But even in the midst of this expansion and jubilation the evidences were not wanting that a much greater transformation was at hand; that once the comedy of annexation was over the drama of consolidation,—some regarded it as a tragedy,—would begin. The movement toward the consolidation of Brooklyn and New York had long been agitated. Mr. Stranahan had ventilated it for years, and with the completion of the bridge many thoughtful persons saw in that event but the first tangible evidence of the complete civic union that was bound to come. While the scheme was but a dream, Brooklyn regarded the matter somewhat jocularly, but in 1894, when the question became serious and agitation on the subject became acute, it was seen that the voting population was pretty evenly divided, for and against. In 1890 the advocates of union had so far matured their plans as to have a commission appointed by the Legislature to consider the expediency of consolidating the cities. The Long Island members were J. S. T. Stranahan, E. F. Linton and W. D. Veeder, of Brooklyn, and John H. Brinckerhoff, of Queens. Under the engineering of this commission a test vote as an expression was taken at the November election in 1894, with the following result:

	FOR.	AGAINST.
Kings county.....	64,744	64,467
Queens county.....	7,712	4,741
New York.....	96,938	59,959

With the rest of the vote we are not here concerned. On the Long Island side the only district to give a majority against consolidation was Flushing (1,407 against, 1,144 for, union); but the most curious fact brought out was that Brooklyn's exploits in the way of annexation had really sounded the knell of its own separate history. The majority in Kings county for consolidation was only 277, and this was brought about by the vote of the annexed towns, for in Brooklyn city proper

the vote showed a majority of 1,034 against. The vote had hardly been counted before definite action was taken by the opponents of the question which had now become a live and most important issue. The League of Loyal Citizens was formed and began a vigorous campaign, using the press, enlisting orators, issuing leaflets and even a newspaper which was called "The Greater Brooklyn," and introduced into the Legislature a bill supported by a petition signed by over 70,000 voters of Brooklyn, calling for a resubmission of the question to a vote of the people. On January 13, 1896, the league organized a mass meeting in the Academy of Music, where Dr. Storrs presided and declared that while resubmission was the topic to be considered, "there is now a strong sentiment against consolidation with or without resubmission." "Let Brooklyn's future remain in the hands of Brooklyn's people," was the watchword of the meeting, and its entire proceedings showed the keen antipathy which had been aroused to any attempt at union. In March, 1896, however, a bill favoring consolidation was passed in the Senate by a vote of 38 to 8 and in the Assembly by 91 to 56. When submitted as required by law to the executives of the municipalities affected, Mayor Strong, of New York, and Mayor Wurster, of Brooklyn, vetoed the bill, and Mayor Gleason, of Long Island City, approved it. When the bill was returned to Albany it was promptly repassed and became a law. A mass meeting in New York, in which A. A. Low and the Rev. Dr. Cuyler took a prominent part, asked Governor Morton to veto the bill, but it was signed on May 11, 1896, and so the first stage of the struggle was over.

By the terms of the act consolidation was to go into effect on January 1, 1898, and in the meantime a commission was to frame a charter for the proposed great municipality and setting out the basis of the union. This commission consisted of Seth Low, Benjamin F. Tracy, John F. Dillon, Comptroller Stew-

art L. Woodford, Thomas F. Gilroy, Silas B. Dutcher, William C. De Witt, George M. Pinney, Jr., and Harrison S. Moore. That body accomplished its task, and the charter it prepared, after being amended to please the whims of some of the legislators, was duly passed and became a law by the signature of the Governor on May 2, 1897. In November of that year the Mayor of the consolidated municipality and all the other elective officials provided by the charter were chosen after a heated campaign, and then the consolidation movement had only to wait a few weeks before coming to its full fruition.

It was truly a mournful gathering that assembled in the Council Chamber of Brooklyn's City Hall on the closing hours of December 31, 1897, to observe the passing into history of the City of Churches. There was no lack of expressions of hope for the future; it was even felt by many that Brooklyn was about to enter upon the highest phase of her history; that she was to preserve her individuality in the cluster of boroughs which the next day were to unite into the Greater New York; but even the most optimistic in the gathering could not but feel that they were face to face with "the end of an auld sang," as the Chancellor of Scotland remarked with the passing of the last vote which united that

country to England. The meeting,—“the wake,” some one irreverently called it,—was arranged mainly by the Society of Old Brooklynites and the city officials, and the following formed the committee in charge: Joseph C. Hendrix, William Berri, Herbert F. Gunnison, John S. McKeon, Richard Young, James L. Watson, D. T. Leverich, John Hess, E. D. White, Stephen M. Griswold, Mayor Wurster, Comptroller Palmer, Auditor Sutton, Aldermen J. R. Clark and David S. Stewart. The City Hall was bedecked with flowers and seemed gay even in the waning hours of its pre-eminence. Over the exercises Mayor Wurster presided, and in a graceful manner performed his last public official duty. The inevitable “oration” without which no American gathering would be complete was delivered by St. Clair McKelway, whose theme was “From Great to Greater.” Will Carleton, the poet, read an original ode, “The Passing of Brooklyn,” and Rev. J. M. Farrar, D. D., delivered an address on “Commerce and Church.” An informal address was made at the close of the exercises by ex-Mayor Seth Low.

The proceedings were kept up until the tolling of the bell in the tower announced at once the dawn of 1898 and the end of the long and honorable story of the City of Brooklyn.

QUEENS

CHAPTER XLIII.

QUEENS.

DEVELOPMENT FROM RURAL TO URBAN LIFE—THE FUTURE OF THE BOROUGH—
HORSE RACING—AN INTERESTING STORY OF THE
CONSOLIDATION.

WITH the advent of the Greater New York the old county of Queens became little more than an expression. Shorn of its ancient boundaries it retained its county organization, its County Clerk, District Attorney, Surrogate, Sheriff and other legal officials, but for administrative purposes it became one of the boroughs of the Greater New York with its representatives in the Council and on the Board of Aldermen of the great city, its own local Borough President, Board of Public Improvement, its school board and the like. It is as much a distinct borough as Manhattan or Brooklyn, with the same official staff as has any of the other component sections of the greater city.

But that fact does not make it any the less true that many of the old residents of the Queens County as it was, believe that in its present status as a borough much of its old glory has departed, that its birthright has been sold for a mess of pottage and that even that reward or price is still in the future. At the election of Nov. 6, 1894, at which the question

of consolidation was decided by the people Queens county voted in favor of the change by 7,712 votes to 4,741, the large majority being rolled up mainly through the votes of Long Island City. Flushing township voted 1,407 against consolidation and 1,144 in favor of it.

The boundaries of the old County of Queens were as follows: On the east by Suffolk County, on the west by Kings County, on the north by Long Island Sound and on the south by the Atlantic, and included 410 square miles. In its territory was the North and South Brother, Riker (Hallet's) and several smaller islands. The whole was divided into the six townships of Newtown, Flushing, Jamaica, North, Hempstead, Hempstead and Oyster Bay. For a long time its population increased slowly—slowly, that is, considering its contiguity to Manhattan Island. In 1731 the figure was 7,895; in 1786, 13,084; in 1800, 16,983; in 1830, 22,460; in 1880, 90,574; and in 1890, the last official census in which the county figured, 128,415. The details of the two latest censuses follow:

	1890.	1880.
Flushing town.....	19,803	15,906
Including College Point vil- lage	6,127	4,192
Flushing village.....	8,463	6,683
Whitestone village.....	2,808	2,520
Hempstead town.....	23,756	18,164
Including Far Rockaway vil- lage	2,288
Hempstead village.....	4,831	2,521
Inwood village.....	1,277
Lawrence village.....	626
Rockaway Beach village.....	1,502
Seaford village.....	503
Jamaica town.....	14,441	10,088
Including Jamaica village....	5,361	3,922
Ozone Park village.....	539
Richmond Hill village....	626
Long Island City.....	30,506	17,129
Ward 1.....	8,359
Ward 2.....	3,303
Ward 3.....	4,813
Ward 4.....	9,263
Ward 5.....	4,768
Newtown town.....	17,549	9,804
Including Corona village....	2,362	750
Middle village.....	504
Winfield village.....	819
Woodside village.....	710	500
North Hempstead town.....	8,134	7,560
Including Roslyn village....	1,251	1,101
Oyster Bay town, including Sea Cliff village (organized in 1880).....	13,870	11,923
Totals.....	128,059	90,574

Since the change which incorporated it into New York, what remains of the old county as the Borough of Queens still continues to show an increase, and that in a more marked degree than formerly. Long Island City has now an estimated population of over 50,000 and the other sections are increasing in great although not equal proportions. Of late years the land boomer has been energetically at work and devoting to Queens some at least of that energy which helped so materially to build up the old outlying sections of Brooklyn, and as a result many new settlements are opened up each year. But the increased facilities of travel with the various sections of the Greater City

in the way of bridges over the East River and tunnels under it and the splendid programme of the Long Island Railroad as to its immediate extension and the adoption of improvements which will make it a trunk line are the surest reliances for the wonderful growth which will come to Queens within the next decade. Its population of 152,999 in 1900 will, it is confidently expected, be doubled.

For a long time in the last century the population of Queens increased very slowly so far as immigration was concerned. Little effort was made to entice settlement and it was so inconveniently situated that even intercourse between it and Brooklyn was difficult. Long after Brooklyn and its associate towns and even the villages of Westchester were more or less marked by the influx of settlers from abroad, Queens county went on the even tenor of its way, contented with its isolation, proud of its old families, and careful of the ancient customs which had been handed down, generation after generation. But such a state of things could not endure for ever and the introduction of the railroad in Queens as well as elsewhere brought a change. Long Island City, for instance, may be regarded as a product of the railway, and it has had for years, as it has now, a larger proportion of foreign born citizens in its population than any other part of the borough. Jamaica, too, has felt the change, although it was not until the introduction of the trolley and its cheap and speedy method of transit that it began to really feel the full effect of the modern impulse.

But gratifying as this increase of population is in one sense—in every practical sense—it has not been witnessed without a sentiment of regret by some of the representatives of the old families. The late Gov. R. C. McCormick, who for fifty years had his home in Jamaica, remarked a few weeks before his death (1901) to the writer with considerable pathos: "I remember when I used to walk along these streets of Jamaica and everybody knew me and spoke to me. I knew all the children, and

could send kindly messages of enquiry with them to their homes. I had something to say to every man or woman I met, I knew much of their history, their hopes, their disappointments, their anxieties and sorrows. They all knew me, knew of my interests, my politics, my purposes, my standing in the community. Now I can walk from my home here to the postoffice and back again and not exchange a word with any one. It is very sad; it is not as it used to be; we have lost the old friendliness and neighborliness, we are growing in strength, new streets are being opened up each year, we have no fault to find with the newcomers, they are here to found homes—the very best class of settlers who can come to any place, but somehow the old charm of personal acquaintance has been lost.”

In one respect the statistics of Queens County are peculiar, as they show, until almost a recent date, a very small proportion of pauperism. In 1835, for instance, with a population of 25,130, there were only 71 persons receiving public relief. This slim proportion continued all through the history of the county until the introduction of the railway, and the figures before us tell the story so familiar to students of sociology that as the county advanced in wealth so did the number of its paupers increase. In a purely agricultural community, and especially in a community where the ground is tilled by its owners, pauperism does not flourish, and such a community was Queens County until it began to fall under the influence of the spirit of “modern improvements.”

But the future of Queens borough is not to lie in agriculture; that much seems certain from a survey of existing conditions or conditions promised. It will be by the growth of its manufactures, the development of its seaside resorts and its advantages as a place for home building. Long Island City is already a manufacturing centre, so is Jamaica, and scattered through the county are places like Steinway

devoted solely to one branch of trade. All that is really needed to upbuild local manufacturing prosperity is cheap and adequate communication with the rest of the continent, and that is promised in the fullest measure in the near future. Land is cheap in every section of the borough and water privileges are plentiful. In the way of summer resorts contiguous to New York, it has splendid advantages. On the Atlantic coast the Rockaways, Arverne, Woodsburgh, Lawrence and Edgemere are already famous and popular; on the other side North Beach now attracts thousands each year, and Flushing Bay is ready to provide a dozen resorts, while College Point, Whitestone and the shores of Little Neck Bay already boast populous summer colonies.

For home building with the trolley system daily becoming more ubiquitous, and the promised development of the Long Island Railroad, and the tunnels and bridges now in course of construction, all insuring rapid and convenient travel, there is no section better, for practical purposes on Long Island. Real estate in Brooklyn—throughout old Kings County, in fact—has long lost its old time quality of cheapness—a quality that still presents itself abundantly in Queens. Then according to the schemes now being put through, Jamaica will really be nearer the centre of business on Manhattan Island than are Flatbush or Gravesend.

A ridge of high hills runs east and west through the borough along its northern part, throwing out spurs to the Sound and breaking the shore into indentations of bays and headlands. On this ridge, facing the water, are some of the most finished home settlements in the city, while the broad interior plain stretching southward to the Atlantic is covered with agricultural villages, railroad towns and thriving suburbs. Throughout both the Sound and plains settlements city improvements, such as water, gas and electricity, are universal, and larger places, like Flushing and Jamaica, have sewerage systems.

Writing on the certain progress of Queens Borough, a recent writer, who evidently had the facts at his finger's end, wrote:

This tremendous prospective growth of population must of necessity follow the lines of least resistance, which, in the presence of adequate transportation, are determined by the cost of land. On this basis Queens should receive a disproportionate share of whatever investment takes place, for land in Queens is selling at hundreds of dollars as against thousands in the case of land in Manhattan and The Bronx at an equal distance from the Manhattan City Hall. The Long Island Railroad's passenger service will come into direct contact with the Manhattan Rapid Transit system at the Brooklyn terminal of the tunnel from the Battery and in Manhattan itself through the tunnel from Long Island City. Through these tunnels the principal settlements in Queens will be tapped without change of cars, except to board those of the Manhattan Rapid Transit road, and these new outlets to Manhattan will be supplemented by three others dispensing with water passage—the East River Bridge, the Blackwell's Island Bridge and the bridge at Peck Slip, all of which are under way. The combined effect of two tunnels and three new bridges on the passenger service from Queens will be tremendous, revolutionizing travel not only over the Long Island Railroad, but over the elevated and trolley lines as well.

How susceptible the growth of the borough is to betterments of transportation appears from the progress made in the past three or four years. Consolidation with New York induced the construction of a network of trolley lines throughout the borough by the New York and Queens County Railway Company and the New York and North Shore Railway Company, which are identical as to management. The former system starts at the Long Island Railroad ferry in Long Island City and the latter at the terminus of the Kings County Elevated road at the Brooklyn borough limit. The two systems, which also connect with the Long Island Railroad and the Brooklyn Rapid Transit lines at numerous points in the interior, served the needs of local travel, besides bringing formerly inaccessible places into contact with the highways of travel to Manhattan. The formation of the New York and Queens Electric Light and Power Company not only

supplied the illuminant that is now essential in public lighting but made economical power for manufacturing available throughout the borough, except the Rockaway district.

These notable improvements, together with the admission to Brooklyn Bridge of the trolley and elevated lines of the Brooklyn Rapid Transit Company, which sends one branch of its system to Jamaica and another to Flushing, started a building movement which spread far beyond the customary limit of housing improvements. However, the bulk of the travel from the farther parts of the borough must continue to be over the Long Island Railroad. Hence the supreme importance of the tunnels which will connect that road with the Manhattan Rapid Transit system, implying a saving of at least fifteen minutes in distance which now consume an hour in travel, besides dispensing with ferry transfers. But although the improvements in transportation that have been obtained since consolidation with New York appear slight by comparison with those now in sight, they were sufficient to initiate a far-reaching movement in real estate, until in 1900 the number of conveyances practically equalled those of The Bronx with its direct approach to downtown Manhattan and its years of start in municipal progress.

Outside of farming, only one of the old industries of Queens remains, that of horse racing, although it must be confessed that the sorry and sometimes silly exhibitions at Aqueduct are but a poor succession to the old glories of Hempstead or Union Course. Horse racing really was the first industry of Queens county and its meets were long the most famous in the country. In 1665 Gov. Nicolls ordered a race course to be set aside on Hempstead "for encouraging the bettering of the breed of horses which, through great neglect, has been impaired." His successor, Gov. Lovelace, also lent his aid to making the sport a success and it seems to have been a popular feature from the first. Daniel Denton in his "Brief Description" (London, 1701) says: "Toward the middle of Long Island lyeth a plain 16 miles long and 4 broad, where you will find neither stick nor stone to hinder the horses' heels, or endanger them in their races, and

once a year the best horses in the island are brought hither to try their swiftness, and the swiftest rewarded with a silver cup, two being annually procured for that purpose." The course itself was changed at least once, but the racing centre continued to be on Hempstead plains until 1821, when it was moved to Union Course. The stakes at New Market, as the Hempstead Course was called, were as a general rule £50 for each event, although on two or three occasions £100 was the figure. It was on Union Course that horse racing reached its highest development in the eyes of the sporting fraternity, the gentlemen who make money on the turf. Gambling in fact was as much the feature of each meeting at Union Course as was horse racing itself; in reality, as in our modern days, the racing was but an excuse for the gambling. It was estimated that in the race in 1823 between "Eclipse" and "Sir Henry" for a stake of \$20,000 a side \$200,000 changed hands when Eclipse was declared the winner. The amount lost was even greater in 1842 when "Boston" defeated "Fashion" in two heats. It was estimated that 70,000 persons witnessed this race. It was probably the widely reported excesses of that race and its attendant circumstances that induced Dr. Prime to write:

"Here [Union Course] are regularly enacted twice a year, scenes which no imagination, however fertile, can depict without the aid of ocular demonstration. It has been stated, and the statement stands uncontradicted, that at a single course of races 50,000 persons attended and \$700,000 were lost and won; and that during the five days that the "sports" continued the toll of the Fulton Ferry Company averaged \$1,000 a day; and it is supposed that the other avenues of the city realized an equal sum. But the gambling, expense, and loss of time attending these scenes of dissipation form only a part of the evils with which they are connected. The drinking, the swearing, the licentiousness, the contentions and other nameless crimes, which are here periodically

committed, with the countenance of law, are enough to sicken the soul of every man that fears God and is disposed to reverence His commands and must induce him to wish most devoutly for the time to come, and that speedily, when this crying abomination, with all its accompaniments, shall be banished from this once sacred soil of Puritans and Huguenots."

Queens County had other tracks which while not so famous as that at Hempstead and Union Course still proved attractive enough to bring crowds to their "events" and to swell the notoriety which the county enjoyed—enjoyed even in England—as the headquarters of horse-racing in America. As early as 1757 there was a track in Jamaica, and one at Newtown in 1758. The "Fashion Association for Improving the Breed of Horses" had a course at Newtown in 1854, which continued with varying success until 1865, when it had to give way to the progress of the railroad. At Centreville, near Union Course, a trotting track was laid out in 1825 where, in 1847, the "Albany Girl" was tried to run 100 miles in 10 consecutive hours in harness. She actually accomplished 97½ miles in 9½ hours and then broke down. Surely such sport shows degeneracy somewhere.

With the decadence of the Union Course racing in Queens County ceased to be profitable, and it was abandoned altogether when Kings County took the sport up in earnest, until the establishment of the track at Aqueduct, where racing seems to be in reality another name for gambling. When horses are started to race in mud or by electric light the nature of the sport can easily be appreciated.

In the general chapters of this history reference has already been made to the position of Queens County in the War of the Revolution, so that it is needless to dwell upon that theme here. It had its Tories and its Patriots in probably equal numbers, it has been even asserted that the former were the most numerous, but however that may be, there can be no

doubt that all sections were fully aroused to the evils of the system of government to which they had become subject and that the people of Jamaica have the right to claim their old suburb of Brushville as being the birthplace of the Revolution on Long Island.

It is not known what duties the County's militia performed at the battle of Brooklyn other than throwing up fortifications and standing guard at the outposts and ferries. Capt. Jacob Wright of Jamaica and Capt. Van Nuyse of Kings County formed two companies in Col. Lasher's 1st New York battalion in Scott's brigade. The Kings and Queens County Militia guarded alternate days at the Flatbush pass. On the day of battle Capt. Wright's men were in Cobble Hill fort. The Queens County Militia often spoke of lying behind the lines when the British shot whistled over their heads. Putnam rode along the line and every now and again, checking his horse, would say: "Gentlemen, by your dress I conclude you are countrymen, and, if so, good marksmen. Now, don't fire till you see the whites of their eyes."

Next to the Revolutionary story the most interesting study in connection with the history of Queens County is that of the incidents in connection with the transformation of the greater portion of it into a borough of the modern New York City. The story is well worthy of study and that it might be clearly and intelligently put before the reader by one who has made a thorough study we present the following written at the request of the publishers by Mr. Duncan MacInnes, one of the expert accountants in the office of the Comptroller of New York, through whose hands all the papers in the case were passed and considered:

At midnight on the 31st day of December, 1897, there were forty-eight separate municipalities merged into the Greater New York, under the general name or title, Borough of Queens. These former municipalities consisted of Long Island City, the old towns of New-

town (from which Long Island City was originally created in 1871), Jamaica (in its earliest form the town of "Crawford"), Flushing and that part of the town of Hempstead extending westward from the eastern limits of the incorporated village of Far Rockaway to the Rockaway Beach inlet. Eight incorporated villages were among the said municipalities, viz.: Flushing, College Point, Whitestone, Jamaica, Richmond Hill, Far Rockaway, Arverne, and Rockaway Beach; also fourteen school districts in the township of Newtown, eleven school districts in Jamaica, seven in Flushing, and three in Hempstead. These forty-eight separate municipalities were all within the corporate limits of that part (over two-thirds) of Queens County merged into the city of New York by the act of consolidation; and, together with the funded debt of the county, brought a legacy of bonded indebtedness alone to the greater city of \$13,337,465. The total real-estate assessed valuation within said former municipalities was \$83,260,593 on Dec. 31, 1897, and this was a great increase over what the same property was assessed at twelve months before, and an extraordinary increase over the assessment of 1895 and 1894, as the following comparative figures will show:

Date.	Real Estate, Assessed Valuation.	Bonded Debt.
Dec. 31, 1894.....	\$40,405,036	\$ 4,813,300
Dec. 31, 1895.....	42,186,900	5,627,650
Dec. 31, 1896.....	69,267,710	6,089,125
Dec. 31 1897.....	83,260,593	13,337,465

On January 1, 1895, when the ten per cent constitutional limitation as to the debt of a city or county went into effect, Long Island City real estate, assessed valuation, was \$16,667,332, and her bonded debt alone \$3,033,500, or nearly twice the statutory limitation. Something had to be done, and the powers that then were proceeded to increase the assessed valuation of property, so as to scale down the ratio of the bonded debt, and the work was done effectually by increasing Long Island City real

estate values in 1896 from \$16,667,332 to \$42,377,481, or more than the combined assessed valuation of 1895 of all real estate in Long Island City, the towns of Newtown, Flushing, Jamaica and that part of Hempstead which ultimately was merged into the Greater New York. These 1896 and 1897 values have since been reduced by the courts by upwards of six millions of dollars, which has the disadvantage of decreasing the proceeds to the City of New York from Long Island City tax arrears.

It will be noted from the table that the bonded debt of these Queens municipalities was more than doubled in the year 1897 as compared with a normal increase of several hundred thousand dollars in each of the years preceding; and the extraordinary increase during 1897 was practically all after the passage of the Greater New York charter in April of said year. As Comptroller Coler has said, "The worst mistake of the charter, it seems to me, was that it put a premium on the notion of the various communities (to be) consolidated going into debt."

The latter part of the year 1897 witnessed an orgie in Queens of lavish expenditure and debt-incurring obligations. Every town, village and school district was issuing bonds *ad libitum*, and generally on the most liberal terms to purchasers thereof. The county was

also doing its share. The funded debt of the county park was increased in 1897 from \$1,083,500 to \$4,837,811, and everywhere was a feverish anxiety and haste to take in on the one hand and disburse from the other every cent that could be realized previous to Dec. 31, 1897, after which the authority to contract further liability or disburse a dollar was vested in the officials of the City of New York. It was a wild orgie while it lasted, and officials who in former years had never handled more than a few thousand dollars found themselves in possession and absolute disposal of hundreds of thousands of dollars, which was expended with the reckless lavishness of a Monte Cristo. Chapters might be written of the cow-paths that were paved by granite blocks, of the turnip and potato patches that were lighted by electric lamps, of the by-lanes that were lit by gas and naphtha lamps, etc., etc., and of the variety and questionable character of contract on contract made on the very eve of actual consolidation; and of the hundreds of thousands of dollars of floating debt that has since come to light and been foisted on the greater city, and the end is not yet! Consolidation has cost the Manhattan taxpayer, or rather Manhattan property, several millions of dollars for the honor of being the second largest city (numerically) in the world.

CHAPTER XLIV.

FLUSHING.

THE PATENTEES OF 1645—FREEHOLDERS IN 1683—THE LAWRENCES—THE CHURCHES.
—MODERN CHANGES AND DEVELOPMENTS.

THE earliest year of any settlement within the old township of Flushing, —Vlissingen, as it was called,—is 1643. Two years later Governor Kieft issued a town charter to the inhabitants, and this charter was afterward renewed by Governor Dongan in 1685. The town's early records and patents were destroyed by fire in 1789, but in 1792 a copy of Dongan's patent was furnished from the records in Albany under the seal of Governor Clinton, of the State of New York. There is a theory that the name given to the place was derived from that of a town in Holland, but the evidence as to this is a little hazy, and while the matter is practically of no moment, it seems fair to say that the honor of name giving to the Dutch town should not be abandoned. The first settler was William Thorne (the name long survived in Thorne's Neck), who appears to have held views on religious matters which did not find sympathy among the Puritans, so he is said to have come to this neighborhood from New England in search of a place where he might enjoy liberty of conscience. What his views were is not exactly known, but they were of such a nature that he afterward found it congenial to throw in his lot with the Society of Friends. Soon he was joined by several others, and thus Flushing was another religious community, which, like Gravesend, was a standing reproach to the reputed religious toleration of Massachusetts.

The names in Kieft's patent of the settlers to whom it was issued were Thomas Farington, John Townsend, Thomas Stiles, Thomas Saull, John Marston, Robert Field, Thomas Applegate, Thomas Beddard, Laurence Dutch, John Lawrence, William Lawrence, William Thorne, Henry Sautell, William Pigeon, Michael Milliard, Robert Firman, John Hicks, Edward Hart. They were empowered to elect a Schout, to build fortifications, "to have and enjoy the liberty of conscience according to the custom and manner of Holland without molestation or disturbance from any Magistrate of Magistrates or any other Ecclesiastical Minister." In return for all this and other privileges they agreed to "reverently respect the High and Mighty Lords for their Superior Lords and Patrons," and pay a really moderate tax "in case it be demanded." All of those mentioned in the deed were not from New England, or exiles for religion. John Lawrence, who was one of the incorporators of Hempstead in 1644, was quite an enterprising gentleman, and was several times Mayor of New Amsterdam, and at the time of his death, 1699, was a Judge of the Supreme Court. William Lawrence was also prominent as an office-holder, and had the knack of "holding on" no matter what flag—Dutch or English—waved over the fort at New Amsterdam.

In Dongan's patent the names of the freeholders were Thomas Willett, John Lawrence Senior, Elias Doughty, Richard Cornell,

Moriss Smith, Charles Morgan, Mary Fleake, Wouter Gisbertson, John Masten, John Cornelis, John Harrison, Denius Holdron, John Hinchman, William Yeates, Joseph Thorne, John Lawrence Junior, Matthias Harveye, Harmanus King, John Farrington, Thomas Williams, Elisabeth Osborn, Joseph Havyland, John Washborne, Aaron Cornelis, John Bowne, William Noble, Samuel Hoyt, Madeline Frances Barto, John Hoper, Thomas Ford, John Jennings, John Embree, Jonathan Wright, Nicholas Parcell, William Lawrence, Richard Townly, Edward Griffin Junior, John Lawrence at the Whitestone, Henry Taylor, Jasper Smith, Richard Wilday, Thomas Townsend, John Thorne, Anthony Field, John Adams, Richard Stockton, James Whittaker, Hugh Copperthwaite, Richard Chew, James Clement, Margaret Stiles, Samuel Thorne, Thomas Hedges, William Haviland, Thomas Hicks, John Terry, David Patrick, James Feake, Thomas Kimacry, Phillip Udall, Thomas Davis, Edward Farrington, Thomas Farrington, Matthew Farrington, John Field, Joseph Hedger, John Talman, William Gael, William White, Elisabeth Smith, Thomas Partridge, William Hedger and Benjamin Field. Outside of the Lawrence, Farrington, and Thorne families few representatives of the original patentees appear in this list. But so far as can be learned they were of pretty much the same stamp as most of the pioneers—men and women whose law lay wholly in the sacred Scriptures.

Most of these people were farmers; most of them were from New England. Probably many had left the mainland to get rid of the religious notions prevailing there and enjoy freedom of worship in their own way. But they brought with them their Bibles and their own peculiar views, and were prepared to set up as much of a theocracy as circumstances would permit,—some even were determined to carry out their spiritual ideas no matter what circumstances presented themselves.

So it was as a religious colony that Flushing was to thrive. In 1647, by order of Gov-

ernor Stuyvesant, the Rev. Francis Doughty settled in it as its minister. Stuyvesant was curious in his friendships, his likes and dislikes, and what there was in Mr. Doughty's composition that won him the personal interest of the Governor it is difficult to imagine. Doughty was an English clergyman, who had crossed the Atlantic that he might speak the truth, but his views on baptism did not suit the Puritans, and he was arrested, tried and ordered to leave Massachusetts. He promptly went to Rhode Island for a brief period, but in 1642 he went to Long Island, having with several associates secured a grant of 13,332 acres of land at Newtown. An Indian outbreak soon scattered this settlement, and Doughty took refuge in New Amsterdam for two years. In 1645 Doughty and most of the patentees returned to Newtown, but trouble and quarrels broke out, and as a result Doughty threatened to refer the matter to Holland, and thereupon he was arrested and fined twenty-five guilders. In this case Stuyvesant acted in haste and without warrant, and when he recognized this he was anxious to "do something" for Doughty. A request from Flushing for a minister reached Stuyvesant about this time, and he at once named Doughty. The good folks of Flushing, however, did not want the Newtown dominic, but Stuyvesant reasoned with them one by one. As a result Doughty was accepted and his salary fixed at 600 guilders. It was probably Flushing's complaisance in this matter that impelled Stuyvesant in 1648 to permit it to elect three Schepens and a clerk in addition to the primitive Schout. Doughty does not seem to have become popular in Flushing. His religious views were not pleasing to many, and that singular compound, Captain John Underhill, when elected Schout in 1648, at once ordered the meeting-house closed, as the preacher "spoke against his betters." Doughty wandered forth again, but returned. He had made his home in Flushing, and there his sons developed into splendid citizens, while his daughter Mary married Adrian Van Der Donck, a Hudson River patroon, who

included what is now the city of Yonkers in his holding.

As a settled minister Doughty was a failure, and probably the citizens did not care to ask for another in his place. In 1656 one of the pioneers of the Society of Friends, William Wickendam, a shoemaker, settled in Flushing from Rhode Island, and the people seem to have accepted his views. They listened to his preaching and what he said appears to have united them under his spiritual leadership, and many were baptized by him. Even Doughty accepted the workingman's theological views and threw in his lot with the Quakers. Such a condition of things aroused attention in New Amsterdam and led to Stuyvesant's persecution of the Friends, which has been detailed at length in an earlier chapter of this work. But this persecution failed, like most persecutions of similar nature, to stamp out the object of its enmity, and Flushing became more and more deeply a religious,—a Quaker community. In 1660 quite a number of Huguenots settled in the township, and their presence and pronounced views on matters of faith made Flushing more than ever before a center of religious thought.

In June, 1672, George Fox, the founder of the Society of Friends, made his memorable visit to Long Island, and, as might be expected, Flushing was one of his stopping places. He stayed in the home of John Bowne, Stuyvesant's victim and victor, and the couch on which he was wont to rest and other articles of furniture used by him or in use during his sojourn are still preserved. Fox in his diary mentions holding one large meeting in Flushing, "many hundreds of people being there."

Although, however, Flushing was thus in a sense a center of Quakerism, it was not until 1690 that a meeting-house was erected. After Stuyvesant's experience in the case of John Bowne the Friends seem to have been permitted the utmost freedom of worship, so far as the civil government was concerned. Under the English rule, indeed, they were more or

less in trouble, because in accordance with their principles they refused to train in the militia service, a service which by law was made compulsory on all able-bodied men. This refusal was punished by the imposition of a fine, and as it was not in keeping with their ideas of religion and right to pay this fine, their goods were seized and sold in satisfaction. This procedure the Quakers regarded as an infringement of liberty and conscience, as a religious persecution; but it was not so in reality, as the law made no provision for creeds, the militia was for the defense of the people and the Quakers enjoyed the security of that defense and should contribute their share in it.

A much more dangerous disturber of the peace of the Quakers, and indeed of the community, was the attempt made in the reign of James II to establish the Church of England throughout the province. We say attempt, because, although it is the fashion for some writers to argue as though that church was established in New York, just as it was in England, it never really succeeded, Royal instructions and Gubernatorial edicts notwithstanding. The King's orders to Governor Dongan, in fact, avoided the question of "establishment," although that result was implied. "You shall take especial care that God Almighty be devoutly and duly served throughout your government; the Book of Common Prayer as it is now established read each Sunday and holiday, and the Blessed Sacrament administered according to the rites of the Church of England." He was also ordered not to present a clergyman to any benefice within his gift "without a certificate from the Most Reverend the Lord Archbishop of Canterbury of his being conformable to the doctrine and discipline of the Church of England." Still he was to "permit all persons, of what religion soever, quietly to inhabit within your government without giving them any disquiet or disturbance whatever for or by reason of their differing opinions in matters of religion." So far as Flushing was concerned,

these instructions had little interest, and it was not until 1702, under Governor Cornbury,—one of the most disreputable of men and blindest of churchmen,—that any effort was made to foist an Episcopalian minister on the town. Then the turbulent George Keith came upon the scene, but as the story of his experiences and of his persecutions of Quakers inspired by him have already been told in an earlier chapter, the story need not be repeated here.

Ecclesiastically in the Episcopalian fold, Jamaica, Newtown and Flushing were united for a time under one rector. The first, Patrick Gordon, died a few days after his arrival, and then Cornbury sent the Rev. James Honeyman among the people to preach to them until he could determine upon a rector. This rector, the Rev. William Urquhart, was put in possession of the charge in June, 1704, and continued to minister to such of the people as adhered to him until his death, in 1709. Flushing did not take kindly to him, nor did he to Flushing. "Most of the inhabitants thereof are Quakers," he wrote, "who rove through the county from one village to another, talk blasphemy, corrupt the youth, and do much mischief." He held services once a month in the Guard House, which was amply sufficient for his auditory. Mr. Urquhart's headquarters were in Jamaica, and there, too, as we shall see, his path was not one strewn with roses. His successor was the Rev. Thomas Poyer, a Welshman. Flushing still continued obdurate, and matters were not much brighter in Jamaica, which still continued to be the rectorial headquarters, but Mr. Poyer "was'led" on amid a host of discouragements, as we will read in the story of Jamaica, until his death, in 1731. Two years later the Rev. Thomas Colgan was given the charge, and under him, in 1746, the first Episcopalian Church in Flushing was erected. Mr. Colgan seems to have got on better with the Quakers than any of his predecessors, and one of them, it is said, actually aided the new congregation by a gift of money. As was customary, the Society for

the Propagation of the Gospel (in London) sent to the new church a Bible and Prayer Book, and that gift is now among the treasures of St. George's Church. On the death of Mr. Colgan, in 1755, the Presbyterians and others endeavored to seize control of the ecclesiastical affairs in the three towns and elected a Presbyterian minister. Sir Charles Hardy, then Governor, would have none of this, and presented the Rev. Samuel Seabury to the charge. Mr. Seabury had not a very high opinion of Flushing, which he said was "in the last generation the ground seat of Quakerism, is in this the seat of infidelity," but under him the church was finished and in 1761 it received a charter from King George III under the title of St. George's, which it still retains. His leading lay helper in Flushing was Mr. John Aspinwall, whom he described in one of his letters as "a man of low birth and strong passions, and violent in his resentments, who, having acquired a great fortune in privateering, removed thither from New York, and has really done very considerably toward finishing the church and giving it a good bell." Not much of an angelic character, certainly, but this reformed pirate was a benefactor to the Flushing church in many ways, even to the extent of "bringing over many Quakers and Calvinists, so that I myself," wrote Mr. Seabury, "have been a joyful witness of a numerous congregation in a church wherein, within three or four years, seldom assembled above ten or twelve persons." It is sad to think that the friendship of Mr. Aspinwall and Rector Seabury should have ended in a violent rupture caused by an effort on Aspinwall's part to make Flushing a separate charge under a new rector, but so it was. The effort did not succeed, and Seabury remained until 1765, when he removed to Westchester. Afterward he was the first Episcopalian bishop in America. His successor in the three towns was the Rev. Joshua Bloomer. The tripartite rectorial arrangement continued until 1802, when Flushing and Newtown

united in calling a rector, leaving Jamaica to its own course, and in 1809 Flushing and Newtown separated, and the Rev. Brazella Buckley became first sole rector of Flushing.

From then until now St. George's has held a long list of earnest, devoted rectors, but the name that stands out in boldest relief is that of the Rev. William A. Muhlenberg, who presided over it from 1826 to 1829. This famous preacher and practical philanthropist founded the once famous Flushing Institute for the education of boys, and out of its success grew St. Paul's College, of which he continued to act as principal until 1844, when he accepted a call to New York.

Until 1811 St. George's Church and the meeting-house of the Society of Friends contained the only two organized religious bodies in Flushing. In 1811 a congregation of colored Methodists was organized, although it did not possess a church edifice until 1837. The white Methodist brethren built a church in 1822, the Roman Catholic Church had its beginning with twelve adherents in 1826, when the Rev. Father Farnham celebrated mass for the first time in Flushing, and in 1835 the first place of worship was fitted up. In 1854 a second Episcopalian Church, St. Michael's, was erected, and St. George's Church was rebuilt for the third time, the second building having been erected in 1812. The Baptists also erected their first Flushing church in 1854.

The most prominent of the early industries of Flushing, next to agriculture—farming—was that of fruit and tree growing. The Huguenot settlers introduced many of the fruits of their native land, and their product won quite a measure of fame and brought them considerable profit. In the early years of the eighteenth century a number of English gardeners settled in Flushing, attracted by stories of the varied nature of its soil and its adaptability to fruit raising, and established market gardens. Its fame, however, in horticultural circles was really won by a native, William

Prince, who was born in Flushing in 1766, and died there in 1842. His father, William Prince, in 1750 laid out a tract of land in Flushing for the propagation of trees, such as apple, plum, peach, cherry, nectarine and pear. This venture proved quite a success, and the area of ground was steadily enlarged and the varieties grown extended to almost every variety possible in the climate, almond and fig trees, flowering trees and shrubs, berry bushes. So famous did the place become that General Howe, when manœuvring in Flushing on August 29, 1776, ordered it to be guarded so as to prevent any depredations on the part of his soldiery. The nursery, however, did suffer considerably during the British occupation, and for the time its business was paralyzed. In 1789 the place was visited by General Washington, who had long heard of its beauties, but what he saw did not answer his "expectations," for at that time the business was just beginning to recover. By 1792 Mr. Prince had twenty-four acres under his operations. His son brought the nursery up to the fullest measure of its usefulness. In 1793 he entered into business relations with his father and extended the area under cultivation until it exceeded sixty acres. He sent far and near for trees, fruits and plants for experimental purposes, successfully acclimatized several hundred, systematized the nomenclature of the best known fruits, such as the Bartlett pear and the Isabella grape, and wrote a "Treatise on Horticulture," the first work of the kind issued in the United States. The London Horticultural Society named the William Prince apple in his honor, and he enjoyed the personal friendship of all the celebrated botanists and naturalists of his time. The *Morus multicaulis*, long so well known in the manufacture of silk, was first grown here in 1826 by Mr. Prince from trees imported from France a year after they had been received there from the Philippine Islands. Perhaps this should entitle him to be regarded as the pioneer in the great American Philippine trade

which is so certain to come as the result of more recent events!

Flushing had many other famous nurseries, such as that of Samuel Parsons, a man noted for his benevolence, his enterprise, his public spirit and his steadfast adherence to the Society of Friends, before which body he frequently preached. His love of trees led him to plant many along the streets of Flushing at his own cost, and he went into the business of tree raising simply for the good he might accomplish rather than as a commercial speculation.

With the upward progress which attended so many of the Long Island towns after the Revolutionary War Flushing had but little share. Its business had been sadly shattered by that armed conflict, and its geographical position was such that it was by no means easy of access. In the closing years of the eighteenth century communication with New York was had twice a week—Tuesdays and Fridays—by passenger boats, and that service sufficed until the advent of the nineteenth century. In 1801 a daily coach service was established, running from Flushing through Newtown to Brooklyn, and such coach service, with slight changes as to route, continued until 1854, when the opening of the Flushing & North Shore Railroad forced its cessation. But long after the railroad was an assured fact the carrying trade in merchandise continued to be done by packets. The first steamboat from Flushing to New York was run in 1822. It was a small concern, but proved so successful that in the following year "The Linnaeus," a much more substantial and roomy vessel, was put on the route.

In 1837 Flushing began to feel that she really was becoming prosperous, and in that year it applied for and received its charter as a village. The population was then about 2,000, the number of real estate owners was 103, and the assessed valuation \$465,360. Robert B. Van Zandt was elected the first President under the charter.

The Rev. H. D. Waller, to whose interesting "History of Flushing" this sketch has been much indebted, says: "The village boundary line began at the creek just beyond the bridge on the College Point causeway and ran east, crossing Whitestone avenue about 300 feet beyond Bayside avenue, just including the Osgood property. At a point near the junction of Bayside avenue and Parsons avenue the line turned south and ran to the corner of Sanford avenue and Long lane (now South Parsons avenue). From this corner, which marked the furthest limits of the village in that direction, the line ran west to the creek, forming an acute angle with Sanford avenue and crossing Jamaica avenue just south of the Jagger homestead (now Captain Hinman's). Sanford avenue was not open below Jamaica avenue. Bowne avenue was the street furthest east. Long lane began at the village limits and ran south. Jagger avenue was a private lane leading from Main street to the Jagger house; Lincoln street was then called Liberty street; Amity street was not then opened; neither was Locust street east of Main. A tide mill, kept by William Hamilton, stood at the bridge on the College Point causeway. There were no houses northeast of the park except a few which stood in large country places. * * * The lower part of Main street was more thickly settled, but even there the houses stood apart from each other with gardens between. The Pavilion, once a famous hotel, stood at the corner of Bridge street and Lawrence avenue, where the old electric power house now stands. The Town Hall stood where the fountain now stands, facing on Main street, the school-house being on the lot now occupied by the Empire Hose Company's building in Lincoln street."

From the time of her incorporation as a village until the closing scene in her history, when she became part and parcel of the Greater New York, the story of Flushing was one of great progress. It was regarded as a residential quarter, sufficiently retired to be the

scene of several county fairs, where abundant educational facilities were provided, and church, social and professional circles were all of the most desirable qualities. The Board of Education commenced work in 1848 in accordance with an act of the Legislature passed that year, and under its direction the educational system of the village was steadily extended; in 1874 the Douglass Pond water supply was introduced and made the occasion of a grand demonstration and parade, with the usual oratorical accompaniments. In 1883 the old area of the village was considerably extended by a new act of the Legislature, and in the following year the Flushing Hospital and Dispensary was incorporated, a building being rented for its purpose until 1887, when the hospital was erected on ground presented for the purpose by the late John Henderson. "The village of Flushing," writes Mr. Waller, "has always been a place of residence. Those institutions have been fostered that would render the village attractive to persons seeking homes; manufacture has not been encouraged. The village streets are macadamized, well shaded with fine trees of many varieties, lighted by gas and electricity and swept and sprinkled at public expense. The sidewalks are paved with stone flagging. A complete system of sewers extends throughout the village. The steam and electric cars make frequent trips between Flushing and the city. These conveniences and improvements have made Flushing an attractive home for business and professional men of New York. Here they find pleasant homes and rural surroundings within easy reach of their places of business."

Such are the salient points in the history of Flushing township in general, and especially of Flushing village, the center of its life. There are several settlements or villages throughout the township which are deserving of some mention, however brief.

College Point (formerly Lawrence's Neck) on Flushing Bay was first settled by immigrants from Germany. It was the scene of

the operations of Dr. Muhlenberg's St. Paul College and from that got its modern name. It has some manufactories and a population of some 6,000. Within recent years it has become quite a suburban residential village, boasting all modern improvements in the way of gas, electricity, etc., and many remarkably fine residences have been added to its attractions during the past year or two. It is confidently expected that it will continue to grow in favor.

Whitestone is regarded as being, next to Flushing village, the oldest settlement in the township. It derived its name from a large white piece of rock in front of it in the East River, and although several efforts have been made to change the name the efforts have failed. Even De Witt Clinton's popularity, which inspired a meeting of citizens to give it the name of Clintonville, failed to make the change any more than a passing whim. Another name once given to it "Cookie Hill," did not find many admirers at any time, so Whitestone has clung to it throughout its modern history. That history really amounts to very little. In 1800 it had less than twelve houses. It was not until 1853, when J. D. Locke & Company established a tin and copper ware factory, that it began to attract settlers, and a year later it had advanced sufficiently to induce Uncle Sam to establish a postoffice within the village. Some of its clay soil has been found eminently suited for making tobacco pipes, flower pots, flower vases and the like, and in connection therewith several establishments have arisen, and the village now boasts a population of about 3,400. Whitestone is the terminus of the North Shore branch of the Long Island Railroad. It is one of the stations of the New York Yacht Club, and already before consolidation contained a considerable colony of New York business and professional men. The village has a new athletic club, and a school-house costing \$200,000 has recently been completed. A tract of land fronting nearly a mile on the

water is held jointly by the Realty Trust and the Cedar Cliff Park Association, part of which is under development by Edwin P. Roe.

Francis Lewis, one of the signers of the Declaration of Independence, whose seat in Whitestone was one of the centers of Revolutionary activity, was born at Llandaff, Wales, in March, 1713, and was educated at Westminster School, London. In that city he also obtained his mercantile training. He sold all his property in England in 1735, and came to this country, where he at once engaged in business as a merchant, establishing houses in New York and Philadelphia. He met with remarkable success, and probably was the leading shipper in New York at that time. His enterprise was unbounded, and he paid frequent visits to Europe on business ventures, going as far as Russia, and was twice shipwrecked. As a supply agent for the British army he was taken prisoner at Fort Oswego when it was surprised by Montcalm, was carried to Montreal, and from there to France. After his liberation he returned to New York to find the conflict between the Colonies and the mother country already practically commenced; and, joining heartily in Revolutionary movements, he was in 1775 unanimously elected a delegate to the Continental Congress, where his business experience, executive talent and knowledge of commerce made him a valuable member. At the next session he with his fellow patriots signed the paper to the maintenance of which they pledged "their lives, their fortunes and their sacred honor." Having some time previous purchased a country seat at Whitestone, he removed his family to it in 1776, and then entered actively upon the performance of duties of importance with which he had been entrusted by Congress, one detail of which was the importation of military stores, in which he expended the bulk of his large fortune, and for which he was never repaid. Hardly had his family been settled at their home in Whitestone before they were visited, in the fall of 1776, by a body of

British light horse, who plundered his house, wantonly destroyed his extensive and valuable library, and, taking Mrs. Lewis a prisoner, retained her several months, without a change of clothing or a bed to rest on! Through the influence of Washington she was released, but with her health so broken by the abuses she had suffered that she drooped and died—another victim to English chivalry in the eighteenth century. Mr. Lewis resided here until 1796, when he disposed of his property and retired to New York, where he died December 30, 1803, in his ninetieth year.

The second son of this patriot, Morgan Lewis, afterward Governor of New York, also lived at Whitestone for many years. He served in the War of the Revolution as a captain, and afterward as major, retiring with the rank of colonel, to resume his legal studies and qualify for the bar. He soon acquired distinction in that profession, and in 1792 became Chief Justice of New York's Supreme Court. In 1804 he was elected Governor. In the War of 1812 he became a major general and served on the Niagara frontier. But the details of his career are too interesting to be condensed and we must refer the reader to the sketch of India Delafield, containing a sketch of his life and that of his father. Governor Lewis died in 1844. A portrait of him is given on page 277 of this volume.

Bayside, on Little Neck Bay, although in many respects a modern settlement, has really a history of almost equal antiquity with Flushing village, but its story is uninteresting, although it contained a building which, like so many hundreds of others, bore the designation of Washington's Headquarters. It was really simply a scattered group of rural residences until within a comparatively few years, and its progress has been slow. It has a population of 700, but is steadily rising into favor as a residential village, as it presents many advantages in the refined society already to be found there and the many beautiful villas which adorn its streets.

As much might be said of Little Neck, a similar community on the other side of Little Neck Bay and close to the Nassau county boundary line. The property was in the hands of the Hicks family from the time Thomas Hicks drove the Indian owners off the lands by force until a recent date; indeed, some of that redoubtable land grabber's descendants are still to be found in and near the village. Douglass Point, however, as it is now called, one of the most beautiful "bits" of landscape on the sound, passed from their hands early in the last century. Little Neck is slowly but surely rising in popular favor, and its population of 600 are doing all that is possible to add to its attractiveness. Willets Point, Douglaston and several small settlements are also gradually finding their way into public favor and are certain to increase as the years roll on.

In fact, there seems little doubt that the whole of the old township of Flushing is destined to be the "home land," as it were, of a great population of home owners,—the best possible class of citizens. A recent article in one of our daily papers, speaking on this point evidently with the knowledge of an expert, says: "Flushing, with a population of 9,700, on the ridge overlooking Flushing Bay, is a village of Dutch Colonial antiquity, of historic associations and substantial growth. Originally an agricultural community, its chief characteristics have come to be those of a suburban home settlement. It has good roads, schools and churches, libraries, banks, stores, shops and a complete system of public works. Fine old mansions, set in spacious grounds, break the uniformity of development present in more distinctly modern places, and the water affords variety to the enjoyment of nature and outdoor life. In the outskirts of the village are important suburban additions, developed by private enterprise, as Ingleside and Bowne Park. Both are located on high ground, abutting on fine residential streets, which are continued through them.

At Ingleside the Realty Trust has sold some hundred detached frame dwellings at \$3,500 to \$6,750, besides a number running as high as \$10,000. Building sites are sold to investors at \$260 to \$1,000 a lot. At Bowne Park, where John Dayton & Company have built extensively, similar conditions as to prices of houses and lots prevail, this place, like the former, having maintained a high grade of suburban construction. Among smaller groups of houses in the market are eight dwellings at the Broadway station that are quoted at \$3,000 and upward. These are offered by John N. Falkenburg, who is also improving a tract at Bayside, a station just east of Flushing, with houses selling at \$3,500 to \$6,000. Land in the various additions under development at Flushing has been carefully restricted against uses objectionable in a residential community, the aim having been to keep in harmony with the social and natural features which have made the village attractive to quite a colony of artistic and professional men.

"Corona, with a population of 2,700, is another center of suburban development in the section overlooking the Sound. Until recently houses were for the most part built by intending occupants with assistance from co-operative building and loan associations. Construction work is now largely carried forward on extensive tracts, as Luona Park and Hamilton's Homes. At Luona Park, laid out by the Realty Trust, several hundred houses have been built. The prices prevailing have been between \$2,400 and \$3,500. At Hamilton's Homes, developed by William J. Hamilton, quotations range from \$2,000 to \$3,000.

"Elmhurst, near by, with a population of 3,000, is composed of two principal elements, an old village of Dutch origin and a modern suburban settlement. The newer Elmhurst comprises a tract of 1,800 lots controlled by Cord Meyer & Company. Houses are sold to intending occupants at \$3,500 to \$10,000.

About two hundred and fifty families have been drawn to the neighborhood since the tract was opened in 1896. Provisions are contained in all the deeds reserving the land for private residences, and property is thus guarded against construction which might tend to depreciate values. The management refuses to sell lots unless assurance is given that no house

is to be erected without the plans having been approved by the company. This makes speculative building impossible. On the other hand, the village elsewhere offers attractive opportunities for building operations, and a group of new houses by Warren & Combes were for the most part readily disposed of last season at \$3,800 to \$4,300."

CHAPTER XLV.

NEWTOWN.

THE STEP-CHILD OF THE METROPOLITAN AREA—MESPATH AND MR. DOUGHTY—
MIDDLEBURG—DEWITT CLINTON—MIDDLE VILLAGE AND
OTHER SETTLEMENTS.

IN the old Gazetteers the township of Newtown was described as bounded on the north by the East River (including in its limits Riker's, the two Brother and Berrian Islands), on the south by Jamaica, Flatbush and Bushwick, and west by Bushwick and the East River. It was held to contain 10,683 acres. These rather vague boundaries are now of little use, except in an antiquarian sense, for the town is described very differently nowadays, when it is apportioned between the First and Second Wards of the borough of Queens and has its boundaries indicated by named streets or avenues.

For a long time Newtown was the step-child of the metropolitan area, its backyard, so to speak. Whatever was too offensive for the rest of the area found lodgment there, and the odors from some of its works often aroused indignant protests even from dwellers on Manhattan, while Newtown Creek, once one of the sweetest bits of water stretching into Long Island from the river, became a synonym for all that is vile. Much of its territory was used as a dumping ground, its manufactories were those which could not be carried on close to any large city, the making of glue, the rendering of fat, the distillation of oil and the like, and the establishment of each of these made the surrounding territory only the more barren and bleak. Back from the coast line

the land was flat and the landscape uninteresting, and as agriculture decayed the old farms, many of them, began to be cut up into market gardens, while discolored and deserted barns became mute evidences of the glories of the past. In the entire district pools lay stagnant, helping by their exhalations to make the territory uninviting even to the land boomers, who found "Newtown lots" invariably the hardest sort of proposition to tackle when the lots were away from within sight of the river. The place had gradually lost caste and settlers were few. Astoria had flourished, the beauties of Ravenswood had invited a colony of home builders of the better class, Hunter's Point was boomed for many years as a suitable site for the homes of Manhattan workingmen, but the lots failed to command anything like attractive prices outside of Astoria, and Ravenswood was somewhat exclusive. Within the last ten or twelve years a change for the better has taken place and many thriving communities have sprung up, thanks to the increase in the metropolitan population, the facilities of transportation and the more responsible efforts of the land speculators, and such places as Winfield, Elmhurst, Woodside, Lottona Park, Corona, are not only beautiful and attractive settlements, but are an illustration of the effect of business principles, capital and thoughtful, well-planned enterprise being ap-

plied to the once wild and irresponsible business of land booming. But even in spite of the number of these settlements, and their surrounding evidences of prosperity, there are not more dreary and uninteresting trolley rides in the area of the Greater New York than those across old Newtown township, say from Greenpoint Ferry to North Beach.

It used to be a standing joke,—a somewhat grim one,—to say that Newtown's greatest industry was that of funerals, that it was the great burying ground of New York and Brooklyn. Certainly it is plentifully dotted over with cemeteries, the cheapness of the land and its apparent unpopularity with the living having induced churches and corporations to buy up large lots or "parcels" and developing them for burial purposes. Except such as the extensive holdings of the Roman Catholic Church and some smaller places owned by other religious bodies, these cemeteries are all ruled by corporations, pay dividends or are expected to pay dividends on the money invested in them, and are managed on business principles and with a view to the profits just the same as any other piece of property would be. The largest of these cemeteries is Calvary, now inclosing some 300 acres, and the smallest the little Quaker resting place in Middle Village, which is hardly one acre in extent, while the Methodist cemetery, near the latter, only encloses two acres, but it has a history of its own which antedates the Revolution, for it was laid aside for its present purpose in 1770. The Lutheran cemetery and St. John's, also at Middle Village, Machpelah, St. Michael's, Mount Olivet, Mount Nebo, Union Field and parts of Evergreens and Cypress Hills are among the best known of the other silent cities which so long were Newtown's most potent attractions for throngs of visitors from the neighboring centers of population.

In another way the township of Newtown is peculiar among the old Long Island communities. In Jamaica, Flushing, Hempstead, Oyster Bay and other places the first settle-

ment, the first place which gave the name to the township, has retained its original importance and maintained its place as the center of its population,—the local capital, as it might be called. Not so Newtown. In 1870 its most densely populated corner, including Astoria, Ravenswood, Hunter's Point, was concentrated into one municipality and elevated into the dignity of a city, with the result that Long Island City now has a population of 52,240, while Newtown still struggles on as a village with a population of about 2,500. Still the old village is growing, has added about 1,000 to its population in a decade, and in spite of the prominence of the city it is to the village we must turn when we write of the history of the township until at least within the last three or four decades.

Antiquarians have decided that the first settlement in the township was made at what was afterward known as Fisher's Point and which is known at the present day as North Beach. The pioneer Hendrick Harmansen received a grant of land there from Governor Kieft in 1638, and appears to have at once settled. Not long after Richard Brutnell received a grant of land near the modern Dutch Kills, while amidst a slowly gathering procession we find a blacksmith named Jorissen, who was the first white man to become possessor of the beautiful tract later known as Ravenswood. That he was killed by a party of Indians is simply to say that he was the victim of a contingency which he and all other pioneers, and even dwellers in towns, in those picturesque but happily remote days had to face.

The first general name applied to the territory was Mespas, so named after a small tribe of Indians who hunted around Newtown Creek. The Rev. Mr. Doughty's settlers twisted it to Maspeth, a name which still lingers in one of the villages of the township. After the Doughty forces were shattered by the terrible Indian rising of 1643, the whole of Newtown's territory was, in fact, pretty

well cleared of settlers by the avenging hosts of the red man. When peace was restored and a truce had been made with the aborigines, the pioneers, who slowly returned, found they had a new grievance,—the pretensions of Mr. Doughty. That gentleman seemed to have caught the land fever pretty severely and tried to set up as a patroon, but the other original patentees stood up for their rights and won their case when they appealed to the Governor and his Council. So in his wrath Mr. Doughty gathered up his skirts and forsook Maspeth forever.

Immigration helped the territory but slowly, a spot here and there only being cleared, for although lying temptingly near to New York, the swift and treacherous currents in the river were not much to the liking of the longing eyes on Manhattan. In 1652, however, a little colony came from Connecticut, mainly English people, and after prospecting around settled on a spot which answered all their requirements in the way of meadowland, abundant and pure water and the like. As was necessary, application was made to Governor Stuyvesant for a town warrant or charter, which he at once granted, giving the name of Middleburg to the place and conferring on the colonists all the privileges which had been awarded to the other towns on Long Island which had asked that favor from him. This was the beginning of Newtown.

The first Magistrates were Robert Coe, Richard Gildersleeve and Thomas Hazard. The usual system of town meetings seems to have governed as far as possible all the local arrangements, but it is unfortunate that nearly all the early records have been lost. But enough has been left to show that Middleburg was a peaceable and law-abiding community, that it admitted newcomers to the privileges of settlement only after being satisfied as to character and after a vote had been taken, and when a citizen did not walk according to the local ideas of right and wrong he was unceremoniously ordered to betake himself else-

where. Serious crimes were apparently unknown among them; they had no lock-up for offenders, and imposed liberal fines upon all who violated any of the local ordinances. Some offenses were too heinous to be condoned by a fine, no matter how severe, and in 1660 we read of the just and merited penalty inflicted on a "ne'er-do-weel" who stole some corn from Magistrate Coe's barn. This reprobate had to walk through the village with two rods under each arm and drums beating in front of him, and having suffered this humiliation he was to make "amends" to the party he had robbed. Besides all this he was ordered

NEWTOWN'S FIRST HOUSE OF WORSHIP.

to keep to his house at nights and so give no cause for suspicion as to his movements. Why he was not summarily ordered out of the community is not disclosed. Very likely there were sufficient reasons for not imposing this last dread penalty. The citizens united in paying premiums for the slaughter of wild beasts, especially wolves, and in mutual protection against the Indians, but the latter continued troublesome, and in 1653, so great was the apprehension of a general rising of the red men, that the whole colony passed over to Connecticut for safety. They soon returned, however, and resumed the usual tenor of their ways, but in 1655 the Indians did make a raid which caused much bloodshed and destruction.

The people from the first seem to have been dissatisfied with the Dutch government in New Amsterdam, although they fulfilled all their obligations to it honestly and paid their tithes with commendable regularity. In 1662 Connecticut, under its charter, laid claim to jurisdiction over Long Island and the English towns excepting Gravesend seem to have accepted this claim joyfully. Those which were near New Amsterdam, however, had to be cautious in their preference, because the redoubtable Peter, the doughty Silver Leg, had his eye upon them. So Middleburg had to await events while cherishing her hope of getting away from Dutch rule. In 1663, however, her citizens openly professed allegiance to Connecticut, threw away their Dutch name and adopted that of Hastings. Then they were landed in a slough of despond by news that Connecticut had deserted them as the result of a treaty with Stuyvesant, and hailed the arrival of Captain John Scott as the direct representative of English authority, elected him their President, but he did not rule very long. Peter Stuyvesant had too much on hand to think of the contumacy of Middleburg or Hastings, and in 1664 Captain Nicolls wrested the entire province from his rule, and Middleburg or Hastings had an English government at last, an English government *de facto*, which of course had never been realized under the Connecticut claims. With that change, too, the old names were abandoned and "the New Towne" took their place.

In the convention of 1665, which accepted "the Duke's laws," the limits of the different townships were discussed and to a certain extent determined, for the original charters were, as has been noticed frequently. So, too, was the determination of the convention. However, in the following year the freeholders secured by purchase all the remaining lands in the possession of the Indians, or lands claimed by them, and on March 6, 1667, Governor Nicolls issued a brand new charter in

which he gave the people all the privileges of a town government, ordered that the town should continue to be known as New Town and vaguely set out its boundaries as "east by Flushing Creek, north by the Sound, south by the Jamaica line which runs on the south side of the hill and west by Mespat Creek or Kills." The boundaries as thus set forth continued practically to be those of the township although the courts had afterward to be appealed to very frequently. A tract of meadow land which was in dispute between Bushwick and New Town was awarded to the former after quite cantankerous legal proceedings in 1669. In 1684 Newtown, Brooklyn and Bushwick had a three-cornered fight over their boundaries, and a year later Flatbush secured a patent for some land which Newtown claimed. A long and wearisome contest ensued, all the other towns apparently joining issue, most of them against Newtown, asserting that she claimed tracts of territory which had been patented to the others. Sometimes the trouble was before the law courts, sometimes before the Governor, sometimes before the Legislature. There is no practical purpose to be gained by following its details and it may be dismissed by saying that after dragging along for some 80 years it was finally adjusted by an act of the Legislature in 1768. The sudden overthrow of the English government and the appearance of Anthony Colve in 1673 as the representative of the Dutch authorities, appear to have been received by the Newtown people with equanimity. The Duke's laws and the Duke's methods had been tried and found decidedly wanting by a people who valued the privileges of freedom. However, when Colve's representative visited Newtown to administer the oath of allegiance he found only 23 out of the 99 male adults which his papers showed the place contained. New Town was united with "Rustdorp, Heemstede, Vlissingen and Oyster Bay in the election in the usual roundabout way of a sheriff and clerk who were to execute the laws in those five towns. Toward

the close of 1674 the Dutch rule gave way to the English, the Duke's laws were again operative, and the Dutch officials were removed. But the people were far from satisfied, and when the news came that King James had fled from his ancestral kingdom and been succeeded by the Dutch prince, William of Orange, there was great rejoicing among the freeholders generally, Dutch as well as English. They were represented in every convention and in their excess of zeal actually voted to provide two soldiers for the defense of the fort at New Amsterdam and to fully provide for the maintenance of that brace of heroes!

Newtown, throughout its early history, by which may generally be understood its pre-revolutionary history, was essentially an agricultural community, and it is said that it became so famous for its crops of wheat, rye, hemp, tobacco and potatoes, that in 1732 all of the land within its boundaries had been taken up mainly for farming, grazing or fruit growing purposes. Horses, cattle and sheep were reared in great numbers and much attention was given to breeding, importations being made from New England and Holland. The fruit raised was particularly good and the Newtown pippins became famous at an early date. In such a community few trades were in demand, for the people were content with their own product and the wealthier had slaves who were generally handy men on the farm or did the rough work in the domestic establishments. Then, too, money was scarce and business transactions were conducted on the basis of barter. Thus in 1661 a house was sold for "six hundredweight of tobacco, a thousand clapboards, and half a fat [vat] of strong beer." Still the community supported several such tradesmen as butchers, weavers, tailors, carpenters, coopers and blacksmiths. In some instances the trades were represented by a single representative, but there were half a dozen weavers although every household had its spinning wheel, and sometimes its own loom. Milling in such a community was a re-

munerative as well as a most necessary business and as early as 1657 John Coe had set up a flouring mill. The first trace of manufacturing pursuits occurred in 1691 when Thomas and Edward Stevenson were given permission and the necessary ground to set up a fulling mill. In 1721 a bark mill and tannery were put in operation by William Vallance. Then followed a starch factory, a brewery and a grist mill. Most of these were in operation when the Revolutionary War broke out and managed to struggle through it, although while the struggle lasted all business was depressed except agriculture and where that was permitted without molestation it was no longer profitable.

When the war broke out Newtown was found like every other town on the Island, especially on the island west of Oyster Bay, to be hopelessly divided. The Newtown farmers saw their stock carried off by order of Congress to prevent it being used by the British and the news of the result of the battle of Brooklyn made it only too apparent that their property would never be returned. Some of their citizens, too, who formed part of General Woodhull's little force were captured along with that hero and sent to the prison ships. The British troops were visible in Newtown village on August 28 and the Whigs knew then that their doom was sealed. Those who could fled before the arrival of the redcoats, most of those who remained were seized and imprisoned or taken out of the town and their property confiscated. Feeling in the crisis rose high and a Tory thought it no disgrace to turn informer against his Whig neighbor, a proceeding which the latter repaid with full interest when his turn came in course of time. Newtown on the surface, at least, became intensely loyal and joined heartily in a petition which prayed that the whole of Queens County might be restored to royal favor. It was restored and Newtown raised a couple of troops of horse to guard its borders against the depredations of the despised Whigs. But the wages of loyalty was soon found terribly

exacting, exasperating, and begging. Martial law prevailed during the seven years of the "occupation" which followed the battle of Brooklyn, and the civil courts were suspended. Many troops were quartered at Newtown from time to time—the 17th dragoons, the Maryland Loyalists, the 42d Highlanders, the 33d regiment and a battery of artillery. The soldiers were mainly billeted in the houses of the Whigs, but the farmers, Whig or Tory, had to supply the army with their produce at a price named by the army officials, or see their oats, wheat, straw and provisions confiscated and themselves harshly maltreated by the soldiery or imprisoned, perhaps both. Robbery was a matter of daily occurrence and toward the end of the seven years life, liberty and property were held by the slenderest of tenures. Little wonder that Newtown, Whig or Tory, hailed the return of peace with many manifestations of delight.

While we do not think of Newtown as a religious settlement such as was Gravesend, or even as a theocracy like Hempstead or Jamaica, there is little doubt that the pioneer settlers were earnest God-fearing people, fully imbued with the devout spirit of New England. Still their purpose in leaving the land of the Puritan was to secure a stretch of fertile soil and earn a livelihood rather than to obtain any further religious freedom than the law or public sentiment there tolerated. Mr. Doughty, of course, might be cited to prove an exception to this, but while he had to leave New England mainly on account of his views on baptism, there is no evidence to show that he intended setting up a religious community when he settled in "Mespot." Indeed he appears more anxious to attain the dignity of patroonship rather than the barren honor of spiritual leadership. But his connection with Newtown was too brief to give full scope to his ambition, temporal or spiritual, while certainly the course of events showed that whatever his views may have been as to the founding of a little theocracy, they were not shared

by those who were his fellow-patentees in 1652. It has been asserted, however, that the first settlers were organized in a congregation prior to setting up their homes in Mespot and that accompanying them was their pastor, the Rev. John Moore. That this minister was among the pioneers seems undoubted, and it is very likely, nay it is certain, that he would preach to his neighbors and perform his holy offices among them; but there is nothing to show that he was accepted as their leader, that his voice and influence were all-important in their councils as was so often the case in other settlements. We are told that he preached in the "town house," which served him also as a dwelling, and which had been erected soon after the settlement was effected, but all that relates to him is so disjointed and meagre that his personality adds little to our history. He died in 1657, so that at best he was not permitted to enjoy for many years the associations of the community he had helped to found. It was not until 1671 that the first church building was erected in Newtown. The Rev. William Leverich was at that time the pastor and he is generally regarded as the first settled minister in the town. Mr. Leverich had quite a history before settling in Newtown, where his life work was destined to end, about 1694. It seems, however, that several years before that he had retired from the active duties of the ministry. He was a native of England, and after being educated for the ministry at Cambridge crossed the Atlantic in 1633 to become pastor of the church at Dover, N. H. He remained there two years or so and then, after holding several brief charges, became, in 1640, minister at Sandwich, Cape Cod, where, it seems, he took a particular interest in the work of spreading a knowledge of the Gospel among the Indians. He removed to Oyster Bay in 1653, where he had acquired some land, and was chosen as minister by the people at an annual salary of £15. He remained there for some two years as pastor and then became minister at Huntington, where he remained

until 1670, when he settled in Newtown. He seems to have been a man of singular ability, about as learned in the law as in the Gospel, and seems to have engaged in many enterprises outside of his sacred calling, and his lawsuit or lawsuits with his predecessor as religious teacher in Huntington still form an interesting story in the early annals of that town. Mr. Leverich certainly prospered in his worldly affairs and seems to have been much beloved in Newtown. His descendants are still among the most prominent citizens of Long Island.

The successors of Mr. Leverich at Newtown were amiable men, and the church prospered so that about 1697 or thereabout a house and lot were set apart for the use of the ministry. In 1703 the church was taken possession of by the Rev. Mr. Urquhart of the combined charge of Jamaica, Newtown and Flushing, under the orders of Lord Cornbury, just as in the case of the Jamaica church, and an effort was made to suppress Presbyterianism. The Rev. John Hampton was openly arrested in Newtown and imprisoned for attempting to preach without first obtaining a permit from the precious scamp who then represented the majesty of Britain—Lord Cornbury. In spite of this the Presbyterian flock was able to keep together and in 1708 the Rev. Samuel Pumroy accepted a call to the pastorate and entered upon his duties on September 18th, that year, although he was not ordained for some fourteen months later. Under him the church waxed strong and in 1715 it was received into the Presbytery of Philadelphia and built a new and much larger tabernacle, which seems to have been used for religious services from that date, although it was not fully completed until 1741. By that time, however, the labors of Mr. Pumroy were nearing an end, for he died in 1744. The most noted of his successors was the Rev. Simeon Horton, who held the charge for some 26 years. Then he retired and waited for the end, which came to him May 8, 1786. He had the mortification of seeing the church in which he had labored so long without a pastor (for

his successor, Andrew Bay, was not a success in any way and only lasted a couple of years), used by the British troops as a hospital, a guard house, and finally demolished. It says wonders for the steadfastness of the people that in 1787, four years after the last British troops sailed through the Narrows homeward bound, they commenced the erection of a new house of worship.

For many years after the zealous Mr. Urquhart captured the Presbyterian meeting

OLD FIRST PRESBYTERIAN CHURCH.
NEWTOWN, L. I.

house at Newtown, the story of the Episcopal Church in Newtown is bound up with the story of its progress in Jamaica and Flushing and has already been told in the sections devoted to these towns. It does not seem that at first the old meeting house was much used or that Newtown was regarded as much more than a preaching station. But in 1735 a building was erected for the use of the church and services were commenced in it although it was not completed until 1740. Newtown continued

part of the tripartite charge until 1797, when the Episcopalians attained the long sought privilege of having a minister of their own and the Rev. Henry Van Dyke entered upon the sole charge. Five years later he retired. Newtown then united with Flushing and the Rev. Abraham Clarke became joint rector. This arrangement lasted until 1809, when it was dissolved and Mr. Clarke was rector of Newtown until his death in 1810. The Rev. Evan Malbone Johnson became rector in 1814 and continued until his removal to Brooklyn in 1827, when he was succeeded by the Rev. George A. Shelton, who was rector for the long period of 33 years, from 1830 to 1863.

The first Dutch Reformed Church was erected in Newtown in 1732, but the congregation for several years thereafter was dependent upon the service of such ministers as might be sent them from New York or Kings County. In 1739 the people united with the other Reformed churches in Queens County and this arrangement continued until 1802, when the Rev. Jacob Schoonmaker became minister of Jamaica and Newtown jointly. He labored in Newtown until 1849 and the church thrived under him greatly and built in 1833 a new house of worship. But years began to limit even his great capacity for work, so he confined himself for the remainder of his days to Jamaica, and Newtown went forth alone and prospered under the care of the Rev. Thomas C. Strong, who was installed December 12, 1849.

As early as 1661 a school was held in the town or meeting house under the direction of Richard Mills and thereafter under a succession of high attainments. The children in the county sion of teachers, some of them apparently men were never without means of learning as much at least as the three R's, which was all that the American common school system aimed at until within comparatively recent years. As the population increased schools were established at different points and by 1740 there were no fewer than five in the town, and in

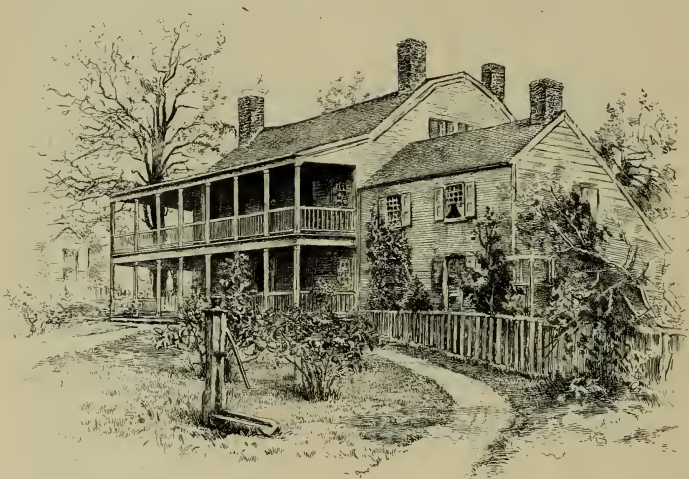

1762 an advanced school, where writing, arithmetic, the "Italian method of book-keeping by double entry," Latin and Greek were taught, was opened at Hallet's Cove.

After the Revolutionary struggle had been fought and won Newtown relapsed into its old quiet ways as an agricultural community and slumbered on. It had a population when the rule of Uncle Sam commenced of about 2,000: forty years later (in 1830) it had only increased by some 500. Communication with the outside world was difficult and dangerous on the one side and expensive and tedious on the other. The currents on the East River were treacherous and a knowledge of their peculiarities had never been thoroughly mastered even by those living on its banks, so that a voyage from Newtown Creek to the opposite shore might last an hour or take up the best part of a day, and the landing place depended not on the will of the passenger but on circumstances. All was well provided fair weather was vouchsafed; if not the simple trip might furnish terrors enough to enthrall a farm fireside for a generation to come. If the journey was made by land up to 1798 the means of accomplishment were few and far between, unless one had the command of horses and wagons. In that year, however, a "light, airy coachee, hung on springs," was put on the route between Newtown and Brooklyn, running through Maspeth, across Penny Bridge to Bushwick, Cripplebush and Bedford, and the cost for the trip was 3 shillings. The "coachee" carried seven passengers and left Newtown three days in each week. In 1805 the extension of the Cripplebush road brought Newtown more easily in touch with Brooklyn and in 1816 it was placed in direct communication with the Williamsburg ferry and so in easy reach, comparatively, of Manhattan Island. It was not, however, until 1854, with the opening of the North Side Railroad, that Newtown was brought into touch not only with Brooklyn and New York but with the outlying sections of its own territory

and began to make ready for the great advance which was in time to come with the trolley, railroad, rapid transit and annexation.

So far as the township was concerned the modern advance in population commenced in 1830, but little of that advance was felt in Newtown village. In fact it steadily began, almost with the opening of the last century,

is seldom used as very few of that denomination are to be found in this vicinity. It is supposed to be about 100 years old, but there is some reason to believe that it is even more ancient." But whatever its age it has long since disappeared altogether and so have most of the country homes of the merchants and others of New York which in the early part of the nineteenth century made it the best known

CLINTON HOMESTEAD.

to lose its primal place in the story of the township and to become quite a subordinate village.

Even Maspeth in time surpassed it. That early English settlement, almost as early as Newtown village itself, has had a most curious history. For years it was a stronghold of the Quakers, but that body abandoned it long ago. Writing in 1845 Dr. Prime said: "The only public edifice is an ancient Friends' meeting house which is now very much in decay, and

village in the township. Here De Witt Clinton had his country seat to which he was glad to retire at frequent intervals to think out his many schemes for the upbuilding of New York and to escape from the worry and wiles of the politicians, and one is almost inclined to think that the local statesmen were more numerous, more irrepressible, more zealous in their plans for emptying the public treasury either by way of salaries or appropriations than now. The old house is still standing,

seemingly in as good condition as when it was inhabited by Walter Franklin, Clinton's father-in-law, whose New York house was Washington's residence when he became President of the United States and whose name is still kept alive in Franklin Square, on which the Presidential dwelling stood. Many modern villas and cottages, even little settlements, have arisen in Maspeth since De Witt Clinton's day, but it still retains much of its rural aspect except in the spots where manufacturing has sprung up.

To-day it would really be termed a manufacturing village, and has been such since 1842 when John Murch began the manufacture of cord and twine, and that business is now carried on in several establishments, the industry giving employment to several hundred hands. In 1852 Cord Meyer started a factory for producing animal carbon. Oil cloth making was another industry, established in 1863, and since then a number of other establishments of various kinds have given employment to a population estimated to-day at 2,500. During the past few years the building up process going on so unceasingly in New York and Brooklyn has added what may be called a new industry to Maspeth in the opening up of picnic grounds and athletic grounds which attract at intervals large crowds of visitors each summer. It is well supplied with churches and can now be so easily reached that there is no doubt its popularity as a site for homes and factories will steadily increase.

Middle Village is another old settlement, but it is mainly given over in these later days to cemetery purposes, although it supports a living population of some 1,300. It received

its name from its geographical situation, being midway on the old turnpike between Williamsburg and Jamaica. In it was built in 1785 the first Methodist church on Long Island, but that structure has long since disappeared. The late Joseph Wesley Harper, of the famous New York publishing house, had his home in Middle Village from the time he reached manhood until his death in 1871, and did much to improve the amenity of the village as a place of residence. The Harper family originally hailed from Newtown, where the father of the founders "J. & J. Harper" was long a farmer. Corona has lately come into prominence as a manufacturing village and home site, having been much favored by the land boomers, and as much may be said of Laurel Hill, full of memories of the old Alsop and Rapalye families and which began to be laid out for "improvement" in 1853. About the same time Woodside became known as a desirable place for residential purposes and several elegant villas were erected. It dates from 1850, when the late J. A. F. Kelly came north from South Carolina and sought retirement from active life amid its beautiful surroundings. It still continues to be a village of homes and its business interests are mainly confined to floriculture and market gardening. East Williamsburgh, Charlotteville, Glendale, New Suffolk and several other settlements are among those likely to become soon prominent through the impetus which rapid transit and consolidation have even already brought about. What may be called the old part of Newtown township has an interesting history in the past, but its future promises to surpass it in incident, in importance and in real achievement.

CHAPTER XLVI.

JAMAICA.

THE LITTLE REPUBLIC OF RUSDORP—MINISTERIAL TROUBLES—MR. POYER'S TRIALS—
THE REVOLUTION—EDUCATIONAL AND BUSINESS PROGRESS.

TO Governor Stuyvesant must be awarded the credit of bringing this town into existence, the old village of which is destined to become in the near future one of the great railroad centres with the usual accompaniments of trade, business and industries of all sorts, of this part of the continent. Stuyvesant issued his first warrant for settlement March 21, 1656, and a more ample and more imposing document in 1660. When Gov. Nicolls sent Stuyvesant to enjoy the comforts of his Bouwerie, he confirmed all the rights and privileges which had been granted Jamaica by a deed dated Feb. 15, 1666, and Governor Dongan twenty years later gave it another charter mainly for the sake of the fee involved. On March 7, 1788, it was re-organized as a town by the state government and so it remained until it was swallowed up in the Greater New York.

Such in brief is what might be called the municipal history of Jamaica from beginning to end. There is much doubt about the origin of its name, but it is generally accepted as being a modernized rendering of the old Indian name Jameco—the name of a small tribe located on Jamaica Bay. How or when this name was first applied is not clear. The Dutch authorities called it Rusdorp—town in the country; and this was long its official designation. Some of the settlers called it Canorasset, others Crawford, but Jamaica, by whoever in-

troduced, kept to the front and remained. Very likely it was called Jameco before the white man came along. But there have been all sorts of surmises and speculations over the name and the etymologists as usual have given their fancy free reins over it with wonderful results: even so staid a personage as the late Dr. O'Callaghan, the famous local historian, formulated a theory that the word was derived from the Indian name for beaver as translated by the French "Annique."

Where the first settlers came from is a point that has not been exactly determined, but there is little doubt that they came over from Connecticut with the view of establishing a religious colony, or rather a colony where religious tolerance might be enjoyed. Those who signed the request to Stuyvesant, therein described themselves as "inhabitants of the town of Hempstead and subjects of this province," so it is very likely that some of them had been for a time residing in Hempstead and spying the land. They told the Governor that they wanted "a place to improve our labors upon; for some of us are destitute of either habitation or possession, others, though inhabited, find that in the place they are they cannot comfortably subsist by their labours and exertions." So they asked for the Governor's consent to settle on a tract of land "called Conorasset and lyes from a river which divideth it from Conarie see to the bounds of heemstead,

and may contain about twenty families." This tract they had already "bought" from the Indians for "two guns, a coat and a certain quantity of powder and lead." Stuyvesant had to be petitioned three times before he consented, but when he did confirm the request he did it in a most handsome manner, giving them permission to elect magistrates and conduct their affairs on the same lines as Brooklyn, Midwout and other Dutch towns. The names of the petitioners were Robert Jackson, Nicholas Tanner, Nathaniel Denton, Richard Everit, Rodger Linas, Daniel Denton, John Eazar, Abraham Smith, Thomas Ireland, Thomas Carle, Edward Spray, John Rhoades, Andrew Messenger and Samuel Matthews. These fourteen may therefore be regarded as the first citizens of Jamaica. By 1660, when Stuyvesant gave the town a regular charter and the name of Rusdorp, there were some forty additional freeholders in the town. It was a little republic in itself; its town meeting regularly settled all its affairs and even regulated who should and who should not be admitted to citizenship. One Benjamin Hubbard, for instance, in 1649 had bought a house lot without having first obtained the sanction of the town meeting, so it required him to give assurance of his good behavior. Of course with such additions to the population more land had to be secured from the local Indians from time to time, and we find several records of purchases made in exchange for such articles as soldiers' coats, kettles, "bottles of licker," powder, lead, guns, blankets and the like. The value of the Dongan patent of 1686 was that it clearly defined the limits of the township and showed that several of the original patentees were still prominent in the town. The names given in this patent were, Nicolas Everit, Nathaniel Denton, Nehemiah Smith, Daniel Denton, John Oldfields, William Creed, Bryant Newton, Benjamin Coe, Jonas Wood, William Foster, John Everit, Edward Higbie, Daniel Whitehead, John Carpenter, John Furman, Samuel Smith, Richard Rhodes, Thomas Lamberson, Joseph Smith, George Woolsey, John

Baylis, Thomas Smith, Wait Smith and Samuel Mills. The town government seems to have gone at once into operation on receiving Stuyvesant's first permit (it should hardly be called a charter, although in effect it was one). The town meeting, as has been said, determined everything, subject, of course, to the Governor's veto, but Stuyvesant seems to have given the English settlements much more liberty than he did the Dutch, and so practically the town meeting of Jamaica was supreme within its bounds. Attendance at these meetings was compulsory and absence without cause was the subject of a fine. A keeper was hired in 1661 to look after the cows and calves of the lieges, thus saving a lot of individual time and worry, and they gathered in their crops in squadrons under appointed officers for mutual protection against any overt effort on the part of Indians. It must be said, however, that the settlers did all they could, according to their light, to deal justly with the red man, and held frequent conferences with his representatives while the conclusions seem to have been mutually satisfactory. In 1662 they hired Abraham Smith, one of the original patentees, to beat the drum on Sundays and on the days of public meetings. They laid aside a lot ten rods square as a burying place and this, in 1668, they had reverently enclosed with a wooden fence.

The glimpses we get of the community show it to have been prosperous from the first and steadily advancing in material wealth, reminding us in many respects of the English settlements on the eastern half of the island. The population steadily increased, although as early as 1664 the adventurous, roving spirit of some of the early settlers asserted itself and Daniel Denton, John Baylis and Luke Watson headed a new migration which passed over into New Jersey and there commenced the settlement of Elizabethtown. Denton, however, seems to have returned within a few years to Jamaica and resumed his original holding there. It is worthy of notice that in the petition to Gov. Nicolls for a tract of land on

which to settle in New Jersey, Denton and his associates dated the document "from Jamaica, commonly so called." From this paper, in which they speak of the "decease of the Dutch interest" in the Province, we see how thoroughly English at heart were the pioneer settlers at Jamaica. They had fled from New England intolerance and from nothing else and built up right under the official dictatorial regime of Stuyvesant as complete a little republic as was any of the communities in Massachusetts which sent representatives to the General Court. In all essential matters they were masters of their own municipal destinies—and so continued for many years.

While not a professedly religious community like Gravesend, or enrolled under clerical leadership like Southold, there is no doubt that from its inception Jamaica was a theocratic society—one in which the affairs of the little commonwealth were regulated by the teachings of the Scriptures rather than the statutes of their High Mightinesses. The life of the community revolved around its church and the recognized fathers of the church were the natural leaders of the people, so that for a long time after the settlement was begun the story of its religious development is really the entire story there is to tell. Stuyvesant's permission for settlement was dated March 21, 1656, and it was not until 1662 that a town meeting decided to erect a house of worship, a meeting house, and united in a call to the Rev. Zachariah Walker to join with them and become the first minister of Jamaica, which he accepted. It is not to be imagined, however, that during the four or five years which elapsed before this preacher that the community was without any regular religious services. Undoubtedly one or more of their number was quite capable of conducting public worship and fulfilling all the duties which could be performed by a lay preacher. Services would be held in any convenient barn or in the winter time in any hospitable kitchen. With the erection of the meeting house, however, the people had a place where they could worship God or

discuss affairs of state or assemble for any purpose, religious or secular, as they saw fit. The little frame edifice (20 feet square) was at once the church and the Town Hall. About the same time a house was built for the prospective minister and a lot laid aside for his use. It would seem that an effort was made to try the experiment of listening to one of Stuyvesant's ministers before finally calling one from New England and accordingly in answer to a petition Stuyvesant sent there the Rev. Samuel Drisius, who was able to preach in English and who, on Jan. 8, 1661, delivered two sermons and baptized eight children and two women. Probably all this was done to please the irascible Governor and to pave the way to the peaceable settlement of the minister of their choice. Mr. Walker seems to have won the affections of his people, although one would think from the records that he was as much a farmer as a clergyman. He received, however, much "encouragement" in the way of having his stipend increased and the like, but he decided on trying another sphere of operations and in 1668 removed to Connecticut. The Rev. John Prudden, a Harvard graduate, then became Jamaica's minister at a salary of £40 and the use of the minister's house and land. He was a Congregationalist and the majority of the citizens were Presbyterians and they seem to have been unable to agree, although what the real difference was between the two, considering the time and circumstances, it is difficult to realize. It is not so stated, but probably the people did not want any connection with the Congregational churches in Connecticut, while Mr. Prudden at that time regarded New England as the hub of the entire religious system. The Jamaica citizens seemed to have appreciated his services and were desirous of retaining him, but he retired in 1674. His successor, the Rev. William Woodruff, whose salary was fixed at £60, did not seem to please the people. Mr. Prudden, on full reflection, thought he might go further and fare worse, so in 1676 Mr. Woodruff seems to have been released and Mr. Prudden

once more presided over the table in the meeting house. It was an amicable arrangement on both sides. Mr. Prudden became a Presbyterian and his salary was to be £40 a year. Besides, he had the use of forty acres of meadow land and 19 of the brethren agreed each to bring him a load of firewood each year. Then he was housed in the minister's home and to encourage him it was agreed that if he remained as minister for ten years the house and lot which had been set apart for the use of the minister should become his own property. Under him the congregation prospered. In 1690 a new and more commodious meeting house was erected—60 feet long and 30 feet wide, and a year later the minister's salary was raised to £60 with all firewood and other privileges. In the following year, however, he accepted a call to Newark, N. J. His ministry had extended six years beyond the ten which made the minister's house and lot his personal property, but before leaving he transferred the holding to the congregation, receiving in return land elsewhere. Jamaica seems to have been invariably liberal in its treatment of its ministers and to Mr. Prudden's immediate successor, the Rev. George Phillips, the promise was made that if he should remain in charge until the close of his life his annual salary of £60 would be continued to his widow. The minister's salary being paid mainly in produce, or as a result of sales of produce, sometimes a little difficulty arose in connection with the collection, owing to the dilatoriness of human nature, but such details were to be expected.

In 1699 a stone meeting-house was built partly by subscription among the people, and when that source failed by a rate passed by the trustees. By that time, it should be noted, several of the ratepayers were opposed to the Presbyterian form of worship and refused to pay the rate, but payment was finally made compulsory. It was a small square structure, forty feet square, surmounted with a belfry. Its interior was plainly fitted up with high-backed, uncomfortable pews, and a high pul-

pit, high enough to bring the preacher on a level with the gallery, on the south side, had the usual huge sounding board, an arrangement which good Dr. Prime used to think was an arrangement of the devil. Much of the history of Jamaica centered around the church until it was demolished in 1813.

Its historic interest began immediately on its completion. The Rev. John Hubbard, who had been ministering to the people for some time, was formally called to the charge in January, 1702, and was duly installed and given possession of the minister's house and lot. He had hardly more than got accustomed to his new dignity when he was dispossessed of both church and manse in the summary procedures already recorded in a previous chapter of this work.

By that time, it should be remembered, the Presbyterians were no longer the sole dictators of Jamaica. The growth of population had long overstepped the old necessity of submitting a certificate of character on the part of prospective settlers to the town meeting, and people had become citizens to whom Calvinism was a thing abhorred.

As early as 1657 we find Robert Hodgson, a preacher of the Quaker persuasion, visited Jamaica and was lodged in the house of Henry Townsend (one of the first petitioners to Stuyvesant for settlement privileges), who for his hospitality was promptly fined eight Flemish pounds. A few months later Townsend, who seems to have adopted the views of the Society of Friends, repeated his offense by housing another preacher, and was again fined, this time at a higher figure. But Townsend never failed in his hospitality, and welcomed each wanderer and gathered a congregation to listen to the preaching of the new doctrine until Stuyvesant, tired of hearing such contumacy, sent down to Jamaica a squad of soldiers to see that his edicts were respected, and then Townsend and several others removed to Oyster Bay and so placed themselves beyond Stuyvesant's jurisdiction. But in spite of soldiers and local opposition the number

of Friends grew. They stubbornly held their views in spite of opposition, declined to pay the rate imposed for the support of the "priest of Jamaica," and had their goods distrained as a result, but held their ground. As a result their services were more numerously attended year after year, and Jamaica was declared in 1686 a place for holding quarterly meetings, although it was not until 1706 that they erected a meeting-house.

About 1702 a Dutch Reformed congregation seems to have been organized, meeting in the stone church, which, as has already been pointed out, was never intended, even by the Presbyterians themselves, for their sole use. It was not until 1716, that the Reformed Dutch people erected a little tabernacle of their own.

The year 1702 also marks the formal introduction of the Episcopal body, when, according to the authorities of that denomination, Jamaica, Newtown and Flushing were spiritually united under one rector. After the forcible ejection of Mr. Hubbard the Rev. William Urquhart continued, in spite of strong opposition on the part of those he styled "nonconformists" and sometimes amid much and sometimes bitter controversy, to hold the church and the minister's house until his death, in 1709. Mr. Hubbard died in 1705, and was succeeded by the Rev. Francis Goodhue. We do not find whether he was elected to the pastorate by the people or was simply set down among them by the rascal who then represented Queen Anne. But he must have been a rather weak-kneed brother or he would never have accepted such a document as the following prior to entering on his duties:

By his Excellency Edward Viscount Cornbury Captn Genl & Govr in Chiefe of ye Provinces of N York, New Jersey & of all The Territories & Tracts of Land Depending thereon in America & Vice Admiral of the same &c.

To Mr FRANCIS GOODHUE, Greeting.

I do hereby Licence & Tollerate you to be Ministr of the Presbyterian Congregation at

Jamaica in Queens county on the island Nassaw in the sd Province of New Yorke & to have & Exercise the free Liberty & use of yor Religion pursuant to Her Matys pleasure therein signified to me In her Royal Instructions & during so Long Time as to me shall seem meet & all Ministers & others are hereby Required to Take notice hereof Given under my hand & seale at ffort Anne in New York this day of this Instant January in the fourth year of Her Matys Reign Annoq: Dni 1705.6.

CORNBURY.

By His Excys Command

WILLIAM ANDERSON D secy

Goodhue only lasted about a year and then went home to New England to die. With his departure the Presbyterian flock had no shepherd until in 1710 the Rev. George McNish entered upon the work of the ministry among them. In July of the same year the Rev. Thomas Poyer was appointed Rector of Jamaica, Newtown and Flushing under the Episcopal banner. Then the battle royal between the two forces was on. Both of these men were of marked ability and of earnest devotion to their work. Perhaps McNish was the brainiest of the two, the most brilliant of the two, but Poyer was one of those diligent, plodding individuals whose dogged perseverance makes up, in the way of actual accomplishment, for genius. It is not certain whether Mr. McNish was born in Scotland or in the north of Ireland, but his name demonstrates clearly that he was of the Scottish race. Mr. Poyer was a Welshman and came direct from the Mother Country to at once enter upon his duties here. Mr. McNish came to America in 1705, in company with the sainted Mackemsie, and with him assisted in the formation of the Presbytery of Philadelphia—the first in North America, and to him is generally awarded the credit of bringing about the first Presbytery on Long Island, in 1717. However, he remained a member of the Presbytery of Philadelphia until his death, in 1722.

McNish seems to have been a natural lead-

er, and if Poyer lacked that essential quality to success in public or professional life, he had at least the backing and support of the representatives of the Royal Government, the authorities of the church and the powerful society in London which was then engaged in sending out men like him as missionaries to "propagate" the Gospel in foreign parts. Such were the two men who were destined to oppose each other in support of their respective standards in Jamaica for several years. The echoes of the battle rolled over Newtown and Flushing, over all of Queens County, in fact, but Jamaica was the battle ground; there the leaders resided and there was the centre of attack, the prize for the victor, the little stone church.

Certainly Mr. Poyer had officially the most exacting position of the two. Mr. McNish had his energies concentrated in Jamaica, and although he made his influence felt throughout Long Island, and seems to have travelled all over it doing missionary work, his parochial labors must have been light. But in Mr. Poyer's case there was steady parochial work all the time and a host of other troubles—pecuniary mainly—while the opposition confronted him at every step. From some of his letters we get a capital idea not only of his own little troubles, but of the condition of the places over which he was set to hold spiritual supervision.

The first position in the struggle was won by McNish. Settling in Jamaica before the arrival of Poyer, he took possession of the church and for some reason or another, Mrs. Urquhart, the widow of Poyer's predecessor, vacated the minister's house and turned it over to McNish. Gov. Hunter saw to it that the church was turned over to Poyer, but McNish, "an independent North Britain preacher who has had the assurance in the face of the contrary to aver that the Bishop of London as no power here," held on to the dwelling and the people, the ratepayers, not only refused to pay Mr. Poyer his stipend,

but actually handed over part of it to Mr. McNish. To oust McNish from the dwelling a suit at law was necessary and Gov. Hunter seemed unwilling at first to spend his money in that manner: besides the Judge before whom the matter would likely come was a Dissenter. Afterward he seemed willing to aid in bringing the case into a court of law, but by that time Poyer hesitated about following such a procedure and aroused the ire of the Chief Executive. It seemed a paltry case throughout, one in which Poyer had the worst of it—his salary unpaid or only partly paid, his dwelling withheld, his appeals disregarded at headquarters, his congregation growing slowly, and personal indignities being heaped upon him on frequent occasions. But for gifts of money from the home society it is difficult to see how he could have maintained the struggle. His brother clergy, however, stuck to him all through and really forced the authorities to take some action—getting some special instructions in his case from the Queen in Council; but even all that had paltry practical results. Even a suit at law which he instituted for the recovery of his salary dragged along so slowly as almost to banish all hope of legal relief. Here are two of his letters to the Secretary of the Society for the Propagation of the Gospel, whose missionary he was, which are pathetic in their presentation of his case:

Jamaica L. I. Novr. 2d 1714.

HONORED SIR—It will be five years the last day of next month since my most honored patrons the Venerable Society were pleased to order me to embark to proceed on my Mission which I obeyed and embarked that same day but there were more hindrance than one that detained the Fleet 'till the roth of April and in the interim I was tossed about from one expensive harbour to another without my family having my Wife visited on board with two fits of sickness and obliged each fit to bring her ashore for the help of a Doctor which was not a little trouble & charge to me and besides all this the £20 I was forced to pay for our passage & the twice laying in

of sea Stores put me to very great straits the 10th of April we left the Lands end of England and had a very tedious and uneasy passage of 13 weeks lacking two or three days. In this passage I had great experience of the goodness of God and often had occasion to reflect on the Royal Psalmist's expressions in Psalm 107. 23 &c where he has these words— They that go down to the Sea in ships and occupy their business in great waters these men see the works of the Lord and his wonders in the deep &c. I saw indeed & wondered and often expected in the great tempests we had to have been swallowed up of the merciless waves, but when we were in our trouble and almost brought to our wit's end We cried unto the Lord and he was graciously pleased to hear us and bring us thro' not into the haven where we would have been yet unto a Christian shore yea unto the Island where my Mission was to terminate about 100 miles from my Parish Here the ship and part of her Lading was lost on the 7th July but not the life of one person.

The week following I did set out for this place where to this time I have not ceased (according to the ability that God hath given me) to instruct the Flock committed to my charge I have laboured faithfully in my Lord's Vineyard and in my private advice from House to House as well as public discourses I have exhorted them to faith in Christ and amendment of life and to live in Love I have likewise endeavoured to possess them with as due a sense of the fundamentals of our religion as I could and the Great God has vouchsafed to give such a blessing to my poor yet well meaning endeavours the number of the communicants of the Church of England here before my time never exceeded 30 I have had above 60—of the Independents who are the most numerous in my parish I have gained some and of the Quakers more some that were very rigid Independents since I came and that have reflected very much on our Church and constitution are now very frequently my hearers; and among the Quakers where my predecessor, Mr. Urquhart thought it not worth his while to go I seldom have so few as fifty and often more than one hundred hearers.

And notwithstanding I have all along discharged the duties of a Parish Minister yet have I never received one penny of the Salary due to me by the laws of the Colony how to come by it I can't tell; and without it or an

augmentation of my Salary from my Right Honble & Right Revd Patrons I cannot live in this dear place. I live very near much below the character of a Missionary and yet am running myself in debt. I am spending my strength & yet cannot get a competency wherefore I humbly beg the Venerable Society will be pleased to consider my condition, it is very necessitous indeed.

But I will trouble you with no more at this time but refer you to the Revd Mr Vesey who I understand is safely arrived in London how I have led my life here and in how mean circumstances I am he can if you'll be pleased to enquire of him very well inform you.

I have no more to add but my most sincere & hearty prayers to the Lord to bless prosper & keep my most honored Patrons and when the time of their departure hence shall come may God who is the rewarder of those who make it their study and delight to enlarge Christ's Kingdom here take 'em to the eternally happy enjoyment of himself in Heaven is the prayer of

Honored Sir &c &c

THOS. POYER.

Jamaica 15th Jany 1716-17

HONORED SIR—My suit at Law for the recovery of my Salary here is as backward as my last gave you an account, so that I have nothing new to add on this head but that one of my lawyers is dead which put a stop to it last Term & what progress will be made in it the next I cannot tell, you shall be acquainted of the proceeding by every opportunity.

The continuance of my troubles (which alas have no prospect of an end) and the tediousness of this lawsuit have almost wearied me out, I find a daily decay in myself thro' the continual fatigue I undergo in this large parish which consists (as I have formerly observed) of Three towns which I serve alternately & how I have discharged my duty to the Souls I am entrusted with is well known to my good God and Great Judge & will I hope be testified by some of my people.

I humbly beg the favour of you to give my most humble duty to my most Honble Patrons & acquaint them that their poor Missionary is labouring under many difficulties & reduced to the want of a great many necessities; two Gowns and Cassocks I have already worn in their service a 3d is worn very

bare and my family wants are so many and pressing that I know not how I shall procure another.

But pray give me leave to assure you that I am not reduced to this necessitous Condition thro' any extravagance in my way of living, 'tis well known to many here Dissenters from us as well as friends to the Church that I am contented to want many necessities the better to be enabled to be hospitable, which is expected from the established Ministers here and which with my being conversant with them hath (I praise God for it) removed the prejudices of some and effectually brought others to us.

But under all my troubles this bears me up and is great comfort that God is so good to me as to continue his Blessing on my endeavours I have lost none but have gained many the number of my hearers consisting of about 400 & Communicants above 3 Score. I have this last week gained two families from the Anabaptists & Quakers and baptized them. Many are often coming over to us and I am assured more would, were there according to their desire a Minister of the Church of England to preach to them in this Town every Lord's day.

But this I leave to the consideration of the Honble Society and hope they will be pleased to consider my necessities and administer a little comfort to me in my troubles.

I pray God to bless guide preserve and keep my most honored Patrons may they be enabled to send out many faithful Labourers into Christ's Vineyard & amply rewarded for all their pious and good deeds. This is what offers at present from

Your most humble Servt
THOS POYER.

February 6th 1716

Mr. Poyer's appeals to the home authorities for help were backed up by his own people in the following statement which was forwarded to London:

We humbly pray leave to lay before our Honble Patrons a true state of the case of the Church here and that as briefly as the nature of the thing will bear.

The Independents here being the most numerous do annually choose the Church Wardens & Vestry out of those of their own persuasion who are the most inveterate against

the Church, every freeholder having a vote by Virtue of an Act of Assembly for settling the Ministry made in the year 1693 in which act there is a clause empowering them to call a Minister, the act also provides that such a Minister shall be inducted & established to entitle him to the Salary of £60 per annum given by the same Act.

Now this Dissenting Vestry & Church Wardens have (as no other could be expected of them) after the death of the Revd Mr Urquhart (who enjoyed the Glebe & Salary undisturbed for about six years) called one Mr Geo: McNish who because of that call has seized upon the Parsonage House & Glebe pretends to all and has actually received some part of said Salary. This call is the only argument on which they insist & on pretence whereof they defraud the rightful minister both of the Glebe and Salary contrary to the known laws and continued practice of all the other places in this Province that stand upon the same foundation. To confute therefore their absurd notion the case may be stated thus. In Feb 1702 the Vestry & Church Wardens (being as always Dissenters) called one Mr Hubbard a Dissenting Minister (one whom some of us have heard declare it a sin to say the Lord's Prayer). In the year 1704 Mr Urquhart was sent here by the Venerable Society & Bishop of London and was immediately inducted and established by the then Governor of this Province the said call given to Mr Hubbard (who never did officiate as Minister of the Parish) being deemed to be invalid because the person called was not qualified to accept & this proceeding of that Governor was declared to be right by another Act of Assembly in 1705 for the better explaining the former Act—Thus in like manner after Mr Urquhart's death as is said before they called the said Mr McNish who being a Dissenter like the other not qualified to accept thereof, our present Governor for the reasons aforesaid on the arrival of Mr Poyer immediately caused him to be inducted and established by the Chaplain Mr Sharpe on the 18th day of July 1710 which we think (with submission) makes the matter very clear that the Salary & Glebe can belong to none but him; for the Cure must not lie vacant for want of a call or presentation & not to call at all or to call a person in himself incapable of accepting is all one. And it can never be supposed that the Law intended any other than an Orthodox Minister for if otherwise nothing

but confusion must ensue about the disposal even amongst the Dissenters themselves all having an equal right.

To this false argument of the Church Wardens & Vestry (as well as their principles) may be attributed the many affronts by them at sundry times given to our Minister even to the excluding him from sitting in the Vestry contrary to the Governors express Injunctions from the Crown signified to them.

Yet notwithstanding the imperious behaviour of these our Enemies who stick not to call themselves the Established Church & us Dissenters we can with Joy say the Church hath increased very considerably both in its number of hearers & Communicants by the singular care pain and industry of our present Labourious Minister Mr Poyer who notwithstanding the many difficulties he has struggled with has never been in the least wanting in the due execution of his Ministerial Function but rather on the contrary has strained himself in travelling thro' the Parish even beyond his strength & not seldom to the prejudice of his health which is notorious to all the Inhabitants for almost 7 years last past in all which time he has not received one farthing of his Salary allowed him by the laws of this Province nor any private contributions that by the nicest search we can find out except about £18 (this Country money) which was presented to him by some of his people at his first arrival here purely on the account of the tediousness of his voyage from England & his having with his family been shipwrecked on this island about 100 miles from his parish and at divers times since Gifts on the whole not amounting to Fifty pounds.

A year later Mr. Poyer reported a little progress in spiritual matters, but the situation unchanged in other respects. Writing to London, under date of October 24, 1717, he said:

Jamaica, October 24th, 1717.

The State of the Church in this Parish is much the same as my last gave you an account of saving that I had two new members added to it since, & baptized besides several Infants & some adult persons.

And here I must desire you to pardon me while I acquaint you that I have undergone more trouble in the discharge of my Ministry here than I am able to tell you—for besides

the frequent abuses and affronts I receive from some of the Enemies of our Constitution besides that they make it their constant endeavor to tire me with their ill usage and to starve me as some of the most inveterate among them do sometimes express themselves; the service of the three towns which this Parish consists of bears hard upon me, and affords me as much business as I am able to go through with. I serve them by turns every other Sunday besides frequent Lectures on week days. Now to do this and to visit my people which I am often obliged to who live distant from me many of them about 12 miles, I am necessitated to keep two horses which is very expensive & troublesome to me & consumes me more Clothes in one year than would serve another that is not obliged to ride for 3 or 4. In Newtown & Flushing for want of the convenience of private houses I am forced to make use of Public ones which is a very great charge to me for I bring some of my family generally with me, If I did not they would be the half of the year without opportunities of public Worship.

Mr. McNish held the fort—the house and glebe—until his death, in 1723, but the passing of that doughty antagonist made no difference in Mr. Poyer's worldly prospects. In fact they were worse, for the Presbyterians were actually at law with him for the recovery of the church building, and in this they were finally successful. Tired of it all, Mr. Poyer became anxious to give up the struggle, and wrote a touching letter to London asking to be relieved. The letter was dated June 16, 1731:

By this opportunity I beg leave humbly to represent to my Honble Patrons the Venerable Society for Propagating the Gospel in Foreign Parts that I have been their Missionary here 21 years & may without incurring the imputation of boasting say that my diligence in the discharge of my functions has been little inferior to any I pray God to give a blessing to the seed sown but so it is that besides the great and almost continual contentions that I have struggled withal amongst the Independents in this parish having had several law suits with them before I could have the Salary which the Country has settled upon the Minister of the Church of England several

other law suits for some Glebe lands which we have lost and at last even the Church itself of which we had the possession 25 years is taken from us by a trial at law (with what justice I can't pretend to say) tho' I say I have endeavored as patiently as I could to bear up under all these trials besides the loss of two Wives & Several children yet the infirmities of old age bear very hard upon me insomuch that I find myself almost unable to officiate at the three towns of Jamaica, Newtown and Flushing as I have hitherto done and which is absolutely necessary for the Minister of the Parish to do.

The intent of these are therefore to beg that my distressed state and condition may be laid before the Venerable Society and that they will be pleased to permit me to quit my Mission and to return to Great Britain as being for the reasons aforegiven not capable of bearing such fatigues and discharging my duty as I have done for so many years in this place. I humbly beg of my most honored patrons to consider my case & circumstances & I remain &c

THOS FOYER

His resignation was accepted, but before the arrangements were completed he was called higher and passed away January 15, 1732.

We must now return to the Presbyterian camp. Mr. McNish, broken in health, seems to have either retired from the active work of the ministry a short time before his death or to have obtained leave of absence, for he passed away at Newtown, New Jersey, March 10, 1722: It was under his successor, the Rev. Robert Cross, "an Irish gentleman," Thompson called him, that the crowning victory of the restoration of the old church was won. The dissenters—Presbyterians and Quakers—could not, however, avoid the payment of the salary for the maintenance of the Episcopalian minister, and this salary was paid out of the rates with grumbling and sometimes only after a legal process had been indulged in. The Quakers invariably paid under protest, when they paid at all. The result of the Revolutionary War put an end to all this.

In 1738 the Rev. Walter Wilmot, one of the best beloved of Jamaica's ministers, entered upon his work in the little stone church.

His ministry was spiritually a success, and the historic tabernacle had all it could do to hold the worshippers. Under him the local Presbyterians lost much of the harshness which had come to them as a result of more than a generation of fighting with Friends on the one hand and Episcopalians on the other. They had won the victory and Mr. Wilmot was essentially a man of peace, a man who had taken no part in the warfare and so was better able to heal up the wounds among the laymen, the result of years of friction. He was a native of Southampton and had married a daughter of the Townsend family, a family which had been locally famous for its devotion to the doctrines of the Society of Friends, even before that society was fully organized. She was a devoted Christian and on her marriage openly embraced the Presbyterian views held by her husband. His ministry was destined to be a brief one. Mrs. Wilmot died February 24, 1744, in the twenty-third year of her age, and her husband joined her on the 6th of August following, when in his thirty-fifth year.

Under a succession of ministers and itinerant preachers or students designated as "stated supply," the cause of Presbyterianism barely held its own in Jamaica for a long term of years after Mr. Wilmot passed away. At times the membership fell off greatly, and in 1761 we read that it had but twelve communicants. There were several causes for this. The preachers were, as a rule, able men, but there was continual difficulty in the payment of the stipend, and there were the usual divisions in the congregation itself, so common in the history of Presbyterian societies, which led to schisms of more or less importance. During the Revolution the minister was Matthias Burnet, who was installed in 1775, when in the twenty-sixth year of his age. He seems to have been an amiable but rather a weak brother, had married a lady belonging to an Episcopalian family and was opposed to the Revolutionary movement. It was to his pro-British sentiments, however,

that the little stone church was saved, during the occupation after the Battle of Brooklyn, from the desecration which befel most of the other places of worship on Long Island. When the struggle was ended the feeling against him on the part of the people generally was so intense that he was compelled to resign. He removed after a time to Norwalk, Connecticut, where he accepted fully the views of the Episcopalian body and became rector of one of its churches. We are told, however, that he paid an annual visit to Jamaica, and in 1790 preached to a large congregation in the stone church. That fact is significant as showing how early the first bitterness engendered by the great struggle had passed over—so far as Jamaica was concerned.

The stone church served until 1813, when it was pulled down and a more commodious structure was erected in its place and opened for worship in January, 1814. At that time the Rev. Henry Wood was the pastor.

The English Church, even after it had lost the stone building and turned forever from all thoughts of possessing it again together with the glebe, seemed to wax in strength, slowly, but none the less surely. Its official position was of itself a tower of strength, and the payment of the stipend was about as well assured as anything worldly could be. The Rev. Thomas Colgan, who was the successor to the unfortunate and long-suffering Poyer, and who entered on his duties January 31, 1733, was a much more diplomatic and congenial gentleman. He aimed to make friends all around and to antagonize no one and appears to have succeeded. He seems to have accepted the situation as he found it and began holding services in the building which then served as a court house. The old animosity seemed to die out rapidly, the law-suits ceased, his stipend was paid as the law directed and he slowly built up a congregation. Six weeks after he began his work he was able to report that 200 persons attended his services in Jamaica. The court house soon proved too small for the work, and with quite

an effort, aided by help from New York and elsewhere, the people secured a lot and erected a building for their own use. Under the name of Grace Church it was opened for service April 5, 1734. Governor Cosby and his family attended in state, the military lined the front of the building and the throng was so great that many persons had to be turned away. It was a memorable occasion—one which would have cheered the heart of poor Mr. Poyer beyond measure and set Mr. McNish to measuring out unstintedly the vials of destruction. Many gifts were made to the church, notably a Bible, Prayer Book, surplice and pulpit and communion table cloths by the wife of the Governor. After such an auspicious opening Grace Church flourished. Here are some extracts from Mr. Colgan's letters to the London society which used to get such dolorous reports from Jamaica:

Jamaica Novr 22d 1740

We have yearly for these seven years last past increased in Church Members, so these buildings are generally well filled in time of Divine Service, & the worship of God is duly performed with decency and good order, the several sects which are around us do look upon the Church with a more respectful eye than formerly, there being not wanting either in myself or people any Christian like or prudential means necessary to form a reconciliation & union amongst us, some itinerant enthusiastical teachers, have of late been preaching upon this Island the notorious Mr Whitfield being at the head of them & among other pernicious tenets, have broched such false & erroneous opinions concerning the doctrine of Regeneration as tend to the destruction of true religion & of a holy and virtuous life and therefore I take this opportunity to beg that the Society would be pleased to bestow upon the people of this parish a few of Dr Waterland's pieces on that subject, & of his Lordship the Bishop of London's Pastoral letters upon lukewarmness and enthusiasm.

Jamaica Decemr 15th 1741

However in the mean time be pleased to accept this general account of the State of my Mission there being three Churches belonging to my Cure, that of Jamaica Newtown and

Flushing, I must with a great deal of truth say that not only they are in a growing condition & the members thereof generally of an exemplary life and conversation but that the Church of England here was never in so much credit and reputation among the Dissenters of all sorts as at this day, their opinion concerning her doctrine as well as discipline being vastly more favourable than ever. Enthusiasm has of late been very predominant amongst us but is now in a declining state several of the teachers in that way as well as their hearers being found guilty of the foulest immoral practices and other of them have wrought themselves into the highest degree of madness—these occurrences together with those good books lately sent over by the Society have taught people what the true spirit of Christianity is and what it is not & that it is to be found in a more sober rational Scheme than that delivered to mankind by Mr Whitfield that Arch Enthusiast and his adherents, having nothing more to add but the promise of all due diligence & fidelity in the discharge of all the Offices belonging to my Mission.

Jamaica March 23d, 1743

Our Church here is in a flourishing condition her being depressed of late by those clouds of error & enthusiasm which hung so heavily about her, has in effect tended to her greater illustration & glory.

If the Society would be pleased to order me some small tracts, such as The trial of Mr Whitfield's spirit; An Englishman directed in the choice of his Religion, Bishop Stillingfleet's Unreasonableness of separation &c. I'm your most obt &c.

THOS COLGAN.

Jamaica Sept 29th 1743.

Our Church here was never in so thriving a way as at this time—for it has increased both in number & esteem with those who are without her pale, these eight or ten years last past more than it did for 30 years before being one of the oldest Missions from the Society—This must be an argument with them, that under the benign influence of Heaven and their pious Care & bounty, my faithful endeavours have not been wanting to promote and answer the end & design of my Mission to this place I would further acquaint the Venerable Society that since my last accounts I have baptized 17 persons belonging to 3 fam-

ilies in this parish, consisting of Men Women & children who before were tainted with the corruptions of Anabaptism & Quakerism & have now before me a fair prospect of doing the like good office for others in a little time.

Jamaica Sept 29 1744.

The several Churches belonging to my Cure (as those of Jamaica, Newtown & Flushing) are in a very peaceable & growing state, whilst other separate Assemblies in this Parish are in the utmost confusion & this I can write with a great deal of truth that Independency which has been triumphant in this town for the 40 years last past is now by the providence of God in a very faint & declining condition which gives us hopes that better Principles than such as issue out thence will generally prevail amongst us & that we shall be better united than heretofore.

Jamaica Sept 29th 1746

These are to acquaint the Venerable Society that my endeavours in the work of my Mission are by the blessing of God attended with success a late & remarkable instance whereof we have in the conformity of a Family of good repute in ye Town from Independency to the Doctrine discipline and Government of our Church which considering all circumstances may be thought worthy of notice.

In my letter of the 26 March last I gave information to the Society of our being in a very likely way of having a Church erected in the town of Flushing a place generally inhabited by Quakers & by some who are of no religion at all which indeed has all along from the first settlement of the town been a great obstruction and discouragement to an undertaking of this kind but now by the kind providence of God (who has raised up Friends & money for the purpose) the work is actually begun so that I have hopes of performing divine Service in this new Church in about 3 months time and also that the Society will bestow upon it a Bible & Common Prayer Book according to their usual bounty for certainly there can be no set of People within this Province who are greater objects of the Society's pity & charity than those belonging to the town of Flushing of which I have been so truly sensible that it has brought me (if I may be permitted thus to express it) to

double my diligence in that place where error & impiety greatly abound nor have I been wanting (thro' the Divine assistance) in the other parts & duties of my Mission for the space of almost one and twenty years to approve myself a faithful Labourer & my trust in God is that I shall continue to approve myself such whilst

Jamaica March 28th, 1749.

I have great hopes that our Church at Flushing will in a little time gain ground among the Quakers who are very numerous there, and it is somewhat remarkable and may be thought worthy of notice, that a man who had for many years strictly adhered to the principles of Quakerism, when that new Church was opened & a collection made he gave money for the use of that Church, but thinking he had not put enough in the Plate, went immediately after service and gave more to the Collector.

Mr. Colgan died in 1755 and then the "dissenters" tried their coup—long famous locally—of at once installing one of their own ministers, Simon Horton, into the vacancy, but Governor Hardy made short work of that and Samuel Seabury, Jr., was inducted to the charge of the three towns. He was not a success by any means, and by 1760 he complained that the communicants in Grace Church were less than 20. Under these circumstances the full amount of his stipend was not forthcoming and the constant attention necessary to keep the church in repair was relaxed with the usual result. With the view of improving matters, Seabury got up the idea of having Grace Church incorporated, and the following document, which explains itself, was drawn up, signed and presented to Cadwallader Colden:

To the Honourable Cadwallader Colden Esq President of his Majestys Council and Commander in Chief of the Province of New York and the Territories depending thereon in America &c

The Petition of the Minister of the Parish of Jamaica & Sundry of the Inhabitants of The Town of Jamaica on Nassau Island Communicants & professors of

the Church of England as by Law Established

MOST HUMBLY SHEWETH

That the Inhabitants of the town of Jamaica: Members & professors of the Church of England as by Law Established: did some years ago by Voluntary contributions Erect & finish a decent & Convenient Church in the Town of Jamaica: for the Celebration of Divine Service according to the use of the Church Of England, but that through the Want of some proper Persons to Superintend the Affairs of the Same: With Legal Authority, the Building is now Considerably out of Repair, and There is Danger Least moneys contributed for the Repair of the Same may be Improperly Applyd to the Detriment of your Petitioners: & Thro' the want of Such Persons it also comes to pass yt Pious & Well Disposed People are Discouraged, in their Designs of Establishing & Erecting proper Funds for the Support Of the Church & its Ministry Your Petitioners Therefore Humbly beg that yr Honour Takeing these things into Consideration Would be Pleas'd to Grant us a Charter (Incorporateing such Persons as upon Mature Deliberation shall be found Worthy) with such Privileges & Immunities as in Your Wisdom you shall think Proper And Your Petitioners as in Duty bound Will Ever Pray April the 8th 1761.

The charter was granted, the church was repaired as the result of a subscription which

netted £93 18d, but the people did not flock to Mr. Seabury's ministrations in any greater numbers than before. So he gladly went his way when an opening occurred for him at Westchester, and the Rev. Joshua Bloomer was installed in his stead. Mr. Bloomer commenced his ministry May 23, 1769, and soon was able to announce that his services were well attended—"crowded assemblies who behave with decorum." But the times were sadly out of joint and it was not long before he had some trouble in getting payment of his salary as it fell due. When the crisis came Mr. Bloomer found it necessary to close his church for a few weeks; some of his members were sadly persecuted by order of Congress, several even sent to prison or to Connecticut, but with the victory of August 27, 1776, all went well and the good, loyal minister was again permitted to pray for King George and the royal family without hindrance. In 1778, as a result of a lottery, \$780 was realized for the purchase of a glebe, and with the money a farm of seventy acres was bought about a mile west of Jamaica village. It was not the first time a lottery had come to the aid of Grace Church. By one, in 1747, the bell in its steeple had been bought. The glebe does not seem to have proven a profitable adjunct to the church, and it was offered for sale in 1786. With the cessation of hostilities, Mr. Bloomer seems to have passed over the crisis of the sentiment against everything British undisturbed, and ministered in his three charges until 1790, when he passed to his reward, and his remains were laid in the chancel of Grace Church.

After Mr. Bloomer's death, however, the congregation began to dwindle, although most of the rectors were men of more than ordinary ability. In 1808 the money received at a communion season was only \$234. There is no doubt that the influence and generosity of the King family was the most potent agency in carrying the church through its darkest days, which may be said to have lasted from

1796 until 1815, and the first substantial token of that interest was a gift from Rufus King of real estate in New York sufficient to yield the rector \$500 a year. The same generous hand in 1820 started the movement for the erection of a new church, and as a result the second Grace Church was built and opened for service July 15, 1822. This building served the congregation until January 1, 1861, when it was burned to the ground and to the building which took its place, a beautiful gothic structure of stone, and which was consecrated by Bishop Horatio Potter January 8, 1863, the King family were princely subscribers, while their subsequent gifts were numerous and munificent.

The Dutch Church seemed to have had its beginning in Jamaica in 1702, and for a time its services were held in the little stone building erected by the Presbyterians. For some years the congregation was ecclesiastically attached to the Kings County Consistory, but in 1715 they managed to build one of the little octagon edifices such as the early Dutch congregations delighted in, and tried to get a minister of their own, but they failed to offer enough in the way of inducement and that project slept. Afterward when there were small congregations formed at Newtown, Success and Wolver Hollow further attempts were made to get a clergyman to devote himself to the four, but it was not until 1741 that they succeeded, and the Rev. Johannes Henricus Goetschius settled among them. He and his successors were able men, but they did not attract large congregations somehow and the people did not seem to act as a harmonious unit with regard to them. During the Revolution the church was unceremoniously used by the British as a storehouse, the people were without any stated pastor, but Dominies Rubell and Schoonmaker, of Kings county, visited them at intervals and held services in Grace Church. After the war was over the Rev. Rynier Van Nest became the pastor of the four churches. It was decided, in 1794, to have

half of the services in English, as it was thought that the younger people might wander away, seeing that the tongue of the motherland was thoroughly understood by only a few. But the old Dutch service continued to be a feature and old Dr. Schoonmaker, who was minister of the church when the old building was abandoned, June 23, 1833, delivered the farewell sermon in Dutch, although not over half a dozen could follow his words clearly. The new church, a frame structure, was consecrated July 4, 1833, by which time the octagonal edifice had been demolished. With this change the congregation (it had parted company with the other Reformed Churches in the county) seems steadily to have waxed in strength. The building was burned to the ground on November 19, 1857, but on October 6, 1859, the present tabernacle was opened for worship. It cost over \$20,000.

The Methodist Episcopal body had a congregation in Jamaica in 1784, but it was not until 1810 that they erected a church. The first Roman Catholic Church, St. Monica's, was erected in 1839 and the first Baptist Church in 1869. In 1873 the German Reformed Church was erected.

From the consecration of churches we pass easily as a corollary to the God's acre, where the fathers of the village sleep. There are several of these in Jamaica township, notably that at Springfield and the quaint Hebrew cemetery at Woodhaven, but the oldest of them all is that in Jamaica village. It was first set aside—to the extent at least of ten rods square—in 1668 and with considerable additions has been used since then, although the oldest existing stones bear such comparatively recent dates as 1732 and 1737. It has been much beautified in recent years and the chapel at its gateway, the Chapel of the Sisters, built by Nicholas Ludlam, of New York, in 1857, in memory of his daughters, is an attractive piece of architecture. In Jamaica village also the Roman Catholic, Methodist and Protestant Episcopal Churches each have their

grounds "sacred for the resting place of their dead." In the ground of the last named is the grave of Rufus King and of many of the other members of that famous family.

At first, as might be expected, agriculture and hunting were the two industries of Jamaica most generally followed, the two industries in which the early settlers found their employment and their amusement. It was not long, however, before the area of industry was widened. In 1663 John Ouldfield, at a town meeting, was voted a home lot and twenty acres of meadow land on which to settle and pursue his occupation—that of a tanner. He was admonished to stick strictly and constantly to his trade and to take care only to produce good leather. How he behaved himself after "getting in" we are not told, but as the eyes of the leaders of the community were upon him it is very likely that he fully met their views. In 1669 the settlers offered James Hubbard, of Gravesend, ground on which to erect a mill, but he preferred to remain in Lady Moody's bailiwick. Benjamin Coe, however, fell in with the offer in the following year and the people agreed to build a dam for the mill which he agreed to erect and work. It was part of the agreement that in return for the lot and the other bounties conferred upon him, he should grind the corn of the townspeople in preference to that of strangers on days to be mutually agreed. Mr. Coe carried out his part of the agreement so well that they added ground for a grist mill. The milling business after a time fell into the hands of Joseph Carpenter and Caleb Carman on the same terms as Coe had received and which did not pan out very well with him, but whether owing to his incompetency or neglect history sayeth not. The new firm, however, were also allowed to erect a saw mill and were to be permitted to feed it from the common lands of the township under a few restrictions pertaining to growing trees. Their work according to the peculiar ideas of the time was to be done cheaper for the townspeople than

for others, but even toward outsiders they were not permitted to make extravagant charges. This arrangement seems to have proved eminently satisfactory all around. Milling privileges were awarded in 1685 to Benjamin Coe and John Hansen, but there is no record as to how Coe profited in this venture by his first experience. There is also a record of half an acre of land being voted to a cooper on condition that he work at his trade, build a home "and supply the town with such cooper's work as they shall stand in need of." In 1704 permission was given to Jonathan Whitehead and Benjamin Thurston to establish a fulling mill to "full [shrink] all kinds of cloth, press the same for three pence the yard, and to full for the townspeople before other townspeople." For a long time the milling industry in Jamaica was a most important one, but little has been heard of it in recent years.

In 1676 the first record of a local school appears in the record, for in that year Richard Jones was given the use of the little stone church "for to teach scoule in for ye yere ensuing, provided he keep ye windowes from breaking and keep it deasant and cleane on Saturday nights against ye Lord's Day and seats to be placed in order." How Brother Jones fared and how long he kept "scoule" is not stated. Nine years later mention is made of a girls' school kept by "Goody" Davis. In 1705 Henry Lindley was licensed by Governor Cornbury to teach school in Jamaica and a similar authority was conferred in the same year on Thomas Huddleston. The ministers of the Church of England generally were in receipt of small grants from the London Society for the Propagation of the Gospel to provide teaching facilities, but the amount was never, in the case of Queens county, sufficient to secure more than temporary service. Thus the Rev. Mr. Poyer complains, in 1724, that while there were schools in Jamaica, Newtown and Flushing, they were taught by Quakers or Presbyterians. A public meeting was called in 1726 to consider the possibility of estab-

lishing a free school, but nothing came of it, probably owing to theological differences. Still the educational facilities of Jamaica seem to have been ample at all times, and several of the teachers, such as James Lockhart, Thomas Temple and John Moore, all pre-Revolutionary schoolmasters, were men of more than ordinary education. In 1777 Andrew Wilson opened a grammar school, and in 1784 the Rev. Matthias Burnet, the Presbyterian minister, opened a private school, in which he proposed to teach Latin and Greek, and for which he had engaged "a person" to teach the common branches, writing, book-keeping, vulgar arithmetic and the like. The opening, in 1791, of Union Hall Academy led the way to other schemes of higher education. The history of that institution has already been referred to. In 1812 the common-school system of the state superseded all private enterprises to a great extent and put all the primary schools in the commonwealth within a short time on a standard basis. Still even under that system, as it progressed, much was due to the work and intelligence of local teachers and superintendents, and in this regard we must recall the work of Henry Onderdonk, Jr., who was the first superintendent of common schools under the law passed in 1844.

Jamaica has never figured much in the outside world. The General Assembly of the Province of New York met in the village in 1702 and again in 1753, and in 1790 it received a visit from George Washington, who seemed to have been fully satisfied with his reception and his entertainment. The village received a charter in 1814 and an additional patent of the same class in 1855. The town meetings were held at first in the meeting house, which has been generally spoken of as the stone church, but afterward when that place became the Episcopal sanctuary they were held in the court house. That building was torn down by the British troops in 1777 for military reasons, and from that time until 1858 they were convened at various inns and public houses.

In 1858 a town hall was erected on Herriman street, near Fulton street—a wooden two-story structure, inconvenient and dangerous. It served its purpose, however, until 1870, when the present town hall was completed and was then converted into dwellings.

In 1827, so far as the records show, the first made road in Jamaica was laid out, and it was followed by several others, but it is not likely that any of these early highways are still used and their original boundaries are not now exactly determinable. In 1786 the people in town meeting decreed that no hogs should be permitted to roam about the streets, and we see plenty of other evidences of a desire to improve the amenity of the town much earlier than was the case in many other Long Island villages. It was not until 1830, however, that the township was divided into ten road districts, and a systematic effort made at their improvement and maintenance.

While Jamaica was in all moral respects quite a clean community, yet the people seemed to be at all times in a condition to punish such evil doers as might turn up among them. The early town meetings were liberal in their scale of fines for contraventions of local laws and a significant appointment was that of whipper, to which office Joseph Prue was appointed in 1772. His work, it is true, lay principally among negroes, but still he stood ready to suitably admonish any one the law thought deserving of such treatment. In those early days theft was a capital offense, and as late as 1782 we read of two unfortunates—William Guthrie and Joseph Alexander—being hanged at Jamaica for stealing from a farmer at Cow Neck. But hanging was too expensive a luxury to be indulged in by a country town like Jamaica. Such corrective agencies as the lock-up or cage, or even the stocks, were much more in vogue. In fact as late as 1808 new stocks were ordered to be erected.

When the Revolution was over, the red-coats gone and peace had been proclaimed, Ja-

maica celebrated the result with huzzas and ovations and feasting, and then quietly settled down to the even tenor of its days. Of course, it felt remotely the trend of the outside world, it had a reverent funeral procession when the news reached it that George Washington was no more, and it felt a revival of the old patriotic thrill when the news came in 1812 that war with Britain was again on; it was stirred to its depths around each election time, but such flurries soon passed over and left little trace. Its splendid fishing in Jamaica Bay seems to have attracted few adventurous spirits and the islands which dot that inland sea, and which were included in the boundaries of the township, were untenanted and unknown. It had its newspapers—the Long Island Farmer was started by Henry C. Sleight in 1819, and the Long Island Democrat first saw light at Jamaica in 1835,—and these in a measure supplied the news of their day and more or less sage comment and communication was kept up with the outside world by means of lumbering stages, which run on the schedule time which was formulated each trip by the caprice and in accordance with the temper of the driver.

A revival, the great modern revival, set in in 1837, when the Brooklyn & Jamaica Railroad was opened. With that came, slowly at first but surely, wonderous changes. The once famous plank road of 1854 has already been spoken of, and other road improvements were soon in vogue. By and by the horse car supplemented the service of the railroad, but the advent of the trolley and the introduction of something like rapid transit by the railroad brought the old village nearer and nearer, as it were, to Brooklyn.

As the means of transit increased the lawl boomers began to turn their attention in the direction of Jamaica, especially after it began to be understood that the elevated railroad system of Brooklyn was certain, sooner or later, to be extended there. Under their manipulation such places as Dunlin, Richmond Hill,

Woodlawn, Clarenceville, Morris Park, Woodhull Park and half a dozen settlements were opened up and the lots disposed of with remarkable celerity. Even the old pre-Revolutionary village of Springfield—a place in fact not many years the junior of Jamaica village itself—felt the impulse of the change, and Woodhaven, founded in 1836 by John R. Pitkin, talked confidently of extending its manufactures. In 1863 Messrs. Lalancé & Grosjean entered upon the manufacture of agate ware in an old factory building and extended the business so rapidly that in 1870 it was necessary to organize a joint stock company to operate and control it. The capital stock was fixed at \$500,000 and the operations grew steadily year by year. In 1876 its buildings were destroyed by fire, but the calamity in the long run really helped the corporation, for the old structures were at once replaced with modern buildings, in which the most advanced appliances were introduced. The goods made by this establishment are now to be found all over the country.

Queens, another of Jamaica's suburbs, has also felt the impulse of the modern movement, and has gradually been opened up to settlement. It still, however, retains much of its primitive agricultural aspects, although in the recent railroad changes which have been discussed it seems likely that Queens will, more than all the outlying portions of the old township, receive its share of the material prosperity so confidently anticipated.

Just as these lines were being penned a telegram brought the news of the death of one of the most devoted citizens of Jamaica—ex-Governor Richard C. McCormick—at his home, 88 Herriman avenue, in that village. In this work he took a deep interest, made many valuable suggestions and promised to aid it from his rich stores of Long Island historical data. He was a most enthusiastic student of county history and had gathered together a valuable library containing published volumes of local history from all over the country, for,

as he said, in such works the real story of the nation and its people is to be found. In conversation with the writer a few weeks before his death he told the story of the now forgotten movement to erect at Jamaica a statue of General Nathaniel Woodhull and regretted that that grand hero was apparently forgotten in the region where he was best known and where he gave up his life for his country.

Both the political and the business career of Governor McCormick were anything but commonplace. In recent years he had been engaged in mining operations, with offices at 1 Broadway, New York, but in earlier life he was active as a Republican, and had the confidence of such men as General Grant, Zachariah Chandler, and William H. Seward. This was considered somewhat remarkable, as he married a daughter of one of the most distinguished Democratic statesmen of the day, Allen G. Thurman, of Ohio.

Mr. McCormick was born in New York City on May 23, 1832, and was descended from several old Long Island families. He was elected Trustee of Public Schools for the Eleventh Ward in 1858, and two years later was a member of the Republican State Committee, taking an active part in the campaign of that year in support of Lincoln, as he had in the canvass four years previously, when General Fremont was his party's candidate. He was made Chief Clerk of the United States Department of Agriculture in 1862, and a year later became Secretary of the Territory of Arizona. So well did he attend to the duties of this office that in 1866 he was appointed Governor of the Territory by President Johnson, and at once set about placing the people in a better condition for defending themselves against the hostile Apaches. It was on his advice that General Crook was sent to this section.

Governor McCormick served three terms as a delegate in Congress from Arizona, and declined a fourth nomination in order to accept the appointment of Commissioner to the

Centennial Exposition. He was appointed Assistant Secretary of the United States Treasury in 1877, and Commissioner General to the Paris Exposition in 1878. Returning to New York and settling in Jamaica, he devoted himself to promoting the large mining enterprises with which he had become identified. He was President and Director of the Boreel Mining Company and the Small Hopes Consolidated Mining Company, a Director of the Leadville Consolidated Mining Company, and a Trustee of the Citizens' Savings Bank. He served a term in Congress from the First

New York District, taking his seat on March 4, 1895.

During Governor McCormick's stay in Arizona he kept Secretary Seward informed as to Maximilian's movements in Mexico. He was one of the founders of the Long Island Historical Society and the author of "Arizona: Its Resources," and of several other works, and was a member of the Union League Club, the American Geographical Society, and of the Military Order of the Loyal Legion. He was also a Commander of the Legion of Honor of France.

CHAPTER XLVII.

LONG ISLAND CITY.

A LOOSE AGGREGATION—ANNEKE TANS—CAPTAIN PRAA—LONG ISLAND RAILROAD'S
TERMINUS—ASTORIA AND ITS NAMESAKE—GRANT THORBURN—
HELL GATE—A PICTURESQUE MAYOR.

ON May 27, 1870, Governor Hoffman signed the bill which took away part of Newtown from that ancient township, including some of its most thriving villages, and incorporated it into a distinct municipality under the title of Long Island City. Such a union had been agitated for several years, mainly since the terminus of the Long Island Railroad had been established for good at Hunter's Point, and the concentration there of a large population seemed inevitable in the not very distant future. But it is difficult now to see what was to be gained by taking a section of territory with several villages widely separated from each other and having little in common and dubbing it a city. It was hardly a political measure; it seemed rather a move on the part of the people, headed by Father Crimmin, of St. Mary's, Hunter's Point; the wealthy residents were opposed to it and with reason, for there was not even a city treasury in sight and the imposition of city taxes on a sparsely settled community meant a startling increase. That increase it was urged would keep manufactures from coming to the section and would result in an increase of assessments on real estate without any increase in the actual market value of the property. From a financial standpoint there was nothing to be said in favor of the change, and the events which

followed from the signing of the bill of incorporation until the later bill was signed which wiped the city out of existence amply justified all the arguments against it. It became in its consolidated state a prey to the machinations of the local politicians, its treasury was ever empty, its police force was never adequate, its educational system was deficient; the taxation was increased without adequate return, the several sections incorporated by law did not incorporate in reality, except in the Hunter's Point section, the expected tremendous increase in population did not materialize, transit throughout the section was slow and uncertain until 1890, when the trolley began its work; and when consolidation took effect Long Island City was the weakest point in the aggregation which made up the Greater New York. Its most noteworthy feature was a bonded indebtedness of \$3,849,000, on some of which interest was paid at the rate of seven per cent. The Long Island Railroad had done its work well in spite of local political opposition. It had built up a vast terminal depot, brought the place into close and frequent communication with Manhattan Island and made it a place of entry in reality for the business of Long Island: but the city itself failed to take advantage of its opportunity and became more noted for the antics of its politicians, its local "statesmen," than for aught else.

The localities incorporated into Long Island City were Astoria, Hunter's Point, Ravenswood, Dutch Kills, Blissville and Middletown and several small settlements, while the two Brother and Berrian Islands were thrown in for variety. The city had a splendid stretch of water front from Newtown Creek to Bowery Bay, but although settlement was early effected within its borders it never had any history worth writing about except that which comes from the stories and traditions of the old families who built it up and the more or less straggling communities of which it was composed. These communities may now be considered in detail.

Governor Kieft seems to have given patents to many settlers for lands along the water front from a farm at Hell Gate to an Englishman named William Hallet to another at a point overlapping Newtown Creek at the other end of the territory now under consideration which was given to Everardus Bogardus, the first minister or dominie of New Amsterdam, and from that fact the point was named Dominie's Hook. The property stood in the name of the dominie when he went down into the waters off the Welsh coast in 1647, along with Governor Kieft himself, in the wreck of the "Princess." His widow, the still famous Aneke Jans, secured a fresh patent for the point from Governor Stuyvesant, and it was purchased from her heirs in 1697 by Captain Peter Praa, whose descendants, along with those of Aneke, have enjoyed many a most exciting hunt after mythical real estate, to the enjoyment of the public and the enrichment of the lawyers. Peter Praa (or Pratt) was a Huguenot, and came here from Dieppe, France, in 1659. He appears to have been a man of means, for soon after his arrival he bought a bouwery at Gowanus. He died in 1663. His son, Captain Peter Praa, the purchaser of the Dominie's Hook, was born at Leyden in 1655, and therefore was but a child when he came here. He developed into one of the largest land owners in the vicinity,

owning vast tracts in Bushwick and elsewhere as well as extending his original purchase of the Dominie's Hook by much additional territory on the water front as well as inland. He died in 1740. One of his daughters, Annetie, had married William Bennet, and died some years before him, leaving a young family, and to these children Captain Praa bequeathed the Dominie's Hook property. Thus in course of time its popular name became Bennet's Hook. One of the family, Jacob Bennet, bought up the entire interest in the estate of the other heirs and at his death bequeathed it to his daughter Anne, wife of Captain George Hunter. She died in 1833, leaving the property, which by that time had again changed its name to Hunter's Point, to her children. The last of these to reside on the family homestead was Jacob Hunter, who died in New York City in 1875.

It is noticeable that some of the deeds in the early part of the last century conveying lots at Hunter's Point call it Long Island City. It continued to be a straggly, dreary, poverty-stricken place, with few settlers and these of the poorest class, until the Long Island Road, because it could not make the necessary arrangements in Brooklyn, selected it as the main terminus of the road. Since then it has steadily increased in population, and as the First Ward of Long Island City it rapidly assumed the lead in the destinies of that now happily departed shade. Railway and manufacturing interests have steadily built up its population and added to its material resources, most of which, however, were mercilessly squandered by political intriguers.

The Second Ward of Long Island City, Blissville, was founded by Nezhiah Bliss, the patriarch of Greenpoint, but it really calls for little mention, not having yet fulfilled the ambitious hopes once held as to its future. At all events, it has not yet felt the upward movement which the advent of the Greater City has brought to so many other outlying places. Its history has yet to be written. It formed

part of the old Dutch Kills section, and was a corner of the old dominie's farm.

With Ravenswood, which became the Third Ward of the city, we find better material for historical study. This is certainly one of the prettiest "bits" in the whole of Greater New York, and as a residential neighborhood it has been a favorite from the beginning of the nineteenth century. In the first edition of his "History of Long Island," issued in 1838, Thompson says: "The site is sufficiently elevated to afford the most charming view of the adjacent country and possesses charms which almost equal some descriptions in eastern romance. The situation will hardly suffer by comparison with the beautiful scenery of the Thames at Windsor. Already several houses have been completed and others are in course of erection. In the vicinity are the valuable farms of the corporation of New York, upon which buildings have been constructed for the accommodation of more than 500 orphan children who are maintained at its expense." Grant Thorburn, the noted Scotch florist of Astoria, whose seed store in New York was long one of the landmarks of the city, describes his sensations when, once passing this institution, he saw 600 children enjoying themselves. But the enterprise, or benevolence, or whatever it may be called, did not continue for many years. Its ultimate fate created quite a riot. In French's Gazetteer of New York we read: "About 1834-5 the corporation of New York City erected extensive buildings about one and one-half miles south from Astoria for a pauper establishment, which were sold at public auction April 15, 1847, upon the removal of these institutions to the islands in the river. Three large buildings, called the 'Boys' Nursery,' 'School-house' and 'Infants' Nursery,' the property of William W. Miles, were leased May 25, 1847, to the Commissioners of Emigration for a ship fever hospital and other purposes. A public meeting was held immediately thereafter at Astoria to express indignation at the

appropriation of the property to these uses and to remonstrate against it. The people failing to obtain their object, the premises were assailed and destroyed on the night of May 26-27 by a mob in disguise. An attempt was made to fasten the expense of these losses upon the town, and after repeated efforts the owner recovered \$3,000 from the State by act of March 15, 1855." With this threatened discord out of the way, Ravenswood resumed its quiet and dignified serenity, and many fine villas were erected within its neighborhood from time to time. It still retains its old description as a residential quarter, although business and manufacturing requirements are beginning to make inroads upon its domain. It was long, however, the aristocratic section of Long Island City. In 1849 St. Thomas's Episcopal Church was organized, and since then most of the social life of Ravenswood has revolved around that little tabernacle.

Steinway, the principal settlement in the Fifth Ward, was laid out in 1872 by the famous firm of New York piano-makers. There they erected a splendid suite of buildings for their own uses and around these buildings the little village of Steinway was soon built up. It has now an estimated population of 1,500, and several other enterprises are carried on in it, while its beautiful situation on Long Island Sound has made it attractive to hundreds of home-seekers. It is a thriving place in every way and will likely undergo many important developments before many years pass by.

Astoria, which became the Fourth Ward of the city, was long the most populous and most popular village within it. It was incorporated as a village in 1836, and at that time its name was changed from Hallett's Cove. The name originally proposed was the old Indian one of Sunswick, still kept alive in the name of a creek, but one of the men prominent in the matter of the incorporation, Mr. Stephen A. Halsey, suggested that if it were named in honor of John Jacob Astor he might pay for the foundation of a female seminary

which was to be one of the features of the new village. Mr. Halsey spoke as one having authority. He had been engaged in the fur trade for many years, was intimately acquainted with Mr. Astor, and it was supposed possessed much influence with him. But Mr. Astor was not exactly the man to be caught with such chaff, and when approached on the subject rather threw cold water on the matter by saying there was already a city named Astoria and one was enough. However, Mr. Halsey persevered, Astoria became the name, and Mr. Astor contributed \$100 to the institution which it was expected he would erect and maintain. Mr. Astor was a liberal enough giver according to his lights, but the race of modern benefactors had not then arisen.

Hallet's Cove received its name from William Hallet, an Englishman, who got a patent for a tract of land of 160 acres at Hell Gate from Governor Kieft. In 1655 his home was destroyed by Indians, and he was glad to escape to Flushing; of which place Stuyvesant appointed him sheriff. However, he did not hold that office long when the Governor deposed him for entertaining a traveling preacher from Rhode Island. When the trouble had blown over he returned to his property at Hell Gate, and afterward added more acres by purchase from the Indians until he owned pretty much all of the coastline from Sunswick Creek round to about where Steinway now is. Anneke Jans also managed to get a slice of real estate near by. She seemed to know how to manage to secure choice parcels of land better than any of her contemporaries, and she certainly managed to hold on to what she got. Bit by bit several farmers settled in the district, and in 1753 Captain Jacob Blackwell and Joseph Hallock built and operated a mill at the mouth of Sunswick Creek, on its right bank. Around the mill a small colony gradually sprung up. Possibly there was not when the Revolution broke out over half a dozen houses altogether, but behind lay a thriving colony of prosperous farmers. One evidence of this

is found in the fact that in 1762 an English and classical school was established at Hallet's Cove, while thirteen of the near-by farmers were willing to board one or more of the scholars at a yearly rate of \$45. But the institution did not last long, and Hallet's Cove resumed its sleep.

With the War of 1812 the sleep was broken. Large parties of experts visited the cove with the view of surveying its importance as a defensive position, covering as it could the approach from the Sound through Hell Gate to New York. One of the results of this survey was the erection of Fort Stevens. But the flurry was soon over, although its effects were of incalculable benefit to Hallet's Cove. The many fine, even romantic, sites suitable for residential purposes which surrounded it had become known, and many New York merchants secured choice plots in the neighborhood. But the most noted* of the new arrivals was General Ebenezer Stevens, for whom Fort Stevens had been named. A member of the famous Boston Tea Party, a hero of two wars and a popular man in social life, his advent would have caused a stir in any community and would have been the occasion of a warm welcome. Such he found in Hallet's Cove. He built a splendid home on an eminence just opposite the northern extremity of Blackwell's Island, and gave the name of Mount Bonaparte to his property.

Mr. Henry Whittemore, the well-known Long Island historian and genealogist, gives the following interesting record of the family of this hero and his achievements in "The Heroes of the Revolution," a work of great value and research:

John Austin Stevens, the founder and first President of the Society, comes of a line of distinguished New England ancestors, who have been prominent in Church and State affairs for two hundred years.

Erasmus Stevens, the first of the family mentioned in this line, appears in 1714 as one of the founders of the New North Church in Boston. He had a son, Ebenezer (1).

Ebenezer Stevens (1), son of Erasmus Stevens, was probably born in Boston. He lived in Roxbury, where he married Elizabeth Wild. They had a son, Ebenezer (2).

Major-General Ebenezer Stevens, of the War of the Revolution, son of Ebenezer and Elizabeth (Wild) Stevens, was born in Boston, Massachusetts, August 22, 1751. He was an ardent patriot, and led the famous "Tea Party," 1773, in disposing of the obnoxious cargo by "committing it to the deep." He made little effort at disguise, being recognized by the officers of one of the ships. He soon afterward removed to Rhode Island, where he raised two companies of artillery and one of artificers, and was commissioned Lieutenant, May 8, 1775, and took part in the expedition against Quebec. He joined Henry Knox's regiment of artillery, was made a Captain on January 11, 1776, and on November 9, following, was brevetted Major. He commanded the artillery at Ticonderoga and Stillwater. As senior officer of this arm of defense in the northern department, he directed the artillery operations in the encounters which led to the defeat and surrender of Burgoyne, and soon after received a brevet commission as Lieutenant-Colonel, with a special resolution of thanks from the Continental Congress, for merit as Commandant of the Artillery of the Northern Department in the campaigns of 1776-7. He was at this time in the Massachusetts line. On April 30, 1778, he was commissioned Lieutenant-Colonel and transferred to Colonel John Lamb's regiment of the New York line, in which he served to the end of the war. He was entrusted with the defenses of the Hudson River, and had chains and other obstructions placed across the river to prevent the ships of the enemy from ascending. In 1781 he prepared a train of artillery for the southern service and was selected by General Lafayette to accompany him on his expedition to Virginia.

Owing to impaired health he returned home for a time, but after a brief respite he was commissioned by General Knox to prepare the artillery force which was to operate against Cornwallis. This was collected and transported from West Point, Philadelphia and Baltimore, and played an important part in the final siege which led to the surrender of Cornwallis. This completed his active service, though he continued his command till the army was finally disbanded. It is believed

that no officer of his grade in the army rendered more arduous, various and important services than Colonel Stevens, and his characteristic energy, courage and perseverance gave assurance that, had the opportunity occurred, he would have signalized himself in a manner worthy of his patriotism and his ambition.

After the Revolution he started in business in New York, and without any previous experience, but relying on his own prudence and foresight, he met with extraordinary success and became one of the leading merchants of New York City. As agent of the War Department he constructed the fortifications upon Governor's Island in 1800. In 1812 he was commissioned Major-General of the State Militia, and with Morgan Lewis mustered for active service against the British, in September, 1814, at the time of an anticipated attack upon the city. He resigned his command in 1815 and withdrew from all public employment. He married, first, in 1775, Rebecca Hodgson, of Boston. In 1784 he married Lucetia, widow of Richardson Sands, a daughter of John Ledyard and sister of Colonel William Ledyard, the hero of Fort Gronon. By his first wife, Rebecca Hodgson, he had issue three children, viz.: Horatio Gates, George, Rebecca (married John P. Schermershorn). By his second wife he had Byam, William, Henry K., Samuel, Dr. Alexander H., John Austin, and Mary, wife of Frederick W. Rhineland, Esq.

John Austin Stevens, Sr., was born in New York City January 22, 1795, died October 19, 1874. He was graduated at Yale in 1843; entered mercantile life and became a partner in his father's business in 1818. He was for many years Secretary of the New York Chamber of Commerce, and was one of the organizers and the first President of the Merchants' Exchange. From its first establishment, in 1839, till 1860, he was President of the Bank of Commerce. He was chairman of the Committee of Bankers of New York, Boston and Philadelphia, which first met in August, 1861, and decided to take \$50,000,000 of the Government 7-30 loan. They subsequently advanced \$100,000,000 more, and the terms of the transaction were arranged chiefly by Mr. Stevens, as the head of the treasury note committee. His advice was frequently sought by the officers of the Treasury Department during the Civil War.

John Austin Stevens, Jr., the first President

and one of the incorporators of the Society Sons of the American Revolution, son of John Austin Stevens, Sr., was born in New York City January 23, 1827; was graduated at Harvard in 1846, engaged in mercantile business in New York, and in 1862 was elected Secretary of the New York Chamber of Commerce, continuing in office six years. He was librarian of the New York Historical Society, and devoted himself to the investigation of topics of American History. He founded and for many years edited the *Magazine of American History*. He was the author of numerous works, among which were "The Valley of the Rio Grande; its Topography and Resources" (New York, 1864); "Memorial of the New York Chamber of Commerce on Steam Navigation" (1864); "Colonial Records of the New York Chamber of Commerce" (1867), containing illustrations and biographical and historical sketches; "The Progress of New York in a Century" (1876); "The Expedition of Lafayette Against Arnold," published by the Maryland Historical Society (Baltimore, 1878), and other works.

General Stevens' eldest son married the daughter of Albert Gallatin, Secretary of the Treasury under Jefferson and Madison, and that venerable statesman died in the home on Mount Bonaparte in 1849. By the middle of the century quite a number of manufactories had located around Hallet's Cove, which had become quite a village. In 1828 St. George's Episcopal Church was founded, and in 1834 a meeting-house was erected for the use of the Presbyterian and Dutch Reformed congregations. In 1837 the once famous female institute was founded. The Rev. Alexander H. Bishop was installed in 1840 as minister of the Dutch Church, and the Presbyterians, having given up their interest in the building, erected jointly, it was given over to the sole use of the new pastor. The Presbyterians worshipped in the district school-house until 1846, when they entered a new church they had built, and chose the Rev. F. G. Clark as their pastor.

About the middle of the last century Astoria became noted for its nurseries and gar-

dens, the leader in that business being Grant Thorburn, whose grounds were once the most extensive of any devoted to the raising of garden seeds to be found in the country. Thorburn's gardens were near the river,—the Sohmer piano factory now stands on part of the property, and he himself was postmaster of Hallet's Cove for some time, and assisted in the organization of the Reformed Dutch Church in 1839. A useful man, the founder of a local industry and one who made a considerable mark in the world of letters, it is worth while to recall the salient features of Thorburn's career before he became connected with Astoria.

In the "Statistical Account of Scotland," vol. I, page 495, is the following brief notice:

"Mr. Grant Thorburn, seedsman, New York, the original 'Lawrie Tod,' though a native of Newbattle parish, where he was born on the 18th of February, 1773, lived in Dalkeith from his childhood until he sailed for New York on the 13th of April, 1794. He is a man of great piety and worth, though of a remarkably lively and eccentric character. He visited Dalkeith in 1834, when he published his "Autobiography," which he dedicated with characteristic singularity and elegance to Her Grace the Duchess of Buccleuch."

It did not suit the purpose for Mr. Peter Steele, the gifted schoolmaster who in 1844 wrote these words, to give any indication of Thorburn's career in Scotland. Political feeling then ran very high and political resentment was very bitter, and the teacher could not, had he so inclined, say a word commendatory of Thorburn's early life without bringing upon his own head the ill will of the Buccleuch family and its adherents. So like a canny Scot he acted the part of the Highlandman's parrot, which "thocht a guid deal and said naething ava." Thorburn learned from his father the trade of a nail-maker, and became quite an expert at it long before his apprenticeship was past. Like most of the Scottish workmen of the time,—a time when the old order of things

was fast changing and the governing powers tried to quell the popular advance and the popular aspirations with trials for treason, sedition and the like,—Thorburn became deeply interested in politics, and in Dalkeith was prominent among those who advocated Parliamentary reform and a generous concession to the claims of the people to a voice in the conduct of affairs. The result was that when opportunity offered he was arrested for treason, and after a short time in prison was released on bail. This arrest made him a marked man and blocked any prospect of his making his way in the world, so, believing that the star of freedom blinked bonnily across the sea in the new republic which had thrown off the yoke of the same Parliament he had protested against, Thorburn left Scotland, and, settling in New York, tried to earn his living at his trade of nail-making. It, however, did not promise much for the future, and in 1801 he started in business as a grocer at 20 Nassau street. "He was there," writes Walter Barrett, "some ten or twelve years, and then he moved to No. 22, and about the time of his removal, in 1810, he changed his business and kept garden seeds and was a florist. He established a seed-raising garden at Newark, but it proved unsuccessful, and thereafter he confined his attention to his business in New York and acquired considerable means." In 1825 he secured land and opened his garden in Astoria, where he built a home for himself.

From the beginning of his American career almost Thorburn became known for his kindly heart, and he did much practical good in a quiet way, not only among his countrymen, but among all deserving people whose needs touched his sympathy or aroused his compassion. For many years his store in Liberty street was not only a lounging place for the merchants who bought flowers, but for the practical gardeners who grew them, and his place became a sort of clearing house for the horticulturists in the city, and every Scotch gardener who arrived in New York from the

old country made Thorburn's place his headquarters until he found employment, and hundreds used to say that the advice and information they received from him at that critical stage in their careers were of the most incalculable value to them through life. In 1854 Mr. Thorburn in a sense retired from business and returned to Astoria. From there he moved to Winsted, Connecticut, and finally to New Haven, Connecticut, where he died in 1863.

Mr. Thorburn possessed considerable literary tastes, and under the *nom de plume* of "Lawrie Tod" wrote in his later years at frequent intervals for the "Knickerbocker Magazine" and other periodicals. He gave to John Galt much of the information which that genius incorporated in his story of "Lawrie Tod; or, Settlers in the New World," and his published books of reminiscences, notably his "Forty Years' Residence in America" and "Fifty Years' Reminiscences of New York," still form interesting reading. So, too, does a now scarce volume published in 1848, under the title of "Lawrie Tod's Notes on Virginia, with a Chapter on Puritans, Witches and Friends." This book is one of those contributions to American social history which will become of more value as time speeds on, although its importance will be more appreciated by the student than by the general reader.

Until the incorporation of Astoria as a village it progressed on somewhat slow yet eminently satisfactory lines. In fact, it was regarded as prosperous. After incorporation it progressed more rapidly. The "horse" ferry gave way to a steamer in 1839, and in 1853 a gas company was organized and many other improvements were introduced. Its advantages as a residential village were kept well before the people and every inducement was offered to people likely to become good citizens to settle. It was a quiet, orderly community, a home community, a law-abiding, peaceful community; and even after the formation of Long Island City, of which it became a ward, when other parts of the township

were offering protection to blacklegs and swindlers, when the liquor dealers, united openly to defy the law, when it was loudly boasted that in Long Island City a man might even defy the law and escape justice, Astoria held aloof from the maelstrom of license and crime and pursued the even tenor of her way, conscious that if other members of the family had thrown open their doors to crime she at least had preserved her name unsullied. But it cannot be said that her incorporation with Long Island City proved for Astoria's benefit; how she will fare in the Greater New York still remains to be seen.

An event which for a time attracted the attention of the entire country, and indeed of the scientific world, to Long Island City was the blowing up of Hell Gate so as to provide a clear channel for navigation. This event belongs to the annals of Astoria because the main obstructions destined to be removed lay off her shore line and the operations were directed from headquarters established in her territory. The wonderful story of that great engineering enterprise has been so often fully told that there is little need of plunging into the details in these pages. Suffice it to say that the work was begun in 1870 by the United States Government and placed under the direction of General Newton. For six years the work progressed, and after some minor obstructions had been removed every effort was directed to the destruction of Hallet's Reef, the most dangerous in the whole passage. A shaft had been sunk and passageways cut out in the interior of the rock until its whole extent was opened up. Into holes drilled into these passageways 52,206½ pounds of dynamite and other explosives were inserted, a network of electric wires connected the whole with a series of batteries on shore, and these again were controlled by a single wire operated by a button. The work was pronounced complete, and on Saturday, September 23, 1876, water was let into all the passageways and on the following day the little

daughter of General Newton touched the button and in two seconds Hallet's Reef was a mass of broken rock. The whole scheme had worked to perfection, almost exactly according to the schedule of the engineers. Flood Rock was afterward destroyed in the same way and several smaller obstructions were successfully removed. Hell Gate with its dangers is now a thing of the past, and this was amply demonstrated in the early summer of 1901, when a United States war vessel of the first class successfully passed through a channel which formerly was deemed too dangerous to be attempted in time of peace except by

HELL GATE.

river craft manned by river pilots, and was always dangerous. Readers of Fenimore Cooper's interesting novel, "The Water Witch," will recall a most thrilling description of the passage through Hell Gate as it was in the days before Uncle Sam undertook to remove its dangers.

To the student of American municipal matters the history of Long Island City as a distinct community during its existence of some twenty-eight years is an interesting study, if a somewhat nauseous one. It is not intended to follow its details here, for, excepting for the purposes of such study, the story is really purposeless; so a few details will suffice. As

the new city became the legal center of Queens county it became the seat of the law courts and so attracted quite a new order of business to the whilom Hunter's Point, a class of business which it still holds. To accommodate this legal business it was deemed necessary to build a court house. One was authorized in 1872 and in 1875 it was completed and opened. The original cost was fixed at \$150,000, but the actual cost was \$278,000, and the local politicians thought it escaped them too easily at that! The first election under the charter was held on July 5, 1870, when Abram D. Dittmars was elected Mayor, but the charter proved unworkable and full of faults, so that within a year a second charter had to be given the city. Each of the five wards were represented by three Aldermen, but in 1879 the number was reduced by limiting the wards to one city father each, while two were chosen by the city at large. Henry S. Bebevoise was elected the second Mayor in 1873, and in 1876 Mr. Dittmars was re-elected, but soon resigned. The most famous of all the Mayors,—famous for his vulgarity, his defiance of law and his aptitude for holding votes,—was Patrick Jerome Gleason, the last of the city's own rulers, and who, after a curious career, became a political nonentity, a bankrupt, and died poor and heartbroken early in 1901. One of the newspaper accounts of his career said:

"Patrick Jerome Gleason, who in late years was never mentioned without his emblem, the battle-axe, being spoken of in the same breath, was a unique figure in American politics. For years he practically carried Long Island City in his vest pocket and was the autocrat of the place. He was its Mayor for three terms, running over eight years, and from the time of his appearance there until his death his name was constantly before the public in one form or another.

"Gleason was fond of notoriety and liked to talk about himself and his deeds. He declared that the laborer and school children had in him a champion, and in the fight for more

school-houses he continually led the van. One of his latest feats was to write an autobiography, which it was his intention to publish in book form. He could not keep it long enough, however; he said it was too good for that,—so he gave it to the newspapers a chapter at a time.

"It was in the parish of Drum and Inch, County Tipperary, the birthplace of Senator John Morrissey, that Patrick J. Gleason was born. He said in his book that he had a twin brother and six other brothers and one sister. Patrick was the pigny of the family, and he stood six feet one inch when he had attained his growth.

"In May, 1862, when the Civil War was raging, Gleason came to this country. He used to tell that he had not been here two days when he was assaulted by two volunteer firemen, and he added, 'we had to be separated by a policeman.'

"Mr. Gleason's twin brother became a member of Mosby's guerrillas, but Patrick elected to stand by the Stars and Stripes, although the Ninety-ninth Regiment, in which he was a lieutenant, never got to the front. The next step in his career was as a distiller in Flushing, but the plant was confiscated by the Government and Gleason found himself bankrupt. He became a bidder for a street railroad through Williamsburgh into Long Island City, and got a franchise. Then came his first plunge into politics at the time of the Greeley campaign, when he was defeated for the Assembly.

"With a capital of fifty cents, Gleason thought of California as a haven, and he said he went to a friend to borrow \$150, telling him he need never expect to see it again. The friend gave him \$300 and he went to the Golden Gate. He had brothers in San Francisco, and finally sold his distillery secret for \$5,000, dabbling in stocks and increasing his capital to \$32,000. He heard that some one was trying to get his franchise in Williamsburgh, so he came East, built his road, acted

as conductor, driver, president and general superintendent, and began to increase his rolling stock.

"It was as Mayor of Long Island City that Gleason came into the greatest prominence. He was a strong supporter of consolidation, and when the Greater New York was finally an accomplished fact Mr. Gleason announced himself as a candidate for Mayor of the greater city. The battle-axe was his emblem on the ballot, but his candidacy was looked upon as a joke."

With the story of this interesting personage, whose name for fifteen years or so was the most familiar one in Long Island City, we might fittingly close this chapter, for in one sense he was its most representative citizen, in that he could for many years rally a

majority of its votes to his assistance to support his schemes. But before closing it may be proper to recall one locality which practically has passed out of existence. Dutch Kills still has a quasi-existence in local talk, although it has legally been wiped out, but Middletown, on the eastern boundary line of the city, seems to have been entirely passed into the forgotten. In the Revolutionary era it came into prominence from the movement of the British troops, Sir Henry Clinton and General Robertson having their headquarters there for brief periods, just as Lord Cornwallis seems to have had a brief station at Dutch Kills. But historic tradition alone is not enough to give vitality to a place, and so Middletown gradually fell from its one-time prominence and is now practically a memory.

YACHTS.

CHAPTER XLVIII.

SUMMER RESORTS.

A COSMOPOLITAN PLEASURE RESORT—HEALTH, EXCITEMENT, SOCIETY AND SOLITUDE
—MODERN BARONIAL ESTATES—PATCHOGUE—PECONIC BAY—THE
LAND BOOMER AND THE RAILWAY.

LONG ISLAND, throughout its whole extent, might most fittingly be styled the garden of New York, or Greater New York, the amusement and recreation ground of America's greatest city. It gratifies every taste. The lover of quiet can find it in abundance, can settle down in places apparently so far removed from the din of commerce, the roar and bustle and struggle of humanity, that he might easily imagine himself a thousand miles away from any habitation excepting his own and hear no sound save the hum of the bee, the twitter of the bird, or the musical duet of the katydid when night falls and darkness closes in on the little world to which he has resigned himself. If he wants society and fun and frolic and excitement, he can find it in abundance at many a popular caravansary, where he can be associated with people from all parts of the world, get the newest hints as to social life and study the most recent fad in the fashionable world. If a sportsman, he can find full use for rod and gun; and if he desires to fish in the deep blue sea, the waters of the Atlantic or of Long Island Sound are ready at his command. The fishermen can find no place where a day of more genuine fun can be had than in Jamaica Bay, or he can have a day worthy of being remembered by engaging in snipe shooting at Westhampton; if he wants excite-

men with his sport, let him spend a day or two in an open boat off the Great South Bay; if he be of the quiet, contemplative, philosophical kind, Izaak Walton description of a sport, a gentle "angler," why, such places as Sayville are ready to receive and welcome him. If a golfer, the finest courses in the world are at Babylon, Quogue, Flushing, Port Washington, the Shinnecock Hills and a dozen other places. If a polo expert, he will find many noted players in the Meadow Brook Club, one of the most famous sporting organizations in the land, whose kennels are a sight to see and whose annual hunting record is the best and most exciting in the country. If a bicyclist, he has only to secure a little tag and go meandering over some of the finest cycle paths to be met anywhere in this vale of tears and of spent tires and smashed wheels. He may even enjoy scorching now and again, and, most wonderful of all, will never once in his journey on the island be denounced as a nuisance. Sea-bathing, rolling and tumbling in the breakers or floating lazily in still waters is everywhere at command or within easy reach; and some of the most magnificent stretches of sandy beach to be found anywhere are of frequent occurrence along the whole extent of the South Shore. The harbor facilities for yachting purposes are unexcelled, and the sport, one of the grandest ever

invented by human agency, is enjoyed to the full by the dwellers on the island. No prettier sight can anywhere be found than the snug harbors of Port Jefferson or Shelter Island during the height of the season. If one is of a poetic mind, loves to realize how small an atom he is in the cosmopolis, he can sit on the rocks at Montauk Point and mourn the glories of a vanished race, a royal race, and realize the mutability of earthly greatness and comprehend his own insignificance as he watches the wide expanse of horizon and sees the wide limitless expanse of water kissing the rocky coast when in placid mood, or hurling against it with resistless fury when the angry fit is on.

A rare place indeed is Long Island for all sorts and conditions of men, and the beauty of it all is that every section of it is within easy reach of America's metropolitan city, Greater New York, part of which, indeed, is now on the island itself. Even to the sojourner, with only an hour or two to spare, the attractions of the island are open. Coney Island is less than an hour's distance by water, or even by the trolley, and a ride on some of these vehicles really carry the visitor through a stretch of ground more crammed with historical interest than can be found in an hour's ride even in history-burdened Continental Europe. We traverse the scene of the Battle of Brooklyn and through old villages, now, however, so sadly modernized and annexed that only glimpses here and there of the relics of other days present themselves. But we, in spite of changes, do pass through Flatbush and Flatlands and Gravesend, and each of these names recalls to the student of modern history a flood of treasured memories. Coney Island itself is a picture, a unique "city of the sea," with its bands, its noise, its touts, its shows, its merry-go-rounds and its cafes and saloons. A little bit vulgar, some people call it; possibly they are right; but there are many tastes in this world to be gratified, and every taste that is right and

proper and in keeping with morals and ethics has to be catered to. Coney Island has but one mission, and that is to please the public; and as it is visited every year by about a million persons it can hardly be said not to fulfill that mission. But people who think it vulgar, who find it not to their taste, can pass it by and go on to Manhattan Beach and the Oriental, where they can listen to classical music, hear now and again an opera or burlesque, associate with the salt of the earth, be waited upon by Austrian dukes and Italiap counts rigged up in swallow-tailed coats, eat the culinary masterpieces of French chefs, and see a grand display of fireworks before ascending to their bedrooms to be lulled to sleep with the gentle moan of the deep blue sea. In the season "the sport of kings," as horse racing is called, can be enjoyed at Sheepshead Bay or at Gravesend. Another resort near at hand is Rockaway, a long stretch of sand lying between Jamaica Bay and the ocean; while east of it, on the same stretch of sand, is Arverne, with its huge hotel and cottages, a center of social pleasure for three months every year.

The trolley system of Brooklyn is one of the most comprehensive to be found anywhere, and by it one may journey over very considerable distances of interesting country for a cost that is almost nominal. From Brooklyn Bridge to Jamaica is perhaps the acme of cheap and pleasant traveling, and so in the trip from the Broadway Ferry to Flushing or North Beach. Jamaica is the railroad center of the island, Flushing one of its old historic towns, and North Beach a summer show place; and to get to each of these places the cars pass through a wide extent of varied country, sometimes more or less thickly populated, sometimes so thinly peopled that the car bowls along with increased speed, irresponsive to the beauty of the surroundings or the story of the wayside, so as to make up the time lost in threading its way through the city's streets. Traveling by trolley is a delightful

pleasure on a warm day, for the car itself "makes a breeze," as the conductor tells us, and there is a certain degree of excitement or exhilaration always obtainable when one is bowling along through an open country, now passing a village, now a church, now a green field, and ever and anon dashing through some little collection of pretty villas, the beginning of some future popular summer resort.

But the trolley has its drawbacks; and as we look at the motorman we realize what a wide difference there is between that mechanical development and the old-fashioned stage-driver of our younger days. The motorman is a part of the machinery, and nothing more. The stage-driver was a gentleman, and, in his way and so far as his observation went, a scholar and a philosopher. He could tell you the story, the romance, of every field as he passed it by, name the owners of each house, tell you how much the head of each family was worth, relate all sorts of village scandal and gossip, and point out the scene of every remarkable occurrence within his view for a hundred years back! Your motorman is a different personage. He attends strictly to business, and his business is to get his car to the end of his route and nothing more. We question if there is a motorman in Brooklyn who could point out to you a bit of the ground fought over in the Battle of Brooklyn in 1776, or who ever heard that such a battle had ever been fought. His mind is fixed on other things.

The resorts on Long Island are very numerous, and all of them seem to grow in popularity year after year. We can not recall one that has gone back to its primitive condition of solitary wildness: although most of them have their ups and downs, their good years and their bad ones, the story is one of steady progress all along the line. Some seasons the "gilded youth" of both sexes prefer one place to another, and forsake, say Shelter Island for Glen Cove; but new arrivals take the place of the departed ones, and the story

of success goes steadily on. There is more reason for this than appears on the surface. The people who really make these resorts are the dwellers in the large cities, and as these increase in population year after year so does the cry for summer homes, and summer breathing places increase. Then Long Island fills the bill. It is so easily reached and yet affords such a welcome change! But, more than all that, its schedule of prices are moderate, and a man can spend a season at one of its best hotels as cheaply as he can in such establishments anywhere. Land is cheap, and a site for a dwelling is not costly, nor is labor extravagant in its demands. A man can choose a site overlooking the seashore or in some picturesque nook in the center of the island, all for a moderate cost, while he can have his provisions from New York or from some of the towns on the Connecticut shore as cheaply and promptly as though he were still a dweller in the busy haunts of men. He can enjoy city privileges and rural felicity without drawing more heavily on his purse than though he never stirred away from the noise and clamor of a city. Long Island is every year becoming an island of homes in the sense that Brooklyn used to be called a "city of homes." It is drawing to itself all classes of the community,—the millionaire and the clerk, and the mansion and the cottage, both find congenial surroundings.

In recent years a new development has taken place on Long Island, in the holding by individuals of vast extent of its territory, such as the property at Oakdale of William K. Vanderbilt and the estates of F. G. Bourne, of W. H. Whitney and others. These demesnes are veritable baronial holdings and rival in beauty and elegance many an English show place. But they are much more home-like, and the residences erected on them are a thousand times more comfortable than most of the storied old-world castles we read so much about. The old owners of manors on Long Island would have gazed with wonder at these estates, the modern

successors of their vast holdings. The modern manors are not so large as the old ones, and their title deeds do not convey any questionable "rights,"—rights which sometimes sadly interfered with "life, liberty and the pursuit of happiness;" but they are better worth living on and give to their owners more genuine pleasure and comfort than any of the old patriarchs could derive from their broad but bleak and sterile acres.

Of late years a feature of summer-home life on Long Island has been the organizations which club together, buy a piece of property, erect a club house and cottages and restrict the rights of property-owning on their domain to their own members. By this means many a pleasant colony has been formed of people who are acquainted with each other and whose company is congenial. Some of these places are most attractive, their co-operation permitting many expenses which the members could not indulge in single-handed, and they afford as a result of the benefits of co-operation all the pleasure of rural outdoor life at a very moderate cost.

But the multitude of people who go to Long Island flock to the resorts and the number of them is legion. Take Patchogue, for instance. It is in itself an old and settled community, lying in the shelter of the Great South Bay, in a little bay which bears its own name, with a railroad station in its midst, and one of the best roads in the island reaching from its centre right across to Long Island Sound, to Port Jefferson. It has an industry pre-eminently its own, its oyster trade, as well as several manufacturing establishments. Little need for it one would think, to spread bait to catch summer visitors; yet season after season they flock to it by the thousand. Its wide streets charm every one; and its churches, villas as well as its general air of comfort and cleanliness are satisfying somehow to the dweller in cities. Of course it caters to this annual trade and has all the attractions which an up-to-date seaside resort should have, and,

unlike many of the smaller towns in Suffolk county, it spends money on improvements with no niggard hand. As a sea-bathing resort it has all the adjuncts which fashion demands, and a fleet of car-boats or sailing vessels or naphtha launches are daily riding in its harbor, waiting the beck and call of any who want to enjoy a sail on the Great South Bay. If one is tired of the seacoast he can easily turn his steps inland; he can enjoy a glimpse of the country, or, by hiring a gig, can drive for many hours through rich and varied scenes and never once catch a glimpse of the coast until he returns to his hotel or boarding-house, and boarding-houses are as plentiful in Patchogue as dollar bills in a bank.

For those who desire seaside with very little, comparatively, of country, a tract of Long Island has been coming slowly into vogue in recent years, and that is at its eastern end along the shores of Great and Little Peconic Bay. A recent writer speaks of this section in the following enthusiastic fashion,—a fashion which, however, is truthful, in spite of its enthusiasm:

"Along Peconic Bay are a number of towns and villages whose fine climate, good roads and general attractions are making them prime favorites with summer visitors. The bay itself is a beautiful body of salt water, on whose placid bosom all manner of pleasure craft can be seen during the warm months, bearing happy groups of care-free folk. They sail or row over the blue waters in land-locked security from the rollers of the open sea. If they wish to take a dip in the surf, good beaches offer the alluring opportunity.

"On the north side of the bay, after leaving Riverhead, one soon comes to the town of Aquebogue, a name admirably descriptive, for water and bog make up the bay-front side. The Saxon half of the name and the sedgy flats about the town suggest the marshes of Runnymede, where the barons wrested the Magna Charta from King John.

"The land rises as one reaches Jamesport,

and here are hills crowned with old churches and pleasant homes. This town has become so popular for a summer holiday that the difficulty frequently met with is getting accommodations, a fact that has served as a stimulus in the erection of many cottages.

"Franklinville is a pretty village, 'at peace with all the world.' Contentment exhales from it as a fragrance, and it always has a colony of summer residents.

"A little way on down the narrow Italy-shaped peninsula into which the north side of Long Island is here tapering is the modest village of Mattituck. Both to the north end and to the south it has fine water views. Having comfortable inns and hospitable farmhouses for the entertainment of visitors, it has won deserved repute as a place of summer outing. One of the diversions of those sojourning here is found in a little creek flowing toward the Sound and abounding in crabs. In both sea and bay fish are plentiful.

"Just sneeze and you pronounce it:' that is a remark the writer overheard as descriptive of the name Cutchogue. But this description is suggestive in other ways than phonetically. A sneeze is apt to result from too much oxygen, and in the air that blows fresh from the water over slightly Cutchogue oxygen is abundant. This pretty town has other advantages than good air and a fine view. It is on one of the best roads in America, the long, straight highway leading from Riverhead to Orient. But good roads on Long Island, it should be said, are the rule rather than the exception. Every natural advantage in surface and soil helps their construction and maintenance. The drainage is good, the grades seldom steep, save near the ocean, and there is plenty of land to give the roads needed width. As a result these highways between verdant stretches of farm land, in the shade of noble trees, by the shores of shining lakes, and in sight often of the mighty sea, offer a perpetual invitation to walking, cycling and driving.

"One's first impression of Peconic, formed

from a glance down its broad, shaded street, is favorable, and closer acquaintance with the old town confirms this impression. Jutting out from the shore is a headland called Nasau Point. Southold, a few miles east, lays claim to antiquity in its name, and points to the fact proudly that its first settlers secured a concession from the Indians and from a church as early as 1640. There is a contention between Southold and Southampton, across the bay, as to which is the older. In August, 1890, Southold celebrated, with much ceremony, the two hundred and fiftieth anniversary of its founding. The town has a center where the stores, schools, and churches are grouped, and about it the houses are scattered widely. Whichever way the wind may blow the old place is fanned by a sea breeze. In this fact some antiquarians profess to have found a reason for the great age of some of the inhabitants, a few of whom, it is gravely claimed, antedate the founding of the place.

"Journeying to the very end of the main line of the Long Island Railroad one reaches the progressive and interesting town of Greenport. It has over 3,000 inhabitants, and is both a resort and an important business centre. Besides the trade that comes to it from being the terminus of the railroad, it has a considerable commerce through its boat connections with Shelter Island, New London, and Sag Harbor. Within the safe haven of its harbor a mighty fleet could find anchorage. The town's large summer population is drawn from a wide territory—New England and the West being represented as well as New York and Brooklyn. These sojourners have pleasant stopping places in well-appointed hotels and comfort-giving cottages. They find every means of outdoor diversion. Boating, sailing, fishing, and shooting are excellent, and many pleasant trips can be made awheel, afloat, or afoot. The view one gets from a bluff north of the town is expansive and exhilarating. Dancing in the sunlight are the waters of the Sound stretching away to the green shores of

Connecticut; to the south lies Peconic Bay, a glittering sapphire set between the green heights of Shelter Island and the trees of Greenport, with spire and roof peering through them; to east and west the eye travels over water to the far horizons. This north prong

the history not only of Long Island but of the country at large ought to commend it to many classes. To a certain extent and up to a certain time it was a "resort," but since it became a railroad centre it is so no longer; yet for one who wants to explore Long Island

CATHEDRAL AT GARDEN CITY, L. I.

of Long Island pushes on from Greenport, beyond the pretty town of Orient, with its one thousand people, to its end at Orient Point. Here the land, which has been gradually becoming narrower, dips into the sea, and what, in some of the geological epochs of the past, was a greater Long Island here becomes the bed of the Atlantic."

To many, the central portion of Long Island will always be its most attractive feature. Jamaica itself might be a resort, deserves to be a resort in fact, for its antiquity, its natural beauty; and the important part it has played in

no place is better adapted as headquarters unless one is prowling around Montauk Point, or meandering solemnly in the outskirts of Wading River. It is surrounded by a cluster of pretty home-like towns,—Hollis, in the one direction and Woodhaven in the other, each worth a visit to get a good understanding of the comforts and discomforts, the joys and drawbacks of the individual the comic papers like to run foul of as the suburbanite.

It is not very far by rail from Jamaica to Garden City, a place which has acquired so much prominence from the beautiful cathedral

and schools founded by the late A. T. Stewart and his widow. Stewart was a strange individual. The most successful merchant of his time, every speculation he entered into in connection with his legitimate dry-goods business turned to gold: everything else he touched turned to dross. One of his pet schemes was to found a city on Long Island, and with that end in view he purchased a large tract of land in the township of Hempstead. He knew that a town must have some reason for its existence, and he furnished the reason—the cathedral. He also built houses for the people to live in; but none was to be sold, all to be rented, and the rentals in turn was to help support the cathedral and its work. It was a failure. Americans do not like to live in an atmosphere of restriction, and that was what life at Garden City meant. The cathedral is a thing of beauty, the architectural beauty of Long Island, and the schools associated with it are the best of their kind; but it was not until Stewart was dead and the silly restrictions were removed that Garden City began to attract people. Its growth has been slow: the word “city” as its title has proved a misnomer. It will in course of time be peopled: that is inevitable; but it will never be in itself a city, for the next time that the Greater New York stretches itself it will be swallowed up as have so many more popular places.

For sylvan beauty no section of Long Island can more commend itself than that around Lake Ronkonkoma. Says the writer we have already quoted:

“The sheen of its limpid surface sparkles like the eyes of an Indian maiden. Fed by springs at the bottom, its waters are as pure as they are clear. The lake is about three miles around, and its shores form the shape of a pear. In places it is over sixty feet deep. As a shady fringe around it are many trees, and clustered about are a number of cottages. Along the beach of white sand a road runs, and the view from it over the crystal face of the lake is beautiful. This is the largest body

of fresh water on Long Island. It is fifty-five feet above sea level. Through some mystery of nature it has periods of ebb and flood, but these are not coincident with the tides or by any possibility connected with them. On the sloping banks daisies nod to their relatives the lily-pads in the water. In the darkling depths, bass, catfish, and perch disport themselves. Floating now and again over its bosom, as if calling its Indian name, are the sounds of bells from St. Mary’s-by-the-Lake, and from other steeples. A legend has it that a phantom canoe now and again goes noiselessly over the waters bearing an Indian girl, love-lorn, and in search of the young brave to whom she has given her heart. With the dawn her birch-bark boat skims away into the ether and the sun looks down into the mirror face of Ronkonkoma.”

But we must cease mentioning places, for wherever our eye falls on the map some great hotel like that at Long Branch or some quiet, old-fashioned inn like that at Roslyn comes before us demanding a word; and the summer delights of Southampton, or Cold Spring or Moriches or Shelter Island troop up calling for more detailed description than can well be given them individually in a chapter devoted to all as a class. Then too many historic spots are recalled, such as the early home of him who when a wanderer far from it wrote the plaintive words of “Home, Sweet Home,”—one of the world’s songs; the old Indian Canal at Shinnecock; the memorial to Nathan Hale; the haunts of Captain Kidd, and even the late tumult and excitement at Camp Wyckoff, where our soldiers rested after their return from their short but glorious campaign in Cuba,—all these bid us linger, all inspire a desire to tell their story; but such things cannot be crowded into a chapter and had better, here at all events, be left untold.

For fifty years or thereabout Long Island has been a paradise for the land boomers. Money has been made in its real-estate field, and much has been lost. The land boomer is

an evil: of that there is no doubt; and the story of his doings in Williamsburgh and and other places have won for him a memorable reputation. He has done harm in many quarters,—harm which exists to this day, because he has floated a half-considered and ill advised scheme, and then when the "bottom fell out of it" left it hopelessly a wreck. Such results are painfully evident all over Long Island. But still the boomer has been of service. He quickened the extension of the old city of Brooklyn by his efforts more than did any other agency; he it was who opened up its farms and turned them into streets and squares and won for it its title of "city of homes;" he, too, has been the means of bringing to the front most of Long Island's most popular resorts. They have been started in the first instance by his glowing descriptions and his confidently expressed hopes, and once he induced the people to believe as he professed to believe the rest was easy. He made money. He turned strips of sand into foundations of wealth, won a price for old farms which would have astonished the old holder of a manor patent; but the people got something for their

money, something they could use for health and pleasure. It was said of a once famous real-estate auctioneer and boomer in Brooklyn that he sold more sand and mud than any other man living. So he did. But people built hotels on the sand and homes on the mud, and so all were benefited. The boomer should be gratefully remembered when we think of the marvellous prosperity which Long Island has for so many years enjoyed for its pleasant country homes, its suburban pleasures and the wealth which the vast throngs of summer visitors yearly bring to its resorts.

But if the boomer has passed a greater power has arisen to perform his work, to perform it more honestly, more thoroughly, and with more beneficial and permanent results. That power is the railroad system of the island. There is no doubt that the plans now in progress for the extension and development of the Long Island Railroad will open up the entire island to business and pleasure to an extent even now little dreamed of and make it become a veritable fairyland of homes and resorts, and that, too, at a not very far distant day.

CHAPTER XLIX.

THE MEDICAL PROFESSION ON LONG ISLAND.

EARLY MEDICAL LEGISLATION—A SOUTHAMPTON DOCTOR AND HIS FEES—NOTED PHYSICIANS OF THE OLDEN TIME—BROOKLYN'S PIONEER DOCTORS.

By WILLIAM SCHROEDER, M. D.*

IT appears from the records of the past, that the relation of the medical man to the people was not the same as that of the minister or the schoolmaster, for his efforts in behalf of humanity did not receive the same recognition as was accorded to

the two other professions. This may be largely accounted for by saying that medical science, as we understand the term to-day, was unknown, and that the people submitted themselves to various forms of treatment with no particular object in view other than to lower

*This chapter and the two following, all relating to the history of the medical profession on Long Island, are from the pen of Dr. William Schroeder, of Brooklyn, and have been presented here in answer to a very general request that so much, at least, of Dr. Schroeder's historical studies as could be made available should be gathered together and presented in an enduring form. All of the matter contained in these three chapters was prepared and presented at various times and in various publications—publications which having served their day and purpose are now forgotten or so scarce as to be beyond general reach. It was felt that the material which had been so carefully and so lovingly compiled, at a great cost of time, research and patient labor, should be brought within easy reach of all interested in Long Island history.

William Schroeder was born in New York city, July 26, 1854, but since he was four months old his life has been spent in Brooklyn. He may therefore be regarded as to all intents and purposes a native of that borough. He studied medicine at the Long Island College Hospital, from which he was graduated with honors in the class of 1881. Soon afterward he entered upon practice in Brooklyn and slowly but surely advanced to the front in professional circles. He is a member of the

Kings County Medical Society, of which he is the official Historian, and is a member also of the Brooklyn Medical Society, the Brooklyn Pathological Society, the Long Island College Hospital Alumni Association and several other medical organizations.

Dr. Schroeder is also a prominent figure in social life. In Masonic circles he has attained high rank, having served as Master of Nassau Lodge, No. 356, and High Priest of Gate of the Temple Chapter, Royal Arch Masons. In the Order of the Eastern Star he has held the office of Grand Lecturer for the State of New York. An eloquent public speaker, Dr. Schroeder has lectured in public several times, mainly on Masonic matters, on which he is recognized as an authority of more than ordinary standing. To medical and periodical literature he has for many years been a steady contributor, mainly on historical themes. He is to the present day a diligent and painstaking student and he gathered around him a working library of which any library man might well be proud. In addition to his medical books, he has a collection of Masonic literature, collected from all sources and all lands, which could hardly be found equalled in any other local private library, while of works relating to Long Island history and antiquities his treasures are large, varied and unique.

their vitality. The patient received considerable attention from his neighbors, and they were always ready to give advice and offer treatment—which usually consisted of herbs of various kinds, each one possessing peculiar merits, capable of curing all the ills that human flesh is heir to. Many recovered, due to the fact of their possessing a robust constitution, consequent to their mode of living, which was largely out of doors; their living apartments being larger and their food more wholesome,—therefore much more health-giving than our manner of living at the present day.

A few historical notes, relative to the early history of medicine on Long Island, may not be out of place at this time.

Benjamin F. Thompson, in his History, published in 1839, informs us that the name conferred upon Brooklyn by the Dutch was Breucklin (broken land), and in the act for dividing the province into counties and towns, passed Nov. 1, 1685, it is called Breucklyn.

On the 18th day of October, 1667, a patent was granted by Governor Richard Nicolls to the freeholders and inhabitants of the town of Breucklen, their heirs, successors and assigns. "It is generally believed that Governor Stuyvesant, in 1657, gave a general patent of the town to Stephanus Van Cortlandt, of that portion known as Red Hook." Grants were also made between the years 1642 and 1647, by Governor Kieft, to different individuals for lands on the Brooklyn shore, from Red Hook Point to the Wallabout Bay. In 1670, the inhabitants being desirous of enlarging their common land applied to Governor Lovelace, who granted a license for that portion known as Bedford, extending from Brooklyn Ferry to the Flatbush turnpike.

In turning our attention to medical education in the State of New York, we find that in 1767 or 1768 an attempt was made in the city of New York to establish a medical school. The faculty, organized at that time, continued to read lectures until the beginning of the War of the Revolution, which converted their col-

lege into a military hospital. From this time until the year 1792, there were no medical lectures delivered in this State, and from that time until the institution of the College of Physicians and Surgeons by the Regents of the University in 1807, medical education did not make much progress, in fact, the advancement of medical science, so far as the State of New York is concerned, may be dated from the year 1807.

In 1760 the General Assembly of the Province of New York ordained that no person should practice as a physician or surgeon in the city of New York before he was examined in physic or surgery.

It appears that the first degree that was granted in New York was that of Bachelor of Medicine, conferred upon Samuel Kissam and Robert Tucker, in 1769, by the College of New York. In 1770 the degree of Doctor of Medicine was conferred upon the same gentlemen. (Transactions of the Medical Society, State of New York, 1827 and 1842.)

The presentation of these historical notes at this time is intended to fix in our minds the condition of things as they existed at that time. By so doing, we can more easily comprehend the efforts put forth by medical men at that time, to organize a college or society. Long Island evidently was not looked upon as the best place to practice medicine, as the writer has been unable to find a record of any physician, who was willing to call Long Island his home, until about the year 1725.

The practice of medicine on Long Island is well presented in an address, delivered by W. S. Pelletreau in 1890, at the 250th anniversary of the town of Southampton. He seems to have understood the relative position of the medical man in the community, for he admits that the procuring of a minister and then of a schoolmaster always preceded that of a doctor. His language is so beautiful and truthful, that I shall take the liberty of giving it in full.

For long years after the settlement there appears to have been no physician in town. A "Dr. Craig" is once mentioned, but he evidently was not a permanent resident. Families then doctored their ailments with domestic remedies. It was a part of the duty of a good housewife to lay in a good stock of herbs at the proper season. "Yarb teas" of all kinds were given in cases of sickness, and if they did no good they certainly did no harm.

It is quite a question, whether many of these herbs were not brought with the first settlers from England, with the traditional knowledge of their efficacy. Some of them are never found growing wild, far from the haunts of men. However this may be, each plant, according to their ideas, possessed a peculiarly good quality. Catnip was soothing to the nerves; Indian posy was strengthening; boneset was good in fevers; and skunk cabbage was used for rheumatism, but never cured it.

The first physician who appears to have settled here was Dr. John Mackie, who was here previous to 1736. He died in 1758, and of his medical practice we have no knowledge whatever. Succeeding him came Dr. William Smith, son of Nathaniel Smith, Esq., who owned a very large estate at Moriches. He first came to Southampton as a scholar of the Rev. Sylvanus White. In 1742 he studied medicine in Philadelphia, and settled here in 1754, remaining here until his death in 1775. His son, Dr. John Smith, was a physician here for many years, but the real successors of Dr. William Smith were Drs. Henry White and Silas Halsey, the latter removing to the western part of the State after the Revolution.

Of the nature of a doctor's practice during the latter part of the last century and the early part of the present, we have a very full description, contained in the account book of Dr. White, which is still in existence. His prices certainly were moderate,—so moderate that if physicians at the present time followed his scale of prices we could almost afford to be sick. As examples of the fees then earned by the medical profession, we may mention the following: Charge for a visit in the vicinity—one shilling. For a visit more than a mile distant—three shillings. For a night visit—four shillings. A visit to the North Sea—five shillings, and if he stayed there all night, and furnished medicines, the charge was nine shil-

lings and six pence. To Seth Squire's, at Squiretown—seven shillings. To Wakeman Foster's, at Pon Quogue—eight shillings, and the same to Red Creek.

A visit, with paregoric, cost Squire Herrick (a near neighbor) two shillings, and for three visits, with spirits of nitre, he charged three shillings and six pence. A visit to Wickapog, in the night, with castor oil and paregoric furnished, was ten shillings. He made a good many visits to Samuel Jaggeis, at Long Springs, at three shillings each. His son Sylvanus made a good many more visits, but he got a wife by them. The fee for extracting a tooth was one shilling. A "purge" was one shilling and four pence; an emetic the same; also the same for a dose of rhubarb. Two visits to Shinnecock, with sundry medicines, cost some Indians twelve shillings. A visit to North Sea, with bleeding thrown in, was four shillings.

A large part of his pay was taken in barter and days' work. At one time he gets a load of sea-weed for a visit, with the inevitable "purge," and again he brings home a fine bass, at a cost of a cent and a half a pound. We have no doubt but that his successors in the profession would be glad of such a chance occasionally. In one instance, a wealthy family at North Sea, for divers visits and doses, had run up a bill of nine pounds, seven shillings and six pence. This was paid, in what the doctor very justly calls "sundries," and includes apples, flax; wood, pears, timothy seed, beans, clams, fish, eels, pigs, watermelons and geese.

His accounts show that all the medicines he used were of the very mildest kind, and it is doubtful if they have either killed or cured. Phlebotomy and cathartic medicines, or as he expressed it in much plainer English, "bleeding and a purge," was the beginning, the middle, and the end. No matter what the disease might be, a "purge" was the first remedy administered. If the patient recovered, the doctor had the credit of it; if he died, it was charged to Providence.

When Dr. Smith wished to replenish his stock of drugs, he saddled his horse, fastened on his saddle bags, and started for New York. The end of the first day found him at Patchogue, where he tarried at the tavern over night. The next evening found him in the city, which then extended almost to Canal street. Having accomplished his business, he

started on his return home, and Saturday night found him safe at home.

The foregoing notes give an idea of the practice of medicine, and the relation of the physician to the people, up to the beginning of the present century, on Long Island. It is probable that the same relative conditions existed in every other part of the country at that time. The following items regarding the physicians in practice on Long Island up to this time, as far as the writer has been able to collect information concerning them, are intended to give the medical men of our city at the present time a view of the scarcity of physicians at that time, in any of the three counties of Long Island, for the purpose of organizing a Medical Society. In the county of Kings, the number was exceedingly small. Still there may have been a number of medical men in practice on this island, at the time referred to, who simply attended to their professional work, and never permitted their names to appear in connection with any other work, but this was probably not the case, as they would likely have been called upon to perform some work for the town in which they lived, and in that way their names would appear upon record.

"The Annals of Medical Progress," by Joseph M. Toner, M. D., 1874, makes mention of the following physicians on Long Island:

Samuel Osborn, a son of Dr. John Osborn, of Middletown, Conn., studied medicine and became a physician of repute in Brooklyn. He subsequently resided in New York city. Drs. Ball and Wendell succeeded to his practice in Brooklyn.

Dr. Benjamin Treadwell, a physician of Long Island, was in practice for nearly sixty-five years. He died in North Hempstead, in 1830, aged ninety-five years.

Dr. Jacob Ogden was born at Newark, N. J., in 1721. Received the best medical education the Colonies afforded, and removed to Jamaica, L. I., where he remained in practice

during the remainder of his life. He was Warden of Grace Church from 1761 to 1802. He wrote several medical dissertations on the sore throat distemper of 1769. The application of mercury in the treatment of inflammatory complaints was extensively used by him in 1749. He was also noted for his advocacy of inoculation. He died at Jamaica, L. I., September, 1780, in the fifty-ninth year of his age.

Dr. Samuel Martin, of Hempstead, L. I., son of the Hon. Josiah Martin, located in Hempstead, where he was Warden of St. George's Church from 1770 to 1791. He died at Rock Hall, April 19, 1806, aged sixty-five years.

In the Proceedings of the Medical Society of the County of Kings, 1876, Dr. R. M. Wyckoff contributes a paper on "Kings County in 1776," from which we extract the following notes:

Dr. John Jones, who assisted the Provincial Congress in establishing regimental hospitals, was a native of Jamaica, L. I. He was born in 1729. He studied medicine in Europe. Returning to this country in 1768, he was selected to fill the honorable station of Professor of Surgery in the Medical School of New York. He is the author of the first surgical book published in this country. It was brought out in 1776. The title reads: "Treatment of Wounds and Fractures; with an Appendix on Military Hospitals." He died June 23, 1791, aged sixty-two years.

Dr. Daniel Menema, a native of New York, who served as surgeon in the Second New York Regiment, was afterwards a resident of Jamaica, Queens county. He was a member of Grace Church; also of the Society of Cincinnati. In 1806 he was President of the Medical Society of Queens County. He died at Jamaica, L. I., Jan. 20, 1810.

Nathan Shelton, M. D., for more than fifty years a practicing physician in Jamaica, and for more than forty years a ruling elder in the Presbyterian Church. He was President of the Queens County Medical Society in 1829.

(History of the Presbyterian Church, Jamaica, L. I., 1862.)

Dr. Joseph Bloodgood, who was born in 1784, graduated from the University of Pennsylvania in 1806. He became a trustee of the College of Physicians and Surgeons of New York in 1811, and came to Flushing in 1812. He died March 7, 1851, aged sixty-seven years. He was Postmaster of Flushing for sixteen years. (History of Flushing, G. H. Mandeville, 1860.)

Dr. Benjamin Y. Prime, born in Huntington, in 1733, was graduated from Princeton College in 1751. In 1756 and 1757 he was employed as a tutor in the college. He studied medicine with Dr. Jacob Ogden, of Jamaica, L. I., and for several years thereafter practiced physic. He died Oct. 31, 1791, aged fifty-eight years.

Dr. Gilbert Potter was born in Huntington, Jan. 8, 1725. He studied medicine with Dr. Jared Elliot, of Guilford, Conn. He was engaged as a surgeon in the French War. In 1776 he was appointed Colonel, and was associated with General Woodhull in protecting Long Island. In 1783 he returned to Huntington, and pursued his professional calling. He died Feb. 14, 1786, aged sixty-one years. (Historical Address, by the Hon. Henry C. Platt, 1876, Huntington, L. I.)

Robert A. Davidson, M. D., was born November 28, 1793, and settled in Hempstead in 1813. At the time of his death, he had been engaged in the practice of medicine over sixty years.

Dr. James Searing is remembered as an old resident, at one time residing in the Harper residence. He was the first Treasurer of the Queens County Medical Society. He died at the age of seventy-four years.

Edwin Webb, M. D., of Hempstead, was born in England, September 2, 1804. He came to New York when three years of age. He studied medicine with Drs. Ball and Wendell, who were in partnership, and were then the principal physicians in Brooklyn. He received

his diploma from the College of Physicians and Surgeons, New York, in 1825. (History of Queens County, 1882.)

Dr. Samuel L. Mitchell, of Hempstead, L. I., was born in 1764. He died Sept. 7, 1831. He was a physician, naturalist, and Senator. He was admitted to the bar in 1791. Received his medical education in Edinburgh, Scotland. He held the chair of Chemistry and Natural History in Columbia College in 1796. In 1797 and 1798 he made a geological survey of the banks of the Hudson. He was a member of the Legislature at Albany from 1797 to 1813. He started with others the "Medical Repository" in 1798. Made a special study of yellow fever. Was present on November 4, 1825, at the completion of the Erie Canal. In 1820 he presided over a convention of physicians, who had for their object the formation of a Pharmacopœia. For twenty-seven years he gave an annual course of lectures at the College of Physicians and Surgeons. He was President of the New York Institution for the Deaf and Dumb, and in 1808 made, with others, that famous trip to Albany in Robert Fulton's first steamer. (N. Cleveland's History of Greenwood.)

Dr. John B. Riker, born at Newtown, L. I., in 1738. He held the position of surgeon in the American Army, from 1775 until 1783. Returning to his native town, he practiced medicine until his death in 1795, aged fifty-seven years. He was considered a gentleman of high professional attainments.

Dr. Ebenezer Sage, born August 16, 1755, in Connecticut. He graduated from Yale College in 1778; in 1790 settled in East Hampton, and married a daughter of Dr. Wm. Smith, of South Hampton. He was elected to the Eleventh, Twelfth and Thirteenth Congresses, and again in 1819 and 1820. In 1821 he was a delegate to the convention for amending the Constitution of the State of New York. He died Jan. 20, 1834, at Sag Harbor.

Dr. Isaac Hulse, born August 31, 1796, at Brookhaven, L. I., studied medicine in the

University of Maryland, and graduated in 1820. In 1821 he was commissioned Assistant Surgeon in the U. S. Navy; in 1824 Surgeon to the Naval Hospital in Virginia. In 1838 President Van Buren appointed him Fleet Surgeon of the West India Squadron. His medical reports exhibit talent of a high order.

Dr. George Muirson, of Brookhaven, L. I., in 1745 became celebrated for his successful treatment of small-pox by the administration of mercury, which method proved very successful in his hands. (Benjamin F. Thompson's History of Long Island, 1839.)

Dr. Benjamin F. Thompson was born in Brookhaven, L. I., May 15, 1784. He studied medicine with Dr. Ebenezer Sage, of Sag Harbor, and practiced the same for about ten years. He then studied law, and was elected to the Assembly in 1813 and 1816. He was School Commissioner in 1813 and 1814. A History of Long Island was written by him in 1839. A second edition, in two volumes, was published in 1843. He died March 21, 1849.

Dr. Nathaniel Miller was born in Brookhaven, on April 17, 1783; graduated from the New York Medical College in 1812; was a member of the Assembly in 1818 and 1849. He died May 7, 1863.

Dr. Nathaniel Gardner, of East Hampton, born June 11, 1759, was a Surgeon in the Revolutionary War, and served as a member of the Assembly in 1786, 1789, 1790. He died March 25, 1804.

Dr. Abel Huntington was born in the State of Connecticut, February 22, 1776. In 1796 he came to East Hampton, L. I., where he studied medicine, and for sixty years practiced his profession. He was a representative in Congress from 1833 to 1837. Collector of Sag Harbor under President Polk, and a member of the New York Constitutional Convention of 1846. He was known for his ability as a surgeon. He died May 18, 1858. (History of Suffolk County, 1882.)

The following are the names of physicians,

who have practiced medicine on Long Island previous to 1822, so far as the writer has been able to obtain information in regard to them, together with the dates of their practice:

Dr. Gilbert Smith, 1775. Huntington, L. I.
Dr. James Sandford, 1780. Huntington, L. I. Died Oct. 1795.

Dr. Daniel Wiggins, 1790. Huntington, L. I. Died Sept. 10, 1805.

Dr. Zophar Platt, 1754. Huntington, L. I. Died Sept. 29, 1792, aged eighty-seven years.

Dr. Oliver Brown, 1800. Huntington, L. I. Died Oct., 1815.

Dr. Jonathan Havens. Smithtown, L. I.

Dr. Zephaniah Platt, 1760. Smithtown, L. I. Died Jan. 27, 1718.

Dr. Samuel H. Rose, 1790. South Hampton, L. I.

Dr. Henry White. South Hampton, L. I.

Dr. Silas Halsey. South Hampton, L. I.

Dr. Aaron F. Gardner, 1800. East Hampton, L. I.

Dr. Samuel Latham, 1780. South Hampton, L. I.

Dr. George Punderson, 1780. Brookhaven, L. I.

Dr. Samuel Moore, 1761. Newtown, L. I.

Dr. William Lawrence, 1774. Musquito Cove, L. I.

Dr. Richard Udall, 1800. Islip, L. I. Died Oct. 6, 1841, aged ninety years.

Dr. Joshua Clark, 1780. Southold, L. I.

Dr. James E. DeKay. Oyster Bay, L. I.

Dr. Richard Sharpe. North Hempstead, L. I.

Dr. Purdy. North Hempstead, L. I.

Dr. Drake. North Hempstead, L. I.

The town of North Hempstead claims the following as having been born in the town:

Samuel Mitchill, M. D., 1764, Professor of Natural History, etc., etc.

Benjamin Kissam, M. D., Professor of "The Institutes of Medicine."

Richard S. Kissam, M. D., Professor of Surgery.

Wright Post, M. D., Professor of Surgery.

Valentine Mott, M. D., 1785. Professor of Surgery.

Dr. D. W. Kissam, born in Cow Neck, March 23, 1763. He married the daughter of Dr. Benjamin Treadwell, June 26, 1787. At the death of Dr. Sandford, 1795, he removed to Glen Cove, where he remained in practice until his death, November 21, 1839, at the age of seventy-six years.

Nathaniel S. Prime, in his History of Long Island, published in 1845, informs us that in 1802 the town of Brooklyn had but eighty-six freeholders, but that it was rapidly increasing in population, so that in 1816 the total population was 4,402. In the latter year the town was invested with the powers of a village. The impulse it received at this time soon became manifested, so that in 1822 the total population was about 8,000.

The formation of medical societies on Long Island dates from the organization of the Suffolk County Medical Society, which was organized July 22, 1806. The early records of this society have been lost, but as nearly as can be ascertained at the present time, Drs. A. G. Thompson, W. S. Preston, and Dr. B. D. Carpenter were prominently identified with its formation. The first delegate to the New York State Medical Society was Dr. Nathaniel Miller, in 1818, and the second was Dr. Charles H. Havens in 1820.

This was followed by the Queens County Medical Society, which was organized October 1, 1806, at Jamaica, with the following as its first officers: Daniel Minema, President; Henry Mott, Vice-President; Thomas Cock, Secretary; and James Searing, Treasurer. But it is evident that they did not meet with success, for on December 17, 1829, a second society was formed. This also seems to have met with adverse circumstances, for the present society dates only from 1853.

At a preliminary meeting of the physicians of the county of Kings, held at Flatbush on the 25th of February, 1822, at which Dr. Charles Ball, Matthew Wendell, John Car-

penter, William D. Creed, Francis H. Dubois, and Adrian Vanderveer, were present, the organization of a County Medical Society was decided upon, and carried into effect. At an adjourned meeting, held on March 2, 1822, at the inn of William Stephenson, Brooklyn, the organization was perfected by the election of the following officers:

Cornelius Low, President; Matthew Wendell, Vice-President; Adrian Vanderveer, Secretary; and John Carpenter, Treasurer. At a second meeting, in addition to those present at the first one, were Drs. Joseph G. T. Hunt and Thomas Wilson Henry. A third meeting was held on the 8th of April, at which time a code of by-laws was adopted, and the following gentlemen presented their credentials:

Cornelius Low, licensed in 1782, died 1830.

Francis H. Dubois, licensed 1802, was born May 21, 1783, and died Dec. 27, 1837.

Matthew Wendell, licensed 1804, was born July, 1779, and died July 11, 1860.

Jos. Gedney T. Hunt, licensed 1804, was born in 1783, and died June 25, 1848.

Charles Ball, licensed 1806, died 1845.

William D. Creed, licensed 1809, was born April 4, 1787, and died 1870.

John Carpenter, licensed 1812, was born April 17, 1791, and died Sept. 13, 1864.

Adrian Vanderveer, M. D., Col. P. & S., N. Y., 1818, was born Dec. 21, 1796, and died July 5, 1857.

Thomas Wilson Henry, M. D., Col. P. & S., N. Y., 1820, died 1867.

The above named gentlemen founded the Medical Society of the County of Kings.

At the meeting of May 8th, Dr. Matthew Wendell was appointed delegate to the New York State Society, and Drs. Jos. G. T. Hunt, T. W. Henry, and Charles Ball, censors according to law.

In July, 1822, the society adopted a seal, bearing the figure of a serpent spirally wound around a staff, with the inscription, "Scientia

Salusque Deo," and around the margin the words, "Societas Medica Comitatus Regis. Instituta A. D. 1822."

At the annual meeting in April, 1825, the venerable President, Dr. Cornelius Low, resigned his office, in consequence of his intention to altogether abandon the practice of physic, on account of his age and its attendant infirmities. Dr. Low enjoyed a large practice in Bushwick, New Lots, and part of Newtown. He was an ardent Patriot. He remained throughout his life unmarried. His death occurred about the year 1830. He was succeeded by Dr. George Cox.

The "Brooklyn Medical Journal" of January, 1888, contains a short article on the formation of the Medical Society of the County of Kings.

The first physician that settled in Brooklyn was Dr. John N. Barbarin, who established himself on Front street, which was then the main road, and remained in practice from 1784 to 1815. He was a Frenchman by birth, and came to this country as a surgeon in the British service. He was for a while stationed here during the occupation of Long Island by the British, afterwards resigning from the British service. He married a daughter of Mr. Bamper, and entered upon the practice of his profession in the village of Brooklyn. He died greatly respected.

Dr. Osborn conducted the first drug store in Brooklyn, on the corner of Sands and Jay streets. In 1811 it was bought by Ithiel Smead, who was followed by Dr. J. W. Smith, who removed the store to Hicks and Fulton streets.

Dr. Jos. G. T. Hunt's office was on the corner of Concord and Fulton streets. Dr. Chas. Hall's office was on Pearl street; Dr. Daniel McNeil at 22 Hicks street, and Dr. John W. Smith, 16 Concord street.

In 1809, the yellow fever prevailed in Brooklyn, producing what was known as the newspaper war between the physicians of the village. Among those particularly interested

were Drs. Osborn, Ball, and Wendell. Dr. Ball was President from 1833 to 1835, and Dr. Wendell in 1836, of the Medical Society of Kings County. Dr. Wendell was Health Physician from 1827 to 1834, and again from 1851 to 1856.

Dr. Osborn removed to New York, and Drs. Ball and Wendell succeeded to his practice, their office being at the corner of Sands and Fulton streets. Dr. Ball's house is represented in Guy's Brooklyn Snow Scene of 1820. See page 403 of this volume.

Dr. Francis H. Dubois and John Carpenter were in practice in the town of New Utrecht. During the yellow fever epidemic Dr. J. E. Dubois, son of F. H. Dubois, fell a victim to the disease. A beautiful monument erected to his memory marks his resting place in the old village graveyard. Dr. Carpenter, in 1825, organized the first Sabbath school in the village of Fort Hamilton, its sessions being held in a barn. In 1826 he organized the New Utrecht Sabbath-school, of which he was superintendent until his death.

Drs. Adrian Vanderveer and William D. Creed practiced medicine in the town of Flatbush. Dr. Vanderveer was on July 24, 1832, chosen the first Health Officer, one of his assistants being Dr. Creed. Dr. William Duryea Creed was born April 4, 1787. He was Sheriff of Kings County in 1811, and died in 1870.

In 1823 the Reformed Church organized a Sabbath-school, of which Dr. Vanderveer was the first superintendent, which position he held for thirty years. He was President of the Medical Society of the County of Kings in 1837 and 1838. He received the degree of A. M. from Columbia College in 1816.

Dr. Jos. G. T. Hunt was the first Health Officer of Brooklyn, being such during the years 1825 and 1826. He was well known in Masonic circles, being Master of Hohenlinden Lodge, No. 56, F. & A. M., in 1825, and Scribe of Nassau Chapter, R. A. M., during the same year. For a few years pre-

vious to this time he was surgeon to the Marine Barracks. He was President of the Medical Society of the County of Kings from 1825 to 1831.

Thomas Wilson Henry's office was at No. 67 Sands street, corner of Jay street. He was President of the Medical Society of the County of Kings during the years 1831-1832.

The above facts are related by Henry R. Stiles, in his "History of Kings County, including Brooklyn," 1884, vol. II, page 887; also in part by S. M. Ostrander, in his "History of Brooklyn and Kings County," 1894, vol. II, page 32.

From the organization of the Medical Society of the County in Kings, in 1822, until the repeal of that power by the Legislature in 1881, the society conferred sixteen licenses to

practice medicine, as follows (Manual, 1888, page 25):

Nelson A. Garrison.....	1824.
Joseph N. Smith.....	1827.
John Fred Sickels.....	1827.
Hartshorne Gregory.....	1829.
William A. Clarke.....	1832.
Henry A. Ruding.....	1832.
Philip Harvey.....	1833.
John V. E. Vanderhoef.....	1833.
Stephen M. Disbrow.....	1834.
Henry J. Cullen.....	1843.
Nelson J. Tucker.....	1848.
John Van Ness.....	1852.
William H. Van Duyue.....	1857.
George Wieber.....	1875.
John Mears.....	1878.
W. E. Conroy.....	1879.

LONG ISLAND COLLEGE HOSPITAL.

CHAPTER L.

THE MEDICAL SOCIETY OF THE COUNTY OF KINGS.

BROOKLYN'S CITY HOSPITAL AND SIMILAR INSTITUTIONS—A LONG ROLL OF HONORABLE PROFESSIONAL NAMES.

THE formation of the state and county medical societies was authorized by the Act of 1806. Soon several county societies were formed in various parts of the State, though the Society of the County of Kings was not organized until March 2, 1822, at the residence of Simon Voiz, in Flatbush.

The first annual meeting took place on April 8, 1822, at a tavern called "Auld Lang Syne," conducted by William Stephenson, at Fulton and Nassau streets. The following were the first officers and founders: Cornelius Low, President; Matthew Wendell, Vice-President; John Carpenter, Treasurer; Adrian Vanderveer, Secretary and Corresponding Secretary; Joseph G. T. Hunt, Thomas W. Henry, Charles Ball, Censors; Matthew Wendell, Delegate to State Medical Society; Francis H. Du Bois and William D. Creed. From 1822 to 1827 the meetings alternated between the house at Flatbush and the Auld Lang Syne tavern, after which until 1857 they were held quarterly in the Apprentices' Library Building, Henry and Cranberry streets.

The records show that for a number of years the Society confined itself to the discharge of the duties connected with the "regulating of the practice of physics and surgery within its limits." The nature of the work may be more clearly comprehended by the lay reader when the fact is known that the law of

the State required all practising physicians and Surgeons to connect themselves with the society in the county in which they resided. Thus, the statute of the State in 1827 required the President of the County Medical Society to serve personally a written notice on every physician and surgeon residing in the county, not a member of the Society, directing him to apply for and receive a certificate of membership within sixty days after the service of such notice.

The history of old Brooklyn records many physicians whose standing was open to question. As it was necessary for the protection of the public at large, as well as that of the reputation of the medical profession, it may be readily understood that the officers and members of the Society had sufficient work in enforcing the law of the State during the first thirty odd years of its existence. The first historian of the Society was Theodore L. Mason, M. D., who recorded the above facts in a short sketch of the Society published in 1858, at which times the meetings were held at the Brooklyn Lyceum, better known as the Brooklyn Institute, on Washington street, near Concord, 1837-1866.

Although so occupied by the business of enforcing the law, the Society found time as a society to aid the poor as early as 1835, when Isaac J. Rapelye, M. D., President of the Society, recommended that a committee be ap-

pointed to prepare a memorial to the Common Council proposing the establishment of a City Hospital for the care of the sick poor. It would be well to notice here that a dispensary had been organized by individuals in 1833 at the corner of Jay and Sands streets. This was the first Brooklyn Dispensary. The attending physicians were Doctors J. Sullivan Thorne and W. A. Clark. The consulting physician was Matthew Wendell.

To return to the hospital project, the Committee named below were appointed, and their efforts resulted in the organization of the City Hospital in 1839, then located in Adams street, near Johnson. Committee: Theodore L. Mason, M. D., Isaac J. Rapelye, M. D., John C. Fanning, M. D., Matthew Wendell, M. D., George Marvin, M. D., Samuel Boyd, M. D. The staff at this time included: Theodore F. King, M. D., President from 1840 to 1842; John Sullivan Thorne, M. D., Secretary; and the attending physicians were Purcell Cooke, M. D., George Marvin, M. D., and Samuel Boyd, M. D.

The Brooklyn City Hospital may, therefore, be considered the nucleus of the great hospital system which is one of the crowning glories of our city. Our hospitals are established for the relief of suffering, rich and poor are alike benefited, and it is a question which derives the greater good from these institutions. The Long Island College Hospital, as well as the Brooklyn City Hospital, owes its inception to members of the Society, Drs. Daniel Ayres, Louis Bauer, and John Byrne, together with the first council, and all but three of the first faculty were members of the Society. Owing to the fact that during the first thirty years of its organization the Society was obliged to expend its efforts in the enforcement of the law, there was little or no time left for scientific work. As a result, the Brooklyn Medico-Chirurgical Society was formed on November 10, 1856, with Andrew Otterson as President. The members of the society were, with few exceptions, members

of the County Society. During the ten years of its existence the society was a most active body. Here for the first time in the medical history of the city of Brooklyn was the opportunity offered to present papers on the advancement made in medicine and surgery, the discussion of which tended not alone to benefit the members, but the community at large.

In 1858, by a revision of the State statutes, the County Medical Society was relieved from its work of regulating the practice of medicine and began the publication of its transactions. This was simply the beginning of the great work accomplished here on behalf of the people of this city. At this time the society was made up of men who were ready to give not only their services but their lives when the opportunity came. For example, during the yellow fever epidemic in 1856 at New Utrecht Doctors John L. Crane and James E. Du Bois gave their lives in their endeavor to save those who were stricken with the disease. A few years before, in 1854, Joseph C. Hutchison, M. D., took charge of the Brooklyn Cholera Hospital, retaining its management for some years. Later, during the epidemic of 1866, William Henry Thayer, M. D., also a member of the society, devoted his energies to the Hamilton Avenue Cholera Hospital. William J. Swalm took charge of the Cholera Hospital in the City Park, called the City Park Hospital, near the Navy Yard. Besides this, various members of the society gave what leisure time they had to the improvement of the Brooklyn public schools. Doctor J. Sullivan Thorne was president of the Brooklyn Board of Education from 1868 to 1871. From the beginning of the school system in the town of Brooklyn to the present day there have been physicians connected with the Board, ever ready to give their advice on matters pertaining to the public health and to better the condition of the children.

The first Health Officer of Brooklyn was Dr. J. G. T. Hunt, who went into office in 1825. He was one of the organizers and sec-

and President of the Society, and from his time until the present, with three exceptions, every Health Officer or Commissioner has been connected with the County Society. No one can estimate what a vast amount of work these men, whose lives are devoted to the healing art, have accomplished for the people in the city of Brooklyn. The monumental work performed in this direction by Dr. A. N. Bell is sufficient of itself to test the sincerity of the Society's members in behalf of the public good. It has been said that the physicians have not received the recognition which is their due. As a matter of fact, however, the records show that many of our physicians have been called upon to fill places of honor, both in the State and National Societies. These positions have been such as to command the highest integrity and intellectual development. Dr. Joseph C. Hutchison, as well as three members of the Society who are still living, have held the presidency of the New York State Medical Society. Two of its specialists have been President of the New York Obstetrical Society, one of whom has also been President of the American Gynecological Society. Dr. Joseph C. Hutchison held the office of President of the New York Pathological Society. Another of the members has been President of the New York Neurological Society. Still another of the American Dermatological Society, and two more have been Presidents of the American Association for the Cure of Inebriates. These few examples show that the ability of Brooklyn men has not been entirely disregarded, and proves conclusively that the members of the County Society have been active in both State and National Societies, while eight of the members have received the degree of LL. D.

The first offspring of the Society was the above-mentioned Medico-Chirurgical Society. The second was the Brooklyn Pathological Society, organized as a section of the County Medical Society in 1870, under the

direction of Richard Cresson Styles, President of the Society at that time. To-day it is an active body, independent of membership in the County Society, though, with a few exceptions, its members are also members of the old County Society. In 1866 the Society changed from quarterly to monthly meetings, securing rooms in the Hamilton Building, at 44 Court street, where it continued to meet until 1875. Then removing to Everett Hall, 398 Fulton street, where they met until 1887, when they purchased the Bridge street building, 365 Bridge street, and remained until August, 1898. At present the meetings are held at Apollo Hall, 102 Court street. During the past few years the Society has been making efforts to commemorate events connected with its members, and with medical history. The first of these was a dinner to the late Dr. Andrew Otterson, on April 25, 1895, in honor of his completing fifty years of active practice in our city. Next, the Jenner Centennial, commemorating the inauguration of vaccination, May 14, 1896, all the guests receiving bronze medals in commemoration of the occasion. Then the 75th Anniversary of the Kings County Medical Society, April 11, 1897. Finally, the laying of the corner-stone of the new building of the Kings County Medical Society, November 10, 1898.

The early history of the Society is so closely identified with the lives of its members that it is well to give a brief sketch of the biographies of the founders.

Cornelius Low, M. D., the first President of the Society, was born in Albany, New York, about 1750. He was licensed to practice medicine in 1782. Served the Society in the capacity of President for three terms, beginning 1822. Little is known of his personal history. He died in Bushwick, Long Island, in 1830.

Dr. Matthew Wendell, M. D., the first Vice-President and sixth President of the Society, was born at Albany, N. Y., July 9, 1777. He came to Brooklyn from his birthplace, Albany, having studied under Dr. Hyde, of that city.

He became a licentiate in 1804, and entering into partnership with Dr. Charles Ball in 1805 he opened an office at the corner of Sands and Fulton streets. In 1812 he became surgeon in the United States Army. From 1815

Dr. John Carpenter, first Treasurer of the Society, was the son of Anthony Carpenter; his mother was a daughter of the late Rev. John Moffat, a Presbyterian preacher; also the early tutor of Governor DeWitt Clinton. Dr.

THE LIBRARY OF THE MEDICAL SOCIETY OF THE COUNTY OF KINGS.

to 1816 he was free vaccinator. In 1815 he was President of the Society for the Prevention of Vice in the Town of Brooklyn. He was Health Officer of this city during the years 1831 to 1838, and 1851 to 1857, and in hours of pestilence, as well as quiet, showed great executive ability. He died in July, 1860.

Carpenter was born at Goshen, New York, on April 17, 1791. His education was conducted by the Rev. John Moffat; he came, however, to New York about 1807. On his arrival in the city he made his home with Rev. James B. Romeyn, D. D., and found employment in the Governor's office. A few years later he

began to study medicine under Dr. Douglas, of New York, as preceptor. He attended the course of lectures at the old College of Physicians and Surgeons, and in 1812 was licensed to practice by the New York State Medical Society. It is believed that he obtained the first license granted by the Kings County Society, which was given him in 1822. At the beginning of the war of 1812 he was connected with the United States Army, and continued with the army until 1822, when he commenced private practice in Fort Hamilton and New Utrecht. In the same year he was one of the organizers of the Medical Society. He also organized the first Sunday-school in Fort Hamilton, of which he was Superintendent for thirty-eight years. In fact he might be termed the father of the Brooklyn Sunday-school system. He died on September 13, 1864.

Dr. Adrian Vandever was born in Flatbush December 21, 1796. He was prepared for Columbia College at Erasmus Hall Academy, and after graduating from there studied medicine at the College of Physicians and Surgeons, New York. In 1819 he entered upon a practice which finally extended over the whole of Kings county. At the organization of the Society he was elected First Secretary, and became its seventh President, during the years 1837 to 1838. He and Dr. T. W. Henry were the only members of the Society at its organization who were graduates of medical colleges, all others being licentiates. In the epidemic of Asiatic cholera in 1832 Dr. Vandever was appointed Health Officer of Flatbush. He was one of the first physicians to abandon general practice and confine himself to a special branch of the profession. This aroused opposition from his medical brethren, but he persevered, and eventually accomplished much. He died July 5, 1827, in his sixty-fifth year. Like many of the early physicians, he was closely identified with church work, having organized the Reformed Church Sabbath School of Flatbush in 1825, of which he was Superintendent from 1825 to 1857.

The duties of the Censors were far more onerous than the general public can realize. It was their duty to examine candidates and license them to practice medicine. The first three men who formed the Board of Censors were Drs. Joseph G. T. Hunt, Thomas W. Henry and Charles Ball.

Dr. Hunt was born in 1783. He studied medicine with Drs. Whitehead, Hicks and Bard, was licensed in 1804 and appointed Assistant Surgeon in the Navy. After having been promoted to full surgeon, 1806, he served in the Algerian war under Decatur, and was on board the "Chesapeake" when she was captured by the "Leopard." Later on he was stationed at the Brooklyn Navy Yard, and in addition to his official duty acquired considerable private practice. In 1820 he resigned from the service. In 1825 he was appointed First Health Officer of Brooklyn, with a salary of \$200 a year, and served until 1830. He was also President of the Medical Society from 1825 to 1830. He died in August, 1830, having held the office of President longer than any other member up to the present time.

Thomas W. Henry was born in the city of New York June 17, 1796. His education was obtained in the private boarding schools of New York. In 1818 he entered the College of Physicians and Surgeons, New York, receiving the degree of M. D. in 1820. Dr. Henry began the practice of his profession in the village of Brooklyn, as Brooklyn at that time did not extend much further than the present City Hall, the population being about 5,000. His first office was at Sands and Jay streets, then he removed near the further corner of Henry and Orange streets, and the old directories give his address as 65 Henry street. The name of this street was chosen by the Trustees of the village of Brooklyn, April 8, 1819. According to the custom then in vogue, Dr. Henry conducted for a number of years a drug store at the corner of Sands and Jay streets. In addition to holding the office of Censor in the Society, Dr. Henry was elected to the Vice-

Presidency in 1827, and to the Presidency in 1831. In 1832 he was elected an honorary member of the Medical Society of the State of New York. The records show that he was preceptor for the late George Gilfillan and Ripley E. W. Adams. It is said of Dr. Henry that he was a man of marked education, stern and conscious in his manner, ever ready to assist the sick and needy by his advice and treatment.

In comparison with the other two Censors little is known of Dr. Charles C. Ball. He was licensed July 4, 1806, and entered into private practice. In 1824 he and Dr. Wendell had joint offices at Columbia and Cranberry streets. They then moved to 112 Fulton street, corner of Main. He erected the first three-story brick house in Brooklyn, where he lived at the time of his death. This house was surrounded by beautiful grounds, and is pictured in Guy's snow scene of 1820. Besides holding the position of Censor he was President from 1833 to 1834. He was also a member of the Society for the Prevention of Vice. It is interesting to note that he was the richest physician of his time, owning all of what is now known as Brooklyn Heights; he was the first to give up horseback for the more luxurious carriage.

Of Dr. Francis Du Bois, like Dr. Ball, little is known. He was the son of John E. Du Bois, of the town of New Utrecht. Was born May 21, 1873. He married Sarah Bergen, and died January 22, 1827.

With Dr. Creed, however, we are more fortunate. He was born in 1787, in the town of Jamaica. His early education was obtained at Friars' Hall Academy, with the addition of a few years at Columbia College. He began the study of medicine in 1805, under the preceptorship of Dr. Comaine, in New York. He also attended medical lectures at the College of Physicians and Surgeons, New York, and was licensed to practice medicine in 1809. He accepted the position of interne in Bellevue Hospital during the year 1810, being the second interne in that institution.

In 1811 he began the practice of medicine in the village of Brooklyn. The same year he was Sheriff of Kings county, and was the only medical man in Kings county to hold that office. In 1812 he was appointed surgeon in Jeremiah Johnson's brigade, stationed at Fort Greene. He resumed the practice of his profession after the close of the war, and in 1822 became one of the organizers of the Medical Society of the County of Kings. When the first board of health was organized in Flatbush, in 1832, by John B. Zabriskie, M. D., with Dr. Adrian Vandever as Health Officer, his associates were Drs. William D. Creed and Robert Edmond, all members of the Society. Soon after Dr. Creed removed to Jamaica, and connected himself with the Queens County Medical Society, of which he was President during the years 1856 and 1857. He was also a member of the Suffolk County Medical Society. Dr. Creed, like many of the old physicians, was interested in the temperance cause, and for a number of years was President of the Queens County Temperance Society. He also organized the First Reformed Church at Queens, Long Island, laying the cornerstone in September, 1858. Dr. Creed died in 1870, aged eighty-three years.

In addition to the biographies of the founders it will be interesting to touch briefly upon the lives of the deceased presidents.

Dr. Isaac J. Rapelye became the fifth President of the Society in 1835. He came of a very interesting family, for tradition has it that the first white child born on Long Island was a Rapelye. The date of the Doctor's birth has never been ascertained. In fact, little is known of him up to the date of his graduation from the College of Physicians and Surgeons in 1820. He practiced in Newtown from 1820 to 1830, and in Brooklyn from 1830 to 1847. He held the position of Health Officer from 1839 to 1840; was Censor of the Society during the years 1831, 1832 and 1833. In 1847 he met with a tragic death. While going upstairs a favorite dog jumped upon

him with such force that he was thrown the full length of the stairs. It was found, upon examination, that his neck was dislocated, thus producing instant death.

Dr. John Barrea Zabriskie was President of the Medical Society of the County of Kings in 1839, being the eighth in line of succession of the preceding officers. He was prepared for college at Millstone, New Jersey. He entered Union, Schenectady, leaving that college in 1823. The following year he began the study of medicine in the office of Mr. William McKeesick, of Millstone, and became a student in the College of Physicians in New York, 1825. In 1826 he was licensed to practice medicine by the Medical Society of the State of New Jersey. Not being satisfied with this legal qualification, he entered the University of Pennsylvania, and received the degree of M. D. in 1827. In 1830, after having practiced for a time in New York, he removed to New Lots, and thence to Flatbush, where he spent the remaining eighteen years of his life in the active practice of medicine. He joined the Medical Society of the County of Kings in 1829. He was Censor and Secretary in 1831-2 and Vice-President in 1833-4-5, and was President in 1839. He also represented the county organization in the State Medical Society in 1829-31, where he presented a paper on the medical topography of Kings county, which was published in the transactions of 1832. During that same year he was a member of the Flatbush Board of Health and in 1847 superintendent of the Flatbush School District, which included New Lots. Besides these positions he was at one time physician in charge of the Kings County Almshouse, and at another surgeon to the Two Hundred and Forty-first Regiment, New York State Militia. He was also trustee of the Erasmus Hall Academy, and was an elder in the Dutch Reformed Church. In 1848 he died of a contagious disease contracted in his professional career. His son, John L. Zabriskie, deceased, was a member, and his two

grandsons are now active members of the Society.

The date of the birth of Dr. Purcell Cook is not known. He was licensed by the County Medical Society in 1824, and in 1851 received the honorary degree of M. D. from the Regents of the University of the City of New York. He practiced all his life in Brooklyn, and held the following positions in the Society, of which he was a member during the years 1835 to 1860: was Censor in 1835, Vice-President in 1839, President in 1840, 1841 and 1845. He died a bachelor December 24, 1860.

The next in line is Dr. Theodore Lewis Mason. He was born in Cooperstown, New York, September 30, 1803. He was the son of the Rev. David Mason, of Norwich, Connecticut, and a direct descendant of the John Mason who came to Boston from England in 1632. The early education of Dr. Mason was received under the preceptorship of Rev. Isaac Lewis. He began the study of medicine in 1822 at Greenwich, Connecticut, under Darius Meade, M. D. A few years later, after matriculating at the College of Physicians and Surgeons, New York, with David Hosback as his preceptor, he graduated in 1825. In that same year he began the practice of his profession at Milton, Connecticut, where he remained until 1832, when he removed to New York city. In 1834 he came to Brooklyn, remaining here until his death, February 12, 1882.

Bradley Parker graduated from the Medical Department of Dartmouth College in 1824. In 1836 he joined the Medical Society of which he remained a member until his death in 1874. He was Censor of the Society during the years 1838, 1840, 1841, 1846 and 1847. Secretary in 1842 and 1843, and President in 1844.

John Sullivan Thorne was born in the city of New York, April 19, 1807. Entered Union College and received the degree of A. M. in 1826, and immediately began the study of medicine in the offices of Drs. Matthew Wendell and Charles Ball, two of the organizers and ex-Presidents of the Medical Society. Re-

ceived the degree of M. D. from the College of Physicians and Surgeons in New York, in the class of 1829, and immediately began the practice of medicine in Brooklyn, at 51 Sands street. In 1830 he assisted in organizing the first dispensary in Brooklyn; when the dispensary was discontinued in 1839 he assisted in the organization of the City Hospital, and was one of the attending physicians until 1855. During the years 1844 and 1845 he was President of the Hospital. In 1832 he was physician to the Cholera Hospital, and from 1840 to 1880 physician to the Roman Catholic Orphan Asylum. In 1876 he became a member of the Council of the Long Island College Hospital, and, at the same time, one of the consulting surgeons. In 1879 he was a member of the Board of Regents. His connection with the Medical Society, county of Kings, dates from 1834. He became the Vice-President in 1844, President in 1846, and Censor in 1851. In 1843 Dr. Thorne became a member of the Brooklyn Board of Education, retaining his membership until 1872. In 1868 he was elected President of the board, retaining the position until his retirement in 1872, and as far as is known was the only physician who ever held that position. In addition to these various offices of trust he held the position of Trustee of the Brooklyn Female Academy, and was also a director of the Packer Institute of Brooklyn. His life was a record of usefulness.

Lucius Hyde was the son of Isaac Hyde, M. D., of Connecticut. He was born December 13, 1800. Educated at Union College, he studied under his father, Isaac Hyde, in 1823, and in 1825 was licensed by the New York State Medical Society. Practiced in Brooklyn from 1825 to 1862. Joined the Society in 1835. He was Censor during the years 1843, 1846, 1848, and President in 1847. A delegate to the New York State Medical Society 1848-50, and to the American Medical Society 1847, 1849, 1850 and 1851. He died September 11, 1862.

Chauncey Leeds Mitchell, A. M., M. D., was born at New Canaan, Connecticut, November 13, 1813. He graduated at Union College in 1833, received the degree of A. M. in 1836, and the degree of M. D. in 1836, from the College of Physicians and Surgeons, New York. He practiced medicine in Brooklyn from 1843 to 1888, was a member of the Council of Long Island College Hospital from 1860 to 1888; a member of the Board of Regents from 1878 to 1888. Was Professor of Obstetrics at Castleton, Vermont, Medical College from 1842 to 1845. Member of the Medical Society of the county, of which he was President in 1848, and 1858 to 1859; New York Academy of Medicine from 1847 to 1888. The American Academy of Medicine from 1879 to 1888, and the Brooklyn Pathological Society from 1871 to 1888.

Henry James Cullen, born at Manor Hamilton, Sligo, Ireland, July 2, 1806, came to this country when about fourteen, remaining in New York five or six years, when he removed to New Orleans, where he began the study of medicine. In 1828 he graduated from the Geneva Medical College, in New York. Immediately after graduation he returned to Matamoros, Mexico, where he had previously lived some years, and remained there three years. In 1837, after a trip abroad, he settled in Brooklyn, where he resided at the time of his death. He became a licentiate of the Medical Society in 1843, a member in 1844, Vice-President in 1846 to 1847, and was elected its President in 1849. He served as Censor in 1851, 1856 to 1857. He was for years one of the physicians of the Brooklyn City Hospital, and at the time of his death consulting physician to St. Peter's Hospital and St. Mary's. He was a member of the Brooklyn Medico-Chirurgical Society from 1856 to 1866, and President in 1866. He was one of the worthiest practitioners Brooklyn ever had. The last time he was seen by some of his medical friends was on a cold night, when the air was filled with snow and rain, the pavements slip-

pery with sleet, walking a good distance in spite of his chronic enemy, asthma, to witness the transfusion of blood from the carotid of a lamb to the veins of a man enfeebled by disease. Such occasions Dr. Cullen never allowed to pass. He was a practitioner of the old school, but in perfect sympathy with the progressive spirit of the profession. To Dr. Cullen the medical corps of the Navy owes a debt of gratitude which, when known, will be fully appreciated. It was he who instigated the movement in 1859 to secure for the surgeons a right which had often been asked for, and as often denied. Acting upon his recommendation, the Society appointed a committee with power to promote, by all lawful means, the passage by Congress according to the Naval medical corps their just demands. Circulars were addressed to medical societies far and wide. Petitions were sent to Washington and members of Congress appealed to personally to further the cause, which two years later signally triumphed. Dr. Cullen was a man of decided natural ability and high intellectual qualities.

James Harvey Henry was born at Rutland, Massachusetts, February 22, 1806. He died in Brooklyn November 1, 1875. He graduated at the Berkshire Medical Institute in 1827. A member of the Council of the Long Island College Hospital from 1860 to 1867, and of the Medical Society of the County of Kings, of which he was President in 1850.

Dr. Samuel Johnson Osborn was born May 4, 1813, at Mount Airy, Germantown, Pennsylvania. His early schooling was obtained at the Middletown Academy, Connecticut, and Joseph Hoxie's School, New York. After completing his education he entered the drug business, where he remained until 1840, when he began the study of medicine in the city of New York, under the preceptorship of Drs. Nichol H. Deering and Joseph Smith. Entering the Medical Department of Rutgers College in 1842, and the New York College of Physicians and Surgeons in 1843, he obtained

the degree of M. D. in 1844, and began the practice of medicine in the city of Brooklyn, connecting himself with the Medical Society the same year, serving the Society as Censor, 1846-50-52-55, and as President in 1851. He was Secretary from 1845 to 1851. In 1855 he removed to Oshkosh, Wisconsin, where his ability was recognized by the citizens, in evidence of which he was called upon to fill the following positions: Supervisor; School Superintendent, 1859 to 1869; School Commissioner, 1869 to 1871, and Alderman, 1871 to 1872. He was an upright man, a profound student of human nature, and an honor to his profession. During sixty years of his life he was connected with the Masonic order, having held the position of Master and High Priest in his lodge and chapter.

George Marvin was born at Norwalk, Connecticut, February 23, 1798. Having been prepared for college in his native town, he entered Yale University in 1814, receiving the degree of A. M. in 1817. In 1818 he matriculated with the University of Pennsylvania, where he received the degree of M. D. in 1821. He began private practice in Rochester, remaining there until 1828, when he came to New York city. In 1831 he removed to the city of Brooklyn, where he engaged in active practice until 1874. In 1831 he became a member of the Medical Society, holding the position of Censor in 1837-38 and 1839. Was Vice-President in 1840 to 1841, and President in 1852. He was Assistant Physician to the City Hospital, 1840 to 1845, and a member of the Council of the Long Island College Hospital from 1867 to 1874. For thirty-five years he was a member of the First Presbyterian church of Brooklyn.

Dr. Andrew Otterson was born near Amsterdam, Fulton county, New York, February 22, 1822, and died April 15, 1897. His academic education was received at Hempstead Harbor, Long Island, and Freehold, New Jersey, and in the year 1840 he commenced the study of medicine at Whitehouse, New Jersey,

having for his preceptor Dr. William Johnson of that place. He went to the University Medical College, graduating from there in 1844, and immediately selecting Brooklyn as the field of his future efforts for fame and success. In 1845 he became a member of the Medical Society of the County of Kings, and remained a member fifty-two years. His connection with the Medical Society covers a period of more than two-thirds of his life. He signed his name as the seventy-eighth member on the roll, and added to that eminent list an unimpeachable presence, a sublime purpose, and a dignity of character that remained unquestioned, and lived to enjoy the growth of its membership to more than six hundred. At the time of his death he was the oldest ex-President of the Society in active membership, the oldest non-resident ex-President living being Samuel J. Osborn, who filled the chair in 1851, removed to Wisconsin in 1862, attaining his eighty-fourth year of age on May 4, 1897. Between these two there existed a warm friendship, which time failed to dim or distance to sever. Dr. Otterson's membership in the Medical Society was not without recognition. He was President in 1853, 1854, and again in 1868. He held the position of Censor in 1849, 1864 and 1865. Secretary in 1850, 1851 and 1852, and Treasurer from 1855 to 1861. He also became associated with the Brooklyn Medical Society in 1856, and was its President in 1857; with the Brooklyn Medico-Chirurgical Society from 1857 to 1866, being its President in 1857, 1858 and 1859; the Brooklyn Pathological Society from 1877 to 1897; the Brooklyn Medical Book Club from 1892 to 1897, and the Alumni Association of the University Medical College of the city of New York, of which he was elected Vice-President in 1896. While thus professionally affiliated there were social duties which claimed his attention; among these were Altair Lodge, No. 601, F. & A. Masons, Constellation Chapter, R. A. M., Brooklyn Consistory, No. 24, and Ancient Scottish Rite, thirty-third degree. To cease here would be denying him the time-

honored association of a membership where his presence was ever punctual and an inspiration for good—a Fellow for fifty years of Montauk Lodge, No. 114, I. O. O. F. In his early professional life he filled the position of Attending Physician to the Brooklyn Dispensary from 1850 to 1855. In professional public life Dr. Otterson was Health Officer of the city of Brooklyn in 1872, and again in 1883; was President of the Board of Health in 1875 and 1877; Commissioner of Health in 1879 and 1880, and again from February 6, 1886, to February 1, 1888. Like many physicians in active practice, Dr. Otterson found little time for contributing to the medical literature of the day. He was essentially a practical man, who never lost a suggestion, and was never found without one. His reports of the Health Department are chiefly clerical, but his papers on the cholera epidemics of 1848 and 1854 in Brooklyn give proof of a facile pen and an ability to understand the hygienic requirements necessary in times of sudden outbursts of disease. Dr. Otterson's life was one continued earnest effort; right or wrong, he knew no middle ground. To his brothers in the profession he was singularly courteous, upright and void of dissimulation, ever ready to extend the helping hand. In ethics he was a moralist; in politics a Jacksonian Democrat; in the practice of his profession an ideal physician, kind, conscientious, faithful and beloved.

George I. Bennett was born November 15, 1809. He graduated at the University of the City of New York in 1842. Practiced in Brooklyn during his professional career, 1842 to 1875. He was the first outdoor temperance orator in Brooklyn, lecturing on Fort Greene plaza on Sunday afternoons, and using the stomachs of patients who had died of alcoholism (as prepared by Dr. John G. Johnson, of Brooklyn) to illustrate his text. He was a member of the Kings County Society, 1842 to 1875. The Vice-President in 1851; Censor in 1858; Librarian in 1859 to 1869, and President in 1855.

Timothy Anderson Wade was graduated

from Berkshire Medical Institute, 1843. He practiced medicine from 1844 to 1866. Was physician to the Brooklyn Dispensary, 1846 to 1850; physician to the Kings County Penitentiary, 1849 to 1859. A member of the Kings County Medical Society from 1845 to 1856. Was Secretary, 1847 to 1848 and 1849. Censor in 1849; President in 1856; Delegate to the American Medical Association in 1855. He died in Brooklyn, in April, 1866.

Samuel Boyde was born in Manhattan, in 1806, began studying medicine in New York city, 1825, with Dr. Alexander Stephens. Graduated from the College of Physicians and Surgeons in 1828; post-graduate studies were conducted in the hospitals of Dublin, Edinburgh and Paris. Began private practice in New York city, 1829. In 1844 he moved to Staten Island, where he remained until 1848; also had an office in Brooklyn from 1830 to 1860. Health Officer of the city of Brooklyn from 1857 to 1859, and Visiting Physician in the City Hospital, 1840 to 1843. Member of Kings County Society, 1847 to 1861; was Vice-President in 1857. Delegate to the State Society in 1835. Physician to Seamen's Retreat, Staten Island, 1844 to 1848; a surgeon in the Seminole War, and the only member that contributed a pamphlet on the yellow fever of 1856 then prevalent in New Utrecht.

Daniel Brooks, M. D., born in Westmoreland, New Hampshire, in 1813, took the degree of A. M. from Yale University in 1839; the degree of M. D. from the Vermont Medical College in 1845; was interne at the Insane Asylum at Hartford, Connecticut, 1845 to 1846; practiced medicine in Brooklyn, 1846 to 1861; attending physician at the Brooklyn Dispensary, 1846 to 1850; member of the Kings County Society, 1847 to 1861; Vice-President, 1859; President, 1860; delegate to the American Association, 1860; died December 24, 1861.

Christopher Raborg McClellan, born in Baltimore, Maryland, in 1813; graduated from Yale University, 1833. Received the degree

of M. D. in the University of Maryland, 1835; was interne at Baltimore City Hospital and County Almshouse, 1835 to 1836; practiced medicine in Brooklyn, 1837 to 1887; Health Officer of Brooklyn, 1841 to 1842; attending physician City Hospital, 1845 to 1850; consulting physician, St. Peter's Hospital, 1877 to 1887; member of the Kings County Medical Society, 1839 to 1887; Censor in 1842; Vice-President, 1850 to 1860; President, 1861; member New York Mutual Aid Association, New York Academy of Medicine, State Medical Association, and in 1866 he was a delegate to the American Medical Association; Professor of Botany in the New York College of Pharmacy in 1839; he died in Brooklyn January 13, 1887.

Samuel Hart was born at Wakefield, Massachusetts, November 27, 1796; graduated at Harvard University (A. B., 1817; A. M., 1820; M. D., 1821). Began the practice of medicine at Beverly, Massachusetts, in 1821. In 1828 he removed to Oswego, New York, and in 1855 he removed to Brooklyn, where he died September 3, 1878. He was a member of the Kings County Medical Society, 1858 to 1878, and Censor in 1861, 1863 and 1870. Was President in 1862. He was a member of the Oswego Medical Society, 1829 to 1855, also a member of the American Medical Association and of the New York State Medical Society, and Fellow of Massachusetts Medical Society. He was Curator of the Medical Department of the University of Buffalo, and Surgeon to the Riflemen of Oswego, New York. He bequeathed his library to the Kings County Medical Society in 1878.

De Witt Clinton Enos, M. D., was born at De Ruyter, New York, March 17, 1820. Died in Brooklyn, New York, December 14, 1868. Received his medical education in the College of Physicians and Surgeons, New York, graduating in 1846. He was professor of General and Descriptive Anatomy in the Long Island College Hospital, 1860 to 1867. Professor of operative and clinical surgery, Long Island

Hospital, 1867 to 1868. He was President of the Medical Society of the County of Kings in 1863. He practiced medicine in the city of Brooklyn from 1847 to 1868.

Joseph Chrisman Hutchison was born in Howard county, Missouri, Feb. 22, 1827, died in Brooklyn, New York, July 17, 1887. Graduated M. D., University of Pennsylvania, 1848, receiving the degree of LL. D. from the University of Missouri in 1880. Was Professor of operative surgery and surgical anatomy of the Long Island College Hospital from 1860 to 1867. President of the Collegiate Department, 1886 and 1887. President of the Medical Society of the County of Kings, 1864; New York State Medical Society, 1866; New York Pathological Society, 1871; and Health Commissioner of Brooklyn from 1873 to 1875, where he practiced medicine from 1853 to 1887.

John Terry Conkling, M. D. was born at Smithtown, Long Island, March 19, 1825, died in Brooklyn March 17, 1898, thus rounding out a useful life of more than the allotted time of three-score years and ten. His preliminary education was received in the schools at the place of his birth, and at the State Normal School of Albany, graduating from there in 1847. Shortly after this he came to Brooklyn, and in 1852 began the study of medicine in the office of De Witt Clinton Enos, M. D. Dr. Conkling matriculated at the College of Physicians and Surgeons, attending lectures during the winters of 1853, 1854 and 1855, graduating in 1855. He began the practice of medicine in Brooklyn, 1855, and continued until incapacitated by sickness. Was Superintendent of the Metropolitan Board of Health from 1864 to 1870, and was made President of the Brooklyn Board of Health in 1873. Was a member of the Board of Education, 1864 to 1870; member Council of the Long Island College Hospital, 1886 to 1893; Physician to the Brooklyn Dispensary and Eye and Ear Infirmary and Consulting Physician of the Long Island College Hospital. Member of the Long

Island Historical Society; became a member of the Kings County Medical Society, 1859; Censor, and President in 1864, serving one term.

William W. Reese was born of Quaker parentage, about eighty-seven years ago, near Philadelphia, Pennsylvania. He received the degree of M. D. from the University of Pennsylvania in 1845. After coming to this city he became a member of the Medical Society in the county of Kings in 1861. Six years after joining the society he was elected to the Presidency, which office he held during the year 1867. Dr. Reese was one of the constituent members of the New York Physicians' Mutual Aid Association. Was the first Vice-President, his term extending from 1871 to 1892. From 1874 he was also an active member of the Committee on Applications for Membership. Besides holding the office of President he was Librarian from 1870 to 1878 and later held the office of Assistant Secretary. He was elected a delegate to the New York State Medical Society for the years 1870 to 1873; a delegate to the American Medical Association from 1870 to 1879, and the National Quarantine and Sanitary Commission in 1866. He died on October 20, 1894.

Richard Cresson Styles was born in Philadelphia, Pennsylvania, Oct. 4, 1830; died at Westchester, Pennsylvania, April 17, 1873. In 1851 he took the degree A. B. from Yale University, and in the following year began the study of medicine in the office of Thomas Turner, M. D., of Flatbush, Long Island, matriculating with the University of Pennsylvania, and receiving the degree of M. D. in 1854. The years 1855 to 1856 were spent in the Paris Hospitals. Returning to this country, he began the practice of medicine in the State of Vermont, where he continued until 1862, receiving in that year the appointment of surgeon of volunteers. In 1863 to 1864 he was surgeon in Hancock's corps, coming to the city of Brooklyn. In the same year he engaged in the practice of medicine, his office be-

ing at 16 Court street. He accepted an appointment as resident physician to the Kings County Hospital, remaining until 1866. During the years 1865 to 1866 he held the position of Superintendent to the Hospital. Under the Metropolitan Board of Health he held the office of Registrar of Kings county in 1866, and was Assistant Sanitary Superintendent from 1868 to 1870. Previous to his coming to Brooklyn he filled the following positions: Lecturer on Physiology, College of Physicians and Surgeons, New York, 1861 to 1862; Professor of Physiology and Pathology, Vermont Medical College, 1857 to 1865; Professor of Physiology, Berkshire Medical Institute, Massachusetts, 1858 to 1862. His affiliation with medical societies has been as follows: Medical Society, County of Kings, 1865-1873; Vice-President, 1867; President, 1868-69; Censor, 1870; Brooklyn Pathological Society, 1870-73, of which he was one of the organizers. New York Academy of Medicine, 1865 to 1873. Delegate to the American Medical Association, 1865. In this connection it may be interesting to note that Dr. Styles had given some time to the study of Texas cattle disease, and discovered the parasite which caused the malady, and which Professor Haller, of Jena, named the fungus *Conisthecium Stilesianum*, in honor of the discoverer.

William H. Thayer was born in Milford, Massachusetts, June 18, 1822, became a member of the class of 1841, Harvard University, taking his A. B. in regular course. He received his M. D. from the Harvard Medical School in 1844. He was an interne of the Massachusetts General Hospital during his student period. For about ten years he practiced at Boston and at Newtown Centre, Massachusetts. From 1854 to 1862 he resided at Keene, New Hampshire. Was a member of the State Medical Society, New Hampshire and Vermont, and a surgeon of the New Hampshire volunteers. From 1862 to 1865 was Medical Director of New York, the Sec-

ond Division of United States Army Corps, being mustered out in July, 1865. He joined the Medical Society of Kings County in 1866, filling various offices from 1867 to 1878, and holding its Presidency in 1872 and 1873. In 1869 or 1870 he, with his friend, Dr. R. C. Styles, and nine others, laid the foundation of the Brooklyn Pathological Society. In 1892 he gave up the practice of the profession on account of deafness, and removed to Lanesboro, Massachusetts. There he spent the last five years of his life in the enjoyment of outdoor freedom. He died December 22, 1897.

William Wallace was born in Cork, Ireland, May 14, 1835; began the study of medicine in Edinburgh in 1851, and graduated from the Royal College of Surgeons in 1856, and the Royal College of Physicians in 1860. During 1855 he was acting Assistant Surgeon to the Royal Navy, in the Russian War. After the completion of his medical course Dr. Wallace entered the service of the Cunard Steamship Company, and for seven years served as surgeon. In 1864 he began practice in Brooklyn. He held the office of attending physician to the Out-door Department of the Long Island College Hospital. Subsequently he became visiting physician to the following institutions: Long Island College Hospital, St. John's Hospital and Home for Consumptives. Consulting physician to Long Island College Hospital and St. Mary's Hospital, and medical director to the college dispensary, were the important titles conferred upon him. His appointment as a member of the Council of Long Island College and Hospital Committee of St. John's Hospital, and the board of Managers of the Church Charity Foundation, shows the confidence reposed in him by the general public. In the Kings County Medical Society he was elected Censor, Trustee and President, and delegate to the State Society, and President of the Brooklyn Pathological Society. He died in 1897.

CHAPTER LI.

VARIOUS MEDICAL SOCIETIES—BROOKLYN HOSPITALS— DISPENSARIES.

THE reason for the organization of the Medico-Chirurgical Society is that usually offered, want of harmony, or inactivity, in the older societies.

J. H. Hobart Burge, M. D., located in the city of Brooklyn in 1855. The Medical Society of the County of Kings was the only medical body in existence and its members met quarterly. Dr. Burge felt that medical men should come together oftener, and issued a call to a number of physicians to meet at his office, 138 Duffield street, to consider the advisability of forming an active medical society. The result of this meeting was the organization of the above society on November 10, 1856.

The society was duly organized, in Duffield street, the name of which it received in honor of Dr. John Duffield, a surgeon in the Revolutionary War, who practiced medicine in the village of Brooklyn until his death in 1798.

During the ten years that the society had an existence in Brooklyn it included fifty of the most active physicians as members, many of whom were connected with the different hospitals of the city, and in a position to present a great many specimens at the meetings of the society, so much so that the society partook largely of the character of a pathological society; this work continued until 1866. During this year the Medical Society of the County of Kings resumed active work, which made

it unnecessary to have two medical societies in one section of the city. The members of the Medico-Chirurgical Society simply transferred their field of active work to the County Society.

The first President was Andrew Otterson, M. D., who held the office from 1856-59.

He was followed by Joseph B. Jones, M. D., in 1860. Dr. Jones is a graduate of the College of Physicians and Surgeons, New York, of 1855. He was local Health Officer from 1860-63 and 1864-66; Coroner of the county, 1869-74; member of the Medical Society of the County of Kings, 1860-76, and the last President of the Brooklyn Medical Society in 1857. Daniel Ayres, M. D., LL. D., followed as President, during the years 1861-62-63. He was born in Jamaica, Long Island, on October 6, 1822, "a year that marks the birth of our County Society." He was prepared for Princeton College, from which institution he was graduated, A. B., in 1842. Wesleyan University conferred upon him the degree of LL. D. in 1856. He commenced the study of medicine at the Castleton Medical College, Vermont, completing his studies at the University of New York, receiving the degree of M. D. in 1845. During the years 1844 and 1845 he was interne in Bellevue Hospital, and commenced private practice in the city of Brooklyn in 1846, continuing in the active practice of his profession in the city until his death, January 18, 1892. During his long and active service

in the practice of the healing art he ever maintained that dignity of character and honesty of purpose which go to make the true man and physician. In 1848 he was surgeon of the Fifth Brigade, Thirteenth and Fourteenth Regiments, New York, and from 1861-65 surgeon, New York State Volunteers; surgeon to the Brooklyn Hospital, 1846-53 and 1892; surgeon to St. Peter's Hospital, 1864-70; Consulting Surgeon, 1870-92.

His greatest work was in connection with the Long Island College Hospital. He was one of the founders, his active co-laborers being Louis Bauer, M. D., F. R. C. S., and John Byrne, M. D., LL. D. He was surgeon to the hospital from 1858-60, and elected the first Professor of Surgery in 1859, and Professor Emeritus of Surgical Pathology and Clinical Surgery, Long Island College Hospital, 1874-1892.

In the history of Bellevue Hospital, published in 1893, Dr. Daniel Ayres appears as Professor of Surgery, Long Island College Hospital, 1858-74. This is simply a mistake, in so far as the dates are concerned. His connection with medical societies was as follows: Medical Society of the County of Kings, 1845-92; Censor, 1847; American Medical Association, New York Academy of Medicine, New York Pathological Society, Medical Society of Berlin, Medico-Chirurgical Society of Brooklyn, New York.

His contributions to surgery have been: "Treatment of Membranous Croup by Tracheotomy," 1852; "Successful Treatment of Tetanus," 1852; "Successful Reduction of Complete Dislocation of the Cervical Vertebrae," 1852; "Contributions to Surgery," 1857; "Congenital Exstrophy of the Urinary Bladder and Its Complication Successfully Treated by a New Plastic Operation," 1859; "Operations for Artificial Anus," "Trepanning the Skull for Reflex Epilepsy," "Lymphomata in Anterior Mediastinum," 1881; "Reminiscences of Tracheotomy," and "Croup and Diphtheria," 1881. Several of the above papers were re-

produced in Hamilton's Gross' and Erichsen's "Systems of Surgery."

His bequests to Wesleyan University and Hoagland Laboratory are well known.

John Henry Hobart Burge, M. D., followed as President, in 1864-65. He was born in the village of Wickford, North Kingston, Washington county, Rhode Island, August 12, 1823. In 1844, at Wickford, Rhode Island, he commenced the study of medicine under the preceptorship of Drs. William Gorham and William Allen Shaw, which were continued at the University of the City of New York from 1846 to 1848, graduating M. D. in that year. His post-graduate studies were conducted by Professors Darling and Aylett, and at the New York Hospital under Professors Post, Reid and Watson. Dr. Burge's private practice commenced in New York city in 1848. In 1849 and 1850 he conducted a private hospital at Sacramento, California, and in 1851 to 1855 in New York city, coming to Brooklyn in 1855.

During the fifty years of professional life he has been connected with the following: Physician, New York Dispensary, 1852-54; Physician, Brooklyn Central Dispensary, 1858-63; Consulting Physician, 1866-76; Consulting Physician, Brooklyn Contagious Diseases Hospital, 1863-70; Consulting Physician, Sheltering Arms Nursery, 1870; Visiting Physician, Long Island College Hospital, 1863-94; Consulting Surgeon, Long Island College Hospital, 1894; Consulting Surgeon, St. John's Hospital, 1872; Consulting Surgeon, Lucretia Mott Dispensary, 1882; member of the Brooklyn Medical Society, 1856-57; Medico-Chirurgical Society, Brooklyn, 1857-66; Medical Society of the County of Kings, 1859; President, 1870-71; Long Island College Hospital Journal Association, 1868-75; President, 1870-71; Brooklyn Pathological Society, one of the organizers, in 1870; Medical Society, State of New York, 1876; New York Society of Medical Jurisprudence; New York Neurological Society, Vice-President, 1876; and Alumni As-

sociation, University City of New York, Vice-President, 1896.

His contribution to medical literature has been as follows: "History and Mechanical Treatment of Fractures of the Femur," 1890; and "Treatment of Fractures of the Patella," 1884 (his apparatus for the treatment of these fractures was presented in 1868 and 1880); "Hygienic Influences," address before the Medical Society of the County of Kings, 1868; "The Relations between Physician and Apothecaries," 1870; "A New Ether Inhaler; Remarks on Sulphuric Ether," 1889; "Anesthesia, Apparent Death; Resuscitation and Medical Ethics," 1891; and "Points of Election in Laparotomy, after Wounds of the Abdomen," 1893. To these may be added "A Throat Forceps," "Post-Mortem Needle," "Obstetrical Forceps," "Dilating Strictures in the Urethra, Curved and Straight."

Henry James Cullen, M. D., was the last President of the Society, in 1866.

BROOKLYN PATHOLOGICAL SOCIETY.

The history of any organization is simply the history of those who were active in its work. The success of any society depends upon the earnest work of a few of its members, aided by the general and hearty support of all connected with the organization. It is, therefore, to be expected that in outlining the history of any society certain of its members will be mentioned by name, while others who may have been faithful and earnest in their efforts to promote the best interests of the society are not named, for the reason that their work was along lines carrying with it little or no prominence.

Previous to the formation of the Homeopathic Medical Society, County of Kings, November 12, 1857, a State law required that all physicians who desired to practice medicine in Kings county should become members of the County Medical Society.

This necessity required homeopathic physicians to present their names for membership in the County Medical Society.

As a natural result the admission of homeopathic physicians met with much opposition and caused a lack of interest in the attendance at the meetings of the Society, the outcome of this indifference to the County Medical Society being that the Brooklyn Medico-Chirurgical Society came into existence.

This Society was organized November 10, 1856. The following well known physicians held the office of President during its existence: Andrew Otterson, M. D., President, 1856-59; Joseph B. Jones, M. D., President, 1860; Daniel Ayres, M. D., President, 1861-63; John Henry Hobart Burge, M. D., President, 1864-65; and Henry J. Cullen, M. D., President, 1866.

This Society marked the beginning of the study of pathology on Long Island; for at its meetings were presented for discussion pathological specimens, the first time anything of this character was ever attempted in the city of Brooklyn.

The laws of the State having been amended so as to permit the organization of more than one County Medical Society, thereby removing the feeling of opposition to the existing Society, peace and harmony were restored. In a few years the Medico-Chirurgical Society found that its usefulness as a society had practically come to an end, and the Society was discontinued in 1866. For a few years nothing of importance developed until the formation of the Brooklyn Pathological Section, in connection with the Medical Society, County of Kings. The preliminary meeting was held at the office of Charles H. Giberson, M. D., 188 Remsen street, on the evening of March 3, 1870, at which time it was agreed to issue a call through the Medical Society, County of Kings, for a meeting to be held at the rooms of the Board of Health, on the evening of March 22, 1870. The Assistant Superintendent was Dr. R. C. Stiles, who had kindly offered the use of the rooms for the meeting. Eleven physicians responded to the call, as follows: Charles Henry Giberson, M. D., obit April 14, 1879; Richard Cresson Stiles, A. B.,

M. D., obit April 17, 1873; Charles Corey, M. D., obit April 4, 1894; John Henry Hobart Burge, M. D.; John Byrne, M. D., LL. D.; Arthur Mathewson, A. M., M. D.; Jonathan Slater Prout, M. D.; Benjamin Avery Segur, B. S., M. D.; William Henry Thayer, A. B., M. D., obit December 22, 1897; Richard Morris Wycoff, A. B., M. D.; and Frederick William Wunderlich, M. D.

At this meeting the Brooklyn Pathological Section was organized, by-laws were adopted, and Charles H. Giberson elected to the office of Secretary and Treasurer, a chairman being elected at each meeting of the section. In 1876 the by-laws were modified so as to provide for the election of a President and Vice-President, but it was not until 1884 that the Pathological Section became a distinct organization, as in this year by-laws were so changed as to admit to membership all physicians in regular standing, irrespective of their membership in the Medical Society, County of Kings.

The Presidents of the Brooklyn Pathological Society from its organization to the present time have been as follows:

Charles Henry Giberson, M. D., first President of the Society, was born in the Parish of Kent, Bath, Carleton county, New Brunswick, on September 5, 1838, and died in Brooklyn, New York, April 14, 1879. He was a graduate of the University of Vermont, Medical Department, in 1861, and was Assistant Surgeon in the United States Navy from 1861-65. During the year 1865 he attended the Post-Graduate course at the Long Island College Hospital. He practiced medicine in Brooklyn from 1868 to 1879, and occupied the position of President of the Pathological Society in 1876; in 1872 he delivered the Semi-Centennial address before the Medical Society, County of Kings.

Frank Warren Rockwell, M. A., M. D., was born in Valatie, near Albany, December 22, 1843. Died in Brooklyn, New York, April 30, 1889, receiving the degree of A. B., 1865,

and A. M. in 1868 from Amherst, and graduated M. D. from the College of Physicians and Surgeons, New York, 1868. Lecturer on *Materia Medica*, "Reading Term," L. I. C. H., 1874. President of the Brooklyn Surgical Society, 1887-88. President Brooklyn Pathological Society during the years 1877-78 and 1879. He practiced medicine in Brooklyn, New York, from 1868-89.

Arthur Mathewson, M. A., M. D., was born in Brooklyn, Connecticut, September 11, 1837, received the degree of A. B., 1858, A. M., 1865, Yale University, graduated M. D., University City of New York in 1861. Assistant Surgeon, United States Navy, 1861-64. Surgeon, 1865. Surgeon United States Naval Hospital, Brooklyn, New York, 1866. Lecturer, Diseases of the Eye and Ear, Yale University Medical Department. Clinical Professor Diseases of the Ear, L. I. C. H., 1872-95. President Brooklyn Pathological Society, 1880. Has practiced in Brooklyn since 1867.

William Wallace, M. D., born in Cork, Ireland, May 14, 1835. Died in Brooklyn, New York, December 22, 1896. Graduated at the Royal College of Physicians, Edinburgh, in 1856. Royal College of Surgeons in 1860. Was Assistant Surgeon in the Royal Navy in 1855. President of the Medical Society, County of Kings, 1887-88. President of the Brooklyn Pathological Society in 1881 and 1882. He practiced in Brooklyn from 1864-94.

John N. Freeman, M. D., born in La Grange, Ohio, August 4, 1831. Died in Omaha, Nebraska, August 18, 1888. Graduated M. D. from the University City of New York, 1862. Assistant Surgeon Duryea's Zouaves, 1862-63. Surgeon One Hundred and Sixth New York Volunteers, 1863-65. President of the Brooklyn Pathological Society in 1883. Practiced medicine in Brooklyn, New York, from 1869 to 1888.

Benjamin Frank Westbrook, M. D., was born in St. Louis, Missouri, February 4, 1851. Died in Brooklyn, New York, April 12, 1895. Graduated M. D. from the Long Island Col-

lege Hospital in 1874. Lecturer on Anatomy, L. I. C. H., 1879-80. Lecturer on Anatomy and Pathological Anatomy, 1880-82. President L. I. C. H. Alumni Association, 1886. President Brooklyn Pathological Society, 1884-85-86. He practiced medicine in Brooklyn, New York, 1875-95.

Joseph Hill Hunt, B. S., M. D., was born in Huntsburg, Sussex county, New Jersey, April 12, 1848, receiving the degree of B. S. from Washington and Lee University in 1869. Graduated M. D. from the College of Physicians and Surgeons, New York, 1873. Demonstrator and Instructor of Histology and Pathology, L. I. C. H. Demonstrator of Histology, Brooklyn Anatomical and Surgical Society; member of the Kings County Board of Pharmacy; Professor of Botany, Materia Medica and Pharmacognosy, Brooklyn College of Pharmacy, 1893-95. President Brooklyn Pathological Society, 1887-88. President Medical Society County of Kings, 1898, Practiced medicine in Brooklyn, New York, since 1874.

John Cargill Shaw, M. D., born in Jamaica, West Indies, September 25, 1845. Graduated M. D., College of Physicians and Surgeons, New York, 1874. Was Medical Superintendent of the Kings County Insane Asylum from 1874 to 1883; has been Clinical Professor Diseases of the Mind and Nervous System, L. I. C. H., since 1883; was President New York Neurological Society, 1872 and 1876; President Medical Society, County of Kings, 1893; and President Brooklyn Pathological Society, 1889-90. Practiced medicine in Brooklyn, New York, since 1883.

Ezra Herbert Wilson, M. D., born in Port Jefferson, Long Island, November 24, 1859, graduated M. D., College Physicians and Surgeons, New York, 1882. Director Department of Bacteriology, Hoagland Laboratory, Chief of the Bureau of Bacteriology, Health Department. President Brooklyn Pathological Society, 1891.

Joshua Marsden Van Cott, Jr., M. D., born in New York City, 1861. Graduated M. D.

Long Island College Hospital, 1885. Director Department of Pathology, Hoagland Laboratory, Professor Histology and Pathological Anatomy, L. I. C. H., since 1891. President of the Brooklyn Pathological Society, 1892-93. In practice since 1887.

William Nathan Belcher, M. D., born in Brooklyn, New York, December 29, 1862, graduated M. D., Long Island College Hospital, 1884. Instructor in Histology and Pathological Anatomy, L. I. C. H., 1890. Lecturer on Physiology, "Reading Term," L. I. C. H. President Brooklyn Pathological Society, 1891. Practiced medicine in Brooklyn, New York, since 1885.

Francis H. Stuart, M. A., M. D., born in Logansport, Indiana, July 29, 1846, received the degree of A. M. from Hamilton College, graduating M. D. from Long Island College Hospital in 1873. Registrar of Vital Statistics, Department of Health, Brooklyn, New York, 1875-78. Lecturer on Obstetrics, "Reading Term," L. I. C. H., 1880-86. Acting Professor of Surgery, L. I. C. H., 1895-96. President Brooklyn Anatomical and Surgical Society, 1884. President Brooklyn Pathological Society, 1895. In private practice in Brooklyn, New York, since 1874.

Frederic Joseph Shoop, M. D., born in Braceville, Illinois, February 8, 1862. Graduated M. D., College Physicians and Surgeons, New York, 1883. President Brooklyn Pathological Society, 1896. Practiced medicine in Brooklyn, New York, since 1886.

James Peter Warbasse, M. D., born in Newton, New Jersey, November 22, 1866, graduated M. D., College Physicians and Surgeons, New York, 1889. President of the Brooklyn Pathological Society, 1897. In practice in Brooklyn, New York, since 1892.

Literally speaking, the Pathological Society has not been very active; true, many of its members, particularly those who have held the office of President, have enriched our medical literature by presenting papers at the meetings, also at the meetings of other Medical

Societies, numbering about 108. Independent of books and contributions to bound volumes this figure would be double or more, when we consider the contributions made by individual members.

The proceedings of the Society were published, together with those of the Medical Society, County of Kings, in their Journal from 1876 to 1883. The transactions of the Pathological Society for the years 1885 and 1886 were published in an octavo volume of 233 pages.

The first number of a magazine, under the name of "The Pathologist," was issued in January, 1881. This magazine continued to be published until 1883, its editor being the late Edward Seaman Bunker, M. D. The Chair of Histology and General Pathology was founded by Dr. Bunker at the Long Island College Hospital in 1879. He was a member of this Society from 1873 to the time of his death.

In 1894 William N. Belcher, M. D., who was then President, delivered an address before this Society, which was afterward published, being, so far as known to the writer, the only address ever published relating directly to the Pathological Society of Brooklyn. A report of the proceedings of the Twenty-fifth Anniversary of this Society, together with the address of Joseph H. Hunt, M. D., and other addresses were published in the "Brooklyn Medical Journal" in 1896.

Previous to 1856 the study of pathology on Long Island was practically unknown, and even to-day I believe we are the only Society that has been devoted to the study of pathology on the Island, with the exception that during the years 1874 and 1875 there existed a pathological society in South Brooklyn, with Joseph E. Clark, M. D., as President.

An approximate estimate of the membership of this society during the twenty-seven years of its existence is as follows: Died in active membership, 30; removed, 70; present number of members, 150; total, 250.

In conclusion may I express the hope that the Pathological Society of Brooklyn, as this city merges into the greater city, may increase in membership and in usefulness, and that the interest manifested in its proceedings during the last few years may be an incentive to greater work in the future.

Considering that the study of histology and pathology, as we now understand it, is the product of but recent years, the advances made in this study by members of this society are truly commendable. I well remember, in my student days at the Long Island College Hospital, the look of surprise that passed over the faces of the members of our class when the announcement was made that a Chair of Histology and Pathology had been established, a look which plainly said, "What is it?"

The Brooklyn Pathological Society has just cause to be proud of its record in the past, for if any one body of medical men more than any other have been instrumental in presenting the necessity of education in the science of pathology, and in giving an opportunity to the profession of this city to study pathology in its scientific and practical bearing, it has been those who have cherished and worked for its aims and its interests in the past, and now look forward to a broader and a grander field of labor and for achievements in the years to come in the history of the Brooklyn Pathological Society.

DISPENSARIES, CITY HOSPITAL.

The town of Brooklyn in 1830 had a population of 15,295. Four years thereafter it was incorporated as a city. The Medical Society of the County of Kings in 1830 had nineteen members upon its roll, and the town directory of that year indicates that there were about ten physicians engaged in the practice of medicine who were not connected with the Medical Society.

On the 8th day of February, 1830, the first dispensary in Brooklyn was organized at 168 Fulton street, under the name of The Brooklyn

Dispensary. In 1833 the dispensary removed to the corner of Jay and Sands streets, and must have been discontinued about this time. The attending physicians were: Drs. J. Sullivan Thorne and W. A. Clark. Consulting physician, Matthew Wendell.

City Hospital, 1839-1840.—Under this name, and about the time above indicated, this hospital was organized, being located on Adams street near Johnson. Its staff at that time included Theodore F. King, M. D., President, 1840-1842; John Sullivan Thorne, M. D., Secretary; attending physicians—Purcell Cook, George Marvin, and Samuel Boyd.

Theodore L. Mason, M. D., was President from 1842 to 1844, and was succeeded by John Sullivan Thorne, M. D., as President from 1844 to 1845. The attending physicians at this time were George Ball, Theo. F. King and A. N. Garrison. This hospital was incorporated May 8, 1845, under the name of

Brooklyn City Hospital. It was then removed to Hudson street near Lafayette avenue. The attending physicians at this time were Henry J. Cullen, Lucius Hyde, Purcell Cook, C. L. Mitchell and Christ R. McClellan; attending surgeons—Theo. L. Mason, W. G. Hunt, F. W. Hurd and Daniel Ayres.

In 1850 the hospital removed to Hudson avenue, then "Jackson street," near Lafayette avenue. Attending physicians: Henry J. Cullen, James Crane, Jr., J. Sullivan Thorne and John W. Corson; attending surgeons: William G. Hunt, Daniel Ayres, John Cochran and James M. Minor.

In 1854-55 we find the hospital at Raymond street, near DeKalb avenue, where it is situated at the present time. Attending physicians: H. S. Smith, James Crane, Jr., D. S. Landon, J. Sullivan Thorne and Henry J. Cullen; attending surgeons: DeWitt C. Enos, D. E. Kissam, John Cochran and James M. Minor; 1857-58—visiting surgeons: DeWitt C. Enos, Daniel E. Kissam, James M. Minor and Joseph C. Hutchison; visiting physicians: James Crane, Dillon S. Landon, Hora-

tio S. Smith and E. Krackowizer; 1860—visiting surgeons: James M. Minor, DeWitt C. Enos, Daniel E. Kissam, Joseph C. Hutchison and George Cochran; visiting physicians: James Crane, D. S. Landon, H. S. Smith, A. Nelson Bell and Charles J. Seymour.

The hospital is still in existence, at Raymond street and DeKalb avenue.

BROOKLYN DISPENSARY, ORGANIZED 1846.

Jackson House, Hudson street, near Lafayette avenue. Attending physicians: J. D. Trask, Bradley Parker, C. L. Mitchell, James Crane, Jr., J. H. Henry, Lucius Hyde and L. K. Brown; district physicians: J. D. Ladd, E. N. Chapman, W. Blackwood, T. A. Wade, A. V. Lesley, William Swift; 1849—Daniel Brooks, H. S. Smith, D. E. Kissam and Dr. Beers.

1851-52. Removed to the basement of the City Hall, but unable to remain there for any length of time, as it was understood that the city officials were afraid of contagious disease. The officers secured the back room of Bailey's drug store at 269 Washington street. Attending physicians and surgeons: John D. Ladd, William H. Gardner, D. E. Kissam, A. Otterson and J. C. Hutchison.

In 1855 we find the dispensary located at 107 or 109 Pineapple street. Attending physicians and surgeons: James Hebburn, J. H. Catlin, J. Blackmore, John Ball, E. A. Whaley, Alex. Little and Joseph B. Jones; consulting physicians and surgeons: H. S. Smith, D. E. Kissam and L. C. McPhail.

About 1858 the name was changed to that of Brooklyn Dispensary and Eye and Ear Infirmary. Its staff at this time consisted of the following: John Ball, M. D., President; Joseph B. Jones, M. D., General Surgery; John T. Conkling, M. D., Diseases of Females; John A. Brodie, M. D., Children, Skin and Vaccination; William Law, M. D., Heart, Throat and Lungs; William Otterson, M. D., Head and Digestive Organs; and R. M. Deering, Apothecary and Dentist; 1860—attending surgeons:

Joseph B. Jones and W. F. Swalm; attending physicians: John Ball, William Law and Robert Ormiston.

The dispensary is still in existence, at No. 11 Tillary street.

KINGS COUNTY HOSPITAL.

The early history of this institution appears to be intimately connected with the Brooklyn Almshouse. On April 9, 1832, the poorhouse at Flatbush was opened, and John B. Zabriskie, M. D., was appointed as physician, at a salary of seventy dollars per year. In 1834 Dr. J. B. Zabriskie was re-appointed as physician. In 1838 the County Hospital and Lunatic Asylum were opened.

On February 8, 1848, Dr. J. B. Zabriskie died. He appears to have been the only physician connected with the above institution up to this date. On March 5, 1848, F. M. Ingraham, M. D., and Philip O. Hyatt, M. D., were appointed in place of Dr. Zabriskie.

March 30, 1849, the hospital at the Penitentiary was opened and T. Anderson Wade, M. D., was appointed physician. Dr. Wade agreed to treat all prisoners and furnish the necessary medicine for \$12 per month, which was accepted. Dr. Wade's salary was fixed in 1852 at \$250 per annum. Dr. J. L. Zabriskie was appointed physician at the Penitentiary in 1859.

In 1854 it became known to the Board of Superintendents that a bill was pending before the Legislature directing that bodies of persons who may die in the poorhouse be delivered to medical schools for the purpose of dissection. The bill was denounced as a monstrous outrage, its provisions being declared barbarous.

In 1854 Dr. Thomas Turner was physician to the hospital, and Dr. J. A. Blanchard physician to the Lunatic Asylum. Dr. Blanchard was Superintendent from 1875 to 1877. In 1856 Dr. Robert B. Baiseley was resident physician of the Lunatic Asylum. In 1857 Edwin R. Chapin, M. D., was elected resident

physician of the County Hospital. In 1859 Dr. E. R. Chapin became physician to the Lunatic Asylum, which position he resigned in 1871.

Dr. Thomas Turner died in 1865, and his successor was Dr. R. Cresson Stiles, who resigned in 1866. Dr. Stiles was followed by Dr. Teunis Schenck.

WILLIAMSBURG DISPENSARY.

Organized January, 1851. Opened Sept. 1, 1851. Located at the corner of Fifth and South First street. The first President was Samuel Groves. The attending physicians were John A. Brady, Nelson L. North and Chas. Holzhauer; consulting physicians, Sidney Wade and Orson H. Smith; consulting surgeons, A. J. Berry and F. M. Lovett; visiting physicians, L. N. Palmer, C. H. Schapps and J. J. Bagley, M. D.

This dispensary is still in existence, under the name of the Brooklyn (E. D.) Dispensary and Hospital.

BROOKLYN GERMAN GENERAL DISPENSARY.

From 1857 to 1858, at 145 Court street. Consulting physicians, Edward Macbert and Gustav Braeunlich; consulting surgeons, Louis Bauer and William Arming; resident physician, Hermann Zundt; Mr. Hermann, Cupper and Leecher.

BROOKLYN CENTRAL DISPENSARY.

This dispensary was opened to the public in 1855. It was located at 173 Fulton street. The first President was J. Sullivan Thorne, M. D. Attending physicians and surgeons: J. H. H. Burge, Nelson S. Drake, William H. Van Duyne, Arnold Hallett, Thomas H. Green and T. H. Catlin; consulting surgeons, James M. Minor and C. E. Isaacs; consulting physicians, James H. Hewey and Jos. C. Hutchison.

In 1858 this dispensary was located at 5 Flatbush avenue. From that time to 1860 there seems to have been a number of changes among the physicians. In 1860 we find them

to be: J. H. H. Burge, John Hill, S. C. Gregg, W. H. Gardner and J. Wilson.

This dispensary is at present situated at No. 29 Third avenue.

THE LONG ISLAND COLLEGE HOSPITAL.

This college and hospital will undoubtedly in the near future assume a position among medical colleges second to none in this country. The additions to its curriculum; the increasing number of students; and the growing interest in the welfare of the institution which is exhibited by our citizens, all indicate that the Long Island College Hospital has before it a career of unlimited usefulness. The present outlook causes us to believe that the brightest pages in its history are yet to be written. The writer can scarcely believe the testimony of his own senses as he notes the advances made by this institution during the short time he has been in active practice. While congratulating ourselves upon the splendid prospects the future appears to have in store for the Long Island College Hospital, let us glance backward and note a few facts in the inception and early history of this institution.

During the year 1857 a number of German physicians in general practice in the Sixth and Tenth Wards of the city of Brooklyn organized what was known as the Brooklyn German General Dispensary. This dispensary was situated at 145 or 147 Court street, between Pacific street and Atlantic avenue. Prominently connected with this dispensary were the following doctors: Gustav Braeunlich, residing at 285 Henry street; Carl Aug. Louis Bauer, 167 Court street; William Arming, 75 Court street; Edward Maebert, 109 Union street; and Herman Zundt, 42 Dean street.

The intention of these gentlemen was to organize a large German hospital, as at this time the population of the Sixth Ward consisted largely of Germans. Nothing definite came of this idea, for we find that shortly afterward they joined with Drs. John Byrne,

of 202 Clinton street; Daniel Ayres, of 156 Montague street, and William H. Dudley, of 201 Henry street, in the organization of what was then known as the St. John's Hospital. On November 5, 1857, this hospital occupied the premises at 145 or 147 Court street, where it remained until the spring of 1858.

The "Perry Mansion" on Henry street being for sale, subscriptions were solicited from the citizens of Brooklyn for the purpose of purchasing this property. The effort proving successful and the property having been purchased, application was made to the Legislature for a charter, which was granted in 1858.

Drs. Braeunlich and Bauer deserve special mention for the interest manifested by them in the institution and for the work which they accomplished at this time.

The reason for the change of name from St. John's Hospital to that of the Long Island College Hospital is unknown to the writer, but it was under the latter name that the institution received its charter and opened the hospital in the spring of 1858, on the site where it now stands, and where we hope it may stand for ages to come. The following is taken from the Brooklyn City Directory of 1858-'59:

LONG ISLAND COLLEGE HOSPITAL OF THE CITY OF BROOKLYN.

Henry street, between Pacific and Amity. Board of Regents: Hon. Samuel Sloan, President; Samuel W. Slocum, Esq., Vice-President; C. Nestell Bovee, Esq., Secretary; Cornelius Dever, Esq., Treasurer; Hon. Samuel Sloan, Samuel W. Slocum, Henry Messenger, C. N. Bovee, L. K. Miller, Jaques Cortelyou, A. B. Baylis, R. L. Delisser, Cornelius Dever, Daniel Chauncey, J. T. Moore, George F. Thomas, Joseph Hegeman, J. S. Brownson, N. E. James, Theodore Polhemus, Charles Christmas, Nicholas Luqueer, Eugene O'Sullivan, Harold Dollner, Henry F. Vail, R. H. Berdell, L. B. Wyman, J. J. Van Nostrand and Samuel Smith. Members of the Council: Theo. L. Mason, M. D., C. L. Mitchell, M. D.,

William H. Dudley, M. D., and J. H. Henry, M. D.; physicians: John Byrne, M. D., E. N. Chapman, M. D., and Gustav Braeunlich, M. D.; surgeons: Daniel Ayres, M. D., and Louis Bauer, M. D.; adjunct physicians: R. S. Olmstead, M. D., G. D. Ayres, M. D., and W. H. Davol, M. D.; adjunct surgeons: E. A. Whaley, M. D., D. A. Dodge, M. D., and J. G. Johnson, M. D.; apothecary: E. S. Fougere.

MEDICAL SOCIETIES.

The first medical society, independent of the Medical Society of the County of Kings, was organized in 1852, and was known as the Medical Association of the Eastern District. Among the physicians who were connected with this society we find the following: C. H. Schapps, M. D., who was President in 1852-'55; Ernest Krackowizer, C. Macfarlan, Jos. Creamer, James S. Hawley, Carl Wittman, Geo. W. Baker, John Walsh, J. J. Acheson, Nelson L. North, Sr., and E. N. Colt.

This society continued until 1882, when it went out of existence.

On February 5, 1863, the Medical Association of the Eastern District of Brooklyn was organized.

MEDICAL CHIRURGICAL SOCIETY.

Instituted at Brooklyn in 1857. Active among its membership were the following well-known physicians: Andrew Otterson (President from 1857 to 1859), John Ball, Joseph B. Jones (President in 1860), E. N. Chapman, Daniel A. Dodge, J. H. H. Burge (President from 1864 to 1865), Daniel Ayres (President from 1861 to 1863), J. C. Halsey,

Jos. E. Clark, Henry J. Cullen (President in 1866), William Law, Jr., A. N. Bell, John Byrne and W. E. Mulhallon; besides James Crane, Jr., U. Palmedo, Geo. I. Bennet, A. Moore, J. P. Colgan, Sr., Charles C. Isaacs, J. P. Colgan, Jr., William Otterson, G. D. Ayres, W. Mills, Thomas P. Morris, H. C. Simms and De Witt C. Enos.

This society was discontinued in 1866.

BROOKLYN MEDICAL SOCIETY—1856.

This society met in Brooklyn Institute on Washington street, but very little is known regarding it. The physicians connected with it were Andrew Otterson (President from 1856 to 1857), John Ball, A. N. Bell, Jos. E. Clark, Jos. B. Jones and John Byrne.

On August 21, 1846, a special meeting of the Medical Society of the County of Kings was called to consider the propriety of establishing a dispensary in the city of Brooklyn. This call was signed by the following members: Drs. Robert McMillan, John F. Morse, J. C. Halsey, Sam. J. Osborn, William Swift, David F. Atwater, T. A. Wade, Purcell Cooke, J. M. Moriarty, A. Otterson, Wm. C. Betts, Daniel Ayres, F. W. Hurd, Geo. I. Bennet and A. Van Pelt.

The committee appointed at this meeting reported on September 14, 1846, that the matter had been presented to the trustees of the Brooklyn City Hospital, and that a committee had been appointed by them to consider the subject. The committee from the medical society comprised Drs. Sam. J. Osborn, Henry J. Cullen, John F. Morse, John L. Thorne and Theo. L. Mason.

CHAPTER LII.

DENTISTS IN BROOKLYN.

OUR information regarding the early dentists on Long Island is exceedingly limited. The first of whom we have any record is T. Jefferson Jones, M. D., who in 1828 practiced dentistry and kept a drug store at No. 4 Sands street. He appears to have continued to practice at this place until his death in 1835. In 1831 W. K. Northall, Jr., commenced practice at 79 Fulton street. His father, W. K. Northall, F. S. A., was principal of the Mount Pleasant Academy, 278 Fulton street. Dr. Northall was evidently from Birmingham, England, and in the directory for 1832 appears the following advertisement:

W. K. NORTHALL, DENTIST,
No. 79 Fulton Street, Brooklyn.

Begs to refer to those Ladies and Gentlemen who may require his attendance, to the Rev. Mr. McIlvane, Brooklyn, Valentine Mott, M. D., and Daniel Lord, M. D., of New York.

Mr. Northall has certificates from the following Gentlemen in England, namely: W. T. Cox, Esq., Professor of Anatomy in the Birmingham School of Medicine; John Erles, M. D., Lecturer on the Practice of Physics; Dr. Richard Pierson, M. D., Lecturer on Materia Medica and Medical Botany; to Dr. Burt Davis, M. D., Physician to the Fever Hospital, Birmingham; Joseph Hodgson, Esq., Senior Surgeon to the Birmingham General Hospital; T. K. Booth, Senior Physician; Dr. Aaron Davis, M. D., of Radnorshire; the Rev. George Hall, Vicar of Tenbury, Worcester-shire, Rector of Rochford, Herefordshire, and Domestic Chaplain to Lord Brougham and Vaux, the Lord High Chancellor of England.

In the same year appears the advertisement of Dr. T. Jefferson Jones, as follows:

T. JEFFERSON, JONES, M. D.

Would inform his friends that he continues to officiate in the capacity of a Dentist at his residence, No. 4 Sands street, Brooklyn, where Teeth of every description from one to an entire set can be inserted. Teeth Cleaned, Filled and Filled so as to add much to their Durability and Beauty. He would also recommend the Persian Dentifrice (tooth powder) kept by him to all those who are desirous of having their gums healthy and teeth white and clear from tartar without any injury to either. Also a general assortment of Drugs, Medicines and Perfumery for sale as above.

In 1836 Dr. Northall, having evidently obtained somewhat of a practice among Brook-

lyn people, has the following advertisement in the directory of that year:

TEETH.

W. K. NORTHALL, Surgeon Dentist, 56 Fulton street, respectfully informs the inhabitants of Brooklyn and Long Island that he is prepared at all times to accommodate those who wish to supply the loss of natural teeth with artificial ones with Premium Incorruptible Teeth of the very best quality and of every variety of shade, of durability, cleanliness and natural appearance of the silicious teeth; renders them permanently superior to all other kinds. Mr. Northall inserts teeth from one to an entire set upon the best principles of dental mechanism which render them available for all purposes of articulation and mastication.

DENTAL SURGERY.

Cavities in the teeth filled with Cement, Gold or Silver, as the circumstances of the case may require. The teeth when loosened by tartar, disease or mercury, may, by a proper course of treatment, be in almost every case restored to their pristine firmness.

Irregularities in children's teeth may in most instances be obviated by well directed aid. Such cases particularly attended to.

Dr. Northall begs to present the following Certificates for the guidance of those who may wish to employ him professionally:

We, the undersigned, having had opportunities of judging of Dr. Northall's abilities as a Dentist, cheerfully subscribe our names in evidence of our opinion of his skill as an operator on the teeth and recommend him to the public as one in whom every confidence may be placed in the practice of the various branches of his profession.

(Signed) Evan Johnson, Rector of St. John's Church.

B. C. Cutler, Rector of St. Ann's Church.

S. A. Willoughby, President Brooklyn Bank.

D. Embury, Esq., Cashier Long Island Bank.

N. B. Tooth powders of all kinds to be obtained at the office, 78 Fulton Street. A work called "Hints to Parents on the Importance of Early Attention to Children's Teeth," by W. K. Northall, for sale. Also one entitled "Five Minutes' Advice on the Teeth." Both works can be obtained at the office or at any of the big stores in Brooklyn.

In 1842 Dr. Northall paid a visit to Europe and on his return calls to the attention of his patients that he has resumed practice, and with respect to charges "begs to state that he shall at all times take a pleasure in consulting the circumstances of those who may apply to him and charge as moderately as he can with justice to himself and patients."

Dr. Northall had considerable literary ability, and, in addition to the works referred to in his advertisement, wrote a book, which was published in 1850, entitled "The Life and

Recollections of Yankee Bill, together with Anecdotes and Incidents of his Travels." In 1844 he became associated with Dr. George Rose and had moved his office to 208 Fulton street. This is our last information of Dr. Northall, who probably died in 1846, for in 1846 we find his partner, Dr. George Rose, practicing alone at 246 Fulton street.

In the year 1837 Dr. Martin K. Bridges settled in Brooklyn and commenced practice at 118 Fulton street. In the directory of 1839 appears his card, simply calling attention to the fact that he was practicing at 105 Fulton street, and referring to fourteen or fifteen of the leading clergymen and physicians of the city, together with the Mayor, the Hon. Cyrus P. Smith. He edited the "Dental Mirror," a little leaflet published for gratuitous circulation, in which appeared conspicuously in 1843 the following notice:

"Two hours in each week day, from seven to nine o'clock in the morning, are devoted to the service of the poor without charge."

Dr. Bridges was born in Hardwick, Massachusetts, August 1, 1800, and when thirty-six years of age commenced the study of dentistry in the office of Dr. Lathrop at Saugerties. He died in September, 1853, at 109 Henry street, Brooklyn. Drs. Jones, Northall and Bridges were able representatives of the pioneers in dentistry in the United States, and the example they set in earnestness, ability, learning and liberality has been faithfully followed by their successors in Brooklyn.

In the year 1845 the village of Brooklyn had become a city and had extended its borders to accommodate the rapidly increasing population. The two dentists who had been sufficient to attend to the needs of the community in 1831 had increased to eight, among whom were:

Dr. George Wood, born at Groton, Massachusetts, July 24, 1813, and who settled in Brooklyn in 1838 and began practicing at 169 Fulton street; Dr. James E. Miller, born January 7, 1820, in Somers, Westchester county,

New York, and after teaching school in the Friends' Meeting House, which was then on the corner of Clark and Henry streets, commenced to practice dentistry in 1842, and in 1845 was practicing at No. 7 Squire's Building, Atlantic avenue; Dr. John Scott, born in Wyoming county, New York, September 4, 1813, and after studying medicine and dentistry settled in Brooklyn in 1843 and was then practicing on Fulton street, near Clinton street; Dr. G. A. Cooper, born in Lexington, Kentucky, in 1822, became a citizen of Brooklyn in 1845 and commenced to practice at 268 Washington street; and Dr. Salmon Skinner, born at Coeymans, Albany county, New York, March 6, 1818, commenced to practice at 57 Hicks street, Brooklyn, in 1840.

In the year 1855 the number of dentists had increased to forty-nine, but, as far as known, none were natives of Brooklyn.

Dr. Hezekiah N. Stratton was born in Phillipston, Massachusetts, in July, 1822, and in 1846 commenced to practice at 139 Atlantic avenue, Brooklyn, and in 1855 was still there. Dr. A. Appleton Wheeler was born near Brattleboro, Vermont, December 11, 1832, and commenced to practice in Brooklyn in 1853, at 51 Myrtle avenue. In 1855 he moved to what is now 80 Court street, where he died November 23, 1865. Dr. C. A. Marvin was born at Tappan, New York, June 16, 1823, was practicing at the southwest corner of Montague and Henry streets, where he had commenced May 1, 1853. Dr. W. B. Hurd, who was born at Brookfield, Connecticut, July 5, 1820, was on Fourth street, in what was then Williamsburgh, where he had commenced to practice in 1854, at which time there were but four other dentists in Williamsburgh, viz., Dr. Andrew H. Griswold, Dr. Lloyd Slade, Dr. Samuel H. Twitchell and Dr. Cornelius Weeks, all of whom had their offices on Fourth street. Dr. H. G. Mirick was born in Worcester, Massachusetts, October 15, 1832, and settled in Brooklyn in 1852 as assistant to Dr. James E. Miller. He was practicing at 74

Clinton street. Dr. John Branique was a native of Ireland and was practicing at 196 Clinton street. Dr. Charles F. Mermier was a native of Jamaica, West Indies, and was practicing on Classon avenue, near Myrtle avenue. Dr. C. D. Cook settled in Brooklyn in 1853 as assistant to Dr. James E. Miller, whose office was on the corner of Pacific and Henry streets, on the site of the present Hoagland laboratory. At the present writing but four of those who were practicing in 1855 are living. Drs. Mirick and Marvin have retired from practice, the former still residing in Brooklyn, while the latter lives in Philadelphia. Drs. Hurd and Cook are both actively engaged in the practice of their profession, the former at 502 Bedford avenue, the latter at 162 Remsen street.

The number of dentists kept pace with the increase of population, for in 1870 there were seventy practicing. The boundaries of the city were continually extending. In 1860 there were not more than one or two dentists beyond where the City Hall now stands, but at the end of the decade, while the greater number were still located in that part of the city known as the "Heights," many were in South Brooklyn and on "The Hill."

Drs. A. H. Brockway, M. E. Elmendorf, W. T. Shannon, F. W. Dolbeare and Henry Brown were on "The Hill;" Drs. James H. Race, S. W. Bridges, C. D. Cook and C. H. Biddle were south of Atlantic avenue; Drs. W. B. Hurd, W. C. Parks, William Fishbough, R. T. Ambler, C. W. Harreys, S. H. Twitchell and E. C. Wadsworth were in the Eastern District; Drs. C. A. Marvin, H. G. Mirick, O. E. Hill, G. A. Mills, William Jarvie, Jr., I. C. Monroe, D. S. Skinner, Thomas Fry, J. B. Brown, R. C. Brewster, W. A. Campbell and A. N. Chapman were on the "Heights" or in the immediate neighborhood.

In 1842 John Kearsing opened a small establishment at the corner of South Fourth street and Eighth street, Williamsburgh, where he refined gold and beat it into foil to

be used in the filling of teeth. In 1848 he removed to 240 Adams street, Brooklyn, where he kept a supply of dental instruments and artificial teeth and melted and rolled out gold and silver which were alone employed at that time in the construction of sets of teeth. Prior to this time it had been necessary for Brooklyn dentists to go to New York for all their materials, but Mr. Kearsing became so favorably known as a refiner and beater of gold that many New York dentists bought their gold and silver plates and gold foil from him. In 1855 Messrs. Jones, White & McCurdy opened a branch of their dental depot, under the supervision of Mr. Thomas Wise, on Fulton street, near Tillary. A third-story hall room at the back of the building was sufficiently commodious for the purpose, and a small japanned cash box large enough to contain all the gold and silver kept on hand. This box was carefully carried to New York every night for safe keeping and brought back every morning. "Tom" was the faithful custodian of this box, and continues to be the faithful conservator of the interests of the S. S. White Dental Manufacturing Company, and the genial friend of all Brooklyn dentists. In 1865 M. M. Johnston opened a dental depot at No. 20 Fulton avenue, in a small room in the rear of a book store. He soon associated his brothers with him under the name of Johnston Brothers, and introduced many improvements upon the materials and appliances then in use. Prospering rapidly, the firm became a powerful competitor of S. S. White; competition was terminated, however, in 1881, by a combination of the two firms under the name of the S. S. White Dental Manufacturing Company.

In the autumn of 1853 the first association of dentists on Long Island was organized. It was known as the Long Island Association of Dental Surgeons, and held its first meeting at the office of Dr. H. N. Stratton, 137 Atlantic avenue, and elected as officers: D. H. Mulford, Recording Secretary; G. A. Cooper, Cor-

responding Secretary; James E. Miller, Treasurer; Martin K. Bridges, Librarian; John Branique, James E. Miller and J. B. Fredericks, Examining Committee; B. S. Lyman, A. H. Griswold and C. B. Hammond, Executive Committee.

This society had no president, but a chairman was elected for each meeting. Its object was more of a social than a scientific character, and the interest in it soon subsided. It passed out of existence after two or three years of an uneventful career.

On June 12, 1862, a number of dentists met at the office of Dr. O. E. Hill, on Fulton street, near Clinton street, and organized the Brooklyn Dental Association. Its first officers were W. C. Parks, President; A. C. Hawes, Vice-President; John Allen, Treasurer; and William B. Hurd, Secretary. This society was largely composed of the most able and progressive of New York dentists, its Brooklyn members being O. E. Hill, A. Appleton Wheeler, C. A. Marvin and William Jarvie, Jr., while Williamsburgh was represented by W. B. Hurd, W. C. Parks and W. C. Horne. It met every two weeks at the offices of the members, and during its existence of five years was the most active and useful society of the time.

In 1867 unfortunate differences arose and the society disbanded, some of its New York members organizing the New York Odontological Society, while on December 14 of that year thirteen Brooklyn dentists met at the office of Dr. George A. Mills, 133 Henry street, and organized "The Brooklyn Society of Dental Science and Art." These dentists were George A. Mills, H. G. Mirick, O. E. Hill, A. H. Brockway, L. E. Brockway, William Jarvie, Jr., I. C. Monroe, John Scott, N. M. Abbott, Thomas Fry, E. L. Childs, H. E. Bird, George E. Bretz. The first officers chosen were H. G. Mirick, President; C. D. Cook, Vice-President; E. L. Childs, Recording Secretary; William Jarvie, Jr., Corresponding Secretary; I. C. Monroe, Treasurer; G. A.

Mills, O. E. Hill and John Scott, Executive Committee.

On January 4, 1869, the name was changed to the Brooklyn Dental Society, and the following made application to have the society incorporated: C. D. Cook, O. E. Hill, E. L. Childs, William Jarvie, Jr., I. C. Monroe, James H. Race, H. G. Mirick and George A. Mills. The application was granted April 5, 1869.

On January 10, 1870, this society organized a dental infirmary at 260 Washington street, which was open every week day and where dental operations were performed for the worthy poor without cost. A superintendent was employed, and each afternoon a member of the society was in charge. The members of the society not only volunteered their services, but, with the assistance of a few public-spirited citizens, paid all the expenses for one year, after which the city contributed \$1,500 annually toward its support. The infirmary was in existence about four years, and through it the society endeavored to teach the people to appreciate the value of their teeth and to educate them in their proper care. The infirmary studies became to many dentists a post-graduate course. Clinics were frequently given, and the dentists of Brooklyn, as well as the public, are indebted to the late Dr. William H. Atkinson, who at great personal loss and inconvenience would frequently leave his private patients in New York and conduct them. As far as is known, this infirmary was the only institution of the kind ever in existence. Much good was accomplished, and its relinquishment was caused principally by the many people who were able to pay endeavoring to obtain good dental services gratuitously, thereby defeating the charitable object for which the infirmary was established.

In 1882 the Brooklyn Dental Society established a library and reading room in connection with the Kings County Medical Society, in Everett Hall, at 398 Fulton street. This library was afterward removed to the rooms

of the Medical Society in Bridge street, much enlarged and owned by the Second District Dental Society; it is now in the beautiful new home of the Kings County Medical Society in Bedford avenue.

In 1895 the Brooklyn Dental Society retired from the field of scientific activity in favor of its somewhat younger brother, the Second District Dental Society, still retaining, however, its organization, and meeting but once each year, at which a banquet is given. This function is looked forward to with much pleasure as the social event among the dental profession on Long Island. The present officers of the society are: William Jarvie, President; W. A. Campbell, Vice-President; R. C. Brewster, Recording Secretary; R. G. Hutchinson, Jr., Corresponding Secretary; F. C. Walker, Treasurer; F. O. Kraemer, Librarian.

On April 7, 1868, the State Legislature passed a law entitled "An Act to incorporate dental societies for the purpose of improving and regulating the practice of dentistry in the State," which provided for a dental society in each of the eight judicial districts, eight delegates from each of which were to meet at the capitol in Albany and organize what was to be known as the Dental Society of the State of New York. In accordance with this provision in the law, thirty-eight of the dentists of the Second Judicial District, which comprised the counties of Kings, Suffolk, Richmond, Westchester, Orange, Rockland and Putnam, and to which was added in 1897 Nassau, met at the City Hall, Brooklyn, on June 2, 1868, and organized the Second District Dental Society by electing the following officers: President, W. B. Hurd; Vice-President, George A. Mills; Recording Secretary, William Jarvie, Jr.; Corresponding Secretary, L. S. Straw; Treasurer, H. G. Mirick; Delegates to State Dental Society, C. D. Cook, W. B. Hurd, O. E. Hill, H. G. Mirick, A. H. Brockway, G. A. Mills, L. S. Straw and C. L. Houghton.

This society has had an uninterrupted career of activity and usefulness and is one of the most prosperous and influential in the State. The regular monthly meetings, with the exception of the September one, are held in Brooklyn, at the residences of the members, that of September being held in one of the river towns, generally Newburgh. Once each year a large meeting is held to which the neighboring dental societies are invited and papers of special value are presented. These meetings attract eminent dentists from different parts of the country and are anticipated with great interest throughout the profession.

As stated above, this society has been most influential in the affairs of the Dental Society of the State of New York, four of its Brooklyn members having been called to serve in the capacity of President, viz.: W. B. Hurd, C. A. Marvin, O. E. Hill and F. T. Van Woert. H. G. Mirick was its Treasurer for several years and until his retirement from the practice of his profession, while William Jarvie has been a member of the Board of Censors and of the New York State Dental Examining Board for the last twenty-six years.

Members of this society have also been called upon to fill positions of prominence and responsibility in the New York Odontological Society. C. A. Marvin, W. B. Hurd, O. E. Hill, William Jarvie and A. H. Brockway have been its Presidents, H. G. Mirick and F. C. Walker have been its Treasurers, while William Jarvie and William J. Turner have edited its transactions for several years.

It now has enrolled 123 names upon its list of members. Its officers are: President, William J. Turner; Vice-President, F. P. Hamlet; Recording Secretary, Ellison Hillyer; Corresponding Secretary, H. P. Gould; Treasurer, R. G. Hutchinson, Jr.; Librarian, R. C. Brewster; Censors, William Jarvie, E. L. Ripplier, F. B. Keppy, O. E. Houghton and G. W. Knight; Executive Committee, F. C. Walker, D. W. Barker and C. F. Ash.

Perhaps no better idea can be obtained of

the rapid advancement in dental standards than by a brief resume of legislation regulating the practice of dentistry in this State. The law of New York is generally conceded to be the most comprehensive of all, and nearer the ideal than that of any other State. In the various movements to obtain this result the dentists of Brooklyn have always taken a prominent part. In response to an informal call a meeting composed of dentists representing various sections of the State was held on December 17, 1867, at Utica, New York, to consider the desirability of securing a law that should regulate the practice of dentistry in this State. Such a law was drafted, passed by the Legislature and signed by the Governor April 7, 1868. It was entitled "An Act to incorporate dental societies for the purpose of improving and regulating the practice of dentistry in the State," and under its provisions a society was to be formed in each of the eight judicial districts, and eight delegates from each of these societies were to meet in Albany and organize a State society. This provision of the bill was carried out and "The Dental Society of the State of New York" was organized at Albany June 30, 1868.

Prior to this time there were but few dental schools, and many of the prominent and most able dentists had received their instruction and early experience in the offices of private preceptors. In order that such might receive a degree after proper examination, on April 21, 1870, the dental law was amended, providing for a Board of Censors and the conferring of the degree of M. D. S. (Master of Dental Surgery) in the following words:

SECTION 8. The State Dental Society, organized as aforesaid, at its first meeting shall appoint eight censors, one from each of the said district societies, who shall constitute a State Board of Censors, and at the first meeting of said board the members shall be divided into four classes, to serve one, two, three and four years, respectively, and said State Dental Society shall, at each annual meeting thereafter, appoint two censors, to serve each four years and until their successors shall be cho-

sen, and fill all vacancies that may have occurred in the board by death or otherwise. Each district society shall be entitled to one and only one member of said Board of Censors. Said Board of Censors shall meet at least once in each year, at such time and place as they shall designate, and being thus met, they, or a majority of them, shall carefully and impartially examine all persons who are entitled to examination under the provisions of this act, and who shall present themselves for that purpose, and report their opinion in writing to the President of said State Dental Society, and on the recommendation of said board it shall be the duty of the President, aforesaid, to issue a diploma to such person or persons, countersigned by the secretary, and bearing the seal of said society, conferring upon him the degree of "Master of Dental Surgery" (M. D. S.), and it shall not be lawful for any other society, college or corporation to grant to any person the said degree of "Master of Dental Surgery."

SEC. 9. All dentists in regular practice at the time of the passage of this act, and all persons who shall have received a diploma from any dental college in this State, and all students who shall have studied and practiced dental surgery with some accredited dentist or dentists for the term of four years, shall be entitled to an examination by said Board of Censors. Deductions from such term of four years shall be made in either of the following cases:

1. If the student, after the age of sixteen, shall have pursued any of the studies usual in the colleges of this State, the period not exceeding one year during which he shall have pursued such studies shall be deducted.

2. If the student, after the age of sixteen, shall have attended a complete course of lectures of any incorporated dental or medical college in this State, or elsewhere, one year shall be deducted.

The examinations by this board were so thorough and of such a high standard, and its decisions so fair and evidently free from favoritism, that the degree has always been held in great esteem and was sought for even by many graduates of dental schools who had already the degree of D. D. S. (Doctor of Dental Surgery).

On June 20, 1879, the Governor signed an amendment which required every dentist then

in practice within the State to register within sixty days, and permitting no one thereafter to commence the practice of dentistry unless having a dental or medical degree. The amendment was as follows:

It shall be unlawful for any person to practice dentistry in the State of New York for fee or reward unless he shall have received a proper diploma or certificate of qualification from the State Dental Society, or from the faculty of a reputable dental or medical college recognized as such by said societies, provided that nothing in this section shall apply to persons now engaged in the practice of dentistry in the State of New York; and that

Every person practicing dentistry within this State shall within sixty days after the passage of this act register in the office of the Clerk of the county where located.

On May 12, 1895, the law was again amended so that "the Board of Censors" became "the Board of Dental Examiners" to be appointed by the Board of Regents of the University of the State of New York from nominations twice the number of vacancies to be filled, made by the State Dental Society. No person was allowed to commence the practice of dentistry unless he had received a license to practice dentistry from the regents upon the recommendation of the Board of Examiners. The board was allowed to examine for a license only those who had received a degree from a registered dental school, or those who had been practicing legally in some other State for a period of not less than five years. The dental schools were not allowed to graduate any in 1898 who had not had the equivalent of one year in a high school three years previous to the conferring of the degree; in 1899 two years in a high school, and in 1900 a full high-school course. Provisions were made for revocation of licenses and for penal-

ties for infractions of the law. In 1899 an interchange of licenses to practice dentistry was effected between New Jersey and New York, by which dentists who had been licensed to practice in this State would be licensed to practice in New Jersey without further examination, and, vice versa, those who had been licensed in New Jersey would be licensed to practice in this State without further examination. This is the only case in which such an interchange in dentistry or medicine is practiced, but negotiations are on foot by which it is hoped to extend it to other States. On March 28, 1901, the law was yet further amended, allowing the Board of Examiners to recommend to the regents for a license only those who had a dental degree, and also allowing the regents to confer the degree of D. D. S. in lieu of the M. D. S. which had been conferred by the State Dental Society.

Probably no other profession ever made the rapid advance in science and art that dentistry has. Scarcely born at the beginning of the nineteenth century, the close of it sees it securely recognized as one of the learned professions. In 1828, when the first dentist of whom we have any knowledge came to Brooklyn, there was not a single dental society in the country, there was no dental literature, neither was there a dental school. Intercourse among members of the profession was almost unknown, and what little did exist was marked by constraint, secrecy and jealousy. Now there are about five hundred dentists in this city; there are one hundred and sixty-seven dental societies throughout the country, and eighty-eight dental schools, and twenty-three journals devoted to the profession. Everywhere professional courtesy and liberality is the rule, and a spirit of mutual interchange of knowledge and sympathy abounds.

CHAPTER LIII.

THE BENCH AND BAR.

THE OLD COURTS AND JUDGES—ALDEN T. SPOONER, JUDGE FURMAN—THE TILTON-BEECHER CASE—JUDGE NEILSON, JUDGE BEACH—A GROUP OF MODERN JUDGES AND JURISTS.

THE first court house in Kings county was inaugurated in Gravesend in 1668, and there the seat of justice remained until 1686, when it was removed to Flatbush. In 1832 it was finally located in Brooklyn, when Judge John Dikeman opened the first session. At that time the Brooklyn bar was represented by thirty-three members, and if all reports are true there were even then too many councillors for the extent of business. There had been three court houses in Flatbush. The first, a plain little building, was torn down in 1758 and replaced by a large structure which was part court house and part jail and cost the ratepayers \$448. During the occupation the British officers often used the court room for balls and entertainments. In 1792 it was condemned as antiquated and in such a poor condition as to be not worth repairing, and in the following year a new building was erected, which served until it was burned to the ground in 1832. When the embers of that conflagration died out the glory of Flatbush as a seat of justice passed away. In its day it had been the scene of many brilliant forensic displays. Egbert Benson, John Marshall, John Jay, Joseph Story, Oliver Ellsworth, Bushrod Washington, Samuel Nelson, Brockholst Livingston, John Sloss Hobert, James Kent, Ambrose Spencer, William L. Marcy,

Eseck Cowan, John W. Edmonds, Ogden Edwards and many other historic Judges have presided over its courts. The Judges of the higher courts prior to the legal changes imposed by the constitution in 1846 were:

JUDICIAL OFFICERS (WEST RIDING, UNDER THE "DUKE'S LAWS.")

John Manning,	James Hubbard,
Richard Betts,	Ellert Elbertson,
Samuel Spicer,	James Cortelleau,
Rulof Martin.	

JUSTICES UNDER THE COMMISSION OF GOVERNOR ANDROS, 1688.

Stephen Van Cortland, Judge of the Court of Pleas.

James Cortelleau,	William Morris,
Gerardus Beekman,	Nicholas Stillwell.

JUSTICE OF THE QUORUM.

Under the law of 1691, and the ordinance of 1699: Gerardus Beekman.

Henry A. Moore.....	1877
Henry A. Moore.....	1885
Henry A. Moore.....	1889
William B. Hurd.....	1895
Joseph Aspinall.....	1895

In 1848 the Supreme Court of the State was organized, and under it the following justices were elected in the Second Judicial District, which included Kings county:

Selah B. Strong, Presiding Justice, 1848.

William T. McCoun, 1848.

Nathan B. Morse, of Brooklyn, 1848.

Seward Barculo, 1848.

John W. Brown, elected 1849.

Selah B. Strong, re-elected in 1851.

Gilbert Dean, appointed 1854, after Barculo's death.

William Rockwell, of Brooklyn, elected 1853.

James Emmott, elected 1855.

Lucien Birdseye, appointed 1856.

John A. Lott, of Brooklyn, elected 1856.

William W. Scrugham, elected 1859.

Joseph F. Barnard, elected 1863.

Jasper W. Gilbert, of Brooklyn, elected 1865.

William Fullerton, appointed 1867, after Scrugham's death.

Abraham B. Tappen, elected 1867.

Calvin E. Pratt, of Brooklyn, elected 1869.

Jackson O. Dykman, elected 1875.

Erastus Cooke, of Brooklyn, elected 1879.

Edgar M. Cullen, of Brooklyn, elected 1880.

Charles F. Browne, elected 1882.

Willard Bartlett, of Brooklyn, elected 1884.

William J. Gaynor, of Brooklyn, elected 1893.

William D. Dickey, elected 1895.

Wilmot M. Smith, of Patchogue, elected 1895.

Martin J. Keogh, elected 1895; Augustus Van Wyck, Nathaniel H. Clement and William J. Osborne, former Judges of the City Court, became Supreme Court Justices January 1, 1896, by virtue of section 5, title VI of the Revised Constitution.

Garret J. Garretson, elected 1896.

William W. Goodrich, of Brooklyn, appointed 1896.

Michael Hirschberg, elected 1896.

Samuel T. Maddox, elected 1896.

Jesse Johnson, appointed after death of Justice Osborne, 1897.

We do not propose following in this chapter the record of the various courts in which justice has been administered in Kings county, our purpose being mainly to speak of some of the men who were and are leaders of the local bench and bar, and who by their judicial and impassioned expounding of the principles of the law, or their clear and cogent utterances when charging a jury, or by impassioned argument or ingenious tactics have won victories at the bar for the cause of their clients or the public weal, have won for the bar of Kings county a measure of fame that is not surpassed in any other section of the United States. The keynote to the structure thus raised to such noble proportions was struck by Judge Egbert Benson when he addressed the grand jury at Flatbush June 6, 1800, as follows, to quote a most striking passage from his charge: "In proportion as your county, gentlemen, increases in wealth and population; as it advances in public improvement, in education, in arts, science, commercial prosperity, which must flow from its unsurpassed resources, there will be a corresponding growth of crime—the inseparable companion of great public prosperity.

"Your county, gentlemen, over which the smoke of battlefields has but recently floated, has before it a magnificent future. Upon grand juries; upon courts of justice; upon all officers of courts, and upon all persons connected with the administration of the laws, rest solemn responsibilities, which are to tell on that future; for now is the seed time,—now is the ground fallow which is to yield fruit for generations to come. See to it, then, gentlemen, that the responsibility with which the law clothes you is properly executed and directed."

One of the earliest of the recognized leaders of the bar was John Wells, who was born at Cherry Valley in 1770. He was the son

of Robert Wells, a prosperous farmer, who was murdered along with eleven members of his family in 1778 by a horde of Indians under Joseph Brant,—the sad incident being now spoken of as the Cherry Valley Massacre. John Wells would have shared the fate of the others had he not been in Schenectady attending school. He was taken to Brooklyn by an aunt, educated at Princeton, studied for the

Adams. It was one of those peculiar suits which involved much more than appeared on the surface. A contemporary account says:

Mr. Cheetham, it is said, reasoning from the force with which Wells had wielded his pen in certain political and other articles, retained him as his counsel for the defense,—not merely his counsel, but the leading counsel in the case. This was a great surprise to all of Cheetham's friends; but the result shows he made no mistake in his selection of counsel. The cause came on for trial in the city of New York early in 1804. The prosecution was conducted by several of the ablest lawyers then at the bar. The defense of Cheetham by his young and apparently inexperienced counsel, as has well been said, was masterly; it would have added lustre to the reputation of Wirt. The result was highly favorable to his client. The damages against him were mitigated to a trifle, compared with what was confidently expected on one side and feared on the other. Nothing could exceed the surprise which this splendid—we may say triumphant—defense created in the public mind; and the young advocate at once took that high and commanding place at the bar for which his talents so admirably fitted him. From a stunted business and a few clients, whose visits had hitherto been "few and far between," he was daily retained in cases of importance and of pecuniary value to him. Not long after the trial of *Smith vs. Cheetham*, he was retained in an important case tried at Flatbush, in which he displayed skill, learning and eloquence that added largely to his fame. His opponent was Colonel Aaron Burr, who often appeared in the Kings county courts. After the trial Burr said, "I was aware of Mr. Wells' power and astonishing ability as a writer, but I did not think he possessed, as he really does, the genius of an Erskine as a lawyer."

From that time until the time of his death, in 1823, Mr. Wells was the acknowledged leader of the bar, not alone of Kings county, but of the State. For a time he was in partnership with Josiah Ogden Hoffman, but as a rule he preferred to fight his battles single-handed. After his death his associates at the bar united in the erection of a memorial bust, which is still to be seen in St. Paul's Chapel, New York.

MEMORIAL OF JOHN WELLS.
IN ST. PAUL'S CHAPEL, NEW YORK.

bar, and in 1791 was admitted to practice. His home then was in Brooklyn, and he had an office there as well as in New York. For a time little business came his way, but his literary ability attracted the attention of Alexander Hamilton, and he assisted that statesman in bringing out the "Federalist." But his opportunity came when Mr. Cheetham, editor of "The American Citizen," a New York newspaper, selected him for his legal adviser in a suit brought for libel against the paper by W. S. Smith, son-in-law of President

George M. Wood, born in Trenton, New Jersey, and who began to practice law in Brooklyn in 1837, was long famous as a local leader. Chancellor Walworth called him a "walking library of law," and the immortal Daniel Webster, seeing him apparently asleep in court while a case was going on in which they held opposite sides, said, "Pray don't wake him, for when George M. Wood is fully awake he is one of the most troublesome opponents I am in the habit of meeting." Mr. Wood died in 1861.

One of the last of the purely political Judges to hold office in the court at Flatbush was William Furman, who in 1808 became Judge of the Court of Common Pleas. It is not certain that he was ever bred to the law or knew much more about the profession than any educated gentleman might pick up in the course of his reading or association, yet he sat on the bench from 1808 until 1823, and won a most enviable record. One of the biographers of his son, Gabriel Furman, the well-known local antiquary, thus wrote of him:

He was a man of finished education; strong, practical good sense. Paramount traits in his character were love of justice, perfect integrity, impartiality and a close perception of human nature. It will therefore be seen he possessed the qualities of a useful and upright Judge; his popularity with the bar, and the high esteem in which he was held by the public, plainly attest his character as a Judge and as a private citizen. He represented Brooklyn on the Board of Kings County Supervisors for several successive years. In the fall of 1825 he was elected member of the Assembly from Kings county, entering upon his legislative duties January 3, 1826. That illustrious statesman, Samuel Young, was Speaker; the peculiarities of Mr. Young as a legislator have become matters of history. He was in every sense unlike Judge Furman, and yet there always existed a warm friendship between these gentlemen; there is one fact which attests this in a strong manner; he was appointed by Mr. Young Chairman of the Judiciary Committee, and second on the Committee of Ways and Means.

Judge Furman was President of the Brooklyn Fire Insurance Company, incorporated in 1824. There was scarcely any public improvement touching the welfare of the then village of Brooklyn that Judge Furman was not more or less identified with. He was a lifelong, undeviating friend of De Witt Clinton, strongly sustaining him in that great policy that inaugurated and constructed the Erie Canal.

The legislative session of 1826 was one of the most exciting and important in the history of the State. The four-cornered Presidential conflict between General Jackson, Mr. Adams, Mr. Crawford and Mr. Clay culminated that year. It entered largely into the Legislature of the State, leading to frequent collisions. In these Judge Furman largely participated. On the whole he was one of the most active and influential members of that session. He was tendered the re-nomination the next year, but declined. Among his associates in the Assembly, whose names have passed into the history of the State, were Ogden Hoffman, then a resident of Orange county; Francis Granger, from Ontario; John Tracy, from Chenango; and Erastus Root, of Delaware. After retiring from the Legislature Judge Furman retired entirely into private life, a highly esteemed citizen, influential and active in all that concerned the interest and advancement of the society in which he moved.

Judge Dikeman, the last of the presiding Judges at Flatbush, was the son of a Hempstead farmer, and was born in that township in 1795. For a time he was a teacher in a school on Adams street, near Sands street, but while so engaged he zealously studied law. In 1821 he was appointed clerk of the village of Brooklyn, and held that office until he was appointed to the bench in 1830.

In referring to the career of Henry C. Murphy reference was often made to his law firm, Lott, Murphy & Vanderbilt, and as the members of that firm were really representative lawyers of Brooklyn for many years as well as active in its politics, the careers of the other members may be briefly summarized. John A. Lott was born in Flatbush in 1805, and was the representative of a family whose progenitor settled there in 1682. In 1828 Mr. Lott was admitted to practice at the bar,

and for some time held an office in New York. His acquaintance with Mr. Murphy brought about a partnership with that gentleman in 1835, and Mr. Lott removed his office to Brooklyn. In 1836 Judge Vanderbilt was assumed as a partner, and the firm of Lott, Murphy & Vanderbilt started in its history of some twenty years, until Mr. Murphy became Minister to The Hague, in 1857. Then it became Lott & Vanderbilt and so continued until Judge Vanderbilt's death, in 1878, when Mr. Lott continued in business alone until he was summoned hence, in 1878. With Judge Lott's politics, of course, this work has no interest, but it must be confessed that he was as much a politician as a lawyer, and for a long time was the acknowledged leader of his party in Brooklyn. In 1838 he was appointed Judge of the Court of Common Pleas, in 1841 was elected a member of the Assembly, and about two years later was chosen Senator. His legislative career was a most honorable one. He took an active part in the debates on every important public question, and his words, well thought out and elegantly and forcefully expressing the ideas of a well-read man and one who was in favor of legitimate reforms of all sorts, carried much weight. One notable speech he made was on a motion to cheapen the cost of the printed reports of the State courts' decisions, in which he came pretty close to the notion of a Scotch jurist who held that when the State enacted a law and the law continued in force, the State should attend to its enforcement and its administration so that justice would cost nothing, as justice was a right, not a privilege to be paid for. Judge Lott, among other things, said:

I am strongly in favor of cheap law and cheap law-books. I think it quite as important that a knowledge of law should be brought within the reach of the people as the knowledge of any other science,—for law, as has been well said, "is the rule of human action." We have read of the Roman Emperor who caused his code to be written in fine letters

on tablets, placed on towers so high that none could read it. Those who favor the other side of this question do indirectly what that Emperor did. Sir, I do not desire to emulate him in any degree. I cordially indorse the language of a great English law reformer who said: It was the boast of Augustus,—it formed a part of the glare in which the perfidies of his early years were lost,—that he found Rome built of brick and left it marble; but how much more noble will be the Sovereign's boast when he shall have it to say that he found law dear and left it cheap; found it a sealed book, left it a living letter; found it the patrimony of the rich, left it the inheritance of the poor; found it the two-edged sword of tyranny and oppression, and left it the staff of honesty and the shield of innocence.

In 1857 Judge Lott was elected to the Supreme Court and entered on his duties January 1, 1858. In 1869 he was elected to the bench of the Court of Appeals.

John Vanderbilt, the junior partner of the famous firm, was, like Mr. Lott, a native of Flatbush, and, like him, was descended from an ancient family of that good old town. In 1835 he became associated in business with Mr. Lott and Mr. Murphy, and his association with Judge Lott continued until the close of his active career. In 1844 Mr. Vanderbilt was appointed by Governor William C. Bouck to the responsible position of first Judge of the Court of Common Pleas of Kings county to succeed Judge Greenwood, who had resigned. He discharged the duties of this important position with faithfulness and credit for two years, until the Court of Common Pleas was abolished by the adoption of the New Constitution in 1846, and the creation of the County Court as at present constituted. It has been said that, at the time of his retirement from the bench, there was not a more popular man, politically and socially, in the city of Brooklyn than he. In the fall of 1852 he received the Democratic nomination for the State Senate, to which position he was chosen by a large majority. He filled this station creditably for the full term of two years. Dur-

ing his term as Senator he was appointed one of the Commissioners to investigate the harbor encroachments of New York. He was also selected as one of the Commissioners to investigate the affairs of President Nott and Union College. In the fall of 1856 he was nominated on the Democratic ticket for Lieutenant-Governor, with Amasa J. Parker, of Albany, as Governor, but the Democrats were not successful in the issue of the election. For several years before his death, which occurred at Flatbush May 16, 1877, Judge Vanderbilt was retired from active service by a shock of paralysis; but, "in the prime of his energy was certainly the most vigorous and handsome man in public or political life in this county, if not in the State. His strong, manly beauty mated with and was the exponent of qualities of mind and heart, as attractive as his gifts and graces of person. In a time when 'rings' were unknown, he was a Democrat; in a time when sectionalism was hardly an apparition, and when the State had its full rights, whether it was weighed or counted as a factor, he was a patriot, and one who gloried in his whole country; in a time when shysters had not been evolved, and when pettifoggers were limited to a satirical stage or a sarcastic literature, he was a lawyer; in a time when gentlemen were as dominant in politics, and scholars as dominant in council as they now are not, he was a scholar and a gentleman. His rapidity of public development, his activity in affairs, his not surpassed qualities of good-fellowship, the magnetism of his mind and manners, and the impressive appeal which he could address to the people, early made him and long kept him what he was freely called, 'Kings County's Favorite Son,' when that appellation was forcible by its rarity, significant in its meaning, and when it had not been vulgarized by its application to the politicians by profession, and to the place-hunters by occupation."

Judge Vanderbilt married Gertrude Phebe Lefferts, daughter of John Lefferts, of Flat-

bush. She yet survives, and by her volume on "The Social History of Flatbush" and other graceful writings, has done much to keep alive the kindly memories of that old Dutch town. She has been a frequent contributor to newspapers and magazines, and her interesting story of the Dutch Reformed Church at Flatbush has been by general request incorporated in these pages.

No study of the past generation of Brooklyn lawyers would be complete without a sketch of Alden J. Spooner, who was at once a representative citizen, a representative lawyer, and a representative of the higher culture of the city. The following is condensed from a sketch by L. B. Proctor. Alden T. Spooner was born at Sag Harbor February 10, 1810. His father, Colonel Alden Spooner, was long the foremost journalist in Brooklyn, established "The Long Island Star," the first newspaper published on Long Island, and in 1841, although not bred to the law, was appointed Surrogate of Kings county. His son, however, was duly qualified for a legal career and was admitted to practice in the regular manner and after a thorough training.

His first case at the Queens county bar was one of great difficulty, full of knotty legal questions; and in addition to this his opponent was one of the ablest lawyers of his times. Mr. Spooner had associated with him a very able and experienced lawyer, who was to try the case before the jury. But, being taken suddenly ill, the whole responsibility of the case rested upon the young advocate. With many misgivings he entered the contest; but as the struggle deepened his timidity vanished, confidence and self-reliance took its place, and after a long and bitter contest his efforts were crowned with a triumph that greatly advanced his professional prospects.

In May, 1836, the celebrated case of the People v. John Nichols was tried at the Suffolk Term of Oyer and Terminer, the Hon. Ogden Edwards presiding. Nichols had been indicted for an assault with an intent to kill

and for burglary. The crime was committed under circumstances of great atrocity. Spooner appeared for the defense, interposing the plea of insanity for his client. The case is remembered as one in which an unprecedented number of eminent physicians were sworn as witnesses for and against the prisoner; those for the defense established beyond a doubt his insanity, while an equal number testified that he was perfectly sane. Under this conflict of evidence Spooner went to the jury. With great ingenuity he took advantage of this marked conflict in the professional evidence, thereby raising a reasonable doubt as to the guilt of the prisoner.

"Gentlemen of the jury," said he, "you have the testimony of ten respectable physicians showing the insanity of my client. It is true you have an equal number of equally respectable physicians who testify to his sanity. Notwithstanding this, will you take the responsibility of convicting a man of a charge as serious as this, whom ten scientific physicians have pronounced insane? They may be right, gentlemen,—quite as likely to be right as those who have testified against them. Here, then, gentlemen, is such a reasonable doubt of my client's guilt that you can not convict him; for, gentlemen, when doctors disagree, who can decide?"

His whole plea was a masterly effort, and so pronounced by the bar and spectators present. He was followed by the Hon. Selah B. Strong, District Attorney of Suffolk county, afterward one of the Justices of the Supreme Court of the Second Judicial District of the State. Judge Strong made a very able and eloquent reply to Mr. Spooner's argument, but the jury rendered a verdict of "Not guilty," and the prisoner was discharged. This was a signal victory for the young lawyer. As a speaker Mr. Spooner had a full share of advantages in personal appearance, in oratorical and reasoning powers, and in clear voice. These united qualities commanded respect and attention, and often produced conviction in

the minds of his hearers. With his pen he was a more powerful dispenser of eloquence than with his lips. Possessing a fine literary taste, strengthened and enlarged by classical lore, and an extensive knowledge of books, he ranked among the most able writers of his times. His capacity for intense application to literary labor seemed exhaustless. All his literary efforts exhibit vivacity and strength of mind, quickness of perception and great purity of taste. Books were his constant companions, and he was ever a close student of the Greek and Latin writers. He used to say: "I am pleased with Livy, for his inimitable manner of telling a story; with Sallust, for his entering into those internal principles of action which arise from the characters and manners of those he described; with Tacitus, for displaying those outward motives of safety and interest which give birth to the whole series of transactions he relates." A more pleasing and truthful description of these elegant writers could hardly be given.

His literary taste gradually led him from the duties of his profession. As has well been said: "The literary and artistic features of Mr. Spooner's character were an especial and profitable phase in his life. He wrote much and well. In his earlier years, besides the work of editing the 'Long Island Star,' he was a frequent and valuable contributor to that greatly admired periodical, 'The Knickerbocker Magazine.' The history of Brooklyn and Long Island always interested him deeply. He furnished a loving, tender biography of the author to a reprint of Gabriel Furman's 'Notes, Geographical and Historical, Relating to the Town of Brooklyn' (annotated by Dr. H. R. Stiles), which was published in 1865. He also edited a reprint of Silas Wood's 'Sketch of the First Settlement of the Towns of Long Island.' Of both of these works small editions on large paper, for private distribution, were issued by the Faust Club (consisting of Alden J. Spooner and Henry R. Stiles) in 1865.

"A more recent work was the article on Brooklyn in Johnson's Encyclopedia, published a few years ago,—a very complete sketch; and he also contributed articles on other topics for the same work.

"Mr. Spooner's interest in public affairs dates back to his earlier years. When, on the 18th of November, 1830, the Hamilton Literary Society was organized, Mr. Spooner, then a youth of twenty years, was one of the active promoters of the movement, and was elected first president of the Hamilton. With him were associated at that time, in the organization of the society, such men as Henry C. Murphy, A. A. Low, Seth Low, John T. Howard, Prof. Raymond,—afterward President of the Polytechnic and Vassar College,—Joshua A. Van Cott and Hon. John Greenwood, of the city of Brooklyn."

One of the pleasantest instances in the literary career of Mr. Spooner was the semi-centennial of the Hamilton, on the evening of January 19, 1880, held in the Art Gallery on Montague street. As one of the founders of the society and its first president, Mr. Spooner was one of the honored guests of the evening, and there led in that old song so dear to all Hamiltonians,

"When we all ate the oyster fries
Way down at Johnny Joe's."

He was the writer of that song, and it has been sung at the annual banquets of that society for years. It carries the memory of many a gray-haired and reverend citizen back to his younger days, and to the pleasures and companions of his youth.

Mr. Spooner loved the Hamilton Society as a parent loves its offspring; and he was always the hearty friend of the young men who, year after year, swelled its ranks and participated in its exercises.

His connection with the establishing of the Long Island Historical Society is one of the main features of his career. The idea was present in his brain long before the initial

step was taken, and his name is signed to the call for the meeting held on the 16th of February, 1863, when the project took shape and form, and he was among its first officers. He drew largely from the shelves of his own library to contribute to the infant library of the institution. He presented pictures and objects of interest to the gallery and museum of the society, and he was always its earnest, steadfast friend; and his leisure hours were largely passed in its alcoves. The following minute was adopted by the Board of Directors of the Long Island Historical Society, October 11, 1881, as expressive of their sense of the loss which the society sustained in his death:

Alden J. Spooner, one of the councillors of this society, died suddenly in the month of August last. His life was most absolutely that of a Long Islander. He was born in Suffolk county, passed the greater part of his life in Kings, and died and was buried in the county of Queens. His tastes were always predominantly literary, and his busier years were divided between journalism and the practice of the law. He was a wide reader, and wrote with facility and finish in both prose and verse. He was a delightful companion, and abounded in anecdote, fun and genial humor. He was humane and generous up to the full measure of his means. From early manhood down to his death, on the very verge of old age, he sympathized with all measures and efforts which aimed to make men wiser, better and happier in their lives. Beyond most of his contemporaries, he had a prescience of the rapid growth and prosperity of this city, and of its needs of libraries, lyceums, schools of art, and other institutions for culture and pleasure; and he was always a prompt, eager and enthusiastic participant in all combined efforts to make adequate provision for such needs. The early Apprentices' Library, the City Library, the Athenæum, and the Hamilton Literary Association, are among his debtors, and should hold him in grateful and honorable remembrance. The circular which convened the earliest meeting for the organization of this society was from his pen, and bears his name, and he was not only among the first, but among the most zealous of those to whose public spirit the society owes its existence.

Prominent and active members of the existing institutions of the city, who shared his genial companionship and liberal aims, have united to pay a parting tribute to his cultivated tastes, his broad humanity, his devotion to the welfare of the city and the island, and to his high character for integrity in his relations to his fellow men.

Mr. Spooner was also largely interested in establishing the Brooklyn Institute, on Washington street. Indeed, there is scarcely one among the older institutions of Brooklyn in which he was not actively interested. The latest offspring of his efforts in this direction was the Society of Old Brooklynites.

As a judge of art, Mr. Spooner had few superiors among amateurs. Painting and sculpture were equally a study with him, and he had an intelligent appreciation of their finer points.

In his later years he was engaged in collecting, arranging in chronological order, and uniting together a mass of historical incidents relating to Long Island, which he had been years in gathering. It was his intention, had his life been spared, to have written a comprehensive history of Long Island; but death came to him suddenly at his residence in Hempstead, on the evening of August 2, 1881.

He never had any taste for politics, consequently never sought political distinction or official promotion. The only office he ever held was that of clerk of the Brooklyn City Court. As has well been said: "Always too ready to yield to the advancement of others, he put aside positions he would have splendidly adorned with his magnificent intellect."

Mr. Spooner's life was one of spotless integrity, and the rigid honesty of his business dealings always secured him absolute confidence, not only with his clients, but with all classes of business men. He was a fascinating and instructing conversationalist; one of those persons in whose society intelligent men and women became still more intelligent. He could draw out persons, if there was anything

in them to draw out; if there was a subject about which they knew more than he did, nothing pleased him so much as to have it introduced. He seized quickly upon characteristic traits, and by an anecdote would put one in possession of the real character of the man better than an extended biography.

Perhaps no Judge in Brooklyn came, for a time, more before the eyes of the civilized world than did Justice Joseph Neilson, who presided so ably over the famous Beecher-Tilton trial. He was born at Argyle, New York, April 15, 1815, and was of Scotch-Irish descent. His father was a physician. Joseph studied for the legal profession, and on being admitted to the bar "hung out his shingle" in Oswego, New York, and there remained until 1844, when he removed to New York and took up practice there, building up quickly a large business. He made his home in Brooklyn, and in 1870 he was elected one of the Judges of that city. He retired at the close of 1882, having then reached the constitutional age limit. He was in every respect a remarkable Judge, and a notable instance of this was given just toward the close of the long and involved Beecher-Tilton trial. The evidence was all in, the decisions of the Judge on law points had been given day after day with unvarying courtesy, the lawyers had summed up and every one waited to hear the Judge's charge. All through the long trial he had been so impartial that neither side could say how the evidence had impressed him or what his opinion of the case really was. Now it seemed as if he must at least show his leaning, and counsel, jury and public hung on his words as he laid down the law, pointed out the value of the evidence submitted and went over every detail, every law point, and presented the whole in such a clear and logical manner that the jury had, as it were, a birds-eye view of the ugly story laid before them. At the conclusion of his summing up not a single exception was taken to any part of his address by the counsel on either side; all those

brilliant men who had weighed every word uttered could find no flaw, no wavering in the scales of justice, and through their spokesmen answered they were "content." In commenting on the charge the Albany Law Journal said: "The brief charge to the jury of Judge Neilson, in the Tilton-Beecher case, is a marked contrast with the address of Lord Cockburn in the Tichborne case. The address of the former occupied only one hour and a half, while that of the latter required many days, and fills two ponderous volumes. The vast variety of topics, social, moral, religious, political and legal, which were connected with the Tilton-Beecher case, gave the counsel on both sides, and the Judge presiding, a splendid opportunity to air their learning, their fancy, their rhetoric and their logic. This opportunity the counsel accepted, but the Judge modestly, and we think commendably, refrained from the display of anything but what the necessities of the case required. His charge is a model of clearness, precision and force. It seems almost incredible that the case could have been presented to the jury adequately in so few words. But a careful perusal of the charge shows that nothing was left out which was necessary to the complete presentation of the case. The whole address bears marks of the most patient and careful consideration of all the material evidence, under the most wonderful condensation. The spirit which breathes through the address is one of the utmost fairness and impartiality. The counsel on both sides expressed themselves satisfied, and this of itself is a high testimonial to the freedom from bias which the charge evinces."

The summing up in the Beecher-Tilton case, grand as it was and hailed as it was with acclaim all over the civilized world,—at least over as much of it as American newspapers reached, has now in a measure lost most of its interest for us. The world has long ago made a decision in the case, grander and more conclusive than that of the jury, and fully accepted the perfect innocence of Brooklyn's

greatest preacher and foremost citizen. But Judge Neilson was a polished man of letters, as well as a brilliant jurist, and we as laymen can read much of his literary work to-day with more interest than even his most painstaking utterances from the bench. Here, however, is a summing up which seems so perfect a piece of literary work, and at the same time so thoroughly judicial in tone, that it may serve to recall his genius in both qualities. It is, in fact, a summing up of the characters of Bacon and Coke,—two of the greatest judges of England. King James I, the "British Solomon," and exponent of the Divine Right theory, had tried to persuade his law officers that he was the supreme judge of the law and that judges should obey his wishes, and as a result had frequent conferences with those whose duty it was to administer justice. Judge Neilson wrote:

In one of these conferences Coke thought to teach James I that he was not above the law, could not add to or alter it, or create new offenses. At another interview, Bacon, the attorney-general, present, and supporting the king in his arrogant pretensions, the question was put whether the judges would obey the royal mandates. All the other judges, infirm of purpose, answered yes; but, with the moderation and dignity which became his office, Coke said: "When the case happens, I shall do that which shall be fit for a judge to do."

By his independence Coke paved the way for his dismissal from office, a disgrace for which Bacon, neither the greatest nor meanest of mankind, had toiled, and in which he enjoyed a temporary triumph. But though, in that deprivation, Coke revealed what Sheridan might have called "the flabby part of his character," he was thus left free to act as a statesman.

We call up in review before us the life of Coke with alternate emotions of regret, shame, sorrow, pride and consolation. Was that life as a journey of a day? If so, it was by pathways through dreary and desolate wastes, over Sorbonnian bogs, each footstep sinking in the slime, but occasionally leading up to Alpine heights, glowing with celestial light and beauty. It was a life often marred by want of moral

tone; often redeemed by elevated sentiments; full of distortions and contradictions. As the Speaker when in Parliament, under Elizabeth, he was shamefully subservient; as a crown officer, extorting confessions from prisoners put to the torture, he was pitiless; as uttering reproaches and accusations against Sir Walter Raleigh, on trial for his life, he was fierce and brutal. His devotion to study and his mastery of the law were unprecedented; his assertion of his rights as a judge, against royal intrusion, was admirable; his intrigue to regain royal favor by the marriage of his daughter to the brother of Buckingham was intolerable; his independence, virtue, courage, devotion in Parliament, under James I and Charles I gave special grace and value to the history of the times. But our sensibilities are touched when we find him a prisoner in the Tower of London. The room in which he is confined, long devoted to ignoble uses, becomes sacred. We enter with reverence, as upon holy ground. He is absorbed in his work on the Commentaries. As he writes the hand is tremulous; but that hand had never been polluted by accepting bribes.

In some aspects of life and character Coke appears to greater advantage than Bacon. Both were insatiable in their ambition, implacable in their resentments. The one was rough in manners, arrogant in speech, ready to strike terrible blows openly; but poor in feigning and clumsy in changing his ground. The other was courtly, plausible, serene, had a gentle touch, even when that touch boded ruin, was an athlete in fencing with cunning words, had the facial adroitness of a trimmer, was covetous, to his own disgrace and ruin. Those who dislike the one may well despise the other. For neither of them can we feel the love and sympathy we have for Sir John Fortescue and Sir Thomas More. In scientific speculation, no jurist has commanded as much respect as Bacon. In exact and profound knowledge of the old common and statute law, none could rival Coke. But, in view of the times in which they lived, the work allotted, and the materials in which they wrought, it would be unjust to weigh and estimate their labors with reference to the more enduring and fruitful services of the great English jurists and statesmen of later days. In the freedom of judicial inquiry and direction, in the temper of the people, the condition of trade and commerce, and in the character of legislation, there had been a great advance between their time and that of Hard-

wick. Coke and Bacon could not for any practical purpose have adapted their work to the coming and higher civilization. As in the natural world we have progress and rotation, each season performing its appropriate office, so in the intellectual, social, and political life of a people events are marshalled in due order and relation—a gradual development. What was easy of achievement when the times were ripe for it would have been impossible if attempted prematurely or out of season. When Mansfield moulded and illustrated our commercial law the materials were at hand, plastic and ready for use.

In another part of this work mention was made of the unusual honor paid to Mr. J. S. T. Stranahan in seeing his own statue erected by the people among whom he had lived and labored for so many years. A similar honor was, on May 8, 1895, paid to Benjamin D. Silliman, long the Nestor of the Brooklyn bar, and whose death in 1901 removed from public life a figure that had been active in Brooklyn's affairs for nearly two generations. On the date mentioned a marble bust of Mr. Silliman, from the studio of William Ordway Partridge, was unveiled and presented to the New England Society. It was the occasion of a brilliant gathering. Gen. Stewart L. Woodford, William M. Evarts and the Rev. Dr. Storrs were among the speakers. Mr. Silliman was born at Newport, R. I., in 1805, and was graduated at Yale in the class of 1824. He studied law in the office of Chancellor Kent and was admitted to the bar in 1829. Thenceforth his life was bound up in his profession and he sought relaxation in literary pursuits. His home in Brooklyn was the constant scene, until the weight and infirmities and changes of years forced him to abandon all sorts of excitement, of pleasant and intellectual gatherings. Though often urged to enter political life, he invariably refused, except when he served a term in the State Legislature. In 1873 he was prevailed upon to become the candidate for Attorney General of the State on the Republican ticket. The ticket was defeated, and while Mr. Silliman mourned the blow

to his party, he was personally glad to escape what to him were the annoyances of public office, for as United States District Attorney, which office he resigned in 1866, he knew that even legal officials had to submit to much that made political life repulsive.

As a lawyer Mr. Silliman was rather distinguished for his deep and thorough knowledge of the fundamentals of jurisprudence, for his complete mastery of the details of every case submitted to him, for the clearness and cogency of his arguments, than for his oratorical ability. He was more conversational in his tone at the bar than impassioned or glowing, but when he laid down a point it was so clear, so logical, so matter-of-fact in its assumptions that he seldom failed to win his case. His knowledge of the "authorities" was most thoroughgoing and he could support his own views with an array of decisions that left little to controvert. As a chamber or consulting lawyer he was without a peer, and his cautious and conservative advice, his desire to arrange out of court all differences that could be so adjusted, and his honest appraisal of the legal status and prospects of his client, often effected settlements involving vast interests without the intervention and expense of litigation.

For his legal profession, as such, Mr. Silliman had the most unbounded admiration. In addressing a graduating class at Columbia College he said:

In welcoming you, gentlemen, to the brotherhood of the Bar, you may well be congratulated on the peculiar advantages you enjoyed in preparing for its duties. You have not been left to pick up, as you best might, here and there, scattered fragments of legal knowledge, but you have been systematically instructed in the principles and philosophy of the law. You have been guided and trained by eminent and learned teachers in a school that ranks second to none in the land for the completeness of its system and the thoroughness of its instruction. You come not as undrilled militia, but as graduates from the very West Point of the profession.

Widely different have been (with few exceptions) the opportunities of legal instruction in this country until a comparatively recent period. The student was required to enter the office of a practicing attorney, and there to pursue his studies. He was at once engaged in the practice of that which he had not learned the principles. He became familiar by daily observations, and as a copyist, with the forms of conveyancing and phraseology of pleadings, without understanding their reason. *

* * As a general rule, it was impossible for the attorney, in whose office the student was engaged, to give any material attention to his studies, and his progress and attainments, therefore, lacked system, and were slow, confused and uncertain. A formal and superficial examination finally passed him to the Bar, where he could rarely feel at home until he had acquired by subsequent laborious and anxious practice a knowledge of very much that he should have attained at the outset. * * In Europe, on the other hand, full and careful instruction in the principles of law has ever been a pre-requisite to admission to the Bar, and the schools in which such instruction has been given have been organized, fostered, and more or less regulated by public authority. Regular schools of law were established in Rome, in the time of Augustus, at which those who aspired to the honors of the forum were assiduous students. None but the thoroughly learned and skilled could dream of such honors where Scaevola, Sulpicius and Cicero had been competitors, and where even the boys, according to Cicero, were taught the "twelve tables" as a necessary lesson (*discebamus enim pueri XII tabulas ut carmen necessarium*) to instruct them in so much of the laws as should be obtained by every Roman citizen. In France such schools existed as far back as the twelfth century. From an early period the law has been, and still is, most fully and elaborately taught by renowned professors in the Universities of Germany and Holland. In England the schools of law have been less regular and complete than on the Continent, but the qualifications of candidates for the English Bar have, nevertheless, been measured by a very high standard.

We regard the annual reinforcement of the Bar by a class of accomplished and educated gentlemen who have been thus thoroughly taught in the principles of the law, and whose minds have been carefully disciplined and trained for its intellectual duties, as sure to elevate the standard of legal attainment, and

to promote the honor and usefulness of the profession. * * *

A grand future beckons you, and you have the best preparation for the course. But we must bear in mind that other stout knights, who have had no such advantages as you have had, will enter the lists with strong lances, and compete with you for the higher prizes. The great lawyers who preceded us—the Hamiltons, the Kents, the Jays, the Van Vechtens, the Spencers, the Hills, the Wellses, the Oakleys, the Duers, the Woods, the Talcotts, the Ogdens, the Hoffmans, the Van Burens, the Butlers—had not such training as you have enjoyed. But what summits did they not attain!

I have spoken of this school as the "West Point" of the profession; but we have seen within the last six years that other soldiers than those who graduated at West Point won victories and received laurels—marched to the front with muskets on their shoulders and returned with stars on their shoulders.

At the same time he warned his auditors against indulging in practices which are apt to militate against legal ethics and defeat the ends of justice—practices which were then, and still are, often indulged in, especially by young lawyers in their desire to win a position quickly. He said: "No man can, consistently with personal honor or professional reputation, misstate a fact or a principle to the court or jury. The man who would cheat a court or jury would cheat anybody else. Measured by the lowest standard, that of expediency, no lawyer can, in any case, afford to act meanly or speak untruly. He owes no such duty to his client; an honest client would not be safe in the hands of a lawyer who would do either."

In speaking of the frequent popular denunciation of lawyers in defending cases—especially criminal cases in which the guilt of the accused is evident to everyone who "reads the newspapers"—and succeed in getting a verdict actually or practically removing the accused from the grasp of the law, Mr. Silliman laid down a ruling which must be accepted as just:

It needs but little thought to convince even the vulgar that the idea that the vocation of

lawyers is inconsistent with the strictest truth, is but vulgar error. In support of the charge, it is often said that counsel will not refuse to defend a prisoner whom he supposes to be guilty of the offense for which he is to be tried. The answer to this is plain: The accused person is not to be tried by the impressions, or even by the convictions, of any one man, whether lawyer or layman. The law of the land requires, not only for the sake of the accused, but for the safety of every citizen, that no man shall be tried and convicted except by a jury of twelve men. The question of his guilt or innocence calls for a division of labor in the process by which it is to be determined. It is made the duty of the counsel for the prosecution to conduct one, and of the counsel for the prisoner to conduct the other branch of the investigation; for the former to collect and present before the jury the evidence against the accused, and to state such views adverse to the prisoner as result from the whole testimony; and for the latter to collect and present before the jury the evidence in favor of the prisoner, and to state all such views in his favor as result from the whole testimony.

If counsel assumes the guilt of an accused person before that guilt has been judicially ascertained, if he determines at the outset that the accused is guilty, he takes upon himself most unjustifiably the combined character and prerogative of accuser, witness, jury and judge; and if, because of such conclusions in his own mind, he refuses to conduct the defense of the prisoner, he throws the weight of his own character and convictions into the scale against him.

Of course were we attempting a complete chronicle of the bench and bar of Brooklyn many names would be included in the retrospect, some of which have acquired a national measure of fame, but the aim here has been to select a few judges, attorneys, men of local fame as well as those whose names belong to the nation, who are representative of all ranks of the greatest of all the professions.

But what a galaxy of brilliant men the story of whose lives the biographer who would aim to cover the bar of Kings County a decade ago could draw upon for illustrations! Benjamin F. Tracy, statesman as well as lawyer,

although now in practice in New York, was for years the leader of the bar in Brooklyn. Judge George G. Reynolds, Judge Alexander McCue, Major Gen. Duryea, Judge N. H. Clement, who succeeded the erudite Nielson, Judge S. D. Morris, who for 9 years was District Attorney, Thomas G. Shearman, who was as well known as a publicist and political reformer as a lawyer. General J. S. Catlin, who won an enviable record in the field as a soldier; Mark E. Wilbur, another distinguished lawyer-soldier; Judge T. W. Gilbert, who in 1865 was elected to the bench of the Supreme Court after being nominated by conventions of both the great political parties and held the seat until 1882, when the legal age limit compelled his retirement;; Judge Henry A. Moore, a graduate from the famous office of Lott, Murphy and Vanderbilt, and County Judge for some twenty-eight years; Asa W. Tenney, who for over a decade was United States District Attorney for the Eastern District of New York; Calvin E. Pratt, who fought at Bull Run and until 1891 carried in his cheek bone a bullet which had prostrated him at Mechanicsville, Va., while fighting under Gen. Porter, who was recommended for promotion to a brigadier generalship by McClellan and was promoted, succeeding Hancock in the command of the 6th Army Corps, and who on returning to civil life resumed his old profession of the law, and in 1869 was elected to the bench of the Supreme Court; but even the names alone which come up to memory would fill a chapter. Detailed sketches of most of these appear in other sections of this work.

Some of the present-day leaders of the bar are deserving of brief mention, for their public services are such as to show that the old pre-eminence of the City of Churches in the "forum of justice" is still maintained and that the legal profession is still prominent in all that stands for good citizenship,—honesty in public life, and in knowledge of and devotion to the legal system, which, after all, has been

the backbone of American liberty and which has stood amid all the political turmoils which have excited the people since the adoption of the Constitution for the freedom and equality of the citizen, for free speech, freedom of contract, and the purity, potency and dignity of the source in these United States of all power—the ballot box which registers and determines the people's will.

Perhaps the most widely known exponent of all this at the present time is Justice William J. Gaynor of the Supreme Court, whose services in connection with the ballot-box frauds at Gravesend won for him the gratitude of every man who values liberty and popular government. Justice Gaynor was born in Onieda County, N. Y., in 1851, and spent his early years on a farm. He received his academic training at Whitestown, and for a time was employed as a teacher in Boston, during which time he availed himself of every chance to add to his own education. In 1873 he settled in Brooklyn and studied law, maintaining himself at the same time by newspaper work. In 1875 he was admitted to the bar and soon had quite a large practice. He soon became known for his mastery of local questions and as a staunch and unwavering advocate of good government and came prominently to the front in public life as the counsel for Mr. William Ziegler in the contest against the city's purchase of the plant and assets of the Long Island Water Supply Company. All of Mr. Gaynor's legal points in this case were fully sustained by the courts and as a result the city saved a large sum of money. But apart from that saving, a principle was involved with which the whole cause of municipal government was concerned. Besides this Mr. Gaynor appeared in several other cases in which the rights of the people were involved, notably against the system of giving away public franchises, which has lost not Brooklyn alone, but every American city so much in the way of the collection of practical assets which, created by the community, should be shared by

it. Mr. Gaynor is a Democrat, but in public life has been known for his complete independence of party control, and it was this independence, his stern assertion of right, his unswerving devotion to high ideals in politics whether in county, in state or in municipality which won for him the wonderful majority by which he was elected to the bench of the Supreme Court, where he still presides.

Judge Gaynor's opponent in the contest for the Supreme Court Judgeship was a gentleman who has long enjoyed an enviable reputation in Brooklyn's legal circles, Mr. Thomas E. Pearsall. As representative of an old Brooklyn family Mr. Pearsall would be entitled to a prominent position among the leaders of Brooklyn thought and society, even had not his own abilities and personal successes been such as to win for him an honored position among those who in the present day and generation are striving to make Brooklyn be regarded as the leading borough among those which make up the present City of New York. All his associations have been with Brooklyn. He was born there in 1842, studied in its public schools and then entered the law office of Judge Samuel Garrison, and at once diligently entered on the study of his intended profession. In such an office a student has an opportunity of learning in a practical manner the practice of law as well as its theory, office routine as well as general principles, and the application of these general principles and legal decisions to individual cases. By the time he had reached his 21st year Mr. Pearsall was so thoroughly skilled in the law that he had no difficulty in passing the examination at Poughkeepsie, which made him become a full fledged member of the bar. After getting his diploma, he continued his relations with Judge Garrison for a time, but finally concluded to engage in business on his account.

One of the first of his cases and of his successes was over the will of one Peter O'Hara, in which a large amount of money was involved upon the construction of several of its

clauses. Mr. Pearsall was retained by one of the heirs and the opposing counsel was the late Henry C. Murphy. After a considerable amount of litigation the case was settled in favor of Mr. Pearsall's client by a decision of the Court of Appeals.

In 1867 Mr. Pearsall entered into partnership with Judge Samuel D. Morris, then District Attorney of Kings County, and from 1868 until 1872 he acted as Assistant District Attorney, besides carrying on most of the private legal business of his firm. He was the prosecutor in many noted criminal trials, including that of Fanny Hyde, a murder case which for many reasons was one of the most prolific of talk and rumor in Brooklyn and which is still of interest to the student of jurisprudence. But perhaps the most celebrated trial in which Mr. Pearsall has taken part was that of Tilton vs. Beecher, in which he appeared for the plaintiff. Associated with him in behalf of Tilton was a brilliant array of counsel—Samuel D. Morris, Roger A. Pryor, Austin Abbott, William Fullerton and William A. Beach—but to him fell the real work of the plaintiff's case, the preparation of the evidence, its presentation, and the arrangement and sifting of the authorities upon the important and far-reaching points of law which were constantly coming up. His work in that case was really extraordinary and the value of his services was freely acknowledged by all his associates.

A stanch Democrat, and a gifted orator, he has always been regarded as one of the local leaders of the party, but cares little for public office. His own legal business and the many and varied and important interests committed to his care are more than sufficient to occupy his time. But he believes that one of the tests of good citizenship is the interest a man takes in public affairs and the doings of his political party. So he has been active in politics, served on the local Democratic committee, and willingly accepted an appointment from Gov. Hill to membership on the commission of lawyers which he intrusted with the

delicate task of revising the section of the State Constitution appertaining to the judiciary. He is a member of the Montauk, Carleton and Crescent Clubs and is prominent in Masonic circles.

Justice Goodrich of the Supreme Court, Second District, who presides over the Appellate Division of that body, was noted in Brooklyn for his ability as an admiralty and commercial lawyer for many years before he was elevated to the bench. He was born at Havana, in Catharines Township, Schuyler County, N. Y., in 1833. After he was graduated at Amherst College, in 1852, he went to Albany to study for the legal profession. He attended the Albany Law School and afterward entered the office of Hill, Cagger & Porter, and there remained until 1854, when he was admitted to the bar. On receiving his diploma he settled in New York with the view of building up a practice, but in the course of five or six years he removed his office to Brooklyn, and has since been identified in a marked manner with its affairs. A devoted Republican in politics, he soon proved a pillar of strength to the local ranks of that party, and in 1866 was elected a member of Assembly. In 1869 he was defeated by a small majority for re-election, but in 1871 he was again returned. When his term closed he returned to his law practice and devoted himself to it closely, without at the same time losing his interest in political life as may be judged from the fact that in 1890 he was elected Chairman of the Republican General Committee. As a member of the Brooklyn School Board to which, in 1867, he was appointed by Mayor Schroeder, Justice Goodrich rendered much effective service to the cause of education, and in 1889 he was privileged to perform some good work for his profession and the business interests of the county as a member of the International Marine Conference which met in June of that year in Washington.

Justice Goodrich is a member of the Phil-

harmonic Society and the Apollo Club and is more or less active in several of Brooklyn's charitable and social organizations.

For many years the name of Grenville T. Jenks was one of the best known and best beloved among the members of the bar in New York and Brooklyn. He was a man of many brilliant parts, a thorough law student, a careful, conscientious adviser, an eloquent speaker, a skillful examiner of witnesses, a man of ready wit, keen perception, wide reading and a thorough knowledge of human nature, he would have come to the front in any calling to which he had chosen to devote himself. He studied law in the office of Lott, Murphy & Vanderbilt in Brooklyn, and afterward in that of Storrs & Sedgewick in New York, and it was while so engaged, in 1851, that he was called to the bar. On receiving his certificate he at once entered into practice in New York and soon attained a marked measure of success. On removing his office to Brooklyn success still attended him, and when he died, in 1870, at the early age of 40 years, he was regarded not only as one of the most brilliant members of the local bar, but as a man who would, sooner or later, have attained any professional honor to which he might have aspired.

Almet F. Jenks, the eldest son of this gifted man, is worthily following in his footsteps. He was born at Brooklyn, May 21, 1853, and received his early educational training at Adelphi Academy. From there he passed to Phillips Exeter Academy, at Andover, and completed its curriculum with all the honors. Then, being destined for a legal career, he went to Yale, where he was graduated in 1875, and closed his training by passing through Columbia Law School. He was graduated from that institution in 1877 and in the same year entered on practice in Brooklyn in partnership with Frederick A. Ward. It was not long before it was recognized that the firm had won a large business and that many important interests were committed to its care. In 1848 Mr. Jenks accepted an appointment as

Very Truly
Frederick M. Hardy

Assistant District Attorney under James W. Ridgway, and he continued to hold that office until Feb. 1, 1886, when he was appointed Corporation Counsel by Mayor Whitney, and by successive appointment he continued to hold that important office throughout the administrations of Mayors Chapin and Boody. A change in political conditions caused him to retire from public office with the accession of Mayor Schieren and Mr. Jenks devoted himself to building up his private practice and so was engaged with eminent success when, in November, 1898, he was elected a Justice of the Supreme Court from the Second Judicial District with a popular vote of 169,436, and that dignified office he continues to hold.

Justice Jenks almost from the time he attained his majority has been an active worker in the Democratic party and has since been prominent at many of its conventions. He has been a pronounced supporter of honest money and lent all his influence and bent all his ability and eloquence to keep that plank paramount among the issues supported by the Democrats of New York State. In 1891 Gov. Hill appointed him Judge Advocate General and that appointment was endorsed by Gov. Flower when that lamented statesman and financier became the Chief Executive of the State. Since ascending to the bench Justice Jenks has been less active as a worker in the party—his judicial position so demands—but his interest in its councils is unabated and he is still regarded as one of those quiet, determined, far-seeing leaders whose advice is certain to lead to good results.

For several years the late Mr. Charles J. Patterson held an honorable position in Brooklyn as one of the leaders of the local bar. He was born in what is now the Borough of Manhattan, May 19, 1853, and received his general education in the public schools. He entered the law office of Gen. C. W. Sanford and remained there until he was admitted to the bar. In 1876 he was admitted to practice at Poughkeepsie and soon after settled in Brooklyn,

where he entered upon the professional career which, slowly but steadily, has given him such an enviable position in legal circles of the old "City of Churches." Mr. Patterson devoted himself closely to his professional duties, and while he made many brilliant appearances in court, his arguments were legal ones pure and simple, and probably a case presenting sensational rather than purely legal features would have been repugnant to him. He was regarded especially as an authority on the subject of torts, and many of his best earned victories were in connection with suits in which wrongs have been redressed by substantial damages. Mr. Patterson died in 1901.

Mr. James C. Church, a native of Rhode Island, has been quite prominently identified with the legal profession in Brooklyn since 1883, when he was admitted to the bar. His early years were mainly spent in New Utrecht, and he received his legal training in the office of Morris & Pearsall. His practice has been in a great measure confined to corporation work, as he is counsel for several such concerns and his work as an organizer has been pre-eminently successful.

Surrogate Abbott, who retired from that position on Jan. 1, 1902, as a result of a "landslide" which in November preceding had befallen his ticket, is one of the most honored lawyers in Brooklyn. It was felt throughout the electoral canvass which ended in the defeat of the ticket on which his name appeared, that a mistake in the very fundamental principle of good government had been made when he was not endorsed for re-election by both parties. Throughout the whole of that heated campaign, not a word was said derogatory to Surrogate Abbott, while his eminent fitness as a judge, and his upright, dignified and thoughtful disposition of the many and often extremely tangled cases which turn up in his court, were freely admitted. He had presided over the Surrogate's Court since 1888, and had earned the highest encomiums from the bar, the press and the citizens generally. He has

now resumed private practice and will doubtless soon build up a large clientele.

That same election placed in the important office of Comptroller of Greater New York Mr. Edward M. Grout, who had won an enviable record as President of the Borough of Brooklyn, which office he vacated only on January 1, 1902, when he entered upon the duties of the Comptrollership, succeeding another Brooklyn man, Mr. Bird S. Coler. Mr. Grout has been a consistent Democrat all through his career, but has never wavered in upholding his theory that national and state policies should have no place in connection with municipal government. The latter, he holds, is simply a business proposition and should be administered from a business standpoint. His ideas on that and kindred subjects, as well as his independence in politics generally, have won him the confidence of his fellow citizens of the Greater City, 299,713 of whom gave him their votes at the election of November, 1901, a greater number than voted for Mayor Low, the head of the ticket. But Mr. Grout has a habit of running ahead of his associates in the various municipal contests in which he has taken part.

We have already referred to Mr. Grout's career in a previous chapter and only refer to him in this instance to emphasize his prominence as a member of the Brooklyn bar. In 1893 he became a partner in the firm of which Judge Gaynor was the head, and in 1894 when that gentleman took his seat on the bench, Mr. Grout became the head of the firm. His large practice soon won for him an independence, but his active mind, his sense of public duty and his ideals of citizenship, as well as the trend of most of his associates, made him become a prominent figure in politics. His watchword was reform, and as a reformer most of his political battles have been fought from the time that he aided so successfully in sending the Gravesend ballot-box stuffers to jail. For some years he was associated in political work with Mr. Edwin M. Shepard, but

in 1895 both he and Mr. Shepard were in the race for the Mayoralty of Brooklyn, both using reform banners, and as a result the Republican candidate was elected. In 1897 he was elected President of the Borough of Brooklyn, and as such did as much good as he could. But his experiences in that office led him in 1901 to accept the candidacy of a non-political fusion movement for Comptroller, which again arrayed him against his old associate, Mr. Shepard; and his personal popularity aided much in accomplishing the defeat of that gentleman and bringing about the accession of Seth Low to the Mayoralty of the Greater New York.

Edward M. Shepard, who in the canvass of 1901 came so prominently before the citizens as the Democratic candidate for the Mayoralty, has long been prominent in legal and public life in Brooklyn. His law practice is a large one, but it is as a public-spirited citizen that he has won the magnificent following he possesses and the large measure of confidence and popularity which he enjoys. Possibly his grandest public service has been his work as counsel to the Rapid Transit Commission. In that respect he has performed a series of important labors which are hardly fully appreciated even by those who have watched the recent development of the rapid transit movement in Manhattan and Brooklyn. Mr. Shepard is recognized as a man of honest purposes, of pure ideals and rare administrative qualities, and will undoubtedly continue to be an active factor in Brooklyn's public affairs for many years to come.

But lest it might be thought that we are "drifting into live politics," we will leave such leaders alone and turn to those whose claim to notice here is their prominence solely in connection with bench and bar. One of the foremost of these is Justice E. M. Cullen, of the Supreme Court, who was born in Brooklyn in 1843. After he was graduated from the Troy Polytechnic Institute, in 1861, he became a Lieutenant in the United States Army and saw considerable active service during the Civil

War. In 1862 he was commissioned a Colonel by Governor Morgan, and continued in the service until the close of the war. On leaving the army he followed for a while the profession of civil engineering; but he was at the same time devoting himself to the study of law, and under the guidance of his uncle, Judge McCue, grasped its details so thoroughly that in 1867 he was admitted to the bar and became a member of the firm of McCue, Hall & Cullen. In 1872 he was appointed Assistant District Attorney and filled that office in a manner that won him many stanch friends both in the profession and among the public. In 1880 he was elected a Justice of the Supreme Court. His political independence, manifested by his keeping the bench free from party interference, led to his being "turned down" in 1894, when he was a candidate for re-election, but the vigorous action of the Bar Association as well as the general sentiment of the voters led to his receiving the nomination from the party opposite to that which had formerly placed his name before the electors, and he was again elected. Political managers have often found out that "monkeying" with the Supreme Court is a dangerous business for them, but, unfortunately, they soon forget the many lessons in this connection which they have received.

Judge Willard Bartlett, who has resided in Brooklyn since 1868, was born at Uxbridge, Mass., in 1846. His father, the late William O. Bartlett, in 1859 purchased a country seat in Brookhaven township, and that property is now in possession of his son and is the subject of constant improvement. Nothing delights the Justice more than to throw away the dignity of the ermine and enjoy the relaxation and the health-giving properties of his now beautiful country seat "out on Long Island." Willard Bartlett studied law at Columbia College and was admitted to the bar in 1868. For a time he was associated with Elihu Root, the present United States Secretary of War, in the practice of his profession, and so continued until 1887, when he was appointed one of the justices of the Supreme Court, and that office

he still holds. He has proved an able judge, and during his long career on the bench his fairness and impartiality have never been questioned and his decisions have seldom been subject to adverse review. He is naturally of a judicial temperament and his long experience, his thorough grasp of the principles of the law, his wide reading, his close observation and his good New England practical common sense all combine in giving him a "grip" on even the most involved case and a clear, emphatic and practical decision is the invariable result.

Tunis G. Bergen, a nephew of the famous antiquarian and genealogist of Kings county who bore the same name, was born May 17, 1847. After passing through the public schools he completed his academic training, in succession, at the Brooklyn Polytechnic Institute and Rutgers College. Designed for the legal profession, he then attended the law school of Columbia College, and on completing the course there went to Berlin and Heidelberg for further study, and in 1871 received from Heidelberg University the degree of Doctor in Public Law. He attended lectures afterward at other continental colleges, notably at the famous Sorbonne, and spent some time at Oxford. Returning at length to his own country, Mr. Bergen began the task of building up a practice, and slowly, it seemed to him for a long time, but none the less surely, he became the centre of a large clientele, and one that is even yet steadily growing. But in spite of the cares of his law practice Mr. Bergen has found time to perform a goodly share of the duties which fall to the public spirited citizen. Proud of the city of his birth, proud of his Dutch ancestry, zealous of the tender memories of the old-fashioned historic Bergen homestead in which he first saw the light, Mr. Bergen has been most active in aiding by voice or by pen whatever seemed to him to be for the honor, the progress or the glory of the good old town. He was long an active member of the local school board, and for over four years was its president. In the

work of the Long Island Historical Society, and especially in the capacity of one of its secretaries, he has rendered a grand service in carrying on the work so ably begun by Murphy, Spooner, Storrs, McCormick and others of bygone day, and thus maintaining in all its usefulness an institution which has done more for the preservation of the history of Long Island than any other single force. A staunch Republican in politics he has generally managed to win the support of independent

letters to the newspapers and other literary efforts and his manner of arresting and retaining the attention of the people gave him a degree of national prominence and made his name familiar all over the country. Mr. Bergen is a many-sided man, a deep and tireless student of all things, especially delighting perhaps in historical themes, yet he has the true instincts of a sportsman, holding membership in various hunting and fishing clubs. In the Hamilton and Brooklyn clubs he is especially

Democrats to any cause which he espoused, and in many a contested election he has proved himself a power in the art of winning votes, winning votes, that is to say, as they should be won, by explanation and argument. He rarely wastes words in his speeches, is epigrammatic rather than florid, but every successive point tells. Not long ago he was foremost in an effort to arouse the sympathy of the people of this country toward the Boers in South Africa in their great struggle to retain their political freedom, their country's independence, and while so engaged his ringing appeals, his

interested and is held in the highest personal esteem in these institutions, and indeed in every circle, business, social or political, in which he moves.

General Horatio C. King, who has long been prominent as a soldier, lawyer, journalist and statesman, and won a national reputation, comes of most distinguished ancestry. His great-grandfather, George King, was a soldier in the Revolutionary war, and his father, Horatio, was postmaster-general of the United States in 1861. Horatio C. King was born at Dickland, Me., December

22, 1837, and after the usual course of study was admitted to the New York bar in 1861. The crisis between the States was then on and the young lawyer, like so many thousands of the men of the time in the first flush of young manhood, thought his first duty was to aid in maintaining the supremacy of the flag, so he volunteered for duty and was actively engaged "at the front" from August, 1862, until October, 1865, when he was honorably discharged with the brevet rank of colonel for his brilliant service and his bravery in the field. Then he returned to New York and devoted himself to the building up of a law practice. His tastes gradually led him into the journalistic field, and by 1870 he was more widely known perhaps as a newspaper man and all-around author than as a lawyer. For a time he edited the "New York Star," and afterward managed the "Christian Union" in such a way as to win the heartiest commendation of Henry Ward Beecher. His entire relations with that gifted man were of the pleasantest and closest nature. He stood by Mr. Beecher with unwavering fidelity throughout the great crisis in his personal career, and was prominently identified with the management of Plymouth church during the latter days of the great preacher. In quitting journalism and resuming his law practice, General King seemed to become a more active factor than ever in political affairs, and in the councils of his party in the state of New York, and every movement that tended to promote the cause of good government found in him an earnest, devoted supporter. As a platform orator during a political contest he often appeared at his best as a public speaker and he was ever ready to discuss the affairs of the nation and the state, and to discuss them with a full knowledge and a flow of argument based on reading and experience, such as few could equal. In the canvass which ended in the election of Mayor Cleveland, of Buffalo, to the governorship of New York, General King took a most active part, and it is said to be due to his active influence that Mr. Beecher, a Re-

publican in politics, threw his party aside and came out for Mr. Cleveland at a critical point in that statesman's campaign for the Presidency. Governor Cleveland appointed General King Judge Advocate General in 1883 and he continued to hold the office under Governor Hill. Upon returning to private life General King resumed his law practice and since continued in it with occasional flights into the literary or journalistic field. He has won a high reputation as a military lawyer and his "Guide to Regimental Courts-Martial," issued in 1882, is still regarded as a standard work on the subject. In Grand Army circles he is very popular and for two years he served as commander of Charles R. Doane Post, No. 499, of which he was one of the charter members. He enjoys in a high measure the personal regard of his fellow citizens, and wherever he goes is always certain of a loyal and hearty welcome.

Another prominent adherent of the Democratic party in Kings is William C. De Witt, who for thirteen years held the important office of corporation counsel, and in late years has been conspicuous in the work attending the consolidation of the two cities. He is descended from Tjerck Clausen De Witt, who left Holland in 1657 and founded a family which gave to the country, among many other distinguished citizens, Charles De Witt, a member of the first Continental Congress, and De Witt Clinton, the greatest of all the governors of New York. William C. De Witt was born at Paterson, New Jersey, in 1840, but has resided in Brooklyn since he was five years of age. He was admitted to the bar in 1861, and since then has built up a large and lucrative practice in spite of the time he has devoted to politics and the demands of his party. In the cause of good municipal government he has been an active, and what is better, a practical worker, and his efforts won him the hearty support of a majority of the citizens of Brooklyn, regardless of party influences. He was elected corporation counsel of Brooklyn in 1869, and by continued re-

election served until 1882, when he retired to attend to the increasing demands of his private practice, now one of the most extensive in Brooklyn. Devoted to the law, a close and painstaking student of all its phases past and present, its procedures, rules, decisions and provisions, he has found time to study literature in general from the standpoint of a student of letters and in the works of the classic writers of English and American literature has found a world of pleasure and of solace quite different from that other and rather commonplace world in which a busy public man of the present day "lives, moves and has his being," as the popular saying goes. His own orations and public utterances, even his addresses in court, have always been models of good nervous English, and the frequent and apt quotations which sometimes illustrated a point, seemed always to come from a storehouse filled with such aids to argument. In 1881 he published a volume in which, under the general title of "Driftwood," he printed several of his orations and contributions to magazine literature, and the book is at once an evidence to his literary taste and critical judgment. But Mr. De Witt is first, last and all the time a lawyer, and it is in that field that his most active work has been done, the work which has won for him the prominent position he occupies in Brooklyn—in the Greater New York in fact, for consolidation has made his name equally familiar on both sides of the East River.

We may now speak of a lawyer who is not a representative of the bench, but simply of the bar. Mr. W. B. Davenport claims descent from John Davenport, who founded the New Haven colony in 1638, and from Thomas Benedict, a member of the first English Colonial Assembly in New York. He was born in New

York City in 1845, but has been a member of the Brooklyn bar since 1870. In 1889 he was elected public administrator of Kings County. That is the only public office he has ever held, for the extent of his private business has fully monopolized his time. In connection with corporation matters and the administration of estates he enjoys a large practice, while his personal popularity and social instincts are shown by the fact that he has held the office of President of the New England Society in Brooklyn and is a member of the Sons of the Revolution, the Society of Colonial Wars and several such organizations as the Hamilton, Crescent and Athletic Clubs. He is also a Trustee of the Polhemus Memorial Clinic, of the Brooklyn Institute of Arts and Sciences, and a number of other public and business organizations.

But we must now draw this chapter to a close, for our purpose has been fully gained of presenting in the pages preceding a few representative types of the bench and bar, showing its high standing in its own community and its wealth of material in the olden time as well as in the days now passing. The list might be extended easily so as to fill two or three goodly volumes. We might mention such present-day leaders as Judge Hand, Judge Aspinall, Messrs. E. B. Thomas, James Troy, George H. Fisher, A. E. Lamb, H. C. M. Ingraham, A. G. McDonald, J. A. Burr, John A. Taylor, A. E. Mudge, R. P. Chittenden, T. H. Field, Jesse Johnston and Herbert T. Ketchum, and by recalling their struggles and their exploits and achievements prove that the bench and bar of the Brooklyn of to-day are equal in intellectual capacity and legal scholarship with any of those groups whose members were regarded as giants in the days that are gone. But such a theme really should form a special study.

CHAPTER LIV.

FREEMASONRY ON LONG ISLAND.

SOCIAL—TINY BEGINNINGS OF A GREAT INSTITUTION—SKETCHES OF REPRESENTATIVE
EARLY LODGES—SOME DISTINGUISHED LONG ISLAND CRAFTSMEN.

IS might readily be supposed, Brooklyn is a city of societies of all sorts—secret, fraternal, political, sporting, dramatic and fashionable. Most of its organizations are popular, that is to say, their membership is practically open to all who apply and who have the requisite qualifications as to taste, acquaintance, reputation and the wherewithal to pay the entrance fee and the annual dues. Some on the other hand are as exclusive as can be imagined, and it would seem the more exclusive a certain club or society may be the larger is its waiting list. In the long list of Brooklyn clubs and societies nearly every taste seems to be catered to, every nationality has its circle, every trade and profession has its social home, and every recreation its temple. Even the ladies have their chosen societies and the number of those open equally to both sexes—notably the dramatic and singing societies—run into the hundreds.

The time indeed was when the people on almost each block in Brooklyn formed practically a little social organization among themselves. That was in the days prior to the advent of the tenement or apartment house and the appearance of the trolley. In the pleasant summer afternoons people would gather on the stoops and verandahs in front of their homes and receive the visits of their neighbors, while the ladies would ramble from one

home to another and indulge in their dearly loved and kindly gossip. Each block had its own passing affairs to discuss and business to regulate, and it was done in a pleasant, neighborly fashion as the evening hours slipped away. The children played in the streets right under the eyes of their elders, and without any of the modern dread which the bicycle, the trolley and the automobile have inspired, and the adult male population discussed the latest turn in politics or canvassed the most recent news. Each household seemed to unite for the time being into but one family, having the same interests, the same anxieties, the same ideas of hospitality and amusement. So it went on, night after night, during the spring and summer, and when winter came each house in turn held sweet converse with its neighbors, unless, indeed, when a sleighing excursion carried practically the whole adult and active population on a wild and health-giving rush along one of the old plank roads. All this is now a thing of the past. We are not so friendly with our neighbors as we were wont to be, for the influx of population is steady and changes are continual. But Brooklyn is still a city of social instincts, and instead of holding forth on a stoop, we now spend our evenings in our clubs and there seek that solace, that kindred association, that inspiration from congenial souls which tends so effectually to lighten the bur-

dens and dissipate the cares of the moiling and toiling of our daily existence and which make life after all seem really worth living.

In point of antiquity the credit of being the premier among the existing organizations on Long Island must be given to the Masonic fraternity. The records of the Grand Lodge inform us under date of February 4, 1784, that it was then

"Voted unanimously that the petition of James Gardiner, John Leverel Hudson and Joseph Corwin requesting an Ancient Warrant to form a lodge on Long Island be granted."

There is, however, no further record of this lodge, and, indeed, it is doubtful if it was ever constituted. The three surnames mentioned frequently appear in the annals of the island, but diligent investigation has failed to locate them exactly. It is generally supposed that they were residents of Brooklyn, but even for this there is no warrant. The record shows, however, that in some part of Long Island there were, in 1784, members of the Ancient and Honorable Fraternity in numbers sufficient to think of uniting into a lodge. It is worth noting, too, that the then Grand Master, Bro. William Cock, although a lawyer in New York, was a native of Long Island, and a representative of one of its oldest families.

In 1787, however, another Long Island application for a charter reached the grand body, over which Chancellor R. R. Livingston then presided, this time from brethren at Jamaica. This was granted and Jamaica Lodge was duly constituted on September 5, that year. It does not, however, appear to have gained much headway, and in 1792 surrendered its charter and passed out of existence. In the following year some brethren at Oyster Bay, headed by Moses Blackly, applied for the necessary authority to organize a lodge in that town, and the application was referred to a committee. So far as the records show that ended the matter. Probably the field in that stronghold of Quakerism did not seem to the

committee very promising. At all events there is nothing in the minutes to show that they even dignified the application with a report. On March 22, 1793, a lodge was constituted at Huntington, but it seems to have been a weak organization from its very beginning. It struggled on, however, until 1806, when so far as can be ascertained it ceased holding any meetings and was abandoned. Its last master was Ruluf Duryea, but local history concerning him is silent.

On December 7, 1796, application for a warrant for "a lodge in Suffolk county, Long Island, by the name of Suffolk Lodge" was made to the Grand Lodge of New York, and it was at once granted. Grand Lodge was not so particular then as now and little time was wasted either in making Masons or warranting lodges. It was not, however, until March 10 following that the first regular meeting of the new body was held and the lodge "duly opened and in order for business." The officers were installed, the first master being William Wright, a past master of Independent Royal Arch Lodge, No. 2, New York City. The visitors present at the opening meeting were seven brethren from Huntington Lodge, No. 26, and "Brother Fagan from Ireland." The first applicant for initiation was Woodhull Smith, who was afterward passed Fellowcraft March 16 and raised April 11. The lodge increased rapidly at first. In the course of its opening year it initiated nineteen candidates, the highest number reached in any given twelve months in its entire career. The people around were mostly farmers or seamen, and while the seamen were enthusiastic at first their vocation did not permit them to attend lodge meetings regularly and after a time most of them lost all interest and dropped out. Those who did retain their connection were of little practical use. The lodge was seldom represented in Grand Lodge meetings even by proxies, but it managed to pay its dues with more or less regularity until 1820. In 1822 it was reported in arrears for two years. Long be-

GRAND MASTER R. R. LIVINGSTON.

fore that it began to decline, and in the seven years from 1806 to 1812 partly inclusive it initiated only seven candidates—in 1806, 1807 and 1811 two in each year, in 1810 one, and in 1808, 1809 and 1812 none. From 1812 onward things seemed to improve. In 1813 it had three initiations, in 1816 the number reached seven, and in 1820 the records show five additions. From then the story of the lodge is simply that of slow progress to dissolution. Even in 1816, which looked as if the early success had in a measure returned, of the seven initiates five went no further than the first degree, and in 1820, when there were five initiations, two remained Entered Apprentices to the end of time, so far as Suffolk Lodge was concerned. This, of course, is a bad sign, but the cause for this particular weakness we can not trace. In spite of many discouragements the lodge met regularly and elected officers each year until December 11, 1822, when J. M. Williamson was elected Master. He does not seem to have been installed, and after that date the meetings were held infrequently and irregularly, the last entry in the old minute book bearing the date of September 14, 1825. That may be accepted as the date of dissolution.

The writer of a manuscript history of the old lodge, from which the facts here set forth have been gleaned, comments on the downfall of this lodge in words which are as applicable to the craft at this date as they were when written nearly forty years ago. He wrote: "Two causes may be found for this decline. First, too little care was taken in the examination of the characters of persons proposed for membership. So far as the minutes show there was not always a committee of inquiry appointed, but the candidate was proposed, received and initiated at the same meeting. It was this want of due discrimination in the admission of members which explains a fact that appears on the records, viz., that in 1805 there were more suspensions and more of lodge discipline than through all the existence of the

lodge. The other cause which may account for the decline of the lodge was the neglect of the brethren to pay their dues regularly. It is not certain that they always paid the fees for degrees. At a meeting of the lodge in February, 1800, when it had been organized three years and had about thirty members, a note in the treasurer's accounts states that there was 'Cash on hand, \$64.19; due from members, \$103.75.' Four years afterward the state of the finances was in a still worse condition, the report being \$221.80 due from members and no cash at all in the treasury. It was this un-Masonic conduct in the members not paying dues, and the neglect of the lodge in not using its power of discipline that led to its extinction in the end. A very brief examination into this will teach a lesson which the wise among Masons will be ready to learn."

So far as we can learn the body fulfilled all its duties perfectly with the exception detailed in the above quotation. We have, of course, no idea of how the "work" was rendered, but we may conclude it was at least equal to that of the other Long Island lodges. It observed the two saints' days, sometimes by a dinner, sometimes by a sermon, sometimes by book, and it readily responded to all claims upon its charity. One lamentable feature of the records is the amount of ill feeling that seemed to prevail among the brethren or some of them. As early as 1799 we find a committee at work straightening out a quarrel between two brethren. The committee reported and the report was accepted, but what they did report the minutes do not state. The compiler of the manuscript says: "In 1802 two brethren were called to account by the lodge itself and a committee appointed. This committee duly reported 'that although the said I. B. and S. C. may be considered as respectable members of society, they, as Masons, have acted without the square and compass and ought to be considered as refractory members until something favorable on their side may be produced.' In 1805 the lodge became more severe. Brother

S. S. was called upon to answer the following charges presented against him by a committee appointed for the purpose: 1. Refusing to discharge his dues; 2. non-attendance at lodge meetings; 3. slandering and injustice to his brethren. S. S. pleaded guilty to the first two, but defended himself against the third. The lodge after considering the defense proceeded to ballot for his expulsion and the ballot was unanimous."

Another brother was charged with "defrauding the fatherless and the widow," but the minutes do not show what was done with him. In 1802 the lodge was summoned to examine into a "matter of difference" between two of its Past Masters. It did examine on the promise of both to abide by the decision of the brethren, but the one who was held to be in the wrong refused to accept the conclusion arrived at, and the matter was carried into a law court. Such things do not add to the prosperity of a lodge, and the wonder is that old Suffolk carried the banner of Masonry in Setauket for the number of years it was so privileged.

The present Suffolk Lodge, No. 60, which meets at Port Jefferson, claims to be the successor and heir of the old organization with whose history we have just been dealing. The modern No. 60 is a most prosperous body with over one hundred members, and is proud of the earlier lodge whose name it bears. As the old lodge went out of existence in 1824 and the new one was warranted in 1856, it can hardly be said that the theory of continuity is much in evidence. Thirty-two years is a long time in American Masonic history, and that fact makes us feel that the connection between the old lodge and the new is one of sentiment rather than continuity. But then sentiment is a powerful factor in all that concerns the fraternity.

The year 1797, when Suffolk Lodge was chartered, was a busy one, apparently, among the Freemasons on Long Island. Morton Lodge at Hempstead was then organized and still continues, having celebrated its centennial

with great eclat June 23, 1897, when Grand Master Sutherland and a host of dignitaries took part in the proceedings. It was probably an offshoot from Huntington Lodge, at least the brethren applying for a warrant seemed to be members of that organization. The centennial exercises created quite a degree of interest in local circles, and many stories of the older brethren found their way into print. From these we select two. The first incident is that of two brothers who lived on the north side of the island, perhaps twenty miles from Hempstead. They reached the lodge by what is called the "ride and tie" method. That is, they both started together early in the morning, one riding the single horse on the farm, and the other walking. The rider proceeded to a place agreed upon, where he tied the horse and took up his journey afoot. When the first walker reached the horse he mounted and after passing his walking journey tied the horse again at another place of agreement. So the journey was made to the lodge, and the return on the following morning was a repetition of the scheme.

The second story is told of a man named Platt Stratton, living near what is now College Point. Stratton was a candidate for Masonry and rode into Hempstead on horseback at about noon. Having looked after his horse in the barn, he went to the hotel through the kitchen, which was as fashionable a way as the front door at the time. In the kitchen he found an old colored cook standing over a great fire in the large chimney place, across which was a gridiron of very ample proportions.

"What's the gridiron for, Aunty?" asked Stratton, to which the old cook replied: "I'se don' know, marsa, zackly, 'cept that the Masons meet ter day an' dey genly uses it when dey meets." This was enough for Stratton. He returned to the barn, mounted his horse and rode off. Nothing was ever heard of him again by the lodge, and he doubtless died in the faith that the gridiron was intended for him.

The various committees who arranged for

the celebration of the centennial were as follows, and included the master, Robert A. Davidson, and all the living past masters of the lodge:

Invitations—Wor. Bro. B. Valentine Clowes, Bros. George W. Terry, Carman Lush.

Grand Marshal—R. Wor. Charles L. Phipps. Aids—Lewis H. Clowes, Israel W. Williams, William B. Osterhout, Jotham Post, Henry Floyd Johnson, Royal Harvey.

Railroad and Transportation—R. Wor. Robert A. Davison, Wor. Augustus Denton.

Music—Wor. Bros. Augustus Denton and Oliver E. Stanton.

Press and Printing—Wor. Bros. Oliver E. Stanton, Lot Van de Water, Jr., and B. Valentine Clowes.

Tent and Hall—Bros. Lewis H. Clowes, Eugene V. Willis and John Findlay.

Refreshments—Bros. William M. Akley, Lewis H. Clowes, William McCarthy, Eugene V. Willis, Jotham Post, Foster L. Oakley, Benjamin Griffin, Edward Willis, Morris Sherwood, John Findlay, Richard C. Campbell, Thomas W. Albertson, Walter N. De Nyse, Israel W. Williams, George W. Terry, John Miller, C. Gardner Miller, William B. Osterhout, William S. Hall, Wor. Oliver E. Stanton.

Decorations—Bro. Richard C. Campbell.

Reception—R. Wors. Robert A. Davison and Charles L. Phipps, Wors. Augustus R. Griffin, Benjamin A. Haff, B. Valentine Clowes, John W. De Mott, Joseph E. Firth, Robert Seabury, Augustus Denton, Lott Van de Water, Oliver E. Stanton and John R. Sprague, Bros. George W. Terry, Israel W. Williams, Richard C. Campbell, Thomas W. Albertson, William McCarthy, M. J. Gildersleeve, Lewis H. Clowes, Walter N. De Nyse, C. Gardner Miller, Joseph H. Bogart, M. D.; C. G. J. Finn, M. D.; Charles F. Lewis, Timothy J. Bird, Thomas B. Seaman, Thomas J. Sammond, Charles Davison, Samuel S. Rhame, William H. Patterson, William S. Hall, John

Miller, William P. Miller, Foster L. Oakley, George Emery, Eugene V. Willis, William B. Osterhout.

In 1797, too, the first known Brooklyn lodge of which we have any record—St. Alban's—was constituted. There are vague indications that, apart from the lodge warranted in 1784 and which, as has been pointed out, may or may not have been a Brooklyn body, there was one lodge existing there prior to 1797—*Mechanics*, No. 1. But all we know about that is its name. About St. Alban's Lodge we certainly know little more. It only existed for about two years, and then it was permitted to disappear. At all events, it was mentioned as "lately held" in the petition presented December 4, 1799, to the Grand Lodge by a number of its members and others for a new warrant under the name of Fortitude Lodge. The warrant was at once issued, and bore the signature of Chancellor Livingston.

That lodge is now undoubtedly the oldest in Brooklyn, and it celebrated its centenary in December, 1899, with a banquet and reception which will long be remembered with pleasure by all who were permitted to take part in the proceedings. The first meeting place of the lodge was in the upper room of a tavern near "the Ferry," as Fulton Ferry was then called, and the keeper of the tavern, Martin Boerum, was one of the charter members. Soon after its institution the lodge was called upon to make its first public appearance, when it took part in the local procession on the death of George Washington, and it marched in one of the processions which, in 1824, welcomed Lafayette on his memorable journey through the country which he had helped to mold into a nation. There was always a good deal of patriotic sentiment in Fortitude Lodge when occasion arose, and it was one of the lodges which, in 1814, under the immediate direction of the Grand Lodge, helped to build the fortifications around Brooklyn and so protect it from the British invasion then expected.

Fortitude has had its ups and downs like

all our older lodges, but it managed to pull through, although it was hard pressed in 1832, when an epidemic of cholera made things unpleasant in Brooklyn. The history tells us that "the first record of the conferring of degrees was on January 13, 1806. The fee for each degree was two dollars, but at a meeting of the lodge held January 20, 1806, the fee for each degree was raised to five dollars." The history also tells us that "refreshments appear to have been an important part of the proceedings of the lodge. The amounts of money spent for this purpose ranged all the way from five dollars to sixty dollars per night. Upon the night of November 16, 1812, there is the record in the minutes of a charge of £41 12s 10d, which is something over two hundred dollars. The regular refreshments for meeting nights during the earlier history of the lodge were cheese, crackers and wines."

"Besides this the records show that the expenditures for charity were continuous and liberal. How they managed it all, with their small income, I can not understand, unless it be that the brethren "chipped in" very frequently and that fines were liberally imposed and willingly paid. The great curse of all our early lodges was the drinking habit. When they went to refreshment the brethren went in reality instead of symbolically, as we do at present, and the junior warden's duties as superintendent of the feast meant more than mere words. But the costliness of the custom led to its abolition, although some of the lodges had to adopt heroic measures before the abolition was complete. Had the habit not been stopped we would have had a very different history of Freemasonry in New York than that to which, in the language of the political platform makers, we now 'point with pride.' Our early brethren, both here and in Britain, were jolly fellows and the lodges were often places of pleasant retreat, where the flowing bowl and the merry song made life seem rosier and happier than in the currents of life appeared possible. They performed their Masonic work

with dignity and with care, they were scrupulous, possibly more scrupulous than we are in these days of rush and commercialism, as to who they admitted to their charmed circle, they zealously fulfilled all the Masonic duties they professed, and when they turned from their labors to 'rest and refresh themselves' they did it with a thoroughness and abandon that sometimes stagger us, as we read the story. In many instances the records of the old lodges tell us more of the refreshment episode than of the incidents of the time devoted to work, the old 'monitors' and 'companions' and 'vade-mecums' present us with page after page of the songs and glees and 'catches' they used to sing, and as most of the poetry is miserable doggerel, and refers to drinking, love making and law defiance, we are apt to get rather a poor opinion of the morals and manners of the early brethren unless we probe a little beneath the surface. But give these fathers all the credit to which they are entitled, it is impossible to study the Freemasonry of 1800 and that of 1900 without coming to the conclusion that the craft is one of the most progressive of organizations; that if it holds as steadfastly as possible to the old landmarks, it is earnestly seeking forth after new ones.

"To me, the most interesting part of Masonic study has been, not its rules, not even its ritual, but the character and standing of the men who have been prominent in its ranks. If Masonry has been worth anything, if it has really proved a moral factor, if its philosophy is sound, it can not have failed to impress itself upon the lives and thoughts and aspirations of those who have been prominently identified with it. Fortitude Lodge has had quite a number of brethren on its roll who have won a measure of fame, sometimes local, it is true, but still sufficient to show that they were distinguished above their fellows, and who can say that the teachings and mellowing and broadening influence of the lodge did not aid these men in winning such distinctions and honors as they received? The first master of

C. W. Wright.

Fortitude Lodge, Dr. George A. Clussman, who held the office until the close of 1801, was the most prominent physician of the time in Brooklyn, and although physicians, like actors, are soon forgotten when they cross old Charon's ferry, this man's memory is still held in sweet remembrance in the story of the community in which he lived and labored. Fortitude's first Senior Warden (afterward Master), Daniel Rhoades, was a grocer and a soldier, and in the war of 1812 was a member of the military company locally known as 'the Katy-dids,' which failed to win national renown only because the British forces did not come to this neighborhood during that struggle with the old country. Still though the opportunity did not come, Rhoades and his comrades proved that they were ready to meet it. The more notable of the early officers, however, was the junior warden, Henry Eckford, the greatest shipbuilder of his time. A native of Scotland, but a typical American citizen, he constructed most of the vessels which on the Great Lakes won so much fame in the war of 1812 for the American navy. The once famous battleship *Ohio* and many other noted war vessels were built from his designs, and in fact he was the reconstructor of our navy at the time when America successfully wrested from Great Britain—for a while, at least—the undisputed sovereignty of the seas. He afterward went to Turkey and became chief naval constructor for that country. He died in 1832. All his biographers bear witness to the loyalty and sweetness of his disposition, to his true Christian spirit and to his possession of every true Masonic virtue."

The first chaplain of the United States Navy, the Rev. John Ireland, was also a member of Fortitude Lodge. He was one of the chaplains of the Grand Lodge. Another brother of Fortitude who held this honor was the Rev. Evan M. Johnson, one of the most notable of the long list of clergymen who have made the name of Brooklyn famous as "the City of Churches." He was a zealous worker

in the Master's service, freely gave of his own means to the cause in which he labored, and for years preached without fee or reward, building one or two churches where they were needed—among the poorer classes of the city—among the lapsed masses. He was a man of rare courage, and in the pulpit and out of it never hesitated to proclaim his loyalty to Masonry even in days when persecution was abroad and zealous Masons were content to hide their light under a bushel. It is singular that men like Ireland and Johnson did not hold the appointment of Chaplain in the lodge, but from the list in the volume now published it would seem that such officials were not formally recognized and appointed until 1864.

Masonically, probably the best known name on the long list of members of Fortitude Lodge is that of Nathaniel F. Waring, who was its master in 1834 and again in 1848. For many years he was one of the most active Masons in New York, and came into special prominence in connection with what is known as the Phillips Grand Lodge. He was elected grand master of that body in 1857, and when it was received into the legitimate Masonic fold in 1858 he, according to the agreement, carried with him into "the" Grand Lodge his honors as a past grand master. We can hardly regard him, even when in opposition to the regular Grand Lodge, as being clandestine, for his opposition was based upon honest principle, and he was an honest man, one of those who would rather be right than be president, as the saying goes.

Fortitude Lodge at present is a flourishing body of craftsmen. It has some two hundred members on its roll, and ranks high among the lodges of Brooklyn. It is fully conscious of its position as a representative lodge, is proud of its antiquity, and is a splendid example of that Masonic spirit which with one hand holds steadfastly to the past and with the other reaches out for all that is beautiful and worthy and commendable in the days which are passing over us.

On July 26, 1804, a lodge was constituted

at Sag Harbor, but it passed out of existence in 1818, and appears to have had a struggle for existence until 1818, when it disappeared. An interesting history of this lodge and its successor, the Wamponamon Lodge of the present day, has been written by one of the Past Masters of the latter, Brother Brinley D. Sleight, which we here reproduce:

During the first decade of the present century the Masonic fraternity established its organization in Sag Harbor. The first officers of Hampton Lodge, No. 111, were: Elias Jones, Master; Ithuel Hill, Senior Warden; Joel Fordham, Junior Warden; Moses Clark, Treasurer; Benjamin K. Hobart, Secretary; John Godbee, Senior Deacon; Aaron Clark, Junior Deacon; John Morrison, Tyler.

Five years afterward we find the same officers in the East and West, with Nathaniel Havens, Junior Warden, and Luther Hildreth, Secretary. The list of members comprised about fifty well-known citizens,—names famous in the historic annals of the east end of Long Island, such as Howell, Hildreth, Worth, Crowell, Jennings, Gardiner, Glover, Bishop, Briggs, Baker, Conkling, Hedges, Harris, Toppling, Seabury and others. The communications of the brethren were held in the attic of the house of Moses Clark, on the corner of Division and Union streets. The house is still standing, having been moved further up the street, next south of the residence of Miss Julia King.

Hampton Lodge, No. 111, was at that time the only civic society in Sag Harbor. Neither were there military, firemen's or other organizations. The mystery attached to the name and ceremonies of the order lent an attractive interest to every occasion when the brethren appeared in public, and well-accredited tradition says that the schools were dismissed, and the people turned out en masse "to see the Masons parade."

After a while fraternal activity languished, and eventually in 1819 the lodge surrendered its charter, having for fifteen years been

"steadfastly held in the Port of Sag Harbor." About this time politics infested Masonry. In 1827-30 exciting partisan contests followed, in which anti-Masonic sentiment was a powerful agency.

On the east end of Long Island all Masonic affiliation was abandoned. For thirty-eight years thereafter the Masons had no habitation in Sag Harbor, but in 1857 some brethren from other jurisdictions abiding among us, together with the few remaining members of Hampton Lodge, mindful of the precept, "once a Mason always a Mason," concerted to institute a new lodge. Others desirous of joining the order were initiated, passed, and raised in Peconic Lodge, No. 349, of Greenport, with the understanding that they were to become charter members of the new organization when the requisite number was obtained. The charter members of the new lodge were: Henry S. Roscoe, Eastern Star, No. 227, New York City; Joseph Stanton, Widow's Son Lodge, North Stonington, Connecticut; Charles H. Reeves, Star of the East, New Bedford, Massachusetts; J. W. Nickerson, Lebanon, New York City; Noah Washburne, Jacob Leck, Thaddeus Coles, Nathan T. Fordham, Zebulon Elliott, of defunct Hampton Lodge, No. 111, and James E. Smith, Roswell Warner, Thomas Lister, Nathaniel Dominy, John Stein, John R. Sayre, P. H. Douglas, raised in Peconic Lodge, Greenport. These sixteen men having taken the obligation and agreed to dwell together in unity, established Wamponamon Lodge, No. 437, F. & A. M. The name was settled upon after thoughtful consideration. There were those who desired the old name and number to be retained. "Hampton" had local signification, and the three units were unique and easily fixed in the memory. Besides, they indicated seniority in the list of Masonic lodges. But the newly-initiated brethren wished to imprint their own individuality upon their offspring, and so they literally "left the west and traveled east" in search of a new name. Wamponamon is the Indian

appellation for the easternmost point of the promontory of Montauk, and signifies "to the eastward." It is found in the records of the town of Easthampton, and a correlative term in the Indian deeds. It is quaint, original and not likely to be appropriated by other societies.

The first men made Masons in Sag Harbor under the new order of things were: Joshua B. Nickerson, Abner D. Smith, William White, William L. Parsons, Sylvester F. Brown. They were raised under a dispensation in January, 1858, the charter of the lodge not being issued until the June following. The lodge was dedicated on June 16, A. L. 5858, and on the same occasion the following officers were duly installed: Henry S. Roscoe, W. M.; James E. Smith, S. W.; Roswell Warner, J. W.; Joseph Stanton, Treasurer; Sylvester F. Brown, Secretary; Nathaniel Dominy, Senior Deacon; Pulaski A. Douglas, Junior Deacon; Thomas Lister and William White, Masters of Ceremonies; Noah Washburn, Tyler.

The first meetings were held in the rooms of Suffolk Lodge, I. O. O. F. Afterward the third story of the south side of the present Nassau House building was obtained. It was furnished not without elegance and comfort, in part due to the good taste and generosity of Dr. Frederick Crocker, for many years treasurer of the lodge.

In 1883 it became necessary to look about for a new home. After the consideration of various schemes it was duly determined to purchase the old Presbyterian Church, then owned by the Episcopal society. A contract of sale was signed with the vestry of Christ Church on December 17, 1883. A fund was raised by bonding the property, which, together with the moneys already accumulated, provided for a thorough reconstruction of the building. The present Masonic Hall is the result. The new hall was opened with a festival and promenade concert on July 8th next ensuing. On the evening of November 20th following, the ceremonies of dedicating the new lodge room

were impressively conducted by Right Worshipful Frank R. Lawrence, Deputy Grand Master of Masons, and his associate officers of the Grand Lodge. Public addresses were also given in the large hall, and a collation served in Crowell's Hall. The occasion was a memorable one. Thus, the structure originally erected in 1817 for the worship of God was again consecrated to the Supreme Architect of the Universe and dedicated to the memories of the Holy Saints John.

It may not be inappropriate to refer, in passing, to the early Masters of the lodge, those who have gone before us, who have seen the Great Light, and who are now no more among the living.

Henry S. Roscoe, the first Master, was a swarthy, dark-eyed man, with black hair and flowing beard. He was of dignified demeanor, well up in his work, and a conscientious believer in the tenets of Freemasonry. Restless and nervous, and something of a nomad, he went from this place to East Hampton, and thence to Connecticut, where he died.

The second Worshipful in the East was James E. Smith, an active business man, identified with our early prosperity as a commercial mart. He came here from Connecticut when a young man, and lived here until his death. His final mercantile venture was the building of a vessel at the foot of Main street. It was the last one built in Sag Harbor, and was sent to the Pacific coast, where it still bears on its stern the square and compasses which signalized its bridal with the sea, in the waters of our bay.

Joshua B. Nickerson succeeded Captain Smith. He had been one of the argonauts in the search for gold in California. He returned home, having been more successful than many others. Entering into the business activities of our village, a prosperous career was before him, but the insidious disease, consumption, cut him off in the strength of his manhood.

Following came Captain A. Smith French, a typical whaler, in our characteristic whal-

ing times. More than once had he circumnavigated the globe carrying the emblems of Masonry and Masonic charity to the confines of the earth. He was raised in Hawaiian Lodge, No. 21, Sandwich Islands, but was a native of this county. He sleeps beneath the quiet shades of Oakland cemetery. Next came Abner D. Smith, merchant and citizen of good repute, methodical, correct, attentive, who served the lodge with fidelity and zeal, both as Master and Secretary, for several years. William H. Gleason, a graduate of Yale, wielded the gavel after Smith. A scholar, a politician, a lawyer and a divine, his life work was well done and his career active and honorable.

Of those who have more recently occupied the East, but who have passed beyond the veil, are Benjamin F. Hunting, whose name is especially associated with the purchase and reconstruction of the present hall. He was the chairman of the Building Committee and threw all the enthusiasm of his nature into the work, making it a labor of love, and Thomas F. Bisgood, whom we have so lately borne to the silent tomb, a wise counselor, a steadfast and genial friend. These are "the dead but sceptered sovereigns who rule our spirits from their urns."

The lodge was constituted but three years before the beginning of the war of the Rebellion. Our numbers were few, but Wamponamon supplied its honorable quota to the list of self-sacrificing heroes who voluntarily imperiled their lives in defense of the Union. Dr. L. D. Hall, one of the early initiates, and Drayson Fordred, another, a promising young man, were killed upon the field of battle. Several returned after having won the laurels of honorable conflict.

Among the living members who have achieved Masonic distinction may be mentioned David A. Emory, who has found light in the East, having become a Deputy Grand Master of the Northern District of the Empire of China. He is still a resident of the Flowery Kingdom. The brother of longest official rec-

ord is Right Worshipful Elbridge G. Howard, who, in a period of twenty years, extending from 1869 to 1889, occupied the Master's station twelve times. In 1884 he was made Deputy Grand Master for this district.

There have been memorable occasions in our history which can only be alluded to here, as matters of record. Conspicuous among these are the public installation, given in December, 1884, and previous to this, in the same eventful year, the entertainment of July 8th, and the dedication of the lodge, November 24th. The commemoration of the emancipation from debt of the order in the State was duly observed April 24, 1889, and the celebration of the one thousandth communication of the lodge on May 2, 1895, was a jubilee of fraternal interest transcendent in our annals. In this festivity Peconic Lodge, of Greenport, joined with us in a body. The whole membership of Wamponamon Lodge since the beginning numbers two hundred and ninety-four. There are now living, and in good standing, one hundred and twenty Master Masons, who have traveled the same road and are bound by the same ties of brotherhood.

May the mystic bond never be loosened. Fresh as the green sward upon the promontory whose name it bears, may the memory of our lodge forever be; bright as the beacon light from its headlands, which bids God-speed to the parting traveler; glad as its beckoning rays that cheer the homeward bound, may its future ever shine. Long live Wamponamon! *Esto perpetua!*

In 1808 a lodge was warranted at Newtown, which seems to have flourished about a decade and then passed away. It was one of the lodges which, in the panic of 1814, worked a couple of days on the Brooklyn fortifications, but that is about the only glimpse of it which we get. Then, so far as can be learned, Hohenlinden Lodge, No. 338, organized in 1821, and still extant, and Naval Lodge, No. 391, warranted in 1826, but which almost on receipt of its charter abandoned it, were

the other lodges instituted on Long Island prior to the outbreak of the Morgan controversy, which played such havoc with Freemasonry all over the North American continent, compelled hundreds of lodges and chapters to pass out of existence, raised up a powerful if short-lived, political party, attempted to seat a President in the White House and almost brought about the complete annihilation of the Masonic fraternity.

From that persecution the craft slowly recovered and in time was restored to its old strength. Long Island felt the change, although it was not until about 1852 that the upward movement still going on may be said to have fairly begun. In that year the whole of Long Island was united with Staten Island and several Hudson River counties into the First Masonic District. In 1859 Long Island was divided, Kings county being placed in the Third Masonic District and Suffolk and Queens in the Fourth. In 1868 Kings

county itself was made the Fourth District and in 1873 it was divided. Frequent changes, as a natural result of the wonderful progress made by the fraternity, finally resulted in Long Island being divided into three districts—the first three on the roll of the Grand Lodge—and that arrangement seems destined to endure. According to the latest official returns there are now on Long Island about fourteen thousand members of the fraternity and seventy-six lodges. In addition there are a great many members of the fraternity residing in Kings county and in Queens borough who are members of lodges meeting on Manhattan Island. Taking that into account it is safe to estimate the entire membership of the craft on Long Island at nearly twenty thousand.

The three districts into which Long Island has been divided are made up according to the following official tables:

About the date of this writing there is a movement on foot looking to the erection of a Masonic Hall in Brooklyn. That there is need of such a structure is apparent to every one; and that the brethren in the borough are numerous enough, wealthy enough and influential enough to make such a movement successful if it is proceeded with, there is no doubt. Yet there are so many things to be considered that a natural conservatism is apparent about actually beginning the work. At the same time an option on a site has been secured, quite a large sum has been pledged and an outline architectural scheme has been prepared and so the matter rests, awaiting developments. In the meanwhile, as may be seen from the statistical tables already given, the Brooklyn lodges, as well as the chapters and commanderies, meet in apartments and halls scattered all over the borough. What might be called the headquarters of the fraternity is the structure known as the Aurora Grata Cathedral, the local home of the Scottish Rite bodies, the Mystic Shrine of many lodges and of the Aurora Grata Club, the leading Masonic social organization of the borough. The Aurora Grata Club was organized in 1887, and has some four hundred members, all connected with the Masonic fraternity. The building it occupies was formerly the parsonage of the Bedford Dutch Reformed Church, and is a comfortable, roomy structure, but the good old dominions of that closely Calvinistic body would hold up their hands in pious horror could they see the improvements and changes which the Masonic brethren have introduced. Even what used to be the holy man's study—his sanctum sanctorum—is almost nightly—in season, of course—given over to merry parties; and there are bowling alleys, billiard tables, a reading room and all other accessories of an up-to-date social club. Adjoining the house occupied by the Aurora Grata Club is the cathedral of the same name—the old Reformed Dutch Church—now adapted for Scottish Rite and other Masonic purposes. The Brooklyn Veterans' Association meets in the

basement, and in one corner is their library, a small but wonderfully useful and well selected collection of books. The building itself has seen its best days and the wind on a stormy night seems to have free access to the several apartments. A modern Masonic temple is certainly needed in Brooklyn. The Brooklyn Masonic Veterans' Association is one of the best and grandest developments of the social side of Freemasonry of which we have knowledge. All members must have belonged to the fraternity for at least twenty-five years and all are therefore men who have passed at least into mid-life, but the organization's motto, "The best of life is yet to come," shows how they face the setting sun slowly sinking in the west. The Veterans' annual dinners are possibly the jolliest "functions" of their kind which we know. They combine a splendid bill of fare, splendid singing and some of the best after-dinner oratory heard in Brooklyn. They are generally attended by the most active Masons in Brooklyn, as witness the following partial list of those at the gathering of 1901:

Josephus L. Wood, president of the Brooklyn Masonic Veterans; Henry A. Powell, A. H. Nichols, E. W. Mascord, John W. Richardson, James T. Burdick, John H. Visscher, Richard E. Shaw, C. K. G. Visscher, Sidney L. Rowland, Charles F. Bloom, Claudius F. Beatty, Andrew B. Martin, Joseph H. Cummin, Dr. James T. Terhune, Frederick L. Jenkins, C. W. Hubbell, Rufus L. Scott, John S. Mowry, Edward A. Dubey, R. Van Valkenburgh, Joseph C. Abell, W. T. Ramsbotham, Commodore Edward Hooker, William Van Sise, Charles A. Shaw, J. K. Van Sise, Frank Mapes, J. Carlisle Loudon, John W. Palmer, John T. Palmer, J. Fred Marble, Lee C. Moore, Augustus C. Tate, John W. Mott, L. E. Nicholson, Charles W. Held, George W. Foote, Frank E. Wilson, Dr. J. J. Terhune, W. O. Cloges, Stephen W. T. Tennant, J. Harris Balston, Wilmon Whilldin, Howard W. Ennis, George W. Arnold, Abram H. Dailey, Robert Rogers, James A. Babcock, The-

ophilus Pratt, Herman Canter, Thomas Heil-son, William E. Stein, Lawrence MacNaughton, Charles S. Buell, D. G. Griffiths, Daniel J. Morrison, W. H. Armstrong, Theodore Thielcr, John Cuthbert, W. J. Smith, Charles W. Hayes, W. Westlake, C. O. Cowtan, Joseph W. Ray, David S. Bruen, Obediah Harned, Thomas W. Corrigan, William P. Christmas, William H. Johnson, Gustavus C. Weber, John C. Waldron, James D. Wright, W. A. Mathies, F. Frederick Lenhart, Alfred Sims, W. J. Allen, Augustus W. Boerner, Joseph H. Loomis, W. A. Campbell, Eli R. Denniston; J. W. Smith, A. E. Leach, Louis Nathan, Rudolph R. Bennett, Isaac Hicks, James E. Martin, G. B. Martin, J. R. Bennett, J. M. Kerrigan, L. A. Lewis, J. T. Ross, Harry T. Cook, J. W. Hawkes, W. H. Jarn-ton, John K. Torfts, James Divisch, Charles Christmas, James L. Waldon, J. G. Ramee, Dr. W. T. Millington, E. L. Spike, T. M. Goddard, Charles Goddard, D. M. Meninger, I. Dunn, Colo Venoni, Isaac S. Waters, Edwin Selvage, Judah Moses, James Parsons, James Macbeth, W. H. Steers, S. Wasserman, Samuel Steinbrink, Washington Irving Comes, William M. Clark, G. Turner, J. W. Stopford, H. McKeon, B. A. Levett, H. A. Aechtemacht, Almet R. Latson, H. G. Buswell, A. E. Bieder-man, George W. Wilson, John W. Carme, George W. Brown, James A. Byxbee, William L. Burke, William Burns, Henry Scheele, Herman Pietsch, M. L. Mann, George W. Cook, G. Greve, C. F. Graves, William Chevi-ton, Charles Schabaker, William H. Phillips, George S. Patton, Joseph M. Cord, Robert E. A. L. Estrange, H. T. Giberson, John Fleming Duncan, Walter MacBain, Charles G. Smith, Elmer E. Cain, William Clowninzer, James Sinn, Dr. W. H. Clowninzer, Henry A. Phil-lips, Henry E. Tuthill, Burton M. Balsh and Thomas G. Singleton.

At the dinner of 1893 addresses were de-livered by three prominent citizens of Brook-lyn—William Sherer, chairman of the New York Clearing House; "Deacon" William Richardson and Mr. St. Clair McKelway, of

the Brooklyn Eagle. These addresses are so elevated in tone and so full of interest to the general reader that we are tempted to reprint them here:

Brother William Sherer responded to the toast of the Grand Lodge, saying: "I am here to-night for the purpose of partaking of this banquet and do what I can to extend the brotherly feeling in Brooklyn. It was my as-signment, I believe, to speak for another Grand Body, the 'Grand Chapter.' I loaded myself with sufficient ammunition, I thought, to do execution in that direction; I come here and find that owing to the absence of our Grand Master I am called upon to fill in space to be occupied by either of those gentlemen, so that much abused institution, the Grand Lodge of the State of New York, that has suffered so often at my hands, is again to be a victim to-night. Brethren, you know the story of the Grand Lodge, now one hundred and twelve years old, representing the constitu-encies of seven hundred and fifty lodges formed with us. You know the purpose for which this annual assemblage of Masons is held. You know every lodge in this State, no matter how small or how large, is afforded equal representation in your own Grand Lodge, and you know the voice of the repre-sentative of the most humble New York body receives as much attention as though he came from the most desirable one in the State, and for harmony, dignity and justice of ruling the Grand Lodge of the State of New York sets an example that the several Houses of Congress and State Legislature may well fol-low. And it is this fact that will, in years to come, as it has in years that have passed, be of great importance to the fraternity in this State, and when you come to think that this Grand Body, without danger and without con-fusion, represents a grand feeling of brother-hood extending amongst more than one hun-dred thousand men, then you see the force that there is in that body. Representatives of more than one hundred thousand men are there to legislate, for what? In the interest of

brotherly love and respect for all that is good. No matter what may be a man's political opinion, no matter what may be his religious creed, if he believes in our recognized Supreme Being and in the brotherhood of man, he finds his representative and his place. Socialists, anarchists, reformers and national men have tried for ages to find the panacea for human wounds, but I will tell you that the solution rests alone in this fact and in this condition, when men will treat their brother men as brethren, when they will do to them as they expect to be done by, then we will have no need of reformation in anything. Now, Brethren, we do not pretend, we do not claim, to stand in the place of any man's creed or religion, but we do believe that we have the foundation of all that is good and substantial, the foundation of every creed, and that is love to God and love to all. Our Grand Lodge during its one hundred and twelve years of existence has exalted all that I have just mentioned in these few brief words. That your several Grand Bodies have other uses I will not deny. You can not compel every man to follow in the same rut and in the same line, and if a man finds that his usefulness to his fellow man and his usefulness in Masonic circles is growing by taking an interest in the other lodges, then give him freedom to go there, but never lose sight of this fact, that the Grand Lodge of the State of New York, through whom indirectly the authority came to bring this association to light, is the mother of all that stands for Freemasonry in the grand State of New York.

"It has been my great good fortune to be a member of that body for twenty-four years. I have sat under the gavel of many Grand Masters that have passed away; I have sat under the gavel of so many of them that to-night I can not recall their names, but I have yet to see a man in that position and in the chair who has ever given way to personal spite or personal feelings in carrying out the official position in which his brethren placed him. Now, Brethren, recollect, he who

serves you so serves without the hope of reward. There is no salary attached to the office of Grand Master of the New York Body; nor for many years past has one ever thought that his position was any reason why he should go before his fellow citizens as candidate for any office. We are enabled by our great system of brotherhood to eliminate partisanship and every selfish motive and every other motive which might bring us down from the pinnacle upon which we stand."

Brother William Richardson, responding to the toast of the Brooklyn Masonic Veterans, said: "It is with a feeling of pride that we recognize ourselves this evening to be Masonic Veterans. The City of Brooklyn, by reason of recent events, is well and favorably known amongst all the cities of the world. It has been the fashion amongst a certain class of Brooklyn men, when traveling, to register themselves as from 'New York.' That time has passed by. Hereafter, in registering, no man will be loath to put himself down as from Brooklyn. It was claimed by St. Paul, of old, that he was 'a citizen of no mean city,' and we can certainly claim, in view of recent events, that we are 'citizens of no mean city,' and one which contains very few mean people.

"The motto of our Association is 'The best of life is yet to come,' and that is a worthy motto for those whom we may look upon as being amongst the 'sifted wheat' of the Masonic lodges of this city. After the length of experience which we must attain before being eligible to membership in the Masonic Veterans, we may reasonably—and without too much egotism—look upon ourselves as illustrations of the truth of the doctrine of 'the survival of the fittest.' But while we can more thoroughly and sensibly enjoy the present, one of the most important things for us to feel and enjoy is the hope of the future, that 'the best of life is yet to come,'—not merely during the few more years which we may spend here, but in the life eternal in that great beyond. In this connection you will

pardon me if I recite a few verses written by Thomas Campbell, a Scotch poet, who lived the latter part of the last century and the earlier part of this. For the theology of the poem in a critical sense I will not vouch; for the poetry of it I am willing to be held responsible:

“All worldly shapes shall melt,
The Sun himself must die in gloom,
Before this mortal shall assume
Its immortality.
I saw a vision in my sleep
That gave my spirit strength to sweep
Adown the gulf of Time.
I saw the last of human mould
That shall creation's death behold,
As Adam saw her prime.

“The Sun's eye had a sickly glare,
The Earth with age was wan,
The skeletons of nature were
Around that lonely man.
Some had expired in fight: the brands
Still rusted in their bony hands;
In plague and famine some.
Earth's cities had no sound nor tread,
And ships were drifting with the dead
To shores where all was dumb.

“Yet, prophet-like, that lone one stood,
With dauntless words and high,
That shook the sere leaves from the wood
As if a storm passed by,
Saying, we are twins in death, proud Sun.
Thy face is cold, thy race is run;
'Tis mercy bids thee go;
For thou ten thousand thousand years
Hast seen the tide of human tears,
That shall no longer flow.

“Go, let oblivion's curtain fall
Upon the stage of men,
Nor with thy rising beams recall
Life's tragedy again.
My lips that speak the dirge of death,
Their rounded gasp and gurgling breath

To see thou shalt not boast.
The eclipse of nature spreads my pall,
The majesty of darkness shall
Receive my parting ghost.

“Go, Sun, while mercy holds me up
On nature's awful waste,
To drink this last and bitter cup
Of grief that man shall taste:
Go tell the night that hides thy face,
Thou saw'st the last of Adam's race,
On earth's sepulchral clod,
The darkening universe defy
To quench his immortality
Or shake his trust in God.'

“It was well said by the old patriarch of Uz, Job: 'For I know that my Redeemer liveth; and that He shall stand at the latter day upon the earth; and though after my skin worms destroy this body, yet in my flesh shall I see God, Whom shall I see for myself and mine eyes shall behold, and not another, though my reins be consumed within me.' Again, another patriarch who lived long after him, the Psalmist, King of Israel, cried out in ecstasy: 'As for me, I shall behold Thy face in righteousness, I shall be satisfied when I awake with Thy likeness;' and in this connection I may again quote the lines of a poet:

“There is a land where every pulse is thrilling
With rapture, earth's sojourners may not know;
Where heaven's repose the weary heart is stilling
And peacefully life's time-tossed currents flow.

“Thither our weak and weary steps are tending;
Saviour and Lord! with Thy frail children bide,
Guide us towards home, where, all our wanderings ending,
We shall see Thee and 'shall be satisfied.'”

"But, while we have the duties of life here, we must not be entirely engrossed with the thoughts of the best of life being yet to come, even in the great hereafter."

President Haskell in response to the toast, "The Mason as a citizen," said: "Even those who are skeptical as to the extent to which Masonry controls men's actions, will admit that if tenets of Masonry are made the rules of men's lives there will be better sons, better fathers and better citizens."

St. Clair McElway, responding to the same sentiment, "The Mason as a Citizen," said: "Every American Mason should be a good American citizen. I do not so far lay out the duties of other men as to say that every American citizen should be a Mason, but I do say that if every American citizen were a Mason some questions which are now before the public would be settled at once and forever. There would be no question in such a case about the eternal divorce between Church and State. There would be no question in such a case about an end at once and forever of legislative appropriations to sectarian schools. There would be in citizenship, as there are in Masonry by legitimate evolution, natural and qualified leadership. For a thousand years Masonry has been the epitome of an honest registration and an honest vote. The last twenty years our country has witnessed the deterioration of the legislative arm of government, but in Masonry the legislative arm represented by our Grand Lodge of this and other States, and of other nations, was never stronger, was never purer, never more simple, never more worthily trusted, and never more universally respected than now. In the one hundred and twelve years of its existence it has commanded the approbation of man, the allegiance of the Brethren, and it has deserved, not only the considerate judgment of mankind, but it has received, whether in adversity or prosperity, the gracious favor of Almighty God. Masonry was invisible in the duties of citizenship and ever should be. It was, however, much invisible, not

unfelt, not unfelt in its professional, its fraternal capacity, but strongly felt in the underlying principle of the golden rule and the brotherhood of man and the equal rights of all before the law, which are the foundation stones of this supreme, magnificent order. As Masons we know what our charter is, we know where we got it, we know to whom we owe allegiance and obligations under it, and we know its invaluable advantage to our order. Now let us as Masons believe what we please concerning protection, believe what we please concerning revenue reform or free trade, believe what we please concerning sound money, but let us bear in mind that home affairs are not political affairs, that neighborhood affairs are not State affairs. Under the Declaration of Independence the right of man to liberty is regulated by law. I congratulate you upon your numbers and your enthusiasm, and I thank you for your courteous attention. I regret that I have not been able in previous years to be with you. To-night, I am, if you will allow me to indulge in a personal remark, so fatigued with labor finished, and yet awaiting me, that I hardly hoped to be with you. I have been brought into good company, and this will become a pleasure of memory; associated with other occasions of our brotherhood down at the St. George, where I have met them at the festive board, and is suggestive of a few verses, which I think I can remember, although I would not dare match my poor memory alongside of the magnificent mental faculty of the Deacon, whom I found but did not make, and in labelling him I had only acknowledged the fitness of things.

"There is an isle,

And the name of that isle is the Long Ago;
And we bury our treasures there;

There are brows of beauty and bosoms of
snow,

There are heaps of dust; but we loved
them so;

There are trinkets and tresses of hair.

"There are fragments of songs that nobody sings,

And a part of an infant's prayer,

There's a harp unswept, and a lute without strings,

There are broken vows and pieces of rings,
And the garments she used to wear.

"Oh, remembered for aye be that blessed isle,
All the days of our life till night,

And when the evening comes with its beautiful smile,

And our eyes are closing in slumber awhile,
May that 'Greenwood' of soul be in sight."

"What manner of men may these Freemasons be," is a question that was once asked in London when the fraternity began to attract notice outside of their lodge-rooms, and it is a question that is often asked even yet wherever Freemasons by their numbers stand out in bold relief in any community. So far as Brooklyn is concerned the roll of membership of the various lodges might be said to include the foremost representatives of every walk and condition in life, ministers and mechanics, bankers, lawyers, political war-horses, teachers, merchants and professional men of all sorts. The writer of this has an abiding conviction that the best interests of the Masonic fraternity can always be most readily subserved by naming for public discussion the men who are, or have been, prominent in its ranks, rather than by enlarging upon the moral and other lessons which are inculcated in its lodge. Contrary to the general belief, Freemasonry has no secrets. It has, of course, grips, words and signs peculiar to itself, but these are not what are considered "secrets" in the popular sense. Outside of these all that the fraternity dwells upon is contained in the pages of the Holy Book, which ever lies open on its altars. "Study the Bible," Grand Master Thorne once said in addressing a mixed audience, "and you will be not only in possession of every Masonic secret, but be as good a

Mason as any one in the ranks." Of that there is no doubt. Most men are the result of their associations, and are just what their associations make them, whether these associations be found in the home circle, the political forum, the church parlor or around the Masonic altar. So it is safe to say, when a man becomes prominent in public life or in any walk of life and we find that he is also active in Masonry, has been, in fact, active in Masonry long before he became prominent in other good work, that it is the teachings of the craft which have directed his path and strengthened his effort in all good works. A good Mason must be also a good citizen and exhibit in his walk and conversation all that which makes for peace, order, law, progress and advancement in any community. One or two examples of Masonic biography may enable us to understand this more clearly.

The first we select is that of a man whose memory is yet cherished among the members of the fraternity in Brooklyn and who was, and is, justly regarded as the most typically representative Freemason which Long Island has given to the great brotherhood. This was Joseph D. Evans, who, in 1854, succeeded the famous Chancellor Walworth as Grand Master of the State of New York, and who, while by no means the most brilliant chief executive the Grand Lodge had chosen up to that time, proved by no means the least useful.

The following sketch of the career of this distinguished brother is reprinted from the Standard History of Freemasonry in the State of New York, issued a few years ago by the publishers of the present work:

CAREER OF JOSEPH D. EVANS.

Brother Evans was born in the city of New York in 1807. His parents removed to Richmond, Virginia, and there the future Grand Master received his education and business training. In 1842 he was made a Mason in Marshall Lodge, No. 39, Lynchburg, and afterward affiliated with St. John's Lodge, No.

36, of Richmond, and in 1846 became its Master. Two years later, when he left Richmond to take up his residence in New York the brethren presented him with a Past Master's jewel.

Taking up his abode in Brooklyn, he affiliated with Anglo-Saxon Lodge. His business interests, however, lay in New York, and here it may be said that his commercial career was as brilliant as his Masonic one. As president of the New York Tobacco Board of Trade he exerted himself greatly in the struggle of 1871-3 to retain the bonded warehouse system in New York City, and he was the first presi-

JOSEPH D. EVANS.

dent of the New York Naval Stores and Tobacco Exchange. His business career was marked by industry and probity, his word was as good as a bond, and, while he paid close attention to details, he acted with a breadth of view and a wholesome liberality that showed him to be animated by as much ambition to promote the general good as to conserve his own personal ends. He was a man of humble piety and of deep religious sentiments and his memory is yet held in loving remembrance in the Church of the Messiah, Brooklyn, of which he was vestryman and clerk for many years.

In Anglo-Saxon Lodge Brother Evans became Master in 1850, was elected again in the following year and declined re-election in 1852. In the Grand Lodge he was noted for his loyalty and his conciliatory spirit. When the Phillips division took place in 1849 Anglo-Saxon Lodge went out with the dissidents, but Evans exerted all his influence upon the brethren and submitted a resolution which, on being adopted, brought the Lodge back to its allegiance. As Grand Master he tried hard to restore harmony in the jurisdiction, and, though he did not fully succeed, there is no doubt that his influence hastened the final union of the various bodies among whom union was desired. In fact, it was to his direct initiative that the measures were taken in 1858 which in 1859 finally closed the disunited ranks. He was a strong advocate of the representative system between the different Grand Lodges and wrought hard to make it universal, and to him is due the inauguration of the District Deputy system as we have it to-day—a system that has done much to preserve the unity of the craft and to lessen the labors of the Grand Master and other executive officers of the Grand Lodge.

On retiring from the Grand Master's chair, after being twice elected, Brother Evans stepped down to the ranks again only to resume his active work. In 1859 he dimitted from Anglo-Saxon Lodge, affiliated with Prince of Orange Lodge, No. 16, and became its Master in 1860. In 1864 he aided in the organization of Hillgrove Lodge, No. 540, and later, in 1867, when Hillgrove had become prosperous, he helped to organize Misticoe Lodge, No. 647, Brooklyn, and served as its Master until 1870. All this time he was more or less active in all the Masonic branches. Chapter and Crypt had no mysteries for him and chivalric Masonry claimed him as a faithful knight. In the Ancient and Accepted Scottish Rite he received the highest degree, Sovereign Grand Inspector General, and for two years presided over the Grand Consistory, Northern Jurisdiction,

while as Grand Minister of State he accomplished much good work.

As a Mason he was a staunch advocate of maintaining the simplicity and purity of the order; and in showing the brethren that the ritual, while beautiful, was simply an introduction to a wonderful system of philosophy, religious and moral, he never tired. The landmarks of Masonry formed a theme which engaged his attention for many years and his concise arrangement of these much disputed essentials found great favor in New York. This arrangement is to be found printed in the current edition of the constitution, a position of honor which it should always occupy. There never lived a more devoted Mason or one who interwove Masonry more completely into his daily life. All of his sons in this respect emulated his example. The entire family of Brother Evans was noted for its interest in Masonry, and his eldest brother, James, was at one time Grand Master of Virginia. Joseph D. Evans died at Brooklyn September 11, 1888, when in the eighty-second year of his age.

As an evidence of how thoroughly he himself could apply the teachings, the philosophy of Masonry, we quote the following from his address in 1855, when referring to the death in that year of John Van Buren, who was an enthusiastic Mason and had been Junior Grand Warden and Senior Grand Warden during four years under the Grand Mastership of Morgan Lewis:

"The soul of our beloved brother, John Van Buren, has taken its everlasting flight; his well known seat is vacant; it was, as you well recollect, always near the East. His manly form, benignant demeanor and unobtrusive deportment are vividly impressed upon our memory. He was ever watchful of the true interests of the institution, a friend to the needy and oppressed, and a firm and unflinching adherent to our ancient laws and regulations; in his death we have sustained a great loss, but we have the consolations afforded by the happy reflections that he has gone to meet

a rich reward, and that his memory will ever flourish as the green bay tree. Brother Van Buren died in January last; at his request his remains were consigned to the tomb by his brethren, who assembled in large numbers to unite in the sorrows of the family and participate in our last solemn rites, and as the sympathetic tear which silently expressed their grief at their unexpected loss fell upon his grave, the evergreen deposited by hundreds of kindred hearts within the tomb proclaimed with trumpet power the everlasting truth that his body will rise and become as incorruptible as his soul."

As might be supposed, the ritual came in for a large share of his official attention while Brother Evans exerted a direct influence on the craft as Deputy Grand Master or as Grand Master. In 1852, at his suggestion, one important piece of uniformity was attained when the Grand Secretary was instructed to notify all Lodges that it was a violation of the constitution to transact any business other than conferring degrees, except when in a Lodge of Master Masons; another regulation that did good service in keeping the craft free of undesirable material, or assisted to that end, was that passed the same year requiring a candidate to be an actual resident in the vicinity of a Lodge before being in a position to apply for membership. A Masonic funeral service drawn up by H. G. Beardsley, of Hamilton, New York, was also adopted by the Grand Lodge and recommended to the fraternity of the State. Such a compilation was much needed and it served a useful purpose at the time, although it has since been superseded. It would have been thought that Freemasons would have respected the Sabbath, but unfortunately in the multiplicity of interests which then prevailed some organizations, both "cheap and nasty," found it profitable to work the degrees on the Lord's day, even without the justification that they were Hebrews and held sacred the seventh day of the week; so it is gratifying to find the Grand Lodge putting squarely on record for the second time a

declaration that Masonic meetings on Sunday, except for burial purposes, are improper and prohibited, and also that the use of profane language should render a brother liable to discipline. Being himself a man of strong religious sentiments, there is no doubt that Brother Evans' influence was at work in bringing about such legislation. Doubtless all such matters were thoroughly understood by the brethren long before his time, but they were not given legislative force until he took the initiative.

The necessity of having the esoteric work uniform throughout all the Lodges of the State had been a theme of anxious interest throughout the jurisdiction since the days of Livingston, but, although many means had been tried, Grand Visitors and District Visitors appointed, the desired uniformity could not be brought about, and now that Lodges were springing up in all directions it was seen that something had to be done or the wildest confusion would ensue. To overcome this, if possible, Oscar Coles, in 1852, introduced a motion, which was adopted, that the Grand officers should constitute a Lodge of Instruction, to meet once a week, and appoint a sufficient number of Grand Lecturers so that each Lodge could be visited at least once a year and exemplify the standard work. The Grand Lecturer was to receive compensation from the Lodge so visited. This was virtually the beginning of the present Committee on Exemplification of the Work, and under it the lectures were thoroughly revised and submitted to the craft. The system thus compiled was favorably received, but in 1855 the experience of the committee led to the permanent employment of a Grand Lecturer. This subject is thus summarized by the late C. T. McClenachan, who as a ritualist had in his time no superior in the jurisdiction: "The revised work of the craft," he wrote, "was pronounced by the Grand Master, Joseph D. Evans, as very gratifying, meeting with general approbation; that it was 'the same taught by Preston, Webb, Cushman, Cross and men of their

day, and was in general practice throughout the United States; that Past Grand Master Walworth, our Grand Chaplain, the Rev. Brother Town, together with four other old Masons, recognized and stamped it the same, substantially, as that taught to them forty to fifty years ago.' As to the above-named ritualists, Preston and others, there seems ample room for surprise, for the above and similar remarks occur in the Grand Master's address of June 5, 1855. The inconveniences in the Revision are thus set forth: 'It is now three years since the Grand Lodge commenced a revision of the work. * * * The chaotic rubbish had to be removed, predilections and prejudices overcome, before truth could rear her towering arch, self-supporting and self-capped, to the admiring gaze of the devotees of Masonry's ancient landmarks, but, thanks to patience and perseverance, success equal to all expectation has crowned the effort. Its merits have borne it on approving wings to distant quarters of the State, and it is now practiced and adhered to in the main by scores of our Lodges.' The subject of the new revision went to a committee, who reported on the following day, recommending the election of a Grand Lecturer, under the constitution, at a salary of one thousand dollars, who shall reside in the city of New York, and other Lecturers, who shall receive for their services their actual expenses and two dollars per day during the time they are attending a call. * * * On June 8 Brother A. Colo Veloni was declared elected Grand Lecturer and on the succeeding day the Grand Lodge resolved 'that the work of the Grand Lecturer be submitted to the Grand officers, with power to receive or reject his standard, as they may see fit.' Accordingly, at the close of the session * * * the Grand Lecturer exhibited his version of the ritual to the Grand Master and the Grand Secretary and it was rejected." The reasons for this very drastic conclusion were many, but the main one was the brother's imperfect pronunciation of the English language and a certain amount of extraneous matter, which

was not suited to the taste of American Masons. Further on, McClenachan says:

"On June 7, 1856, the Grand Lodge abolished the Lodge of Instruction; voted Brother A. Colo Veloni, for his services as Grand Lecturer, five hundred dollars; elected Brother William H. Drew the Grand Lecturer without a fixed compensation. * * *. An appropriation of five hundred dollars to Brother Drew was made on the following June, and the sum of two hundred and fifty dollars to Brother Veloni as his assistant. The services of the Grand Lecturer were then settled at three dollars per day and necessary expenses, to be paid by the lodges employing him. The lengthy reports presented by the Grand Lecturer, William H. Drew, to the Grand Lodge and printed in full in the proceedings of 1857 and 1858 are remarkable documents and worthy of frequent reference. It was in this latter year the compensation to the Lecturer was made one thousand dollars. It was ordered that the State be divided into Grand Lecture Districts, designated by Senatorial districts, and that conventions be held in each."

It was this legislation that placed the "standard work" right before every Lodge in the State and gave the New York brethren a reputation as ritualists which has never been surpassed by those of other jurisdictions.

It was under Grand Master Evans, too, that the present Grand Lodge library really had its beginning, although for such purpose donations of books had already been received on various occasions. He brought the need of such an annex so clearly before the brethren in his address in 1855 that the first five officers were appointed a Library Committee, with power to commence the formation of a library and to draw on the Grand Treasurer for five hundred dollars during the year to purchase books. Subordinate Lodges were asked to aid in the work, and a really good beginning was made, although the work afterward, for various reasons, was permitted to languish. It was Evans' idea that the Grand Lodge library

should be a sort of central lending organization, giving the brethren all over the country the advantages of studying whatever treasures it possessed, but this was soon afterward abandoned as unfeasible. It was not, in fact, until the Grand Lodge got settled in its own home that much practical headway was made in the collection of a library worthy of the institution.

Grand Master Evans governed the craft wisely and well, and, while discussion prevailed in the craft, the Grand Lodge steadily advanced in popularity and power. When he retired at the close of his second term there were three hundred and nineteen lodges under its jurisdiction and, besides, thirty-two lodges were working under dispensations, while the New York fraternity was recognized all over the world for its power and well directed energies.

A more modern Mason, yet one who in his earlier days was often associated with Evans and who died in November, 1901, was John G. Barker, Masonic bookseller, who was probably known, by name at least, to every reading member of the fraternity in the United States and Canada. His home was for years in Brooklyn and some of the Masonic organizations of which he was a member had their headquarters there, but his place of business was in New York City. For some thirty years he published Masonic books, but the great feature of his business was its half-yearly auction sales of Masonic books, gatherings from all sorts of places of volumes of interest to members of the order and to no one else. Sometimes not over half a dozen buyers would attend these sales, but as a rule nothing was exactly sacrificed—Barker attended to that. He was very proud of these auction sales and claimed, with justice, that they were not only helpful to the members of the craft, but that he was of real benefit to the widow or heirs of a book-loving Mason by securing for his literary treasures better prices than could be obtained were they sold in open market. But, as he sadly used to admit with a grim smile,

"book-buying brethren" seemed to get smaller in number year after year; as to the brethren in New York and Brooklyn who read books—Masonic books—he was wont to aver that they "might be counted on the fingers of both hands and still leave us two or three fingers for additions." For the "bright Masons" of the present day he had nothing but the most contemptuous words and was ready on all occasions to demonstrate that such burning and shining lights are not Masons at all.

But still, it must be admitted that Barker himself was behind the age. His place of business was in a street that was once a Masonic center, but had long ago lost its pre-eminence in that and in every other respect, except for manufacturing industries. He had a large stock, but it was never displayed properly. When you wanted anything you had to ask for it, and Barker generally had it, no matter how rare a bibliographical treasure it might be. Yet it may be questioned if even he had a complete knowledge of all that his stock contained, for human memory has its limitations.

The establishment in Bleecker street, New York, was not an inviting one. It was not at all tidy; the furnishings were "the remains of former grandeur," and the presence of half a dozen cats did not add to the neatness of things. Three or four chairs were disposed around an old stove, chairs so well seasoned that they could not be destroyed by rough usage, and therein lay their supreme comfort, for you could sit in them as you liked, elevate them to your notion of the fitness of things, and if you so desired tilt your feet on the stove at any angle. It was not a handsome spot, the surroundings were venerable and decrepid, yet around that stove more Masonry has been talked and discussed during the past quarter of a century than probably in any other spot in the State of New York. Mr. Barker himself was a living encyclopedia of local Masonic history, and if his educational training had only been commensurate with the opportunities that came to him and with the facil-

ities his business opened up, he would have been a power in the fraternity. But his early education appears to have been limited. For several years he edited and published a Masonic magazine, which had more errors on the page—errors in grammar and in spelling, involved and dense sentences, misquotations and the like, than any publication the writer of this ever knew, yet he was never aware of them. His sale catalogues were useless for bibliographical purposes because of their mistakes in names and dates, yet such errors he never seemed to think amounted to much. But if some one had pointed out to him a misspelled name in one of Albert Pike's publications he would have gloated over it for a month and denounced the ignorance of Pike in the bitterest terms to all and sundry.

In fact, denunciation was his great forte. At times he was wont to denounce everything. The name of Albert Pike used to arouse his ire much as a red flag is said to arouse the dander of a bull, and the name of the late Enoch Terry Carson uncorked all the vials of his wrath. Even some of the Grand Masters of his own jurisdiction did not escape his ire and of some of them the language he used was such as if here repeated might lay the publisher open to legal proceedings. Of the Grand Masters of recent years he knew nothing, except John Stewart and Wright D. Pownall, for both of whom he entertained the highest regard, but all the others since the days of Frank R. Lawrence were to him little more than names. He admired Grand Master Lawrence's work, or rather the magnificent outcome of it, although he did not admire Lawrence's methods; but then Barker was one of those whom Lawrence himself used to denounce as the Past Masters who led the New York fraternity into the mire of debt from which only heroic measures and masterly leadership enabled them to get out of.

But in spite of his gift of denunciation, which, as usual, grew more virulent as years crept on, John G. Barker had a kind heart. Many a time have we seen a beggar enter his

store, and experience a share of his wrath, winding up with the stern admonition that "this is a place of business and not a bureau of charity;" and we always noticed that when the speech was near the close his hand was in his pocket and the suppliant went away satisfied. Once a fellow walked in and solicited a dime, saying he was a brother of a lodge in Boston and had tramped the streets in search of work until he was played out. Barker, after the customary discourse, gave him the ten cents. "That fellow wants a drink," the writer said after the scene was over. "Well," said Barker, "what if he does? He asked me for a dime for food and I had the dime to spare. If he has lied about it, I have at least done my part." But his kindliness of heart showed itself in many other ways. No young brother ever applied to him for a bit of information as to work, or law, or procedure, or history without having the point at issue fully explained, no matter how much of his time it took up, and he would not only give his own views but would back them up with authorities, ransacking his whole store, searching in safes, desks, pigeon-holes and all sorts of corners for the necessary books or data. "Proceedings" of Grand Lodges were his favorite study, and probably he knew as much of the contents of these as any man living. Now and again he used to talk of editing a volume or two of selections from the valuable contributions to Masonic history which lie buried in these "books which are not books," but he seemed unwilling to undertake the task owing to his advanced years.

Barker was a genuine example of the old school of Masons, of the type that prevailed in New York forty years ago. At that time Simons, Holmes, Phillips, Macoy, Sickels, Henry C. Banks, Somers, and Evans were in the height of their usefulness. Grand men, they were, all of them. Although one or two gave way to the cup which inebriates, they were not drunkards; they were "convivialists," as they used to call themselves, but there is no doubt that their fondness for looking on

"the wine when it is red" lowered their standing in the social scale and more or less wrecked their lives. But whether *bon vivants* like Holmes, or prim, devout, hard-working merchants like Evans, they were all men of brains. When Barker was raised in Silentia Lodge in November, 1862, he had known Simons, Holmes, Sickels and most of the rest of these leaders for some years, and he had quite an intimate acquaintance with that apostle of unrest—that most wonderful of ritualists—Henry C. Atwood, who passed away from the storms and distresses and conflicts of this life to, let us hope, a haven of rest above, two months before Barker signed the by-laws and was acknowledged a Master Mason. Still, although he thus dated legitimately in a Masonic sense from 1862, it is difficult to tell when Barker's acquaintance with the craft began. They were not so particular then as now about many matters and Barker laughingly once told a group of listeners that his initiating, passing and raising showed him nothing new as he had "many times seen the whole business before." In fact he had often tyled a lodge when he was in that state of darkness which the elder brethren stigmatized so eloquently as being that of a "cowan," although not one of them could tell the exact meaning of the word. Neither can any of the brethren of the present twentieth century, for that matter. Of course it was wrong to let a boy act as tyler, but if the fact of a non-Mason being tyler had been called in question Simons would have found ample precedent for it in the Scotch system which did not demand in those days—and possibly does not make it obligatory even yet—that the tyler of a lodge must be a member of the fraternity.

For many years Barker was a prominent figure in Grand Lodge circles although the only official appointment he ever held was that of grand librarian for some four years. But the library was a small affair in his day, containing little beyond loose numbers of proceedings, and during his tenure of the office he attempted little beyond arranging and completing these.

The fact is that he became active in Grand Lodge circles at a time when a library was hardly likely to be a theme of immediate interest. The first year he attended the Grand Lodge as a representative the purchase of the present site of Masonic Hall was announced and then followed the excitement of corner-stone laying, of seeing the building in process of erection, of its dedication, and the long years of doubt, money-raising, and even despondency, until Lawrence lifted the load. It was in these years of financial darkness that Barker was prominent. For the past decade he seemed to take more of a direct interest in Scottish Rite matters than in anything else. He was the secretary and real leader of what the brethren in Brooklyn and New York generally speak of as the Gorman Cerneau council, and he supported its claims to being the genuine article with all the force and vehemence of the old controversial school in which Hyneman and Folger almost to our day carried on the argumentative methods of Lawrence Dermott himself. Into this feature of his career, however, this is not the place or time to enter.

Since the days of the leadership of Joseph D. Evans, Brooklyn has given two Grand Masters to the craft in New York, Joseph J. Couch and William Sherer, and in all probability will in 1902 furnish yet another in the advancement to the highest honor in the gift of the fraternity of Elbert Crandall, now Deputy Grand Master. A lawyer engaged in active practice on Manhattan Island, Mr. Crandall's home was long in Brooklyn and his entire Masonic affiliations are centered here. He is a member of Ridgewood Lodge, No. 710; of Ridgewood Chapter, No. 263; of De Witt Clinton Commandery, No. 27; Aurora Grata Consistory, Scottish Rite, and of Kismet Tem-

ple, Mystic Shrine. In the Grand Lodge, before being elected to his present office, he was chief commissioner of appeals, and his eloquent voice has often been heard in that capacity as well as in urging measures and matters of importance to the general welfare of the fraternity. He has proven a wise and conservative counselor, has rendered loyal service to a succession of Grand Masters, and is thoroughly equipped by long years of practical training and by the dictates of his own heart to assume the leadership of the big army of New York Masons—an army now numbering over one hundred thousand.

Possibly the course of time will place yet another Long Island Mason in the highest office. At present Townsend Scudder is chief commissioner of appeals in Grand Lodge, and somehow that office has come to be regarded as a stepping-stone to greater honors. Townsend Scudder was born at Northport July 26, 1865, and has represented Suffolk county in Congress. As a lawyer he ranks high, having been counsel for Queens county at the time when its affairs were being adjusted prior to annexation. In Masonic circles he is popular everywhere, and the same high regard follows him into every walk in life, for there is no doubt that but for his own determination to quit active political life he would have been returned to Congress from his district as often as he cared. He proved a most useful and reliable representative of his constituents, and while he was in Congress he never permitted his associates to forget that there was a place called Long Island, a place that had many and just claims upon their consideration, and he managed somehow to get quite a large proportion of these claims satisfactorily and liberally adjudicated.

CHAPTER LV.

THE SOCIAL WORLD OF LONG ISLAND.

A GRAND ARRAY OF ASSOCIATIONS OF ALL SORTS—ASSESSMENT INSURANCE—FASHIONABLE CLUBS—SPORTING AND HUNTING ORGANIZATIONS.

BESIDES the Masonic body, Brooklyn has quite a variety of secret organizations; but with few exceptions these are all of what may be called the beneficial order of associations; that is, their main purpose is to help, aid and assist their members in time of sickness and trouble, to provide a burial payment, and in some cases to pay over to the heirs of a deceased member a sum of money generally regulated by the assessment plan, that is to say, according to the result of a fixed amount collected from each surviving member and paid over to the family or estate of a member "who has passed from the cares and troubles of this transitory scene," as the ritual of one of these associations graphically expresses it. In other words, many of these organizations, in spite of their claims to secrecy and their choice collection of grips and passwords and more or less elaborate rituals, are simply insurance organizations, with friendship as their basis instead of business. Their system is based on fellowship, while that of a regular insurance company is founded on experience, statistics and the computations of their actuaries. There is no doubt that the assessment plan of life insurance is wrong—wrong in theory and indifferent in practice—that the prosperous careers of societies founded on such a basis is short, generally a couple of decades, and that even with the best and most careful manage-

ment those who are so insured for any length of time generally find their assessments increase until, in the end, they become as costly as the most costly of the regularly established insurance companies, the old-line companies, as the assessment plan managers used contemptuously to call them when the assessment plan was in the first flush of success—and that was shortly after it entered upon its career as a popular fad. To win in an assessment society one had to die when it was in the first flush of success. Its principle was so simple that on the surface it appeared feasible and plausible. Get together a thousand men between the ages of twenty-one and fifty, men who seemed strong and healthy, and, in some cases, men able to pass a quite superficial medical examination. Let each pay in one dollar and thus raise a fund of one thousand dollars. When one died the fund thus created was to be handed over to his heirs and a fresh assessment levied, the vacancies caused by death to be filled up by new members. Nothing could be more simple, and yet in practice it proved most defective, and there are thousands of the policies of such organizations kept as sad mementoes in homes all over the continent—mementoes that are not worth the cost of the paper on which they are printed.

And still this form of insurance has not been without its good qualities. It has been the means of paying over to thousands of

widows many millions of dollars which otherwise they would never have received, and as these women were generally widows of mechanics and laboring men, men working for a daily wage, the result of the assessment call was generally all that stood between them and actual want when the days of trouble and desolation came upon them. The working classes were not given much to the provident and thoughtful scheme of saving involved in life insurance schemes until this system directed their attention practically to it, and one benefit which these assessment associations was, in the long run, to add to the old and established companies a class of moderate "risks" which had hitherto been overlooked by them even in their keen and incessant hunt for business.

According to one eminent authority, Mayor Merrill, of Massachusetts, long at the head of the department of insurance in the old Bay State, the assessment system of life insurance can only be run successfully when it has other features to recommend it other than those which might be described as purely business, when it brings to the front the social qualities and aspirations of its members, when it is supplemented by a scheme of sick or out-of-work benefits, when it is confined to a trade or brings together people of one nationality, and so keeps alive by its reunions the memories and the story and the customs of the old home across the sea.

Among these a prime place must be given to the Royal Arcanum, even although that strong national organization has had to revise and adjust and increase its scale of assessments since it was first organized, in 1877. It has its regular lodges and social gatherings, and while the national organization takes direct cognizance of no part of the work excepting that of administering what is called the mortuary fund, the local lodges do all that can be conceived in the way of catering to the cultivation of the social aspirations of the members and rendering them fraternal aid. The strength of the whole system lies in the work of the local lodges, and they in turn rely on the solidity of

the general organization to meet all claims which become due on the death of one of their members, claims which vary according to a stipulated scheme from one thousand to five thousand dollars. On Long Island it has a membership of over twenty thousand, distributed in ninety-three lodges, as follows:

BROOKLYN.—Acme, No. 594, 7th avenue and 9th street; Adirondack, No. 1742, 54th street and 3d avenue; Alert, No. 1567, Brooklyn avenue and Fulton street; Algonquin, No. 1610, Johnston Building; Amaranth, No. 461, 153 Pierrepont street; Atlantic, No. 1417, Jamaica and Bushwick avenues; Bay Ridge, No. 1383, 13th avenue and 67th street; Bedford, No. 655, Nostrand and Gates avenues; Blythebourne, No. 1324, New Utrecht avenue and 56th street; Bravura, No. 1285, Summer avenue and Fulton street; Brevoort, No. 1350, Johnston Building; Brooklyn, No. 72, Johnston Building; Burnside, No. 625, Brooklyn avenue and Fulton street; Bushwick, No. 1327, 1556 Broadway; Canarsie, No. 1678, avenue G and 9th street; Carroll Park, No. 630, Livingston and Smith streets; Champion, No. 1618, 153 Pierrepont street; Commonwealth, No. 542, 153 Pierrepont street; Dauntless, No. 1757, 897 Gates avenue; De Forest, No. 1527, Fulton street and Bedford avenue; De Long, No. 725, 16 Graham avenue; DeWitt Clinton, No. 419, Bedford avenue and Madison street; East New York, No. 953, Bushwick and Jamaica avenues; Fern, No. 774, Johnston Building; Fort Greene, No. 1048, Johnston Building; Franklin, No. 253, 970 Fulton street; Fraternity, No. 504, 16 Graham avenue; Fulton, No. 299, Johnston Building; General Putnam, No. 1446, 897 Gates avenue; General Slocum, No. 1701, Gates avenue and Broadway; Gilbert, No. 1343, Johnston Building; Gramercy, No. 1510, 1028 Gates avenue; Iolanthe, No. 318, Argyle Building; J. F. Price, No. 1769, 1028 Gates avenue; Kings County, No. 459, Nostrand and DeKalb avenues; Lefferts, No. 1452, 6 Brooklyn avenue; Liberty Bell, No. 1589, 1584 Fulton street; Long Island, No. 173, 153 Pierrepont street; Manhasset, No. 1518, 217 Court street; Midwood, No. 1615, 822 Flatbush avenue; Montauk, No. 651, 153 Pierrepont street; Morning Star, No. 680, Johnston Building; Nassau, No. 822, Johnston Building; Ocean Hill, No. 1134, Gates avenue and Broadway; Old Glory, No. 1712, Myrtle and Waverly avenues; Osceola, No.

759, Manhattan and Meserole avenues; Oxford, No. 650, Johnston Building; Palm, No. 1626, 1360 Broadway; Peconic, No. 631, Johnston Building; Philadelphos, No. 562, Nostrand and Gates avenues; Pro Patria, No. 1312, 869 Bedford avenue; Prospect Heights, No. 1521, 265 Prospect avenue; Ridgewood, No. 678, 897 Gates avenue; Stuyvesant, No. 690, Howard avenue and Madison street; Suydam, No. 1746, Broadway and Halsey street; Templar, No. 1376, Johnston Building; Undine, No. 1547, Gates and Nostrand avenues; Utrecht, No. 1332, Bath avenue and Bay 22d street; Valiant, No. 1559, 1089 Broadway; Vigilantia, No. 1065, Johnston Building; Vigilant, No. 1536, 54th street and 3d avenue; Washington Irving, No. 821, 897 Gates avenue; Welcome, No. 703, Howard avenue and Madison street; Williamsburgh, No. 441, Bedford avenue, near South 9th street.

QUEENS.—Defender, No. 1502, Arcanum Hall, Cedarhurst; Far Rockaway, No. 1693, Far Rockaway; Floral Park, No. 706, Arcanum Hall; Flushing, No. 997, Masonic Hall, Flushing; Jamaica, No. 433, Town Hall, Jamaica; Newtown, No. 717, Jeben's Building, Corona; Olive Branch, No. 1729, Turn Hall, College Point; Ozone, No. 1465, Odd Fellows' Hall, Ozone Park; Queens, No. 1669, Arcanum Hall, Corona; Richmond Hill, No. 1625, Arcanum Hall; Sunswick, No. 1374, 756 Boulevard Astoria.

NASSAU COUNTY.—Arbutus, No. 1362, Fleet's Hall, Oyster Bay; Charter Oak, No. 1415, Odd Fellows' Hall, Rockville Centre; Farmingdale, No. 1052, Arcanum Hall, Farmingdale; Hempstead, No. 842, Masonic Hall; Hicksville, No. 1159, Hicksville; Seawanhaka, No. 362, Glen Cove, Arcanum Hall.

SUFFOLK COUNTY.—Amityville, No. 1644, Amityville; Babylon, No. 881, Babylon; Great South Bay, No. 1635, Sayville; Greenport, No. 1256, Greenport; Nathan Hale, No. 1121, Huntington; Neptune, No. 1282, Southampton; Northport, No. 1450, Northport; Pausanake, No. 778, Patchogue; Port Jefferson, No. 1279, Port Jefferson; Riverhead, No. 1260, Riverhead; Smithtown, No. 1511, Smithtown; Stony Brook, No. 1333, Stony Brook; Suffolk County, No. 571, Bay Shore.

The Independent Order of Odd Fellows is a much more ancient organization than the

Royal Arcanum, and its objects are on the whole pretty much the same, although its lodge affiliation seems closer—somewhat akin, in fact, to the Masonic body, while its ritual is said by those who have had practical experience to be much more elaborate than that of any other purely beneficial organization. In fact, many are of the opinion that the order was really organized to furnish just those practical benefits which the Masonic body does not supply, and to cater mainly to the working classes, to whom Masonry at the time Odd Fellowship was instituted was practically a closed order. The candidate for Masonic affiliation is taught to expect no temporal benefits from his connection with it, while the candidate for initiation into the circles of Odd Fellowship is assured that if admitted he will benefit both himself and others. The Rebekah lodge gives women a chance to benefit by and work for the order, and those who belong to such lodges have a much more recognized standing in its circles than have the ladies belonging to the Eastern Star in the oldest of all the existing secret societies.

Odd Fellowship received its start in Brooklyn from the action of certain brethren of the order, resident in the city, but holding membership in New York City lodges. Several meetings and consultations were held in the year 1839, at the house of Brother James W. White, and finally application was made to the Grand Lodge for a charter. This application, signed by Brothers George P. Bancroft, Garret B. Black, Lemuel B. Hawxhurst, John Van Pelt, William G. Hynard, James W. White, John Higbie, Abram Campbell, Charles and John Pelletreau, was favorably received by the Grand Lodge, and a charter granted, to be known as Brooklyn Lodge, No. 26, I. O. O. F., which was fully organized November 12, 1839, in Hall's Building, corner of Fulton and Orange streets, by John A. Kennedy, at that time Grand Master of the order in the States, assisted by the officers of the Grand Lodge. The officers then chosen and installed were:

L. B. Hawxhurst, N. G.; James W. White, V. G.; William G. Hynard, Secretary; John W. Van Pelt, Treasurer. At the next meeting, November 19th, Messrs. John C. Roach, Thaddeus Davids, Richard Hallam, Henry Rohring, Jarvis Rogers, Thomas H. Redding, George Bloomfield, William M. Johnson, John Povie, David M. Smith, Henry S. Smith, Peter L. Taylor and Philip Adams were initiated members. By 1847 the membership numbered five hundred, and Nassau, 39; Principle, 48; Atlantic, 50; Ivanhoe, 127; and Magnolia, 166, had been colonized from it. From its organization in 1839 to January, 1844, this lodge enrolled 1,070 members. This lodge at an early day purchased ten lots in Greenwood cemetery in which to furnish a place of decent sepulture for its members, and for strange Odd Fellows dying here, away from home and friends.

The membership of the Independent Order of Odd Fellows on Long Island is about thirteen thousand, distributed in the following lodges:

BROOKLYN.—Brooklyn, No. 26, Nevins and Fulton streets; Principle, No. 48, 725 Union street; Atlantic, No. 50, 177 Montague street; Montauk, No. 114, 49 Court street; Ivanhoe, No. 127, 177 Montague street; Franklin Degree, No. 13, 49 Court street; Magnolia, No. 166, 177 Montague street; Myrtle, No. 323, 49 Court street; Union, No. 169, 49 Court street; Crusaders, No. 61, Broadway and Dodworth street; Mount Ararat, No. 144, Manhattan and Meserole avenues; Olive Leaf, No. 233, Manhattan and Meserole avenues; James L. Ridgely, No. 287, Broadway and Boerum street; Lyceum, No. 333, 14 Graham avenue; Progressive, No. 339, Broadway and Boerum street; Norman A. Manning, No. 415, Grand street and Graham avenue; Ridgewood, No. 534, 654 Hart street; Mystic Links, No. 711, Cooper street and Bushwick avenue; Nathan Hale, No. 804, 14 Howard avenue; Artistic, No. 101, 972 Fulton street; Bunker Hill, No. 136, Bushwick and Jamaica avenues; Ceres, No. 225, 1630 Fulton street; Prospect, No. 290, 14-16 Graham avenue; Purity, No. 337, 854 Gates avenue; Fort Greene, No. 354, Broadway and Willoughby avenue; Eagle, No. 368, 854 Gates avenue; Ivy, No. 472, corner

DeKalb and Bedford avenues; Wyona, No. 28, 440 Liberty avenue and Wyona street; William Tell, No. 125, 114 Graham avenue; Socrates, No. 223, 134 Graham avenue; Diogenes, No. 298, 355 Bushwick avenue; Charles T. Schmitt, No. 348, 574 Broadway; Chase, No. 367, 59 Driggs avenue; Justitia, No. 370, 355 Bushwick avenue; Harmonia, No. 394, 117 Himrod street; Rainbow, No. 409, Atlantic avenue, near Vermont street; Heinrich Heine, No. 580, 253 Irving street; Steuben, No. 133, 123 Smith street; Blucher, No. 426, 123 Smith street; Wallenstein, No. 428, 217 Court street; Werder, No. 594, 267 Prospect avenue; Hamilton, No. 640, 92d street, cor. 4th ave. and Fort Hamilton; The Woods, No. 121, Bath Beach; Franklin, No. 182, Sheepshead Bay; Gowanus, No. 239, 635 3d avenue; Arbor Vitae, No. 384, 478 5th avenue; Joppa, No. 386, 258 Court street; Peerless, No. 535, 217 Court street; Bay View, No. 567, 3d avenue and 54th street; Intrepid, No. 654, 13th avenue, near 67th street; Dauntless, No. 708, 258 Court street; General Putnam, No. 724, 725 Union street.

Rebekah Lodges.—Olive Branch, No. 19, 315 Washington street; Silver Spray, No. 63, 262 Prospect avenue; Mayflower, No. 77, Gates and Nostrand avenues; Arbutus, No. 99, Bath Beach; Miriam, No. 107, 1089 Broadway; Laurel Wreath, No. 110, Fulton street and Bedford avenue; Mount Olive, No. 117, Pennsylvania avenue and Fulton street; Amaranth, No. 176, 49 Court street; Cornelia, No. 38, 134 Graham avenue; Vereinigte Schwestern, No. 59, 217 Court street.

Encampments, Thomas Fawcett, D. D. G. P.—Fidelity, No. 50, 854 Gates avenue; Roland, No. 91, 123 Smith street; Beacon Light, No. 94, corner Grand and Havemeyer streets; Kades, No. 63, 134 Graham avenue; Liberty, No. 146, 3d avenue and 54th street; Mt. Pisgah, No. 26, Broadway and Dodworth street; Bethlehem, No. 10, 879 Gates avenue; Venus, No. 109, 258 Court street; Excelsior, No. 134, Gates and Nostrand avenues.

QUEENS.—Pacific, No. 85, Flushing, 71 Broadway; Astoria, No. 155, 165 Fulton avenue, Astoria; Marvin, No. 252, College Point; Anchor, No. 324, 3d and Vernon avenues, Long Island City; Long Island City, No. 395, 432 Steinway avenue; Whitestone, No. 775, Whitestone; Woodhaven, No. 204, Woodhaven; Jamaica, No. 247, 22 Harriman avenue, Jamaica; A. Grosjean, No. 371, Woodhaven; Freeport, No. 600, Freeport.

Rebekah Lodges.—Long Island City, No.

80, Grand and Steinway avenues; Florence, No. 97, Flushing; Gestina, No. 120, Woodhaven; Camillia, No. 210, Woodhaven.

NASSAU.—Farmingdale, No. 613, Farmingdale; Freeport, No. 600, Freeport; Hempstead, No. 141, Front street, Hempstead; Pembroke, No. 73, Glen Cove; Primrose, No. 569, Hicksville; Protection, No. 151, Roslyn; Rockville Centre, No. 279, Rockville Centre; Seaside, No. 260, Inwood; Seawanhaka, No. 670, Port Washington; Welfare, No. 695, Oyster Bay.

SUFFOLK.—Brookhaven, No. 80, Patchogue; Suffolk, No. 90, Sag Harbor; Sampawans, No. 104, Babylon; Sayville, No. 322, Sayville; Breslau, No. 524, Lindenhurst; Awixa, No. 574, Islip; Hampton, No. 575, East Hampton; Fire Island, No. 636, Bay Shore; New Point, No. 677, Amityville; Greenport, No. 179, Greenport; Southold, No. 373, Southold; Ellsworth, No. 449, Huntington; Roanoke, No. 452, Riverhead; Northport, No. 523, Northport; Port Jefferson, No. 627, Port Jefferson; Stony Brook, No. 730, Stony Brook.

Rebekah Lodges.—1st District, Mrs. Emma G. Downs, vice-president, Riverhead. Friendship, No. 70, Greenport; Suffolk, No. 132, Northport; Veritas, No. 167, Riverhead; Promise, No. 204, Southold; D. Meinen, No. 119, Lindenhurst.

Encampments: Queens—Ridgeley, No. 60, Flushing.

SUFFOLK.—Thomas W. Lister, D. D. G. P. Montauk, No. 56, Sag Harbor; Medole, No. 145, Greenport; Suffolk, No. 147, Bay Shore.

NASSAU.—Mineola, No. 121, Hempstead.

The Knights of Pythias has a membership of some 2,000 on Long Island; the Ancient Order of United Workmen, 2,000; the American Legion of Honor, 1,400; Deutscher Order der Harugari, 1,200; Improved Order of Red Men, 2,000; Knights of Honor, 2,000. There are also many minor secret organizations with somewhat fantastic titles, such as the Knights of the Golden Eagle, Benevolent Order of Buffaloes, Knights of the Golden Star, Order of Good Fellows, which have small membership rolls, but devoted adherents. The Benevolent and Protective Order of Elks is possibly the

best known of all these minor organizations, and its only lodge in Brooklyn has a membership of close on to 500. It is a national society, has lodges scattered all over the country, and accomplishes a vast amount of practical good each year. A large proportion of its members belong to the theatrical profession, and some of their "high jinks" are redolent of the stage. Their ritual, we understand, is quite an elaborate affair, a compound of Freemasonry, Odd Fellowship, Forestry, and original with the brilliant, witty and warm-hearted men who are its moving spirits. The Brooklyn lodge has often come before the public, but generally in connection with some deserving case of charity or in the giving of elaborate funeral ceremonies over the remains of some well-known and much loved brother.

The Foresters of America have a membership throughout the country of about 180,000, the figures for Long Island being given as 20,000. Its lodges are termed courts, and the first established in America was that of Brooklyn. One curious point in connection with the early history of this organization is that the struggle of the Revolution of 1776 was fought over again in its ranks—on a small scale, of course. The order is an English one, and the early American courts were ruled from that country, accepted its dictates and squared their business in accordance with regulations made. After a time, naturally, some dissatisfaction arose over this method, and the dissatisfaction steadily increased in extent as the American membership waxed strong. At length the crisis came, brought about, as in the case of the Civil war, with the negro as the issue. The English courts were open to men of all races, so far as their by-laws went, while the American subsidiary high court inserted the word "white" among the necessary qualifications for membership. This discrimination found no favor in England, and after due consideration a message was sent across the sea ordering the American high court to remove the offending and restricting word. But the representatives of the courts who made up that

body thought they understood what was wanted in America much better than possibly could any body of men in England, and they returned a courteous message to that effect and explained the situation in detail. But it was the old story over again. The English supreme court was obdurate; its mandate must be obeyed; the offending word must go. So the Americans at their next meeting, held at Minneapolis August 15, 1889, quietly listened to the rather imperiously worded message from the old country, and after a long discussion decided to become independent. That edict at once took effect, and a courteous notice of the change was the only answer sent across the sea. The order in America at that time had 31,000 members; after two years of independence it had risen to 77,790.

In another chapter we have referred to the Grand Army of the Republic, but in this place may refer to it in its aspect as a benevolent, social and fraternal organization. There are in all 33 posts in Kings county, 6 in Queens borough, 3 in Nassau county, and 9 in Suffolk county, with a membership approximated at 4,300. The posts are:

BROOKLYN.—Abel Smith and First Long Island, No. 435, 441 Bedford avenue; B. F. Middleton, No. 500, 879 Gates avenue; Barbara Frietchie, No. 11, 116 Calyer street; Brooklyn City, No. 233, 1630 Fulton street; C. D. McKenzie, No. 399, 315 Washington street; Charles H. Burtes, No. 185, 1028-30 Gates avenue; Cushing, No. 231, 9th street and 6th avenue; Devins, No. 148, 12 Nevins street; Erastus T. Tefft, No. 355, 153 Pierrepont street; Frank Head, No. 16, 258 Court street; Germain Metternich, No. 122, 241 Floyd street; George Hunstman, No. 50, 17th Sep. Co.; George C. Strong, No. 534, Gates and Nostrand avenues; George Ricard, No. 362, 164 Clymer street; G. K. Warren, No. 286, 1810 Fulton street; Harry Lee, No. 21, 897 Gates avenue; H. W. Beecher, No. 620, 105 Downing street; Henry W. Slocum Post, No. 28, Amphion Building; James A. Perry, No. 89, Bedford avenue, near DeKalb; James H. Kerswill, No. 149, Snyder's Hall, Grant street; L. M. Hamilton, No. 152, Atlantic avenue and Vermont street; McPherson-Doane,

No. 499, Johnston Building; Mansfield, No. 35, 208 Grand street; Moses F. Odell, No. 443, 153 Pierrepont street; N. S. Ford, No. 161, Avenue G and 95th street; Rankin, No. 10, 407 Bridge street; S. F. Dupont, No. 187, 211 Montrose avenue; Thatford, No. 3, Prospect Hall, Prospect avenue; T. T. Dakin, No. 206, 156 Broadway; U. S. Grant, No. 327, Johnston Building; W. W. Stephenson, No. 669, 165 Clermont avenue; Winchester, No. 197, 972 Fulton street; William L. Garrison, No. 207, 118 Myrtle avenue.

QUEENS.—Adam Wirth, No. 451, College Point, 12th street and 4th avenue; Alfred M. Wood, No. 368, Jamaica, Fraternity Hall; Benjamin Ringold, No. 283, Long Island City, County Court House; John Corning, No. 636, Oceanus, Hall Engine Company, No. 2; Robert J. Marks, No. 560, Elmhurst, G. A. R. Hall; Sheridan, No. 628, Long Island City, Columbia Hall.

NASSAU.—Daniel L. Downing, No. 365, Glen Cove, Roberts Hall; Elijah Ward, No. 654, Roslyn I. O. O. F. Hall; Moses A. Baldwin, No. 544, Hempstead, Carman's Hall.

SUFFOLK.—Edwin Rose, No. 274, Sag Harbor, G. A. R. Hall; Edw. Huntley, No. 353, Greenport, G. A. R. Hall; Henry A. Barnum, No. 656, Riverhead, G. A. R. Hall; H. B. Knickerbocker, No. 643, Amityville, Wood's Hall; J. C. Walters, No. 641, Huntington, G. A. R. Hall; Lewis O. Conklin, No. 627, Port Jefferson, Athena Hall; Richard J. Clark, No. 210, Patchogue, Arcanum Hall; Samuel Acklerly, No. 426, Northport, G. A. R. Hall; William Gurney, No. 538, Bay Shore, Odd Fellows' Hall.

There is no doubt that it was the action taken in 1875 by the Brooklyn Grand Army posts that led to the successful development of the long agitated plan to erect a soldiers' home at Bath, New York. Reference to this has already been made, but further details may here be appropriate. At a meeting of the State Encampment the matter was urged by the Brooklyn veterans, and in the course of a warm address in advocacy of the scheme Corporal Tanner pledged Brooklyn to contribute \$10,000 toward the project. Where he was to get the money or how he was to get it had not been considered by the impulsive corporal, but

he made the offer anyway and trusted the future. In this instance it did not fail him. On returning to Brooklyn he and several other veterans laid the whole matter before Henry Ward Beecher and secured that lion-hearted preacher's hearty espousal of the pledge. A meeting was in course of time called in the Academy of Music, and Beecher delivered one of his stirring patriotic orations, which aroused the enthusiasm of the vast audience to the highest pitch. The subscription was at once launched, and ere long Tanner's pledge was more than redeemed, for \$14,000 was raised. The good work thus splendidly begun was at once carried to full fruition with his usual good-hearted impulsiveness by Corporal Tanner. He traversed the State from New York to Niagara, making speeches and appeals, and securing the promise of aid from every member of the Legislature he could reach. The result was the erection of a splendid home where disabled and poverty-stricken veterans were enabled to await the setting of their sun with temporal comforts and freedom from the harassments incidental to the usual struggle for existence, a struggle that is so hard when accompanied by old age and physical ailments.

Corporal Tanner in 1877 was appointed Collector of Taxes for the city of Brooklyn, and won an enviable record in that office. As Pension Commissioner he removed to Washington, and would have made an equal success in that office, but an unguarded remark about the surplus and a determination to attend to the pension demands of the old soldiers with undue liberality led to a hue and cry against his methods and in time led to his retirement. For years he was one of the most prominent citizens of Brooklyn, and during these years was very frequently the theme of newspaper comment.

Corporal James Tanner was born at Richmondville, Schoharie county, New York, April 4, 1844. His early life was spent on a farm, and his educational privileges were those of the district school. While a mere boy he

taught in an adjoining district, manifesting the thoroughness and force of will that have since characterized him, and proving to anxious friends that he was fully competent for the work. After a few months' experience as teacher, at the outbreak of the war, although not yet eighteen, he enlisted as private in Company C, Eighty-seventh New York Volunteers. He was soon made corporal, with assurance of further promotion, had not a terrible disaster befallen him. His regiment was hurried to the front, and, with Kearny's Division, participated in the Peninsular campaign, and the battles of Williamsburg, Fair Oaks, the siege of Yorktown, the seven days' fight before Richmond, and at Malvern Hill. After leaving the Peninsula, the Eighty-seventh fought at Warrentown, Bristow Station and Manassas Junction.

Corporal Tanner served with his regiment through all the engagements, until wounded at the second battle of Bull Run. There the Eighty-seventh held the extreme right of our line, with Stonewall Jackson's corps in front. During a terrific shelling from the enemy, the men were lying down, when a fragment from a bursting shell completely severed the corporal's right leg at the ankle, and shattered the left so badly as to make amputation necessary. Carried from the field, he lost consciousness, and on recovering found that the surgeons had amputated both legs, four inches below the knee. Meanwhile the Union lines had been broken and the army was in full retreat. The corporal's comrades were forced to leave him at a farm house, where the rebel army, in close pursuit, soon made him prisoner with the other wounded. Paroled after ten days, he was taken to Fairfax Seminary Hospital; then commenced his long struggle for life, with all the odds against him—but a good constitution and a determination to live, brought him through the doubtful days. Through all his suffering his courage never left him; and when he began to improve his first thought was, "What can I do, thus crippled, to hold my place

among men?" His manhood and ambition could not brook the thought that he must take an inferior place because of his misfortune. After treatment in the hospital, and recuperation at his old home in Schoharie county, he was able to walk about on artificial limbs. He was appointed deputy doorkeeper in the Assembly, and subsequently held various positions under the Legislature, which he filled with great credit. He then accepted a clerkship in the War Department, under Secretary Stanton. On the night of President Lincoln's assassination he was employed to take notes of the first official evidence, and then stood by the dying bed of the President. In 1866 he returned to Schoharie county, and studied law with Judge William C. Lamont. The same year he married a daughter of Alfred C. White, of Jefferson, New York, and they now have four beautiful children, two daughters and two sons. He was admitted to the bar in 1869. Soon after he was appointed to a place in the New York Custom House and removed to Brooklyn. On competitive examination he rose to the position of deputy collector, and served four years under Gen. Chester A. Arthur. He was the Republican nominee for Assembly in 1871, in the Fourth Kings county district, but was counted out in the election frauds of that year. Nominated for register by the Republicans in 1876, when the Democratic county majority was nineteen thousand, he was defeated by less than two thousand.

Corporal Tanner is an impressive public speaker, and his public utterances, especially when the theme is the late war or the claims of the veterans to the most liberal treatment at the hands of the country, are marked by that strenuousness which our present honored chief magistrate so thoroughly commends. During recent years Mr. Tanner has gradually retired into private life and there his many fine qualities of head and heart keep closely around him troops of warm and devoted friends.

There is no doubt that U. S. Grant Post is the most popular and best known of the Grand

Army organizations in Brooklyn. It came into prominence, as has been already stated, in this work, in connection with its services at the obsequies of General Grant, and since then it has been particularly active in all that pertains to the welfare of the old soldier. It has among its members many who are prominent in civil life. Rankin Post is still a popular organization, but indeed all of the posts of Long Island might so be described, although year by year their numbers are wearing down. But that contingency is in the nature of things and something to be expected.

The national societies which are linked together by a secret ritual are representative, to mention them in the order of their strength, of Ireland, England and Scotland. The Ancient Order of Hibernians has something like 3,000 members on the island. The Order of Sons of St. George has nine lodges in Brooklyn, with a total membership of about 800. The first of these lodges—Anglo-Saxon—was instituted Sept. 22, 1879. The lodge meetings as a rule are well attended and present many attractive features. In connection with the jubilee of the late Queen of England, in 1887, these societies took a prominent part in the proceedings held in New York and Erastina, Staten Island, by which the British residents of the Metropolitan area showed their respect for the venerated British sovereign. The Scottish organization, Clan McDonald, has 200 members, a ritual which is as full of historical data as could be crowded into it, and any amount of enthusiasm for "the land of the mountain and the flood." It is part of an order that has branches throughout the United States and has a graded scheme of life assurance which pays between \$250 and \$2,000. It is based on a scheme thoughtfully prepared by Mr. Duncan MacInnes, one of the actuaries in the New York comptroller's office, and is believed to be the most perfect and abiding scheme of assessment insurance in force. As to that, of course time is the best and most potent judge.

Of what may be described as the fashion-

able social clubs Brooklyn possesses an abundance and several of them have acquired a measure at least of national fame. Most of them are fitted up with a degree of luxuriousness that is equal to any of the London and Continental clubs about which so much is written. They are housed in roomy mansions fitted up with every imaginable convenience for social pleasure or the amenities of every day life; their cuisine is of the highest order and liveried attendants are ready to carry out the wishes of the members and their friends. Reading rooms, smoking rooms, cafes, billiard rooms, grill rooms and even expensive examples of the artist's studio or sculptor's altier adorn what are considered the public rooms, while the highest skill of the architect, the decorator, the upholsterer and the furniture designer is employed in every apartment and hall. In such clubs the whole domestic machinery moves with a noiseless precision that bespeaks the most watchful discipline, and the service throughout from the imported chef to the colored girl who peels potatoes is the best that can be secured. In such a retreat a man can enjoy the real luxuries of life to a degree that independent effort could hardly attain. He can find himself in a veritable palace, be waited on as though he was attended by the genii we used to read about in connection with Aladdin and his lamp, and have his aesthetic notions cultivated by everything that is bright, beautiful and costly but withal in the most exquisite taste. He can revel in fine paintings, delightful upholstery harmonies, exquisitely cooked chops, and carpets which are themselves poems in construction and design. Fifty years ago no crowned king had more real comfort, more perfect service, more to delight the eye and soothe the cares and the vexations of the busy, toiling, exasperating world than the Brooklynite who has the entree to one of these genuine modern palaces. Then, too, he has what kings did not always have according to history and may not have at the present day—although we must confess that our acquaintance

with modern kings is of the slightest extent—a circle of congenial friends, friends having tastes similar to his own and whose conversation, whose hobbies, whose pleasures, whose politics, whose fads, whose aspirations are more or less his or have his interest and his sympathy. Most of the Brooklyn clubs, even the most exclusive, have this community of tastes as their foundation, and a sure and sturdy foundation it has amply proved to be. In the Union League Club, for instance, politics is the crowning feature; in the Aurora Grata it is Free Masonry; in the Germania it is the Fatherland.

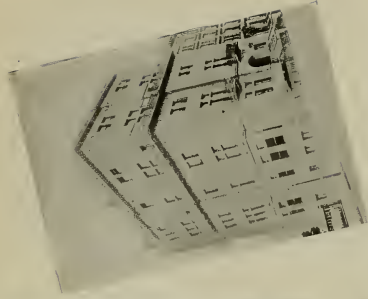

Some of these social organizations are housed in buildings especially erected by or for them. The Hamilton Club possesses a building which at once impresses one with an idea of internal comfort, while the remarkably beautiful statue of Alexander Hamilton, Washington's finance minister and one of the founders of the Republic, shows that the members think on higher matters than mere personal ease. The Union League's mansion is Romanesque in style and constructed of brick and brownstone with medallions of Lincoln and Grant showing prominently in the facade, and an eagle and a bear form conspicuous features in the adornment. But the main attraction to visitors is the magnificent equestrian statue of General Grant which stands in front of the building and was unveiled in 1896. The sculptor was William Ordway Partridge. The pedestal of Quincy granite rises to a height of 16 feet and the statue itself is 15 feet 8 inches in height, so the whole assumes heroic proportions. General Grant's son—General F. D. Grant—General Horace Porter and others competent to speak have declared it to be the best portrait of the hero of the War of the Rebellion yet set up in any public place. The Montauk Club house is a most ornate structure with a Greek frieze on the upper part of its front as well as several other architectural features well worthy of careful study. The home of the Riding and Driving Club was built

for convenience rather than to develop any architectural ideals, but its internal arrangements are perfect. The Germania Club house, on the other hand, arrests the attention of every one passing it on Schermerhorn street by the rich Florentine design of its facade, a design that has apparently been copied, in many respects, in several other club buildings as well as private homes in the borough. Then many clubs have altered and adopted a private house—sometimes have taken two adjoining buildings and thrown them practically into one and so secured an abundance of elbow room even though the outward appearance does not give one any idea of the splendor of the interior. Perhaps the best specimen of an old dwelling developed into a modern club is the home of the Midwood at Flatbush, a grand old Colonial structure with great white columns in front, a style of mansion that used to be common in the neighborhood of both New York and Brooklyn, but of which few specimens are now left.

One of the oldest, if not the oldest, of the aristocratic social organizations in Brooklyn is the Hamilton Club. It was originally intended to be a purely literary club and was so described in its first designation, the Young Men's Literary Association of Brooklyn, but the suggestion of calling it after the author of the *Federalist*—or the principal author—seemed to cover better the idea of the founders, and within a year the title was changed to the Hamilton Literary Club. It certainly gathered in its fold all the leading literary lights and reading men of Brooklyn at that date—Henry C. Murphy, Alden T. Spooner, Henry Silliman, John H. Raymond, Edgar J. Bartow, Abiel L. Low, Joseph Howard, Francis P. Sanford, D. N. Schoonmaker, Josiah C. Dow, Thomas G. King, John T. Howan, George W. Dow, Horace H. Dow and John Jewett, among others. For many years the literary feature was fully maintained as the peculiar field of the club and its annual lecture course constituted an important detail in the social calendar of the city. In fact the association seems latterly

to have developed into simply a lecture-giving body, and with the decadence of that form of public instruction—that tribune of the people, as the lecture platform was titled in the palmy days of Wendell Phillips, Lloyd Garrison, Henry Ward Beecher and a score of others—Hamilton Literary Association appears to have lost its usefulness and its place in the public regard. In 1882 a reorganization was effected or rather the old association was practically wiped out and in its stead the Hamilton Club was evolved, a new organization with the members, library, pictures and other accessories of the old one, but better equipped with rules and regulations calculated to meet modern social wants and aspirations. It was a success from the first. In 1884 it was established in its present home, erected to meet its wants, at a cost exceeding \$100,000. It is quite an aristocratic organization, that is to say, its membership is rather exclusive, and is itself regarded as a social honor. Its art gallery is a particularly choice one and includes Huntington's famous painting of "The Republican Court," which was formerly one of the features of the wonderful collection in the mansion of A. T. Stewart, Manhattan's merchant prince. Another possession that is highly treasured is a Sevres vase presented to the club by the French Government as an acknowledgment of the hospitalities showered upon M. Bartholdi and his compatriots when the statue of Liberty was being placed in position on Bedlow's Island.

The present officers are: President, James McKeen; secretary, William A. Taylor; treasurer, Theodore B. Brown.

The Brooklyn Club, organized in 1865, was for many years the most fashionable of the social organizations of Brooklyn, and has entertained in its rooms such guests as General Grant, Admiral Farragut, General Sherman, Grand Duke Alexis of Russia, Professor Tyndall, the world-renowned scientist, and Henry M. Stanley, the New York reporter who discovered Dr. Livingston in the recesses of the Dark Continent, and who has since become a

social lion in London, having been knighted by the late Queen Victoria, elected to membership in the House of Commons and marrying into a family noted for brains as well as for social prominence. The club was housed very soon after its organization in a building at the corner of Clinton and Pierrepont streets. In 1883 an adjoining house was bought and three years later the two buildings were practically reconstructed and the present commodious clubhouse was the result. For twenty years—from 1870 to 1890—the club was presided over by Mr. B. D. Silliman, one of the most representative of the citizens of Brooklyn and of whom an extended biography is given in another chapter of this work. He was succeeded by Mr. David M. Stone, editor of the *New York Journal of Commerce*, who served for but a single term and was followed by General Benjamin F. Tracy, then probably the most active member of the legal fraternity in the city.

Although his energies are now directed elsewhere and he is regarded as belonging rather to Manhattan than to Brooklyn, General Tracy played too prominent a part in the affairs of the latter borough—was for too many years identified with its progress, not to be regarded with affectionate pride by every citizen of the present day. He was born at Owego, New York, April 26, 1830, and studied law in an office in that village. In 1851 he was admitted to the bar and three years later was elected District Attorney of Tioga County on the Whig ticket, although the constituency was strongly Democratic, and at the expiration of his term he was re-elected in spite of a determined effort to bring about his defeat. In 1861 he was elected a member of Assembly, and during his short service at Albany won golden opinions for his common-sense views on all topics, his short, clear-cut, pithy speeches and his devotion to the advancement of public business. He served but one term and then returned to his law practice in Owego. But he was not long permitted to devote himself to his private business. The war cloud had settled

on the land and the Nation was engaged in the most gigantic of modern armed conflicts. Regarding his war record one authority writes as follows:

"In the spring of 1862, still remembered as a period of alarm to the friends of the Union cause, new levies were imperative for the Federal army, and Governor Morgan at once appointed a committee in each Senatorial district to organize a general recruiting effort. Tracy was one of the committee for Broome, Tioga and Tompkins counties. He accepted the charge, and, in addition to general service as a member, he received a commission from the Governor, and personally recruited two regiments, the One Hundred and Ninth and the One Hundred and Thirty-seventh, making his headquarters in Binghamton. The active work was completed in thirty days, and Tracy was appointed colonel of the One Hundred and Ninth, with which he reported to General Wool, at Baltimore, in whose department it remained until transferred to that of Washington. In the spring of 1864 the regiment was ordered to join the Ninth (Burnside) Corps, then a part of Grant's advance. Colonel Tracy led his regiment with great gallantry in the battle of the Wilderness, when its loss, on Friday, May 6th, was upwards of eighty killed and wounded. Near the close of the fighting on that day, he fell exhausted, and was carried from the field. Urged by the staff of his commanding officer to go to hospital, he refused, but resumed the lead of his regiment, and held it through three days of the fighting at Spotsylvania, where he completely broke down, and was compelled to surrender the command to the lieutenant-colonel.

"As soon as he became satisfied that months must elapse before he could again join the army, and not liking military service in a hospital, he tendered his resignation, and came North to recruit his health. In the following September, without solicitation on his part, Secretary Stanton tendered him the appointment of Colonel of the One Hundred and

Twenty-seventh United States Colored Troops, which he accepted. Subsequently, he was ordered to the command of the military post at Elmira, including the prison camp and the draft rendezvous for Western New York. This was a large and important command. In the prison camp there were at one time as many as 10,000 prisoners.

"The treatment of prisoners of war was long a subject of extended and bitter controversy between the North and the South. That there was much suffering and great mortality at Elmira is not denied, because these are inseparable from large military prisons; but that either can be attributed to cruelty or neglect is positively denied. Nothing that could be reasonably done to alleviate the suffering of the prisoners was omitted. The very best of food was supplied in large quantities, while the barracks were large and commodious—nearly all new and built expressly for the prisoners; the accommodations and supplies furnished them being in all respects the same as those supplied to the Federal troops on guard, and to the volunteers received at the draft rendezvous."

There are a class of men who achieve distinction that seem to resemble the mechanic who forms his calculations and fashions his machinery upon the abstract considerations of the mechanical powers, making no allowance for friction, the resistance of the air, or strength of his materials. This was not the case with Judge Tracy. He exerts a quick, careful examination of every circumstance by which he is surrounded, even though sprung upon him instantaneously. Perhaps nothing in his life more strongly illustrates his ability to overcome sudden difficulties than the triumphant manner in which he repelled the dastardly attack made by Hill, of Georgia, in the House of Representatives, March, 1876, upon the treatment of rebel prisoners at Elmira. It was virtually an attack upon General Tracy, and took place in a once celebrated debate between Hill and Blaine, in which the former, incensed by the representations of the latter of the hor-

rors at Andersonville, referred bitterly to the Elmira camp, charging upon its management cruelties quite equal to those recorded of the Southern prisons.

General Tracy was at home at this time, and it was by mere accident that he learned the nature of the debate in progress at Washington, and of General Hill's charges. This occurred at a time when the General was deeply engaged in an absorbing and important matter. One morning, while rapidly glancing over a New York daily, his attention was arrested by the heading of a column, as follows: "Hill, of Georgia, on the Elmira Prison; he alleges that the rebel prisoners confined in it during the war were treated with great inhumanity," etc. After reading it carefully, burning with indignation, he hastened to telegraph Mr. Platt, member from the Twenty-eighth district, a full, well-worded reply to Hill. This reached Mr. Platt in the House, while the debate on the subject of the prison at Elmira was still in progress. Immediately arising to a question of privilege, he sent the remarkable telegram to the clerk, by whom it was read to the House. It commanded profound silence, falling upon Hill and his Southern friends like a sudden clap of thunder. Hardly was the reading concluded when Hon. C. C. Walker, a member from the Elmira district, an intense Democrat, sprang to his feet, and, in a few glowing and effectual words, fully sustained General Tracy's telegram; alleging that, to his own knowledge, every word of it was true. This ended the debate, completely refuting the charges made by Hill.

On resuming civil life General Tracy became a member of the New York law firm of Benedict, Burr & Benedict, and so continued until appointed United States District Attorney for the Eastern District of New York. This office he resigned in 1873 and entered upon the practice of law in Brooklyn, quickly becoming recognized as one of the leaders of the local bar and one of the most active workers in the local ranks of the Republican party.

In 1881 he was offered the nomination for the mayoralty but declined in favor of Mr. Seth Low.

Before the close of that year, however, he was appointed to a seat on the bench of the Court of Appeals, which he held for over a year, and then resumed private practice, and along with Mr. Silas B. Dutcher was the recognized leader of the Republican forces in the city. In 1889 General Tracy entered the cabinet of President Harrison as Secretary of the Navy, and with his acceptance of that office his connection with Brooklyn may be said to have closed. His career in the Navy Department at Washington won for him the heartiest commendation of all classes of citizens, regardless of party affiliations and he is credited with being the real builder of the "New Navy," which rendered the country such heroic and brilliant service when the time came to practically test its value and efficiency. His residence at the Capital, however, was clouded by a terrible affliction. In a fire which destroyed his residence his wife and his youngest daughter were burned to death, and for several days his own condition was regarded as critical. He calmly resumed his official cares, apparently finding relief from his own sorrows in the rush of business, and continued in the official harness to the close of his term. Then he left Washington, entered upon the practice of law in Manhattan, and so continues. He is active in politics still, figured prominently as the regular Republican candidate in the first contest for the mayoralty of the consolidated city, but the campaign was made on his part more in compliance with a sense of party duty rather than from any personal desire to again hold public office. His law practice, one of the most important on Manhattan Island, fully occupies all his working hours.

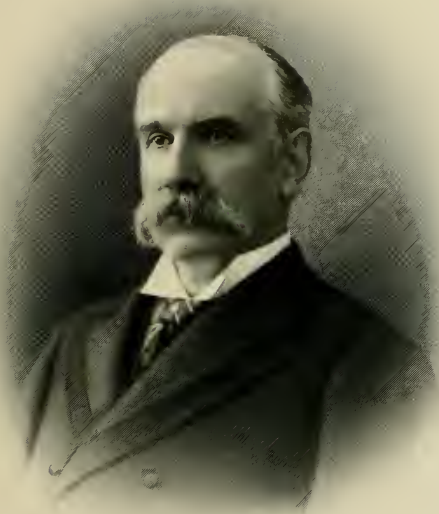

The officers are: President, Edward M. Grout; vice-president, Edward F. Patchen; secretary, Henry Earle; treasurer, William C. Smith.

The largest and the best generally known

of the social organizations of Brooklyn is the Union League Club, which was organized in 1887 as the Twenty-third Ward Republican Club, but changed its name to its present designation a year later when it was incorporated. The present officers are: President, Hibbert B. Masters; first vice-president, David Thornton; second vice-president, Horace M. Carleton; treasurer, Thomas Bishop; and secretary, James R. Ross.

The Union League is essentially a political organization, Republican to the backbone and the head centre of the party in the "City of Churches." There is no getting away from this or any desire to get away from it. The constitution of the club plainly declares that its aims are "To promote social intercourse, to advance the cause of good government by awakening a political interest in citizens, to overcome existing indifference in the discharge of political duties, and to perform such other work as may best conserve the welfare of the Republican party." The club was a numerical and financial success from the first and in 1891 took possession of its present palatial edifice on Bedford avenue and Dean street at a cost, including site and fittings, of some \$215,000. Architecturally the building is an ornament to the city, and the front is designed after the Romanesque style, of brick and terra cotta, and is exceedingly chaste throughout, while the four stories which rise over the line of the sidewalk are surmounted by a French roof, giving really the accommodation of an additional floor and the whole is surmounted by a neat cupola. The main entrance is most imposing in effect, and throughout the entire interior the appointments are the very best that taste or luxury could suggest and money could buy. On its roll of membership are 850 names—thereby representative of every professional and business interest in the city, and all adherents of the Republican party with an intensity that is only varied by their natural temperaments.

The Lincoln Club was originally a purely Republican institution, although nowadays its

J. H. Mason

Printed by P. H. Mason & Co.

association with party politics has been abandoned and its purely social features are its main attraction. In fact many of the most prominent Democrats in Brooklyn have been and are on its roll of membership and in its boards of officers and managers. The Lincoln was organized in 1878 by a number of citizens of Republican proclivities in politics, and for a year or so held very pleasant meetings according to a sort of house-to-house arrangement. By the close of a year a knowledge of these meetings and their many social pleasures and their spread of good fellowship and acquaintanceship led to so many requests for membership that the originators were induced to widen the scope of their association, to abandon its political proclivities and to look out for a house in which the affairs of the club might be carried on and its social features developed to the utmost. Two adjoining frame buildings were purchased on Putnam avenue and there the club took up its headquarters and speedily grew in popularity as well as in financial and numerical strength. This was shown in 1889 when, after "tinkering and coopering," at a considerable expense, the original frame buildings, from time to time to meet the needs of the institution, it was determined to pull them down and erect on their site a structure that would meet all the passing and prospective wants of the association and be another architectural landmark in the city. The result was the erection of the present Lincoln Club house, a magnificent four-story structure in a style developed from the early French Renaissance—one of those buildings which attract the eye and rivet the attention even in a "wilderness of brick, stone and square holes for windows," as a writer once gave as the characteristic feature of American streets. Internally it is fitted up in a style in keeping, not with all the comforts of home, but with all the attractions and luxuries of clubdom, and that means it is in every sense of the word a modern palace.

The Lincoln Club is officered as follows:

President, H. F. Williams; secretary, Jay Stone; treasurer, A. T. Stoutenburgh.

The Hanover Club has a history in many respects akin to that of the Lincoln Club in that whatever political proclivities it may have had in its earlier days have long been abandoned and it is purely devoted to social purposes. It is essentially an Eastern District organization, and its inception was due to the desire of several of the wealthier residents of that section of the old city which would fill the same purposes in their own home district that the older clubs did nearer the old Ferry. The matter was discussed for quite a considerable time and then the old Hawley Mansion, an ideal building for club purposes, was put on the market and the desire to secure it for the proposed organization led to action being taken in the matter. A meeting was called, signed by Andrew D. Baird, Frederick W. Wurster, Charles Cooper, William C. Bryant, Henry Seibert, Charles H. Russell, A. C. Hallam, E. B. Havens, Warren E. Smith, H. G. Taylor, Charles Fox, B. E. Veitch, J. A. Peterkin, Millard F. Smith, James A. Sperry and Louis Conrad, who may be regarded as the "founders and fathers" of the organization. As a result of the call quite a large and representative meeting was held, when it was determined to organize the Hanover Club and take up an option which had been secured on the Hawley Mansion. This arrangement was carried out, a set of by-laws for the government of the new organization was drawn up and possession was taken of the mansion. The first Board of Directors was made up of Andrew D. Baird, Millard F. Smith, John Cartledge, J. Adolph Mollenhauer, William Donald, Benjamin D. Bacon, William C. Bryant, E. B. Havens, Mathew Dean, Henry Hasler, Edwin Knowles, Frederick W. Wurster, J. Henry Dick, A. C. Hallam and H. F. Gunnison. The first business was to "fix up" the splendid old mansion, to remodel it for the uses of the organization and this involved not only a thorough overhauling of its interior arrangements and a

complete outfit in the way of furniture and decoration, but also the building of a large extension. However, all this was satisfactorily accomplished and on January 19, 1901, the club house was formally opened to the members and their friends. Since then the progress of the organization has been as rapid as its most enthusiastic member could desire. It has a membership of 400, and among those who figure on its roll are many of the most prominent residents of Brooklyn—prominent in professional, business, political and social life, the very class of men who by their energies are making Brooklyn advance with rapid strides to the foremost position among the group of boroughs which constitute the Greater New York.

The president is Mr. James A. Sperry; the treasurer, Mr. Andrew D. Baird, and the secretary, Mr. Alvah Miller.

The Montauk Club is the last of the social clubs which we present here as being fully and fairly representative of the higher club life of Brooklyn. Its home on Eighth avenue, Lincoln Place and the Park Plaza, occupies one of the finest sites in Brooklyn and its building is among the most attractive in the city. The structure in design is after the Venetian, and every detail is carried out with the most exquisite taste. The edifice stands out in bold relief, as it were, even in its rather aristocratic surroundings, and while there can be no doubt of its semi-public character—its size at once determines that even to the most casual observer—there is never any question as to its being a home, and a home whose owners possess taste and wealth. This itself is a satisfactory point, for we have seen club houses—expensive concerns so far as their cost was concerned and pretty exclusive as to their membership—which would puzzle even an experienced man about town to say off-hand whether they were hospitals, police stations or insurance headquarters. The Montauk Club house cost, including site, \$202,680, while its furnishings and fittings involved a further outlay

of about \$30,000. It was opened for the use of members in May, 1891, the club at that time having been some two years in existence. The limit of membership—500—has long been reached and is easily maintained—a long waiting list being one of the features of the story of the club. Its management is of the most generous order, its appointments throughout are of the most perfect description and everything it does, every hospitality it extends, is characterized by lavishness, but at the same time everything that savors of what might be called the mere ostentation of wealth—the barbarity of richness—is strictly tabooed. It is a progressive and thoroughly representative organization of Brooklyn's most prominent citizens, and has thoroughly deserved the almost national degree of importance it has achieved during the comparatively brief period of its existence.

Its officers are: President, William H. Henry; treasurer, T. Plunkett; and secretary, J. Meyers.

Among the other leading social clubs are the following:

Aldine Association—111 Fifth avenue, organized 1889. 500 members. H. B. Dominick, president; C. L. Patton, secretary, 43 East Tenth street.

Brooklyn Barnard Club—132 Remsen street. Organized 1896. 350 members. Hon. John A. Taylor, chairman; Mrs. Thomas R. French, secretary, 150 Joralemon street.

Brooklyn Schnorrer—237 Johnson avenue. Organized 1886. 50 members (limited). William Herthe, president; Henry Bauer, secretary, 46 Bartlett street.

Bushwick Club—Bushwick avenue and Hart street. Organized 1890. 400 members. Charles Graham, president; Louis Burger, secretary, 465 Pulaski street; William Batterman, treasurer.

Carleton Club—Sixth avenue, corner St. Marks. Organized 1881. 141 members. B. J. York, president; Henry Bodevin, secretary, 426 First street.

Church Club of the Diocese of Long Island.—2-4 Clinton street, Brooklyn. Organized 1894. 375 members. Francis H. Miller, president; Sutherland R. Haxtun, secretary.

Cortelyou—Bedford, near Newkirk avenue. Organized 1896. 275 members. William H. Hooper, president; C. A. Bahn, secretary, 199 East 28th street, Flatbush. Has athletic and cycle clubs and Dramatic Society.

Crescent—25-29 Clinton street. Country house, Shore road and 83d street, Bay Ridge. 1,700 members. William H. Ford, president; A. Wallace Higgins, secretary, 99 Cedar street, Manhattan; Henry L. Langhaar, treasurer.

Dyker Heights Club—86th street and 13th avenue. Organized 1898. 100 members. Theodore H. Bailey, president; Karl B. Sackmann, secretary; Chas. A. Seaver, treasurer.

Eastern District Citizens' Association—Organized 1899. 200 members. John Feierabend, president; Nicholas Bonnländer, secretary, 1477 DeKalb avenue; annual election, April.

Excelsior—Clinton and Livingston streets. Organized 1854. 100 members. George W. Chauncey, president; J. A. Ayres, treasurer; William De Vigne, secretary, 72 South Elliott place.

Farmers'—603 Grand street. Organized 1883. 100 members. John J. Jennings, president; F. Dahlbender, treasurer; Anton Dahlbender, secretary.

Germania Social Club—Schermerhorn street. Organized 1860. 250 members. Dr. R. Schmeltzer, president, 206 Lincoln place; A. Buchner, secretary, 32 7th avenue.

Homard Club—Organized 1899. 100 members. Club house, 6th avenue and 9th street. N. Heyman, president; C. Henry, secretary, 375 9th street.

Home of the City of Brooklyn—654 Grand street. Organized 1889. 100 members. R. C. Knipe, president; A. D. Canty, treasurer; A. J. Shefers, secretary.

Keramos Club—Manhattan avenue and Milton street. 100 members (limited). George R. McLaughlin, president, 82 Norman avenue; Miss A. Gorman, secretary.

Knickerbocker Field Club—Tennis Court and East 18th street. Organized 1891. 225 members. Walter Moore, president; C. F. Bond, treasurer; H. R. Han, secretary.

Lexington Social Club—225 Lewis avenue. Edward J. Farrell, president; James J. Eagan, secretary, 771 Gates avenue; James Mulvenan, treasurer.

Lincoln Social Club—405 Bridge street. Organized 1895. 50 members. M. E. Walker, president; J. J. Bavenizer, secretary, 93 Clermont avenue; L. W. Herald, treasurer.

Metropolitan—174 Prince street. Organized 1896. 90 members. H. A. Williamson, president; A. H. Ferguson, secretary, 569 Union street.

Midwood—Flatbush, near Caton avenue. 145 members. William A. A. Brown, president; W. Joel Moran, treasurer; R. G. Newbegin, secretary, 147 Midwood street.

Millard Club—335 Hoyt street. Organized 1895. 110 members. Andrew I. Cunan, president; David A. Whamond, corresponding secretary, 31 Douglass street; Ed. A. Cantwell, treasurer.

Nonpareil—Henry Perera, president; Matthew Ryan, treasurer; Thomas Ryan, secretary.

Original Fourteen Club—7 Myrtle avenue. Organized 1890. 617 members. Robert T. Brown, president; William Grady, secretary, 249 Jay street; Thomas Donlon, treasurer.

Oxford—Lafayette avenue, corner South Oxford street. Incorporated 1880. 300 members. F. Joseph Vernon, president; Charles Martin Camp, secretary, 109 Lafayette avenue; Frederick Worth, treasurer.

Prospect Club—Prospect Heights. Organized 1897. 42 members. Mrs. Margaret E. Bretz, president; Miss J. A. Jordan, recording secretary, 873 Union street.

Ridge—2d avenue and 72d street. Organized 1893. 95 members. Frederick C. Cochet, president; Frank F. Koehler, secretary, 270 53d street.

Saratoga Social Club—2042 Fulton street. Organized 1895. 155 members. William Chambers, president; Claus Kuck, treasurer; Dennis Haggerty, secretary, 1098 Herkimer street.

St. Patrick Society of Brooklyn—4 and 5 Court square. Organized 1850. 230 members. William J. Carr, president; Daniel Kelly, secretary; John T. Breen, treasurer, 379 State street.

Shinnecock Club—High and Bridge streets. Organized in 1900. 102 members. John T. Hayes, President; M. J. Burke, treasurer; Charles J. Hayes, secretary, 155 Bridge street.

Trinity Club—Hall Memorial House. Organized 1897. 110 members. A. M. Griffith, president, 72 Hoyt street; A. R. Davison, treasurer; D. Hughes, secretary, 61 Canton street.

Twelfth Ward Home Club—420 Van Brunt street. Organized 1898. 100 members. Daniel J. Lynch, president; August H. Gutthes, treasurer; Claus H. Lührsen, secretary, 424 Van Brunt street.

Unity—482 Franklin avenue. Organized 1896. 160 members. Moses J. Harris, president; Joseph Manne, secretary, 482 Franklin avenue; Ferdinand Seigman, treasurer.

Washington Club—172 Prospect place. Organized 1898. 350 members. Thomas R. Farrell, president; Marriott T. Dowden, secretary, 837 Bergen street.

The sporting clubs of Long Island form even a more conspicuous feature of its pleasure circles than even the social organizations. From the beginning of its history, almost, Long Island has been regarded as a sort of sportsman's paradise and we have seen how the early English governors encouraged horse-racing on Hempstead plains. There doubtless was a variety of sporting clubs on Long Island in earlier times, for sportsmen are sociable beings and half the pleasure of sport is the gathering around the evening campfire and the swapping of wondrous stories of adventure, escape, and the weight of fish, the length of antlers or the size of a bag. But sportsmen do not—or rather did not—keep written records, and there is very little reliable information in existence concerning the doings of these early associations of sportsmen. There was, however, one great difference between them and the present generation. The fashion used to be to kill indiscriminately and without any regard to the laws for the protection of the game; rather in open defiance of them; and a hunter who went forth with a gun banged away at every animal he saw and his prowess was measured by the number of animals he sent to their death. Nowadays there are no better assistants to the game wardens than the members of the various sporting clubs, and indeed it has been said, and said with truth, that the preservation of game on Long Island is due more to the protection afforded by the wide domains of many of the sportsmen's organizations and to the intelligent appreciation of the necessity of close seasons and a rigid application of the laws.

The first of the sporting clubs of which we have any precise record was the Long Island

Shooting Club. Of that organization and several other early ones Mr. Abel Crook, president of the Fountain Gun Club, wrote as follows:

The Long Island Shooting Club was the pioneer organization of the gun clubs of this country. Originally it was simply an association of gentlemen who had enjoyed trap shooting in England, their mother country, and wished to perpetuate a pastime which furnished them the practice of wing shooting at comparatively small expenditure of time and money.

It was in existence prior to 1842. Robert Carter was its secretary as early as 1847, when its roll consisted of about 25 members, including such "old time sportsmen" as Harry Russell, Samuel Parker, John Thompson, John Maitland, Frank Palmer, Humphrey Hartsborn and Robert Robinson. Their place of meeting was "The Woodcock," then kept by Harry Russell and afterwards by Palmer, in Adams street, near Willoughby, on about the site of the present iron works of Howell & Saxtan. All business meetings were at the call of the president, and were held about three or four times a year, to arrange for a trap shoot which depended upon the possibility of obtaining a sufficient supply of wild pigeons, which were generally used for that purpose. They had no regular club ground but held contests in the vicinity of the old Oil Cloth factory, near the present Sackett street boulevard, which was then in commons, and also at Sutton's Prospect Hill Hotel, then known as "Sam Vunk's," and located on about the site of the Distributing Reservoir, at the entrance to Prospect Park. The novelty of these "shoots" attracted such a crowd of spectators that the members ceased to hold them in the old places, and adopted the system of chartering a tug-boat and sailing to some of the islands near the city, where they could enjoy themselves without interruption.

Their last excursion of this character was to Riker's Island, in 1850, when 700 birds were

killed. At that time no regular trap rules had been adopted, except such as had been in vogue in England for at least a century. One ground trap only was used, which the club imported from England.

All disputes were settled by submission to Bell's Life, and frequently large sums were wagered on the result of the decision, which would remain undetermined pending the six weeks' delay necessary to receipt of the paper from London containing the "answer." The amount of shot allowed was one and a half ounce. Soon after the Riker's Island meeting the club moved its headquarters to the tavern corner of Main and York streets, kept by Russell & Stainsby, and still later it followed Harry Russell to his place, then in Fulton street, about opposite York street. In 1855 the club was reorganized and its membership was limited to 24 members, and applicants for membership were required to await a vacancy.

About 1868 a further reorganization was effected, and the limit of membership increased to fifty, and, for the first time, a formal constitution and by-laws and shooting rules were adopted. Its officers, then elected, were: William M. Parks, president; Robert Robinson, first vice-president; Charles W. Rodnan, second vice-president; Captain Sealy, treasurer; J. Foulke, Jr., secretary. Its executive committee were: Frank H. Palmer, Benjamin L. DeForest, Robert Robinson, Dr. S. W. Bridges and George S. Lanphear.

Shooting grounds were selected at John I. Snediker's, on the old Jamaica plank road. The club then included among its members Benjamin W. West, George Lorillard, Howard Jaffray, and many other men of means and sporting tastes, who united in rendering each meeting at the trap peculiarly festive.

A dinner on the grounds was a feature of those days, and was served frequently at the expense of the losing team of those selected at the commencement of the contest. In 1874 another reorganization was had. Again, in 1876, an ineffectual attempt was made to in-

corporate the club under the club act of 1875. A certificate was filed in Queens county, which stated its object to be "the enforcement of all laws and ordinances against the killing and sale of game out of season and the encouragement of a genuine sportsmanlike spirit among its members." The limit of membership was removed, but a unanimous vote was required to elect a member.

Finally, on June 3, 1876, the club filed with the Secretary of State a copy of a further certificate of incorporation, which had been filed in Kings County Clerk's office on May 24, 1876, and the incorporation became complete. This final certificate states as the "object" of the organization, "Protection and preservation of game and the shooting of pigeons from traps; to practice and improve in the use of the gun in shooting birds on the wing, for which suitable grounds have been provided in the county of Queens."

The number of the directors was certified to be seven, "who, with the president, vice-president, secretary and treasurer, shall form an executive committee." It has about 50 members. Officers: Theodore Linington, president; John Akhurst, vice-president; John H. Chasmar, secretary; Robert Robinson, treasurer.

The Phoenix Gun Club, as its name denotes, sprung from the ashes of its original association, the Blue Rock Pigeon Club, which was organized February 4, 1866.

The "Blue Rock" founders were: A. H. Glahn, Adam Glahn, M. McMahon, Owen Larkin, Austin Appleyard, Samuel McGaw and John H. Chasmar. Its first meeting was at the residence of A. H. Glahn, Flushing avenue, near Classon avenue, Brooklyn; but subsequently the meetings were at the residence of Austin Appleyard, at the corner of High and Bridge streets. It was limited to fourteen members. The officers were held peculiarly to the performance of their duties by the imposition of a fine of one dollar for any neglect. Non-attendance at a

business meeting subjected a member to a fine of twenty-five cents; and if not present at roll call, ten cents was imposed as a penalty. Profanity and personalities were especially abhorred and payment of fifty cents for such indulgence was exacted. The trap contests were monthly, and the trophy for the winner was a sterling silver cup, thirteen inches in height, in a glass case; which was retained until won by some other member at a subsequent contest.

In May, 1871, the "Blue Rocks" dissolved, leaving the cup with its then holder, Austin Appleyard. On June 7, 1872, it was reorganized under its present name at a meeting in the "Abbey," on Fulton street, nearly opposite Flatbush avenue, with Austin Appleyard, Edward H. Madison, Warren Birdseye, John H. Chasmar, Daniel McGaw and John Akhurst as its members. Its limit of membership is ten.

The rigid official and individual discipline has been retained. Each member contributes \$1.50 monthly until a sufficient sum has been received to provide the birds necessary for a shooting contest and for refreshments upon the ground. About four "shoots" are held each year. All shooting is by teams of equal numbers, one side being captained by the president and the other by the vice-president; the shooters being selected by lot and all being experts. Each contestant shoots at fifteen birds. Sometimes a single trap, with use of one barrel of the gun, is provided, but usually the contest is with five traps and both barrels may be used. The losing side furnishes a supper for the participants upon the close of the day's sport. The club gold badge is awarded to the individual making the best score of the day; but is returnable to the club at the next contest. The conservative but social character thus maintained has rendered membership so desirable that vacancies seldom occur. Its present officers and members are: Samuel McGaw, president; Reuben Midmer, vice-president; John H. Chasmar, secretary; John Akhurst, treasurer; William Baulsir, James Smith, Moses Chichester, D. H. Freligh, George Jamer, Austin Appleyard.

The Brooklyn Gun Club.—This voluntary organization dates from July 24, 1872, and was reorganized July 31, 1877. As a pigeon-shooting club it has had on its roster the names of many well-known citizens of the city whose name it bears. Gradually its members have deserted the ranks and sought enrollment in more active bodies. At one time, some years since, it secured a victory over the Riverton Gun Club, then known as the Social Gun and Rifle Club of Philadelphia. Its policy has been exceedingly conservative.

At its annual meeting, in January, 1884, it was decided that the club should devote its energies and funds to stocking with quail certain farms in the vicinity of Smithtown, Long Island, for the purpose of affording its members facilities for field sports, and that trap shooting should be abandoned by it. Last year the club tried the experiment of re-stocking, with gratifying results. Its membership is about twenty-five. Its officers are: Henry F. Aten, president; John L. Logan, vice-president; John E. McEwen, secretary; Isaac C. Monroe, treasurer.

The Fountain Gun Club has appropriately been styled the "banner club." It was the creation of necessity. Prior to 1876 membership of gun clubs was practically limited to expert manipulators of fowling pieces; and trap shooting was confined chiefly to sweepstakes or contests for cups, which represented the aggregate amounts paid by the contestants as entrance money. Skillful shots formed "combinations," whereby they agreed to divide winnings and share expenses. Novices soon became discouraged.

In May, 1876, a few of these tyros met at "Brown's," on the old Coney Island road, and inaugurated a shoot in an adjoining potato patch. The surroundings were "truly rooral." Refreshments were at hand on a table, composed of a board supported by two barrels. One ground trap was provided, and as each participant "toed the mark," the others formed a line beside him and the luckless bird became the target for their united efforts. If killed,

it was scored to the shooter who had been called to the front. Many "goose eggs" appear on these original records.

Soon these pastimes occurred at regular intervals of one month and the "lunch" gave way to a regular dinner which each member attended; and toasts and responses, having special reference to the incident of the day, were intermingled with songs and chorus. Under such fostering influences the members became closely united, and an *esprit du corps* prevailed to an extent far greater than in any of the rival clubs. Members of the older organizations applied for admission to the young society; and, having outgrown its swaddling clothes, it was incorporated May 10, 1877. Its objects are specified in the articles of incorporation to be as follows: "The particular business and object of such society shall be the enforcement of all laws and ordinances against killing and sale of game out of season; the prevention of unlawful and inhumane destruction of game; the improvement in the use of the gun and the fostering of a genuine social and sportsmanlike spirit among its members."

The leading sporting associations of the present day, on Long Island, include:

Rockaway Point Rod and Gun (The Cuckoos)—Shooting grounds, Rockaway Park, Rockaway Beach, Long Island. Membership limited to 12. C. Glier, president; J. Fleming, vice-president; Edw. F. Bourke, treasurer; E. J. Meyer, secretary, 257 Flatbush avenue, Brooklyn.

Steinway Gun—911 Steinway avenue, Long Island City. Organized 1890. 10 members. Jacob Schumann, captain; Charles Knueppel, secretary, 911 Steinway avenue.

RICHMOND.

Lehner's Rifle Club—02 Canal street, Stapleton, Staten Island. Organized 1889. 12 members. F. Winsch, president; August Meyer, treasurer; Carl Seidel, secretary.

West New Brighton Rifle Club—Broadway and Cary avenue. Organized 1897. 15 members. John F. Smith, president; Jacob F.

Seeger, treasurer; Robert R. Westbrook, secretary, 11 South street, West New Brighton, Staten Island.

QUEENS.

College Point Schuetzen Company—College Point. Organized 1884. 24 members. William Frese, president; Emil Vouarb, secretary. College Point.

Bay Shore Gun—Bay Shore, Long Island. Organized 1892. 20 members (limited). Grounds extend from Bay Shore to Islip. Stocked with quail. John H. Vail, president; J. R. Howell, secretary and treasurer, Bay Shore, Long Island.

Bellport Gun—Bellport, Long Island. Incorporated April, 1895. Dr. H. A. Mandeville, president; Alfred Wagstaff, secretary, 27-29 Madison avenue, Manhattan.

Brooklyn, E. D., Fishing Club—260 Humboldt street. Organized 1885. 25 members. Meets first Saturday. G. Gillen, president; H. Bachmann, secretary, 637 Bushwick avenue.

Carman's River—Brookhaven, Long Island. Peter B. Acker, president; Henry C. Wilson, treasurer; Alfred Wagstaff, secretary, 27-29 Madison avenue, Manhattan.

Carteret Gun Club—Garden City, Long Island. Organized 1883. 100 members (limited). Henry A. Gildersleeve, president; Walter H. Mead, secretary-treasurer, 67 Wall street, Manhattan.

Cedar Island—Cedar Island, near Babylon, Long Island. Organized 1892. Stephen C. Duryea, president; Carl S. Duryea, secretary, Babylon, Long Island.

Coram Gun Club—Coram, Long Island. Organized 1897. 16 members. T. J. Smith, president; A. S. Pittit, secretary, Fairground, Long Island.

Flushing Fishing—Anchorage, Hicks Beach, Flushing, Long Island. Organized 1896. 75 members. J. B. Schmelzel, president; George W. Pople, secretary, 183 Lincoln street, Flushing. Annual election, March.

Four Jacks Fishing Club—Rockaway Beach. Organized 1896. 150 members. R. H. Sherman, president; Max Berger, treasurer; Charles Watson, secretary, 1198 Myrtle avenue, Brooklyn.

Freeport Gun—Freeport, Long Island. Organized 1892. 37 members. T. D. Carman, president; E. A. Dorlon, secretary.

Gilbert Rod and Gun Club of Brooklyn—Club House, Amityville, Long Island. Organ-

ized 1894. 30 members. J. G. Tuthill, president; George W. Barnard, secretary, 63 Leonard street, Manhattan; W. K. Gilbert, treasurer.

Huntington Gun Club—Huntington, Long Island. Organized 1899. 30 members. Douglass Conklin, president; Lewis B. Smith, secretary. First and third Tuesdays.

Glenwood Fishing—Hempstead Harbor, Long Island. Organized 1882. 20 members. G. H. K. White, president; F. A. Brockway, secretary, 167 Willoughby avenue, Brooklyn; Russell Wheeler, treasurer.

Lexington Fishing Club—Goose Creek, Jamaica Bay. Organized 1891. 12 members. J. E. McElroy, president; A. McElroy, treasurer; G. V. Beckwith, secretary, Belmont avenue, near Crystal street, Brooklyn.

Long Island Meadow Club—19 West 30th street, Manhattan. 50 members. Dr. Edward Bradley, president; Burton Loomis, treasurer; Charles B. Bradford, secretary, Richmond Hill, Long Island.

Meadow Brook Hunt Club—Westbury, Long Island. Organized 1881. 100 members. William Jay, president; Egerton L. Winthrop, Jr., secretary and treasurer, 48 Wall street.

Medicus Rod and Gun Club—Headquarters, Interstate Park. Incorporated 1900. 50 members. Dr. A. A. Webber, president; Dr. C. E. Kemble, secretary, 905 Myrtle avenue, Brooklyn. Annual election, April.

Oceanic Rod and Gun Club—Rockaway Park, Rockaway Beach. Shoots clay birds October to April. L. H. Shortemeier, president; J. H. W. Fleming, secretary and treasurer, 19 East 28th street, Manhattan.

Old Farmers' Light Guard of Queens, Long Island—Organized 1877. 30 members. J. Krumenaeker, president; H. A. Herrmann, treasurer; Jacob Jacobs, secretary, Elmont, Long Island.

Olympic—Bay Shore, Long Island. Organized 1840. 50 members. James Kempster, president; James F. Wenman, secretary, 12 Old Slip, Manhattan; James J. McKenna, treasurer.

Pastime Fishing Club—Brooklyn. Timothy J. Dady, president; Peter Toy, secretary; William D. Watson, treasurer.

Patchogue Gun Club—Patchogue, Long Island. Organized 1898. 32 members. A. H. Carman, president; Warren U. Weeks, secretary.

Prospect Gun—Meadow Island, Jones' Inlet, Freeport, Long Island. Incorporated 1882.

35 members. Meetings at 518 Fulton street, Brooklyn. W. J. La Roche, president; Charles E. Hill, secretary, 141 Broadway, Manhattan.

Rassapreague—Smithtown, Long Island. Organized 1894. Has club house and over 100 acres on Nissequogue river stocked with game. Limited to 8 members. H. L. Terrell, secretary, 749 5th avenue, Manhattan. G. B. Schley, treasurer.

Richmond Borough Gun Club—Dubois Heights, Staten Island. Organized November, 1898. 17 members. William H. Allen, president; William J. Alston, secretary, Box 15, Castleton Corners, Staten Island.

Ridgewood Gun Club—Ridgewood Park, Long Island. Organized 1889. 25 members. Quaz Martin, president; A. Newburger, secretary, 1235 Hancock street, Brooklyn.

Riverhead Rifle Club—Riverhead, Long Island. Organized 1899. 25 members. S. Terry Hudson, President; William F. Flanagan, secretary treasurer.

Robins Island—Peconic Bay, Long Island. Organized and incorporated 1881. Owns Robins Island, buildings and wharves. Annual meeting in February. Eugene A. Hoffman, president; W. H. Force, secretary, 78 Front street, Manhattan.

Rockaway Beach Schuetzen Corps—Organized 1893. 50 members. George Gross, captain; George Griepenkerl, secretary.

Rockaway Hunting—Cedarhurst, Long Island. Organized 1882. 160 members. Annual meeting in March. George C. Rand, president; Newbold T. Lawrence, secretary, 51 Liberty street, Manhattan.

Rod and Gun Club (The)—Hempstead, Long Island. Organized 1898. 15 members. W. K. Bedell, president; George H. Baukney, secretary.

Southampton Sportsmen—Southampton, Long Island. Organized 1870. E. H. Moeran, president; Charles H. Coster, secretary and treasurer, 27 West 19th street, Manhattan.

Southside Sportsmen's—Oakdale, Long Island. Organized 1866. Membership 100. Annual meeting in March. George P. Slade, president; F. L. Hall, secretary.

Stereo Fishing—Canarsie, Brooklyn. Organized 1883. 26 members. A. H. Mahr, president; W. J. Hilton, secretary and treasurer, 435 2d avenue, Brooklyn.

Wa Wa Yanda Fishing Club—Cap Tree Island. Great South Bay. Organized May 13, 1878. 75 members. Charles A. Stadler, president; S. Popper, secretary, 260 West 93d street, Manhattan.

Wyandanch—Smithtown, Long Island. Organized 1872. 45 members. Annual meeting second Tuesday in January. John L. Hill, president; G. Walter, secretary, 45 Maiden Lane, Manhattan.

It may vary the round of the sporting and country clubs by referring here to another class of organizations which promises to grow in number and importance as time passes on and history adds, let us hope, to the honors, dignity and influence of these United States. We refer to the patriotic and commemorative organizations, chief of which, of course, in point of numbers, is the Grand Army of the Republic, which has already been referred to. Time was when the only one of such societies that existed was that of the Cincinnati, organized in 1783, but now they can be numbered by the score and run all the way from organizations of descendants of those who came over in the "Mayflower" and "Descendants of Colonial Governors" to the "Society of the Puerto Rican Expedition." Long Island has a share of such associations, but not, it seems to us anything like a full share. There is the "Colonial Daughters of the Seventeenth Century," of which Mrs. H. P. Halsey is President and Miss R. I. Halsey is Secretary, and which has ninety members, all of whom can trace their descent for at least two centuries. "The Society of Old Brooklynites," which has one hundred and seventy members, has Mr. Edward W. Cooper as its President and C. L. Young as its Secretary. It has accomplished a vast amount of good in preserving the memories of Brooklyn of long ago, and its monthly meetings in the Hall of Records are, as a general rule, well attended; the "St. Nicholas Society of Nassau Island," of which Mr. Tunis G. Bergen is President and Mr. W. T. Lane, Secretary, has a membership of some 300 and has proved a most vigorous and useful auxiliary to the organizations whose purpose is to gather and preserve the records of by-gone days in Long Island.

Brooklyn is the headquarters for the

society of "Prison Ship Boys—Children of the American Revolution," and the "Prison Ship Martyr Monument Association of the United States," both of which refer, of course, to the martyrs of the Wallabout. It is also the headquarters of the "Patriotic League of the Revolution," organized in 1884 to collect relics of the great conflict, and of the "Society of Settlers and Defenders of America," established in 1899. The purpose of this last organization is "to stimulate historical research, to publish patriotic manuscripts, to locate and protect historic sites, to collect colonial records, and to aid in the erection of libraries, museums, etc." It will be seen from this that the society has quite an extensive field of operations and must cover in its work almost every corner of the thirteen original states. Its membership is confined to those descended from a pioneer settler, a colonial resident or a Revolutionary patriot. Its President-General is Mr. W. L. Carter and Mr. G. B. Winthrop holds the office of Secretary.

The war with Spain, in Brooklyn met with as unqualified a degree of moral support as did the war for the Union, but somehow it did not arouse anything like the same excitement. Volunteering was brisk while it lasted, and Camp Black at Hempstead was for a time one of the military depots of the country, giving rise in Brooklyn, often, to scenes that recalled the Civil War days to the memory of the old residents. Then, too, the Navy Yard was the center of particular activity and as the scene of the building of "the Maine," the vessel whose destruction by a hidden torpedo in Havana Harbor led indirectly to the conflict, it was often visited by curious throngs. It is not our purpose here even to summarize the events of that conflict, which resulted in Uncle Sam acquiring new lands across the sea and taking on his honored shoulders new responsibilities and cares, but it may be said that the military spirit of Brooklyn showed itself, during its continuance, to be as potent as when "the first gun fired at Fort Sumter aroused the world," as the orators used to put

it. The record won by the Forty-seventh Regiment in Puerto Rico, and indeed all through its service, was in every way creditable to its own history and to the good name of Brooklyn, and as much at least may be said of Troop C and the Second Signal Corps. There were, it must be admitted, some disagreeable incidents in connection with other commands, but these arose from a misunderstanding on minor points rather than from any desire not to perform the duty of a soldier. In the war which freed Cuba and added Puerto Rico and the Philippines to the territory of the United States, Brooklyn contributed her full share, faithfully and loyally. In view of this it seems strange that Brooklyn should not have at least one Spanish-American War commemorative society, but that is a want which it is expected will ere long be supplied.

It is hard to tell how many clubs the bicycle gave rise to, some of them quite fashionable in their reservations and restrictions, but the fad has somehow passed over and the more expensive automobile has displaced interest in the humble and ever ready wheel. Boating clubs flourish on Long Island so numerous that possibly no complete record of them has ever been made, and many have only a brief existence, sometimes lasting only over a single season. Baseball and athletic organizations likewise are a plenty in every township, and their records are a part of the local story that often forms a leading theme for village gossip the whole year round.

One class of associations deserves more particular mention because of the good they accomplish in promoting social and family life as well as in developing in a pleasant way the resources of the territory in which they are located. That is the class known as country clubs, a class that is increasing steadily year after year, and is destined to continue to increase as life in the cities becomes more strenuous, more intense. The most prominent of these organizations within our scope is the

Long Island Country Club, which was organized in 1886. It owns 1,250 acres of land at Eastport and holds an additional 5,000 acres under lease, all of which are stocked with game and rigidly reserved. It has an ample club house and cottages for the use of its members, and year out and year in really performs a work that not only is attractive to its own large membership, but is really of public benefit by preserving intact so much of Long Island's old hunting grounds and keeping them well stocked in spite of the army of pothunters which yearly prowls around its fences.

Its trout ponds are generally fully stocked, and altogether membership in this organization is, as a New York merchant, who in his early days had been "raised" on a farm, once expressed it, "one of the delights of life." Its officers are: Dr. H. G. Preston, President; Otto Magnus, Vice-President; Ward Williams, Treasurer; James P. Philip, Secretary, 26 Court street, Brooklyn.

The other country clubs include:

Lawrence Club—Lawrence, Nassau county, Long Island. Organized 1892. 60 members. F. B. Lord, president; George Hewlett, secretary, 101 Wall street, Manhattan.

Maidstone—Easthampton, Long Island, Everett Herrick, president; Preston B. Spring, treasurer; S. T. Skidmore, secretary, 71 West 50th street, Manhattan.

Marine and Field—Bath Beach, Long Island. Organized and incorporated 1885. Annual meeting, second Tuesday in January. 400 members. William H. Garrison, president; George H. Usher, Jr., secretary, 253 Broadway, Manhattan.

Meadow Club, of Southampton—Southampton, Long Island. Henry E. Howland, president; Edward W. Humphreys, vice-president; Charles R. Henderson, secretary; Robert Olyphant, treasurer.

Ocean Country Club—Far Rockaway, Long Island. Organized 1900. Limited to 75 members. B. J. Einstein, president; S. Bier, secretary; C. Scheurer, treasurer.

Quogue Field Country—Quogue, Long Island. Dr. S. F. Morris, president; Orison B. Smith, 59 Frankfort street, Manhattan, secretary; Albert Van Wyck, treasurer.

Royal Arcanum Outing Club—Gravesend Beach. Winter quarters, Saengerbund Hall. Organized 1897. 125 members. John T. Ryan, president; John H. Petersen, secretary, 291 Pearl street, Brooklyn.

Smithtown Outing Club—St. James, Long Island. Organized 1896. 40 members. P. H. Butler, president; M. Blydenburgh, secretary, Smithtown Branch.

Westhampton Country—Westhampton Beach, Long Island. Organized 1890. Aaron P. Whitehead, president; Dr. W. B. Clark, secretary, 50 East 31st street Manhattan.

Akin to the country clubs are the riding and driving clubs, the principal of which are:

Bay Ridge Drivers' Club—C. W. Boberts, president; J. J. Lynch, secretary; F. Jacobus, treasurer.

Brooklyn—Rides Wednesday evenings, Bedford avenue, corner Atlantic. Membership, 20. A. Wierl, president; Ph. Corell, vice-president; William Bruorton, secretary, 394 Degraw street; Charles M. Heid, treasurer.

Parkway Driving Club—Boulevard and Kings Highway. Organized 1899. 300 members. Francis D. Creamer, president; William C. Allen, secretary and treasurer, P. O. Box 233, Brooklyn.

Pleasure Drivers' Association—Gilman's Hall, 1255 Bedford avenue. William M. Clark,

president; W. A. Carter, secretary, 72 Washington avenue, Parkville.

Riding and Driving Club of Brooklyn—Vanderbilt avenue and Prospect Park Plaza. William N. Dykman, president; E. H. Barnes, vice-president; Irving T. Bush, secretary; W. W. Walsh, treasurer.

Whip Club—Organized 1896, 25 members (limited). Hamilton H. Salmon, president; E. K. Austin, vice-president; G. Herbert Potter, secretary-treasurer; club house, Park Plaza.

The most noted of these organizations is the Riding and Driving Club of Brooklyn, which was organized in 1889. Its membership is limited to 400. Its building opened in the fall of 1891, and is one of the most commodious structures of its kind in the world. Architecturally its appearance betokens that beauty has been freely sacrificed to usefulness, and that in fact is also the main character of its interior accommodations. The main feature is the riding arena, 90 feet by 180 feet, and in the stalls 200 horses can be accommodated. The club was an exclusive organization at the beginning, and that exclusiveness it still retains, although in many respects it is the most generally popular of all the developments of Brooklyn's social life.

DITMAS HOMESTEAD.—FLATBUSH.

CHAPTER LVI.

OLD COUNTY FAMILIES.

FAMILY HISTORY AND STORY—PIONEERS, HEROES, MERCHANTS AND THEIR DESCENDANTS.

PROBABLY no family name was or is better known throughout Queens or Nassau county than that of Hicks, mainly, of course, on account of the celebrity which one at least of their number attained in religious circles. Most of them were Quakers of the most devoted class, intolerant of the wiles and vanities of this wicked world, and yet it is singular that they should one and all take pride in tracing the family descent from a warring knight, Sir Ellis Hix, who, the genealogical writers tell us, was one of the most trusted warriors of the Black

Prince and was knighted for his valorous deeds by that hero in 1356 on the battle-field of Poitiers. How the descent is proved it is not easy to say, but it seems satisfactory to the genealogists and to the family, and in such circumstances no one has any right to dispute the correctness of the tree. Only it is singular that such vanity should find expression in the circumstance. The first of the family to settle in America was John Hicks, who settled at Roxbury, Massachusetts, and had a family of six sons and three daughters. Two of the sons, John and Stephen, crossed to Long

Island in 1642 and settled in Hempstead, of which he became quite an active citizen, and he also acquired some property in Flushing. Stephen bought from the Indians an extensive tract of land at Little Neck and settled there. One evil-minded biographer asserts that John's son Thomas in time also acquired a tract of land at Little Neck after, according to tradition, quite a rude dispossession of the Indians who had held the land in question. There is, however, it must be confessed, some dubiety about this matter, and probably it arose from the fact that some unregenerate aborigines returned and squatted on lands which Thomas had received from his uncle. The family biographers, as we shall see, speak in the highest terms of Thomas Hicks, as is right and proper when we recall the fact that he was the ancestor of the most distinguished member of the Society of Friends that this country has produced. Many of the descendants of the pioneer brothers settled over Long Island and are to be found there, notably in Flushing, Hempstead, Rockaway and Oyster Bay.

The following sketch of the family and of the wonderful and useful career of Elias Hicks was written by one of the family, Mr. Isaac Hicks:

John Hicks settled at Hempstead, and it is from him that the extensive family of the name on Long Island and in New York are descended. Having been educated at Oxford University, he was a man of intelligence, and his natural force of character made him a leader in the youthful colony. He took an active part in public affairs, and his name appears in most of the important transactions of the time.

John Hicks left an only son, Thomas, who seems to have inherited his father's intellectual vigor and force of character. He occupied a prominent position in public and social life, and filled many places of trust and honor, among others that of the first judge appointed for the county of Queens, an office which he held for many years.

In 1666 he obtained from Governor Nicolls a patent for 4,000 acres, including Great Neck and lands adjacent. Here he erected a fine mansion and introduced the English manorial style of living.

He was a remarkable man in many respects, retaining his mental and physical powers unimpaired to extreme old age. A paragraph in the New York Postboy of January 26, 1749, states that "he left behind him, of his own offspring, above three hundred children, grandchildren, great-grandchildren and great-great-grandchildren." He died in his one hundredth year, and left, among other children, a son Jacob, who was the grandfather of the subject of this sketch.

Elias Hicks was born at Rockaway, Long Island, March 19, 1748. His parents, John and Martha Hicks, were in moderate circumstances, but owned a good farm and comfortable home, where their children had excellent moral training, but otherwise received only a very limited education.

His father being a Quaker, although not a very active member of that society, Elias early imbibed the principles of that sect, but during his youth, while apprenticed to a carpenter, seemed inclined to prefer the gay society of the young people of the neighborhood. As he grew older he developed a vigorous and active intellect, and evinced a steadfast devotion to his convictions of right and duty which was ever one of the most marked elements in his character. He early took decided ground against the iniquity of human slavery, and later in life was among the pioneers in the cause of emancipation in the Society of Friends. This was one of the battles that he felt called upon to fight in the cause of truth and justice, and he devoted the energy and ability of a long life to the faithful championship of the oppressed negro. His father was an owner of slaves, and in his youth Elias plead long and earnestly until he effected their emancipation. Later in life, when the estate of his father-in-law, who was also a slave-

holder, came to be divided, he resolutely refused to accept for his own share any portion of the money which represented the value of the slaves, but used it to purchase their freedom, and ever after took upon himself the care and support of those thus liberated; even leaving a bequest in his will for their maintenance in old age.

In 1775 he became a public preacher in the Quaker Society, and from that time until his death, when over eighty years of age, he was a faithful and tireless worker in what he believed to be the cause of truth and righteousness. He was especially earnest in the conviction that service in the ministry should be free, and without the selfish stimulus of earthly reward, and to this end he was scrupulously careful when traveling in the service of the society, and on all other occasions, to defray his own expenses.

During the exciting years of the Revolutionary war he carefully maintained the peaceful principles of his sect, and such was the confidence reposed in his high character that he was permitted, in the exercise of his religious duties, to pass six times through the lines of the contending armies. He was scrupulously just in his business affairs, holding in all cases the dictates of conscience to be superior to the fallible laws of man.

In his dress, the furniture of his house, and all outward things, he carried to the extreme the principle of plainness and simplicity advocated by his society. In person he was erect, of commanding stature, and possessed in a remarkable degree that intangible attribute which we denominate "presence." In social life he was dignified but kind, a little reserved in manner, and giving the impression of great intellectual force, combined with a stern devotion to the convictions of duty. Affable in bearing, and inheriting the courtly politeness of the old school gentleman of the last century, his society was much sought by intelligent people of all classes, who were attracted by his rare and varied gifts as a conversationalist.

His public addresses were not adorned with flowers of rhetoric, nor polished by scholastic learning, but were plain, logical discourses, delivered with a natural earnestness and eloquence which seemed to inspire his audience with a measure of his own strong faith, and to carry them onward to conviction in the principles he advocated with such force and sincerity.

His religious views were somewhat in advance of those popular in his day, and were the result of individual thought and experience, uninfluenced by theological reading or metaphysical study. While accepting, in its broadest sense, the Quaker doctrine that the Almighty Spirit directly influences the hearts of all mankind, and that a strict adherence to the manifestations of duty, as revealed to each individual soul, is the foundation of all true religion, he was disposed to assign a less exalted place to the Bible, as God's specially revealed guide to man, and to maintain the Unitarian view of Christ's divinity. He took strong and decided ground against the old-time belief in Satan's personal existence and active work in the world, holding that the weaknesses and unbridled passions of human nature were the actual and only evil spirit against which mankind had to contend. In his view God was all love, and he rejected every doctrine or theory that impugned the absolute wisdom and goodness of the Divine Being, or His universal affection for all the human family, however indorsed by conclave or synod. As it was his nature to think out his conclusions for himself, and then to take bold and fearless ground in maintaining his convictions of right, his advanced views naturally met with the disapproval of many of the conservative members of his society, and after a few years of excited discussion the Quakers in America divided into two separate bodies, which have ever since remained distinct. Those who united with the sentiments of Elias were called Hicksite, and those opposed to him Orthodox, Quakers. The former are the most numerous about New York, Philadelphia and

Baltimore, while the latter compose the bulk of the society in the New England and Western States.

Like most celebrated men of strong will and earnest convictions of duty, Elias Hicks made a decided impression upon the religious thought of his time, although the circumscribed limits within which the customs and principles of the Quaker Society of that day confined his labors prevented his working in connection with other associations; thus restricting his efforts to the endeavor to promote a higher standard of Christian life among his own religious associates.

During his long and active career he was constantly traveling about the country, addressing the meetings of his society, and wherever he went large and deeply interested audiences gathered to greet him. His noble presence and eloquent words made lasting impressions upon his hearers, the memory of which was ever afterward cherished in affectionate hearts and has been handed down with a feeling of reverence to a later generation.

Elias Hicks died at Jericho, Long Island, on the 27th of February, 1830.

Many old families were represented among the residents of Flushing before it was opened up by modern improvements so as to develop into a metropolitan suburb. The Thornes could trace their descent to William Thorne, who settled on a neck of land which was called Thorne's Point until the name was supplanted by its modern designation of Willett's Point. The family were all intensely patriotic during the Revolution, and one died while a prisoner on a hulk in Wallabout Bay. The Cornell family claimed connection with Flushing from 1643, when Richard Cornell, a sturdy Quaker, settled within its bounds, and after a life of exceeding usefulness left a large family, by whom the name was retained in the front rank. The Lowerres were originally Huguenot refugees, and came to America in 1660 or thereabout, gradually developing into Quakers as time went on. These words might also be ap-

plied to the Embree family and to that of the Van Zandts.

Jamaica also furnishes the local historian with records of many old families, chief among whom is that of King. This family came to Long Island, where Richard King had long been a successful merchant. There his son, Rufus King, the most famous of the family, was born in 1755. He was educated at Harvard, where he was graduated in 1777, and then studied law in an office at Newburyport. His studies were somewhat disturbed by his becoming an aide to General Sullivan in that hero's Rhode Island expedition, but after its disastrous termination he was honorably discharged and returned to his desk. After he was admitted to the bar he rapidly won quite a prominent place, and as a member of the General Court of Massachusetts, to which he was elected, he was soon distinguished by the clear manner in which he handled all of the many pressing public questions then before that body. In 1784 he was elected to Congress, and was returned again in 1785 and 1786. In 1785 he offered his famous resolution that "there should be neither slavery nor involuntary service in any of the States described in the resolution of Congress in April, 1784, otherwise than in the punishment of crime, whereof the party shall have been personally guilty; and that this resolution shall be made an article of compact and remain a fundamental principle of the constitution between the original States and each of the States named in the said resolve." This was not pressed to a vote at the time, but the principle laid down was adopted in the ordinance of 1787 for the government of the Northwestern territory. In the movement to strengthen the Federal authority, which began to agitate the country almost as soon as peace was declared, Rufus King took a prominent part, his views being in favor of a strong central executive authority. He was recognized as one of the leaders, with Alexander Hamilton, of the Federalist party, and by voice and pen strove

mightily that its principles might prevail. In 1788 he was chosen Senator along with General Schuyler from New York, and was re-elected in 1795. But higher honors awaited him. He was offered the Secretaryship of State, and declined, but accepted the post of Minister to Great Britain. He left New York in 1796, and for eight years continued to represent his country at the court of St. James, although during the latter part of the time he was not in political sympathy with the then President (Jefferson). In 1804 he asked to be relieved, and when his successor was appointed returned to America and retired to a beautiful farm he had purchased at Jamaica. Thus began the long and honorable connection of his name with the good old village. There he mainly resided, keeping a watchful eye on public affairs, until 1813, when he was again elected to the United States Senate, and continued to serve until 1825, when he retired, as he hoped, to enjoy the leisure he had so richly earned. In reviewing his career in the Senate chamber we are unable to recall any policy advocated by him which was not wise, just and eminently patriotic, and his stanch opposition to slavery, to the indiscriminate sale of the public lands, sales often made upon credit and without guarantee, and in particular his opposition to the scheme of a political bank with a capital of \$50,000,000 pledged by the government, showed that, strong Federal as he was, he was unwilling to lend aid to a scheme which in a few years would either have become bankrupt itself or would have paralyzed and bankrupted the trade of the country. In 1825, at the earnest solicitation of President Adams, Rufus King again entered public life by accepting once more the post of Ambassador to Great Britain, but after a few months' residence in London his health failed and he was compelled to resign. He died in New York City April 29, 1827.

The mantle of Rufus King fell upon his eldest son, John Alsop King, who developed much of his father's public spirit and high

statesmanship. Educated for the bar, he had a taste of military experience during the war of 1812, when he served as a lieutenant in a cavalry regiment. He took up his residence near his father's home in Jamaica, and engaged in farming, but in 1819 was elected a member of the New York Assembly, where he soon became noted for his opposition to the policy and plans of De Witt Clinton, with the exception of that statesman's canal projects, which he heartily endorsed. He went to London with his father in 1825 as secretary of legation, and remained in charge of the affairs of the embassy from the date of his father's resignation until the arrival of the next appointee. In 1838 he was again returned to the Assembly, took part in 1855 in the convention at Syracuse at which the Republican party was born, and in 1856 was elected Governor of the State of New York. He declined a re-election, and when his term was over retired to his home in Jamaica, where he continued to reside until his death, in 1867. His widow survived until 1873, and then passed away, venerated by all who knew her for her kindly ways and Christian, beautiful life. Of her many benefactions to Grace Church, Jamaica, as well as the many gifts to that temple of other members of the King family, mention has already been made. The family is still prominently represented in public and commercial life, although their connection with Jamaica has almost become a memory.

A group of Jamaica families claim descent from Joris (or George) Jansen de Rapalje, who with his brother William came to America from Holland in 1623 in the same vessel with Peter Minuit, and from another brother, Antonie Jansen, who followed them in 1623. It is not certain that William ever married, but Joris founded the Wallabout family of Rapaljes, of whom we have spoken considerably, while Antonie, who married a Quakeress, had four sons, and they appear to have departed from the old Dutch custom in the way of transmitting surnames and stuck to the Jansen,

which in due process of time became transformed into plain Johnson and as such became prominent in Kings as well as in Queens county. A family genealogist thus describes the fortunes of the Jamaica Johnsons and their collateral branches:

Hendrick Jansen, the youngest son of Antontie, settled at Gravesend and married a Stillwell, by whom he had four sons: 1, Jan (John), who settled at Jamaica, Long Island; 2, Claes, who settled at Six Mile Run, New Jersey; 3, Barent, who settled at Gravesend; 4, William, who settled at Gravesend. Barent, the third son of Hendrick, was the father of the Rev. John B. Johnson, a noted preacher of the Reformed Dutch Church, who was settled first at Albany, New York, and afterward at Brooklyn, where he died in 1803. Rev. John B. Johnson had three children: 1, Maria L., who married the Rev. Evan M. Johnson, rector of St. James's Church, Newtown, Long Island, from 1814 to 1827, when he removed to St. John's Church, Brooklyn; 2, Rev. William L. Johnson, D. D., who from 1830 to the time of his death (1870) was rector of Grace Church, Jamaica, Long Island; 3, Rev. Samuel R. Johnson, D. D., who was rector at different times of several Episcopal churches, and professor in the Episcopal Theological Seminary, New York City. Hendrick's children changed the Holland name Jansen to the English name Johnson, yet the Holland name was retained for many years in the family records.

John Johnson, the oldest son of Hendrick, was born at Gravesend, Long Island, December 5, 1705. He married (September 23, 1732) Catalina Schenck, who was born May 7, 1705. They had seven children: 1, Maria, born August 11, 1733, married Douw Ditmars, of Jamaica; 2, Catalina, born August 15, 1735, remained unmarried; 3, Elizabeth, born November 21, 1737, married Abraham Ditmars, of Jamaica; 4, Barent, born April 2, 1740, married Anne Remsen; 5, Martin, born October 25, 1742, married Phebe Rapalje; 6, Catharine, born February 18, 1746, died in infancy;

7, Johannes, born July 25, 1748, died in infancy. John Johnson held office in the Reformed Dutch Church at Jamaica. He died March 27, 1776. His wife died October 5, 1779.

Martin Johnson, of Jamaica, born October 25, 1742, married (May 10, 1772) Phebe, daughter of George Rapelje, of New Lots. She was born February 25, 1754. Their children were: 1, Catalina, born May 14, 1773, married (November 5, 1791) John D. Ditmis, of Jamaica, and had children Martin, Dow I., John, Abraham, Phebe, Maria, Catalina and George; 2, Maria, born August 20, 1775, died in infancy; 3, Johannes (John), born February 27, 1777, died in infancy; 4, Maria, born May 10, 1778, married (November 30, 1798) Rem Suydam, of Newtown, and had children Phebe, Catalina, John, Maria, Nelly, Martin, Gitty, and George and Henry (twins); 5, Johannes (John), born September 26, 1780, died in infancy; 6, Martin, born March 14, 1782, died in infancy; 7, Phebe, born July 19, 1783, married (December 11, 1800) John I. Duryea, and had children Jane Ann, Maria, Alletta, Martin I., Sarah, Catalina and John I.; 8, Martin, born September 13, 1785, died in infancy; 9, Elizabeth, born January 25, 1788, married Willett Skidmore, and had children Phebe and Samuel; 10, Jannetie (Jane), born May 15, 1790, died in infancy; 11, Joris (George), born August 30, 1791, married (June 28, 1815) Catharine Snediker, and had children Martin G., Catharine and Phebe; 12, Johannes (John), born May 17, 1794, married (August 22, 1815) Maria Lott, and had children Martin I., Stephen, Phebe, Eldert, George, Maria Ann, Catalina, Henry, Jeremiah, Sarah, Ditmars and Catharine; 13, Jannetie (Jane), born February 22, 1797, died in infancy.

Martin Johnson, the grandfather of Martin G., died April 27, 1798. Phebe, his wife, died October 27, 1828.

Martin Johnson was earnest in the cause of independence, and was compelled to give

up the best part of his house to the British officers, who occupied it while their army was encamped at Jamaica. He and his family were greatly discommoded, but it was better to submit quietly than to object and perhaps suffer more. Martin Johnson was an active member and an elder of the Reformed Dutch Church, and one of the committee to repair the church edifice after the Revolutionary war, during which it was dismantled by the British soldiers. He was one of the contributors to the fund for founding Union Hall Academy. The first building was erected on the south side of Fulton street, where Herriman's brick row now stands, and was opened May 1, 1792. Here his sons George and John were educated. when Lewis E. A. Eigenbrodt, LL. D., was principal, which position he held from 1796 to 1828.

George Johnson, born August 30, 1791, married (June 28, 1815) Catharine Snediker who was born December 5, 1788. They had three children: 1, Martin G. Johnson, born April 26, 1816, married (May 31, 1859) Margaret T. Nostrand, who was born February 19, 1815—no children; 2, Catharine Johnson, born July 8, 1819, married (May 13, 1856) Elias J. Hendrickson, who was born August 10, 1812—no children; 3, Phebe Johnson, born January 4, 1824, married (June 19, 1854) George O. Ditmis (who was born July 22, 1818), and died December 27, 1866. James Hendrickson, the father of Elias J., was an elder and one of the pillars of the Reformed Dutch Church of Jamaica.

George O. and Phebe Ditmis had six children: 1, Catharine, born November 26, 1856; 2, Georgianna J., born May 5, 1859; 3, John D., born December 18, 1860; 4 and 5, Martin G. J. (born January 30, 1862, died February 18, 1878) and Margaret N., born January 30, 1862, died in infancy; 6, Caroline Maria, born November 9, 1863, died in infancy.

George Johnson, the father of Martin G., held at different times the town offices of su-

pervisor, commissioner of common schools, inspector of common schools, inspector of election, commissioner of highways and assessor. He was an elder in the Reformed Dutch Church of Jamaica, and one of its most liberal supporters. He died May 14, 1865. His wife died December 15, 1858.

A short genealogy of the Johnson family is as follows: Gaspard Colet de Rapalje, from France, married the daughter of Victor Antonie Jansen, in Holland, by whom he had two sons and a daughter Breckje, who married her cousin, Victor Honorius Jansen, who was the father of Abram, who was the father of Antonie, who was the father of Hendrick, who was the father of John, who was the father of Martin, who was the father of Georçé, who was the father of Martin G.

THE SNEDIKER FAMILY AS CONNECTED WITH THE JOHNSON FAMILY.

Jan Snediker, the common ancestor of the Snediker family, came from Holland to this country as early as 1642, and was among the first settlers of Flatbush, and his name appears in the patent of New Lots, 1667; by his will (1670) he devised his land to his son Gerret. (New Lots was then part of the town of Flatbush.)

Gerret Snediker, of New Lots (son of Jan), married; first, Willemetje Vocks; second, Elstje Denyse; he died in 1694. Children: Jan of Jamaica, Margaret, Christian of Jamaica, Abraham, Isaac of New Lots, Sara, born 1683 (married Adrian Onderdonk); Gerret and Elstje.

Abraham Sned'ker, of New Lots (son of Gerret), born 1677, married and had children Abraham, Johannes, Gerret, Theodorus, Elizabeth, Altie and Sara.

Isaac Snediker, of New Lots (son of Gerret), born 1680, married Catryntje Janse; died in 1758. Children: Garret, Abraham, Antie, Sara, Isaac, Catryntje (born 1721, married

Douwe Ditmars), Jacob of New Lots, Femmetie (Phebe), and Elstje, born 1731.

John Snediker, of New Lots, married Neiltje, daughter of Johannes Lott, of Flatbush; she was born November 13, 1730. They had a son, Isaac I. (grandfather of Martin G. Johnson).

Isaac I. Snediker, of New Lots (son of John), born July 17, 1759, married Catharine, daughter of Jacob Rapelje, of Newtown. She was born January 18, 1760. They had four children: 1, Jacob, born May 18, 1787, died in infancy; 2, Catharine, born December 5, 1788 (the wife of George Johnson and mother of Martin G.), died December 15, 1858; 3, Nelly, born November 5, 1790, married (October 5, 1815) John E. Lott, of New Utrecht, Long Island (who was born December 16, 1789), had one daughter, Catharine, and died May 1, 1866; 4, Jacob, born November 2, 1792, married (March, 1822) Anne Lott, daughter of Hendrick Lott, of Jamaica; no children.

Jacob Snediker belonged to the Reformed Dutch Church of New Lots, and was one of its firmest friends and supporters. He died September 20, 1859. His wife died August 22, 1867.

Isaac I. Snediker (father of Jacob) died February 1, 1804. His wife died September 9, 1796.

The Snediker homestead, on which Jacob Snediker and his forefathers were born and lived and died, is situated on both sides of the New Lots road, at the crossing of the New York & Manhattan Beach Railroad and the Brooklyn & Rockaway Beach Railroad. The house, probably two hundred years old, still stands in a good state of preservation. This farm originally extended to what is now the center of East New York; but Jacob Snediker sold forty-five acres of the northerly part to Whitehead Howard, and sixty-nine acres of the middle and easterly part to Abraham Vanderveer. The homestead still belongs to the

heirs of Jacob Snediker. It has been in the family 215 years.

THE NOSTRAND FAMILY AS CONNECTED WITH THE JOHNSON FAMILY.

The Nostrand family derives its origin from Hans Jansen, who came to Long Island in 1640 from the Nootstrandt, in the duchy of Holstein. He married Janneken Gerrits Van Leuwen, and had four sons—Jan, Gerrit, Peter and Folkert. His sons adopted the name of the place from which their father emigrated, which in the course of time has been changed to the present to the present name, Nostrand. Different branches of the family have in former times lived and their descendants still live in New York, Brooklyn, Flatbush, New Utrecht, Flatlands and New Lots, Kings county; in Jamaica, Flushing and Hempstead, Queens county; and in Huntington, Suffolk county.

Margaret T. Nostrand, the wife of Martin G. Johnson, is the daughter of Timothy Nostrand, who for many years was a merchant in New York. When he retired from business he bought the farm on which his son George now lives, situated on the Brooklyn & Jamaica Plank Road, one mile west of the village of Jamaica, where he died December 21, 1831. Her grandfather, John Nostrand, owned and lived and died on the homestead farm at Valley Stream, in the town of Hempstead; it descended to his son, John Nostrand, Jr., and there he lived and died; after his death it belonged to his son Foster, who also lived and died there. On this farm Timothy Nostrand was born, February 8, 1767.

Timothy Nostrand married first (September 27, 1793) Garchy, daughter of John Suydam, of Newtown. Their children were: Sarah, born October 1, 1794, married James Bogart, died October 14, 1845; and John S., born March 16, 1796, who died, unmarried, February 6, 1836. Timothy Nostrand married, second (September 8, 1804), Catharine,

daughter of Stephen Lott, of Jamaica. Their children were:

1. Stephen L., born August 31, 1805, married (January 30, 1826) Cornelia L. Remsen, of Flatlands. They had one child, Catharine Ann, who married Jacob Ryerson, of Flatlands.

2. Garchy (Gitty) Am, born March 16, 1807, died, unmarried, January 8, 1831.

3. George, born February 5, 1809, married first (March 26, 1846) Mary Bogardus. They had one child, Henry L. Nostrand, who married Phebe W., only child of Dominicus Vanderveer, of Jamaica. George married secondly (October 12, 1859) Cornelia C. Van Sicken, of Jamaica. No children.

4. Catharine L., born December 31, 1810, married (April 7, 1836) Dr. Richard T. Horsfield, of New York. Their children are: Richard T., Timothy N. (who married Sophia Frisbie), and Catharine L. (who married John K. Underhill). Catharine L. Horsfield died February 2, 1879.

5. Margaret T., born February 19, 1815, married (May 31, 1859) Martin G. Johnson. No children.

6. Timothy, born April 21, 1817, married first (October 19, 1853) Catharine Lott, of New Utrecht (cousin of Martin G. Johnson). Their children were: Ellie (deceased), J. Lott, T. Foster, Margaret (deceased) and George E. Timothy married, secondly Belinda Hegeman, of New Utrecht, who survives him. He died December 6, 1878.

All the children of Timothy Nostrand, Sr., are dead except George Nostrand and Margaret T., wife of Martin G. Johnson.

Timothy Nostrand, Sr., was one of the most prominent members of Grace Church, Jamaica, and was for many years warden, and for several years, and at the time of his death, senior warden. The following notice of his death appears on the records of the church, January 2, 1832:

"The vestry have heard with deep regret of the decease of Mr. Timothy Nostrand, their

clerk, the senior warden of this church, and treasurer, and sincerely condole with the congregation with whom he was connected, and with his family, in the great bereavement they have been called to sustain; and we implore the Divine compassion on them that this afflictive providence may be sanctified to them, and to the church of which he was a member."

He was a member of Assembly of the State of New York, and a trustee of Union Hall Academy. He died December 21, 1831. His wife Catharine died February 13, 1860.

THE DITMARS FAMILY AS CONNECTED WITH THE JOHNSON FAMILY.

Jan Jansen Ditmars, the common ancestor of the family, emigrated from Ditmarsen, in the duchy of Holstein. He married Neeltie Douws; obtained a patent March 23, 1647, for 24 morgens, at Dutch Kills, Newtown, Queens county; died prior to 1650.

Douw Jansen Ditmars resided first at Flatbush, and finally settled at Jamaica. His first name was variously spelled Douwe, Douw, Dowe and Dow, and his surname Ditmarse, Ditmīs, Ditmas and Ditmars. He held office in the Reformed Dutch Church, Jamaica, and died about 1755.

Abraham Ditmars, of Jamaica, married (June 18, 1725) Breckje, daughter of Abraham Remsen, of Newtown, and died on his farm at Jamaica, August 7, 1743. He was the father of Douw Ditmars and Abraham Ditmars, Jr., the two brothers who married two sisters, Maria and Elizabeth, the daughters of John Johnson, of Jamaica (great-grandfather of Martin G. Johnson).

Douw Ditmars, of Jamaica, born August 24, 1735, married Maria, the oldest daughter of John Johnson, of Jamaica. They had five children, John D., Abraham, Breckje, and Maria and Catalina, who were twins. He was an office holder in the Reformed Dutch Church. He died August 25, 1775.

John D. Ditmīs, of Jamaica (son of Douw

Ditmars), married (November 5, 1791) Catalina, the oldest daughter of Martin Johnson (grandfather of Martin G. Johnson). They had eight children: Martin, Dow, John, Abraham, Phebe, Maria, Catalina and George, who are all deceased except Maria.

Dow I. Ditmis, son of John D., married (April 22, 1817) Catharine Onderdonk, of Cow Neck (Manhasset). Their children are: George O., John and Jacob Adrian Ditmis, all of Jamaica. Henry Onderdonk, Jr., A. M., married Maria H., sister of Catharine Onderdonk, wife of Dow I. Ditmis.

Abraham Ditmis, son of John D., married (April 18, 1827) Katie Onderdonk, of Cow Neck (Manhasset). They had one child, Henry O. Ditmis.

John D. Ditmis held the military office of major; he was a member of Assembly in 1802 and 1804, and a State Senator from 1816 to 1820, and held the office of Surrogate of Queens county. He was a trustee of Union Hall Academy; he belonged to the Reformed Dutch Church. He died March 11, 1853; his wife July 6, 1847.

Abraham Ditmars, Jr. (son of Abraham, of Jamaica), born December 9, 1738, married Elizabeth, the third daughter of John Johnson (great-grandfather of Martin G. Johnson). They had four children—Abraham, born October 6, 1760; Catalina, born September 20, 1762, married Samuel Eldert, of Jamaica; John A., born April 9, 1766; and Dow, born June 12, 1771.

John A. Ditmars married Nancy, daughter of Johannes Wyckoff, of Jamaica. They had three children—Margaret Ann, A. Johnson and Elizabeth, all deceased.

Elizabeth Ditmars married (December 30, 1839) Martin I. Johnson, who was for some years, and at the time of his death, county clerk. He was the eldest son of John and Maria Johnson, and cousin of Martin G. Johnson. Martin I. and Elizabeth are both deceased, but one son, A. Ditmars Johnson, of Jamaica, survives them.

Dow Ditmars, son of Abraham Ditmars, Jr., studied medicine, and went to Demarara, South America, where he had a lucrative practice for fourteen years. When he returned he married Anna Elvira, daughter of Samuel Riker, of Newtown, and bought a farm at Hell Gate (now Astoria), where he spent the remainder of his life, and died, at an advanced age, in 1860. Their children were Thomas T., Richard R., Abraham Dow and Anna. They are all deceased but Abraham Dow Ditmars, who is a lawyer in New York.

Abraham Ditmars, Jr., held office in the Reformed Dutch Church, Jamaica, and so did his son, John A. Ditmars.

Abraham Ditmars, Jr. (father of John A.) was a captain of militia in the Revolution. He was known among the British soldiers who were quartered at Jamaica as the "rebel captain," and he suffered much from their depredations. They stole the crops from his farm, the provisions from his cellar, and all of his fowls but one, which went to the top of the barn to roost. One day the soldiers ordered him and his family to leave the house, as they intended to burn it. He had to obey, and his sick wife was taken on a bed and placed in the dooryard! But it seemed that an Almighty Power interposed; the consciences of the fiends stung them, and the dreadful threat was not executed.

So great became the demands upon him for the produce of his farm, and for the use of his men and teams for carting the supplies of the British army, that he at last refused to comply. For this the petty officer who made the demand arrested him, took him to the village of Jamaica, and locked him up in the dungeon in the cellar of the old county hall, which stood on the spot now covered by Herriman's brick row. He was confined until the next day, when he was brought before a superior officer of the British army, to whom he made a frank statement of the sufferings he had endured, and of the unreasonable claims continually made upon him. The officer at once gave him

an honorable discharge; and at the same time severely reprimanded the underling who had arrested him. This decision had a good effect, as he afterward did not suffer much annoyance. It is proper to say that the highest British officers always condemned the cruel and barbarous acts which were committed by the dregs of the army.

The home of Abraham Ditmars, Jr., was the farm of the late William C. Stoothoff, one and a half miles southwest of the village of Jamaica, and the old house, in which he lived and died, still remains. The home of his daughter Catalina, who married Samuel Eldert, was the old house on Eldert's lane now belonging to Henry Drew; and the old house on the Brooklyn & Jamaica Plank Road now belonging to Dominicus Vanderveer was formerly the home of Douw Ditmars, of another branch of the Ditmars family. It is a singular circumstance that these three old houses, probably the oldest in the town, should all have belonged to members of the Ditmars family. They still stand as monuments of the solid style of building of the early Dutch settlers.

Abraham Ditmars and Abraham Ditmars, Jr., were contributors to the fund for building Union Hall Academy, and were two of the first trustees at the time its charter was signed by Governor Clinton, March 9, 1792.

Abraham Ditmars, Jr., died November 19, 1824.

John A. Ditmars was colonel of the State militia in the war of 1812, and he and his cousins George and John Johnson and their nephew Dow I. Ditmis were encamped at Fort Greene (now Washington Park), Brooklyn. They were under the command of General Jeremiah Johnson, of Brooklyn, who was the cousin of George and John Johnson and John A. Ditmars. There our soldiers were for some time, in daily expectation of the landing of the British forces, whose vessels of war were lying off the harbor of New York; but the British wisely concluded to depart without landing.

INTERMARRIAGES OF JOHNSON, DITMARS AND RAPELJE FAMILIES.

The union of the Johnson and Ditmars families in this country began by the marriage of two sisters of Martin Johnson, Maria and Elizabeth, daughters of John Johnson, of Jamaica (great-grandfather of Martin G.), to two brothers, Douw and Abraham Ditmars, of Jamaica.

Catalina, daughter of Martin Johnson, of Jamaica (grandfather of Martin G.), married John D. Ditmis, the son of Douw.

Martin I. Johnson, a great-grandson of John Johnson above named, married Elizabeth, daughter of John A. Ditmars.

Phebe, daughter of George Johnson, of Jamaica, married George O. Ditmis, a grandson of John D. Ditmis.

Victor Honorius Jansen, of Holland, married Breckje Rapalje (written by different families Rapalje, Rapelje, Rapelye and Rapelyea). Martin Johnson, of Jamaica, married Phebe Rapelje. General Jeremiah Johnson, of Brooklyn, married Sarah Rapelje.

Breckje, sister of John D. and daughter of Douw Ditmars, of Jamaica, married (December 29, 1791) Peter Rapelje, of New Lots. Their children were Jacob, Dow and Peter.

Maria and Catalina were twin daughters of Douw Ditmars, of Jamaica, and sisters of John D. and Breckje Ditmars. Maria married Jacob Rapelje, of Newtown. They had one child, Susan. Catalina married John R. Ludlow, of Newtown. She was his second wife. They had one son, Ditmars.

Susan, the only child of Jacob and Maria Rapelje, married the Rev. Gabriel Ludlow, D. D., who for many years, and at the time of his death, was pastor of the Reformed Dutch Church at Neshanic, New Jersey. He was the son of John R. Ludlow by his first wife. Another son was John Ludlow, D. D., who was twice professor in the Theological Seminary, New Brunswick, New Jersey, for many

years pastor of the Reformed Dutch Church at Albany, and afterward provost of the University of Pennsylvania.

OTHER FAMILIES.

The Hallet family formerly had many representatives in Jamaica, although Newtown seems to have long been more prominently associated with the name than any other locality. The pioneer of the family, William Hallet, settled in 1655 at what became known as Hallet's Cove, and, as we have seen, had quite a melancholy experience with the Indians. He survived his troubles, married a Quakeress and settled at Hell Gate until his death, when he had attained the age of ninety years. His descendants were long known as thrifty farmers, and seem to have spread all over the western end of Long Island. They were devoted adherents, most of them, of the Society of Friends, and in the persecution of these people by the authorities they seem to have been visited with a full share. In connection with the history of this family a story is told in Riker's "Annals of Newtown," which long created a deep sensation throughout the district and still, for its heartless atrocity, holds a prominent position in the criminal annals of Long Island. The details as given by Riker were as follows:

"Very near the present settlement of Middletown there lived a thrifty farmer, William Hallett, Jr., who held a portion of the land which his paternal grandfather had purchased of the natives. Near neighbors there were few or none, but his domestic hearth was enlivened by the presence of five children and a fond wife who was expected soon to add another to their store of conjugal comforts. In the family were two colored slaves, a man and wife, the former an Indian. Incensed, as was said at the time, because they were restrained from going abroad on the Sabbath, the woman meditated revenge and assured her husband that if he would only kill the whole family

then the farm and everything pertaining to it would become his own. He at last yielded to the wicked suggestion and accomplished the atrocious deed while his victims were asleep. It was on Saturday night, the 24th of January, 1708. Hoping to screen themselves from suspicion, they concluded to be the first to announce the tragedy, and with this intent the female fiend, the prime instigator of the deed, set out early the next morning for Hallett's Cove. Entering a house, her first exclamation was: "Oh, dear! they have killed master and missis and the children with an axe, and only Sam and I have escaped." The truth, however, was too palpable, and the guilty creature soon confessed who was the real murderer. Both were straightway arrested and lodged in Jamaica jail. Tidings of the affair were at once sent to Governor Cornbury, who immediately issued a special warrant to the judges, before whom, at Jamaica, the prisoners were arraigned for trial, and being found guilty, they were executed on the plains east of that village, on Monday, February 2d, in the presence of a large concourse of spectators. The woman was burnt at the stake. Her accomplice was hung in gibbets and placed astride a sharp iron, in which condition he lived some time; and in a state of delirium which ensued, believing himself to be on horseback, would urge forward his supposed animal with the frightful impetuosity of a maniac, while the blood oozing from his lacerated flesh streamed from his feet to the ground. How rude the age that could inflict such tortures, however great the crime committed! * * * Mr. Hallett was a son of Captain William Hallett, then one of His Majesty's justices of the peace. He was in the prime of life, and had served the town in various public capacities.

"The event which so prematurely terminated his life and those of his family produced a strong sensation in the province, and a law was passed shortly after, making mention of the occurrence and entitled 'An act for preventing the conspiracy of slaves.' The dwell-

ing where the murder was committed is still (1852) remembered by many, it having remained until the beginning of the present century. It was built of brick and stood in the hollow on the west side of the road, opposite the late residence of Mr. Marks and within a few feet of the small house now erected there. The well which belonged to these premises remains still in use. With this spot the juveniles were wont to associate the idea of ghosts and hobgoblins; it was noted as the scene of marvelous appearances witnessed by the timid traveler at the dim, mysterious hour of twilight, and was often pointed at by the passing school boy as "the haunted house." By some it is stated that the assassination of the Hallett family was only part of a plot among the slaves of the vicinity to possess themselves of the property of their masters. There must have been some evidence in support of this theory, for it is related that on Tuesday, February 10th, a week and a day after the execution of the murderers, two negro men were put to death for complicity in the crime and several others had been arrested and were awaiting trial. Yet, had the murderous movement been a general one, it would doubtless be recorded that still others were punished. In the absence of such a statement it is fair to presume it was not."

The Burroughs family in Newtown can trace its American genealogy back to 1637, when John Burroughs landed in Salem, Massachusetts. In 1643 he seems to have settled in Newtown, where he occupied a farm that remained intact in the possession of his descendants until about 1835. Another noted Newtown family was that of the Rikers, whose American ancestor, Abraham Rycken or de Rycke, received a grant of land at the Wallabout from Governor Kieft in 1638. He got possession of what is now known as Riker's Island about 1650. His sons Abraham and Andrew proved shrewd business men, and their extensive land purchases made them rich. Abraham was a public-spirited citizen of New-

town, and took a prominent part in the erection of the old Dutch Church there.

The Lent family is of common origin with the Riker family, being descended from Ryck and Hendrick, the eldest and youngest sons of Abraham Rycken, who, for reasons not clearly known, renounced their own name and assumed the name of Lent. Abraham Lent, son of Ryck, came from Westchester county to Newtown in 1729 and took possession of a farm left him by his uncle, Jacobus Krankheyt, on Bowery Bay. He resided here until his death, in 1746, when his son Jacobus, for years a ruling elder in the Dutch Church, succeeded to the farm. His death occurred in 1779. Daniel Lent, youngest son of Jacobus, was the last of the family who occupied this estate. It was sold just prior to his death, which occurred April 20, 1797. Daniel, his only child that survived infancy, removed to Flushing Bay, and for years resided upon the farm.

The Alsop family goes back, or could go back if any of its representatives still exist, which is doubtful, to the roll of the first settlers of Newtown. Thomas Wandell, a major in Cromwell's army, seemed to get involved in some dispute with the Lord Protector,—a dispute, whatever its nature, so serious that Wandell had to fly for his life. He made his way across the Atlantic, and in 1648 we find him in Maspeth. In 1659 he bought a farm at Newtown and took up his residence there, marrying the widow of its former owner. He was quite an influential member of the local society, and was held in high esteem even on Manhattan Island. Having no children, he invited a nephew in England to join his fortunes with his in this country, and when he died, in 1691, he left his estate to that nephew, Richard Alsop. That young man had "taken" to the new country almost as soon as he arrived. He fell in love with a Dutch lady, but as she could speak no English and he did not know a word of Dutch, the billing and cooing customary to courtship had to be car-

ried on with the aid of an interpreter. However, love, which laughs at locksmiths, triumphed over such an obstacle, and the pair were married. They lived very happily together on the Wandell property until his death, in 1718. His widow survived until 1757, when she passed away in her ninety-first year. Their son Richard succeeded to the property, and it remained in possession of the Alsop family until 1837, when the last of the name died and the property was sold to strangers—all except the old family burial plot, which is now enclosed in Calvary cemetery, a little Protestant plot in the midst of that great city of Roman Catholic dead.

The two following sketches of other Newtown worthies are from the pen of the late William O'Gorman, of Laurel Hill, and were written for the Long Island Star:

"Captain Richard Betts, whose public services appear for fifty years on every page of Newtown's history, came in 1648 to New England, but soon after to Newtown, where he acquired great influence. In the revolution of 1663 he bore a zealous part, and after the conquest of New Netherlands by the English was a member from Newtown of the Provincial Assembly held at Hempstead in 1665. In 1678 he was commissioned high sheriff of 'Yorkshire upon Long Island,' and he retained the position until 1681. He became a bitter opponent to Director Pieter Stuyvesant and the little town of Bushwick, which he had founded. Under leave from the Governor, the English settlers had planted their town, but were refused the usual patent, and in 1656 Richard Betts administered a severe blow to Stuyvesant by purchasing the land for himself and fifty-five associates, from the red men, at the rate of one shilling per acre. The total cost amounted to £68 16s. 4d., which, with the sum of £76 9s. paid to the sachems Pomwaukon and Rowerowestco, extinguished the Indian title to Newtown. For a long series of years Betts was a magistrate. During this time he was more than once a member of the high

court of assize, then the supreme power in the province. He became an extensive landholder at the English Kills. His residence was here, in what is still known as 'the old Betts house.' It is further said that here within sight of his bedroom he dug his own grave, in his one hundredth year, and from the former to the latter he was carried in 1713. No headstone marks the grave, but its absence may be accounted for by the fact that his sons had become Quakers and abjured headstones. The old house, which we may enter by lifting the wrought-iron latch of heavy construction, worn by the hands of many generations; the polished flags around the old deep well, where the soldiers were wont to wash down their rations, are still as the British left them on their last march through Maspeth. This house is but one of several most ancient farm houses still carefully preserved for their antiquity, on the old Newtown road, between Calvary cemetery and Maurice avenue. These venerable companions have witnessed many changes, and now enjoy a green old age, respected by the community in which they stand.

"John Moore, the early ancestor of the Newtown family of this name, was supposed to be of English birth, though it is unknown when or whence he emigrated. He was an Independent, and the first minister of the town. Though not authorized to administer sacraments, he preached to the people of Newtown until his death, in 1657. In consequence of his interest in the purchase of Newtown from the Indians the town awarded eighty acres of land to his children, thirty years after his decease. One of his sons, Samuel Moore, became a grantee of land in Newtown village in 1662, and afterward bought an adjacent tract, previously owned by his father, which subsequently came into the hands of John J. Moore. In 1684 he bought a farm near the Poor Bowery, to which he removed.

"Among the distinguished members of the Moore family was Benjamin Moore, who was born at Newtown October 5, 1748. He re-

ceived his education at Kings (now Columbia) College, and afterward became its honored president. After pursuing theological studies he went to England and was ordained to the Episcopal ministry. In 1800 he was appointed rector of Trinity Church, and in 1801 was elected bishop of the Protestant Episcopal Church in the State of New York, and he continued in this relation until his death, February 16, 1816. His wife was a daughter of Major Clement Clark, of New York.

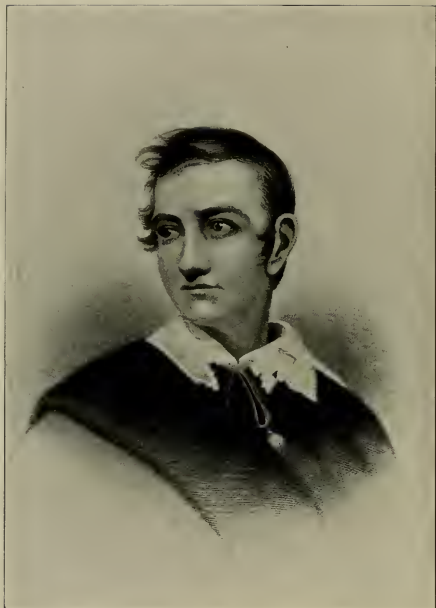

"His brother, William Moore, born at Newtown January 17, 1754, was a medical student and a graduate of Edinburgh in 1780. He then returned home, and for more than forty years was engaged in the duties of an extensive practice. For many years he was president of the New York Medical Society, and trustee of the College of Physicians and Surgeons. His wife was a daughter of Nathaniel Fish, of Newtown. One of their sons, Nathaniel F., succeeded his uncle as president of Columbia College.

"Captain Daniel Sackett Moore was a successful and respected ship-master. He owned the Moore residence near Newtown village, and died here in 1828. His son, John Jacob Moore, the last of the sixth generation of the Moore family, died June 14, 1879, aged seventy-three years. The ancestors of this gentleman form an unbroken line of proprietors in fee from the original Indian purchase, in 1656, in the following order: Rev. John Moore, died 1657; Samuel Moore, died 1717; Benjamin Moore, died 1750; John Moore, born 1730, died 1827; Captain Daniel Sackett Moore, died 1828; John Jacob Moore, died 1879.

"The venerable Moore house standing on the Shell road was one of the mansions of the colonial period. It is carefully preserved and has been occupied constantly by the Moore family since its erection, more than a hundred years before the Revolution; no part of it is allowed to go to decay, nor is there much change save by additions, which are not al-

lowed to displace the old structure. The same hall door—in two sections, of solid oak and secured by the original strong hinges, bolts and locks, and with the original ponderous brass knocker—is still spared; the old well built stairway give access to the upper rooms; the ancient beams still exhibit their full proportions and are well varnished. This house occupied the center of the British camp for many years. The well beside it requires but one glance down its mossy stones to discover its antiquity."

The Kissam family of North Hempstead can point in its records to the names of many who have been prominent, locally at all events, in public and professional life for over two centuries and a half—a long time as genealogies go in the United States. The name of the American founder of the family has been lost "through the vicissitude of time," as Burkes' "Peerage" gravely puts it, and so gets over such a snag in its story of the origin of many noble families in Great Britain. Had the town records of Flushing not been destroyed by fire in 1789 it is possible that the name of the American pioneer would have been extant and so the genealogical tree of the family might have had a more symmetrical beginning. This now nameless pioneer seems to have arrived in America about 1640 and settled on a piece of land in Flushing. He did not long survive the change of country, for when he died he left his property in the care of guardians for the benefit of his only son, John. John was born in 1644 and in due time entered upon possession of his father's acres and like a good Dutchman settled down and cultivated them, bringing to the homestead as its mistress a Jamaica girl, Susan Thorne, whom he married in 1667. Their family consisted of three sons. The second son, John, in after years married and settled in Freehold, New Jersey, and it is thought that the youngest, Thomas, also removed to that colony. Daniel, the eldest, appears to have left Flushing and secured a farm on Great Neck. In

JOHN HOWARD PAYNE.

1703 he was elected a vestryman in St. George's Church, Hempstead. He had a large family, one of whom, Joseph, also became a vestryman in St. George's, and had a farm at Cow Bay. Daniel, a nephew of the last named, son of an elder brother, who also held a farm at Cow Bay, had quite an experience in public life, as he served as county treasurer from 1759 to 1782 and was for many years a member of Assembly and a justice of the peace. Some of his family, at least, were opposed to the Patriots during the Revolution, for we find one of his sons, John, accepting a commission as major from Governor Tryon in 1776. Another member of the family active in public life was Daniel Whitehead Kissam, who served in 1786 as a member of Assembly.

Richard Sharpe Kissam, born in 1763, was educated for the medical profession at Edinburgh, Scotland, and entered upon practice in New York in 1791. For thirty years he stood at the head of the active members of his profession in the city, and until his death, in 1822, he was regarded as one of the foremost surgeons of his time. From one of his brothers Governor John T. Hoffman of New York was descended. It is impossible to trace here all the ramifications of this family to the present time. Its members have married into nearly all the old families of New York and Long Island and it almost seems to us that a history of the various generations would almost include the story of the legal and medical professions in Manhattan from the beginning of the story of the United States.

In Suffolk county the number of old families which are still represented in every township is such that a volume or two would be needed to present even the usual meagre details of births, marriages and deaths, which form the genealogists' stock in trade. Here, however, a few may be selected at random to illustrate all the rest.

We may begin with a family whose connection with Long Island has long since ter-

minated, which was really connected with it for a few years, genealogically speaking, yet some of the credit of affiliation with it must be given to Suffolk county, because there seems little doubt that when the most famous member of the family wrote the heart-touching words of "Home, Sweet Home," it was the memory of the interior of a little cottage in East Hampton that inspired the theme.

John Howard Payne was born in New York City, June 9, 1792. He was destined for a business career but early showed a predilection for literature and the stage. He edited some trifling publications while still in his teens,—publications now interesting only as curiosities,—and in 1809 made his first professional career as an actor in the old Park Theatre, New York, taking the part of Norval in Douglass' tragedy of that name, a part which used to be the starting point in the career of every budding Roscius. The play has long been relegated to the bookshelf and is never now acted, but in the early part of the past century it was a prime favorite. Payne's success in the part was most flattering and after playing it in many American cities he repeated it in Drury Lane Theatre, London, with equal commendation from the critics and the public. That success determined his career and for some twenty years thereafter he was associated with the stage as actor, manager and playwright. General James Grant Wilson writes: "While living in London and Paris, where he was intimate with Washington Irving, Payne wrote a host of dramas, chiefly adaptations from the French. In one of these, 'Clari; or, The Maid of Milan,' occurs his deathless song of 'Home, Sweet Home,' which made the fortunes of all concerned, except the always unfortunate author. By it alone, Payne will be remembered after his multitude of poems and dramas have been forgotten, which, indeed, has almost happened already. His tragedy of 'Brutus,' produced in 1818, with Edmund Kean in the principal part, is his only dramatic composi-

tion that still holds possession of the stage, with the single exception of 'Charles the Second,' the leading character in which was a favorite with Charles Kemble." In 1832 the wanderer returned to America, as poor as when he left it, and pursued his theatrical career with varying fortunes, generally brief bits of success mingled with long periods of misfortune and poverty. Home he had none throughout his career since the death of his mother when he was a lad of thirteen years, and it was destined that he should die in exile from his native land. In 1841 he was appointed consul at Tunis and there he resided until his death, in 1852. His body was interred in a little cemetery on the shores of the Mediterranean until 1883, when it was removed to Oak Hill cemetery, Washington, and so poor Payne was home at last. His career was a sad one; poverty and he were close acquaintances, he "fattened on trouble and starvation," as he said himself, and he often in later years told a story of the bitterness he once felt on hearing his famous song sung one night in London when he himself was unable to raise the price of a night's lodging and had to find a home in the streets. He made plenty of money but had no idea of how to keep it, and a hit, when it was made, only carried him and his friends—partners in his joys and often strangers to his sorrows—through for a few days and then the weary round of misery was faced again. The penalties of genius were never better illustrated than in the sad career of this gifted singer. The genealogy of the Payne family has been made a theme of special study by Mr. Henry Whittemore, and as much misunderstanding exists concerning the poet's ancestors and even concerning his birthplace, we give the record in full:

Thomas Paine, the progenitor of the family from which John Howard Payne descended, was the son of Thomas, supposed to have come from Kent, England, and presumably identical with Thomas Payne of Yarmouth,

the first Deputy from that place to the Old Colony Court at Plymouth in June, 1639.

Thomas Paine (2), son of Thomas (1), came to New England when a lad ten years of age, and settled in Eastham before 1653, as he was constable there at that date. He was admitted freeman 1658. He represented Eastham at the Colony Court 1671-2-3, 1676-78-80-81, and in 1690. He removed to Boston before 1695. He was a man of more than ordinary education, and was a very fine penman. He died at Eastham August 16, 1706. He married Mary Snow, daughter of Hon. Nicholas Snow, who came in the *Anne* to Plymouth in 1623, and in 1654 removed to Eastham, Massachusetts. He married Constance Hopkins, daughter of Stephen Hopkins, of Plymouth, fourteenth signer of the "Mayflower Compact."

The children of Thomas and Mary (Snow) Paine were: Mary, Samuel, Thomas, Eleazer, Elisha, John, born March 14, 1660-1, Nicholas, James, Joseph, Dorcas.

Deacon John Paine, sixth child of Thomas (2) and Mary (Snow) Paine, was born in Eastham, Massachusetts, March 14, 1660-1. He was admitted freeman June, 1696. He was elected clerk of the town 1706 and re-elected until 1729. He was Treasurer from 1709 to 1736, and Representative to the General Court at Boston 1703-9-14-16-18-24-5. He was of a literary turn of mind, and some of his spare moments were devoted to literary pursuits. Scraps of prose and poetry written by him are still in the hands of his descendants. He died October 26, 1731.

He married first Bennet Freeman, daughter of Major John and Mercy (Prence) Freeman, born March, 1671. She was "a pleasant companion, a most loving and obedient wife, a tender and compassionate mother, and a good Christian." By her he had John, Mary, William, born June 6, 1695, Benjamin, Sarah, Elizabeth, Theophilus, Joseph, Nathaniel, Rebecca, Mercy, Benjamin again.

He married, 2nd, Alice Mayo, and had by her Hannah, James, Thomas, Alice, Hannah.

Lieut. William Paine, third child of Deacon John and Bennet (Freeman) Paine, was born at Eastham, June 6, 1695. He was a Representative to the Provincial Legislature from Eastham 1731-32-35-38-39-40-43-44. He was appointed one of His Majesty's Justices in 1738. He took part with the Colonial forces in the capture of Louisbourg as Lieutenant in Capt. Elisha Doane's company, Col. Gorham's Seventh Massachusetts Regiment, and died in service in 1746.

His first wife was Sarah Bacon, of Barnstable, who he married in 1727. He married, 2nd, June 14, 1741, Elizabeth Myrick, a widow, the daughter of Rev. Samuel Osborn, pastor of the South Church in Eastham, and sister of Dr. John Osborn, the distinguished physician and poetical writer of Middletown, Connecticut. By his first wife he had Sarah, Ruth, Josiah, Jedediah. He had one child by his second wife, William, born 1746.

William Paine, or Payne, (2), son of Lieut. William and Elizabeth (Myrick nee Osborn) Paine, was born in 1746, the year his father died in the Colonial service. His mother remarried and he was placed in the family of Rev. Joseph Crocker, pastor of the South Congregational Church of Eastham. He commenced the study of medicine under Dr. Joseph Warren, who fell at Bunker Hill. He was interrupted in his studies by the events which immediately preceded the Revolution, and opened an English Grammar School in Boston, but on account of the occupation of that city by the British he gave it up and became a tutor in a private family. Writing to a friend, of his experience at that time, he says: He was obliged to be in his school "from the first entrance of light till nine in the evening." While on a visit to Barnstable he married Lucy Taylor, who died shortly after the marriage. He went to New London, Connecticut, and there engaged in a mercantile adventure to the West Indies. On his return he

formed the acquaintance of Miss Sarah Isaacs, of East Hampton, Long Island, who was on a visit there, and soon after married her. Her father was a convert from the Jewish faith, who came from Hamburg, Germany, previous to the Revolution, and settled at East Hampton. He was a man of education and wealth, but difficulties in his own country and the Revolution in his adopted country induced heavy losses and left him comparatively poor. His wife, a Miss Hedges, was the daughter of a lady whose maiden name was Talmage. His uncle Talmage was the Earl of Dysart, a British nobleman.

William Paine, or as he wrote his name, "Payne," settled in East Hampton after his marriage, about 1780, and became one of the teachers of the academy there. His wife, who was a woman of remarkable beauty, fine education and many excellent traits of character, assisted her husband in teaching. Payne continued there for about ten years. Several of his children were born there, and this was really the only home he ever possessed. He removed to New York in 1790, where he taught school for some years. In 1793 he resided at No. 5 Dey street, and he also resided and taught school on Little Queen street. In 1799 he was invited by some influential men in Boston to open a school there, which became quite noted. He returned to New York about 1809 and taught school on Common near Grand street. He died March 7, 1812.

In the cemetery at East Hampton is the grave marked by a stone of Andrew Isaacs, the father of William Payne's wife, Sarah (Isaacs) Payne, on which is inscribed: "Behold an Israelite in Whom is No Guile."

William Payne by his wife Sarah (Isaacs) Payne had issue:

1. Lucy Taylor, born 1781, at East Hampton, married, in 1816, Dr. John Cheever Osborne, of New York; died in Brooklyn, 1865, left no issue.

2. William Osborne, born at East Hampton, August 4, 1783, died March 24, 1804.

3. Sarah Isaacs, born at East Hampton, July 11, 1785, died in New York, October 14, 1808.

4. Eloise Richards, born at East Hampton, March 12, 1787, died at Leicester, Massachusetts, July, 1819.

5. Anna Beren Leagers, born at East Hampton, April 9, 1789, died at Newport, Rhode Island, October 11, 1789.

6. John Howard, the poet, born in New York City, at 33 Pearl street, June 9, 1791, died at Tunis, Africa, April 9, 1852.

7. Eliza Maria, born in New York City, September 19, 1795, died there May 25, 1797.

8. Thatcher Taylor, born in New York City, August 14, 1796, married in New York; 1833. Mrs. Anna Elizabeth Bailey, died in Brooklyn, December 27, 1863.

9. Elizabeth Mary, born in Boston, Massachusetts, died there aged about two years.

The Scudder family, although not among the original settlers of Suffolk county, might almost claim directly, can, in some of its branches at least, claim descent by intermarriage with every one of the historic families of which Suffolk is so justly proud. Then, too, their own American pedigree commences at a date almost ranking with the first. The American pioneer, Thomas Scudder, left Grafton, England, in 1636, and settled at Salem, Massachusetts. He left three sons, Thomas, John and Henry, all of whom in 1652 crossed over to Long Island and became residents of Southold. After a while they all moved to Huntington township and acquired land there. Then John removed to Newtown, where he resided until his death, about 1670. He left an only son, John, who married a daughter of Captain Richard Betts. His two sons, John and Richard B., moved with their families to New Jersey, and their descendants are there to be found even to the present day.

Thomas and Henry Scudder may therefore be regarded as the progenitors of the Scudders of Long Island. Thomas seems to have had quite a land thirst and apparently

invested all the money at his command in real estate. At his death his holdings were divided, according to his directions, between his two sons, all within the town of Huntington going to the eldest, Benjamin; and tracts at Cow Harbor, Crab Meadow and elsewhere, to the younger one, Timothy. There were five daughters in the family but they seem to have been lost sight of in the distribution of the real estate. Both of these fortunate brothers married and had families and soon the mere records of the marriages and baptisms and deaths begin to tangle us up in a maze, and, even if printed, would have no interest even for the family themselves outside of a few of an antiquarian turn of mind. But there are several names on the long and honorable record which deserve to be held in general remembrance throughout Long Island, at any rate for their patriotic and public services.

Thomas Scudder, son of Benjamin, and third in descent from Thomas (1st) of Salem, died about 1760, leaving only one son, also named Thomas, who in turn died in 1809, leaving four sons, John, Nathaniel, Gilbert and Thomas. John joined the Continental army, was taken prisoner at the battle of Long Island and confined with many others in the old sugar house in New York City, where the cold and hunger occasioned much sickness and many deaths among the prisoners.

The old house of the Scudders at Huntington Harbor, offering good quarters for the British officers, was occupied by them, except the kitchen, where the family were forced to crowd together, and the officer's horses occupied the barn and used the hay and grain stored there, while the stock of Thomas Scudder was turned adrift in the fields and streets.

The sufferings of John as a prisoner, coming to the ears of his father, caused the latter to send his son Gilbert (then a lad of sixteen years) to New York to aid in his brother's relief, which he accomplished by walking past the prison house several times a day and when the chance offered passing food from his pocket

et to him, or to some one for him, through the iron bars of a window bordering on a side street. This assistance continued until he was liberated on parole; but the severity of treatment the prisoners suffered and the injustice and rapine offered his father's family in Huntington so embittered John's feelings against the rule of Great Britain as to justify him, in his own opinion, in breaking his parole and enlisting in General Greene's command in the Southern army, where before a year had passed he died of yellow fever. Another Revolutionary hero belonging to the family was Henry Scudder, who was of the fourth in descent from the Salem pioneer. On the outbreak of the war he gave heart and hand to the cause of the Revolution, promoted its development, held a commission in the army, and during the seven years' war sacrificed all personal and family considerations for the common cause of independence. He was captured at or shortly after the battle of Long Island, but escaped confinement, passed over the sound to Connecticut, and was attached to the force of General Tallmadge. During the seven years' struggle he largely contributed by his local knowledge and great personal daring to many successful expeditions against the British forces on Long Island between Matinecock Point and Wading River, and came to be held by them as a scourge whom they at once feared and watched for. His possessions at Crab Meadow were laid waste by cutting his wood, burning his fences and outbuildings and driving off all the stock (excepting one cow which was secreted by an old slave), and his wife was subjected to a system of most distressing espionage in order to discover the presence of her husband on his stealthy visits to her. To the courage of his wife and her sympathy with the cause of justice Henry Scudder undoubtedly owed much in his cheerful self-denial and endurance of the hardships occasioned by the long struggle for freedom. After the declaration of independence he was chosen as one of the dele-

gates from Suffolk county to aid in the adoption of the Federal constitution. He represented the county in the Assembly several terms and held other positions of honor and trust. Henry Scudder died in 1822, leaving three sons, Youngs Prime Scudder, Henry Scudder and Joel Scudder. He also had two daughters, the oldest Phebe, who married Azel Lewis, and Amelia, married to Platt Lewis.

Several of the Scudder family have been members of Congress. Tredwell Scudder represented Suffolk county in the State Assembly for several terms and was elected a member of the fifteenth Congress. For over twenty years he was prominent in public life. Henry Joel Scudder was chosen to Congress in 1872 and declined a renomination. He was born at Northport in 1825, graduated at Trinity College, Hartford, in 1846, and two years later was admitted to the New York bar. He acquired a leading position in his profession, and in 1881 the degree of LL. D. was conferred upon him by Roanoke College. His career was distinguished by the interest he took in educational matters and in schemes for improving the condition of the poor and for his native town of Northport he was always thinking and planning some scheme of improvement. His death in 1886 was deeply regretted by a wide circle of devoted friends. His son, Townsend Scudder, afterwards represented Suffolk and Nassau, etc., in Congress and proved a thoroughly practical and most eminently useful member.

The Hunting family is another which has representatives all over the island, and, notably, in Suffolk. Their progenitor, so far as their American story goes, was John Hunting, who in 1638 settled at Dedham, Massachusetts, from England. His grandson, the Rev. Nathaniel Hunting, was minister of East Hampton for about half a century. He had a family of six sons, and his grandson, Jonathan Hunting, became minister of Southold. In 1739 Samuel Hunting founded the Southampton branch of the family. Colonel

Benjamin Hunting, who was born in Southampton in 1754 and died there in 1807, was one of the most enterprising merchants of his day. He was one of the first to equip whaling vessels for long voyages and carried on a large trade with the West Indies. The family have been merchants, lawyers and fighters and are represented in nearly all the wars in which this country has engaged. When the Civil War broke out E. F. Hunting of Southold volunteered for the front and with a commission as lieutenant went forth to do what he could to defend the flag. His career was a short but brilliant one; he was shot at the head of his company and soon after the news was brought to Southold the Rev. Dr. Ephraim Whitaker preached a notable sermon on the lessons of the young hero's death which, as it deserves to be printed in some form likely to preserve it, and as its deeply religious tone and moral musings and splendid spirituality form an elevating change from most of what appears in this chapter, we print it entire. It will be seen that it is more than a sermon; it is a sketch both biographical and genealogical, with a lesson of deep import drawn from the whole:

"Here am I; send me." Isa. vi, 8.

Readiness for duty, however dangerous burdensome and responsible, is the expression of this text; and it would not be easy to find another more fit to indicate the character of that young soldier, whose death we mourn and whose virtues we commemorate to-day.

The Bible is not a book of life and peace only. It is also, very largely, a volume of war and death. The songs of Miriam and of Deborah are pæans of victory. Many of the psalms of David are martial odes. His lamentation over Saul and Jonathan is the eulogy and elegy of battle-slain heroes. And the Bible abounds, throughout all its parts, in language and illustration drawn from the science and art of war. This is the case in the earlier as well as in the later ages of its history. The fine figure which soldiers present in its latest books is specially remarkable. Here some of them and there others, again and again save the life of the chiefest of the

apostles, and afford him the means of spreading the gospel among the nations. Others often hate and hurt him. Soldiers commonly treat him fairly and kindly.

But I have chosen no incident of a soldier's life, nor any circumstance of a soldier's death, to indicate the character of that heroic soldier, in whose honor we perform this service. Yet, "Here am I; send me," are words full of martial decision, alacrity, courage and manliness.

These qualities and others of Lieutenant Hunting will appear in the briefest sketch of his life and death.

EDWARD FOSTER HUNTING was born May 22, 1813, in the home of his parents and paternal grandparents, in Southold, and died in the service of his country, while commanding his company, on the battle-field of Olustee, Florida, February 20, 1864, in the twenty-first year of his age.

He sprang from a long line of worthy ancestors of the same family name. The earliest of the name in this country was John Hunting, who came from England two hundred and twenty-five years ago last September, and settled at Dedham, Massachusetts, where he died April 12, 1682. His son, John, who married Elizabeth Payne, was a resident of the same place, where his son Nathaniel was born November 15, 1675. This Nathaniel Hunting, a graduate of Harvard College in 1693, began his life-long ministry at Easthampton, in September, 1696, before he was twenty-one years of age, and by his vigorous ministry there for more than half a century, he prepared the way for the Rev. Samuel Buell, D. D., and the Rev. Lyman Beecher, D. D., who were his next successors. Two of his sons and one of his grandsons, having graduated at college and then studied theology, became ministers of the gospel. The grandson was the Rev. Jonathan Hunting, who graduated at Yale College in 1804, and was ordained and installed here on the 20th of August, 1807, the Rev. Drs. Woolworth and Beecher performing the chief parts of the services. He fulfilled the duties of the pastoral office here twenty-one years and one week; and his pastorate, under God, was the salvation of this church. After he ceased to be the pastor, he retained his home in this place, and with him, till his death, December 30, 1850, lived his son Edward, this bereaved father, whose first-born child and only son is the subject of our thoughts to-day.

The brief service of an hour will not permit

me to make any specific mention of the widely spreading branches of Lieutenant Hunting's maternal ancestry, whether through the Cases, the Halseys, or others more remote from him. They are extensive and known to be worthy of the regard due to his forefathers on the paternal side.

It requires some acquaintance with men to appreciate the full worth of such an ancestry. But its advantages are none the less real. Apart from the virtue of blood, which is substantial and operative, it gives the child of such parentage a material vantage ground in the very first years of his life. It goes before him and prepares the way for his reception of kindness, instruction, attention and manifold advantages on every hand. It gives him the confidence of others, and makes many friends for him even before his own merits have won them or deserved them. He is "beloved for the fathers' sakes." This may aid him long after his ancestors are in their graves. For many important purposes, the worth of his forefathers avails him as if it were his own. The nature of human life and the structure of human society make it as useful as it is unavoidable that parents and children should share their advantages and disadvantages with each other. Every child feels this connection of the parents and their offspring, even before he can fully understand its nature or appreciate its great value; and he is a most unwise and ungrateful son, who recklessly throws away all the substantial advantages of honorable parentage, and chooses to fight the battle of life alone, and cut his way through the world friendless and unsupported. We honor those who make a good name for themselves without this advantage; but we blame the man who scorns the privileges of his own birthright.

Even the childhood of Lieutenant Hunting was marked by no folly of this kind. He was early mindful of the advantages which his parentage gave him, and commendably obedient to parental authority. The family is the foundation of human society. He felt unceasingly its benign and mighty influence. The wishes of his parents were often contrary to his boyish tendencies, his constitutional inclinations, and the customs of many among his youthful associates, and in many a case of this kind it was exceedingly interesting to mark the cheerfulness of his conformity to their will. For instance, the entertainments of doubtful character, which they wished him to forego, he often treated for their sakes as

unattractive and worthless. Thus he cheerfully rejected what would have pleased his social disposition, in order to show his regard for their wishes. He was *thus trained to faithfulness in duty.*

The same deference to their authority and regard for their comfort, which marked the course of his boyhood and chiefly formed his character, also restrained him, I know not how long, from giving himself to his country in arms.

For many months before he volunteered, the strong impulses of his ardent patriotism impelled him to this step, but a life-long desire to promote the comfort of his parents and sisters, held him back for a season.

He was not aware that his talents and training had fitted him for this service. His highest triumphs in school were in the exact sciences; and I never saw him appear in a better light at any time than in the splendor of an examination in certain branches of the higher mathematics, which are closely connected with that precision of movement and aim, and quick measurement of time and distance for which a soldier should be fitted.

His progress and excellence in his academic studies were not more marked than his activity, agility, strength and readiness in all athletic sports on the playground. But his vigorous mental powers and superior physical endowments found not their chief object in sports and pastime. As manhood drew on apace, the choicest athletic games became less attractive than substantial, productive toil; and whether he ploughed the fields of his father or performed some neighborly and generous act for one in need of aid, the labors of his hands were cheerful industry, not repulsive drudgery. Within these weeks of our mourning, since he met his early death as a thorough soldier might wish to die, new anecdotes of his skill, efficiency and generosity as a worker have been related to me in his praise.

Thus in the life of the family, in the studies and sports of good schools, both at home and abroad, in the labors of the farm, and in the social activities, duties and charities of the neighborhood, he had shown himself worthy of high regard.

Full five years since he passed the most critical portion of his youth; and the fears which some of his friends then experienced for a short time, lest he should falter in virtue, were happily and speedily done away.

The approach of manhood both matured

and improved his character. The benign influences of the family and of the church of God, in whose worship he was habitually active, were, through the working of the divine Spirit, not without effect upon his higher powers. He became more thoughtful, considerate, manly and gentle, and so acquired no little decision of character. We saw it often, but will point you to no more than one instance.

We shall not soon forget that evening, the 18th of August, 1862, when his tall and shapely form was seen advancing here to place his name, with his own right hand, upon the list of volunteers for his country's army; and we knew him to be one who would never shrink from his engagement, neglect his duty, nor turn his back to his country's foe. His unselfish patriotism was not the kind to wear the badge of meanness and infamy, and his heroic soul was not shaped and fashioned to receive the brand of cowardice and shame. The multitude who then thronged this house of God hailed his generous act with loud applause. But it was not so much the acclamations of the enthusiastic spectators as the noble impulses of his own spirit and the firm decision of his own mind, that filled his radiant eyes with light, and spread a smile over his expressive countenance. Memory is faithful to disclose even now the graceful dignity which he displayed among his worthy companions who then, with him, pledged their young manhood's prime and their precious lives to the defence of our country against the lawless violence and war of traitors. Dumb be our lips and dead be our hearts if we fail to honor them, whether they live or die, for such generous and heroic devotion.

It was no sudden freak of Lieutenant Hunting that led him to lay down his life for his country. He pondered the matter long and well before he gave himself to live or die for the nation. Though his life had not reached a score of years, he had carefully studied the history, the extent and the worth of the country and its national government. He had marked the insurrection of traitors and had seen how they had levied and begun war against their lawful rulers. He scorned their sophistry, despised their selfishness, detested their oppression and defied their warlike power. He counted not his life dear unto himself, to maintain his country's rights and promote the general welfare.

As soon, therefore, as approaching manhood would justify it, and the national voice

asked, "Who will go for us?" his firm answer was ready, "Here am I; send me." When he thus offered himself, he was not unaware that he gave perhaps his life for his country. He was not unmindful of this fact in subsequent days. Indeed, he desired to incur the danger and to fight the battles for which he had volunteered to serve his country in arms.

This was one reason why he desired promotion and transfer from his place in the One Hundred and Twenty-seventh Regiment to his lieutenantancy in the Forty-seventh Regiment of New York Volunteers. In the former regiment he had faithfully performed the duties of a non-commissioned officer for more than a year in Maryland, Virginia and South Carolina, on both sides of the Potomac, the James and the Nansemond rivers, as well as on the coast islands of South Carolina; and though often in pursuit of the enemy, yet never able to see more than his back or a line of his pickets. This did not satisfy our young soldier. His patriotic aspirations sought a more vigorous and decisive service of his country and hence it was a real gratification to him, even at the expense of a separation from dear companions of long and well tried friendship, to be transferred to a lieutenantancy in the Forty-seventh Regiment, whose fortune it had been to see more decisive service. Accordingly, in November last, he received his commission in this regiment.

It presented a fit occasion to display the integrity and nobleness of his character. His commission was presented to him with the promise, on his part, that he would forthwith report himself to the commander of the regiment in which he had been commissioned. But no sooner had he received his commission, than he was advised by senior officers around him to do what is not uncommon in such cases, namely, pocket the commission, and make a short visit home before reporting himself in the new place according to his promise. But neither his strong desire to see his parents and kindred and home friends once more, nor the example of many a one among his brother officers, nor all other considerations combined with these powerful motives could induce him to falsify his word, or swerve one line from the path of integrity and honor. He would not burden his conscience with a broken promise, even to lighten and gladden his heart with all the delights of home, though he might see that beloved home and its unspeakably dear inmates never more. This is virtue beyond the reach

of mere heroism. It is virtue which comes from Christian principle only.

It was virtue too in one whose heart craved the society of gentle souls with inextinguishable longing. This yearning of his heart might be shown in many ways. Let one incident suffice. In one of his cheerful, familiar letters, intended to be read only in the home of his childhood, he writes, "I do not particularly dislike this kind of life, but still it does not fill up the vacancy. The associations do not exactly suit; and you may laugh, but I am more 'homesick' for *good* female society than I ever was for any thing else. I want something refining among all this coarse, strong community of men who do and dare. I think sometimes, what would I not give for an hour's talk with mother and sister. I never *have* been homesick—never *will be*, so long as I have health in other respects; but I do hunger for something refining, and softer than these surroundings of war, if I am 'a man of blood.' I never told you of the risk I ran to have an hour's conversation with an old lady and her daughter while in Virginia. They lived outside the lines; but I took my gun and went out, determined to risk a fight or capture for the sake of an hour's chat with the ladies. The old lady's name was Warner, and I found herself and her niece both at home, but very much surprised to see me, as they lived up among the mountains or 'up country,' as they said. I told them just what I had come for, and hoped they would not be offended. They invited me into the parlor, and I spent a very pleasant two hours. The old lady's son was in the rebel army; but she was no partisan, and said she hoped some Southern lady would talk to her son like a mother, for she was sure he would need it. She was a member of the Episcopal church, a very good, motherly old lady, and when I left she gave me some very good advice."

How clearly this incident discloses the union of the tenderest sensibility with the manliest courage. It prepares us to glance our eye at his modesty, which was equal to his merit in other qualities. In a letter containing his photograph, sent to his oldest sister three months since, one of the two letters from his pen which I have had opportunity to read, he wrote thus: "Is Eddie much changed, do you think? When I look at him with my mind, and compare the untried boy, untaught in the world's rough school, who left his island home fifteen months ago to fight the battles of his

country's flag, and shield that flag from the foul stain traitors would put upon it, to the individual, half boy half man, who to-day appears before me, I can see a great change in many respects. He has gained a glimpse of the many and various pages of the text-book set before him in this great school, and his opinions and feelings and whole mind have changed much. But when, at the hour of twilight, he puts aside the present and outward world, gives imagination free scope, and thinks of the loved ones who at that moment are thinking and praying for the *absent one*, he is the same boy of fifteen months ago, not a whit changed, still cheerful, still hopeful that the end will soon come, and he be again united to that pleasant family circle which his imagination correctly pictures."

This mention of the twilight hour is a beautiful intimation of his prayerfulness. It is the part of the day in which he devoted a half hour to prayer in concert with his mother. His frequent allusions to it in his letters, and his oft-repeated request that his mother would not fail to observe it, show most clearly how highly he prized it. He was mindful of the religious privileges and education which he had received from his parents; and it would seem that he made a deep impression of his Christian principle and rectitude upon the minds of his brother officers.

This shines forth in the letter of Lieutenant Smith, who wrote, with equal perspicuity and tenderness, the particular circumstances of our young lieutenant's death.

This letter is the most grateful evidence that even in the last moments of his life, Lieutenant Hunting maintained and disclosed, and even most fitly displayed some of those sterling virtues which have come into view in the course of this sketch.

Only four days after the battle, and while yet in bivouac, Lieutenant Smith obtained the address of Lieutenant Hunting's mother, and most generously and kindly wrote thus:

"MY DEAR MADAM—It is with feelings of deep sorrow that I communicate to you the news of the death of your son, my esteemed friend, Second Lieutenant E. F. Hunting. He fell while gallantly leading his company 'I,' in the battle of Olustee, on the afternoon of last Saturday, February 20th.

"A large number of the original members of Company 'I' had re-enlisted as veteran volunteers, and the captain and first lieutenant had

accompanied them home on furlough. So great was the confidence reposed in Lieutenant Hunting by Col. Moore, that although he was only a junior officer, the colonel gave him the command of his company.

"Our mess on the march consisted of Lieutenants Evry, Scott, Hunting and myself. While conversing together over a cup of coffee, reference was, by chance, made to the probabilities of some of us going down in the battle that we knew was soon to take place. Your son's thoughts seemed to dwell particularly on home, and the sad effect that any thing serious or disastrous to him would cause in the family circle. He mentioned you particularly as likely to be seriously affected, should he be taken away. Alas for the uncertainty of human life! The early moon that evening looked down serenely on the lifeless forms of two out of that little group of four who were then so quietly talking over their future prospects.

"At a little after 8 A. M. we were on the march. My company was first in line, Lieut. Evry's next, and Lieut. Hunting's third. We pushed on rapidly, and by 3½ P. M. were supposed to be within a mile of the town of Olustee, a distance of twenty miles. A smart artillery fire, directly followed by the rattle of musketry, about half a mile in advance, led us to suppose that the enemy had thrown out a small picket force, which our cavalry were then engaged in driving in. Soon we were ordered to form brigade line, and shortly afterwards we came into line of battle, our regiment being on the left flank. Immediately the enemy commenced shelling us, with good range on his part, so that we at once moved forward to engage him. In a few moments we were hotly engaged. Your son—cool, calm, and deliberate in every movement—cautioned his men to fire low, and bravely stood up facing the death-storm that raged about him. In a little while a rebel regiment moved forward on the left and attempted to flank us. This drove back our left wing for a time, leaving us who were on the right exposed to an enfilading fire. Our men were falling rapidly, and the three right companies became somewhat massed together. Lieut. Hunting deliberately walked back to the colonel, not understanding what order had just been given, and inquired if he had any thing for him to do. 'Just tell me what you want, colonel,' said he, 'and I will do it.' The colonel answered that he, the lieutenant, was doing very well, and he had no orders to communicate. Upon this Edward walked over to where I was standing, and remarked that it

was a *pretty hot place*. I answered in the affirmative, at the same time showing him where the throat button of my overcoat had been shot away by a rifle-ball. He then called upon the men to 'stand steady, aim low, and fire deliberately.' The words were scarce out of his mouth, when he suddenly threw his right hand over the left breast, at the same time covering it with his left forearm, and turning his face towards me, remarked, 'I'm struck; don't leave me, Smith.' I made a motion to catch him in my arms, but he reeled towards the right, and fell immediately on his right side. Hastily calling two men to carry him to the rear, I knelt for a moment at his side, heard him mutter something incoherently about 'mother,' 'heaven,' and then the eyes closed, the limbs stiffened, and his pure unselfish spirit passed away to be at rest forever. God grant that when my hour for departure from earth and earthly joys and sorrows may come, I shall be found as well prepared as he was.

"My duties calling me to my company, I ordered the men to carry him to the rear, not thinking but that we should hold the ground, and be able to take care of our wounded and bury the dead. In a few moments a heavy force of the enemy was thrown forward to capture a battery, and we were forced to fall back some distance. We never recovered the ground, so that nothing of the personal effects on your son's body were saved except his sabre.

"I have written thus at length, under many difficulties, knowing you would take a mournful interest in everything relating to your so much loved son. Believe me, my dear madam, that it has been a mournful subject for me to dwell upon, for your dear boy was a cherished friend and companion of mine. Particularly since the opening of this campaign we have been together night and day; and his singular openness of heart, unselfish conduct, strict and unbending integrity, and thorough knowledge of all of his duties as a soldier and an officer, had endeared him not only to me, but to all his brother officers. By his men he was not only promptly obeyed, but greatly respected. You well know that in the field an officer's power over his inferiors extends even to life itself, but your son's men well knew that while they travelled in the path of duty, they would be protected, and always receive strict and impartial justice. His every action seemed to be dictated by a spirit of true Christian responsibility.

"It would not become me to intrude upon

your sorrows—me, who am so far behind your loved and lost one in preparation for eternity—but may I not suggest, that his whole life was so pure and guileless as to warrant us in saying that he is now rejoicing in the presence of his Saviour, where I trust you and I, and all of his and my friends may some day join him. For one, I shall try to benefit by the example of my lost friend, who, in a few months, took a place in my heart that will cause his memory to remain there for ever.

“Wishing you every blessing under this heart-rending bereavement, I remain, dear madam, your obedient servant,

“JOHN A. SMITH, First Lieut.,
Commanding Co. G,
47th Reg. N. Y. Vols.”

Thus his comrade in arms and battle tenderly tells us how nobly died our true, faithful, courageous young lieutenant. How could a soldier find a more appropriate death? We mourn his early fall, even though he died gloriously. For it is our grief that our ears shall hear no more his sprightly footsteps and his cheerful voice; that our eyes shall no more behold his tall and vigorous form. His brilliant eyes will no more flash responsive to our looks of love. His dark glossy hair feels the dampness of the grave, and the earth has hid those handsome, manly features from our sight till the morning of the resurrection.

He has finished his work on earth. He will toil no more for his kindred and his country. He will die no more for us all—for *us all*. It remains for us to cherish his memory, to emulate his virtues, and to receive the inspiration and the consolation which properly come from his noble, unselfish life and his generous and courageous death.

His readiness for the most burdensome and dangerous labors and exploits should animate us to perform our respective duties with alacrity and faithfulness, and to bear our heaviest burdens with fortitude and submission to God's holy will and providence.

The example of good men, whether old or young—whether in ancient times or in these days—should encourage us to walk in the footsteps of the one perfect Man, who was also God manifest in the flesh, and who died for us all, that we through him might have forgiveness of sins, and strong consolation in the deepest afflictions and sorrows.

The grace of God in Christ Jesus affords the best relief for the hearts that grieve over the bereavements of earth. The father of all

can make the severest anguish of his children work for their future and eternal joy. To these bereaved kindred he can make the death of their beloved one work a far more exceeding and eternal weight of glory than all the fame and honors of the world.

Oh may this mournful event promote in them and in us all the proper preparation for death, judgment, and heaven; so that whenever may come the hour of our departure from these earthly scenes, we may each be ready to say unto God, “Here am I; send me.”

The foremost living historian of Suffolk county and, indeed, the Nestor of its historical students, is Mr. William S. Pelletreau. He has been and still is a diligent student of our old records and has the happy faculty of making even the dryest of them tell an interesting story. His recent work on Early New York's Wills, issued by the New York Historical Society, and his volume on the Records of Southampton, are cases in point, and in both there is hardly a page from which some detail of general interest could not be gathered, and yet their local character is thoroughly preserved. Both books received quite commendatory notices at the hands of the critics of the country, while the long extracts which appeared in the daily press showed the value placed on their contents. Mr. Pelletreau is still closely studying the story of Suffolk county and every now and again hits upon a discovery which is at once given to the world with the same honest enthusiasm which Sir Walter Scott—the prince of antiquaries—used to announce the literary and historical results of one of his tours to the Borderland or the Highlands.

The family to which Mr. Pelletreau by his life work and his many brilliant talents has added additional honor, has long been one of the most prominent in the county. He has sketched its history so briefly and pithily that we here reproduce his own record:

The ancestors of the Pelletreau family were Huguenots who upon the revocation of the edict of Nantes fled from France and sought safety and religious freedom in a for-

eign clime. The first of the family in America were Jean Pelletreau and wife Magdalena, and their nephews Jean and Elie, the latter having two sons, Jean and Elie (these names were soon anglicised into John and Elias). These were direct descendants from an ancestor who was physician to Admiral Coligny, and like his illustrious patron perished in the massacre of Saint Bartholomew, August 23, 1572. King Charles IX granted him a coat of arms July 17, 1571. The following is a translation of the description:

"Azure, upon a column in pale *or*, encircled with a serpent proper, and bordered on the dexter and sinister sides by a martlet, *or*; crest, a helmet."

Jean 1st was naturalized in New York September 22, 1687, and died in 1700. His wife Magdalena died in 1702, without children. Jean 2nd died in 1703, childless. He and his brother Elie were naturalized July 10, 1696. The native place of this family was the village of Arces, in what is now the Department of Charente Inferieure. They were all members of the French church in New York, and in their wills left funds toward the support of its poor. Their names are found in connection with the troubles in that church, as in favor of Rev. Lewis Row (see Documentary History of New York, Vol. III).

Elie Pelletreau died in 1730, leaving sons Elias, Paul, Francis, John and Benjamin, and a daughter Magdalena. Elias died before his father, leaving a wife, Elizabeth. John also died before his father, and left daughters Mary and Elizabeth. Paul is supposed to have had a son Elias, who had children Elias, Samuel, Mary and John. From the first of these are descended the families now living in the city of Brooklyn. Benjamin was the youngest son and is not known to have left descendants.

Francis Pelletreau is said to have been an infant at the time when the family left France in 1686. He came to Southampton, L. I., in 1717. He married Jane, widow of Richard Osborn, September 26, 1721, and by this marriage had two children—Mary, born November 30, 1723, and Elias, born May 31, 1726. His wife Jane died December 6, 1733, aged thirty-eight. His second wife was Mary King, widow of Joseph King, of Southold, and daughter of Judge Thomas Chatfield, of East Hampton. She was born September 12, 1707, and was married to Mr. King September 9,

1731. He died while on a visit to his father-in-law at East Hampton, November 6, 1732, aged twenty-five. Mrs. King married Francis Pelletreau September 4, 1734, and they had children Hugh and Hannah, born in 1735. Francis Pelletreau was a merchant. In 1728 he purchased the homestead of Samuel Woodruff in Southampton village, and this place remained in the hands of his descendants until 1866, and is now the residence of Josiah Foster. The old house remained standing till 1881; it was the last house on Long Island that retained the old-fashioned rhomboidal panes of glass set in lead, and from these it was known as "the house with diamond windows." In 1737 Francis Pelletreau went to London to undergo a surgical operation, and died from its effects September 26. His widow married Judge Hugh Gelston, February 23, 1737, and died September 1, 1775.

Mary, eldest child of Francis Pelletreau, died July 6, 1736. Hugh died when a child. Hannah married Edward, son of Rev. Silvanus White, in 1757, and died March 1, 1810.

Elias Pelletreau married Sarah, daughter of Judge Hugh Gelston, December 29, 1748, and had five children, viz.: Jane, born May 13, 1750, married Judge Pliny Hillyer, of Simsbury, Conn., whose descendants are now living in Westfield, Mass.; Francis, born May 15, 1752, died September 29, 1765; Hugh born November 25, 1762, died July 30, 1771; John, born July 29, 1755, died August 26, 1822; Elias, born August 29, 1757, died October 10, 1831.

The last named married Hannah, daughter of Colonel Josiah Smith, of Moriches, August 7, 1782, and had children: Francis, born May 16, 1784; Elias Smith, born May 18, 1789, died September 30, 1821; Maltby, born March 23, 1791.

Hannah Pelletreau, wife of Elias 2nd, died July 11, 1804, and he married Milicent Post, December 21 of the same year, and by her had one son, Paul, who died when a child.

Elias Smith Pelletreau married Hannah, daughter of Oliver Smith, of Moriches, and had a son, Jesse Woodhull Pelletreau, who died in 1878, leaving children Mary (wife of Hon. John S. Havens of Moriches, Jessie and Legrand.

Maltby married Jane Joralemon, of New York, and left children William Upson, Maltby and Francis.

Francis married Mary Conkling, of Islip,

and left children Henry and Cornelia; the latter married Rev. Ralph Smith; the former died childless.

Elias 2nd married Sarah Conkling, daughter of Zebulon Conkling, of East Hampton, June 28, 1786. They had no children. His wife Sarah died April 14, 1784, aged fifty-three.

The descendants of John Pelletreau, son of Elias 1st, were as follows:

John married Mary, daughter of Dr. William Smith, April 9, 1785, and had six children, viz.: William Smith, born June 8, 1786, died March 15, 1842; Nathaniel, born September 18, 1787, died January 5, 1823; Sarah, born July 19, 1789, died April 15, 1839; Charles, born December 9, 1791, died February 24, 1863; Edwin, born January 11, 1795, died 1840; John, born February 15, 1804, died December 2, 1817. Mary, wife of John Pelletreau, died December 2, 1817, aged fifty-eight.

William Smith, son of John Pelletreau, married Nancy Mackey, daughter of David Mackey, May 23, 1810, and had children: Albert died May 19, 1843, aged thirty-two; George died December 21, 1832, aged twenty; Jane married Lyman Lewis, of Westfield, Massachusetts; Gilbert died in 1864; Alexander, born March 4, 1829, now in California; Mary Gelston, wife of William Green, Prairie du Sac, Wisconsin; Frances, wife of William I. Mathews, Washington, Pennsylvania.

Nancy, wife of William S. Pelletreau, died April 22, 1832, aged 44, and he married Elizabeth, daughter of Colonel Isaac Welles, of Westfield, Massachusetts, June 26, 1839, and had children: Helen, now president of Pennsylvania Female College, Pittsburg, Pennsylvania; William Smith (the historian), and George, Virginia City, Nevada.

Nathaniel, son of John, married Harriet Crittenden, and had children: Walter; Mary, wife of Daniel Jagger; and Maria, wife of Albert Jagger.

The Dering family, which for so long was closely connected with the progress of Shelter Island, was descended from Henry Dering, a native of Dorsetshire, England, who came to America in 1660. He became a merchant in Boston, and at the time of his death, in 1717, was a member of the Governor's Council. His grandson, Thomas, settled on Shelter Island,

and as the husband of Mary Sylvester, heiress of Brinley Sylvester, he was practically lord of the manor. In the time of the Revolution he cast in his lot with the Continental Patriots, but after the result of the battle of Brooklyn became known, deemed it prudent to retire to Connecticut like so many Long Island Whigs too old to fight or not possessing fighting qualities. He died in 1785, leaving two sons, Sylvester and Henry Packer, and a daughter. Sylvester made his home on Shelter Island and did much to beautify it. He was the first to introduce merino sheep into America and added considerably to his wealth by the development of that stock. Having been appointed a brigadier-general of militia, he became quite an authority on military matters after his own notions like most of the old time "militia soldiers," and, like them, he was proud of his title and liked to be addressed as "General" to the end of his life journey. He was supervisor of the town of Shelter Island for many years, and in 1804 was elected a member of Assembly. His death, on October 8, 1820, was the result of an accident. The younger brother of this warrior-stock raiser, Henry Packer Dering, was appointed collector of the port of Sag Harbor by President Washington, and was one of the most honored of the business men of that place. He died in 1822.

In Huntington Jonas Wood became one of the first settlers and the ancestor of a long line of men and women who were highly honored in that township and wherever the changes of life carried them. The best known of them all, Silas Wood, has been called the first historian of Long Island. He was born at West Hills, Huntington, September 14, 1769, and was educated at Princeton, where he was graduated in 1793. He seems to have then studied law. Two years later he was elected to the Assembly, and when his service at Albany was over he practiced as a lawyer in Huntington. In 1817 he was elected a member of Congress and served in that capacity for five terms in succession. In 1828 he was defeated of re-election.

tion and retired to private life. He died in 1847. His most noted work was his "Sketch of the First Settlement of the Several Towns on Long Island," and a brief sketch of the history of Huntington. It is said that during his last years he engaged in a series of extended theological studies and wrote quite voluminously upon religious matters. But as the end drew near he began to feel dissatisfied with some of the opinions he had expressed and burned every line he had written.

Several of the descendants of the Rev. Joshua Hartt are still to be found in Huntington, and as he may be regarded as the founder of the family and certainly as the most notable of the name, we may here present a sketch of his extraordinary career, written by Mr. Charles R. Street, the learned and painstaking annalist of Huntington:

Joshua Hartt was born at Dix Hills, near Huntington, September 17, 1738. He graduated from Princeton College, New Jersey, in 1770, and was ordained and installed pastor of the Presbyterian Church at Smithtown, Long Island, April 29, 1774. He married Abigail Howell, of Moriches, by whom he had ten children. After the Revolution he went to Fresh Ponds, where he preached many years. During the Revolutionary War his bold and uncompromising advocacy of the cause of his country caused him to be arrested a number of times by the adherents of the king. Once he was brought before the court martial held at Lloyd's Neck, but he was admonished and discharged. He was soon after arrested, tried and committed to the jail in New York City, where he remained from May 27, 1777, until October 25 of the same year. During this imprisonment he came near dying from want and disease brought on through cruel treatment by his jailer, the notorious Provost Marshal Cunningham. Among his fellow prisoners was the celebrated Colonel Ethan Allen, with whom he was on terms of intimate friendship, although their views of spiritual matters were totally at variance, Allen being at the

time an infidel. While Mr. Hartt lay sick of a fever and his life was in danger Allen was active in his attention to the wants of the sick man, and by his lively manner and cheerful conversation did much to make his sickness and confinement endurable. It was during Mr. Hartt's illness that Allen one day knelt down by his bedside and made a most fervent prayer for his restoration to health. (See *Onderdonk's Annals*.) Soon after this Mr. Hartt, probably by the influence of some Tory friend, was released from prison upon parole, and when he was about leaving Allen took him by the hand and said: "Good bye, Mr. Hartt; when you go home tell your wife that while you were sick and nigh unto death, Ethan Allen, a servant of the Most High God, prayed over you, and you recovered."

Although released from prison, he was not free from persecution. On one occasion while he was preaching in the church at Smithtown Branch a bullet was fired at him, lodging in the wall just above his head, where the mark remained for many years. For some time after the return of peace in 1783 Mr. Hartt was engaged with others in making surveys of the state lands in the neighborhood of Whitestown, Oneida county, New York. In 1790 he and Rev. Nathan Kerr were appointed missionaries by the Presbyterian General Assembly. They visited Whitestown, Cherry Valley and the Indian tribes of that vicinity. Their route was then regarded as in the far west.

During the war between this country and England in 1812 Mr. Hartt took strong ground in favor of sustaining the government in its efforts to punish Great Britain for her insolent treatment of our rights upon the seas. He preached several sermons in which he vindicated the acts of the government in declaring war, and in which he set forth the necessity of a hearty support of the government while prosecuting the same. These sermons were printed in pamphlet form, and were extensively circulated, several copies being still preserved.

The Howell family was formerly a prominent factor in the business affairs of Southampton. Captain Stephen Howell was born in the good old town in 1744, and died there in 1828, was one of the first to erect a storehouse in the village. He was a stanch patriot in the Revolution and fought in the battle of Brooklyn, seemingly ending, however, in that disastrous engagement, his military career. In 1785 he became prominent in the whale fishery business and he and his sons, Lewis and Silas, made considerable money rapidly. Latham may also be regarded as the founder of Sag Harbor's industries, he having established there a candle-making factory. Although he was a man of many progressive ideas and of shrewd business instincts and his endeavors added greatly to Southampton's prosperity.

A family named Miller was long prominent in East Hampton. They were descended from John Miller, one of the first settlers. In 1717, Eleazer Miller, the grandson of this pioneer, was born and developed into quite a famous character. He was elected a member of the Assembly in 1748 and continued to hold the office for twenty-one years, when, in 1769, after a warmly contested election he was defeated by no less a personage than Gen. Nathaniel Woodhull. Eleazer's son, Burnet, was clerk of Huntington for many years, served in the Assembly and in Congress and was supervisor for eleven years prior to 1776. He seems to have been lost sight of in the course of the Revolutionary war, probably removed to some place up the Hudson.

Hubbard Latham, of Connecticut, settled in Southampton in 1760 and was for many years one of its most active citizens. He was a dealer in real estate as well as a speculator in marine ventures and gathered together quite a fortune. He left a large family which is still represented in the village.

The Rose family, still represented in North Sea, Southampton, are descended from Robert Rose, who settled in the township in 1644.

Judge H. P. Hedger wrote the following interesting sketch of the career of a member

of this family who attained high judicial honors:

Judge Abraham T. Rose, son of Dr. Samuel H. Rose, was born in Bridgehampton, in 1792, and died April 29, 1857. He graduated at Yale College in 1814, and became a successful practicing lawyer, residing through life in his native village. He was county judge and surrogate of Suffolk county from July, 1847, to January, 1852, and from January, 1856, until his resignation, in the month wherein he died. In 1848 he was an elector to choose a president of the United States.

He was a man of varied and almost universal genius, of generous and kindly impulse, poetic temperament and magnetic eloquence; where others by slow and laborious effort achieved the mastery he by intuition looked through the complication of mechanics, science, literature, music and the practical arts. Hosts of ardent friends admired, loved and served him; crowds thronged the place where and when he was expected to speak. Fluent in expression, graceful and commanding in gesture and action, fertile in fancy and invention, versed in all the springs of human nature, winning and persuasive in manner, his presence was a poem and his speech was music. Almost at will he carried courts, jurors, witnesses and crowds to his own conclusions, and in his own inimitable way. One of his contemporaries remarked that industrious application would make a good lawyer, but only genius like his would make a man an advocate. Unquestionably as an advocate and orator he was of the highest rank in his time.

When the dark shadow of the inevitable hour gathered around him, professing his undoubting faith in Jesus Christ, and regret and repentance for errors past, he was received on the Sabbath in the church at his residence, and partook of the sacramental elements at the hands of the elders. When his malady obstructed his wonderful and attractive utterances he commended to us the 116th Psalm as expressing his experience and undying hope. The tramping feet of the living thousands may

move on unconscious of the memory of the other thousands gone before; yet age after age the remembrance of this gifted man, of his wonderful eloquence and his generous heart, will live in the traditions of generations to come, transmitted by those who have gone as he has gone.

These random notes and delvings into the family history "out on Long Island" must here close. We have lingered with the subject lovingly and reverently so as to bring out the characteristics of each and in most cases their special claim to remembrance, but the subject might be indefinitely extended, for such families as the Mulfords, the Hewletts, the Daytons, the Brewsters, the regiment of Smiths, and a host of others are at hand—enough to fill many volumes. But we desire to close this chapter with a biographical sketch of a man who was for years a tireless student of Long Island genealogy and whose works are a delight to the antiquary and an inspiration to the historian—Teunis G. Bergen, of Bay Ridge. This sketch was written by his life-long friend, Dr. Stiles, the historian of Brooklyn.

Teunis G. Bergen, farmer, statesman and antiquary, was born in the town of New Utrecht, October 6, 1806. He was the eldest child of Garret Bergen and Jane Wyckoff, his wife. He clearly traced his ancestry to Hans Hansen Bergen, a native of Bergen, in Norway, who came over to the New Netherlands with Wouter Van Tweller, the second director of the colony. Bergen's wife, whom he married in 1639, was Sarah, the daughter of the Walloon emigrant, Jan Joris Rapalye, who came to this country in the ship *Unity* in 1623 and settled in Albany, afterwards removing to New Amsterdam, and thence (1635) to the Walebought on Long Island. Sarah was herself a historic character, being the first white female child born within the limits of the present state of New York—at Albany. Thus, from a stock not originally of the Netherland blood, but which became afterwards thoroughly incorporated with the first Dutch settlers of this county, sprang this most distinguished Dutch

scholar. His early youth was mainly spent between work upon his father's farm at Gowanus, and at the common school of the district. As youth merged into manhood, he applied himself to the study and practice of surveying, in which he soon became proficient. To the main duties of an active life he added those of a farmer; and, not forgetting those he owed to the community in which he resided, he faithfully discharged such as were imposed upon him by the choice of his fellow-citizens, as soldier, civilian and statesman. He held the position of Ensign, Captain, Adjutant, Lieutenant-Colonel in the militia; and, finally, that of Colonel of the 241st Regiment, N. Y. S. N. G. He was supervisor of the town of New Utrecht for twenty-three years in succession (April, 1836, to April, 1859); and from 1842 to 1846 was chairman of the board. He was a member of the Constitutional State Conventions in 1846, 1867 and 1868, and was repeatedly a member of the Democratic state conventions. He was a delegate to the national Democratic Convention held at Charleston, S. C., in 1860, and vigorously opposed the resolutions of that body which caused the breach between the northern and southern Democratic party. The last and most notable public office which he held by the choice of his fellow citizens was that of representative in Congress from the Second Congressional District, in 1864, when he was elected by a majority of 4,800 over his opponent, the "Union" candidate. In that session of the House of Representatives his party was in the minority; but, true to his Dutch principles, he stood firm to his party to the completion of his term of service. The pages of the history of the county of Kings bear frequent witness to Mr. Bergen's many public services in behalf of the interests of the county and of its several towns, as well as of the city of Brooklyn. That he was so frequently called upon, in these public affairs, was a most striking tribute to his ability, industry and integrity.

On his retirement from public and professional duties, he devoted his leisure hours to

those antiquarian and genealogical investigations which possessed, for him, so great a fascination. These investigations ran most naturally in the lines of Dutch (and Kings County Dutch) ancestry and history. In the earlier years of his life, spent among the hills and by the waterside at Gowanus, and at New Utrecht, he knew no language but the Dutch—not as spoken nowadays, but with the idiom and pronunciation of two hundred years ago—and corrupted, in a measure, by the gradual introduction of the English. By education, he soon became versed in the English language; but he never ceased to cultivate the language of his boyhood, which he lived to see almost eradicated, in this county, as a spoken language. It sometimes seemed to his friends as though he *thought* in Dutch, but *spoke* in English; and there was always a certain peculiar accent to his pronunciation, especially when a little excited, as if *both* tongues wrestled at his lips for precedence. By birth, and education and study he was admirably qualified to decipher the Dutch records, both public and private, which he frequently had occasion to consult. His pure character and great experience as a land-surveyor in the settling of town-boundaries and private estate-lines among the old Dutch families of the county, also gave him access to many ancient documents and sources of information which would have been closed to any other person. So that he early became an expert in all that related to the Dutch and their descendants, not only in the county, but upon Long Island and even in New Jersey. In the history of the Dutch families of Long Island he was not only (with the exception of Riker) the first gleaner, but he was by far the most thorough, exhaustive and authoritative. His untiring and self-sacrificing researches into the almost obsolete records of the ancient Dutch churches of Long Island and New York have unearthed numerous and important materials for the use of modern historians; while his discoveries, in out-of-the-way places, of many of the detached birth, baptismal and marriage records, and the restora-

tion of the same, have conferred inestimable benefits upon the genealogist and antiquary. His published writings were numerous and important. Scattered through the volumes of the New York Genealogical and Biographical Record will be found valuable papers on Records of Births of the Society of Friends, Gravesend, L. I., commencing 1665; the Van Dyke Family; Marriage Records of Gravesend, commencing 1664; a List of Deaths in Captain Grant's company in 1762; the Montfoort Family; Pioneers of the Revolutionary War; the Martense Family; Contributions to the History of the First Settlers of Kings county; Memorials of Francays D' Bruynne; the Van Duyn Family. Some of these formed portions of "A Register of the Early Settlers and Freeholders of Kings county, N. Y., from its First Settlement by Europeans to 1700, with Biographical Notices and Family Genealogies," which was published in 1881, a few weeks after his death. Before this, however, in 1866, he had issued "The Bergen Family," an octavo of 298 pages; in 1867, the history of his wife's ancestry, "Genealogy of the Van Brunt Family," in 80 octavo pages. But the crowning glory of his well-spent life, so far as family history is concerned, was a second edition of his "Bergen Family," so improved and augmented as to embrace, by regular descent and intermarriage, a large portion of the Dutch population of southern New York and eastern New Jersey; forming a handsome illustrated volume of 658 octavo pages. In 1878 appeared his "Genealogy of the Lefferts Family," 1675-1878, an octavo of 172 pages. In 1877, also, at the 200th anniversary celebration of the Reformed Dutch church of New Utrecht, he delivered an "Address on the Annals of New Utrecht," of great historic value; and which was printed for private circulation by the consistory of the church. He left, also, in manuscript, "A History of New Utrecht," which antiquarians are hoping to see issued, in due time, by competent hands. He left, moreover, translations of several important manuscripts relating to Kings county matters.

CHAPTER LVII.

NOTES AND ILLUSTRATIONS.

THE LONG ISLAND CAMPAIGN—DUTCH NAMES OF PLACES AND PERSONS—HISTORICAL GLEANINGS AND DOCUMENTS—EARLY NINETEENTH CENTURY DESCRIPTIONS.

IN this chapter we propose to present some documents, extracts, and additional details which will help to elucidate several of the earlier passages of this work, and also to present specimens of the work of the earlier historians of Long Island, all of which will be found of interest to the general reader of the local history:

CAPITULATION BY THE DUTCH TO SIR RICHARD NICOLLS.

These Articles following were consented to by the Persons here under subscribed, at the Governour's Bowery, August the 27th, Old Style, 1664.

I. We consent That the States-General, or the West India Company, shall freely enjoy all Farms and Houses, (except such as are in the Forts,) and that within six months they shall have free Liberty to transport all such Arms and Ammunition as now does belong to them, or else they shall be paid for them.

II. All Publique Houses shall continue for the Uses which they are for.

III. All people shall continue free Denizens, and shall enjoy their Lands, Houses, Goods, wheresoever they are within this Country, and dispose of them as they please.

IV. If any Inhabitant have a Mind to remove himself, he shall have a Year and six Weeks from this day, to remove himself,

Wife, Children, Servants, Goods, and to dispose of his lands here.

V. If any Officer of State, or Publique Minister of State, have a Mind to go for England, they shall be transported Fraught free, in his Majesty's Frigotts, when these Frigotts shall return thither.

VI. It is consented to, that any People may freely come from the Netherlands, and plant in this Colony; and that Dutch Vessels may freely come hither, and any of the Dutch may freely return home, or send any Sort of Merchandize home in Vessels of their own Country.

VII. All Ships from the Netherlands, or any other Place, and Goods therein, shall be received here, and sent hence, after the manner which formerly they were, before our coming hither, for six Months next ensuing.

VIII. The Dutch here shall enjoy the Liberty of their Consciences in divine Worship and Church Discipline.

IX. No Dutchman here, or Dutch Ship here, shall upon any occasion be pressed to serve in War against any Nation whatsoever.

X. That the Townsmen of the Manhattans shall not have any Soldiers quartered upon them, without being satisfied and paid for them by the Officers; and that at this present, if the Fort be not capable of lodging all the Soldiers, then the Burgomasters, by his Officers, shall appoint some Houses capable to receive them.

XI. The Dutch here shall enjoy their own Customs concerning their Inheritances.

XII. All Publique Writings and Records, which concern the Inheritances of any People, or the Reglement of the Church or Poor, or Orphans, shall be carefully kept by those in whose Hands now they are, and such Writings as particularly concern the States-General, may at any Time be sent to them.

XIII. No Judgment that has passed any Judicature here, shall be called in Question; but if any conceive that he hath not had Justice done him, if he apply himself to the States-General, the other Party shall be bound to answer for the supposed Injury.

XIV. If any Dutch, living here, shall at any Time desire to travaille or traffique into England, or any Place, or Plantation, in obedience to his Majesty of England, or with the Indians, he shall have (upon his Request to the Governor,) a Certificate that he is a free Denizen of this Place, and Liberty to do so.

XV. If it do appeare that there is a publique Engagement of Debt by the Town of the Manhattoes, and a Way agreed on for the satisfying of that Engagement, it is agreed that the same Way proposed shall go on, and that the Engagement shall be satisfied.

XVI. All inferior Civil Officers and Magistrates shall continue as now they are, (if they please,) till the customary Time of new Elections, and then new ones to be chosen by themselves; provided that such new chosen Magistrates shall take the Oath of Allegiance to his Majesty of England before they enter upon their Office.

XVII. All Differences of Contracts and Bargains made before this Day, by any in this Country, shall be determined according to the Manner of the Dutch.

XVIII. If it do appeare that the West India Company of Amsterdam do really owe any Sums of Money to any Person here, it is agreed that Recognition and other Duties payable by Ships going for the Netherlands, be continued for 6 months longer.

XIX. The Officers Military, and Soldiers, shall march out with their Arms, Drums beating, and Colors flying, and lighted Matches; and if any of them will plant, they shall have fifty Acres of Land set out for them; if any of them will serve as Servants, they shall continue with all Safety, and become free Denizens afterwards.

XX. If at any Time hereafter the King of Great Britain, and the States of the Netherlands, do agree that this Place and Country be

re-delivered into the Hands of the said States, whensoever his Majestie will send his Commands to re-deliver it, it shall immediately be done.

XXI. That the Town of Manhattans shall choose Deputyes, and those Deputyes shall have free Voyces in all publique Affairs, as much as any other Deputyes.

XXII. Those who have any Property in any Houses in the Fort of Aurania, shall (if they please) slight the Fortifications there, and then enjoy all their Houses, as all People do where there is no Fort.

XXIII. If there be any Soldiers that will go into Holland, and if the Company of West India in Amsterdam, or any private Persons here, will transport them into Holland, then they shall have a safe Passport from Colonel Richard Nicolls, Deputy-Governor under his Royal Highness, and the other Commissioners, to defend the Ships that shall transport such Soldiers, and all the Goods in them, from any Surprizal or Act of Hostility, to be done by any of his Majestie's Ships or Subjects. That the Copies of the King's Grant to his Royal Highness and the Copy of his Royal Highness's Commission to Colonel Richard Nicolls, testified by two Commissioners more, and Mr. Winthrop, to be true Copies, shall be delivered to the Hon. Mr. Stuyvesant, the present Governor, on Monday next by Eight of the Clock in the Morning, at the Old Miln; and these Articles consented to, and signed by Colonel Richard Nicolls, Deputy-Governor to his Royal Highness; and that within two Hours after the Fort and Town called New Amsterdam, upon the Isle of Manhatoes, shall be delivered into the Hands of the said Colonel Richard Nicolls, by the Service of such as shall be by him therunto deputed, by his Hand and Seal.

John Pinchon.

I do consent to these articles,

RICHARD NICOLLS.

The division of Long Island by the Treaty of Hartford, in 1650, is given below :

TREATY OF HARTFORD, 1650.

Articles of agreement made and concluded at Hartford, upon Conecticut, September 19, 1650, between delegates of the Commissioners of the United English colonies, and the delegates of Peter Stuyvesant, governor-general of New Netherlands—concerning the bounds and limits between the English United Colonies and the Dutch province of New Netherlands.

We agree and determine as follows:

That upon Long Island, a line run from the westernmost part of Oysterbay, and so in a straight and direct line to the sea, shall be the bounds between the English and the Dutch there, the easterly part to belong to the English, and the westernmost part to the Dutch.

The bounds upon the main to begin upon the west side of Greenwich Bay, being about four miles from Stamford, and so to run a westerly line twenty miles up into the country, and after, as it shall be agreed by the two governments of the Dutch and New Haven, provided that said line run not within ten miles of Hudson's River, and it is agreed that the Dutch shall not, at any time hereafter, build any house or habitation within six miles of the said line. The inhabitants of Greenwich to remain (till further consideration thereof be had,) under the government of the Dutch.

That the Dutch shall hold and enjoy all the lands in Hartford that they are actually in possession of, known or set out by certain marks and bounds, and all the remainder of the said lands, on both sides of Connecticut River, to be and remain to the English there.

And it is agreed, that the aforesaid bounds and limits, both upon the island and main, shall be observed and kept inviolable, both by the English of the United Colonies and all the Dutch nation, without any encroachment or molestation, until a full determination be agreed upon in Europe, by mutual consent of the two States of England and Holland. And in testimony of our joint consent to the several foregoing conditions, we have hereunto set our hands this 19th day of September, 1650.

SIMON BRADSTREET,
THOMAS PRINCE,
THOMAS WILLET,
GEORGE BAXTER.

CAPTAIN MULFORD'S TROUBLE, 1717.

Captain Samuel Mulford, of 7 East Hampton was the eldest son of one of the first settlers of that town and was born in 1644. In 1705 he was elected a member of the Assembly and held that office until 1720. Mr. Pelletreau in a biographical sketch of this sturdy patriot, says :

The greatest grievance of Captain Mulford's fellow townsmen was a tax which, without shadow of law or justice, had been levied by the governor upon the products of the whale fishery, he demanding a tenth as a right of royalty. Against this unjust demand the people, with Mulford at their head, rose as one man. In a memorial addressed to the king he recounts the facts that the taking of whales by the people continued "above fifty years before the captors heard of any duty for so doing until of late," and that it was looked upon as "an imposition contrary to the law of the colony."

It also seems that Captain Mulford and his two sons and Colonel Richard Floyd, of Brookhaven, "had been arrested on an action of trover for converting the Queen's goods to their own use," and that this case had been "carried from court to court to the number of fifteen or sixteen courts." The case against Colonel Floyd was, that Captain Theophilus Howell's company of Southampton had a license to take whales, obliging themselves to pay one-twentieth part of all they gained. This party killed a whale and brought it ashore, and in the night a strong east wind drove it along shore about forty miles. The owners of the whale put it into Floyd's hands to try out, and he was prosecuted by the governor for the whale. The defense that was made by Captain Mulford is an example of careful reasoning which before an unprejudiced tribunal could not fail to command respect ; but judgment was given against him, and in every possible way he was annoyed by persecutions and penalties.

On the 2d of April, 1714, he made a speech in the Assembly, "putting them in mind of some ill measures I was informed were taken." This speech was printed, and brought down upon the devoted head of its author the wrath of the royal governor. Suit was instituted against Mulford in the supreme court, and as it was in the power of the governor to prolong the matter it kept him away from his home, and deprived him of the opportunity of attend-

ing to his personal affairs. Conscious of the injustice the Assembly united in a petition that the prosecution might be dropped and Captain Mulford permitted to return to his native town. With that tenacity of purpose which distinguished him through life he resolved to make the journey to England, and there to present his wrongs in person to the king and council and demand redress. A voyage across the Atlantic at that time was something that called for the vigor of early manhood, but it was unhesitatingly undertaken by this man, whose head was whitened by the frosts of seventy years, but whose spirit was unconquered. To conceal his departure he made his way to Boston to embark, and duly arrived at London. Unaccustomed to the sights and sounds of crowded cities, and with none to urge his case or assist his claim, Samuel Mulford stood in England's capital, unknowing and unknown. The attendants of court had no attentions for the plain man from a distant colony, who came unannounced by the voice of fame and unaccompanied with the pomp of power. At length, by one of those singular circumstances which, insignificant in themselves, sometimes turn the tide of human events and set at naught all human calculations, attention was drawn to his case, and justice obtained for his cause. His unsophisticated appearance rendered him a conspicuous and suitable subject for the operations of the light-fingered gentry, and the contents of his pockets were quickly transferred to their own. It would seem as if the proverbial Yankee sharpness must have been early developed in this clime and prompted him to have several fishhooks sewn into his garments in such a manner that the next hand that was introduced into his pocket received an invitation to remain that it was found impossible to decline. This amusing affair was quickly noised abroad; it was mentioned in the newspapers at the time, and from an unknown individual he became the topic of the hour. His case was examined before the council, his information duly appreciated, the tax on oil ordered to be taken off, and he returned to his constituents with his efforts crowned with well merited success. At his return he took his seat in the Assembly. The hatred of the governor was not appeased; the old subject of the speech was revived, and by the vote of a subservient house he was expelled from his seat. It is needless to say that the people of Suffolk county did honor to themselves by immediately re-electing him to the

place he had filled so long and so well, and he continued to serve as their representative till October 17, 1720, when he was again expelled, for protesting against the legality of the house and refusing to unite in an address to the governor. Thus ended his public career, but to the end of his life he was in his native town an honored man.

The following documents illustrate the details of this controversy from Captain Mulford's standpoint and were written by him:

A MEMORIAL OF SEVERAL AGGRIEVANCES AND
OPPRESSIONS OF HIS MAJESTY'S SUBJECTS
IN THE COLONY OF NEW YORK IN
AMERICA

Sheweth: When the Enemies of the Nation had, by their wicked Councils and trayterous Intreagues, brought our Nation to the very Brink of being swallowed up by Popish Sperstition and Arbitrary Government, it pleased the Almighty God by his wonderful Omnipotence to bring in Peace and settle his Most Sacred Majesty, King GEORGE, upon the British Throne; and it is to be hoped, that his Subjects in distant Countries, and in particular those of the Colony of New York may in some Measure feel the Influence of his Happy Government, and be in due time relieved from all Oppressions.

The West End of the Island Nassau, (the then Manhados) Hutsons River and Staten Island were first settled by the Dutch from Holland, in great Danger and Hardship many of them being slain by the Salvages; the East End of the same Island by English under the Crown of England (they then being a Part of Connecticut-Colony) who also settled in great Hazard and Hardship. In some time after the Natives were suppressed, in the Year 1664, General Nicols with a Fleet of Ships and some Land Forces reduced the then Manhados to the King's Obedience, it being delivered to him upon Articles. And being thus subjected to the Crown, King Charles the Second making a grant of the same to his Brother James Duke of York, as by the same may at large appear, the said General Nicols and Commissioners demanded the East End of the Island; and though the Inhabitants thereof were much against, being moved from Connecticut to New York, yet it was their Misery and unhappy Fate to have it to be so. The

Governor, Commissioners and Council took upon them the Legislative Power, and the People were governed by their Ordinances, until Governor Dungan came to be over them, then an Assembly were called, which Privilege was then declared to be the People's Right; and some time after an Act of Assembly passed, That the Persons to be Elected to sit as Representatives in the General Assembly from time to time, for the several Cities, Towns, Counties, Shires, Divisions or Mannors of this Province, and all Places within the same, shall be according to the Proportion and Number hereafter expressed; that is to say, For the City and County of New-York four, for the County of Suffolk two, for Queens-County two, for Kings-County two, for the County of Richmond two, for the County of Westchester two, for the County of Ulster two, for the County of Albany two, for the Mannor of Ranslerwick one, and for Dukes County two, and as many more as their Majesties, their Heirs and Successors shall think fit to establish; That all Persons chosen as aforesaid, or the major Part of them shall be deemed and accounted the Representatives of this Province in General Assembly, and such Acts made by them, consented to by the Governor and Counsel, shall be the Laws of the Province, until they are disallowed by their Majesties, their Heirs and Successors, or expire by their own Limitation. And though by this Act, their Majesties, their Heirs and Successors may establish as many more, as they shall think fit: It is not to be thought that our Most Gracious Sovereign King George, will establish so many in such Places, that they may live upon other Parts of the Government, and great Injustice be done thereby, neither give Power to his Governor so to do; But that his Most Sacred Majesty would have Justice done: Notwithstanding of late there hath been Precepts issued out for Choice of Representatives in what Part and Places of the Government as he pleaseth. So that notwithstanding the Law, they are raised to the Number of Twenty Five; and now the Minor Part of the People in the Government have the Major Part of the Assembly, and for their Interest Oppress a great Part of the People, and they lie under great Disadvantages; as may appear by the following proportion of a 4000*l*. Tax, and several other Particulars upon the several Counties in the Colony, here is an Account of the men, Inhabitants in each County, and their Rep-

representatives in the Assembly; also the Quota of Tax in the same.

	Number of Men	Assembly Men	Quota of Tax		
			L	S	D
In the City and County of New Yk	1200	4	885	00	0
County of Albany, with Ranslerw'h	540	4	175	10	0
Kings County.....	420	2	730	00	0
Queens County.....	1000	2	644	10	0
County of Suffolk.....	800	2	680	10	0
County of Ulster.....	620	2	311	10	0
County of Westchester.....	630	3	240	00	0
County of Richmond.....	350	2	226	13	4
Orange County.....	65	2	60	00	0
Dutchess County.....	60	2	46	06	8
	5685	25	4000	00	0

By this plan it is evident, that the several Counties are very unequally Represented, as well with Regard to the Number of Inhabitants in each, as to the Taxes they pay; And to this Disproportion of Assembly-Men is to be ascribed the unequal Taxing of the several Counties, without respect to their Number of People, their Riches and Commerce. To evince this it will appear, that Kings-County, Queens-County and County of Suffolk, which contain 2220 Men, have only Six Representatives in Assembly, and are taxed 2055*l*. whereas all the other Counties, having in them 3465 Men and so many Representatives that they are Taxed only at 1945*l*. So that at this time there is up Hudsons River Ten Assembly-Men, in Albany, Ranslerwick, Ulster, Orange and Dutchess Counties, and all those Ten represent, do not pay in one Tax so much as one County on the Island of Nassau, where they have but two in each County. And for what Disbursements and Services done on the same Island, for publick Service there is very little if anything paid them: When for publick Disbursements and Services done up Hudsons River (do but give it the Name for their Majesties Service) altho' it be to draw Trade to them, or to go to purchase Land for themselves, it is brought to the Assembly to put the Charge upon the Country; and for the most part they get twice so much as others in part of the Government would demand for the same Service, if it were not for the Publick.

It is a Privilege to have an Assembly, if it were as near as may be according to the Number of the People in each County, that Justice and Right might be done: But to have the

Name and nothing of the Nature, is but a Snare to the greatest Part of the People in the Colony, and would be easier for them that there was not any Assembly, than to have such an One as endeavour to live upon their Neighbours, and not by them, and shall be called True and Loyal Subjects, complying to all Proposals for some Men's Advantage; when others, endeavoring to have Justice and Right done, and speak any thing for Property and Liberty of the Subjects, shall be looked upon as Criminals, if not prosecuted for the same, as Capt. Mulford was. It is supposed there are some things else besides Loyalty, as An Office with a Sallary, A Grant of some Lands, and A Sallery of Three Hundred Pounds per Ann. to the Commissioners of the Indian Affairs at Albany; though it is not known to the Country, what Service they do to the King or Country, except it be to draw Trade to themselves and Debts upon the Country, and procure a Resolve of the Assembly to allow them 300*l.* per Annum for five Years, and also to Allow the Indians 400*l.* by a Resolve of the House for the same time. And so in time of Peace have brought the Colony to be Tributaries to the Heathen, and when the five Years are expired, the Indians will expect it for ever; and if they have it not, they will think they have just Cause to Quarrel with the English. And of what dismal Consequence are such Measures! But it is thought that the Indians did not expect such a Present now, but that it was somebody else that wanted it: For 400*l.* at New York, with the Customary Advance of 50*l.* Per Cent. at Albany, makes 600*l.* And if the Indians have 400*l.* there, it will do; also somebody must present it to the Indians, who in Retaliation return several Packs of Beaver and other Skins: The Report is, that sometimes to the Value of the Present, which is unknown to the Publick what becomes of it. But it is thought to be the greatest Reason of Making the Present, and so bring His Majesties Subjects to be Tributaries. If it were of Necessity to do it, and were for the publick good of the Plantations in America, why do not the Neighbouring Colonies assist, which are as deeply concerned for their own Security?

The Indians that fled out of New-England are settled near Albany, and those from North-Carolina, when fled from thence, come there for Shelter, amongst those Indians which their Majesties Subjects in New-York-Government

are brought to be Tributaries to; and it is thought that the Present that was made to those Indians in the Year 1713, put them in a Capacity to assist in destroying their Majesties Subjects in South-Carolina. The Report is, That when the Wars were in North-Carolina they had Assistance from South Carolina, the Albany-Members informed the Assembly, That there was Five Hundred of the Enemy Indians come amongst the Five Nations. They also informed the House, That they thought it was requisit to make a Present to the Indians: Amongst some slight Arguments, they said, The young Men amongst our Indians armed themselves, and it was to be feared they were upon some ill Design: So in the latter End of the Summer they had a Present of 400*l.* The Report was, That the Winter following there were Indians from South-Carolina amongst the Five Nations, complaining that the English at South Carolina had taken their Land from them, and craved their Assistance. In the Spring following the Wars were at South-Carolina, and it was reported, that several Indians from those Five Nations were gone when the Wars were there, and the latter End of that Summer the Indians Sold (at Scunnatade, about twenty Miles above Albany,) Beaver Hats bound with Silver Lace, Wigs, good Broad Cloth Coats, and Shirts: It is so reported that it is thought to be real Matter of Fact, and it might be well if it were not so. It was commonly reported, That the Albany-People made a Truce with the French of Canada, and had a Trade with them all the Time of the Wars: Notwithstanding by their Remonstrances to the Assembly, of their Danger, and they being a Frontier, the Country was at great charge keeping Garrison there, and all the Officers must be of Albany, and most of the Money for that Service centers among them; which was thought to be the greatest Reason for that Service.

And if the Governor for the time being hath power to establish so many Representatives, and in what Places of the Government he pleaseth (as it now is) and such as for their own Interest will do and comply with all the Proposals to bring it to pass, and the Governor to put in Office whom he will, and as many as he pleaseth, and allow them what Sallary he sees cause, and all the publick Money in the Government at his Disposal, to no other Use but at his Will: Then the People in the Colony have not the Property and

Liberty of English Subjects, but are subjected to some Mens Avarice; not only to those who have the Name of Christians, but to the barbarous and cruel Heathen. And is it not a Dishonour to His Majesties Crown and Dignity, that his Subjects should be sold Tributaries to them? Would it not be better for them to part with one Half of their Personal Estates, for Encouragement for 5000 or 6000 Men to come and suppress those Salvages, that his Majesties Subjects could not live quietly by, and to possess their Lands, and not become Tributaries to them, or at least to do as those of Quebeck did in October, 18, 1716, on the Interruption of their Commerce by the Savages, living Four Hundred Leagues up the Country, went with Three Hundred French and Six Hundred Savages their Allies, to bring them to a better Temper: And finding the Enemy well entrenched with Pallisadoes and good Ditches, they planted themselves near enough to the Pallisadoes, and threw two Granadoes, brought them to Surrender and agree to pay the Expence they had been at, and restore to the French their former Skin-Trade, as before; and they had but one Frenchman and two Savages wounded in that Expedition, though there were above 3000 Men Women and Children in that Fort. So that it is a Quære, whether it be not more for some particular Mens Interest, to make so much Stir for Presents to the Indians and bring the Colony to such vast Charge, than it is for the publick Good.

The poor Colony of New-York, containing in it not above 6000 Men at the most, were at the Charge of at least 3000*l.* upon the Expedition for Canada, upwards of 2700*l.* to pay some small Debts and make good the Embasement of the publick Money in the Government, and 4045*l.* per Annum for five Years by Resolves of the House, part of which is to bring them to be Tributaries to the Heathen, and pay Men to bring it so to be; and now the Colony is miserably distressed, if not vasaled: The Sense whereof caused several to move out of the same, and several more purpose to do so, if they cannot be relieved.

A great Part of the Aggrievances and Injustice done in the Colony may be ascribed to an unequal Proportion of Representatives; and if not redressed, may ruin the Colony. If there were an equal Proportion of them, as near as may be according to the Number of the People in each County, then they might

in the strongest Manner unite the Hearts of all the Subjects, and put an effectual End to all the Feuds and Animosities that have obstructed Prosperity in the Colony for a Course of many Years.

There is a Court of Chancery erected at New-York, where the Governor is sole Judge, and if he demands any thing in the King's Name and it is not comply'd with, they shall be subpoena'd to the Court of Chancery, where the Governor shall judge whether he shall have his Demands; the Masters of Chancery shall not judge in the Cause, only tax the Costs of the Court. So in all Cases that come to that Court, the Governor is only and sole Judge, whether the Cause be right by the Verdict of Twelve Men and Judgment upon the same. So the Governor becomes The End of all Law and Judgment in the Government: Let the Judicial Reader judge, whether it be not a Miserable and Unhappy Fate to be subjected, both Persons and Estates, to the Will and Pleasure of any Governor for the time being, especially considering the People under the Government by Experience find the chief End of their Coming. It may be said, You have an Agent for your Colony. Answer, Though there be an Act for an Agent for the Colony of New-York, yet by the same Act he is Agent for the Governor, and not for the Country, they have nothing to do but to pay him, and send to him such Instructions as the Governor shall approve of; for it is said in the Act, That the Instructions sent to him, shall be by the Governor and Council, or General Assembly; and what is sent by the Governor and Council, shall be Signed by the Governor and major Part of the Council, residing within the Province, and what is sent by the General Assembly, shall be Signed by the major Part of them and the Speaker; and if any thing comes to him otherwise, then as aforesaid, he shall not have any Regard to it.

Observe, The Governor hath Power to call some to sit in Council, they must acquiesce with what he proposeth, lest they be suspended; and for the Assembly; if the Governor hath Power to have them chosen where he pleaseth, and get the Soldiers to chuse for such Men in New-York as they shall be directed to chuse to serve upon the Assembly, the most subtle Men to have a grant of some Lands, an office with a large Salary, as several of the Assembly Men have, they must comply to the Governor's Proposals, and make Resolves to allow

the Governor 171*ol.* per Annum for five Years, the Chief Justice 300*l.* per Annum, for the same time, the Commissioners of the Indian Affairs at Albany 300*l.* per Annum, for the same time, and some others of the Assembly Sums too tedious here to relate.

So that some for their Interest and others for Fear dare not oppose any thing proposed, but comply with whatsoever is for the Governor's and some cunning Mens Advantages: And how can the major Part of the Assembly make known the Aggrievances of the People, when they are drawn and deter'd from speaking. And if the major Part and Speaker of the Assembly should be about to send to the Agent, if the Governor should not like it, he could dissolve the Assembly at his Pleasure, and so prevent them of sending. So it must be what he pleaseth; and if Demetrius and the Craftsmen of the same Occupation made such an Uproar about Paul's Preaching the Gospel at Ephesus, because it took away their gain and Wealth, what Stir do you think these Men will make, if any should endeavour to break the Schemes they have laid, whereby they get their Wealth, and wholly subject the People to their Pleasure? But if the Governor be infallible, and the People under his Government both Persons and Estates at his Pleasure, then it is in vain to dispond or complain; but if the People have Property, and the Government ought to be carried on for His Majesties Benefit, and Good of the Subjects, then such Measures as these ought to be took into consideration and what is amiss to be rectified.

The People in New-York Government have been called Stubborn, Reflectory, little if any thing less than Rebels, when they have been Oppressed under the Government, and Ruinous Measures taken amongst them, whereby they are deprived of the Privileges of Englishmen, and they have been uneasy under the same: And there is not any Reason to Villify, Scandalize and Reproach them, except to render them so vile, that not any should have regard of them, to relieve them from Oppressions. But he that doth Injustice dishonours the King, and those that endeavour to uphold and vindicate such, are Accessories though not Principals.

These are some of the Measures that are and have been taken in New-York Government; although the truth of this may be questioned, yet many One in the Colony of New-York by woful Experience knows this and sev-

eral other Oppressions to be real Matter of Fact.

And although there was an Act of Parliament passed in the Reign of King William III. For Punishing of Governors of Plantations in this Kingdom, for Crimes by them committed in the Plantations, what Benefit can the People in New-York Government have by this Act, when they can not have an Agent to be informed of the Aggrievances of the People, nor any Publick Money in the Government, to enable any other Person to do it, but what the Governor pleaseth. And for particular persons, when denied to make Use of the Customs of the Colony and Grants made by former Governors, denied the Benefit of the Laws of the Colony, Prosecuted contrary to Law, passed upon and destroyed without due Course of Law; How shall they be relieved from such Oppressions, when by their Poverty and Ruinous Measures are so impoverish'd, that they have not Money to prosecute in such Case? These must be Ruin'd: for there is not any Fencing against a Flail.

So, by what is here set forth, may be left to the Consideration of all Judicial Persons, what Encouragement such a small People as are in New-York Colony have, to allow their Governor such a large Sallery. Quere, Is the Government carried on for their Majesties Benefit, and Good of the Subjects, according to the Laws and Customs of the Colony, and according to English Government; or is it Arbitrary, Illegal, Grievous, Oppressive, Unjust and Destructive?

AN INFORMATION.

It hath been a Custom, for above 60 Years, (several Years before New-York was Subjected to the Crown of England) for their Majesties Subjects, on the East End of Long-Island then belonging to Connecticut Colony, to go out upon the Seas adjacent to their Land, Six Men in a small boat to take and kill Whales and other Fish, and the Capters to have all they killed, brought on Shore, or left dead or wounded; so that they came on Shore with Wind or Sea, which continued above Fifty Years, before the Capters heard of any Duty for so doing, until of late, by violent Proceedings, frightened some to do it, when generally it was look'd upon to be an Imposition, contrary to the Law of the Colony: And while my

Lord Lovelace was Governour; Maj. Engoltsbee Lieutenant Governour, and Colonel Beaman President, there was not any thing demanded nor paid by the Capters; so it ceased until Brigadier Hunter came; then he imposed upon the People, seizing Whales, Oyl and Bone, and subpoena'd the Capters to New-York to the Court of Chancery, issuing out Prosecutions at Law, to compel People to pay Duty for that Fishery: Whereupon, in the Year 1712, they commenced an Action of Trover against me, in the Supream Court at New-York, and also arrested Colonel Richard Floyd and my two sons Timothy and Matthew Mulford, in an Action of Trover, for converting the Queens Goods to their own Use: This was carried on from Court to Court, to the Number of Fifteen or Sixteen Courts. Here follows the Defence I made in the Courts.

SAMUEL MULFORD'S DEFENCE FOR HIS WHALE FISHING.

New-York, March the 15th, 1715-16.

The Custom of the Whale-Fishing is a Free Custom; because there is not any Law to Prohibit it: It is an Antient Custom, to the Third and Fourth Generation; it is more Antient than the Colony of New-York, and not in any Man's Memory to the contrary till of late: And in the Year 1686, we, the town of Easthampton, had a Patent to us, by the King's Governour, with several Priviledges therein granted to this Corporation, for which we pay 40s. per Annum to the Crown, amongst which it was granted to us, to have Rivers, Rivulets, Waters, Lakes, Ponds, Brooks, Streams, Beaches, Quarries, Mines, Minerals, Creeks, Harbours, High-Ways and Easements; Fishing, Hawking, Hunting and Fowling, [Silver and Gold Mines excepted] and all other Franchises, Profits, Commodities and Hereditaments, whatsoever, to the said Tracts and Necks of Land belonging or in any wise appertaining, or there withal used, accepted, reputed or taken to belong, or any wise appertain, To All Intents and Purposes, and Constructions whatsoever: So that we have Waters, Lakes, which is Sea, and Fishing granted to us, and nothing prohibited, but granted to us, except Silver and Gold Mines, The Whale-Fishing was our Fishing at the time of the Grant, and several Years before; so we hold it to be our Right to continue so to do, it being reputed to be one of the Franchises con-

firmed to us both by Patent, Law and Reason: And in the Third Year of King William and Queen Mary, 1691, there was an Act of Assembly passed, That no Aid, Tax, Tallage, or Custom, Loan, Benevolence, Gift, Excise, Duty or Imposition whatsoever, shall be Laid, assessed, imposed, levied or required of or on any of their Majesties Subjects in this Province: Or their Estates upon any manner of Colour or Pretence whatsoever; but by the Act and Consent of the Governour, and Counsels, and Representatives of the People, in General Assembly met and convened; also by another Act of Assembly, made at the same time, confirming Patents and Grants, which by the Act may at large appear, And also unto all and every of the several respective Free Holders, their Heirs and Assigns for ever within this Province, are to all Intents and Purposes whatsoever, hereby Ratified and confirmed to have, Hold, Exercise, occupy, possess and enjoy all their, and every of their Former Rights, Customs, Prerogatives, Priviledges, Preheminences, Practices, Imunities, Liberties, Franchises, Royalties and Usages whatsoever: And in their Majesties Letters Patent to the Governour for the time being, saith, You shall call to your Self, some of the principal Free-Holders to sit in General Assembly, and such Acts as are made by them, consented to by the Governour and Counsel, shall be the Law of the Province, except they are disallowed by us. These two acts above mentioned were never disallowed by the Crown that ever I heard of, neither by Record or Information from the Crown to this Government; so consequently they must be the Laws of this Colony, until they appear to be disallowed by their Majesties: So that the Prosecution of me, for Whale-Fishing, I take it to be against the Form of our Grant to this Corporation; against the Laws of this Colony, and against Reason and the Governour for the time being's Instructions from the Crown; for it is said therein, You shall carry on the Government for our Benefit and the Good of the Subjects, according to the Laws and Customs of the Colony. It is hurt to the Common-Wealth of this Colony, against the Crown to hinder Effects being taken, to make Returns Home for England, to purchase the Manufacture of the growth of that Realm; and although Mr. Attorney General was pleased to commence an Action in Behalf of the Crown, in the Supream Court at New-York, against me, and

prosecute from time to time for above Three Years, I know not any Law the Action is grounded upon, but Consequence or Pretence; for I have not done any thing in that Case, but what is according to the Laws and Customs of the Colony, it is a common Saying, where there is no Law there is no Transgression; and in this case I do not see how any can give Judgment against me, if he have Regard to the former Governors Grant, the Law of this Colony, the Governours Instructions from the King, Reason and a publick Good of the Subjects, which is the End of all good Laws: I query, what Judgment and Penalty shall be put upon any of their Majesties Subjects, that have not done any thing contrary to Law and Custom, but consonant to both, and only made use of an Antient Custom and Usage confirmed by Patent, Law and their Majesties Instructions: I have not done any thing but used a particular Custom, as I take it to be neither against the Law of God nor the Law of Reason, and to be good and necessary to the Commonwealth.

I understand, within the Realm of England, a General Custom is to be decided by the Justices, which I take to be the Twelve Judges: But if not, I suppose it must be more than One single Person: but in a particular Custom (as this is) the Student at Law saith, If it be not against the Law of God nor the Law of Reason, although they be against the said general Customs or Maxims of the Law: yet nevertheless, they stand in Effect and be taken for Law: But if it rise in Question in the King's Courts, Whether there be any such particular Custom or not? It shall be tried by Twelve Men, and not by the Judges, except the same particular Custom be of record in the same Court; And if not to be tried by the Judges, to be sure not by one particular Judge. So I crave and Request of this Honour'd Court, the Judgment of Twelve Men, my Peers of the same Vicknage, that may know something of the Matter, that Justice and Right may be done in such Matter of great Consequence as this is.

And in fine, We have Water and Lakes, which is Sea, granted to us. In the 8th Chapter of St. Matthew, Verse 22. it is said, The Herd of Swine ran into the Sea; And St. Mark, Chap. 5. Ver. 13. saith, They ran into the Sea: St. Luke, Chap. 8. Ver. 33. saith, They ran into the Lake and were choaked. So that by the most Infallible Rule, the Lake is

Sea, and the Sea adjacent to the Land is Lake, which is granted to us, it being one of the Premises of the Grant. And we have Fishing granted to us, which we hold of the Crown, and pay an Acknowledgment for the same. And I know not any Reason why we should not fish in the Waters and Lakes granted to us: There is not any Sort of Fishing prohibited, Silver and Gold Mines are excepted, and all other Franchises, Profits, Commodities and Hereditaments whatsoever, to the said Tracts and Necks of Land and Premises belonging, or in any wise appertaining, or therewithal used, accepted, reputed, or taken to belong, or in any wise appertain, to all Intents, and Purposes, and Constructions whatsoever. The Whale-Fishing at the Time of our Grant, was used, accepted, reputed, and taken to belong to us, and hath been ever since till of late. And although there might have been more Words put into the Grant, to have made it more plain to be understood, yet the law doth it: For the Law in express Words confirms our Patents and Grants, against the King, His Heirs and Successors for ever, notwithstanding the Want of Form in the Law, or Nonfeizance of any Right, Priviledge, or Custom, which ought to have been done heretofore, by the Constitutions and Directions contained in the respective Charters, Patents and Grants aforesaid. And the Law proceeds farther, to say, what the Priviledges granted to the Subjects are, as at large may appear in the same. And if a Grant from the Crown, the Laws of this Colony, nor the Instructions from the King to the Governors for the Time being, will not secure the Priviledges of the Subjects, according to the Laws and Customs of this Colony, what shall a Man say, but request and crave the Priviledges of an English Man, and not to be passed upon but by due Course of Law.

My Council pleaded an Act of Parliament for the Subjects within this Kingdom to go a Whale Fishing to Greenland, Friezland and Places adjacent, and for the Oyl and Fins they so get should not pay any Duty. Also Newfoundland and the Plantations in New-England, who should pay a Duty for that when brought into this Kingdom. He shewed the Act to the Court. Upon the Tryal I was denied to have a Jury. My Council had pleaded a former Court, that we had Right by Prescription; upon which the Attorney-General pleaded a Demur, and it was a matter of Law;

so I should not have a Jury: Although formerly, in the Year 1694, Peter Choke seized a Whale killed by Richard Smiths, Esq; Company, he sued for the same in the Supream Court at New-York, and Judgment was given in Favour of the Subject. On Thursday the Chief Justice said he should defer Judgment until Saturday. On Fryday he sent his Man to me with a Note, the Copy whereof is as followeth:

To Samuel Mulford, Esq; These.

Sir, I desire you will send me by the Bearer, the Paper you read in Court Yesterday; for I did not take any Notice on my Paper, and cannot remember so long a Discourse, so as to form any Judgment of what you offered in your own Defense, except I read it.

I am, Sir, Your Servant,

LEWIS MORIS.

The Answer that I returned, was, Sir, You had it Yesterday in the Court.

On the Tryal there was only the Chief Justice on the Bench. My Council pleaded, that Judgment ought to be according to Justice: The Judge said he could give Judgment conditionally. The Clerk wrote something, but I did not hear the Judge give Judgment, nor hear him direct the Clerk what to write, neither did he read what he wrote in the Court. Then the Court adjourned until next Term. So I could not know whether there was a Judgment passed, nor what it was. The Report was, that there was a Judgment against me: I desired the Officer to give me a Copy of the Courts Proceeding about the Whale-Fishing. The 3d time I spake to him he could not give me a Copy, because the Attorney-General had the Rolls. I went to the Attorney-General, desired him to let the Officer have the Rolls, that he might give me a Copy. I was with them for a Copy in May, June and August, and I could not have any Copy. The Officer said, he could not do it, because the Attorney-General did not let him have the same. I desired the Officer to give me under his Hand, the Reason why he did not give me a Copy, which he refused to do. I desired some to go with me, that they might be witnesses that I demanded a Copy; but they would not, and said, if they should they should have Ill-will, and might have an Injury done them. And although I could not know in the Court what was done, I was informed the Judge did give Judgment against me, my two Sons and Col. Richard Floyd. So they made it all one Case upon Tryal, but every one particular in

the Court Charges; but there ought to have been particular Pleadings, because the said Floyd's Case was thus: Capt. Theophilus Howl's Company in Bridghampton had a License from the Governor to go to kill Whales, obliging themselves to pay the 20th Part. This Company killed this Whale, and brought it on Shore. In the Night a strong Eastwardly Wind drove it along Shore about Forty Miles. The Owners of this Whale put it into the said Floyd's Hands, to cut it up and make it into Oyl for them. The said Floyd is prosecuted for this Whale, and the Capters having their Whale kept out of their Possession, by Reason of the Prosecution, next Season would not take a License: So that Nine Men were subpena'd to New-York the 24th of June, in the most busy Time in the Summer, one Hundred Miles, to pay the 20th Part of what they got the Winter before, besides Charges. So that if they will not take a License, they shall be molested, if they do, they may lose their Whale.

Some time after the Supream Court was over, there was a Jury of Enquiry impanelled, to enquire what Damage was done to the Crown by our Killing Whales. The Jury was told, there was a Judgment against us, and their Business was only to say what a Whale was worth. So that they could not but say a Whale was worth Something. So Execution was issued out, and Distress made upon our Estates for using an Antient Custom; because one Single Judge was of Opinion, That they had not right by Prescription, though they had by Law, but we know not what is Law. The Chief Justice makes an Argument, that we have nothing to do with Acts of Parliament, we have no Law but what the Crown allows us. But we know by Experience, That all Penalties by Act of Parliament and Laws of the Colony shall be severely put in Execution; when if by either of them the People might have a Benefit it shall do them little or no good. Our Attorney-General said in Court, when pleading about the Whale-Fishing, If there was an Act of Assembly to give the Liberty to go to Sea a Whale-Fishing, it signifies nothing. So what our Officers please is Law. I desire and hope, for a publick Good, that the Subjects in the Plantation of America, might have the Whale-Fishing so settled, that they may be encouraged to go on that Design, and be capacitated to have Commerce with this Kingdom, to purchase the Manufacture of the same. I know no Reason why the Subjects

in New York and New Jersey Governments should not have the same Liberty to Fish for Whales as freely as other Subjects in their Neighboring Colonies in America have, or as the French King hath granted his Subjects to do, and not be deprived of Right and Privileges granted to us, for which we pay an Acknowledgment to the Crown, for Quit-Rents for our Land five Shillings, and an Acknowledgement for Priviledges fourty Shillings per annum; of which the Whale-Fishing was most Material, and several Places in the Colony pay the same.

I have seen a Memorial, setting forth several Aggrievances and Oppressions in the Colony of New York; I know several things therein mentioned to be too true to make a Jest of.

In the Year 1713, I with my Son Matthew Mulford was subpena'd to appear at the Court of Chancery at New-York on the 9th of April: My Son then had not one Foot of Land, nor ever was a Trustee; so was not prosecuted, but was forced to go 115 Miles to New York, and the same back, to be afflicted and put to Charge. And I that had not been in the Station of a Trustee for several Years before, could not pay the Debt of the Corporation, without Orders from the Trustees: But upon our being subpena'd to New York, the Trustees sent a Man to New York, to pay what the Corporation was in Arrears; but the Receiver-General would not receive it: So they ordered me to receive the Money and pay it. I tendered the Money to the Receiver, he would not receive it, and said he had put that Matter into the Attorney General's Hands, I must go to him. So I went and tendered him Sixteen Pounds, for him to take what was due; and also eight Pounds for him to take the Charge out of it: He said he could do nothing, and would not receive it. The next Week in the Court of Chancery, it was proved that I had made a Tender of the Money, as abovesaid. The Decree of Chancery was, That I should pay to the Register of the Court Fifteen Pounds and Fifteen Shillings, and the Charge as it should be taxed by one of the Masters of Chancery, and if the Receiver-General did not see Cause to accept thereof, but shall further prosecute: In such Case, if he did not make it appear there was more due, I should not pay any more Charge. I paid the 15*l.* 15*s.* to the Register of the Court, and 5*l.* and 10*d.* taxed for Costs to the Attorney-General, and took their Receipts for the same, and comply'd with

the Decree as far as I was capable, remain'd at New-York Fifty Days upon the General Assembly. Soon after I got home, a Man was sent down, being hired as it was said, for 5*l.* 10*s.* to bring a Writ to our Sheriff to arrest me. The Sheriff did arrest, and I gave Security for Appearance. I was charged with Contempt, but when I came to New York, being 115 Miles from my Abode, they could not make any thing out against me, only pretended that I was not discharged from that Court, neither could I get a Discharge until I had paid them Twenty Shillings. So in this Case I was prosecuted contrary to the Form of the Grant of the Quit-Rents, and the Custom of the Colony, if not a Breach of the Instructions from the Crown and the Decree of Chancery. So it was said, They were at 5*l.* 10*s.* Charge, to compel me to ride 130 Miles to pay them Twenty Shillings, I being near Seventy Years of Age. By the Grant, the Trustees are the only capable Persons to act and do all things in Reference to the Corporation, and every particular Freeholder, not being a Trustee, hath not any thing to do with the Money of the Corporation without their order.

It was the Peoples Pleasure to chuse me to be their Representative to sit in the General Assembly, to assist in having the Government carried on for their Majesties Benefit and Good of the Subjects. In the Year 1714, upon the 2d Day of April, I made a Speech in the House, putting them in Mind of some ill Measures that I was informed were taken, and to set things in their true Light, that Justice and Right might be done amongst us. There was a Discourse of having it Printed, but the Question was not put; however a Copy was desired and taken, which was printed. That Assembly being dissolved and another chose, who expel'd me out of the House upon the 2d Day of June, 1715, about that Speech. The next Week the Supream Court sate, and there was an Indictment drawn, charging me with an High Misdemeanor, acting contrary to my Duty of Allegiance, in manifest Contempt of his Majesty, and the Governour of these Provinces under His said Majesty. and against the Peace of Our said Lord the King, His Crown and Dignity, and against the Form of the Statutes made and provided: Whereupon the said David Jeneson, who &c. for our said Lord the King, prays the Advice of this Court in the Premisses, and that the said Samuel Mulford be attached by his Body whersoever, &c. To

answer our said Lord the King in the Premises. The Indictment was brought to the Grand Jury, who return'd it to the Court indorsed Ignoramus. The Attorney General makes Information and obtains a Capias to our Sheriff, to take me a Prisoner, to bring me to New-York before the Chief Justice upon the first Tuesday in September at the Supream Court, where Recognizance was required and given of 500*l*. Mr. Vandam and Mr. Delunsey, my Securities that I should attend the Court, and not depart without Leave. The Plea we made was, That it was against the Priviledge of the House, to Appeach any Member of the same in any Court or Place but in the House: desiring the Court would take that for an answer. Which Plea the Chief Justice over-ruled, there not being any other upon the Bench to assist. And I have been at four Courts, and know not but that it must be from Court to Court so long as I live; which has been a great Hardship upon me already, which I set forth in a Memorial to the House in June the 21st 1716. They took the same into Consideration, and resolved to Address his Excellency on that account; The Speaker with the whole House presented the Address, which is as followeth:

The humble Address of the General Assembly of New-York May it please your Excellency,

The Assembly being deeply sensible of the great Hurt, Damage and Inconveniency Mr. Samuel Mulford, a Member of this House, suffers and undergoes, by Occasion of a Prosecution against him in the Supream Court for Printing and Publishing a Speech formerly made by him in Assembly, are humble Suters to your Excellency, To give Orders that Mr. Mulford, in regard of his great Age, Distance of Habitation from the City, and other Considerations, may be freed and discharged from the said Prosecution, in the Supream Court.

The other Considerations in the Address, may be because the Prosecution was against the Priviledges of the House appears by Act of Parliament, and contrary to a Law of the Colony, which saith, That in all Cases Capital and Criminal, there shall be a grand Inquest, who shall first present the Offence, and then Twelve good Men of the Neighbourhood, to try the Offendor, who after his Plea to the Indictment, shall be allowed his reasonable Challenges.

Of what Benefit or Good can it be to the Colony, to have such an Assembly to represent them, when the Members of the House shall not have Freedom of Speech, and let the People they represent know what they are doing for them; but shall be prosecuted from Court to Court in the King's Name, and every Member of the House deterred to speak of any Aggrievances of and Priviledges for the People; but let things pass at Pleasure, lest they be molested as I am, and shall not have Relief, when by the best Authority of the Country his Excellency was addressed to free and discharge me, he refused to do it, except I would acknowledge, That I had set out a false Libel, and make him Satisfaction: Which I could never do, knowing that all which I set forth in that Speech was true; and I can prove it to be true, except what I related by Information, and that I believe to be true. I desired of the House, when I made that Speech. To let me know, whether they knew any thing in it that was not true. There was not any thing objected against it; but it was said in the House, That the worst Part of it was, it was too true: Also, That it was too true to make a Jest of. And I know not any Wrong I have done the Governor. It may be remembered, That the Speech was made the 2d Day of April, 1714, which was in the late Administration; therefore could not be against his present Majesties Administration; neither is it a Crime for any Member of the House in the same, to mention Matters of Fact, which are the Aggrievances of the People they represent; but their Duty to endeavour to have them relieved. Although the Governor might be the Occasion of the Aggrievances, and if I have done the Governor any Wrong, he might have brought his Personal Action against me, and not prosecute in the King's Name, except he is to be Infalible and do what he pleaseth, and nothing to be said by any. lest they in the King's Name be prosecuted from Court to Court. I always thought, That the Government ought to have been carried on for their Majesties Benefit and good of the Subjects, according to the Constitution of English Government: But it is so now with us, that I desire to know, Whether the Subjects in New-York Colony are to be governed by Prerogative and deprived of Property, or whether they are to be governed by the Constitution of English Government? If the former, then there is not any need of a General Assembly, nor any Occasion for that

Act of Parliament made in the Reign of King William III. For punishing Governors or Commanders in Chief, for Crimes by them committed in the Plantations: But let the Governors for the time being demand of the People what they please, and the People take care to help them to it, lest they be subpoena'd to the Court of Chancery at New-York, where the Governor is Judge whether he shall have his Demands, and pay Court Charges into the Bargain: But if according to the Constitution of English Government, then by the Common Law, what Estate every Subject possesseth, is deemed to be his Property, and is not to be taken from him by due Course of Law, which is by his own Consent, the Lawful Judgment of his Peers, or the Penalty for the Breach of some Law: And I know not any thing that I have done contrary to Law and Custom, endeavouring to do my Duty to the King and Country, as far as I was capable, and to have Justice and Right done. And I know not any just Cause or good Reason, why I should be thus molested and destroyed. So I am forced to come to this Court of Great Britain, to seek Relief for my self and others who employed me, which I hope will be took into Consideration, that I may be discharged and freed from unjust Prosecution, and my Securities indemnify'd, and a final Determination settled thereupon for a Publick Good.

Which is the Desire and Request of His Most Sacred Majesty King GEORGE's Most Humble, Loyall, Faithful and Obedient Subject,
SAMUEL MULFORD.

HOUSE OF ASSEMBLY *Die V'eneris*,

Sept. 13. 1717.

Col Rutsen reported from the committee appointed to consider a Memorial entitled A Memorial of Several Aggrievances and Oppressions &c. That they are of Opinion, the same is most false, malicious & scandalous Paper, reflecting upon the Governor and Government and the whole Constitution of this Colony and of Pernicious Consequence, and humbly Conceive, that the Thanks of this House, ought to be returned his Excellency for communicating the same, and that he be addressed to use his Interest at the Court of Great Britain, to find the Author in order to be brought to Justice, and in the Meantime his Excellency would please to acquaint the Indians of the five Nations, That we utterly abhor and detest that Suggestion in the Said paper or Libel, of re-

ducing the Indians by Force, and possessing their Lands, for the Steadiness of those Indians to the Interest of Great Britain, all the last War with France, is that we owe in a great measure, our present Security: which was read & agreed to by the House.

LETTER FROM THE LORDS JUSTICES TO GOV.
HUNTER.

Whitehall, ffeby 25th, 1717-18.

You intimate in Your letter to our Secry of 22d Nov. last that the Whale fishery is reserved to the Crown by Your Patents. As we can find no such thing in Your Commission, We desire you will explain What you mean by it. In the meantime We have received another Petition from Mulford, praying Dispatch in our Report upon the Papers our Secretary sent you on the 19th of Septemb last: We must desire therefore from You a full Answer to those Papers; and particularly as to the Right of the Crown; and that you would inform us what Quantitys of Whales are Caught in your Government *Comunibus annis*; In what Condition that fishery is, & has been for some years past, especially since your being in this Government, whether other persons have paid & continue to pay the Dues you demanded & which Mulford Complains of; What these Dues may amount to one Year with Another, & how the profit arising by them is Apply'd.

Upon this Occasion We must observe to you, that we hope you give all due Encouragement to that Trade.

Mr. Philips has laid before us the Address from the General Assembly of New York to You about Mulford & at the same time acquainted us that he had reason to believe your Answer to Mulford's Complaints was lost in the Ship Mercury.

THE REV. MR. HORTON'S LABORS AND DIARY.

The story of the efforts to advance the spiritual welfare of the Indians of Long Island is one of intense interest, involving as it does the usual details of patient labor, of privations endured, of triumph and of dejection; triumph when the grand message seems to have been accepted and dejection over the apparent slowness of the work and the inability

to reach and rescue the thousands who might be reached. On Long Island the missionary story, while relieved of the tortures and miseries which darken the story elsewhere, is still full of details which must ever form a graphic chapter in the story of Christian endeavor in North America. The Rev. Dr. Prime enlarges on the life and work of the Rev. Azariah Horton, and as that missionary was a native of Long Island, it may not be out of place here to present his record as given by Long Island's ecclesiastical historian. The society referred to is the London Society for the Propagation of the Gospel, often mentioned in this work:

After the settlement of East Hampton the Rev. Mr. James, the first minister of that town, moved with compassion for the ignorance and moral darkness of the Indians, commenced the study of their language, with the design of instructing them in the way of life and salvation. It appears that he was employed by the same society about the year 1660, but how long he continued in the work cannot be determined. His exertions were principally, if not exclusively, bestowed upon the Montauk tribe.

There were probably other individuals, in different parts of the island, who devoted more or less time to their religious instruction. But it is lamentable to record the fact that for about one hundred years these benevolent exertions appear to have been made in vain. The Indians, almost with one consent, adhered to the religious opinions and the senseless rites of their ancestors, and exhibited no inclination to receive the blessed gospel. It seems probable that after the experiment of a few years had been made the work was abandoned as altogether hopeless.

This state of things remained until towards the middle of the eighteenth century. In 1741 the New York committee of the society already named, engaged Mr. Azariah Horton (a native of Southold) as a missionary, to be exclusively employed in the instruction of the Long Island Indians, and for this purpose he was ordained to the work of the gospel ministry in that year by the Presbytery of New York.

Although human instrumentality, at all times and under all circumstances, is dependent for its efficacy on the divine blessing, it will

not be out of place to remark, that both the character of the missionary and the time of his appointment were peculiarly favorable to the results that were realized. Though the good man has long since gone down to the grave, and no memoir or extended biographical sketch of his life perpetuates his memory, and no memorial remains but the simple and concise record of his daily labors and some of their obvious results, he was manifestly a humble, laborious and self-denying servant of the cross. His charge extended along the whole southern shore of the island, for more than one hundred miles, upon which the remnants of those once numerous tribes, at that time reduced to "four hundred, old and young," were scattered. And here you trace him, four or five times a year, from Montauk to Rockaway, the two extreme points, back and forth, subsisting upon Indian fare—sleeping in their frail wigwams—teaching them to read the word of God, and almost daily preaching to them the gospel of Christ.

The time of his appointment was that notable period, at which it had pleased the King of Zion to bestow such a copious and extensive effusion of His Spirit on the American churches. And while thousands, in every part of the land, were raising the anxious inquiry, "What must we do to be saved?" He, who is "no respecter of persons," saw fit to send His devoted servant to these benighted savages with the same message of salvation and accompanied it with "the dispensation of the same Spirit." And while the skeptic is always ready to raise the cry of fanaticism and priestcraft against the work of God in the conversion of souls, the devout Christian, and even the candid rationalist, can scarcely fail to acknowledge the general awakening of that day, notwithstanding the human infirmities with which it was in some cases disfigured as a supernatural operation, when he sees these ignorant and degraded savages, who for one hundred years had strenuously rejected a proffered gospel, now melted down and brought to bow with contrite hearts to the message of grace. And let it be particularly noticed that these effects were produced, not by the powerful appeals of an eloquent preacher, addressed to the passions and sympathies of his hearers, but often by the slow communication of divine truth through the imperfect medium of a dull interpreter. And besides this, these astonishing results were realized, not on a few special occasions and in one or two populous neighbor-

hoods, but, during several successive years and throughout the length of the island.

A few extracts only can be given from the journal of this indefatigable missionary, to illustrate these remarks.

Rockaway, June 6th, 1742; preached. My hearers attended with seriousness, and appeared somewhat thoughtful.

Islip, June 8th; preached. Two awakened to a considerable sense of their sinful dangerous condition; others concerned before brought under fresh and strong impressions of their guilty state, of their need of Christ, and to earnest inquiries after an interest in him, and, in general, they are very devout and attentive.

Moriches, June 13th; preached. Two Indians awakened, and several others under distressing concern of mind, &c. Most of these are endeavoring to learn to read.

Shinnecock, June 15th. Preached; and surely the Lord was in this place; his power made known in bringing some that were concerned before, under distressing apprehensions of the wrath of God, of their need of Christ and his salvation, and in refreshing some that were hopefully his own children, by the refreshing influences of his blessed Spirit.

June 16th. Spent the forenoon in conversing with the Indians. P. M. preached. Many were under distressing concern, filled with anxiety of mind, and inquire "what they must do to be saved." Some were abundantly refreshed with joy and comfort in the Holy Ghost. O what adoring thoughts of free grace and redeeming love! O what wonder did they express at Christ's stooping to them, poor, undeserving creatures! The Lord was with us of a truth.

June 18th. Arrived at Montauk. The Indians gladly received me. Many among them are now sick.

June 19th. Spent most of the day in visiting, from wigwam to wigwam, both sick and well.

June 20th, preached, &c.

June 23d. Spent most of the day in visiting. Conversed with an Indian and three squaws, who, by the accounts they gave, and their conduct and conversation consequent thereupon, are hopefully converted. And these conversions were wrought, according to their accounts, while I was upon my journey to the western Indians upon Long Island.

July 5th. This day conversed with an Indian girl, by an interpreter, and I hope she has had a saving change wrought in her heart. This, while I was gone westward.

July 8th. Expounded; and at this exercise an Indian (who was hopefully converted while I was

westward) owned the covenant and was baptized together with four of his children.

July 15th. Preached. Former concern continued. Two squaws owned the covenant, and were baptized. These were hopefully converted last October.

Shinnecock, July 22nd. This evening, gave my dear people some cautions and warnings against some irregularities that abound in our land at this day, and by which their best interest has been much endangered. After this, preached. Some had their distress renewed and increased. Others appeared to be sweetly composed, and to find, by fresh experience, the ways of religion to be ways of pleasantness, and her paths peace.

Moriches, August 15th. Preached. Some were deeply distressed. Some that attended came 12 miles, and others 20, on purpose to hear the word preached.

Montauk, August 22. Preached. This day the power of the Lord was evidently displayed in strengthening the convictions of some, and heightening the joy of others. It may be noted that seven squaws came hither from Shinnecock, on purpose to attend public worship, and that one of the number was hopefully converted in the time of service, and another in the evening.

Shinnecock, September 10. Visited and preached. The outpourings of the Spirit still evident and conspicuous among my dear people, &c.

Islip, October 6th. Spent the evening in giving instructions and cautions to some of my Indian people gathered together for that purpose. They were greedy to hear, and very thankful to me for my instructions. It may be noted, these Indians have frequently gone (since I left them last summer) 16 miles to attend public worship.

Rockaway, October 10th. Preached. The Indians attended with seriousness, and some appeared to be under some awakenings about their eternal safety.

Islip, October 24th. Preached. Some deeply concerned.

Mastick, October 29th. Preached. They appeared serious and thoughtful.

Moriches, October 31. Preached. Some deeply concerned.

Montauk, November 11th. Conversed with an old Indian, who appears to have found the Lord Jesus by faith. This, while I was gone westward.

Quaog, December 19th. Preached. They seriously attended, and some considerable movings accompanied the exercises of the day.

Moriches, December 20th. In the evening preached. Some few were led to commend the dear

Redeemer, from a view of his special love to their souls, and to acknowledge their own meanness and unworthiness. Some were deeply distressed, &c. At this exercise one squaw hopefully converted.

Quaog, December 24th. Visited. In the evening preached, attended with encouraging appearances. It may be noted that nine or ten Indians came to the meeting twelve miles, in a wet, stormy time.

December 26th. Preached. Some favoured with lively views of the glory of Christ, and their mouths filled with praises to him. Others deeply distressed.

Montauk, January 2, 1742-3. Preached. Many of God's children favoured with almost overcoming discoveries of divine love, which raised their affections on high, and filled their souls with holy transport and sweet nourishment, and made them with pleasure speak forth the praises of their dear Redeemer; and these discoveries were attended with a deep and abasing sense of their own unworthiness, and led them to pity their poor Christless friends.

Shinnecock, January 30th. Visited.

Quaog, January 23d. Preached. Some were, as I trust, refreshed from on high, and their mouths filled with praises to the blessed and glorious Jesus. Some others were deeply distressed in mind, and brought to inquire with solicitude after an interest in the Lord Jesus Christ.

Montauk, February 5th. Conversed with one squaw, and I can't but hope she has received a saving change, and that, a few days ago.

Moriches, March 2nd. Preached. They attended with seriousness, and appeared forward to receive instruction.

Islip, March 6th. Some considerably affected with a sense of their undone estate.

Rockaway, April 14th. Preached. Some few appeared somewhat attentive and thoughtful.

Islip, April 17th. Preached. Some were made sensible of their sins in some measure, &c.

Shinnecock, April 20th. Returned to the Indians there, and they appeared much rejoiced, &c.

Montauk, April 24th. Preached. Some were enlivened and refreshed, &c.

Rockaway, May 8th. Preached. There was a forwardness in some to receive instruction. I can not well omit observing, the great necessity of one to instruct, caution, and exhort them in a more steady and uninterrupted method than I possibly can, seeing they, with the Indians of many other places upon Long Island, live at so great a distance from each other, it being at least 100 miles from the two extremes.

Smithfield, May 18th. After a long and tedious journey arrived at Smithfield upon Delaware, &c.

Moriches, June 2nd. Preached. Some were dis-

tressed under a sense of sin. The Indians hereabouts are much reformed, and very ready to receive instruction.

Shinnecock, September 8th. This day was observed as a day of public thanksgiving. The exercise was attended with seriousness and decency. A beautiful sight to behold, those gathered together to worship and bless God, who before gospel light shone upon them were wont to meet to sing and dance, carouse and give loose to vain mirth and jollity.

Quaog, December 10th. This morning I had the pleasure to hear three Indian children repeat a considerable part of the Assembly catechism, and to hear each of them spell in the Psalter, and the two eldest repeat the two first of David's psalms. Their mother can read well, and is painful, after her capacity, in giving instructions to her children. (This woman was afterward employed as a school-teacher at Montauk.)

December 13th. After divine service, I told my people the news I had received from Scotland, viz., of my continuance among the Long Island Indians. They universally manifested what great joy and satisfaction it was to them, and they explicitly declared their thanks to the great God, for his kind Providence herein.

Montauk, December 25th. Preached. Some of the children of God brought to a deeper acquaintance of their own hearts, and made to mourn bitterly under a sense of their indwelling corruptions. Towards evening, instructed 4 or 5 squaws, who came to visit me, about the great business of salvation.

Quaog, January 8th, 1743-4. Preached. Some had their concern revived and increased. The exercises of this day were attended with much of the divine power.

Moriches, January 23. Preached in the evening. Visibly attended with divine power. A great part of my hearers this evening came from Quaog, which is 12 miles, and the Indians of this place go frequently there to meeting.

Montauk, January 29. Preached. Some few refreshed.

Quaog, February 5. Preached. Some distressed; others, sweetly refreshed.

In making these extracts the object has not been to furnish a few isolated passages of the most remarkable character, but to exhibit several deeply interesting facts connected with the work of grace among this ignorant and benighted race, such as the following:

1. The incessant and extended labors of this devoted and self-denying servant of the cross. He appears to have been untiring in his efforts for the salvation of perishing souls. While the principal settlements of the Indians were at Montauk and Shinnecock, and therefore most of his time was spent there, still we find him traveling, several times a year, from one end of the island to the other, to proclaim the message of salvation. And then, the extreme caution with which he expresses his hopes of the favorable appearances among them, warrants the highest confidence in the truth of his statements.

2. While the work of grace was manifestly wrought by the instrumentality of divine truth, communicated in preaching and conversation, these hopeful conversions, in numerous instances, did not take place under the excitement of public meetings, but even in the absence of the missionary to other parts of his charge, plainly showing that it was the work of God and not of man.

3. The long continuance of this blessed work furnishes another evidence of its genuineness. It was not the hot-bed production of a few days or weeks, originating in special efforts to produce a public excitement, and then subsiding into death-like coldness, as soon as the exercises were suspended. But it commenced and was continued for months and even years, by the occasional labors of a single missionary, traveling back and forth over a region more than one hundred miles in extent. And yet, in every part of this vast field, the same moral phenomena were exhibited, to a greater or less extent, throughout this protracted season of mercy. And when we take into consideration the numerous disadvantages under which these labors were performed, it seems that infidelity itself, if associated with a small degree of candor, must be constrained to acknowledge that such results could not be ascribed to mere human ingenuity or efficiency.

Mr. Horton remained in the service of the

Long Island Indians eleven years. During the first three years, which his printed journal covers, he appears to have confined himself constantly to his field of labor. In May, 1742, he attended the synod in Philadelphia, and in the year following he spent a fortnight in visiting the Indians on the Delaware river, for the purpose of preparing the way for the establishment of a mission among them. With these short intervals, not of relaxation, but of a mere change of labor, he pursued his solitary work, uncheered by the presence of a single fellow laborer, except that in February, 1742, David Brainard, who was then preparing to set out on a similar embassy of mercy, paid him a short visit and preached a single discourse to his "poor, dear people." In 1752 Mr. Horton, from what cause is not known, left the island and was settled that same year at South Hanover, or Bottle Hill, New Jersey, a settlement that had been formed in part by Long Island people. Here a church had been recently formed, of which Mr. H. was the first pastor. Here he spent his days and laid his bones. His tombstone bears the following simple inscription:

"In memory of the REV. AZARIAH HORTON, for 25 years pastor of this church. Died March 27th, 1777, aged 62 years."

Mr. Horton was evidently a very respectable minister in his day. He was one of the most constant attendants on the judicatories of the church—was seldom absent from the meetings of the synod, and was frequently appointed on its commission. And yet his memory has well nigh passed away. It is still true that "the righteous perish, and no man layeth it to heart," even while men of far less excellence and usefulness, obtain a temporary renown by a splendid monument or a flattering memoir. But the name of Azariah Horton, though little else of the good man remains, is worthy to live in the history of Indian missions, and should never perish from the annals of Long Island.

THE BATTLE OF BROOKLYN.

PRECAUTIONS PRIOR TO THE LANDING.

JAMAICA, May 15, 1776.

Resolved: That no person be permitted to move into the township from the date hereof unless he produce a certificate from the committee where he resided that he has in all things behaved as a friend to the cause of American freedom. And whereas, sundry persons, in passing and repassing through the town, have given just cause of suspicion that they are employed in aiding and assisting the unnatural enemies of America: Therefore

Resolved, That all such persons passing through this town be taken up for examination.

By order of the committee,
ELIAS BAYLES, Chairman.

On the day after Woodhull's capture Elias Bayles was arrested by a neighbor and brought before the British officer at Jamaica, although old and blind. He refused to say even a word against the American cause and was shut up in the Presbyterian church for the night and the next day was sent to the prison at New Utrecht. He was an elder in the Presbyterian church and beguiled the hours of his imprisonment by reciting passages of scripture and singing psalms and hymns. Finally he was removed to the provost in New York. After confinement for two months he was released, but died on the ferry while crossing to Long Island.

INCIDENTS FROM ONDERDONK.

GUARDING THE STOCK.—August 24, 1776.—Congress ordered half the Western Regiment of Suffolk with five days' provisions, to march into the western part of Queens, that the officers of the militia of Queens order out the whole militia, with the troop of horse, and use all diligence to prevent the stock falling into the hands of the enemy, that the captain of the troop of horse of Kings county join said militia and that the inhabitants of Queens (not of the militia) assist when ordered.

FARM AND GARDEN PROVISIONS.—August 12, 1776.—Captain P. Nostrand was stationed at Far Rockaway with forty-six men to guard

the coast. There was a guard at David Mott's, and at Hog Island Inlet was a guard boat. A guard was often put on board fishing boats to prevent their giving information to the British fleet, to which the disaffected used to carry water, eggs, butter and fresh provisions.

DISPOSITION OF THE MILITIA.—August 10, 1776.—One-half of the militia of Kings and Queens counties was ordered to march immediately to Brooklyn; the levies from Kings and Queens to be formed into one regiment under command of Colonel Jeromus Remsen, Lieutenant-Colonel Nich. Covenhoven and Major Richard Thorne, and continue in service until September 1.

Captain Andrew Onderdonk's company lay at Bedford, in the barn of Lambert Suydam, and marched daily to Brooklyn to throw up the fortifications.

CAPTAIN SUYDAM'S DISCOVERY.

CAMP LONG ISLAND, August 19, 1776.

I, the subscriber, went down to Rockaway just at daybreak with my company of light horse, pursuant to an order from Brigadier-General Heard to take care of some boats. At the house of ——— Van Brockle I discovered a number of men issue out of the door and run, some of them partly dressed and some in their shirts only. Immediately I ordered my men to pursue them, and presently overtook three of their number and took them prisoners. Two of them got to the woods and hid under the bushes; on finding them I ordered them to surrender. One of them did; the other absolutely refused, although one of my men had his gun presented to his breast, on which my men alighted and took him.

After I had taken six prisoners I examined the beach and found a boat and four oars and a paddle. In the boat were three sheep, four ducks and a large bottle with water.

LAMBERT SUYDAM,
Captain of the Troop.

THE HOWARD HOUSE.

Just as this work is going to press the news has transpired that the Howard House at East New York is about to be torn down, and thus another of Brooklyn's historic landmarks is doomed to disappear. The Howard House of 1776 figures prominently in the story of the

battle of Brooklyn, and although possibly but little of the building of that day is extant in the old tumble-down structure which has borne its name to the present generation, still there was that continuity about the house which gave it a certain claim to authenticity and antiquity. The old Howard House of 1776 was never pulled down; the building now doomed just developed out of it by slow degrees, alteration succeeding alteration, repairs obliterating the past, and all the varied requirements of a century and a quarter of busy occupation necessitating frequent changes in exterior as well as interior. But just as the old man of three score years and ten is to be regarded as the same individual who as a boy of five or six summers awoke the echoes with his mirth, so must we regard the passing Howard House as the scene of the culmination of Sir William Howe's bit of strategy, which turned the flank of the defenses of Brooklyn and brought about a disastrous defeat of the Continental heroes at a time when the cause of American liberty could ill afford such a set-back.

The original Howard House was built in 1700 by William Howard and was conducted as a tavern pure and simple, with nothing to lend it any degree of prominence until that eventful August night in 1776, when Howe's detachment came upon it and Sir William compelled the proprietor and his son to guide the troops through the pass, the movement which insured the victory of the red-coats before the sun went down the next day. It is said that Sir William and several officers stood at the bar of the house and ordered refreshments, but on that point historians differ. However, the British commander had a habit of wasting time and it is quite possible that even in that crisis he was not forgetful of creature comforts. After the battle the Howard House simply sank into a tavern once more and so continued its uneventful story until possibly twenty years ago, when it was invested with the dignity of recognition as a landmark.

Writing of its approaching destruction a

writer in the Brooklyn Eagle wrote of some of the old characteristics of the house as follows:

A key was left hanging outside the door for belated farmers, who might enter and help themselves, settling their scores at some more convenient season. This seemingly rash policy would bring any modern tavern to the brink of lasting ruin, but they were honest in those days, and it was with such considerate simplicity that the inn was then conducted. History contains no record that the Howards offered the first free lunch, but a perusal of their business methods, as aforesaid, indicates their right to the distinction. In the Howard House on winter evenings merry sleighing parties gathered, coming all the way from far distant Brooklyn, and here politics and weighty state matters were discussed. It was a resort for the farmers from far and near, and Major Joseph Howard is a name still held in honorable memory by old Long Islanders. In 1852 the property passed into the hands of Catherine Howard, the mother of Philip H. Reid, who was the proprietor of the hostelry when, in 1880, it was first proposed to remove it.

THOMPSON'S STORY OF THE BATTLE OF BROOKLYN.

After the commencement of hostilities in 1776, New York being situated near the center of the colonial sea-board, and readily accessible from the sea, was selected by the enemy as a principal point for their future operations. With this view, a first division of their army arrived at Staten Island in the latter part of June of that year, followed, about the middle of July, by the grand armament under Lord Howe, consisting of six ships of the line, thirty frigates, with smaller armed vessels and a great number of transports, victuallers and ships with ordnance.

The Americans, anticipating the invasion of Long Island, had fortified Brooklyn before the arrival of the British at Staten Island. A line of intrenchment was formed from a ditch near the late toll-house of the Bridge Company at the navy-yard to Fort Greene, then called Fort Putnam, and from thence to

Freek's mill-pond. A strong work was erected on the lands of Johannis Debevoise and of Van Brunt; a redoubt was thrown up on Bæmus' Hill opposite Brown's mill, and another on the land of John Johnson west of Fort Greene, Ponkiesberg, now Fort Swift, was fortified, and a fort built on the land of Mr. Hicks on Brooklyn Heights. Such were the defences of Brooklyn in 1776, while a *chevaux de frise* was sunk in the main channel of the river below New York. The troops of both divisions of the British army were landed on Staten Island after their arrival in the bay, to recruit their strength and prepare for the coming conflict. It was not till the middle of August that a first landing on Long Island was made by them at New Utrecht. Here they were joined by many royalists from the neighborhood, who probably acted the infamous part of informers and guides to the enemy. General Sir Henry Clinton arrived about the same time with the troops re-conducted from the expedition to Charleston.

Commodore Hotham already appeared there with the reinforcements under his escort, so that in a short time the hostile army amounted to about twenty-four thousand men, English, Hessians and Waldeckers. Several regiments of Hessian infantry were expected to arrive shortly, when the army would be swelled to the number of thirty-five thousand combatants, of the best troops of Europe, all abundantly supplied with arms and ammunition, and manifesting an extreme ardor for the service of their king. The plan was, first to get possession of New York, which was deemed of most essential importance. Then, if General Carleton, after having passed, as was hoped, the lakes of Canada, could penetrate to the banks of the Hudson and descend this river at the same time that General Howe should ascend it, their junction would have the immediate effect of interrupting all communication between the provinces of New England on the left bank, and those of the middle and south upon the right. While General Howe was seconded in his invasion of New York by

the twelve or thirteen thousand men coming from Canada under Governor Carleton, General Clinton was to operate in the provinces of the south and to attack Charleston. The American troops being thus divided, and their generals surprised and pressed on so many sides at once, it was not doubted but that the British arms would soon obtain a complete triumph. But in executing this design they had counted too much on an admirable concurrence of a great number of parts, and had not taken into account the difficulties of the winds and seasons. Admiral Howe did not arrive until after Clinton's expedition to Charleston had totally miscarried. The army at Canada was entirely interrupted at the lakes. It was still, however, confidently expected that General Howe would be able alone to make a decisive campaign.

To resist this impending storm Congress had ordained the construction of rafts, gun-boats, galleys and floating batteries, for the defense of the port of New York and the mouth of the Hudson. They had also decreed that thirteen thousand of the provincial militia should join the army of Washington, who, being seasonably apprized of the danger of New York, had made a movement into that quarter; they also directed the organization of a corps of ten thousand men, destined to serve as a reserve in the provinces of the center. All the weakest posts had been carefully intrenched and furnished with artillery. A strong detachment occupied Long Island, to prevent the English from landing there, or to repulse them if they should effect a debarkation. But the army of Congress was very far from having all the necessary means to support the burden of so terrible a war. It wanted arms, and it was wasted by diseases. The reiterated instances of the commander-in-chief had drawn into his camp the militia of the neighboring provinces, and some regular regiments from Maryland, from Pennsylvania and from New England, which had swelled his army to the number of twenty-seven thousand men; but a fourth of these troops were composed of in-

valids, and scarcely was another fourth furnished with arms.

The American army, such as it was, occupied the positions most suitable to cover the menaced points. The corps which had been stationed on Long Island was commanded by Major-General Greene, who, on account of sickness, was afterwards succeeded by General Sullivan. The main body of the army encamped on the island of New York, which, it appeared, was destined to receive the first blows of the English.

Two feeble detachments guarded Governor's Island and the point of Paulus' Hook. The militia of the province, commanded by the American General Clinton, were posted upon the banks of the sound, where they occupied the two Chesters, East and West, and New Rochelle. For it was to be feared that the enemy, landing in force upon the north shore of the sound, might penetrate to Kingsbridge, and thus entirely lock up all the American troops on the island of New York. Lord Howe made some overtures of peace upon terms of submission to the royal clemency, which, resulting in nothing, decided the British general to attack Long Island. "Accordingly," says Botta, "on the 22d of August the fleet approached the Narrows; all the troops found an easy and secure landing-place between the villages of Gravesend and New Utrecht, where they debarked without meeting any resistance on the part of the Americans. A great part of the American army, under the command of General Putnam, encamped at Brooklyn in a part of the island itself, which forms a sort of a peninsula. He had strongly fortified the entrance of it with moats and intrenchments; his left wing rested upon the Wallabout bay, and his right was covered by a marsh contiguous to Gowanus' Cove. Behind him he had Governor's Island and the arm of the sea which separates Long Island from the Island of New York, and which gave him a direct communication with the city, where the other part of the army was stationed under Washington himself. The

commander-in-chief, perceiving the battle was approaching, continually exhorted his men to keep their ranks and summon all their courage; he reminded them that in their valor rested the only hope that remained to American liberty; that upon their resistance depended the preservation or the pillage of their property by barbarians; that they were about to combat in defense of their parents, their wives and their children, from the outrages of a licentious soldiery; that the eyes of America were fixed upon her champions, and expected from their success on this day either safety or total destruction."

The English having effected their landing marched rapidly forward. The two armies were separated by a chain of hills covered with woods, called the heights, and which, running from west to east, divide the island into two parts. They are only approachable upon three points, one of which is near the Narrows, the road leading to that of the center passes the village of Flatbush, and the third is approached far to the right by the route of another village called Flatlands. Upon the summit of the hills is found a road, which follows the length of the range, and leads from Bedford to Jamaica, which is intersected by the two roads last described; these ways are all interrupted by precipices and by excessively difficult and narrow defiles.

The American general, wishing to arrest the enemy upon these heights, had carefully furnished them with troops, so that, if all had done their duty, the English would not have been able to force the passage without extreme difficulty and danger. The posts were so frequent upon the road from Bedford to Jamaica that it was easy to transmit, from one of these points to the other, the most prompt intelligence of what passed upon the three routes. Colonel Miles, with his battalion, was to guard the road of Flatland, and to scour it continually with his scouts, as well as that of Jamaica, in order to reconnoiter the movements of the enemy. Meanwhile the British army pressed forward, its left wing being to the

north and its right to the south; the village of Flatbush was found in its center. The Hessians, commanded by General Heister, formed the main body; the English, under Major-General Grant, the left, and the other corps, conducted by General Clinton and the two lords, Percy and Cornwallis, composed the right. In this wing the British generals had placed their principal hope of success; they directed it upon Flatland. Their plan was, that while the corps of General Grant and the Hessians of General Heister should disquiet the enemy upon the two first defiles, the left wing, taking a circuit, should march through Flatland, and endeavor to seize the point of intersection of this road with that of Jamaica, and then, rapidly descending into the plain which extends at the foot of the heights upon the other side, should fall upon the Americans in flank and rear. The English hoped, that as this post was the most distant from the center of the army, the advanced guards would be found more feeble there, and perhaps more negligent; finally, they calculated that, in all events, the Americans would not be able to defend it against a force so superior. This right wing of the English was the most numerous and entirely composed of select troops.

The evening of the 26th of August, General Clinton commanded the vanguard, which consisted in light infantry; Lord Percy the center, where were found the grenadiers, the artillery and the cavalry; and Cornwallis, the rearguard, followed by the baggage, some regiments of infantry and of heavy artillery; all this part of the English army put itself in motion with admirable order and silence, and leaving Flatland, traversed the country called New Lots. Colonel Miles, who this night performed his service with little exactness, did not perceive the approach of the enemy; so that two hours before day the English were already arrived within a half mile of the road to Jamaica, upon the heights. Then General Clinton halted and prepared himself for the attack. He had met one of the enemy's patrols and made him prisoner. General Sullivan, who

commanded all the troops in advance of the camp of Brooklyn, had no advice of what passed in this quarter. He neglected to send out fresh scouts; perhaps he supposed the English would direct their principal efforts against his right wing, as being the nearest to them.

General Clinton learning from his prisoners that the road to Jamaica was not guarded, hastened to avail himself of the circumstance and occupied it by a rapid movement. Without loss of time he immediately bore to his left towards Bedford and seized an important defile, which the American generals had left unguarded. From this moment the success of the day was decided in favor of the English. Lord Percy came up with his corps, and the entire column descended by the village of Bedford from the heights into the plain which lay between the hills and the camp of the Americans. During this time General Grant, in order to amuse the enemy and divert his attention from the events which took place upon the route of Flatland, endeavored to disquiet him upon his right; accordingly, as if he intended to force the defile which led to it, he had put himself in motion about midnight and attacked the militia of New York and of Pennsylvania, who guarded it. They at first gave ground; but General Parsons being arrived and having occupied an eminence, he renewed the combat and maintained his position till Brigadier-General Lord Stirling came to his assistance with fifteen hundred men. The action became extremely animated and fortune favored neither the one side nor the other. The Hessians, on their part, had attacked the center at break of day, and the Americans, commanded by General Sullivan in person, valiantly sustained their efforts. At the same time the English ships, after having made several movements, opened a very brisk cannonade against a battery established in the little island of Red Hook, upon the right flank of the Americans, who combatted against General Grant. This also was a diversion, the object of which was to prevent them from attending

to what passed in the center and on the left. The Americans defended themselves, however, with extreme gallantry, ignorant that so much valor was exerted in vain, since victory was already in the hands of the enemy. General Clinton being descended into the plain, fell upon the left flank of the center, which was engaged with the Hessians. He had previously detached a small corps, in order to intercept the Americans.

As soon as the appearance of the English light infantry apprized them of their danger, they sounded the retreat and retired in good order towards their camp, bringing off their artillery. But they soon fell in with the party of royal troops which had occupied the ground on their rear, and who now charged them with fury; they were compelled to throw themselves into the neighboring woods, where they met again with the Hessians, who repulsed them upon the English; and thus the Americans were driven several times by the one against the other with great loss. They continued for some time in this desperate situation, till at length several regiments, animated by an heroic valor, opened their way through the midst of the enemy and gained the camp of General Putnam; others escaped through the woods. The inequality of the ground, the great numbers of positions which it offered, and the disorder which prevailed throughout the line, were the cause that for several hours divers partial combats were maintained, in which many of the Americans fell.

Their left wing and center being discomfited, the English, desirous of a complete victory, made a rapid movement against the rear of the right wing, which, in ignorance of the misfortune which had befallen the other corps, was engaged with General Grant. Finally, having received the intelligence, they retired. But, encountering the English, who cut off their retreat, a part of the soldiers took shelter in the woods; others endeavored to make their way through the marshes of Gowan's Cove, but here many were drowned in the waters or perished in the mud; a very

small number only escaped the hot pursuit of the victors and reached camp in safety. The total loss of the Americans in this battle was estimated at more than three thousand men in killed, wounded and prisoners. Among the last were found General Sullivan and Brigadier-General Lord Stirling. Almost the entire regiment of Maryland, consisting of young men of the best families in that province, was cut to pieces. Six pieces of cannon fell into the power of the victors. The loss of the English was very inconsiderable; in killed, wounded and prisoners it did not amount to four hundred men.

The enemy encamped in front of the American lines, and on the succeeding night broke ground within six hundred yards of a redoubt on the left and threw up a breast-work on the Wallabout heights, upon the Debevoise farm, commenced firing on Fort Putnam and reconnoitred the American forces. The Americans were here prepared to receive them, and orders issued to the men to reserve their fire till they could see the eyes of the enemy. A few of the British officers reconnoitred the position, and one, on coming near, was shot by William Van Cotts, of Bushwick. The same afternoon Captain Rutgers, brother of the late Colonel Rutgers, also fell. Several other British troops were killed, and the column which had incautiously advanced, fell back beyond the range of the American fire. In this critical state of the American army on Long Island; in front a numerous and victorious enemy with a formidable train of artillery, the fleet indicating an intention of forcing a passage up the East river; the troops lying without shelter from the heavy rains, fatigued and dispirited, General Washington determined to withdraw the army from the island, and this difficult movement was effected with great skill and judgment, and with complete success. The retreat was to have commenced at eight o'clock in the evening of the 29th, but a strong north-east wind and a rapid tide caused a delay of several hours, a southwest wind springing up at eleven essentially facilitated its passage from the island

to the city, and a thick fog hanging over Long Island toward morning concealed its movements from the enemy, who were so near that the sound of their pick-axes and shovels were distinctly heard by the Americans. General Washington, as far as possible, inspected everything from the commencement of the action on the morning of the 27th till the troops were safely across the river; he never closed his eyes and was almost constantly on horseback. After this the British and their allies, the Tories and refugees, had possession of Long Island, and many distressing scenes occurred, which were never made public and can therefore never be known. The Whigs who had been at all active in behalf of independence were exiled from their homes and their dwellings were objects of indiscriminate plunder. Such as could be taken, were incarcerated in the church of New Utrecht and Flatlands, while royalists, by wearing a red badge in their hats, were protected and encouraged. It is believed that had Lord Howe availed himself of the advantage he possessed by passing his ships up the river between Brooklyn and New York, the whole American army must have been almost inevitably captured or annihilated. General Washington saw but too plainly the policy that might have been pursued and wisely resolved rather to abandon the island than attempt to retain it at the risk of sacrificing his army.

The unfortunate issue of the battle of Long Island was doubtless to be ascribed, in part, to the illness of General Greene. He had superintended the erection of the works and become thoroughly acquainted with the ground. In the hope of his recovery, Washington deferred sending over a successor till the urgency of affairs made it absolutely necessary, and then General Putnam took the command, without any previous knowledge of the posts which had been fortified beyond the lines, or of the places by which the enemy could make their approach, nor had he time to acquire this knowledge before the action. The consequence was, that, although he was the commander on

the day of the battle, he never went beyond the lines at Brooklyn, and could give no other orders than for sending out troops to meet the enemy at different points. The following is a letter to Congress, describing the events of the day, by Colonel Harrison, secretary to the commander-in-chief:

NEW YORK, 8 o'clock P. M.,
27th August, 1776.

Sir: I this minute returned from our lines on Long Island, where I left his Excellency the General. From him I have it in command to inform Congress, that yesterday he went there and continued till evening, when, from the enemy's having landed a considerable part of their forces, and from many of their movements there was reason to apprehend that they would make in a little time a general attack. As they would have a wood to pass through before they could approach the lines it was thought expedient to place a number of men there on different roads leading from where they were stationed, in order to harass and annoy them in their march. This being done, early this morning a sharp engagement ensued between the enemy and our detachments, which, being unequal to the force they had to contend with, have sustained a considerable loss, at least many of our men are missing. Among those who have not returned are General Sullivan and Lord Stirling. The enemy's loss is not known certainly, but we are told by such of our troops as were in the engagement, and have come in, that they had many killed and wounded. Our party brought off a lieutenant, sergeant and corporal, with twenty privates, prisoners.

While these detachments were engaged, a column of the enemy descended from the woods, and marched towards the center of our lines with a design to make an impression, but were repulsed. This evening they appeared very numerous about the skirts of the woods, where they have pitched several tents; and his Excellency inclines to think they mean to attack and force us from our lines by way of regular approaches, rather than in any other manner. To-day five ships of the line came up towards the town, where they seemed desirous of getting, as they turned a long time against an unfavorable wind; and, on my return this evening, I found a deserter from the Twenty-third Regiment, who informed me that they design, as soon as the wind will permit

them to come up, to give us a severe cannonade, and to silence our batteries if possible.

I have the honor to be, in great haste, Sir, your most obedient.

ROBERT H. HARRISON.

As the two generals who commanded the engagement were taken prisoners, no detailed official account of the action was ever reported to the commander-in-chief. The following letter from Lord Stirling, and extracts from General Sullivan's, contain a few particulars not hitherto published. Lord Stirling was a prisoner on board Lord Howe's ship when he wrote:

Lord Stirling to General Washington.

EAGLE, 29 August, 1776.

My Dear General:

I have now an opportunity of informing you of what has happened to me since I had the pleasure of seeing you. About three o'clock in the morning of the 27th I was called up and informed by General Putnam that the enemy were advancing by the road from Flat-bush to the Red Lion, and he ordered me to march with the two regiments nearest at hand to meet them. These happened to be Haslet's and Smallwood's, with which I accordingly marched, and was on the road to the Narrows just as the daylight began to appear. We proceeded to within about half a mile of the Red Lion, and there met Colonel Atlee with his regiment, who informed me that the enemy were in sight; indeed, I then saw their front between us and the Red Lion. I desired Colonel Atlee to place his regiment on the left of the road, and to wait their coming up, while I went to form the two regiments I had brought with me along the ridge from the road up to a piece of wood on the top of the hill. This was done instantly on very advantageous ground.

Our opponents advanced and were fired upon in the road by Atlee's regiment, who, after two or three rounds, retreated to the wood on my left and there formed. By this time Kichline's riflemen arrived; part of them I placed along a hedge under the front of the hill, and the rest in the front of the wood. The troops opposed to me were two brigades of four regiments each, under the command of General Grant, who advanced their light troops to within one hundred and fifty yards of our right front, and took possession of an orchard

there, and some hedges, which extended towards our left. This brought on an exchange of fire between those troops and our riflemen, which continued for about two hours and then ceased by those light troops retiring to their main body. In the meantime Captain Carpenter brought up two field-pieces, which were placed on the side of the hill so as to command the road and the only approach for some hundred yards. On the part of General Grant there were two field-pieces. One howitzer advanced within three hundred yards of the front of our right, and a like detachment of artillery to the front of our left. On a rising ground, at about six hundred yards' distance, one of their brigades formed in two lines opposite to our right, and the other extended in one line to the top of the hills, in the front of our left.

In this position we stood cannonading each other till near eleven o'clock, when I found that General Howe, with the main body of the army, was between me and our lines, and I saw that the only chance of escaping being all made prisoners was to pass the creek near the Yellow Mills, and, in order to render this the more practicable, I found it absolutely necessary to attack the body of troops commanded by Lord Cornwallis, posted at the house near the Upper Mills. This I instantly did, with about half of Smallwood's regiment; first ordering all other troops to make the best of their way through the creek. We continued the attack for a considerable time, the men having been rallied, and the attack renewed five or six several times, and we were on the point of driving Lord Cornwallis from his station, but large reinforcements arriving, rendered it impossible to do more than provide for safety. I endeavored to get in between that house and Fort Box, but, on attempting it, I found a considerable body of troops in my front, and several in pursuit of me on the right and left, and a constant firing on me. I immediately turned the point of a hill, which covered me from their fire, and was soon out of the reach of my pursuers. I found that it would be in vain to attempt to make my escape, and therefore went to surrender myself to General de Heister, commander-in-chief of the Hessians.

WM. STIRLING.

General Sullivan to the President of Congress.

WHITEMARSH, 25 October, 1777.

I know it has been generally reported that I commanded on Long Island when the action

happened there. This is by no means true. General Putnam had taken the command from me four days before the action. Lord Stirling commanded the main body without the lines. I was to have commanded under General Putnam within the lines. I was uneasy about a road, though which I had often foretold that the enemy would come, but could not persuade others to be of my opinion. I went to the hill near Flatbush to reconnoiter, and with a picket of four hundred men was surrounded by the enemy, who had advanced by the very road I had foretold, and which I had paid horsemen fifty dollars for patrolling by night while I had the command, as I had no foot for the purpose.

What resistance I made with these four hundred men against the British army, I leave to the officers who were with me to declare. Let it suffice for me to say, that the opposition of the small party lasted from half-past nine to twelve o'clock.

The reason of so few troops being on Long Island was because it was generally supposed that the enemy's landing there was a feint to draw our troops thither that they might the more easily possess themselves of New York. I often urged, both by word and writing, that, as the enemy had doubtless both these objects in view, they would first try for Long Island, which commanded the other, and then New York, which was completely commanded by it, would fall of course. But in this I was unhappy enough to differ from almost every other officer in the army till the event proved my conjectures were just. JOHN SULLIVAN.

A DEFENCE OF PUTNAM.

The recent publication of an interesting and valuable life of Gen. Israel Putnam by W. F. Livingston has called renewed attention to the hero's share in the disaster to the Continental arms on Long Island. Naturally Mr. Livingston defends Putnam from the charge so often made by contemporaries and by later historical writers, that his military incapacity and his utter ignorance of civilized military tactics, as well as his reckless personal bravery, cost his country a defeat that for a time made the prospects for liberty seem decidedly dark. However, as the late John Fiske pointed out, the wonder is not that 5,000 half-trained soldiers

were defeated by 20,000 veterans, but that they should have given General Howe a hard day's work in defeating them. The new biographer of Putnam accepts the statement of the case made by Prof. Henry P. Johnston: "As for the generalship of the day, if the responsibility falls on any one, it falls first on Sullivan, who sent out the mounted patrol in the first instance, and to whom it belonged to follow up the precautions in that direction. Putnam was in chief command, but nothing can be inferred from contemporary writers to fasten neglect or blunder upon him any more than upon Washington, who, when he left the Brooklyn lines on the evening of August 26, 1776, must have known precisely what disposition had been made for the night at the hills and passes." Prof. Johnston goes on to say that the situation seems to have been the following: "On the night of August 26th we had all the roads guarded. On the morning of the 27th Putnam promptly re-enforced the guards on the lower road when the enemy were announced. The arrangements were such that if an attack was made at any of the other points he and Sullivan were to have word of it in ample time. No word came in time from the left, for the reason that those who were to bring it were captured or surprised or failed of their duty. Hence the disaster. The dispositions on Long Island were quite as complete as those at Brandywine, more than a year later, where we suffered nearly a similar surprise and as heavy a loss." Under this state of facts, Prof. Johnston submits that to charge Putnam with the defeat of August 27 is both unjust and unhistorical. No one hinted such a charge at the time; nor did Washington in the least withdraw his confidence from Putnam during the remainder of the campaign.

In May, 1777, Putnam was placed in command of the Hudson Highlands, and continued to occupy this post until the spring of 1778. Here he by no means gave satisfaction to the Commander-in-Chief, and, after being subjected to a court of inquiry, he was superseded by General McDougall. The author of

this book concedes that in the Hudson Highlands Putnam's military capacity was put to a severer test than at any previous period of his life. He did not appreciate how critical was the state of affairs at the time. He did not comprehend that Washington must have large re-enforcements from the northern army to prevent Howe from removing the obstructions on the Delaware and opening free communication between Philadelphia and the British shipping. In addition to Hamilton's unfavorable report concerning Putnam, General Washington received numerous complaints from inhabitants of New York State who found fault with Putnam's good nature in granting applications for passports to the city. He had shown, it was said, an "overshare of complaisance and indulgence" to Tories, and many of them, under the pretence of urgent business, had gone into the city and given valuable information to the British General. Even the fact that Putnam had exchanged newspapers with some of the King's officers who had been his comrades in the French and Indian war was complained of. Chancellor Robert R. Livingston, in a letter to Washington, lamented that Putnam's patriotism would not suffer him to take the repose to which his advanced age entitled him. The Chancellor added: "Unfortunately for him, the current of popular opinion in this and the neighboring States, and, as far as I can learn, in the troops under his command, runs strongly against him."

The judgment of the court of inquiry was favorable to Putnam, who was not reinstated in his command on the Hudson, however, but was ordered to Connecticut to superintend the forwarding of troops.

THE PRISON SHIPS.

General Jeremiah Johnson communicated the following data to the "Naval Magazine" of September, 1836: "The subject of the naval prisoners, and of the British prison ships stationed in the Wallabout during the Revolution, is one which cannot be passed by in silence.

From printed journals published in New York at the close of the war, it appears that eleven thousand five hundred American prisoners had died on board the prison ships. Although the number is very great, still if the number who perished had been less the commissary of naval prisoners, David Sprout, Esq., and his deputy, had it in their power, by an official return, to give the true number exchanged, escaped and dead. Such a return has never appeared in the United States. This man returned to America after the war, and resided in Philadelphia, where he died. He could not have been ignorant of the statement published here on this interesting subject. We may therefore infer that about that number perished in the prison ships. A large transport, named the "Whitby," was the first prison ship anchored in the Wallabout. She was moored near "Remsen's Mill," about the 20th of October, 1776, and was crowded with prisoners. Many landsmen were prisoners on board this vessel. She was said to be the most sickly of all the prison ships. Bad provisions, bad water and scanty rations were dealt to the prisoners. No medical men attended the sick. Disease reigned unrelieved, and hundreds died from pestilence, or were starved, on board this floating prison. I saw the sand-beach between a ravine in the hill and Mr. Remsen's dock become filled with graves in the course of two months; and before the 1st of May, 1777, the ravine alluded to was itself occupied in the same way. In the month of May of that year two large ships were anchored in the Wallabout, when the prisoners were transferred from the "Whitby" to them. These vessels were also very sickly, from the causes before stated. Although many prisoners were sent on board of them, and were exchanged, death made room for all. On a Sunday afternoon, about the middle of October, 1777, one of the prison ships was burnt; the prisoners, except a few, who, it was said, were burnt in the vessel, were removed to the remaining ship. It was reported at the time that the prisoners had fired their prison; which, if true, proves that they

preferred death, even by fire, to the lingering sufferings of pestilence and starvation. In the month of February, 1778, the remaining prison ship was burnt at night, when the prisoners were removed from her to the ships then wintering in the Wallabout. In the month of April, 1778, the "Old Jersey" was moored in the Wallabout, and all the prisoners (except the sick) were transferred to her. The sick were carried to two hospital ships, named the "Hope" and "Falmouth," anchored near each other about two hundred yards east from the "Jersey." These ships remained in the Wallabout until New York was evacuated by the British. The "Jersey" was the receiving ship—the others, truly, the ships of Death! It has been generally thought that all the prisoners died on board of the "Jersey." This is not true; many may have died on board of her who were not reported as sick, but all the men who were placed on the sick-list were removed to the hospital ships, from which they were usually taken, sewed up in a blanket, to their long home.

After the hospital ships were brought into the Wallabout, it was reported that the sick were attended by physicians; few, very few, however, recovered. It was no uncommon thing to see five or six dead bodies brought on shore in a single morning; when a small excavation would be made at the foot of the hill, the bodies be cast in, and a man with a shovel would cover them by shoveling sand down the hill upon them. Many were buried in a ravine on the hill; some on the farm. The whole shore from Rennie's Point to Mr. Remsen's dock-yard was a place of graves; as were also the slope of the hill near the house, the shore from Mr. Remsen's barn along the mill-pond to Rapelje's farm and the sandy island, between the flood-gates and the mill-dam; while a few were buried on the shore, the east side of the Wallabout. Thus did Death reign here, from 1776 until the peace. The whole Wallabout was a sickly place during the war. The atmosphere seemed to be charged with

foul air from the prison ships, and with the effluvia of the dead bodies washed out of their graves by the tides. We have ourselves examined many of the skulls lying on the shore; from the teeth, they appear to be the remains of men in the prime of life. A singularly daring and successful escape was effected from the "Jersey" about 4 o'clock one afternoon, in December, 1780. The best boat of the ship had returned from New York, was left fastened at the gangway, with the oars on board. It was stormy; the wind blew from the north-east, and the tide ran flood. A watchword was given, and a number of prisoners placed themselves between the ship's waist and the sentinel; at this juncture four eastern captains got on board the boat, which was cast off by their friends. The boat passed close under the bows of the ship, and was a considerable distance from her before the sentinel on the fore-castle gave the alarm and fired at her. The boat passed Hell Gate, and arrived safe in Connecticut next morning.

Suffice it to say, in conclusion, that here more than eleven thousand American citizens and soldiers perished, many of whose names are unknown, and whose sufferings are buried in oblivion! They lingered where no eye of pity witnessed their agony; no voice administered consolation; no tongue could praise their patriotic devotion, or friendly hand be stretched out for their relief. Here to pass the weary day and night, unvaried, except by new scenes of painful endurance and new inflictions of hopeless misery. The hope of death was to them the only consolation which their situation afforded.

STORY OF A SURVIVOR OF THE PRISON SHIPS.

The Rev. Thomas Andros, of Berkeley, Massachusetts, was a prisoner on the old battleship "Jersey," and related his experiences in the following graphic words:

"This was an old sixty-four gun ship, which through age had become unfit for fur-

ther actual service. She was stripped of every spar and all her rigging. After a battle with a French fleet her lion figurehead was taken away to repair another ship; no appearance of ornament was left, and nothing remained but an old unsightly, rotten hulk. Her dark and filthy external appearance perfectly corresponded with the death and despair that reigned within; and nothing could be more foreign from truth than to paint her with colors flying or any circumstance or appendage to please the eye. She was moored at the Wallabout Bay, about three-quarters of a mile to the eastward of Brooklyn Ferry, near a tide-mill on the Long Island shore. The nearest place to land was about twenty rods; and doubtless no other ship in the British navy ever proved the means of destruction of so many human beings. It is computed that not less than eleven thousand American seamen perished in her. After it was next to certain death to confine a prisoner here, the inhumanity and wickedness of doing it was about the same as if he had been taken to the city and deliberately shot in some public square; but, as if mercy had fled from the earth, here we were doomed to dwell. And never, while I was on board, did any Howard or angel of pity appear, to inquire into or alleviate our woes. Once or twice, by the order of a stranger on the quarter deck, a bag of apples was hurled promiscuously into the midst of hundreds of prisoners, crowded together as thick as they could stand, and life and limbs were endangered by the scramble. This, instead of compassion, was a cruel sport. When I saw it about to commence I fled to the most distant part of the ship.

"On the commencement of the first evening we were driven down to darkness, between decks secured by iron gratings and an armed soldiery, and a scene of horror which baffles all description presented itself. On every side wretched, desponding shapes of men could be seen. Around the well-room an armed guard were forcing up the prisoners to the winches to clear the ship of water and prevent her

sinking; and little else could be heard but a roar of mutual execrations, reproaches and insults. During this operation there was a small, dim light admitted below, but it served to make darkness more visible, and horror more terrific. In my reflections I said this must be a complete image and anticipation of hell. Milton's description of the dark world rushed upon my mind:—

'Sights of woe, regions of horror doleful,
'Shades where peace and rest can never dwell.'

"If there was any principle among the prisoners that could not be shaken, it was their love of country. I knew no one to be seduced into the British service. They attempted to force one of our prize-brig's crew into the navy, but he chose rather to die than to perform any duty, and was again restored to the prison-ship.

"When I first became an inmate of this abode of suffering, despair and death, there were about four hundred prisoners on board; but in a short time they amounted to twelve hundred, and in proportion to our numbers the mortality increased. All the most deadly diseases were pressed into the service of the king of terrors, but his prime ministers were dysentery, small-pox and yellow fever. There were two hospital ships near to the old 'Jersey,' but these were soon so crowded with the sick that they could receive no more. The consequence was that the diseased and the healthy were mingled together in the main ship. In a short time we had two hundred or more sick and dying lodged in the fore part of the lower gun deck, where all the prisoners were confined at night. Utter derangement was a common symptom of yellow fever; and, to increase the horror of the darkness that shrouded us (for we were allowed no light betwixt decks), the voice of warning would be heard, 'Take heed to yourselves! There is a madman stalking through the ship with a knife in his hand!' I sometimes found

the man a corpse in the morning by whose side I laid myself down at night. At another time he would become deranged and attempt, in the darkness, to rise, and stumble over the bodies that everywhere covered the deck. In this case I had to hold him in his place by main strength. In spite of my efforts he would sometimes rise, and then I had to close in with him, trip up his heels and lay him again upon the deck. While so many were sick with raging fever there was a loud cry for water; but none could be had except on the upper deck, and but one allowed to ascend at a time. The suffering then from the rage of thirst during the night was very great. Nor was it at all times safe to attempt to go up. Provoked by the continual cry for leave to ascend, when there was one already on deck, the sentry would push them back with his bayonet. By one of these thrusts, which was more spiteful and violent than common, I had a narrow escape of my life. In the morning the hatchways were thrown open and we were allowed to ascend, all at once, and remain on the upper deck during the day. But the first object that met our view was an appalling spectacle—a boat loaded with dead bodies conveying them to the Long Island shore, where they were slightly covered with sand. I sometimes used to stand and count the number of times the shovel was filled with sand to cover a dead body; and certain I am that a few high tides or torrents of rain must have disinterred them, and had they not been removed I should suppose the shore even now would be covered with huge piles of the bones of American seamen."

"There were probably four hundred on board who had never had the small-pox. Some perhaps might have been saved by inoculation, but humanity was wanting to try even this experiment. Let our disease be what it would, we were abandoned to our fate. Now and then an American physician was brought in as a captive, but if he could obtain his parole he left the ship; nor could we

blame him for this, for his own death was next to certain and his success in saving others by medicine in our situation was small. I remember only two American physicians who tarried on board a few days. No English physician, or any one from the city, ever, to my knowledge, came near us. There were thirteen of the crew to which I belonged, but in a short time all died but three or four. The most healthy and vigorous were first seized with the fever and died in a few hours. For them there seemed to be no mercy. My constitution was less muscular and plethoric, and I escaped the fever longer than any of the thirteen except one, and the first onset was less violent."

Another survivor of these horrors, Captain Dring, wrote regarding the burial of the dead from the hulk:

"After landing at a low wharf, which had been built from the shore, we first went to a small hut which stood near the wharf, and was used as a place of deposit for the hand-barrows and shovels provided for these occasions. Having placed the corpses on the hand-barrows, and received our hoes and shovels, we proceeded to a bank near the Wallabout. Here a vacant space having been selected, we were directed to dig a trench in the sand of a proper length to receive the bodies. We continued our labor till our guards considered that a proper space had been excavated. The corpses were then laid into the trench without ceremony, and we threw sand over them. The whole appeared to produce no more impression on our guards than if we were burying the bodies of dead animals instead of men. They scarcely allowed us time to look about us; for no sooner had we heaped the earth above the trench than the order was given to march. But a single glance was sufficient to show us parts of many bodies which were exposed to view; although they had probably been placed there, with the same mockery of interment, but a few days before. Having thus performed, as well as we were

permitted to do it, the last duty to the dead, and the guards having stationed themselves on each side of us, we began reluctantly to retrace our steps to the boat. We had enjoyed the pleasure of breathing for a few moments the air of our native soil, and the thought of returning to the crowded prison-ship was terrible in the extreme. As we passed by the water's side we implored our guards to allow us to bathe, or even to wash ourselves for a few minutes; but this was refused us. I was the only prisoner of our party who wore a pair of shoes; and well recollect the circumstance that I took them from my feet for the pleasure of feeling the earth, or rather the sand, as I went along. It was a high gratification to us to bury our feet in the sand and to shove them through it, as we passed on our way. We went by a small patch of turf, some pieces of which we tore up from the earth and obtained permission to carry them on board for our comrades to smell them! * * * Having arrived at the hut we there deposited our implements and walked to the landing-place, where we prevailed on our guards, who were Hessians, to allow us the gratification of remaining nearly half an hour before we re-entered the boat.

"Near us stood a house, occupied by a miller; and we had been told that a tide-mill, which he attended, was in the immediate vicinity, as a landing place for which the wharf where we stood had been erected. It would have afforded me a high degree of pleasure to have been permitted to enter this dwelling, the probable abode of harmony and peace. It was designated by the prisoners by the appellation of the 'Old Dutchman's,' and its very walls were viewed by us with feelings of veneration, as we had been told that the amiable daughter of its owner had kept a regular account of the number of bodies which had been brought on shore for interment from the Jersey and the hospital ships. This could easily be done in the house, as its windows commanded a fair view of the landing place.

We were not, however, gratified on this occasion, either by the sight of herself or of any other inmate of the house. Sadly did we approach and re-enter our foul and disgusting place of confinement. The pieces of turf which we carried on board were sought for by our fellow-prisoners with the greatest avidity, every fragment being passed by them from hand to hand, and its smell inhaled, as if it had been a fragrant rose."

FURMAN'S LIST OF ANCIENT NAMES OF PLACES.

Gabriel Furman, writing in the year 1824, gives the following list of ancient names upon Long Island, with the dates affixed opposite to them, of the time when they were used, viz.:

IN THE TOWN OF BROOKLYN.

- 1667. Gowanus, which still retains the same name.
- 1667. Cripplebush, which still retains the same name.
- 1686. Wallaboght, which still retains the same name.
- 1686. Marchwick, and in 1722 called Martyr's' Hook, which was the point of land forming the present United States Navy Yard.
- 1689. Lubbertse's Neck, which was sold by Peter Corsen to Cornelius Sebringh, March 28, 1698, for £250, and Sebringh to find Corsen in meat, drink, washing, lodging, and apparel during his life. In 1690 the same place was called Graver's Kill. This place was recently known as Cornell's Red Mills, and is about five hundred feet north of the Atlantic dock.
- 1700. Gowanus Mill Neck, sometimes called Mill Neck, and known by this latter name in 1785. In 1680, a lot of land in this town was called an Erffe.

About the period of the Revolution the people were in the habit of distinguishing the large lots into which their farms or plantations were divided, by particular names, and these names they retained for many years. Thus in this town, near the road leading from Brooklyn Ferry to Flatbush, were the "Geele Water's Caump," the "Erste Caump of Der-

rick's land," the "Kline Caump," the "Twede Caump of Derrick's land," the "Middleste Caump," the "Benen Caump," and the "Agterse Caump."

IN THE TOWN OF MIDWOUT, OR FLATBUSH.

- 1660 Canarsee Landing, Canarsee Woods, which places still retain the same names.
- 1679 Third Kill.
- 1687. Minsehoele Hole.
- 1698. Rush Swamp.

IN THE TOWN OF BUSHWICK.

- 1690. The Norman Kill.

IN THE TOWN OF AMERSFORT, OR FLATLANDS.

- 1636. Kaskutensukin, the westernmost flat of land of the three flats.
- 1646. Mutelar's Island.
- 1687. Stroom Kill.
- 1687. Juriansen Hook.
- 1687. Fries Hook.
- 1690. Hogg's Neck.
- 1694. Albertse's Island.
- 1695. Mayise land.
- 1704. Fresh Kill.
- 1711. Bestevaar's Kill.
- 1712. Craven Valley.

IN THE TOWN OF NEW UTRECHT.

- 1660. Nayack, which name it still retains.
- 1685. The Fountain at Yellow Hook.
- 1690. Turk's Plantation, afterwards called Bruynenbergh.

IN THE TOWN OF GRAVESEND.

- 1692. Hoogh Penne Neck.
- 1693. Gysbert's Island.
- 1695. Ambrose Strand.
- 1697. Garretsen's Neck.
- 1698. Cellars Neck.
- 1704. Great Woods.
- 1718. Harbie's Gat.
- 1718. Brown's Creek.
- 1718. Robin Poyneer's Patent.

IN THE TOWN OF NEWTON.

- 1656. The west branch of *Mespart Kills*, called *Quandus Quaricus*.

Dosoris, the name of a place on this island, has its origin from the circumstance of the original owner of it, as a farm, or plantation,

having obtained it through his wife, and he being a scholar, called it *Dos Uxoris*, the *Wife's Gift*, which the people subsequently corrupted to its present name of *Dosoris*.

Quogue, in Suffolk county, is probably a corruption of the Indian name of a favorite shell-fish known to us as the *clam*, *Quohaug*—these shell-fish having been very abundant, and probably of a choice kind, as is indicated by the immense ancient shell banks in all the surrounding region. At this place is the only point from which the Great South Beach can be reached on foot from the mainland of the island, for the immense stretch of coast reaching from Fire Island to the inlet of Shineecoc Bay. In all other places you have to pass in a boat over many miles of water; and it is this circumstance which renders a ship-wreck upon that beach in winter so frequently dreadful in its consequences from the loss of life; for even if the crew and passengers should succeed in reaching the beach alive, they will find no shelter there, and having from ten to twenty miles of water to cross before they can experience any relief, and their boats being almost invariably destroyed or lost in the shipwreck, if the storm is very heavy and the cold severe, as is frequently the case, they perish from the exposure. It may be asked by those not acquainted with this beach, Why is this not provided against? The answer is, It is almost, if not quite impossible to do so, the character of the beach being such, and the distance from the mainland, and the difficulties and dangers of communication often so great that men could not live there at the times when their services would be most required. The formation and position of this beach is, however such that the great loss of life is usually sustained before the shipwrecked persons have the chance of reaching the land, from the immense seas thrown over them by the whole swell of the Atlantic Ocean, which, by the rapid evaporation it causes, comparatively soon chills them to death.

NAMES OF FAMILIES IN BROOKLYN.

<i>Ancient</i>	<i>Modern.</i>
Courten.	
Defforest,	Deforest.
Filkin.	
Gulick.	
Hansen,	Johnson.
Harsen.	
Houghawout,	Lefferts.

<i>Ancient.</i>	<i>Modern.</i>
Abranse.	
Aerson.	
Amertman,	Amerman.
Blaw.	
Beeckman,	Beekman.
Casperse.	
Dehart.	
Depotter.	
Ewetse.	
Hooghland.	
Janse,	Johnson.
Jarisse.	
Jurianse.	
Lambertse,	Lambertson and Lamberson.
LeFoy.	
Lubbertse.	
Middagh.	
Schaers.	
Seberingh.	
Symonse,	Simonson.
Staats.	
Van Cortlandt.	
Van Eckellen.	

Of all these families there are now but seven remaining in Brooklyn, viz.: Beekman, Deforest, Johnson, Lambertson, Lefferts, Middagh and Simonson. Within the last five or six years the emigration from Continental Europe has brought back some of the old names as in New York, merchants of the name of Courten. The name of Middagh is Dutch, and means, in English, midday or noon.

NEW UTRECHT.

<i>Ancient.</i>	<i>Modern.</i>
Van Westervelt.	
Mattyse,	Martense.
Coorten.	
Salom.	
Smack,	original of Martense.
Van Thinhoven.	

GRAVESEND.

Garretse,	Garretson and Gerritson.
Remmerson,	Remson.

FLATLANDS.

Tiehuynon,	Terhune.
Lucasse.	
Kenne.	
Elbertse.	
Harmanse.	

BUSHWICK.

<i>Ancient.</i>	<i>Modern.</i>
Vanderschaez.	
Schamp.	
Loysen.	
	FLATBUSH.
Ditmarse,	Ditmas.

The practice of giving people what would now be called *nicknames*, by which they became known, not only to the public generally, but also in the official records, was very common under the Dutch Colonial Government, and it also continued for a considerable period under the English administration in this colony. In 1644, in the Dutch records we have John Pietersen, alias Friend John. In the Newton purchase from the Indians, dated April 12, 1656, one of the boundaries is, "by a Dutchman's land called *Hans the Boore*;" and in the Bushwick patent, dated October 12, 1667, one of the boundaries is "John the Swedes Meadow." In 1695, in the Kings County records a man is named living at Gowanus, as "Tunis the Fisher."

And we also find that by the records of the Common Council of the City of New York, on the 25th of March, 1691, they ordered that "fish be brought into the dock, over against the City Hall [then standing in Pearl street, at the head of Coenties slip], or the house that Long Mary formerly lived in."

And also on the 9th of April, in the same year, they directed "that Old Bush deliver into the hands of the treasurer the scales and weights that he hath in his hands belonging to the city, being first satisfied for the making of them."

Again, on the same day, the order "that Top Knot Betty and her children be provided for as objects of charity, and four shillings a week allowed." And further, that "the treasurer let Scarebouch have a new suit, and assist him in what's wanting."

All the preceding orders, from the date of April 9th, inclusive, were made in one day, so that our city functionaries of that period seem to have had a most charitable disposition, as well as a strange propensity for giving nicknames to people. But we are not yet done; this Common Council were not so mean as to apply such nicknames to those only to whom they afforded charitable relief, as some might otherwise suppose—they also used them when

discharging their debts. Thus, on the 8th of December, 1691, the city records contain an order that "the treasurer pay English Smith, £1, 13s. for three cords of wood, which he bought for the use of the city this day."

Strange as it may now seem to us for the Common Council of a city to place such names upon the public records, yet we have seen that this practice extended to the highest functionaries of the Colonial Government, and that the Governors, both Dutch and English, used it in their patents for towns, and other official documents. The explanation of it, in many cases, undoubtedly was, that in many instances the parties either had no surname, or family names (for family names were not so common then as now), or if they had, they did not themselves know it, and that which now appears like a nickname was from necessity adopted as a means of distinguishing them, and was usually taken from some personal characteristic, and which subsequently became, some part or other of it, the surname of the children, as Long and Betty.

The manner in which names of families sometimes become changed in this country is truly curious. There was previous to the middle of the last century, among the Dutch settlers in the southern part of this colony, and particularly upon Long Island, a regular systematic change of the family name with every generation, so that the son never bore the family name of his father; thus, if the father's name was Leffert Jansen, and he had a son named Jacobus, this son's name would not be Jansen, but it would be written Jacobus Leffertsen. Suppose the old gentleman would have a grandson by his son, who was christened Gerrit, his whole name would be Gerrit Jacobsen. Thus we would have in the three generations of that one single family, the following different names, viz.:

1. The father, named Leffert Jansen.
2. The son, named Jacobus Leffertsen.
3. The grandson, named Gerrit Jacobsen.

This strange custom does not seem to have prevailed among the Dutch in Albany; there they preserved their family names from the first settlement, and many of them may therefore be traced back without difficulty.

In other parts of our country, as well as among the Dutch, great changes have occurred in family names. Edward Livingston, Esq., in his answer to Mr. Jefferson, in the case of

the New Orleans Batture, furnishes us with the following singular instance of this nature:

An unfortunate Scotchman, whose name was Feyerston, was obliged, in pursuit of fortune, to settle amongst some Germans in the western part of the State of New York. They translated his name literally into German and called him Fourstein. On his returning to an English neighborhood his new acquaintances discovered that Fourstein, in German, meant Flint in English; they translated, instead of restoring his name, and the descendants of Feyerston go by the name of Flint to this day. I ought, however, says Mr. Livingston, to except one of his grandsons who settled at the Acadian coast, on the Mississippi, whose name underwent the fate of the rest of the family; he was called, by a literal translation into French, *Pierre-a-fusil*, and his eldest son returning to the family clan, his name underwent another transformation, and he was called Peter Gun! This is about equal to the Dutch transmutation of names, although wanting its system. Here we have the following result:

- | | |
|-------------------|-------------------------|
| 1. The father's' | 1st Name, Feyerston. |
| | 2d Name, Fourstein. |
| | 3d Name, Flint. |
| 2. 'The son's | Name, Flint. |
| 3. The grandson's | 1st Name, Flint. |
| | 2d Name, Pierre-a-fusil |
| | 3d Name, Peter Gun. |

The old practice formerly so common among the Dutch settlers on Long Island, seems also to have been at one time in use in Iceland. Mr. Hooker, who was there in the summer of 1809, speaking of the family of Olaf Stephenson, the former Governor of that island, observes: "In naming his children, the Stiftsamptman (Governor), as well as his sons, have abolished the custom, which is otherwise, I believe, very general in Iceland, of calling the child after the Christian name of the father, with the addition sen or son to it; thus the son of the Etatsræd (Chief Justice) Magnus Stephenson ought by this rule to have been Magnusen, to which any Christian name might be subjoined. If it had been Olaf Magnusen, his son would bear the name of Olavsen, or rather Olafsen, as I believe it is generally written. The females had the addition of datter to the Christian name of the father."

This was precisely the old Dutch custom in this colony; and it has led to great difficulty in tracing the descent of our early Dutch fam-

ilies, and also in examining our old records, as there are but few who are conversant with this peculiarity in their change of names. Thus, amongst the Dutch the original name of the present family of the Lefferts was Houghawout. Leffert Houghawout's son James was called Jacobus Leffertsen, or Leftertse, as it was often written, dropping the letter n; and when this custom was abolished about the middle of the last century, this latter name Leftertse was retained as the family name. So also the original family name of the Martenses was Smack. Mattyse Smack's son received Mattyse as his surname, which eventually became the present name of Martense, although as now written only within the last half century. This is also the origin of the present family names of Johnson, or Jansen (which are both the same name), Remsen, Gerritsen. etc. It is strange that such a custom should have been identically the same with those two different nations; but it shows their common origin.

Upon this island, and especially in the central portions of it, are very many families of the name of Smith, and so numerous did they become at an early period of the settlement that it was thought necessary to distinguish the various original families by some peculiar name. Thus we have the Rock Smiths; the Blue Smiths; the Bull Smiths; the Weight Smiths, and the Tangier Smiths. Of the Rock Smiths there are two distinct families: one originally settled between Rockaway and Hempstead, some ten or fifteen years before the settlement of the first white inhabitant in Setauket, who derived their name from their contiguity to Rockaway; and the other located themselves in Brookhaven, and obtained their appellation from their ancestor erecting his dwelling against a large rock which still remains in the highway of that town. The Blue Smiths were settled in Queens county, and obtained their peculiar designation from a blue cloth coat worn by their ancestor; whether because a cloth coat was then an uncommon thing in the neighborhood, or that he always dressed in a coat of that color, does not appear. The Bull Smiths of Suffolk county are the most numerous of all the families of the name of Smith upon this island; it is said that there are now at least one thousand males of that branch on this island. The ancestor of this branch of the Smith family was Major Richard Smith, who came from England to New

England, with his father Richard, in the early part of the seventeenth century; and afterward came to the island and became the patentee of Smithtown. The sobriquet of this class of Smiths is said to have arisen from the circumstance of the ancestor having trained and used a bull in place of a horse for riding. The Weight Smiths derived their name from being possessed of the only set of scales and weights in the neighborhood of their residence, to which all the farmers of the country around resorted for the purpose of weighing anything they wished to sell or buy; at least so says the tradition. The Tangier Smiths owe their origin to Colonel William Smith, who had been the English Governor of Tangier, in the reign of Charles the Second, and emigrated to this colony in the summer of the year 1686, where he settled in the town of Brookhaven, on the Neck known as Little Neck, and afterward as Strong's Neck, which, together with his other purchases, were erected into a manor by the name of St. George's Manor, by a patent granted to him in 1693, by Governor Fletcher. Most of the Tangier Smiths are now in that town, scattered through it from the north to the south side of the island.

These different appellations of the families of the Smiths became as firmly settled as if they were regular family names; so that when any inquiry was made of any person on the road, man, woman or child, for any particular Smith, they would at once ask whether he was of the Rock breed, or the Bull breed, etc.; and if the person desiring the information could say which breed, he at once was told of his residence. In truth, there are so many of the same name in that most numerous family of the Smiths upon this island, that without adopting some such plan it would be almost impossible to distinguish one from the other. Among these Smiths, and at Smithtown, upon this island, have occurred two of the most marked instances of longevity known in this country.

Richard Smith, the patentee of Smithtown, of the Bull breed, purchased at New York a negro man named Harry, who lived with him, with his son, and then with his grandson, and died at Smithtown in the month of December, 1758, aged at least one hundred and twenty years. This remarkable individual said he could remember when there were but very few houses in the city of New York; his memory must have extended back to the administration of the Dutch Governor Kieft. His health and

strength of body continued almost unimpaired until very near his death, and he could do a good day's work when he had passed one hundred years.

There appears to have been another negro man in the same town who even exceeded him in the point of age. In a note to Moulton's History of New York, it is stated that an obituary article appeared in a newspaper, printed in 1739, of the death of a negro man at Smithtown, on Long Island, reputed to have been one hundred and forty years old; who declared that he well remembered when there were but three houses in New York. The memory of this man must therefore have extended back to the founding of New Amsterdam, in the year 1626, as New York was then called, and he must have come into this country with some of the first Dutch settlers.

BROOKLYN SURVIVORS OF THE MEXICAN WAR.

It is singular that in 1901 no fewer than thirty-five survivors of the Mexican war were still resident in Brooklyn, and nearly all, if we may judge by their portraits, hale and hearty old gentlemen, and several of them still engaged actively in business. Their names and the regiments in which they served are as follows:

T. W. Barnum, Company A, First Louisiana Volunteers; A. Nelson Bell, Naval Surgeon; Anthony Bassey, United States Steamship "Ohio;" Charles Blohm, Permanent Party; C. M. Brower, Company F, First New York Volunteers; Othneal Bush, United States Steamship "Princeton;" R. D. Buttle, United States Marine Battalion; Jacob Clute, Siege Train; E. B. Cole, Company C, Second United States Artillery; William Coler, Company B, Second Ohio Volunteers; Hugh Conner, Marine Corps; John Cornock, Company E, Third United States Dragoons; John Da Silva, United States Steamship "Savannah;" John Dick, Company I, First New York Volunteers; C. H. Farrell, Company I, First New York Volunteers; James C. Foote, United States Steamship "Columbus;" John H. Foote, United

States Steamship "Columbus;" J. S. Gallagher, Company A, Second Maryland Volunteers; C. Herrschaft, Company H, First United States Artillery; F. W. Jennings, Company E, First United States Infantry; Edward Kast, United States Steamship "Raritan;" Robert T. Kirk, Company K, First New York Volunteers; Julius Lucas, United States Steamship "Cumberland;" Hubert Oberly, Company G, Seventh United States Infantry; F. E. Pinto, Company D, First New York Volunteers; David Randall, Recruiting Office; John Ritter, United States Steamship "St. Mary's;" H. T. Spencer, United States Steamship "Vesuvius;" Samuel C. Stores, Company A, Tenth United States Infantry; E. Sullivan, Company I, First Rhode Island Volunteers; L. Thomas, Company F, First Pennsylvania Volunteers; D. Van Auken, United States Steamship "Independence;" Van Bokkelen, Seventh United States Infantry; John Weeks, United States Steamship "Cumberland;" J. Williams, United States Steamship "Vesuvius."

The following details regarding some of these veterans are taken from an article in "The Brooklyn Eagle" of February 17, 1901:

By far the most important military organization that was recruited in this vicinity for service in Mexico was the First New York Volunteers, under the command of Colonel Ward B. Burnett, Lieutenant-Colonel Charles Baxter, who was killed at Chapultepec, and Major J. C. Burnham. On May 19, 1846, the President served a requisition on Governor Fish for seven regiments to be organized and held in readiness for service. On November 16 of the same year a regiment was called for, and Colonel Burnett's being the first organization, was chosen for the service.

The surviving members of the First New York Volunteers are General Francis E. Pinto, Charles H. Farrell, Charles M. Brower, Robert Kirk and John Dick. General Pinto enlisted as second lieutenant in the First Regiment, New York Volunteers, and is the only surviving commissioned officer of

the regiment. He was brevetted a captain and assisted in planting the only regimental flag on the walls of Chapultepec. General Pinto was a close friend of Lieutenant Mayne Reid, who became famous as a writer of boys' stories, they being officers in the same regiment. The General raised a regiment for service in the Civil war, during which he rose to the rank of brigadier-general. He has written a history of the Mexican campaign and the Rebellion, which he has not published. He is not now actively engaged in business.

Charles M. Brower, who lives at 1105 Bedford avenue, was one of the original members of the regiment, and enlisted in Company F. One of his most conspicuous services during the war was the recovery for burial of the body of a comrade who had been murdered by the Mexicans in the rear of the American army. Mr. Brower was twenty years old when he enlisted. He rose to the rank of sergeant.

Charles H. Farrell enlisted in Company I, of the First New York Volunteers, and served through the entire war. He contributed letters to the Herald during the Mexican war, and at the outbreak of the Civil war became its regular correspondent. For years Mr. Farrell was the city editor of that paper, and is now clerk of the Supreme Court in this borough. Mr. Farrell, who is seventy-two years old, resides on Gates avenue.

Robert Kirk enlisted in Company K, of the same regiment, at the age of twenty-three, but being detailed for recruiting service at Fort Hamilton, he was unable to sail with the rest of the troops. He did duty as a recruiting sergeant until August 10, 1847, when he joined his regiment in Mexico. Mr. Kirk has retired from business and lives at his home on Stuyvesant avenue. He is seventy-six years old and a well-preserved man.

John Dick enlisted in Company I, with the original regiment, and was connected for a time with the quartermaster's department. Mr. Dick is in poor health and somewhat feeble.

Edward Kast, who is nearly eighty-two

years of age and still hale and hearty, followed the sea all the early years of his life, and at the outbreak of the Mexican war he was serving in the United States Navy on the frigate "Raritan," under the command of Commodore Gregory. Before the beginning of actual hostilities his vessel was dispatched to Point Isabel, and he, among others, was sent ashore to join General Taylor's division, which took part in the battle of Palo Alto. Mr. Kast remained with the American forces until the end of the war, when he embarked in the merchant service. He now conducts a cigar store on Metropolitan avenue.

Julius Lucas shipped on the "Falmouth" when that vessel sailed for Vera Cruz with the United States Minister. This was in 1844, when Mr. Lucas was about sixteen years of age. Shortly after this, Commander Forrest, who was a friend of Mr. Lucas' father, had the young man transferred to his own vessel, the frigate "Cumberland." He was at the siege of Vera Cruz, the engagement of Eldorado, and later was sent ashore to join the land forces at Tobasco. Mr. Lucas marched into Vera Cruz by the side of Commander Forrest. He is seventy-three years old, and has retired from business.

John Ritter joined the merchant service when he was but seventeen years old, and followed it for a decade, when he entered the United States Navy. He served on the United States steamship "St. Mary's," the famous "hanging ship" (so called because a man was hanged at the yard arm for striking an officer), during the Mexican war, and took part in the siege of Vera Cruz. He is not only the oldest retired gunner in the Navy, but the oldest Mexican war veteran in Brooklyn. He works every day in the Department of Arrears in the Controller's office, and, although eighty-six years old, he writes a beautiful hand.

A. Nelson Bell, the editor of the Sanitarian, was a naval surgeon during the war with Mexico, and the last one who survives. Mr. Bell went to Vera Cruz with Farragut, and was in

the wreck off the coast of Mexico when two commanders were lost. He floated out to sea on two oars, and, after terrible suffering, was picked up by a passing vessel. He served on six different vessels during the war.

Anthony Bassey, who is quite feeble, is one of the few sailors who served on the Pacific coast. John Da Silva was also in the Pacific. They both served on the "Savannah," and Mr. Bassey was also on the "Ohio." Mr. Da Silva is a Portuguese, and was born in Madeira.

James Williams, who lives at 33 Devoe street, and Hiram T. Spencer, of 555 Tenth street, were both on the United States steamship "Vesuvius." John H. Foote and James C. Foote, who are brothers, were on the ship "Columbus," doing blockade duty at Monterey. They were under the command of Commodore Bidel, and afterward circumnavigated the world in this vessel. Othneal Bush, who is employed in the Navy Yard, served during the war on the "Princeton." Daniel Van Auken was stationed on the Pacific coast in the "Independence," under Commodore Schubert. Mr. Van Auken is seventy-five years old, and has retired from business. John Weeks, who is the only colored survivor of the Mexican war in Brooklyn, was on the old frigate "Cumberland."

The other veterans in this borough were enlisted in the regulars or the volunteer regiments of other States. There is one member of the Marine Battalion, one of the Third Dragoons, one of the First and one of the Second Artillery, several in the infantry, and one each of the volunteer regiments of Ohio, Pennsylvania, Rhode Island and Maryland. There is also a musician, a member of the Permanent Party and one of the Ordnance Department.

John Cornock, who belonged to Company E, Third United States Dragoons, has the reputation among his fellow veterans of being one of the most recklessly brave fighters of the war. Mr. Cornock is very reticent about his own feats, but his regiment saw some of the severest fighting of the war. Mr. Cornock has

led a very romantic career since the war with Mexico. Many of his personal experiences in Mexico are thrilling and entertaining, and his narrow escape from capture by Indians in crossing the continent, his services in the California Vigilante troubles and his subsequent life prove him to have been a seeker of adventures. Mr. Cornock has retired from business and lives at 114 Fourth avenue.

Robert D. Buttle is the only survivor of the Marine Battalion in this borough. He enlisted in this organization on May 24, 1847, and sailed in the "Atlas" on June 4 of the same year, arriving at Vera Cruz in the early part of July. His company was engaged in the battles of Pueblo, Contreras and Churubusco, and at the storming of Chapultepec. Mr. Buttle was wounded at the capture of the city of Mexico, and lay there eight months before he had recovered sufficiently to be removed. He is now seventy-three years old, and conducts a restaurant in Court street.

Charles Blohm was a member of the Hanoverian army in Europe, and on account of his training was selected for a body of troops known as the Permanent Party. They enlisted for any service until the end of the war, but were quartered at Governor's Island till the declaration of peace. Ebenezer B. Cole enlisted in Company C, of the Second United States Artillery, during the Mexican war, and for years after was a captain in the Rhode Island Militia. Mr. Cole is seventy-two years old and has retired. Jacob Clute was connected with the Ordnance Department under General Stone, and was attached to Scott's army. Mr. Clute lives at 207 Halsey street, and has retired. David Randall, who lives at 277 Eighth street, was a musician during the Mexican war. Mr. Randall is seventy-six years old.

Coley Herrschaft occupies the unique position of being the youngest Mexican war veteran. He enlisted in the First Artillery, February 10, 1845, at Governor's Island, and fought under the forces of General Taylor. Mr. Herrschaft was but twelve years old when

he became a soldier. He served part of the time in Company H and afterward in the regimental band, his regiment being the last to leave Vera Cruz. He received his discharge after a service of five years, and this document places his age at that time at seventeen.

William Coler is the only representative of the Ohio troops in this city. Mr. Coler was in Company B, of the Second Regiment of Ohio Volunteers, under the command of Colonel Morgan. Mr. Coler was elected a sergeant, but resigned the office to become clerk to the colonel of the regiment. He is best remembered as the father of Controller Bird S. Coler and the head of the banking firm of W. N. Coler & Company.

John S. Gallagher belonged to Company A, of the Second Regiment of Maryland Volunteers, under the command of Colonel Hughes. This regiment captured and held the National Bridge and acted as a part of the body guard of Santa Ana after his surrender.

Eugene Sullivan enlisted in Company I, of the only regiment of Rhode Island Volunteers, under the command of Colonel Clemens. This regiment formed a part of General Scott's army. Lafayette Thomas, who is quite ill at present, was a member of Company F, of the First Pennsylvania Volunteers. Captain John Bennett commanded the company and Colonel Wynkoop the regiment. Mr. Thomas was one of the organizers of the Scott Legion in Philadelphia.

Samuel C. Stores enlisted in the Tenth United States Infantry, raised under the ten regiment bill. The regiment was commanded by Colonel Temple and was a part of Taylor's army, but was never engaged in any battles.

William K. Van Bokkelen belonged to the Seventh Regiment of the same body of troops. He is a West Point graduate, and served in the Mexican war as a second lieutenant. Mr. Van Bokkelen is seventy-nine years old and is engaged in the real estate business.

Hubert Oberly enlisted in the Seventh United States Infantry in 1840. He served all

through the Mexican war, part of the time with Taylor's army and later with the army of General Scott. Mr. Hubert was in the Florida war, the Rebellion, and fought Indians on the frontier for ten years. His service in the army lasted for twenty-five years, and he was for thirty-two years on the police force.

Hugh Connor was a member of the Marine Corps. He sailed for Vera Cruz in the "Monterey," and was in the rear of Scott's army. Mr. Connor is seventy-one years old and has retired from business.

T. W. Barnum, of 118 Prospect place, served in Company A, Captain R. R. Mace, First Regiment Louisiana Volunteers, under the command of Colonel L. G. DeRuse, of New Orleans.

GLEANINGS FROM EARLY HISTORIANS.

THOMPSON'S ACCOUNT OF KINGS COUNTY.

For purposes of comparison, and showing the wonderful advance made by Kings county in little over half a century, we reprint the entire story of the county and its towns given in Thompson's "History of Long Island," first edition, 1839:

Town of Bushwick.

This town is situated in the northeast extremity of Kings county, is bounded westerly by the East river, northerly by Maspeth or Newtown creek, easterly by Newtown and southerly by Brooklyn, and that part of Flatbush called New Lots. Its area is 3,860 acres, of which a greater portion is under cultivation; its proximity to the cities of Brooklyn and New York rendering it valuable in a high degree. The precise period of its settlement is not satisfactorily ascertained, but is believed to have been some years later than Brooklyn and the more southern towns. It was commenced by the Dutch, who were joined, many years after, by a number of Huguenot families, whose descendants are numerous and respectable in this and the neighboring towns. The name is of Dutch origin, indicating that the territory was remarkable

for the woods which covered its surface in early times. There are some families here who can trace their ancestry back nearly two hundred years, and as possessing at that period the identical lands now in the occupation of their descendants. The increase in population in this part of the country was so small as not to acquire its municipal character before the year 1648, at which time application was made to the governor for a patent or ground-brief. One was accordingly issued, under which the inhabitants remained till the conquest of New Netherlands in 1664. The government having now fallen into other hands and many considerable defects existing in the charter granted by Governor Stuyvesant, the people of Bushwick, in 1666, at a town meeting assembled for the purpose, appointed a committee to wait upon Governor Nicolls, "to solicit him for a new patent, and to request that therein the boundaries of their plantation might be more expressly defined and set forth."

This patent was obtained on the 25th of October, 1667, wherein, among other things, the limits and bounds of the town are set forth in the words following:

"Bounded with the mouth of a certain creeke or kill, called Maspeth-Kill, right over against Dominie-Hook, soe their bounds goe to David Jocham's Hook; then stretching upon a south-east line along the said Kill, they come to Smith's Island, including the same, together with all the meadow-ground or valley thereunto belonging; and continuing the same course, they pass along by the fence at the wood-side, soe to Thomas Wandall's meadow, from whence, stretching upon a south-east by south line, along the woodland to the Kills, taking in the meadow or valley there; then pass along near upon a south-east by south line six hundred rod into the woods; then running behind the lots as the woodland lyes, south-west by south; and out of the said woods they goe again north-west, to a certain small swamp; from thence they run behind the New Lotts, to John, the Sweede's-meadow; then over the Norman's-Kill, to the west end of his old house, from whence they goe alongst the river, till you come to the mouth of Maspeth-Kill and David Jocham's Hook, whence they first began."

From the organization of the town till the year 1690, it was for certain civil purposes associated with the other towns in the county, except Gravesend, constituting a separate dis-

trict under the appellation of the "Five Dutch Towns;" and for which a secretary or register was specially commissioned by the governor, whose duty it was to take the proof of wills, of marriage settlements, also the acknowledgment of "Transcripts," or conveyances, and many of the more important contracts and agreements; all of which were required to be recorded. This office was, in 1674, held by Nicasius de Sille, who had once held the office of attorney-general under the administration of Stuyvesant. These five towns likewise formed but one ecclesiastical congregation, and joined in the support of their ministers in common. The inhabitants, with few exceptions, professed the doctrines promulgated at the synod of Dort in 1618, most of whose resolutions are still adhered to in the Reformed Dutch churches. These churches were at that period, and for a long time after, governed by the classis of Amsterdam, and so continued till about the year 1772, when the American churches repudiated any dependence upon the mother church, and established classes and synods of their own, on the model of the church of Holland. In the year 1662, according to one authority, the dwellings in this town did not exceed twenty-five, and were located on the site of the village of Bushwick, which, with the Octagon church, built in 1720, were enclosed by palisades, as most of the other settlements were. In the minutes of the court of sessions is the following entry:

"At a Court of Sessions, held at Flatbush for Kings County, May 10, 1699. Upon the desire of the inhabitants of Breucklyn, that according to use and order every three years the limmits betweene towne and towne must be runn, that a warrant or order may be given, that upon the 17th day off May, the line and bounds betwixt said towns of Breucklyn and Boswyck shall be run according to their patents or agrements. Ordered, That an order should be past according to their request."

The population of this town was very considerable at the time of the Revolution compared with other parts of the county; yet they suffered greatly from the depredations of the enemy. They were particularly exposed to the invaders, who made, of course, an indiscriminate destruction of whatever their caprice or revenge dictated. The nearness of its forests to the garrison and barracks of New York and Brooklyn led to the entire waste of the valuable timber which abounded at the commencement of the contest. On the return of

the owners to their homes at the close of the war, they found not only the woods and fences destroyed, but their dwellings, in many instances, greatly deteriorated in value.

On the 12th of May, 1664, the magistrates of this town sentenced one John Van Lyden, convicted of publishing a libel, to be fastened to a stake, with a bridle in his mouth, eight rods under his arm, and a label on his breast with the words, "writer of lampoons, false accuser, and defamer of magistrates," upon it, and then to be banished from the colony. An instance also occurred, of a clergyman, who had improperly married a couple, being sentenced to "flogging and banishment," but which, on account of the advanced age of the delinquent, was mitigated by the governor to banishment only. Another person, convicted of theft, was compelled to stand for the space of three hours under a gallows, with a rope around his neck and an empty scabbard in his hands. In 1664 permission was given by the town to Abraham Janson to erect a mill on Maspeth Kill, which was probably the first water-mill built within the town, and for grinding of the town's grain he was to receive the "customary duties." November 12, 1695, the court of sessions of Kings county made an order "That Mad James should be kept at the expense of the county, and that the deacons of each towne within the same doe forthwith meet together, and consider about their propercons for maintainence of said James."

The village of Williamsburgh is not only the principal settlement, but contains within its corporate limits more than two-thirds of the whole population of the town. This flourishing village was, till within a few years, an inconsiderable place, although it was commenced, by a few spirited individuals, nearly thirty years ago, by erecting a few houses and establishing a ferry between it and the foot of Grand street. At this period the houses on the New York side, in the vicinity of the ferry, were scattering; and where extensive blocks of buildings and a large population now exist, was then, in a great measure, an open field of broken ground; and a general want of confidence in the project of making this a place of business, retarded its operations and prevented its growth. In the year 1817 a ferry-boat, impelled by horse power, gave a new impulse to Williamsburgh, and it began to assume an importance before unknown. Still, the main current of travel was by way of Brooklyn, and the progress of improvement

here was slow and gradual. At that time the road leading to the ferry was the principal thoroughfare of the village, and where there are now wide and handsome streets partially built upon, were then cultivated fields, orchards, etc. Such was the state of things, in a great degree, when the first act of incorporation was obtained, April 14, 1827, which proved, in fact, a new and important era in the increase and prosperity of the village. The territory embraced in the act is as follows: "Beginning at the bay or river opposite the town of Brooklyn, and running thence easterly along the division line between the towns of Bushwick and Brooklyn to the land of Abraham A. Remsen; thence northerly by the same to a road or highway at a place called Sweed's Fly; thence by the said highway to the dwelling-house late of John Vandervoort, deceased; thence in a straight line northerly, to a small ditch or creek, against the meadow of John Skillman; thence by said creek to Norman's Kill; thence by the middle or center of Norman's Kill to the East river; thence by the same to the place of beginning." The first trustees appointed in this act were Noah Waterbury, John Miller, Abraham Meserole, Lewis Sanford and Thomas T. Morrill; of whom the first named, a well-known and spirited individual, was chosen president. The board, under the extensive and liberal provisions of this charter, applied themselves immediately and vigorously to the laying out of streets and building lots as the basis for future improvements; and everything was done by them which the state of things at that time seemed to authorize or require. Nevertheless the increase of business and population was not equal to the public expectations until another portion of territory was included in the incorporated part of the village, and additional powers conferred upon the trustees by the act of April 18, 1835. This additional legislative provision vested the public concerns of the village in the hands of nine trustees, of which new board Edmund Frost was chosen president, and by whose zeal, industry and perseverance much has, within a short time, been accomplished for the increase and welfare of the place. Such has been the progress of improvement, that the ancient village of Bushwick can scarcely be identified, having become amalgamated with the village of Williamsburgh. Indeed, it now seems both a matter of surprise and deep regret that public attention should not have been sooner and more

efficiently attracted towards a place possessing so many and superior natural advantages for the successful prosecution of every species of manufacture and commerce, and for the erection of pleasant and convenient private residences. Situated opposite the very heart of the city of New York, it has a bold water front upon the East river of a mile and a half, with a sufficient depth for all commercial purposes, and has this advantage over Brooklyn, that its entire shore is under the control of its own local authorities. There has already been constructed, under the act of the 22d of April, 1835, and the statutes before mentioned, several large and substantial wharves and docks, affording safe and convenient mooring for vessels, even of the largest class. Its ferry is, by two or three miles, the nearest approximation to the upper parts of the city from the eastern towns, and is connected with the upper and lower parts of the city by double lines of steam ferry boats of the best kind, and remarkable for their accommodations and speed. The ferry to Peck Slip may be said to unite the village with the Fulton and Catharine markets, while another is in contemplation to the foot of Houston street, leading to the upper wards and Harlaem. Williamsburg now contains seventy-three streets permanently laid out, of which twenty-seven have been opened and regulated, including one McAdams and seven paved streets. The number of dwellings is five hundred and eighty, and the inhabitants about three thousand and five hundred. There are one Dutch Reformed and two Methodist churches, ten fire companies, one hook and ladder company, two distilleries, which consume annually more than two hundred thousand bushels of grain, one steam spice mill, five rope-walks, an extensive glue factory, two hat manufactories, one iron foundry, two lumber yards, two lime and brick yards, one coal yard, six hotels, one drug store and a due proportion of other mechanics and tradesmen. A considerable number of elegant dwellings have lately been erected in the southern part of the village, owned and occupied by persons doing business in New York. Many other inducements exist, besides an easy and speedy communication with the city, that will insure a rapid influx of inhabitants, and an expansion of business in every department. The improvements in contemplation, and partially in progress, along the shore south of the present ferries, will in time unite with those in the vicinity of the navy yard at Brooklyn, and in

half a century perhaps form a continuous city from the mouth of Newtown creek to Red-Hook, a distance of four miles.

Town of Gravesend.

This town occupies the most southerly part of Kings County, including also Coney Island, which is washed by the Atlantic ocean. It is centrally distant from New York city about ten miles; bounded east by Flatlands, south by the sea, and west by New Utrecht, of a triangular shape, with its base upon the ocean and terminating northerly in a point adjoining Flatbush. Much of the territory consists of salt marsh, not more than one-third being returned as improved land; the surface generally level, but near the seashore are some ridges of sand-hills. This town, unlike the rest of the county, was settled by English people, mostly from Massachusetts, as early as 1640, who gave it the name of Gravesend, they having sailed from a place of that name in England on their departure for America. They were joined soon after by a small colony of English Quakers, accompanied by Lady Deborah Moody, a woman of rank, education and wealth, who, with several others residing at Lynn, Sandwich, and other towns in New England, had imbibed the religious sentiments of George Fox, and being objects of jealousy and persecution with the Puritans there, determined to settle elsewhere. Considering the situation of this town calculated for the site of a commercial village, they proceeded almost immediately to lay out ten acres of ground near the center into streets and squares, which they enclosed with a palisado defense. The plan of the village is still preserved in the clerk's office of the town, and is worthy admiration for its simplicity and beauty. It seems the project was soon after abandoned on discovering the insufficient depth of the water for the approach of large vessels. One of the original squares of the contemplated city was occupied by the court house of the county so long as the courts continued to be held here; another contained the first Dutch church, and a third has long been used for a public cemetery. On the same plot are a considerable number of graves of the first Quakers, the whole of which have been levelled by the plow, except that of Peter Sullivan and his wife, at the head of which is a large granite slab, containing only the names of the deceased. As this particular sect make no use of such memorials, it was probably placed here

by some friend or relative who was not a Quaker.

The first patent or ground-brief was granted by Governor Kieft in 1643 to Antonie Jansen Van Sale (or Anthony Johnson) for one hundred morgen of land, which was afterwards known as the Old Bowery. A morgen was a Dutch measure of little less than two acres, consisting of six hundred square Dutch rods. On the 24th of May, 1644, a patent was also granted to Guisbert Op-Dyck for Coney Island, called in the patent Cunny Island, and by the Dutch Conynen-Eylant, probably from the name of an individual who had possessed some part of it. Pine Island, then called Conyne-Hook, was at that time separated from the former by a creek, which has since disappeared. The latter was doubtless the spot upon which the discoverer of the Hudson and his crew landed in 1609 before entering the bay of New York. A general patent for this town, written both in Dutch and English, was obtained from Governor William Kieft on the 19th of December, 1645. The patentees named therein are the Lady Deborah Moody, Sir Henry Moody, Baonet, Ensign George Baxter and Sergeant James Hubbard, with their associates; and is for "A certain quantity of land lying or being upon or about the westernmost part of Long Island, beginning at the north of a creek adjacent to Conyne-Island, and bounded on the west part thereof with the lands belonging to Anthony Johnson and Robert Pennoyre; and to run as far as the westernmost part of a certain pond in an old Indian field on the north side of the plantation of the said Robert Pennoyre; and from thence to run directly east as far as a valley, being at the head of a fly or marsh sometime belonging to the land of Hugh Garretson; and being bounded on the south with the main Ocean, with liberty to put what cattle they shall see fitting to feed or graze upon the aforesaid Conyne-Island, and with liberty to build a town with such necessary fortifications as to them shall seem expedient; and to have and enjoy the free liberty of conscience according to the customs and manners of Holland without molestation, and to establish courts, and elect magistrates, to try all causes not exceeding fifty Holland guilders."

The circumstance of this patent being granted to a female, and her being also first named, is a matter of some curiosity; and, in connection with events hereinafter mentioned, exhibits the Lady Moody in a conspicuous

light. She being a considerable personage in the early history of the town, it is important to ascertain, as far as possible, the particulars of her history. We find it mentioned in the very interesting publication by Mr. Alonzo Lewis, entitled "History of Lynn," that the Lady Deborah Moody came to that town in the year 1640. That in 1635 she went from one of the remote counties in England to London, where she remained in opposition to a statute which directed that no person should reside beyond a limited time from their own homes. On the 21st of April of that year, the court of Star-Chamber ordered that "Dame Deborah Mowdie" and others, should return to their hereditaments in forty days, in the good example necessary for the poorer class. That soon after her arrival at Lynn, on the 5th of April, 1640, she united with the church of Salem; and on the 13th of May the court granted her four hundred acres of land. In 1641, she purchased the farm of the deputy governor, John Humfrey, called Swamscut, for which she paid £1,100. That some time afterwards she became imbued with the erroneous doctrine that the baptism of infants was a sinful ordinance, and was thereupon excommunicated, and that in 1643 she removed to Long Island. Governor Winthrop, in his journal, says, that "in 1643 Lady Moody was in the colony of Massachusetts, a wise and anciently religious woman; and being taken with the error of denying baptism to infants, was dealt withal by many of the elders and others, and admonished by the church of Salem, whereof she was a member; but persisting still, and to avoid further trouble, etc., she removed to the Dutch, against the advice of her friends." "After her arrival at Long Island (says Mr. Lewis), she experienced much trouble from the Indians, her house being assaulted by them many times. Her wealth enabled her to render assistance to Governor Stuyvesant in some trouble with the neighboring settlers in 1654, and so great was her influence over him that he conceded in part the nomination of the magistrates to her. In the quarterly court records her son is styled Sir Henry Moody." "At the same court, December 14, 1642, the Lady Deborah Moodie, Mrs. King and the wife of John Tilton were presented, for holding that the baptism of infants is no ordinance of God." From these historical relations we learn the reason why the Lady Moody, her son Sir Henry Moody, Ensign Baxter, Sergeant Hubbard, John Tilton and many others of her

associates and friends, left New England and planted themselves at Gravesend, where they hoped to enjoy the most perfect freedom of opinion, unawed by the civil power, and be allowed unmolested to propagate those religious principles which to them seemed most agreeable to their principles of reason and justice. All this, it would seem, was intended to be secured by the patent above mentioned; how far it was realized under the governor's successor will appear hereafter, when we view the persecutions practiced upon the Quakers of this and other towns under the Dutch jurisdiction. Lady Moody probably retained a portion of her large real estate in New England, for Governor Winthrop says that in 1646 the house of Lady Moody at Salem was injured by a tempest, the roof being torn off; which fact he likewise mentions in a letter to his son John, then living at Fisher's Island. A release or conveyance from the Canarsee Indians was obtained for Gravesend-Neck and Conyne Island, on the 7th of May, 1654. Other conveyances in different parts of the town were procured at different times, both by the town and by individuals, which in the end occasioned no small difficulty, in consequence of the clashing of boundaries, the description of which, in deeds, were frequently inconsistent and obscure.

On the 1st of January, 1643, a soldier was convicted before the court of sessions at Gravesend of having left his station while on guard, and was punished by being compelled to sit upon a wooden horse during the parade, with a pitcher in one hand and a drawn sword in the other; to show that he loved beer more than his duty, and that his courage was always to be determined by the quantity consumed. "At a town meeting, September 27, 1644, it was voted that those as should have Boweries (farms), should have fifty morgen of upland, with meadow proportionable to their stock; and it was further ordered, that if any did not build a habitable house by the last of May next, should be defaulted and forfeit their land to the town." The records of this town, which were kept uniformly in the English language, are still preserved almost entire. They commence with the year 1645, and for a series of years are chiefly occupied with records of wills, inventories, letters of administration and a variety of private contracts, bargains, sales, etc. In January, 1648, the town elected Sergeant James Hubbard, a man of respectability and influence, to execute the office of scout

or constable, which was considered of much importance. On the 14th of April, 1649, John Furman agreed with the town to keep their calves three months for twenty guilders a month, to be paid in money, tobacco or corn, and some bitters, if desired. In March, 1650, it was required of every owner of a lot of ground to pay one guilder toward the common charges of the town, to be collected and paid by Mr. Stillwell and Joseph Tilton. In December of the same year it was ordered that every man should fence the head of his lot upon the town square, with a sufficiency of palisades, by the middle of April next. Within this palisade enclosure, which included the original town-plot of ten acres, the inhabitants secured their cattle during the night, and themselves also, when apprehensive of danger from the natives, in which case an armed guard was employed. That wolves were both plentiful and mischievous at that time, appears from the fact, that on the 8th of August, 1650, three guilders were offered for each wolf killed in the town, and two guilders for a fox. It was ordered also that every man be provided with a gun, a pound of powder, and two pounds of lead or bullets. Every owner of a house was likewise required to provide himself a ladder of twenty feet or more in length. It was also voted and agreed in town meeting, that whoever should transgress, in word or deed, in defaming, scandalizing, slandering or falsely accusing any, to the breach of the peace and the reproach of the place, should suffer condign punishment according to his demerit, as should be thought meet by the magistrates, by fine, imprisonment, stocking or standing at a public post.

In the year 1650 the following persons are ascertained to have been inhabitants and freeholders of the town:

William Goulding, Jacob Swart, Walter Wall, Charles Morgan, Peter Simson, John Cock, John Laus, Lawrence Johnson, John Broughman, William Wilkins, John Tilton, John Van Cleef, Thomas Spicer, Ralph Cardell, James Grover, Carson Johnson, Thomas Baxter, William Bowne, Thomas Whitlock, Richard Gibson, Richard Stout, James Hubbard, William Nicolls, Edward Brown, John Thomas, Lady Deborah Moody, Elizabeth Applegate, John Bowne, John Peters, John Applegate, Lyman Law, Thomas Morrell, James Curlear.

In 1654 Governor Stuyvesant rejected certain persons who had been nominated by the

town for magistrates, and submitted for his approbation; these were Baxter and Hubbard, who had rendered themselves obnoxious to his displeasure by their fidelity to the people and their opposition to the arbitrary measures of his administration. This produced great offence, and the popular indignation rose to so high a pitch, that his excellency found it expedient to go in person to Gravesend. In order to allay the general excitement, he was induced to avail himself of the popularity and influence of the Lady Moody, and even committed the appointment of the magistrates to her discretion. Whether this remarkable woman continued here till her death, or returned again to New England, is not certainly known. It is supposed that while she remained here, she occupied the farm of the late Van Brunt Magaw, now owned by Samuel Smith, Esq., and one of the best in the county. It appears that the neighboring Indians were sometimes troublesome to the white settlers, and on one occasion a considerable body of Indians from the Main attacked the place, assaulting the house of the Lady Moody, and would have destroyed her and her family (as they did Lady Ann Hutchinson and her party a short time before at Throg's Point), had they not been overpowered by the number and courage of the inhabitants. Upon the Dutch records in the office of the secretary of state is the following entry, bearing date March 25, 1643:

"Whereas, in some time past, several misunderstandings have taken place between the savages of Long Island and our nation, by which, from both sides, the blood has streamed upon the land, the houses have been robbed and burned, with the killing of the stock and carrying off the corn by the Indians, so it is, that between us and them, who already follow the banner of their great chief, Pennovits, a solid peace has been established, so that all injuries, from whatever side, are hereby forgiven and forgotten."

A confirmation patent for this town was obtained from Governor Nicolls on the 13th of August, 1668, in which the boundaries do not vary from those described in the patent of Governor Kieft in 1644. An additional patent was issued on the 1st of July, 1670, by Governor Francis Lovelace, which, after reciting the most material parts of the original Dutch patent, and the bounds therein mentioned, proceeds as follows:

"Know ye, that by virtue of the commission and authority unto me given by his Royal

Highness, I have ratified, confirmed, and granted, and by these presents do ratify, confirm and grant unto Thomas Delavall, Esq., Mr. James Hubbard, Ralph Cardell, William Bowne, John Tilton, William Goulding, and Samuel Spicer, as patentees, for and on behalf of themselves and their associates the freeholders and inhabitants of the said town, their heirs, successors, and assigns, all the forementioned quantity, tract, and parcel of land, together with the inheritance of all Coney Island (reserving only the privilege of erecting huts for fishing and drying of nets there upon occasion for all persons who shall undertake that design for the public good). Including all the land within a line stretching from the uttermost part of the said Island, unto the southernmost part of Antony Jansen's Old Bowry; their east bounds being the Strome Kill, which comes to the marsh or Fly of Mathew Gerritsen's land aforementioned. As also the meadow-ground and upland not specified in their former patent; concerning which there have been several disputes and differences between the inhabitants of the said town and their neighbor, Francis Brown, the which in part were issued both by my predecessors and myself, but since fully concluded and determined between them by articles of agreement; the which articles I do hereby confirm and allow, with all havens, quarries, rivers, &c. Given under my hand, and seal of the Province at Fort James in New York, this first day of July, in the 22d year of his Majesties Reign, Anno Domini, 1670.

"FRANCIS LOVELACE.

"MATHIAS NICOLLS, Sec."

On the 26th of March, 1777, an agreement was entered into between the towns of Gravesend and New Utrecht in relation to their boundaries, which was confirmed in the patent granted by Governor Dongan on the 10th of September, 1686. The boundaries mentioned in this instrument are as follows:

"Beginning at the westernmost part of a certain place called Coney Island, and from thence to the westernmost part of Anthony Jansen and Robert Pennoyer's land; and so from thence by New Utrecht fence, according to agreement, to the bounds of Flatbush, and from thence along John Ditmas his land unto the bounds of Flatlands, upon a line agreed upon between Flatlands and Gravesend, which from John Ditmas his land, runs to a certain bound stake, and from thence to a white-oak tree marked and standing near New Utrecht

wagon path, and so to the north-west corner of Albert, the weaver's field, and so going to a certain marked white-oak tree that stands by the highway side in the Hollow, and from thence running along the Hollow to the head of a certain creek commonly called and known by the name of Strome Kill, and along the said creek to the main Ocean, and so along the sea-side to the westernmost part of Coney Island."

The patentees in this instrument are James Hubbard, John Tilton, Jr., William Goulder, Nicholas Stillwell, and Jocham Guillock; and the quit-rent reserved was six bushels of good winter merchantable wheat, to be paid on the 20th day of March annually, for his Majesty's use, at the city of New York, forever.

"At a court of sessions held at Gravesend, June 21, 1676, John Cooke and John Tilton, being Quakers, and refusing to take the oath, were ordered to give their engagement to Mr. Justice Hubbard to perform their office as overseers, under penalty of perjury." "At the same court, holden Dec. 17, 1679. Mr. Jos. Lee, deputy-sheriff, presented Ferdinandus Van Strickland for refusing to give entertainment to a stranger who came from Huntington about business at this court; upon which the court do order, that if said Ferdinandus does not make his submission to the sheriff and the justices to-morrow, that he be dismissed from tapping." It is believed that many of the Friends who settled in this town removed to New Jersey at or about the time of the visit of George Fox to Long Island in the year 1672.

Coney Island, on the sea-board, is a place of great resort for strangers in the summer season, is constantly fanned by cool sea breezes and affords an unlimited view of the ocean. It is separated from Long Island by a narrow creek or inlet, over which a handsome bridge has been erected. A large and spacious hotel is established here, called the Ocean House, and hitherto conducted in a superior manner. A railroad is attached to the establishment, with cars leaving the hotel for the beach, a distance of eighty rods, at particular intervals during the day. The bathing at this place is not surpassed by any in the United States. The beach is a beautiful white sand. The island is about five miles long and one wide, and is entirely of alluvial formation. The effect of severe ocean storms has long been visible here, and much of what was once Coney Island has disappeared. It has been conjectured by some persons that Coney Island proper, two

hundred years ago, lay at the entrance of Sandy Hook, and separated from the present Coney Island by a channel of considerable width, which is supposed to have been entirely demolished by a storm about the year 1715. It is well ascertained that in 1643 there was a convenient harbor for vessels of a large size, which is now in a great measure filled up. The exposed situation of this island subjects it to the encroachments of the sea, and to be entirely destroyed at some future period. In the terrible gale which occurred upon the coast on the 26th of January, 1839, the whole of this island, with the exception of a few sand-hills, was completely inundated by the sea; the basement story of the Ocean House was filled with water; the bridge was carried away, several small vessels cast upon the shore, and in one instance carried to a considerable distance toward Flatlands.

The first church, built here was by the Dutch in 1655. It was rebuilt in 1770, and stood till 1833, when the present church was erected. It is located in the village of Gravesend, upon one of the original squares of the town-plot made by the first settlers, and near the place where the court-house formerly stood. Here the court of sessions was held till the Ridings were abolished in 1685, after which it was removed to Flatbush. All the lands in this town were laid out in reference to the village plan, the exterior lines of most of the farms converging towards this center like the radii of a circle. The soil of this town is light and sandy, yet it is generally well cultivated, and the surplus produce of the farms is supposed to exceed forty thousand bushels of different kinds of grain annually, which is a permanent mine of wealth and independence to its inhabitants, their number being seven hundred.

In many Dutch patents there was a clause requiring the patentees and their associates, after the expiration of ten years from the date thereof, to pay, by way of quit-rent, to the governor, or his agent lawfully authorized to receive the same, one-tenth part of all the produce of the lands cultivated by them; and as difficulties and disputes sometimes occurred in reference thereto, Governor Stuyvesant issued a peremptory order, on the 6th of June, 1656, prohibiting the inhabitants of Flatlands, Flatbush and Brooklyn from removing their crops of grain from the fields until the tythes reserved by their patents had either been taken or commuted for.

The following is a true copy of the com-

mission issued by the governor to the magistrates of the several Dutch towns:

"FORT AMSTERDAM, April 24, 1660.

"Loving Friends.

"Out of the nomination presented unto us we have made choice, as you may knowe bee these presents off Tunis Guisbert, the which wee for the year followinge doe confirme and establish ffor magistraate off the towne called New-Amersforte, requirringe all and every one whome these may concerne to esteeme them as our elected and confirmed magestraate ffor the towne, so after mee respects, I rest, your lovinge friende and Governor.

"P. STUYVESANT."

Form of a commission from Lieut. Governor Liesler.

"By the Lieut. Gov. and commander in chieffe, &c. By virtue off the authoritie unto mee, I doe hereby authorise and empower you Jacobus Van De Water to be Clark and Register ffor Kings County, giving you full power and authoritie to acte and officiate therein as a Clark may and ought to doe, and this commission to continue till I receive further orders from his Magesty King William. Given under my hand and seal 20 off Dec. 1689.

"JACOB LIESLER."

Town of Flatlands.

This town, called by the Dutch New Amersfort, is bounded northerly by Flatbush, southerly by Jamaica Bay, and westerly by Gravesend. Barren Island, situated upon the west side of Rockaway Inlet, and at the mouth of Jamaica Bay, is attached to this town, and the south part of the town is indented by numerous small bays. Along the shore of Jamaica Bay is an extensive salt-marsh, which yields an abundance of hay of an inferior quality. With the exception of this marsh, there are no waste lands, the whole being divided into farms well cultivated and productive. The settlement was commenced in 1636, contemporaneously with Gravesend, and one of the first grants for land was that for Barren Island, which was at that time a great deal larger than at present, and was also covered with cedar and other timber. The woods have long since disappeared and much of the land is composed of sand-hills, affording but a scanty subsistence to a few cattle. Ex-Governor Van Twiller had a farm in this town at the time of the first settlement, and called Van Twiller's

Bowery for a long time after. The village of Flatlands is a very pretty spot, in the center of which is the Dutch church, originally erected in 1661, and has since been twice rebuilt.

By the Duke's laws, passed in 1665 in relation to public officers, it was declared that the "Overseers shall be eight in number, men of good fame and life, chosen by the plurality of voyces of the freeholders in each town, whereof foure shall remain in their office two years successively and foure shall be changed for new ones every year; which election shall precede the election of constables, in point of time, in regard the constable for the year ensuing is to be chosen out of that number which are dismiss from their office of Overseer." The following is a copy of the oath, administered to the overseers elect: "Whereas you are chosen and appointed an Overseer for the towne of flatlands, you doe swear by the Ever-Living God, that you will ffaithfully and diligently discharge the trust reposed in you, in relation to the publike and towne affaires, accordinge to the present lawes established, without faviour, affection, or partiality to any person or cause which shall fall under your cognizance; and at times, when you shall be required by your superiors to attend the private differences of neighbors, you will endeavor to reconcile them: and in all causes conscientiously, and according to the best of your judgment, deliver your voyce in the towne meetings of constable and overseers. So help you God." It was the duty of the overseers, together with the constable, to hold Town Courts, for the trial of causes under five pounds. They, with the constables, were frequently to admonish the inhabitants "to instruct their children and servants in matters of religion and the lawes of the country; to appoint an officer to record every man's particular marke, and see each man's horse and colt branded." The constable and two overseers were to pay the value of an Indian coat for each wolf killed; and "cause the wolf's head to be navled over the door of the constable, there to remaine; as also to cut off both the ears, in token that the head is brought in and payd for."

The custom of putting Dutch inscriptions upon tombstones, which was the general practice in former times, was continued as late as 1770, and some may be seen even of a much later date in many of the burying-grounds in this county. For the last fifty years the English language has been generally adopted in epitaphs and inscriptions. Many individuals, and

even families, employ the Dutch language in their ordinary intercourse with each other at this day.

An extraordinary interview took place on the 2d of April, 1691, between the Governor of New York and a Sachem of Long Island, attended by his two sons and twenty other Indians. The Sachem, on being introduced, congratulated Governor Slaughter, in an eloquent manner, upon his arrival, and claimed his friendship and protection for himself and his people; observing also that he had, in his own mind, fancied his Excellency as a mighty tall tree, with wide, spreading branches, and therefore prayed leave to stoop under the shadow thereof. Of old (said he) the Indians were a great and mighty people, but now they are reduced to a mere handful. He concluded his visit by presenting the governor with thirty fathoms of wampum, which he graciously accepted, and ordered the Sachem to attend him again in the afternoon. On taking leave, the youngest son of the Sachem handed to the officer in attendance a bundle of brooms, saying at the same time, "that as Leisler and his party had left the house very foul, he had been advised to bring the brooms with him for the purpose of making it clean again." In the afternoon the Sachem and his party again attended the governor, who made a speech to them, and on receiving a few presents, they departed. To exhibit the relative value of some kinds of property, the following is extracted from an inventory of the effects of a deceased person, which was taken December 16, 1719: A negro wench and child, valued at £60; while five milch cows, five calves, three young bulls and two heifers were valued together at £20 only.

From the New York Gazette of August 13, 1781: "On the night of the 4th inst. the crew of a rebel whale-boat from New Jersey landed near Flatlands on Long Island, and robbed the house of Colonel Lott of about six hundred pounds, and carried off with them two of his slaves. They also robbed the house of Captain Lott of a considerable amount of specie."

The surface of this town is, as its name indicates, a perfect level; the soil, a light sandy loam, warm and pleasant to till; and from the skill and industry of its farming population, yields a large amount over and above the wants of the inhabitants. The people, generally, are conspicuous for habits of economy, and modern fashions have not yet extinguished their love of simplicity and substantial com-

fort. The character of the inhabitants is tolerably well portrayed by the traveler, James Stewart, when he says that "some of the farmers of Long Island are wealthy, but are, in general, contented to live comfortably and hospitably, with all the ordinary necessities and conveniences of life, without ostentation or parade, and without seeming to care so much, as other classes of people in this country do, about money." To satisfy any doubts that may be entertained in regard to the prevalence of good order and morality in this and the adjoining towns, the compiler considers the following facts as affording pretty satisfactory evidence. Elias Hubbard, Esq., a respectable magistrate of this town, states that he has held the office of justice of the peace therein for more than twelve years, and in that period transacted most of the judicial business for Flatlands, Flatbush, New Utrecht and Gravesend, and during the whole time had scarcely a dozen trials, and only two suits in which a jury was demanded; that another gentleman held the office of justice in the town of Gravesend for eight years, who had, during that period, but one jury trial, and even in that one case the difference was compromised by the parties before the jury had delivered their verdict into court. Such a pacific temper is honorable to the people, and creditable to the government under which they live.

It was upon Barren Island that the notorious pirate, Gibbs, and his associates in crime, secreted a portion of the money which they had plundered upon the high seas, part of which only was recovered. The names of the pirates were Charles Gibbs, Thomas Wansley, Robert Dawes and John Brownrig, the last of whom saved his life by becoming a witness against his companions, who were convicted and executed upon Gibbet Island in the harbor of New York, in the fall of 1830.

Town of New Utrecht.

This town is bounded north by Brooklyn and Flatbush, east by Gravesend, and west and south by Gravesend Bay and the Narrows opposite Staten Island. It was settled in 1654 by about twenty families from Holland, and a few Palatines, who at first erected a block-house, as well for security against the natives as from the hordes of wandering savages, robbers and pirates, which at that time, and for several years after, infested the country and adjacent coast to such a degree that the interposition of the government became necessary

for the more complete protection of the inhabitants, who, from their position, were peculiarly exposed to their predatory excursions. The population of this part of the country increased in a very moderate degree compared with other places in the vicinity, in consequence of the constant danger apprehended from the attacks of enemies; and the first steps taken to organize a separate community was in 1660, when, on application to the governor, he appointed a scout or constable for the town, together with a secretary or clerk, and an assessor, with power to make a division among the inhabitants of the land held in common; to cause the same to be enclosed and cultivated; to lay out a street or highway through the village; to make arrangements for the erection of a place of defense, with a mill in it, and a well by it, at the common charge of the people; to decide difference among individuals, and do as other subaltern village courts were accustomed to do. In 1662 a patent was obtained from Governor Stuyvesant, by which the inhabitants were not only confirmed in the several purchases and divisions of land already made, but were vested with the right of pre-emption of all the remaining lands not included in the patents previously granted to the adjoining towns. By this patent they were partially incorporated, with power to build a town, to elect magistrates subject to the approval of the governor, and to hold town courts for the trial of causes not exceeding in value five pounds. On the 15th of August, 1666, two years after the conquest of New York, another patent or grant of confirmation was issued by Governor Richard Nicolls, in which the boundaries of the town are described as follows:

"All that tract of land, together with the several parcels of land which already have been or hereafter shall be purchased or procured for or on behalf of the said town, whether from the native Indian proprietors or others, within the bounds and limits hereinafter set forth and exprest; that is to say, the bounds of the said town begins from Nayack-Point, stretching alongst the Bay to the land belonging to Francis Bruyin, and from thence run into the woods along the said Francis Bruyin's land to the land heretofore belonging to Robert Pennoyer, near upon a north-east line, twelve hundred Dutch rods; from which they goe again in a direct line to the North River, running three hundred rod, to the north of the whole Hook or Neck of land; and then again alongst the North River to Nayack-

Point, comprehending within the said bounds or limits twenty lots as they are now layd out."

The paucity of the records of this town, as well as the great difficulty of deciphering those that remain, render it impossible to obtain from them much information in relation to the early history of its inhabitants; and the little we have been enabled to procure, has been derived from extraneous sources.

It was off the shores of this town that the squadron under the command of Colonel Richard Nicolls, destined as the future English governor of New York, anchored in 1664; and the first communication addressed to the Dutch governor bears date on board the ship *Guynev*, riding before *Nayack*, on the 20th of August of that year. The place at that time known by this name, is near the present site of Fort Hamilton, and is a delightful place of residence; being in sight of the ocean, it commands a full view of all the shipping leaving and entering the harbor of New York, and steamboats passing down the bay. It has now become an important military station by the construction of a fort and batteries, and the maintenance of a considerable garrison for the defense of the harbor. Several handsome buildings have likewise been erected, and few situations can boast of a more sublime and beautiful prospect. A handsome Episcopal church, called *St. John's*, was built a few years since, and adds much to the appearance of the place. In 1836 a company was incorporated for the purpose of making a railroad from Brooklyn to Fort Hamilton, Bath and Coney Island, which has not yet been undertaken, but which, if accomplished, would make each of them places of more extensive resort than heretofore. The village of *New Utrecht* is pleasantly situated on a fine plain, nine miles south of Brooklyn, containing a Dutch Reformed church and about fifteen dwellings. This church was originally built in 1700, and was occupied during the revolution as most of the other Dutch churches were, for a store, hospital or prison, as suited the convenience of the enemy. The present church was erected nearly upon the site of the old one in 1820. It is a substantial stone edifice, and an important feature in the general aspect of this delightful spot. Bath House and village is upon the margin of the Bay, a mile or two southeast from the Narrows or entrance of the harbor, in full view of the military works and the commerce of the bay. It has for many years been a

favorite place of resort for sea-bathing. Here is a large and well-kept public house, with a lawn in front, beautifully shaded by trees, where the luxury of the ocean breezes may be enjoyed in their fullest extent during the heat of the summer. It is the nearest watering-place to New York, and new accommodations have recently been erected within a short distance of the beach, which commands a most charming prospect of the ocean. It was near this delightful spot that the British army commanded by Sir William Howe, protected by the guns of their fleet, landed on the 22d of August, 1776, and followed, a few days after, by the disastrous battle of Long Island. South of the hills the surface of the town is perfectly smooth and level; but along the shore of the Narrows it is rough and uneven. The woody ridge that borders the town is the western termination of the range which extends to the eastern part of Southold, and is denominated the ridge of a spine of Long Island. The shad-fishery of the town is one of the most important and valuable in this part of the country, in which many of the inhabitants engage at the proper season, and find it a profitable employment. It is affirmed that ten thousand of these fish have been caught here at a single draught. On digging a few feet below the surface, some years ago, at the Narrows, more than a wagon load of Indian stone arrow-heads were discovered lying together, under circumstances calculated to induce a belief that a large manufactory of that indispensable article of Indian warfare must once have existed at that place. They were of all sizes, and from one to six inches in length: some perfect, others partly finished; together with blocks of the like kind of stone in the same condition as when brought from the quarry. They had the appearance of, and were nearly as hard as, ordinary flint, from which not only arrow heads were formed, but axes and other articles of domestic utility. It must ever remain a matter of astonishment how these native artificers, destitute, as they were, of the knowledge or possession of tools of iron, could form and polish with such exquisite art so many various instruments from so hard a material.

In the year 1663 one of the clergy of this town was accused before the court of sessions of having performed the ceremony of his own marriage, and that, too, while he had another wife living. The reverend gentleman pleaded his own cause, and alleged, by way of excuse for so novel a procedure, that his first wife

had eloped from him without cause, and being minded to take another, he conceived he had as good a right to execute the ceremony for himself as for any other person. This mode of reasoning did not, it seems, satisfy the court. The marriage was declared void, and the delinquent was fined in two hundred guilders, forty beaver skins, and also forty guilders more for his insolence and impertinence to the court. In addition to the patents before mentioned, another was granted by Governor Dongan on the 13th of May, 1686, of which the following is an extract:

"THOMAS DONGAN, Lieut. Governor and Vice Admiral of New-Yorke and its dependencies under his Majesty James the II, by the Grace of God of England, Scotland, France and Ireland, King, Defender of the faith, &c. Supreme Lord and proprietor of the Colony and Province of New-Yorke and its Dependencies in America, &c. To all whome this shall come, sendeth greeting. Whereas there is a certain Towne in King's County on Long-Island, commonly called and knowne by the name of New-Utrecht, Beginning at the North-East corner of the Land appertaining to Mr. Paulus Vanderbeeck called Goanus to the Bounds of Flatbush Pattennt and soe along the said bounds of the said Pattennt, and stretching from thence South-East and by South till they meete the Limitts of Flatlands, Gravesend, and the said Utrecht, and from thence along Gravesend Bounds to the Bay of the North River and soe along the said Bay and River till it meete the Land of the said Paulus Vanderbeecke as according to severall agreements and writings and the pattennt from Governor Richard Nicolls, dated in the year 1666. And whereas applicacon hath to mee been made by persons deputed from the aforesaid Towne of New-Utrecht for a confirmation of the aforesaid Tract of Land and premises; now Knowe Yee, that by Virtue of &c. I have Given, Granted, Ratified and Confirmed, and by these presents doe Give, Grant, Ratify and Confirme unto Jacques Corteljour, Ruth Joosten, John Verkerke, Hendrick Mathyse, Jolm Kiersen, John Vandyck, Guisbert Thyson, Carel Van Dyck, Jan Van Cleef, Cryn Jensen, Meyndert Coerten, John Hansen, Barent Joosten, Teunis Van Pelt, Hendrick Van Pelt, Lawrence Janse, Gerrit Cornelisson, Dirk Van Stutphen, Thomas Tierkson, Gerrit Stoffelson, Peter Thyson, Anthony Van Pelt, Anthony Duchaine, Jan Vandeventer, and Cor-

nelis Wynhart, on Behalf of themselves and their associates, the present Freeholders and Inhabitants of the said Towne of New Utrecht, their Heirs, Successors and Assigns; All and singular, &c. To have and to hold the said Tract and parcell of Land with their and every of their appurtenances to them the said Jackues Corteljour, &c.—To bee holden of his said Majesty, his Heires and Successors in free and common Soccage, according to the Tenure of East Greenwich in the County of Kent in his Majestyes Kingdome of England; Yielding Rendering, and paying therefor, Yearly and every year, on every five and twentieth Day of March, forever, six bushels of good Winter merchantable Wheate att thee City of New-Yorke, &c. Given under my hand, and sealed with the seale of the Province att Fortt James, in New Yorke, the 13th day of May, 1686, and in the 2nd year of his Majestyes Reigne.

“THOMAS DONGAN.”

“May it please your Honor,

“The Attorney Generall hath perused this Pattent, and finds nothing contained therein prejudiciall to his Majestyes Interest.

“JA. GRAHAM.”

In 1706 the negroes, who had become numerous both in the city of New York and the adjoining country, were at times so disorderly and dangerous to the peace and safety of the people, that the government was compelled to take measures for restraining their depredations upon the community. A proclamation was issued by the governor for this purpose in the words following:

“Whereas I am informed that several negroes in King’s County have assembled themselves in a riotous manner, which, if not prevented, may prove of ill consequence; You, the Justices of the peace in the said county, are hereby required and commanded to take all proper methods for the seizing and apprehending all such negroes as shall be found to be assembled in such manner as aforesaid, or have run away or absconded from their masters or owners, whereby there may be reason to suspect them of ill practices or designs; and to secure them in safe custody; and if any of them refuse to submit, then to fire upon them, kill or destroy them, if they cannot otherwise be taken; and for so doing this shall be your sufficient warrant. Given under my hand, at Fort Anne, the 22nd day of July, 1706.

“CORNBURY.”

In the clerk’s office is the copy of a proclamation issued on the 16th of June, 1780, by James Robinson, a British officer, styling himself captain-general and governor-in-chief in and over the province of New York, by which the inhabitants of Long Island are peremptorily required to furnish a sufficiency of wood for the barrack-yard in New York; that Kings county shall get fifteen hundred cords, Queens county four thousand five hundred, and the western part of Suffolk county, including Huntington, Islip, Smithtown and Brookhaven, three thousand cords; all to be cut and carted to the landing by the 15th of August next ensuing. And the inhabitants of Southold, Southampton and Easthampton were specially required to cut upon the woodlands of William Smith and William Floyd (notorious rebels), in those parts nearest to the landing by Mastic-Neck, three thousand cords, to be ready by the 1st of September; and for which they were to receive at the rate of ten shillings per cord. This requisition it was made highly penal to neglect, and those who did so were severely punished, instances of which were not uncommon.

On the 26th of May, 1836, an act of the Legislature was passed to incorporate the New Utrecht Dock and Steamboat Companv, but as yet, it is believed, nothing has been done to carry this very desirable measure into operation.

Town of Flatbush.

This town, called by the Dutch Midwout, or Middle Woods, is bounded north by Brooklyn and Bushwick, and a small part of Queens county; east by Jamaica; south by Jamaica Bay, Flatlands and Gravesend; and west by Gravesend; being of an irregular shape, containing an area of about seven thousand acres, most of which is under cultivation. The settlement of this town was begun in 1651, and the next year a patent or ground-brief was obtained from Governor Stuyvesant, authorizing the inhabitants to erect a town or plantation, with the usual privileges of other towns under the Dutch jurisdiction; and under which the settlers managed their public concerns during the remainder of his administration. In October, 1667, application was made to Governor Nicolls for a patent of confirmation and assurance of their lands and boundaries; and on the 11th day of the same month one was issued unto Mr. Johannes Megapolensis, one of the ministers of the city of New York; Mr. Cor-

nelius Van Ruyven, one of the justices of the peace; Adrian Hegeman, Jan Snedeger, Jan Stryker, Frans Barents (Pastor), Jacob Stryker, and Cornelius Janse Bougaert, as patentees for and on behalf of themselves and associates, the freeholders and inhabitants of the said town, their heirs, successors, and assigns, for the premises described therein, as follows:

"All yt tract wt ye severall parcell's of land wh already have or hereafter shall be purchased or procured for and on ye behalf of ye sd town; whether from ye native Indian proprietors or others, wt in the bounds and limits hereafter set forth and expresst; That is to say, bounded to ye south by ye hills, and to the north by ye fence lately sett between them and the town of Amsfort, alias Flatlands, beginning at a certain tree standing upon ye Little-Flats, marked by ye order and determination of severall arbitrators appointed by me, to view and issue ye difference between ye two towns concerning the same, wh accordingly they did upon the 17th of October, 1666 and to ye east and west by the common woodlands, including two tracts heretofore called by ye names of Curler's and Twillers flats wh lye to ye East of ye town; As also a parcell of meadow ground or valley on ye East-north-east side of Canarese planting land, and having to ye South ye meadow ground belonging to Amsfort als Flatbush, according to ye division made by an East line running half a point northerly between them without variation of ye Compass, and so to go to ye mouth of ye creek or Kill, which said meadows were on ye 20th of April last by common consent staked out and by my approbation allowed of."

On the 12th of November, 1685, a further confirmatory patent was executed by Governor Thomas Dongan to the following persons named therein as patentees: Corneleus Vanderwick, John Okie, Joseph Hegeman, Art Jansen Vanderbilt, Lafford Peterson, William Guilianson, Hendrick Williams, Peter Guiliams, Arien Ryers, Peter Stryker, John Stryker, John Ramsden, Jacob Hendricks, Direck Vanderfleet, Hendrick Rick, Peter Lott, Daniel Polhemus, Cornelius Vanderveere, Direck Johnson, Hooglant Denise, John Johnson, Petimus Lewis, Okie Johnson, Jan. Jansen, William Jacobs, Hendrick Hegeman, Jan Stryker, Garret Lubberts, Hans Bogaert.

The premises are in this patent described, as "A certain town in Kings County known by

the name of Middwout, alias Flatbush, the bounds whereof begin att the mouth of ye fress Kill, and soe along by a certain ditch which lyes betwixt Arnisford and Flatbush meadows, and soe running amongst the ditch and fence to a certain white oake markt tree; and from thence upon a straight line to the westernmost point of a small island of woodland lying before John Striker's bridge; and from thence with a straight line to the northwest hooke or corner of the ditch of John Okie's meadow; and from thence amongst the said ditch and fence to the swamp of the Fresh-Kill, and soe amongst the swamp and hollow of the aforesaid Kill to the land of Krewler's hooke; then amongst the same to a marked white oak tree; from thence with a straight line to a black-oake markt tree standing upon the north-east side of Twilder's Flatts, having a small snip of flats upon the south-east side of the line, and soe from thence to a white-oak tree standing to the west side of Mustahole upon a small island, leaving a snip of flats in the Flatlands bounds; and from thence to a certain markt tree or stump standing by the highway which goes to Flatlands upon the Little Flatts, about twenty rod from Flatbush Lotts, and soe amongst the fence six hundred Dutch rodd to the corner of Flatbush fence, and soe amongst by the rear of the Lotts to a sassafras stump standing in Cornelius Jansen's Bowery lott of land; and from thence with straight line to a certain old marked tree or stump standing by the rush-pond under the hills, and so along upon the south side of the hill till itt comes to the west end of the long hill, and soe along upon the south side of the said hill till itt comes to the east end of the long hill; and then with a straight line from the east end of the said long hill to a mark'd white-oake tree standing to the west side of the roade near the place called the gale or porte of hills, and so from the east side of the porte or gale along upon the south side of the maine hills as far as Browklin patten doth extend, and soe along the said hills to the bounds of Jamaica patten; and from thence with a southerly line to the Kill or creeke by the east of the Plunder's Neck, and soe amongst the said Kill to the sea, as according to the several deeds or purchases from the Indian owners, the patent from Governor Nicolls, and the award between Browkline and the town of Flatbush, as by reference thereto will fully and at large appear."

On the 17th of December, 1654, Governor

Stuyvesant, who seems to have exercised entire authority as well in ecclesiastical as in civil and military affairs, gave orders that a house of public worship should be erected in this town, "sixty feet long, thirty-eight wide, and fourteen feet in height below the beams." And on the 9th of February, 1655, he issued his commands that the people of Brooklyn and Amersfort should assist the people of Midwout or Flatbush in getting timber for the house. In September, 1660, those who had the charge of the building reported that it had cost four thousand six hundred and thirty-seven guilders; of which sum three thousand four hundred and thirty-seven had been collected in New Amsterdam, Fort Orange and on Long Island. Upon which the Governor contributed out of the public funds four hundred guilders, leaving a balance of eight hundred against the church. In June, 1656, the Governor directed the inhabitants of Brooklyn, Flatbush and Flatlands, to enclose a place in each of them with palisades for the common defense. In 1660 the Rev. Mr. Polhemus petitioned the Governor to have a window placed in the church, which request was granted; and it being reported that the church was indebted to the amount of six hundred and twenty-four guilders, it was ordered to be satisfied out of the treasury as soon as funds should be received. Complaint being made that the minister was inattentive to his calling, attending only once a fortnight, and then only for a quarter of an hour, giving the people a prayer instead of a sermon, the Governor gave orders "that he should attend more diligently to his work." October 1, 1673, an ordinance of the Governor and Council was published, enjoining it upon the Sheriff and Constables to take care that the reformed religion be maintained, to the exclusion of all other sects. It is supposed that the first Dutch church erected in this country was one built in the city of New Amsterdam in 1642, although a society had been organized as early as 1629. And the inhabitants of Kings county attended religious worship in the city until the church was built in Flatbush as above mentioned. The Rev. Everardus Bogardus was the first minister, and officiated in the city from 1638 to 1647; and was succeeded by the Rev. Johannis Megapolensis, who continued till the conquest in 1664. The latter gentleman, with John Snedcor and John Stryker, were the persons appointed to superintend the erection of the church here, which stood nearly on

the site of the present Dutch Church. It was directed to be in the form of a cross; and the rear part of the building was reserved and fitted up for the accommodation of the minister and his family. The original subscription list of this church is still preserved among its records, and shows the names of the inhabitants of the Dutch towns at that time. A church was ordered to be built at Flatlands in 1662, and completed the next year; another was erected in Brooklyn in 1666, which, with the one in Flatbush, being associate churches, constituted but a single congregation, and were under the pastoral care of the same minister. The Rev. Johannis Polhemus was employed to preach soon after the erection of the church at Flatbush, with a salary of one thousand and forty guilders (about four hundred and sixteen dollars) a year, raised by assessment upon the towns in which he officiated. He was required by the Governor, in March, 1656, to preach every Sunday morning at Midwout; and in the afternoon, alternately at Amersfort and Brooklyn. In 1660 the Rev. Henericus Selwyn was installed at Brooklyn by order of the Governor, at a salary of six hundred guilders a year, one-half to be paid by the people, and the other half by Fatherland or Holland. He resided in New Amsterdam; and in 1662 the inhabitants of Brooklyn petitioned the Governor that he should be required to reside among them. The Governor agreed to pay a part of his salary, provided he should preach at the Bowery every Sunday evening. At the conquest he returned to Holland. Mr. Polhemus died June 9, 1666. In 1667 the churches engaged the Rev. Casperus Van Zuren, who remained about the period of ten years, when he returned again to Europe. The Rev. James Clark was the next minister, who remained till 1695; and was followed by the Rev. William Lupardus, who died in 1702. The Rev. Vicentius Antonides was settled in 1706, and continued till his death, in 1714. His successor was the Rev. Bernardus Freeman, who remained till the close of life, in 1741. In 1742 the church engaged the services of the Rev. Johannes Arondius, but who, in 1747, removed to New Jersey. The Rev. Anthony Curtenius was settled as an associate minister in 1730, and remained till his death, in 1750. The Rev. Ulpianus Van Sinderen was employed in 1747, about which period much controversy arose in the churches touching the necessity of foreign ordination; the opinion being enter-

tained by great numbers, both clergy and laity, that ministers should be ordained in Holland. This unhappy schism continued for several years to agitate the churches, to interrupt their peace, and retard their prosperity. These dissensions having much abated, the Rev. John Caspar Rubel was in 1760 employed as a colleague of Mr. Van Sinderen, but was, for some reason, deposed from the ministry in 1784. The death of Mr. Van Sinderen took place in 1796. The Rev. Martinus Schoonmaker was settled in 1785, and continued till his death, at an advanced age, in 1824, and with him terminated the practice of preaching occasionally in the Dutch language. The Rev. Peter Lowe became an associate minister of the churches in 1787, where he remained to the end of his life, in 1818.

The church built here in 1663 stood, with occasional repairs, till 1717, when it was succeeded by another, built of stone. This building fronting the east, had a large double-arched doorway in the center; a steep quadrangular roof, with a small steeple rising from the middle. It was sixty-five by fifty feet, the pulpit being in the west side. It was repaired and altered in 1775, at an expense of more than seven hundred dollars; but in 1794 it was taken down, and the present large and commodious edifice erected, which cost about twelve thousand dollars. It was completed in December, 1796, with a fine bell, imported from Holland, and presented to the church by John Vanderbilt, Esq. In 1818 the churches of Flatbush and Flatlands united in settling the Rev. Walter Monteith, who removed in a short time thereafter; and in 1822 was settled their present highly respected clergyman, the Rev. Thomas M. Strong. In 1824 a new congregation was organized, and a church erected in the eastern part of the town, called New Lotts, from the circumstance of the land having been divided or allotted among the inhabitants at a later period than some other sections of the town. The soil is generally of a good quality, and by careful cultivation is made highly productive. The village of Flatbush, situated about four miles from the City Hall of New York, is hardly excelled by any other as a place of residence. The spirit of improvement has reached this delightful spot, and several splendid private edifices have been erected, bearing all the insignia of taste and opulence. A softer or more agreeable landscape than is here presented is seldom met with. Its surface is an

inclined plane, elevated about fifty feet above the ocean, toward which the descent is regular and gradual. The court house of the county was erected here in 1685, and the courts continued to be held therein till it was destroyed by fire in 1832. St. Paul's Episcopal Church in the village was built in 1836, mainly by the liberality and munificence of one of its citizens, Matthew Clarkson, Esq., and is a neat and handsome edifice. Erasmus Hall, a noble academical institution here, was incorporated November 20, 1787, being the second in point of time upon Long Island. It has always maintained a high reputation as a place of education, and its pupils are diffused over almost every part of the United States. The building is not only spacious and airy, but replete with every convenience, having sufficient grounds about it, filled with ornamental trees and shrubbery. A little north of the village is an elevation, called Prospect Hill, which is estimated to be one hundred feet above the surrounding country, and from whose summit the view is sublime and beautiful beyond description.

The Poor House of the county of Kings is located a short distance from the village. The farm contains sixty acres of excellent land, which cost three thousand dollars. The main building is forty-four feet square, with two wings, each sixty by thirty-five feet. The whole is two stories in height. There is also a building detached from these, appropriated for patients laboring under infectious diseases; and likewise another for deranged persons, where these unfortunate individuals are treated with the attention which humanity requires. Surely this benign establishment does honor to the county, and deserves the imitation of every other in the State. The soil of this town is inferior to none other, and improved in the highest degree, furnishing to the markets of Brooklyn and New York a large quantity of produce. Many of the farmers are wealthy, and there is an appearance of independence and opulence seldom witnessed in many other places.

Town of Brooklyn.

This town, the whole of which is now included within the corporation of the city of Brooklyn, lies upon the extreme western part of Long Island, opposite the southern portion of the city of New York, and separated therefrom by the East River, which is here about

three-quarters of a mile in width. The length from northeast to southwest is six miles, and its greatest breadth four miles; giving an area of nine thousand two hundred acres, most of which has been apportioned into city lots. The surface is high, broken and stony; and the more elevated points afford beautiful and romantic sites, many of which have been built upon, and are not excelled in elegance by any others in the country. The soil, in common with the whole county, was originally claimed by the Canarsee Indians, a numerous tribe, inhabiting chiefly the more southern parts of the county, and from whom the title to the lands was procured by the Dutch government. The situation of this tribe rendered them peculiarly obnoxious to invasion from their savage neighbors of the north, and it has been supposed that they were once tributary to the Mohawks, and obliged to conciliate their forbearance by yearly contributions of dried clans and wampum. At the first settlement of the white people, the Indians were persuaded to withhold the accustomed tribute, being promised protection from these unjust exactions of their enemies; in consequence of which they were unexpectedly assailed by a hostile force, and numbers of them destroyed or taken captive.

The name conferred upon this town by the Dutch was Breucklen (or broken land); and in the act for dividing the province into counties and towns, passed November 1, 1685, it is called Breucklyn; nor does the present appellation appear to have been generally adopted until after the Revolution. Many changes have doubtless taken place upon the shore, and it is believed that Governor's Island was formerly connected with Red Hook Point. It is well known that a short period previous to the war of independence, cattle were driven across what is called Buttermilk Channel, now sufficiently deep to afford passage to vessels of the largest class. The alteration is no doubt in great measure attributable to the vast extension of the wharves on both sides of the river, thereby diverting the course and increasing the force of the currents. The first European settler in this town is supposed to have been George Jansen de Rapelje, at the Waalboght, or Waaloons Bay, during the Directorship of Peter Minuit, under the charter of the West India Company. In a family record in the possession of Jeremiah Johnson, Esq., it is stated that the first child of Rapelje was Sarah, born in 1625, unquestionably the first white child born

upon Long Island. Watson says she was born on the 9th of June, and honored as the first-born child of the Dutch settlers; also that, in consideration of such distinction, and of her widowhood, she was afterward presented with a tract of land at the Wallabout. She was twice married; first to Hans Hanse-Bergen, by whom she had six children, namely, Michael Hanse, Joris Hanse, Jan Hanse, Jacob Hanse, Breckje Hanse, and Marytje Hanse. Her second husband was Teunis Guisbertse Bogart, by whom also she had six children, namely Aurtie, Antje, Neelje, Aultje, Catalyntje, and Guysbert. The account of this remarkable woman in the archives of the New York Historical Society contains the names of the persons to whom eleven of her children were married, and the places where they settled. The twelfth, Breckje Hanse, went to Holland. In the journal of the Dutch Council in 1656, it is related that "the widow Hans Hanson, the first-born Christian daughter in New Netherlands, burdened with seven children, petitions for a grant of a piece of meadow, in addition to the twenty morgen granted to her at the Waale-Boght." There is a tradition in the family, that the Indians, induced by the circumstance of her being the first white child born here, gave to her father and his brethren, the other French who followed them, the lands adjacent to the bay; hence called (says Judge Benson) Het-Waale-Boght, corrupted to Wallabout Bay. A few of the other associates of De Rapelje were Le Escuyer, Duryee, La Sillier, Cershow, Consellaer, Musserol; these, with some changes in the mode of spelling, are still found among us. It appears by the Dutch records, that in 1634 a part of the land at Red Hook was the property of Wouter Van Twiller, being one of the oldest titles in the town. The earliest deed for land was from Governor Kieft to Abraham Rycken, in 1638. The oldest grant recorded is to Thomas Besker, in 1639. This must be considered as the commencement of permanent Dutch settlements on Long Island, and there is no evidence of any direct and systematic efforts being made for the purpose till this period. In 1641 the Governor and Council, in order to strengthen their claim to the island, consented that the English should settle under their jurisdiction on taking the oath of allegiance to the States-General and the Dutch West India Company. The following grant for land in 1642 is given as a specimen of conveyances at that remote period:

"By William Kieft, Director General and Counsellor, about the high and mighty Lords, the States General of the United Low Country, and his highness of Orange, and the Lords Commanders of the privileged West India Company, residing in the New-Netherland, do ratify and declare by these presents, that we, upon the date hereinafter written, did give and grant to Jan Manje, a piece of land, greatly twenty morgan stretching about south-east one hundred and ninety rods inward the woods towards to Sassians maise land—long is the limits of the said maise land fifty rod, and then again to the water side, two hundred and twenty rod, about north north-west, well so northerly, and along the strand or water side, seventy rod. Which above-said land is lying upon Long Island, between Andries Hudde and Claes Janse Ruyter. With express conditions, &c. Dated at Fort Amsterdam, in the New-Netherland, the 11th day of September, 1642.

"WILLIAM KIEFT,

"By order of the Lord the Director General, and Counsellor of New-Netherland.

"CORNELIUS VANTIENHOVEN,

"Sec'y."

Between the years 1642 and 1647 grants were made by his Excellency Governor Kieft, to different individuals for all the lands on the Brooklyn shore, from Red Hook Point to the Wallabout Bay, which were generally in the above form. It is believed that a general patent of the town was granted by Governor Stuyvesant in 1657, the same being frequently referred to in conveyances between individuals at an after period, and is evident from the following extract from the records: "August 10, 1695. The patentees and freholders of the town sold unto Stephanus Van Cortlandt the neck of land called Red-Hook, containing, by estimation, fifty acres; which they state in their deed was formerly given and granted to the town of Brooklyn in the year 1657, by Governor Stuyvesant, the Dutch governor, then, at that time, and since confirmed by the English governors, Nicolls and Dongan." On the 18th of October, 1667, a full and ample patent was granted by Governor Richard Nicolls to Jan Everts, Jan Damen, Albert Cornelisson, Paulus Veerbeek, Michael Eneyl, Thomas Lamberts, Teunis Guisbert Bogart, and Joris Jacobson, as patentees for and on behalf of themselves and their associates, the freeholders and inhabitants of the town of Breuck-

len, their heirs, successors and assigns, for "all that tract, together with the several parcels of land which already have been or hereafter shall be purchased, procured for and on behalf of the said town, whether from the native Indian proprietors, or others, within the bounds and limits hereafter set forth and expressed; that is to say:

"The town is bounded westward on the farther side of the land of Mr. Paulus Veerbeek, from whence stretching south-east, they go over the hills, and so eastward along the said hills to a south-east point which takes in all the lotts behind the swamp; from which said lotts they run north-west to the river and extend to the farm on the t'other side of the hill heretofore belonging to Hans Hansen over against the Kicke or Looke-out, including within the said bounds and limits all the lotts and plantations lying and being at the Gowanis, Bedford, Wallaboucht, and the Ferry. All which said parcels and tracts of land and premises within the bounds and limits aforementioned, described, and all or any plantation or plantations thereupon, from henceforth are to be, appertaine and belong to the said town of Breucklen; together with all havens, harbors, creeks, quarries, wood-land, meadow-ground, reed-land, or valley of all sorts, pastures, marshes, runs, rivers, lakes, hunting, fishing, hawking, and fowling, and all other profits, commodities, emoluments, and hereditaments, to the said lands and premises within the bounds and limits aforesaid belonging, or in any wise appertaining. And withal to have freedome of commonage for range and feed of cattle and horse into the woods, as well without as within these bounds and limits, with the rest of their neighbors; as also one-third part of a certain neck of meadow-ground or valley called Seller's Neck, lying and being within the limits of the town of Jamaica, purchased by the said town of Jamaica from the Indians. and sold by them unto the inhabitants of Breucklen aforesaid, as it has lately been laid out and divided by their mutual consent and my order, whereunto and from which they are likewise to have free egress and regress as their occasions may require. And that the place of their present habitation shall continue and retain the name of Breucklen, by which name and stile it shall be distinguished and known in all bargains and sales made by them, the said patentees, and their associates, their heirs,

successors, and assigns, rendering and paying such duties and acknowledgments as now are or hereafter shall be constituted and established by the laws of this government, under the obedience of his Royal Highness, his heirs and successors. Given under my hand and seal at Fort James, in New-York, on the Island of Manhattat, the 18th of October, 1667.

"RICHARD NICOLLS."

In 1670 the inhabitants, being desirous of enlarging the bounds of their common lands by extinguishing the Indian claim, applied to Governor Lovelace, and obtained from him the following license:

"Whereas, the inhabitants of Breucklyn, in the West Riding of Yorkshire, upon Long Island, who were seated there in a township by the authority then in being; and having bin at considerable charges in clearing, fencing, and manuring their land, as well as building ffor their convenience; have requested my ly-cense for their further security, to make purchase of the said land of some Indians, who lay claim and interest therein. These are to certify all whom it may concerne, that I have and doe hereby give the said inhabitants ly-cense to purchase their land according to their request, the said Indians concerned appearing before me, as in the law is required, and making their acknowledgments as to fully satisfied and payed for the same. Given under my hand and seal at ffort James, in New-Yorke, this ffirst of May, in the 22d yeare of his Majestyes reigne, Anno Dom. 1670.

"FRANCIS LOVELACE."

This purchase had been agreed upon the 14th of May, 1670, between the town and five Indian chiefs, and is described in the conveyance as "all that parcell of land in and about Bedford, within the jurisdiction of Breucklyn, beginning from Hendrick Van Aarnhem's land by a swampe of water, and stretching to the hills; then going along the hills to the port or entrance thereof, and so to Rockaway foot-path, as their purchase is more particularly sett fforth. To have and to hold all the said parcell and tract of land unto Monsieur Machiell Haimelle, Thomas Lambertse, John Lewis, and Peter Darmantier, ffor and on behalfe of the inhabitants aforesaid, their heyres and successors for ever." The port or entrance mentioned in this instrument is the valley upon the Flatbush Turnpike, a short distance beyond the three-mile post from Brook-

lyn Ferry, where a freestone monument has been placed to designate the line between this town and Flatbush. The price paid for the land in and about Bedford was one hundred guilders seawant, half a ton of strong beer, two tons of good beer, three guns, long barrels, with each a pound of powder, and lead proportionable, two bars to a gun, and four match coats.

Notwithstanding the early inhabitants of this town had previously obtained patents for their lands both from the Dutch and English Governors, yet Colonel Thomas Dongan, who succeeded to that office in 1683, had the address to make them believe that a new patent was necessary to confirm and assure their lands. Accordingly, on the 13th of May, 1686, a new patent was issued, which, after reciting the boundaries of the town as described in former grants, with reference to the charter of Governor Nicolls in 1667, the powers and privileges of which are recognized to the fullest extent, concludes in the following words:

"Now know ye, that I, the said Thomas Dongan, by virtue of the commission and authority derived from me, and power in me residing, have granted, ratified and confirmed, and by these presents do grant, ratifie and confirm, unto Teunis Gysberts, Thomas Lamberts, Peter Jansen, Jacobus Vander Water, Jan Dame, Joris Jacobs, Jeronimus Rapalle, Daniel Rapalle, Jan Jansen, Adrian Bennet, and Michael Hanse, for and on the behalf of themselves and the rest of the present freeholders and inhabitants of the said town of Breucklen, their heirs and assigns for ever, all and singular the afore-recited tract and parcels of land set forth limited and bounded as aforesaid; together with all and singular the houses, messuages, tenements, fencings, buildings, gardens, orchards, trees, woods, underwoods, pastures, feedings, comunon of pasture, meadows, marshes, lakes, ponds, creeks, harbors, rivers, rivulets, brooks, streams, highways and easements whatsoever, belonging or in any wise appertaining to any of the afore-recited tract or parcells of land and divisions, allotments settlements made and appropriated before the day and date hereof. To Have and To Hold, all and singular, the said tract or parcels of land and premises, with their, and every of their appurtenances, unto the said Teunis Gysberts, Thomas Lamberts, Peter Jansen, Jacobus Vander Water, Joris Jacobs, Jeroninus Rapalle, Daniel, Rappalle, Jan Jansen, Adrian

Bennet, and Michael Hanse, for and on behalf of themselves and the present freeholders and inhabitants of the town of Breucklen, their and every of their heirs and assigns for ever, as tenants in common without any let, hindrance, molestation, right of survivorship or otherwise, to be holden in free and common socage according to the tenure of East Greenwich, in the county of Kent, in his Majesty's kingdom of England. Yielding, rendering, and paying therefor yearly, and every year, on the five and twentyeth day of March, for ever, in lieu of all services and demands whatsoever, as a quit rent to his most sacred Majesty aforesaid, his heirs and successors, at the city of New-York, twenty bushels of good merchantable wheat. In testimony whereof, I have caused these presents to be entered and recorded in the Secretary's office, and the seal of the Province to be hereunto affixed this thirteenth day of May, Anno Domini, one thousand six hundred and eighty-six, and in the second year of his Majesty's reign.

"THOMAS DONGAN."

Under this and other patents considerable sums have been paid at different times for quit-rents, for which receipts have been preserved. June 8, 1713, there was paid to Benjamin Vandewater, treasurer, the sum of £96 7s 1d, for upwards of sixteen years quit-rent. April 6, 1775, Charles Debevoise, collector of the town, paid to the receiver-general of the colony, twenty bushels of wheat for one year's quit-rent; and, November 9, 1786, Fernandus Suydam and Charles C. Doughty, two of the trustees, paid to the treasurer of the state, £105 10s. in full for arrears of quit-rent due from the town. During the early years of the colony, the old ferry was from near the foot of Jerolemon street to the Breede-Graft, now Broad street, in the city of New York; but it is difficult to ascertain the exact period when the old ferry was first established at its present situation on the Brooklyn side. It appears that, in 1693 John Areson, the lessee of the ferry, complained of his inability to pay the rent of £147, and it was reduced to £140. At this time the ferriage for every single person was eight stivers in wampum, or a silver two-pence; each person in company half the above; and if after sunset, double price; each horse or beast one shilling if single, or nine pence in company. In 1698 Rip Van Dam was lessee of the ferry for seven years at £165 per annum. During the Revolution the old ferry was kept by Van

Winkle and Bukett, when the usual charge for crossing was six pence. The corporation of the city of New York has long claimed and exercised the control of the ferry, which has produced a considerable revenue. August 1, 1795, the ferry from the foot of Main street was established by William Furman and Theodosius Hunt, on a lease from the corporation of New York. In May, 1814, the first steamboat commenced running upon the Fulton Ferry, and at a later period upon the other ferries also.

The town having acquired so great an extent of common land by the purchase of 1670 from the Indians, the inhabitants thought proper to take some order for the division and defending thereof, together with their other lands; accordingly, "At a town meeting held on the 25th day of February, 1692-3 at Breuklyn, in King's county. They Resolved to divide their common lands and woods into three parts, in manner following, to witt:

"1. All the lands and woods after Bedford and Cripplebush, over the hills to the path of Newlots, shall belong to the inhabitants and freeholders of the town of Gowanis, beginning from Jacob Brewer and soe to the uttermost bounds of the limits of New-Utrecht.

"2. And all the lands and woods that lyes betwixt the abovesaid path and the highway from the ferry towards Flatbush, shall belong to the freeholders and inhabitants of Bedford and Cripplebush.

"3. And all the lands that lyes in common after the Gowanis, betwixt the limits and bounds of Flatbush and New-Utrecht, shall belong to the freeholders and inhabitants of Brooklyn, fred. neck, the ferry and the Wallabout." This proceeding of the town meeting was allowed of by the court of sessions, held at Flatbush on the 10th day of May, 1693.

The following will serve to show the manner in which the inhabitants of this town elected the trustees of the common lands, and the duties of those trustees. "Att a towne meeting held this 29th day off Aprill, 1699, at Breucklyn, by order off Justice Machiel Hanssen, ffor to choose townsmen ffor to order all townes busines and to deffend theire limitts and bounds, and to dispose and lay out sum part thereof in lotts, to make lawes and orders ffor the best off the inhabitants, and to raise a small tax ffor to defray the towne charges, now being or hereafter to come, to receive townes revenues, and to pay townes debts; and that with the advice off the Justices off this said towne standing the space and time off two

years. Chosen for that purpose by pluralitie off votes. Benjamin Van de Water, Joores Hanssen, Jan Garretse-Dorlant. By order of the inhabitants aforesaid. I. Vande Water, Clarke."

Although it may not be generally known, yet it is true that the records of this town, from its first settlement to the end of Revolutionary war, were either destroyed during the contest between Britain and her colonies, or carried off at its close by some evil-disposed individual. The person suspected is John Rapalje, Esq., who was in authority here during that period, and against whom an act of attainder was passed in October, 1777, by which his large real estate was confiscated, and himself forced to depart from the country. The necessary consequence is, that we have been deprived of many valuable materials toward a history of the town. It might be expected, that in a state of hostility, every measure would be adopted to afflict an enemy; yet it may be questioned whether abstracting the records of a country is strictly justifiable by the customs and usages of civilized warfare.

The hope is still entertained that these important documents are still in existence, and that by proper exertions they may yet be found in some of the public offices in England. Some facts of recent occurrence corroborate this opinion, and a correspondence was set on foot a few years since, between General Jeremiah Johnson, supervisor of the town, and Governor De Witt Clinton, which led to examinations in one or more places in London, where it was supposed they might chance to be deposited; but nothing satisfactory was elicited. The subject matter of this correspondence is thought sufficiently important to justify its insertion in this place.

(General Johnson to Governor Clinton.)

Albany, April 11, 1827.

SIR:

I visited this city, in December last, for the purpose of examining the Dutch records and public papers in the secretary's office, particularly the Dutch patents of the towns of Brooklyn, Flatbush, Flatlands, and Jamaica; and not finding them, the search was continued among the English records to the year 1684, wherein I found that in that year the governor and council of the colony issued an order commanding all the inhabitants of the Dutch towns in the provinces of New-York and New Jersey

to bring their Dutch patents and Indian deeds into the Secretary's office in New-York. Th's measure, in my opinion, accounts for the absence of many papers supposed to be lost. Subsequent to my search in the office in 1826, I had been informed that many old papers relating to this state are in the colonial office in London. And, as the records of the town of Brooklyn were removed during the Revolutionary war, I entertain a hope that we may regain them. This information is presented to your Excellency in the expectation that inquiry may be made in London whether the papers alluded to, or authenticated copies, cannot be obtained. The recovery of the records of the town would be of great importance, and the patents and Indian deeds serve to improve the history of the town.

Yours, respectfully,

JEREMIAH JOHNSON, *Supervisor.*

His Excellency, Governor Clinton.

(Governor Clinton to Albert Gallatin, Esq.)

Albany, 12th May, 1827.

SIR:

I take the liberty of transmitting to you a letter from General Johnson, a respectable citizen of this state, and of requesting your attention to it. According to a report made at the last session of congress, there will be no difficulty on the part of the British government. The papers wanted may be found in the former plantation office.

Yours, &c.

DE WITT CLINTON.

ALBERT GALLATIN, ESQ.

(Mr. Gallatin to Governor Clinton.)

London, 25th August, 1827.

SIR:

I had the honor to receive your Excellency's letter of the 12th May last, enclosing one from General Johnson, and requesting that application might be made to this government for certain town records, and other papers therein-mentioned as having been carried away, and being now either in the colonial office, or that of trade and plantations in London. I regret to say, that after diligent inquiry, and although the various departments here were anxious for the restoration of the papers if they could be found, there is no trace of them whatever. There are two deposits for records and documents connected with the

colonies; the office of the Board of Trade and Plantations, and the State Paper office, where the records and papers of the colonial, as well as the home and foreign departments, are kept. There is nothing in the colonial office; and you will perceive by the enclosed letters, that nothing was found in the others; and that it is believed the papers in question were carried away by individuals who never deposited them in any office. Mr. Charles Grant, the writer of two of the notes, is the vice-president of the board of trade, one of the commissioners appointed to treat with me, a gentleman of distinguished merit and obliging disposition. Another search may nevertheless be made, if Gen. Johnson will state the time when the records were carried away, and other circumstances, which may afford a cue to the inquiry.

I have the honor to be, &c.

ALBERT GALLATIN.

His Excellency, DE WITT CLINTON.

(Charles Grant, Esq., to Mr. Gallatin.)

London, August 14, 1827.

DEAR SIR:

I have only this morning received the enclosed from Mr. Rice, whose absence from town prevented his sooner transmitting it to me. I regret much the result. As a last hope, I have sent Governor Clinton's letter to the colonial office, that inquiries may be made; but I fear there is little probability of success.

I am, Sir, &c.

C. GRANT.

A. GALLATIN, ESQ.

(Spring Rice, Esq., to Charles Grant, Esq.)

MY DEAR GRANT:

On coming down to the office this morning, I found enclosed, which relates to your communication with me. I enclose it as the best means of answering Mr. Gallatin's request, regretting that we cannot do more to furnish you with the information requested.

Ever and most truly yours,

SPRING RICE.

Judge Furman, in speaking of the history of this town, observes, "that its great antiquity is apparent from the fact that the English colonists, who came out from Holland for professed purposes of settlement, were those brought out in 1623, only two years before the

settlement of Brooklyn, in the ship of Capt. Kornelis Jacobse Mey; and that soon after two-ships of the West India Company brought, as agriculturists, the Walloons, who settled in Brooklyn." In 1646 the town was permitted to choose two magistrates, who were authorized "to give judgment in all events as they should deem proper, not contrary to the charter of New Netherlands;" and, to give complete effect to their authority, the governor ordered that if any one disobeyed the decision of the magistrates, he should forfeit his right to the lands within the village. This privilege seems not to have been extended to any other town, probably because no other was at that time so populous as to require it.

The first public officer appointed by the Dutch government for this town after its settlement in 1625, was a "superintendent," whose duties were to preserve the peace and regulate the police of the town. A few years after the office of superintendent was abolished, and the offices of schout, secretary, and assessor, created. These were, like others, appointed by the governor.

The inhabitants suffering very much under the arbitrary exercise of power on the part of the government, frequently remonstrated against the same. Finally a convention of delegates from this, and other towns under the Dutch government, assembled at New Amsterdam, November 26, 1663, on an invitation from the governor; where they, on the 11th of December following, entered into a remonstrance against the exclusion of the people from any share in legislation, and generally against their mode of government. The governor and his council sent them no answer, but entered one on the minutes, in which they denied the right of this town, Flatbush, and Flatlands, to send deputies; and protested against the meeting, notwithstanding the same was held at the governor's request. Entertaining a just sense of the responsibility attached to them, the deputies made another, but ineffectual attempt, to obtain a recognition of their rights; and on the 13th of the aforesaid month presented another remonstrance, in which they declared, "that if they could not obtain them from the governor and council, they would be under the necessity of appealing to their superiors, the States-general." The governor, in a fit of anger, dissolved their meeting, and sent them home.

In order to secure the settlement against the depredations of the Indians, the governor,

in 1660, required the inhabitants to fortify the town, and remove their families within the enclosure, constructed of palisadoes, set close together and made sharp at the top. This order was probably in consequence of threatened hostility from the northern Indians, who had in 1655 made a descent upon Staten Island, and massacred sixty-seven persons; and the settlement of Gravesend was only saved by the timely arrival of soldiers from New Amsterdam.

It seems to have been enjoined upon the overseers and constables to admonish the inhabitants to instruct their children and servants in matters of religion and the laws of the country. They likewise appointed an officer to record every man's particular mark, and see each man's horse and colt branded. They were to pay the value of an Indian coat for killing a wolf, whose head was to be nailed over the door of the constable. In October, 1675, an order was passed by the court of assize that a fair or market should be yearly kept near the ferry, for the sale of grain, cattle, or other produce of the country; to be held the first Monday, Tuesday and Wednesday in November; and in the city of New York the Thursday, Friday and Saturday following. Although the population of this town has augmented every year since its settlement, yet, previous to the incorporation of the village in 1816, the increase was far from what it has been since; and within the last fifteen years the accession in number and wealth has been greater than for the preceding hundred years. In 1706 the real and personal estate in the town was valued only at £3,112, the tax thereon £41. In 1824 the valuation was over two million six hundred thousand dollars, and the taxes between six and seven thousand. In 1834 the valuation in the city of Brooklyn alone was \$7,257,473.

The controversies which have heretofore existed between this town and the corporation of the city of New York in relation to the ferry across the East river, and the claim of the latter to the soil below high water-mark along the Brooklyn shore; and also concerning the title of the United States to a valuable tract of land at the Wallabout, are of the highest importance to the inhabitants; but their merits would require more space for examination than could be afforded in this work. For an exposition of the legal principles involved in the discussion, the reader is referred to

Judge Furman's notes, and other productions of the same author.

The history of the Dutch church in this county has been so fully detailed in our account of Flatbush, that little more is necessary on that head.

In the year 1659 the inhabitants of the town applied to Governor Stuyvesant for permission to call a minister for their congregation, assigning, as a reason for their application, the badness of the road to Flatbush, the difficulty of attending divine service at New York, and the extreme old age and inability of the Rev. Mr. Polhemus to perform ministerial services at Brooklyn.

The governor deemed this request reasonable, and sent Nicasius de Sille, Fiscal of New Netherland, and Martin Kregier, Burgomaster of New Amsterdam, to this town, as a committee of inquiry, who reported in favor of the application; whereupon the request of the inhabitants was granted. They accordingly prepared a call for the Rev. Henry Solinus, alias Henricus Selwyn, from Holland, who was approved of by the classis of Amsterdam, on the 16th of February, 1660, when the classis also gave the Rev. Mr. Solinus a dismissal, wishing him a safe and prosperous journey by land and by water to his congregation in the New Netherland. The time of the arrival of this minister is not known. He was installed in the church on the 3d of September, 1660, in the presence of the Fiscal and Burgomaster Kregier, by the order of Governor Stuyvesant, who appears to have been at the head of the ecclesiastical as well as the civil and military government of the colony. The salary of Mr. Selwyn was fixed at six hundred guilders; and the marriage fees, instead of being a perquisite of his office, were to be accounted for to the church. On the 29th of October, 1662, it appears that he paid over to the consistory seventy-eight guilders and ten stivers, for fourteen marriages performed by him during the year. On the 23d of July, 1664, he returned to Holland; and after his departure, Charles Debevoise, schoolmaster and sexton, was directed to read the prayers in the church, and a sermon from an approved author, every Sabbath, till another should be called. The first Dutch church was built here in 1666, and stood about forty years, when another was erected on the same spot, which was taken down in 1810, and a new and substantial one built in Jeroleson street. This

last, not being found sufficiently large, has lately given place to a more splendid edifice, on nearly the same site.

An Episcopal society existed in this town as early as 1766. It was incorporated in 1787; and in 1795 St. Ann's church was occupied for the first time. This building was of stone, and was superseded by the present elegant edifice in 1824. The first Methodist church was incorporated in 1794; the first Presbyterian church in 1822; the first Baptist church in 1823; the first Roman Catholic church in 1822; and the first Congregational church in 1839.

The first printing-press established in this town was by Thomas Kirk in 1799, from which was issued a weekly newspaper, entitled "The Courier, and New York and Long Island Advertiser," and was continued for about four years. The first number of the "Long Island Star," by the same gentleman, was issued on the first of June, 1809, and transferred to Alden Spooner in the year 1811.

The most compact part of this town was incorporated into a village on the 12th of April, 1816, which, although violently opposed by a portion of the population, gave a new impulse to the spirit of improvement, and has resulted in raising it to the third rank among the cities of the State of New York. The village charter authorized the election of five trustees, and those named in the act were Andrew Mercein, John Garrison, John Doughty, John Seaman, and John Dean. This charter was several times amended and enlarged as the increase of population required, until it became indispensable to endow the place with the name and privileges of a city. On the 8th of April, 1834, the whole territory of the town was incorporated under the name of the "City of Brooklyn," and its inhabitants a body corporate and politic, by the style of "The Mayor and Common Council of the City of Brooklyn." It is divided into nine wards; the powers of the corporation are vested in a mayor, and a board of aldermen composed of two, elected annually, from each ward. These have the appointing of most of the subordinate officers of the city. Bedford, upon the eastern part of the town, was formerly a separate hamlet; but is now so far swallowed up by the progress of improvement, as to have nearly lost its identity. Gowanus is that part of Brooklyn which joins Flatbush and the waters of the bay, consisting principally of a low tract of salt marsh, ponds, and creeks, over which a

highway and bridge have been constructed, and is fast becoming more valuable as the city advances in that direction.

The Wallabout is a part of Brooklyn north-east from the ferry, and rendered famous in the Revolution from having been the scene of the most heart-rending sufferings of many thousand American citizens, confined on board the prison-ships stationed in the bay. The United States possesses about forty acres, including the site of the old mill-pond. Here have been erected a spacious navy-yard, public store-houses, machine-shops, and two immense edifices, in which the largest ships are protected from the weather, while building. On the opposite side of the bay has lately been constructed the Naval Hospital, which is not only splendid, but magnificent. The "Apprentices' Library Association" was formed in 1824, the corner-stone of which was laid by the Marquis La Fayette during his last visit to America in that year. The library is now in the Brooklyn Lyceum; and the building, having become the property of the city, is appropriated for public offices, and the holding of courts, being denominated the "City Buildings." The Brooklyn Lyceum was instituted October 10, 1833. The edifice is a beautiful specimen of architecture, composed of granite, and every way adapted to the purpose of its projection. The objects of this institution are intellectual and moral improvement, by means of certain specified committees, and by gratuitous public lectures. A course of lectures by gentlemen of the city of New York was commenced on November 7, 1833, and has been varied occasionally by essays, principally from the pens of ladies. The Brooklyn Collegiate Institute for young ladies was incorporated in 1829. The building is large and beautifully located near the East river. It flourished for a few years, and gave promise of permanent utility; but from want of sufficient patronage the school has been given up. The "City Hall," which was commenced a few years since upon a magnificent scale, has been interrupted in its progress, and doubts are entertained of its completion, at least upon the plan and to the extent originally contemplated.

PRIME'S ACCOUNT OF QUEENS AND SUFFOLK COUNTIES, 1845.

The people of Queens county are of a more mixed character, both in regard to their origin and religious views, than either of the other counties. In Kings, till within a few years,

the Dutch character had a decided and obvious preponderance, which is still the case in some towns. This was manifest to the eye of the transient observer, in the manners and habits of the people, and even in the form and style of their buildings. A Dutch house, or a Dutch barn, has been, from time immemorial, a term that conveyed as definite an idea to the mind as the most detailed description could have given. And till after the commencement of the present century, a Dutch church was invariably conceived to bear a strong resemblance to a light-house, only occupying more ground at its base, and not extending to so great a height. And so peculiarly appropriate was this form of church building, in the public estimation, that other denominations sometimes erected their houses of worship on the same plan.

On the other hand the people of Suffolk county, being almost exclusively of English or New England origin, present to the present day the constant evidence of Yankee predilection. Overlooking the physical features of the country, the traveler can not divest his mind of the idea that he is in the midst of a New England population, living in New England habitations. And had he entered almost any one of their churches, some thirty years ago, before "the spirit of improvement" swept over the land, he would have recognized in the vast pulpit, sufficiently large to hold a dozen ministers, with its deacon's seat beneath, and a sounding board of corresponding size above, which always attracted the attention of children more than the preacher, and filled them with constant apprehension that it might fall and crush the man of God in the midst of his devotions; in the large square pews, too, which obliged one-half the congregation (and those were generally the children) to sit with their backs to the minister, and thus, in spite of themselves and all their efforts to become listless and sleepy hearers,—in all these and many other particulars the observer, if from New England, would recognize the *fac simile* of his native church. The writer has always been of the opinion that the devil had as much of a hand in the invention of sounding boards and square pews as he had in the Salem witchcraft, and that the scheme has been vastly more successful, in its pernicious influences, on the rising generation.

But in Queens county there is nothing of this unique, homologous character, either in the manner of the people, the style of their

buildings or the moral aspect of society. Here Yankees and Dutchmen, Presbyterians and Quakers, men of every religion and no religion, have for almost two centuries been mingled together, with all their various affinities and repulsions; and while the effervescence has been constantly going on, the time is yet future, if it ever is to come, when it is to subside into one homogeneous mass.

It may therefore be readily inferred from the facts of the case that there is and always has been a greater diversity of religious views, and consequently of the moral habits of the people of this county, with far less of fellow feeling and assimilated manners, than in any other district of the island. Except in a few thickly settled spots, houses of religious worship, till of late years, have been much fewer in number and attended by a less proportion of the population, than in the other counties; while in many towns, fishing and hunting, traveling and visiting and even ordinary secular labor, are indulged in by multitudes on the Sabbath day. Its proximity to the city has doubtless increased these evils, if it has not been their origin; but it is to be apprehended that too many of the inhabitants are voluntary panderers to the votaries of pleasure from the great metropolis.

And here it is proper to notice one of the principal means of demoralization, with which this county as well as the adjacent parts have been cursed for the space of one hundred and eighty years. Here has been the permanent arena of "sports of the turf," as they are denominated in the jockey dialect, since the year following the surrender of New York to the government of Britain.

This regular system of horse racing was established in 1665 by Governor Nicoll. Four years afterward (1669) his successor, Governor Lovelace, issued a proclamation appointing "trials of speed," to take place in the month of May annually, and ordering the justices of Hempstead to receive subscriptions (!) for "a crown of silver, or the value thereof in good wheat," to be the reward of the winner. The ostensible argument for this procedure was "for the purpose of improving and encouraging a good breed of horses," an argument that is most ridiculously retained in our statute book to the present day. Every man of reflection knows, that from the first settlement of this country, the breed of race-horses is the last species of the animal that the exigencies of the people have demanded. In

days gone by those capable of enduring hardship and of easy support have been sought after, while extraordinary speed has been only a secondary consideration and of limited demand in the occupations of life. But now, when the iron horse, which travels untired with the speed of a hurricane, has entirely superseded the use of the fleetest steeds, it is to be hoped that when the current "fifteen years" shall have expired the act, with its baseless reason, will cease to disgrace the statute book of the State, whose laws forbid every species of gambling.

The Hempstead Plain, or its vicinity, has been the permanent theater of these semi-annual enactments, from their commencement in 1665. The "Newmarket Course," called also "Salisbury Plain," was in the southwest corner of North Hempstead, five miles east of Jamaica, and was thus occupied for more than one hundred and fifty years. This was exchanged, some twenty years ago, for the "Union Course," three miles west of Jamaica, a circle of a mile's circumference, completely palisaded, for this exclusive purpose. And here are regularly enacted, twice a year, scenes which no imagination, however fertile, can depict, without the aid of ocular demonstration. It has been stated, and the statement stands uncontradicted, that at a single course of races fifty thousand persons attended, and two hundred thousand dollars were lost and won, and that during the five days that the "sports" continued the toll of the Fulton Ferry Company averaged one thousand dollars per day, and it was supposed that the other revenues from the city realized an equal sum. But the gambling, expense and loss of time attending these scenes of dissipation form only a part of the evils with which they are connected. The drinking—the swearing—the licentiousness—the contentions and other nameless crimes, which are here periodically committed, with the countenance of law, are enough to sicken the soul of every man that fears God and is disposed to reverence his commands, and must induce him to wish most devoutly for the time to come, and that speedily, when this crying abomination, with all its accompaniments, shall be banished from this once sacred soil of Puritans and Huguenots.

There is no reason to doubt that the passion for horse racing, so long and so assiduously cultivated, has had a powerful influence in stamping the character of the people of this county with traits so diverse from either of

those with which it stands in juxtaposition.

Suffolk county embraces the whole of the remaining part of Long Island (proper) with its adjacent islands. Much of the land, as already described, is a barren waste. In traveling through it the stranger finds it difficult to imagine how even the wandering deer can find sustenance, much more how human beings can secure an adequate support. And yet it is astonishing to see, in a propitious season, how large crops are raised from these sterile plains. Good Indian corn may frequently be seen growing in the fine white sea sand, which has evidently been drifted by the waves and the winds to the distance of miles. This, slightly mingled with sea mud and vegetable mould, conveyed by the same agency, forms a substratum, if not a soil, in which, in a wet season (for, on Long Island, water is pre-eminently a main supporter of vegetation) corn and other grains will grow with astonishing rapidity and luxuriance.

But while these remarks apply, with strict propriety, to large portions of this county, there are extensive tracts of excellent land, which amply repay the labor of cultivation. This is true, not only of the numerous necks of land which jut out into the surrounding waters and the margins of the numberless bays, coves and harbors, but also of large bodies of land situated in almost every part of the island. But the writer would gladly whisper in the ear of many large land holders in this, his native county, if they could be persuaded to believe it, that there is a great deal more profit in cultivating one acre of land well, than in ten acres badly. The fact is, many on Long Island, as in other parts of the country, own and work too much land. The writer has in his mind's eye a farm of nearly a thousand acres, which, half a century ago, was owned and cultivated under the direction of a single individual, who was called a great farmer. But when he had ruined himself by the operation, and had surrendered the whole to pay his debts (as honest, but unfortunate men were in the habit of doing in old times), it was cut up and sold to six or eight persons, who have since supported as many families from its productions. And if it could undergo another, and even another subdivision, it might afford sustenance to double or quadruple the present number, besides materially improving the aspect of the town in which it is situated. The same remarks apply to scores of farms in this county, which, in their present

condition, are to their owners what self-righteousness is to the sinner, "the more they have the worse they are off." We have seen that in this county there is an average of eighteen acres to every inhabitant, while there is many an acre in Kings county that furnishes support to a whole family. And though the proximity of a great market makes a vast difference in the value of vegetable productions, the disparity in the two cases would be exceedingly reduced by applying more manure and more labor to less ground. There is no knowing till the experiment is fairly made, how much an acre of land may be made to produce by good husbandry.

But it is not intended by these remarks to convey the idea that all the farmers of old Suffolk are regardless of the improvements made in agriculture, or that they are in the habit of taxing their fields without furnishing them the means of answering the demand. More or less attention has long been paid to the importance of manuring, and they would be singularly culpable if this were not the case, since nature has furnished them with peculiar facilities for the accomplishment of the work. The waters with which they are surrounded not only furnish a large supply of provisions for immediate use, but they are the unfailing sources of enriching the land. The seaweed, which is cast up in immense quantities on the whole extent of shore and various other productions of the bays and marshes are daily yielding vast supplies of fertilizing materials.

But more than all, the countless multitudes of one peculiar species of fish, which crowd the bays and press upon the ocean's shore, of which millions are annually taken for the sole purpose of manure, are the principal source of fertility to the land. In several of the eastern towns this business is as regularly pursued, during a part of the summer, as ploughing and sowing, or mowing and reaping in their appropriate seasons. For this purpose, the farmers of the neighborhood form themselves into a company sufficiently large to afford a relief of hands every week, and having provided themselves with a large seine, boats, a fish-house on the shore and every necessary convenience, the party on duty take up their residence on the water side, and it is impossible to convey to a stranger's mind the immense product of a week's labor. A single haul of a seine has been calculated at one million of fish.

These fish are called by various names, as

skip-hog, moss-bonker, shad and bony-fish, the last of which is the most descriptive. Though of a good flavor and generally very fat, they are so perfectly filled with fine bones that it is hazardous to eat a particle of them. It would seem as if the God of nature had formed and annually sent them in such immense quantities to these shores for the sole purpose of fertilizing the land. By this means alone, the value of much of the land on the east end of the island has been doubled, and by the same means its present value is maintained. For many years Suffolk county did not raise sufficient grain for its domestic supply, while of late it has exported a large annual surplus. It may be added here, that in taking these fish, other kinds of an excellent quality for the table are caught in sufficient quantities to supply the fishermen and whole vicinity with fresh fish every day, while those which are not wanted for food are cast into the common receptacle. So that, on the whole, though this country, from the nature of the land, may never be able to sustain a population proportioned to its superficial extent in comparison with other portions of the State, it is really questionable whether there is any part of the world in which the means of supporting life can be more readily obtained. And one thing is believed to be certain that in no part of this republican country is there so great an equality and such a strong sympathy and perfect fellow-feeling among the whole mass of population as in Suffolk county, especially in the eastern towns.

The following extract from Vol. I of the "Transactions of the Society Instituted in the State of New York for the Promotion of Agriculture, Arts and Manufactures, in February, 1791, will give some idea of the fertilizing effects, as well as the vast quantities of these fish which were taken, even at that early day.

"Observations on Manures, by Ezra L'Honmedieu, Esq., read in March, 1795.

"Notwithstanding the great improvements which have been made in husbandry in different parts of Europe and America it is far from being ascertained what is the largest quantity of produce, which may be raised from a given quantity of land by manure. It will no doubt be much more than from the most fertile land in its natural state. I have heard of no instance of new land producing more wheat than forty-two bushels to the acre. In Suffolk county, some years ago, at Huntington, by manure fifty-two bushels of wheat were raised

to the acre. Since the practice in that county of manuring land by fish has been in use between forty and fifty bushels of wheat from one acre is not an uncommon crop. And by a late accidental experiment, it appears that the product of grain from an acre will be in proportion to the quantity of this manure, and so far as to exceed any production we have heard of in any part of the world. A farmer in the town of Riverhead, in Suffolk county, Mr. Downs, having four thousand fish called mossbonkers or Menhaden, strewed them about the 1st of June on twenty rods of ground, being a poor, gravelly, dry soil, and which without manure would not pay for the tillage. These fish were plowed under a shallow furrow; at the time of sowing, about the last of September, the ground was plowed up again, and a little deeper; by harrowing the putrefied fish were well mixed with the earth, and the ground sown with rye at the rate of one bushel to the acre. The ground being well covered in the fall, the rye was not injured in the winter; in the spring the growth was remarkably rapid and luxuriant till it was about nine inches high, when his neighbor's sheep broke into the inclosure and eat it all off close to the ground. The fence was mended and the rye grew again, and much thicker than before, till it got about six inches high, when the same sheep broke in again and the second time eat it close to the ground. It was then supposed the crop would be lost, but it grew up again with additional thickness and great rapidity; it all stood well, the ears were very long and full and Mr. Downs assured me he had sixteen bushels of rye from his twenty rods of ground. This production was so extraordinary that although I could have no reason to doubt the assertion of Mr. Downs, I conversed with some of his neighbors on the subject, who had seen the rye growing at different times and just before harvest—they made no doubt of the fact, and observed the heads and thickness of the rye far exceeded anything they had seen or could have imagined. This piece of land was manured at the rate of thirty-two thousand fish per acre, which would cost, including the carting from the shore where they were taken, ten shillings per thousand, which would be sixteen pounds. The product would be one hundred and twenty-eight bushels, which at that time was worth eight shillings per bushel, which is fifty-one pounds four shillings. If

we allow three dollars for the plowing, gathering and threshing the grain per acre, with the straw, which will be fully adequate to the labor, there will remain eighty-five dollars clear of expense on the net proceeds of one acre of rye thus manured and produced. And Mr. Downs' profits on the twenty rods of rye were four pounds five shillings.

"Mr. Downs as well as his neighbors were of opinion that unless the accidents of the sheep eating off the rye twice had happened, the whole would have been lost by reason of its falling or lodging. If this opinion be right, by this experiment we are taught the necessity of cutting or feeding off the grain on lands highly manured, in order to preserve the crop. Perhaps the thicker such land is sown the less necessity there will be for cutting or feeding, as there will be more original strong stalks. Most of the lands in this country of the same quality will bring more bushels of wheat than rye—and I trust by improvements on this experiment, which was merely accidental, we may soon be informed of a much larger quantity of wheat being raised on an acre than hitherto has been raised in Europe or America.

"It was expected that the taking of these fish in such large quantities on the sea coast for manure, would in a few years destroy them, but hitherto they have increased. This year I saw two hundred and fifty thousand taken at one draught, which must have been much more than one hundred tons. One seine near me caught more than one million the last season, which season lasts about one month. Various are the modes of manuring land by fish. Those that are taken early in the season are by some carted on the land, spread lightly and plowed under the furrow for raising Indian corn; this corn is taken off in the fall and the land plowed and sowed for wheat. By this mode they have two good crops by manuring once."

The eastern towns on Long island were, for the most part, originally settled on a different basis from most of the other colonies of this country. They had no royal charter or proprietary patent as the foundation of civil government. Having purchased their lands of the original proprietors of the soil and secured a corresponding grant from the patentee, without any restrictions to their civil rights, they found themselves absolutely in a state of nature, possessing all the personal rights and privileges which the God of nature

gave them, but without the semblance of authority one over another. From the necessity of the case they were thrown back upon the source of all legitimate authority, the sovereign people, and entered into a social compact, in which every man had an equal voice and equal authority. On this platform they founded a pure democracy, and for several years each town maintained a perfectly independent government, making their own laws in public town meeting and executing them by magistrates of their own appointment. And it is worthy of remark that the invaluable privilege of trial by jury was at once introduced, though with this peculiarity, that a majority was sufficient to render a verdict. And when, afterwards, one town after another deemed it expedient to unite themselves with the larger colonies of New England, it was not because they felt themselves incapable of managing their own internal affairs, but solely for defense from foreign aggression. And the nature of the union was rather that of an alliance, than of subjection.

Being thus trained up in the possession and exercise of all their natural rights and privileges, they exhibited through the whole course of their colonial existence, the most unyielding determination to maintain these sacred immunities. And in this they generally agreed to a man. It is a fact, though little known, but worthy of being handed down to posterity, that the declaration of rights and a solemn pledge not to submit to British taxation, proposed in a meeting in the city of New York, April 29, 1775, and distributed for signatures in every town in the province, was signed by the 6th of July of that year by every man capable of bearing arms in the town of Easthampton, to the number of two hundred and eighty individuals. This is surely a much more notable fact than that since the establishment of the present government the elections of that town have often been returned without a dissenting vote, and the former gives a ready explanation of the latter. Similar unanimity, though not as entire, characterized the most of the towns of this county during "the times that tried men's souls."

There is another fact, however great the contrast with the present state of things, which gives this and the adjoining counties a consequence that has long since been lost sight of. There was a period, and that of some considerable duration, when Long Island constituted

the great body of the province of New York. It was the first occupied by actual immigrants for the purpose of a permanent settlement and agricultural pursuits. Here the first churches were organized and the first towns formed. And in the easternmost town, within less than twenty miles of Montauk Point, and at Flatbush, near the western extremity, the first incorporated academies in the great state of New York were erected and put in successful operation.

The first Assembly of Deputies that the representative of royal power condescended to convoke for consultation, the year after the surrender of the province to British arms, was held at Hempstead March 1, 1665, and (with the exception of two) was composed entirely of representatives from the several towns of the island.

The first Legislative Assembly convened in 1683, was not only procured through the remonstrances and demands of Long Island more than any other part of the colony, but was in a great measure made up of its representatives. The first speaker in that body was either then or afterwards a resident of the island, and the same office was afterwards held by one of its representatives sixteen out of twenty-one years. Though now regarded as the mere "fag-end," Long Island was once both the body and soul of the province of New York. Nor has she deteriorated in her intrinsic worth, though she has been completely lost sight of and almost cast into oblivion in the extending glory of a great commonwealth, which has arrogated to itself the proud title of the "Empire State."

But patriotic views and love of national liberty do not constitute the chief glory of old Suffolk. It is her primitive puritanism which it is believed has been illustrated here, in piety towards God and love to men, for two hundred years, and now exists in more of its original purity than can be found on any other spot of equal extent on the American continent. Let it be proclaimed in trumpet-tongued accents that here no man was ever persecuted and disfranchised for his religious opinions, nor man or woman executed for heresy or witchcraft. On the contrary, from the first organization of their civil institutions, they ordained the widest toleration of religious opinions, so long as it was not exercised for the seduction of others and the injury of the community, and that, too, while as yet such an

article had not been enacted, if it had been conceived, on the continent of America.

From the natural reserve of a people brought up in seclusion from the rest of the world, which still, in a measure, distinguishes them, these traits of character may not be readily recognized by the casual observer. But

if the present generation have not greatly degenerated from the sentiments and practices of their immediate predecessors, among whom the writer spent some of the happiest years of his early life, a residence of a few months or even weeks among these primitive people on the east end will afford complete conviction of the correctness of these remarks.

THE VANDEVERE RESIDENCE.

BARN.

CHAPTER LVIII.

THE CATHOLIC CHURCH ON LONG ISLAND.

By MARC F. VALLETTE, LL. D.,
PRESIDENT OF THE BROOKLYN CATHOLIC HISTORICAL SOCIETY.

PART I.—THE PRE-DIOCESAN PERIOD.

IT MAY be a matter of no little surprise to Long Islanders to know that their island was colonized by Catholics as far back as 1634, and that it is almost coeval with Maryland in giving Catholics shelter from non-Catholic persecution and at the same time offering an asylum to non-Catholics fleeing from the persecution of their co-religionists; yet such is a fact.

The first constitution of the colony of New Jersey, or, as it is known in its first charter, the province of New Albion (which comprised New Jersey and Long Island, in the present State of New York), proclaimed religious toleration to all, in these words:

"No persecution to any dissenting, and to all such, as the Walloons, free chapels; and to punish all as seditious, and for contempt, as bitterly rail and condemn others of the contrary; for the argument or persuasion of Religion, Ceremonies, or Church Discipline, should be acted in mildness, love, and charity, and gentle language, not to disturb the peace or quiet of the inhabitants."

The Catholic leader of this Colony, and perhaps the first Englishman that settled New Jersey, was Sir Edmund Plowden, a member of an old Saxon family of Shropshire, England, whose antiquity is amply established by the meaning of the surname, "Kill-Dane."

This gentleman, with other noble "adventurers," petitioned King Charles I for a patent under His Majesty's seal of Ireland, for "Manitie, or Long Isle," and "thirty miles square of the coast next adjoining, to be erected into a County Palatine called Lyon, to be held of 'his Majesty's Crown of Ireland,'" etc.*

This island of "Manitie or Long Isle" was also known as the Isle of Plowden, for in the charter of Charles I the King gives to Edmund Plowden "all that entire island near the continent or terra firma, * * * called the Isle of Plowden or Long Island, and lying near or between the 39th and 40th degree of north latitude." There were "four Kings on Long Isle, with about eight hundred bowmen;" and a chivalric order, the "Albion Knights," was established "for the conversion of the twenty-three Kings" or twenty-three Indian tribes residing within the entire limits of Sir Edmund Plowden's grant.

*See Burke's *Commoners and Landed Gentry of Great Britain and Ireland*, under "Plowden;" Baker's *Northamptonshire*, under "Fermor;" the *Visitation of Oxfordshire*, published by the Harleian Society; Records of the English Province of the Society of Jesus, by Henry Foley, S. J. London, 1875-82. Winsor's *Narrative and Critical History of America*, vol. III, p. 457, Rev. R. L. Burtzell, D. D., in *Catholic World* for July, 1875.

The number of persons who resided in New Albion, and especially on Long Island, under the rule of the Plowdens is difficult to ascertain. That there were settlers on the Isle of Plowden is sufficiently established, but how many and what became of them is shrouded in mystery. Religious persecutions and civil commotions in England contributed largely to preventing Sir Edmund Plowden and his Catholic associates from realizing their plans for colonizing New Albion, as they had fondly hoped to do, but the fact remains that Long Island formed part of a province founded by a Catholic, with the purpose of securing entire freedom of religion to all within its limits. "Calvert and Roger Williams," says Mulford in his "History of New Jersey," "have been represented as standing entirely alone" as the exponents of religious liberty to all, "until the appearance of Penn. This is not just or true. * * * Though Plowden's designs were not successful, though the work he projected fell short of completion, yet he deserves to be ranked with the benefactors of our race, and New Albion is entitled to a higher place in the history of human progress than is often allotted to older and greater and more fortunate States."

We have seen above that there were Catholic settlers on Long Isle as far back as 1648. Father Jogues, in his "Novum Belgium" (1643-44), mentions the existence of some Catholics in the vicinity in his time; in 1654 the Jesuit LeMoyne visited New York from time to time and administered to the wants of the Catholics in the vicinity; in 1657 we find a Frenchman, Nicholas by name, living in Walebrocht, who refused to pay an assessment of six guilders for the support of Dominie Polhemus on the "frivolous excuse" that he was a Catholic. The poor fellow was obliged to pay twelve guilders instead of six! In 1756 Long Island received quite an accession of Catholics in the Arcadian exiles who found homes in Kings, Queens and Suffolk counties.

The earliest Catholic of distinction con-

nected with Long Island, and whose name has come down to us, was Thomas Dongan, Governor of New York, who in 1683 convoked the first General Assembly of New York, which granted the celebrated Charter of Liberties recognizing freedom of conscience. In 1688 he retired to his farm at Hempstead. The Dongan white oak, "which had become historical as a monumental tree, being named in the patent of Governor Dongan which established the boundary lines of Brooklyn, was felled to the ground in the days of the Revolution for the construction of rude fortifications. The stern exigencies of war had called for its sacrifice; and its great branches, filling a narrow lane, proved a formidable though temporary obstacle to the enemy's advance."*

Governor Dongan "and his fellow worshippers met in a little chapel" for religious purposes. Here no doubt mass was offered up by the English Jesuit Fathers that the Governor had brought with him to counteract the influence of the French Jesuits among the Indians in the upper part of the State. The early Brooklyn Catholics were obliged to cross the East River in order to hear mass on Sundays. There were no ferry boats then, nor great bridges, and crossing the river in row-boats or flat-boats was often attended with danger, especially in winter, when the river was filled with floating ice.

Old St. James'.—Prior to 1822 there was not a Catholic church on Long Island, but in that year (on January 1st) the Catholics of the village of Brooklyn resolved that "whatever they did in word or work" should be done "all in the name of Lord Jesus Christ, giving thanks to God the Father, through Him." They wanted "their children instructed in the

*The Battle of Long Island, by Thomas W. Field.—The little bluff on the east, commanding the Flatbush and old Post roads at their junction in the Valley Grove was the sight of a two-gun battery which enfiladed the former road, up which the Hessians marched to assist Sullivan's lines on August 27, 1776. A few rods in front of this battery and almost in the center of the Flatbush road stood the Dongan oak.

principles of our Holy Religion," and "more convenience in hearing the word of God themselves."

A society was formed with the approbation of the Rt. Rev. John Connolly, O. P., D. D., then Bishop of New York, for the purpose of securing the ends in view, and on January 7th the first meeting was held at the residence of Peter Turner, at the southeast corner of Washington and Front streets. Associated with Peter Turner were James M. Laughlin and William Purcell. After a careful examination it appeared that only seventy men were able to give any assistance to the good work undertaken, and some of these, not being able to contribute money, generously offered the labor of their hands. On March 2d eight lots of ground were bought at the corner of Jay and Chapel streets, for \$800; of this amount \$500 was paid in cash and a mortgage was given for the balance. It must be borne in mind that these good men, while acting with the approval of the Bishop of New York, under whose jurisdiction Brooklyn was at that time, were also working under great disadvantages. They were without the aid or guidance of a pastor, and although they made many earnest and repeated requests for one, the Bishop had none to give them. They were entirely dependent on the kindness of the Very Rev. John Power, of St. Peter's Church, Barclay street, New York, who, whenever opportunity offered, crossed the East River in a row-boat and said mass for them in a private house. Sometimes his place would be taken by Fathers Richard Bulger, Auley McCauley, Michael O'Gorman, Patrick McKenna and others, and these good Fathers would offer up mass in Mr. Depsey's "Long Room" in Fulton street. The first mass celebrated in Brooklyn was by the Rev. Philip Lariscy, O. S. A., at the residence of Mr. William Purcell, at the northeast corner of York and Gold streets.

Perseverance, such as these good people displayed in the face of so many difficulties, could not go unrewarded. They had purchased

ground for the erection of a church and also for a burial ground; they had this ground blessed on the feast of St. Mark (April 25) by the Rt. Rev. Dr. Connolly, and they had taken courage from the kind words of Rev. Richard Bulger, who preached on that occasion. Slowly but surely the first Catholic Church in Brooklyn advanced toward completion. On December 31, 1822, the following trustees were incorporated under the general act: George S. Wise, Peter Turner, William Purcell, D. Dawson, P. Scanlan, W. McLaughlin and J. Rose. The work went on, but it was still impossible to give them a resident pastor, as there were only eight priests in the entire diocese of New York at that time. On the 28th of August, 1823, Bishop Connolly dedicated the new church to the honor and glory of God, under the invocation of St. James. The interior of the church was yet unfinished, and upon an altar constructed of a few boards roughly put together the Rev. John Shanahan said the first mass. The sermon was preached by Very Rev. Dr. Power. The children of the new and still pastorless parish required attention, and on the 12th of the following month, J. Mehaney* was appointed schoolmaster, sexton, and caretaker of the graveyard which had just been leveled and fenced in. The amount of money expended up to this time was \$7,118.16, quite an amount for those days. The most strenuous efforts were still made to secure a resident pastor.

The Rev. Patrick M. Kenna, who had ministered to these persevering and energetic Catholics with some degree of regularity, died on Oct. 4, 1824, and was buried in St. James' churchyard. This was a severe blow to the new and struggling congregation, but they were not discouraged. In January, 1825, they sent through the Very Rev. Dr. Power some \$220 to Ireland to the Rev. Father Duffy, in

*Mr. Mehaney was the first Catholic schoolmaster in Brooklyn.

the hope of securing his services as their pastor; but, as he declined to come at that time, the money was returned. It was not until the following April that Dr. Power, acting as Administrator of the Diocese of New York, the Bishop being in Europe at the time, was able to send a pastor to St. James'. This was the Rev. John Farnan, * who became "the first resident clergyman and who received \$600 a year and house rent free." During his pastorate he introduced the Sisters of Charity, who took charge of a school opened in the basement of the church, and in other ways advanced the condition of a parish which was only too ready to second him in every good work undertaken. But his pastorate did not last very long.

In 1832 Father Farnan was succeeded by Rev. John Walsh, a student of St. Mary's, Montreal, and who had been ordained five years before (1827) by Bishop Dubois. Father Walsh is regarded by many of the old St. James' people as the real founder of the mission. His pastorate lasted over ten years, and was marked by great zeal for the welfare of his people. While at St. James' Father Walsh visited the Catholic families at Sag Harbor, Flushing and Staten Island.

In 1834 an act was passed "incorporating the Roman Catholic Orphan Asylum Society in the City of Brooklyn in the County of Kings." From this we see that the building of old St. James' was soon followed by a move toward the education of Catholic children and a tender care for the orphans. (Reference to the Orphan Asylum will be made further on.)

During his pastorate Father Walsh was assisted successively by Rev. James Dougherty, who died March 29, 1841; Rev. Philip Gillick, Rev. Patrick Danahar, and Rev. James McDonough. Father Walsh died at Harlem, August 8, 1852, aged sixty-seven years. As an evidence of the high esteem in which he was held by his superiors it may be stated that

"Bishop Dubois, who ordained him, had affirmed of him years before that of all clergy of the Diocese Father Walsh was *primus inter optimos*." For ten years or so, until 1841, he labored throughout the whole extent of Long Island, building churches, and then resigned in order to become a Trappist, in Mount Mellera, Ireland. But his love for souls led him back again to missionary life," * and on his return to the United States he became pastor of St. Paul's Church, Harlem. His successor at St. James was the Rev. Charles Smith, who remained there until 1847, and enlarged the old church.

St. Paul's.—In the meantime the number of Catholics in Brooklyn had been increasing in number. They began to spread over the city and it was not long before St. James was too far away to suit the convenience of those who lived on the other side of Fulton street. The truly Catholic perseverance which had marked the early struggle of the people of old St. James' had strengthened their faith and awakened a spirit of self-sacrifice. Cornelius Heene, a man of means and of heart too, was ready to do his part towards the erection of another church. In 1835 he gave the piece of land valued at \$8,000 and formerly offered to St. James', situated at the corner of Court and Congress Streets, and in the following year St. Paul's was erected upon it. It was built of brick, 72 feet by 125 feet, at a cost of somewhere about \$20,000. The debts incurred in its erection were generously shared in by the good people of St. James', a truly Christian but rather unusual proceeding nowadays. St. Paul's Church was dedicated by Bishop Dubois and his coadjutor, the Rt. Rev. John Hughes, D. D. The first regular pastor was Rev. Richard Waters, who remained only two years, 1838-1840; but during that time he established a parochial school, which he placed under the care of the Sisters of Charity, and

*Register of Clergy Laboring in New York, by Most Rev. M. A. Corrigan, D. D.

*Register of Clergy Laboring in New York, by Most Rev. M. A. Corrigan, D. D.

began several other good works. He was succeeded by Rev. Nicholas O'Donnell, O. S. A., who, with his cousin, the Rev. James O'Donnell, also a Hermit of St. Augustine, came from Philadelphia and labored not only at St. Paul's, but at many other places on Long Island.

Father Nicholas O'Donnell was evidently a man of learning and literary tastes. It was under his editorial management that the first issue of the Catholic Herald, the first Catholic paper published in Philadelphia, appeared on January 3, 1833. In 1844 he appeared in connection with his cousin and the Very Rev. John Hughes (afterwards Archbishop of New York) in a suit against the County of Philadelphia, to recover damages for the wanton destruction of St. Augustine's Church, in that city, during the Native American riots of that year. In 1846 he was recalled to Rome, much to the regret of his parishioners of St. Paul's.

Father O'Donnell was succeeded by Rev. Joseph A. Schneller, whose long pastorate is still remembered by the older Brooklynites. He was ordained by Bishop Dubois in 1827, and was connected with the Society of Jesus in the early part of his career. He was a man of literary tastes and was for a time on the staff of the New York Weekly Register and Catholic Diary. Before taking charge of St. Paul's he had been pastor of Christ's Church, New York, and of St. Mary's Church, Albany. While in the latter place he engaged in controversy with the Rev. Dr. J. W. Campbell, of the First Presbyterian Church, in that city, and replied to his pamphlet, entitled "Papal Rome." He also published a reply to Rev. Dr. Sprague's pamphlet entitled, "Protestant Christianity Contrasted with Romanism." Father Schneller died Sept. 18, 1862, and was succeeded by Rev. Robert Maguire.

St. Mary's.—In the meantime Father James O'Donnell had been extending the field of his labors to Williamsburg. In 1841 he built St. Mary's Church. Three years before (1838) Father Dougherty went over from St. Mary's Church (Grand Street, New York), and said

Mass in a stable on Grand Street. This was not, as some suppose, the first Mass said in Williamsburg, because records show that Father John Walsh, of St. James', and his assistant, Father Bradley, visited Flushing, Staten Island and Williamsburg in 1837, and it is probable that they went there as early as 1836. In 1839 Flushing was visited once a month by Rev. Michael Curran, who also attended Harlem and Throgg's Neck. Father O'Donnell remained at St. Mary's Church until 1844, and while here visited the Catholics at various points on Long Island. We find traces of him at Sag Harbor, Jamaica, Flatbush and elsewhere.

Father James O'Donnell was a remarkable man. It was just after the disastrous decline in all real estate—and the village of Williamsburg was by no means prosperous—that in February, 1840, he succeeded in securing an eligible site and at once set to work to obtain contributions towards the erection of a church. He succeeded so well that a small building was erected during the year and it was dedicated to our Blessed Lady under the title of St. Mary's.

One of the first steps of Father O'Donnell after organizing his congregation was to establish a Catholic Temperance Society, and in the ensuing year we find the members honoring the patron saint of Ireland by hearing Mass in that little church. In 1844 Father O'Donnell was recalled by his superiors to St. Augustine's Church, Philadelphia, just in time to see the church and its most valuable library destroyed by an infuriated mob. After a short stay at Villanova, the Mother House of the Augustinians in the United States, he visited Ireland, and on his return to the United States went to the Diocese of Boston, the Bishop of that See assigning him to the newly incorporated city of Lawrence. Here he erected a fine, large church, dedicated to Our Lady, and labored earnestly until summoned from the world by an almost sudden death, on April 7, 1861. His name is still held in benediction in

Lawrence and should never be forgotten in the Diocese of Brooklyn.

Father O'Donnell was succeeded in Williamsburg by the Rev. Sylvester Malone, who, in view of the increase in his flock, which soon numbered three thousand souls, resolved to undertake the erection of a more commodious edifice. He soon found an eligible site on Second street, between South Second and Third streets, and plans for a fine church in the pointed style of Gothic architecture were prepared by the eminent architect, Mr. P. J. Keily.

On May 30, 1847, at four o'clock in the afternoon, a procession, led by the symbol of salvation, and closing with a bishop in full pontificals, entered the ground and proceeded to the cross erected where the altar of the future church was to stand. The solemn ceremonies by which the Catholic Church blesses the stone of her sacred edifices, was performed by the illustrious Rt. Rev. John Hughes, D. D., Bishop of New York. A beautiful church, the finest in Williamsburg, and in those days surpassed by few in the country, with a frontage of sixty feet, facing the East River, and a depth of one hundred feet, soon rose with its spire towering one hundred and fifty feet. On May 7, 1848, the church was solemnly dedicated to the service of God, under the invocation of Sts. Peter and Paul.

But we must not anticipate. The year 1841 was a church-founding year for the Catholics of Williamsburg. It was in this year that the Rev. John Raffener, the "apostle of the Germans" in this section of the country, gathered his scattered countrymen around him, and out of his own purse bought ground and erected a church which his pious soul led him to dedicate to the Most Holy Trinity.

The Assumption.—Old St. James' Church had been growing all these years, and another division of the parish was made, in 1842. This time the new church was dedicated to the Blessed Virgin, under the title of the Assumption. This church had been commenced some years before by Father Farnan, while under

ecclesiastical censure. It was his intention to establish an independent Catholic Church, but, as his congregation did not respond to his needs, the church remained in an unfinished condition for some years. In 1841 it was bought by Bishop Hughes, who placed it under the pastoral charge of Rev. David W. Bacon. He completed the building and had it dedicated under the above invocation, on June 10, 1842. Father Bacon was a hard worker and hesitated at nothing. He would dress the altar himself, and he was known to have cut out the cassocks made for and worn by the altar boys. His congregation grew rapidly and demonstrated the necessity for further church extension. He was largely instrumental in the erection of the church of St. Mary's Star of the Sea, but before its completion he was called to a higher dignity and a broader field. He was consecrated Bishop of Portland, Maine, in 1855. His successor was the Rev. Wm. Keegan, who had been his assistant for some time.

Father Keegan was born in the County Kings, Ireland, in 1824, and came to this country in 1842. He graduated from St. John's College, Fordham, in 1849, and, continuing his ecclesiastical studies, acted as professor until October 16, 1853, when he was ordained by the Most Rev. Cajetan Bedini, Archbishop of Thebes, and Papal Nuncio to the United States. He was immediately appointed assistant at the Church of the Assumption, and on the promotion of Father Bacon to the See of Portland he became its pastor. It was not long before he enlarged and beautified the church. Some time later he erected what was then one of the finest parochial school-houses in the country. In 1880 he was made Vicar General of the Diocese, and held that honored position up to the time of his death, May 10, 1890.

While rector of the Assumption, the Rev. David W. Bacon interested himself in the erection of a new church on Court street, between Luqueer and Nelson streets. But higher hon-

ors awaited him and before he had time to get the building fully under way he was called, 1855, to preside over the newly erected See of Portland, Maine. He was succeeded by Rev. Edward Maginnis, whose pastorate was very short. In 1856 Rev. Eugene Cassidy became pastor, and continued in that capacity for twenty years. In 1872 he put a steeple on the church and in 1873 a clock was added. In 1867 Father Cassidy, finding the "little chapel," which had been used as a school, too small to accommodate his pupils, built a school house 60x100 feet, and three stories high. It now contains some five hundred and sixty boys, taught by the Franciscan Brothers, and six hundred and seventy girls, taught by the Sisters of St. Joseph. In 1876 Father Cassidy was succeeded by Rev. Henry O'Loughlin, who remained pastor for ten years. On March 9, 1888, the Rev. Joseph J. O'Connell, D. D., became pastor. In 1893 he built a large hall for literary and social purposes and has kept the parish up with the times. During his connection with the Star of the Sea, Dr. O'Connell has been honored both by his Bishop and by the Sovereign Pontiff. Pope Leo XIII raised him to the dignity of a Monsignor. He is one of Bishop McDonnell's Diocesan Consultors and holds the position of Defensor Matrimonii, is one of the Urban Deans and is a member of the Catholic School Board for Kings county.

Old St. Mary's.—We have seen that old St. Mary's Church (North Eighth and First streets), Williamsburg, was commenced in 1841 by Father James O'Donnell. It was an unpretentious wooden structure, but it was a start, and the Catholics of that day, for a long distance around, were wont to bury their dead in its immediate vicinity. The little church has long since disappeared, but the old tombstones stood for fifty years, and told the Catholics of a later generation who had been the founders of their parish. In 1890 they, too, disappeared, the dead were removed to Holy Cross cemetery and the ground has been devoted to business purposes.

The history of the old church, though brief, is not devoid of interest, because of the mighty tree that grew from this little mustard seed. It was dedicated in 1843 by Bishop Dubois and the sermon was preached by Father O'Donnell. On the same day a temperance society was established, the first in Brooklyn, by the Very Rev. Dr. Felix Varela, V. G., of New York. In 1844, just after his ordination, Rev. Sylvester Malone became the pastor. He found a debt of \$2,300—no small amount in those days—staring him in the face. His people, too, were scattered over a large extent of territory, for his parish extended to Hallett's Cove on the north, Myrtle avenue on the south, Middle Village on the east, and the East River on the west. Before the end of three years, by energy and trust in God, he secured not only the payment of this debt but the purchase of a site for a new church in a more eligible locality, "convenient for the Catholics of the Fourteenth as well as those of the Thirteenth ward, which were the only settled sections of Williamsburg" at that time. We have already referred to the corner-stone laying and dedication of this church on Sunday, May 8, 1848.

The years that followed were years of thought and suffering for the good pastor, and of anxiety to his people. In 1849 Father Malone fell a victim to that dreadful scourge, the small-pox, contracted while attending to his duties among the sick of his parish. Scarcely had he recovered when the cholera broke out among his people. It is needless to say that the good priest was at his post and that he again shared the maladies of his people as well as their troubles. Misfortunes never come alone, and hardly had he recovered from his second attack when the scourge of ship-fever fastened its grip upon him. St. Peter and St. Paul must have prayed and prayed hard that he might be spared to his people, for Father Malone was permitted to live on to bless a flock by whom he was revered. He held as warm a place in the hearts of non-Catholics as in the hearts of his own people. In 1854 he

went to Rome to be present at the definition of the dogma of the Immaculate Conception. During his absence the anti-Catholic prejudice that had manifested itself in the burning of churches in Philadelphia and elsewhere, and in the destruction of the Orphan Asylum in Boston, reached Williamsburg and threatened Father Malone's church. As the Know-Nothing rioters advanced they were met at the church door by Mayor Wall (a non-Catholic), who declared that he would protect the church of his absent friend if it cost him his life. The church was saved and stands to-day as a noble monument of charity and good will among men.

Father Malone was noted for his devotion to the American flag, and he was honored before his death by being made a member of the Board of Regents of the University of the State of New York. He died, universally regretted, on Dec. 29, 1900.

St. Patrick's (Gowanus).—As far back as 1846, the Catholics of Gowanus and vicinity were attended by the clergy of other parishes as the opportunity offered. Father Peter McLaughlin gathered them together in a small wooden structure and organized a parish. The old church was replaced by a more suitable edifice in 1850. St. Patrick's Church at Fort Hamilton was built in 1849.

It was a long distance from old St. James' and the Church of the Assumption to Father Malone's church, in Williamsburg, and yet they were "adjoining parishes." The number of Catholics was growing in this long stretch of territory and they began to feel that there ought to be a church somewhere in the Wall-about region. The Catholic laymen of old St. James' had gathered together, subject to the Bishop, of course, and built a church and then waited until the Bishop could give them a priest. Why could not this be done again? There was a public house on the old Newtown road (now Flushing avenue), kept by a Mr. Markey, an Irish Catholic. Here, some time in the early forties, a number of Catholics were

went to meet and talk over their need of a church. They were earnest men and meant to do all in their power to meet that need. They agreed that each man should contribute a certain amount, and finding that they had every prospect of success they began to look about for a suitable lot. Their patron saint befriended them. A small frame Methodist meeting-house on Kent avenue, near Willoughby avenue, was purchased, with two lots of ground, from the trustees, for something like \$3,000. These happy sons of Ireland immediately set to work to make such alterations as would transform their new property into a Catholic church. This done, they petitioned Bishop Hughes to send them a pastor, but he had none to send them; yet, with the example of old St. James', the Mother of Churches in Brooklyn, set them twenty years before, they had learned to labor and to wait, until finally, in 1843, the Rev. Hugh Maguire, who had been laboring among the French Canadians of St. Lawrence county, was given them as pastor. Before six months had passed away he found it necessary to enlarge the old church. Later on a basement was added, in which he opened a school for the children of his growing congregation.

Ten years had passed away since the first meeting at Markey's "house of call," and the little mustard seed had been growing steadily Brooklyn no longer had to depend on New York for its priests. It had now a Bishop of its own, and his far-seeing eye was not long in telling him that a new and much larger church must be built at once. The corner-stone of the present beautiful edifice was laid on Nov. 5, 1854, and the new St. Patrick's Church was dedicated in 1856. The old church was turned into a school-house and was used as such for many years. Among its teachers may be mentioned Manly Tallo, Esq., for many years afterward editor of the Cleveland Catholic Universe, and Mr. John Gallagher, now (1901) principal of the Brooklyn Training School for Teachers. The old building in

time gave way to the splendid academy for boys, which was placed under care of the Franciscan Brothers. The girls were provided for in the large asylum back of the school and conducted by the Sisters of Mercy. After a pastorate of nineteen years Father Maguire was succeeded by Rev. P. C. Fagan (1862-1865), Rev. E. G. Fitzpatrick (1865-1872), and the present pastor (1901), the Rev. Thomas Taaffe.

"Father Thomas," as many of his people love to call him, was born at Dromard, County Longford, Ireland, in 1837. He made his ecclesiastical studies at the well known missionary college of All Hallows, where he was ordained in 1863. He came to this country immediately after his ordination and labored successfully at the church of St. Mary, Star of the Sea, and at Our Lady of Mercy, Brooklyn. It was while at the latter place that he gave evidence of that executive ability which pointed him out to Bishop Loughlin as the man who alone was able to lift St. Patrick's Church out of the financial difficulties in which it was involved.

Hardly had Father Taaffe put the church of Our Lady of Mercy on its feet and was justly entitled to a season of rest, when he was sent to face a debt of over \$70,000 at St. Patrick's. He had taken the vow of obedience to the will of his superiors, he had preached obedience to his people, and without a murmur he removed to his new field of labor. But before he could begin to cut down that debt he was obliged to put \$20,000 more on it! The parochial house was unfit for habitation; his congregation was growing and would require more priests to meet their wants. A suitable house must be provided, and that immediately. The work was undertaken, the house was built and two additional lots were purchased for school purposes; and what is better still, in a few years the church was out of debt. Arrangements were made for its solemn consecration as the crowning work of good Father Taaffe's labors and sacrifices. But before he

could accomplish that which was nearest to his heart, the Bishop ordered the purchase of additional lots and the erection of a school-house. Overwhelmed with disappointment, Father Taaffe set to work to do the work assigned to him. The school-house he erected is a credit to our city, and his parochial school is one of the best conducted in Brooklyn. He has, within a year, erected a splendidly equipped school for boys. The church has been renovated several times, and now the good pastor is struggling to get his church property out of debt once more.

New Church of the Holy Trinity.—We have spoken of the Church of the Holy Trinity, which Father Raffener had built on lots purchased with his own money, in 1841. The German Catholics of Williamsburg had been growing to such an extent that their old church had become too small to accommodate them, and on June 29, 1853, the Most Rev. Archbishop Hughes laid the corner-stone of a larger church, the Most Holy Trinity. Father Raffener labored here until 1861, when he went to his reward.

Few priests have done more for their people than good Father Raffener. He was born at Mals in the Tyrol, on December 26, 1785, and received in baptism the name of John Stephen. From his tenderest childhood he displayed these qualities of piety, firmness and perseverance which distinguished him in after life. His early manhood was not devoid of struggles. The agitated condition of his country, and the imprisonment of Pope Pius VII made him almost despair of reaching ordination. For a time he devoted himself to the practice of medicine with no little success, but his yearning for a life in which he might spend himself for the benefit of his fellow men grew stronger with his knowledge of the inner life of men. He resolved to resume his theological studies at his old home in Tyrol. On May 1, 1825, at the age of forty, he had the happiness of realizing his life-long desires by receiving the commission that enabled him

to minister to souls as well as bodies. He remained at Tyrol for seven years, acting as pastor of a church and chaplain to a hospital near by. About this time the church in America was calling for zealous missionaries to labor among her German population. The Rt. Rev. Dr. Fenwick, of Cincinnati, appealed to the Emperor of Austria, through his Vicar General, Father Rese (who subsequently became Bishop of Detroit), and the Leopoldine Association was formed. Its object was to assist foreign missions, and Father Raffeiner's missionary spirit was aroused by its work. He resolved to set out for America and devote his life to the propagation of the faith among the Germans who had settled first in Pennsylvania and later on spread into Ohio, then a comparatively new country, where church and priest were rarely seen. He arrived in New York on Jan. 1, 1833, with the intention of going to Cincinnati, where his friend, the Rev. Father Hemmi, afterwards Archbishop of Milwaukee, was laboring with great success. Bishop Dubois received Father Raffeiner very warmly and pleaded with him on behalf of the Germans in and around New York, and finally prevailed upon him to remain in his diocese. From that time until the day of his death he devoted himself to the service of God and of his people. His countrymen were poor, but he managed to form a congregation of devoted men and women. He leased an old Baptist church at the corner of Pitt and Delancey streets and transformed it into a Catholic church. Next he purchased lots for a building of his own and soon laid the cornerstone of St. Nicholas' Church (Second Street). This was the first German Catholic Church in New York; it was dedicated on Easter Sunday, 1836.

But New York was not the only field to which Father Raffeiner devoted his labors. Bishop Fenwick, of Boston, invited him to his diocese and in a little while he was building churches there too. We cannot follow him through all his works: it will be enough here

to "summarize the record of Father Raffeiner's church buildings: 1850, St. Francis' Church, Bedford; 1853, St. Benedict's, New Brooklyn; 1853, St. Boniface's, Brooklyn; 1855, St. Mary's, Winfield; 1856, St. Fidelis', College Point; 1857, St. Boniface's, Foster Meadow; 1860, St. Michael's, East New York; and St. Margaret's, Middle Village. In addition to this, he founded the Orphan Asylum Society and introduced into the Diocese, from Ratisbon, the Dominican Sisters, committing to them the care of the school and of the orphans. * Father Raffeiner also extended the fruits of his labor to Buffalo, Syracuse and Patterson, so that at the time of his death he could point to thirty churches in the state of New York that owed their origin and prosperity in one way or another to his zeal and devotion. No wonder that Bishops Dubois and Hughes honored him with the appointment of Vicar General for the Germans, and Bishop Loughlin continued him in the same capacity for the new Diocese of Brooklyn. He died on July 16, 1861, in the arms of his devoted assistant, Rev. Michael May, who succeeded him as Pastor of the Church of the Holy Trinity.

Rev. Michael May was born at Waldkirch, Bavaria, June 2, 1826, and after taking a thorough ecclesiastical course was ordained on July 19, 1851. After eight years of service in his native land, he determined to come to this country and arrived in New York on March 2, 1859. Bishop Loughlin accepted his services and at once assigned him to do duty at the church of the Most Holy Trinity as assistant to Father Raffeiner, who was not long in discovering that Father May was *ein Priester nach dem Herten Gottes*, and that in him he would have a successor who would carry on the work of the parish as he had planned it. The care of the young, the orphan and the sick, commended itself to Father May, and his wisdom and prudence may be seen in the magnificent church he has reared to the service.

* John H. Haaren, in the Catholic Annual for 1895.

vice of God, a church costing some \$300,000; in the flourishing schools, with their 800 children; in the Orphan Asylum, with its four or five hundred inmates; in the hospital which has opened its doors to thousands of unfortunate men and women who have received the best ward and dispensary treatment that the latest discoveries in medical science can afford. Bishop Loughlin fully appreciated Father May's work by making him Vicar General, and shortly before his death Father May was honored by Pope Leo XIII with the dignity of a Monsignor. Father May died, universally regretted, on the 11th of February, 1895.

St. Charles' Borromeo.—If the Catholics in the Eastern District had been increasing in numbers and building churches in which they might practice the religion of their choice, their brethren in the Western District were not behind them. They, too, needed more church room. St. Paul's had become too far away from St. James', and the good Catholics in the intervening space must needs have a church of their own. Rt. Rev. Bishop Hughes had foreseen this and he soon organized a new parish, which he placed under the charge of the Rev. Charles Constantine Pise, D. D. Near the corner of Sydney Place and Livingston street stood the old Church of the Emmanuel, which the Episcopalians had built ten years before and which they were now anxious to sell. Doctor Pise bought it and on December 30, 1849, after having been remodeled and renovated, it was dedicated to the service of God, under the invocation of St. Charles Borromeo. There is an incident connected with the early history of this church which is not devoid of interest. It was here that the Rt. Rev. Levi Silliman Ives, Episcopal Bishop of North Carolina, ordained the Rev. Donald McLeod. Some years later Bishop and Minister met again in this same church, but the church had become a Catholic church, the Bishop had become a Catholic layman, and the minister had become a Catholic priest.

Rev. Charles Constantine Pise, D. D., was

born at Annapolis, Md., on Nov. 22, 1801. His father was a native of Italy and his mother was a Philadelphian. After completing his studies and graduating at Georgetown College, he began his novitiate as a Jesuit, and was sent to the Roman College of the Propaganda to pursue his theological studies. The death of his father compelled his return to his native country and his withdrawal from the Society of Jesus. Soon afterward he became professor of Rhetoric at Mount St. Mary's College, Emmittsburg, a position he held until 1825, when he was ordained by the Most Rev. Ambrose Marechal, Archbishop of Baltimore. After serving for some time as assistant at the Cathedral in Baltimore, he was assigned to St. Matthew's Church, Washington. While there his brilliant talents and courteous manners attracted the attention of Henry Clay, at whose instance he was unanimously elected Chaplain to the United States Senate. In 1832 Dr. Pise visited the Eternal City, and while there passed a splendid public examination at the College of the Sapienza, earned the degree of Doctor of Divinity, and received the ring and other insignia of his office at the hands of His Holiness, Pope Gregory XVI. His writings merited for him the Cross and Spur and the title of Knight of the Holy Roman Empire. In 1838 he again visited Europe and he described his wanderings through Ireland in his *Horae l'agabundae*. Bishop Dubois invited him to New York and soon made him rector of St. Joseph's Church. He was afterwards transferred to old St. Peter's, and from there to the Church of St. Charles Borromeo, Brooklyn, where he labored until his death, in May, 1866. Few men, if any, have done as much work for Catholic literature as Dr. Pise. In 1830, while in Baltimore, he was editor of the Metropolitan, the first Catholic Magazine published in this country. In 1842 he was associated with Very Rev. Felix Varela, D. D., in the publication of the Catholic Expositor, of New York, a magazine of great merit. Besides his maga-

zine work, Dr. Pise wrote a "*History of the Church*," "*Father Rowland*," a novel; "*Alcithia*," "*St. Ignatius and His Companions*," "*Christianity and the Church*," "*Indian Cottage*," "*Letters to Ada*," "*Pleasures of Religion*," "*Zenosius, or the Pilgrim Convert*," "*The Acts of the Apostles*," in verse. Among his masterly translations may be mentioned De Maistre's Soirees in St. Petersburg and Hymns from the Roman Breviary. His poetical writings are numerous and full of genius.

In manners Dr. Pise was always courteous and refined, and in his many controversies he never forgot that he was a gentleman; hence he never made enemies of his opponents. He was passionately fond of music and painting; and his choir and the decorations of his church evinced his fine taste.

In 1858 Dr. Pise established a parochial school, with over two hundred pupils. This school opened prosperously, but, difficulties arising, it became necessary to suspend it for a time. There is now a flourishing school of over 600 pupils. The girls are under the care of the Sisters of Charity and the boys under the Franciscan Brothers.

Dr. Pise, while Pastor of the Church of St. Charles Borromeo, had as his assistants the Rev. Joseph Fransioli (1857-59), Rev. David O'Mullane (1861), and Rev. Thomas F. McGivern (1865-66). Dr. Pise was succeeded by the Rev. Francis J. Freeland, D. D., one of the assistants at St. James' Cathedral. Dr. Freeland was born in Ireland, in 1840, and pursued his ecclesiastical studies at the famous Urban College of the Propaganda, in Rome. Like his predecessor, he was a gentleman of culture and fine tastes. He immediately applied himself with energy and good will to the continuance of the work of Dr. Pise. In December, 1866, he purchased seven lots, on Livingston street, for which he paid \$22,000. It was his intention to erect a larger and more imposing edifice than the one his congregation then occupied. This determination was hastened by an unexpected event. On the night of March 7,

1868, the church took fire from a defective flue, and, notwithstanding the most strenuous efforts of the firemen, the entire building with its valuable stock of church music, beautiful paintings, statues and costly furniture, was soon reduced to ashes. Dr. Freeland, at the risk of his life, rescued the Ciborium and its sacred contents, some other sacred vessels and some of the most valuable of the vestments. This fire was a sad blow to the people of St. Charles', but in less than three weeks after the disaster ground was broken for a splendid new church, of Philadelphia brick, with a frontage of seventy feet on Sydney Place, and a depth of one hundred and thirty feet on Livingston street. The corner-stone was laid in August, 1868. For eighteen years Dr. Freeland carried on the work entrusted to him. His new church continued to attract the elite of the city, but the poor were never neglected. Dr. Freeland also looked after the education of the children of his parish, and, as has always been stated, he placed his parochial school on a firm and flourishing basis. He was also particularly devoted to the poor sailors at the Navy Yard, and at a time, too, when they had no Catholic chaplain. He devoted a great portion of his time to their service and later on became the first Catholic Chaplain at the Navy Yard, and a small chapel was built at his request. Dr. Freeland died on April 5, 1884.

The successor of Dr. Freeland was the Rev. Thomas F. Ward. He had been at St. Charles, since Feb. 20, 1875. Father Ward was born in St. James' parish, Brooklyn, on Christmas Day, 1843. He pursued his early studies under the Christian Brothers, and was one of the first pupils of old St. James' School. When a boy he often served the Bishop's Mass, and he was a model altar boy. Dr. Freeland became very much interested in him and advised him to study for the priesthood. In time young Ward entered St. Charles College, Ellicott City, Md. Having completed his studies he was ordained, the 20th of February, 1875, with the late Rev. Edward J. Smith, of Glen

Cove, by the Rt. Rev. Bishop Loughlin, and was immediately assigned to St. Charles. He proved so valuable an assistant to Dr. Freeland that on the death of the latter Father Ward was appointed to succeed him. He set to work at once to reduce the church debt, enlarged the school building and made needed improvements in other directions. With all his parochial work Father Ward found time to devote to literature, and in 1892 he published his "Thirty-two Instructions for the Month of May"—a translation from the French. His genial face will long be remembered, especially by the poor of the parish, who were especially dear to the good pastor. He died on October 21, 1898, and was succeeded by the Rev. James E. Bobier.

St. John's, the Evangelist.—St. John's Church (Gowanus), now Twenty-fifth street, near Fifth avenue, was opened in 1850 by the Rev. Peter McLoughlin, then of Fort Hamilton. The first Mass was said (1849) in the second story of Patrick O'Donnell's stable, which he kindly offered to Father McLoughlin until such time as he could build a church. Father McLoughlin soon secured three lots on Twenty-first street, upon which he erected an unpretentious frame church, 90 by 40 feet. In 1852 the tower was completed and other improvements were made. In this year, too, Father McLoughlin was transferred to Westchester county to build another church, and he was succeeded at St. John's by the Rev. John McKeon. This pastor turned his attention to the education of the children of his parish and built the first parochial school in that part of the city. It was a brick building, 25 by 60 feet, but ample for his needs at that time. Father McKeon had been but three years at St. John's, when he was transferred to another mission. He died in 1857. His successor (1855) was the Rev. Patrick McGovern, who might well be called a patriotic priest. When the Civil War broke out Father McGovern was not slow in telling the men of his flock their duty to their country. The New York Cavalry

was organized in his parish, and before setting out for the front the men attended Mass and received Holy Communion. In 1862 Father McGovern was transferred to St. Paul's. Rev. Hugh McGuire became the next Pastor of St. John's. He was a man full of years and service, but he labored on until May, 1867, when the Bishop sent him an assistant in the person of the Rev. Peter Daly, who died the following year. He was succeeded by the Rev. John McGuire. These two namesakes worked with no little success; they enlarged and improved the church in 1872, so as to accommodate some 1,300 persons.

Father Hugh died in 1872 and Father John acted as Pastor until March, 1873, when the Rev. James O'Beirne, one of the pioneer priests of Brooklyn, became Pastor. Born in Ireland, he made his ecclesiastical studies at Maynooth College, where he was ordained in 1852. He at once came to New York, and while laboring in that diocese became acquainted with the future Bishop of Brooklyn. A warm friendship was formed between the two priests, which terminated only in death. When Bishop Loughlin came to Brooklyn Father O'Beirne volunteered for the new diocese and his services were readily accepted. He was appointed to Flushing, where he labored for twenty-one years. During that time he built St. Michael's Church. In 1864 he purchased the ground upon which the Convent and Academy of the Sisters of St. Joseph now stands. While at St. John's, Father O'Beirne erected a handsome parochial school, in 1885, and placed the girls' department under the care of the Sisters of St. Joseph, and the boys' under the Franciscan Brothers. Father O'Beirne died, universally regretted, in 1888, and was succeeded by the Rev. Bernard J. McHugh, formerly of the Church of the Holy Cross, Flatbush.

St. Benedict's.—In 1852 eight German Catholic families settled in what was then known as New Brooklyn, which district lay between Bedford and East New York. They were poor but industrious people, thrifty withal, and

anxious to secure homes for their growing families while property was cheap. But the faith they had brought with them from their fatherland still burned in their bosoms and they were anxious to transmit it to their children. Hence the long journeys on foot they were required to take on Sundays to attend Mass, either at St. Francis', in Putnam avenue, near Bedford avenue, or to Holy Trinity, in Williamsburg, where good old Father Raf-feiner was still Pastor, were too long for the aged and the sick. These good people resolved to have a church of their own. They had little money but they had willing hands; and, having secured a suitable lot on Herkimer street, near Ralph avenue, ground was soon broken and a small frame building, 60 feet by 30 feet, was erected. Those who could not contribute money were ready to contribute a day or two of labor every week to the work. The church was ready for occupancy in March, 1852, and was attended for a time by the priests from St. Francis' or from Holy Trinity. In January, 1853, Bishop Dubois, of New York, sent the Rev. Maurus Ramsauer, O. S. B., to take charge of this parish. He did not remain long, however, and was succeeded by Father Peter Hartlaub, who remained only a few months. The next Pastor was Rev. Bonaventure Keller, who remained identified with St. Benedict's for over three years. On October 25, 1857, Bishop Loughlin sent the Rev. Aloys Enders to St. Benedict's, but after a stay of thirteen months he sought missionary work in the West. The next Pastor, the Rev. James Tuboly, came in December, 1858, and remained nearly two years. He was succeeded in October, 1860, by Rev. Father Peine, who also attended St. Francis'. Ill health forced him, after a few months, to give up his charge, and in May, 1861, the Rev. Franz Sales Klosterbauer became Pastor.

Up to this time little was done except to look after the immediate needs of the people, and an effort to give the children the rudiments of an education. Father Klosterbauer

remained at St. Benedict's for twelve years, during which time the little congregation outgrew the original frame church and the children were clamoring for increased accommodations. Father Klosterbauer determined to build a new church, but he did not remain long enough to realize his hopes. His successor, however, the Rev. M. Kochren, arriving May 25, 1873, carried out his plans, and the present beautiful St. Benedict's owes its commencement and completion to Father Kochren. The new church, 137 feet long by 65 feet wide, is built of brick, with slate roof, and surmounted by a tower 130 feet high. It faces Fulton street. The old church on Herkimer street was immediately altered, made two stories high, and was given over to the school. Father Kochren also erected a commodious brick pastoral residence. He remained at St. Benedict's until September, 1875, and died not long afterwards. His successor, Rev. Francis Duermayer, remained only until January, 1876, when Rev. Henry J. Zimmer became Pastor. Before the year was out, however, he was ordered to St. Patrick's Church, Kent avenue, and was subsequently transferred from there to Far Rockaway, where he built a very beautiful church. On October 1, 1876, Rev. Ignatius Zeller came to St. Benedict's. He had been a Lutheran minister and became a Catholic under the instruction of the good Father Goetz. When he came to St. Benedict's he found a debt of over \$44,000 to be liquidated. During the ten years of his pastorate he reduced this debt to \$26,000, besides having built a new rectory. The old parochial residence he turned into a convent for the Sisters of Christian Charity, from Wilkesbarre, to whom he gave charge of his school, in 1881. Father Zeller resigned in January, 1886, as he desired to see the parish in the hands of a younger man. He went to Jamaica and built a new church for his countrymen there.

The next Pastor was the Rev. John M. Hanselmann, who assumed charge of St. Benedict's on July 3, 1886. He is one of four

brothers who have devoted their lives to the service of God at the altar. He was born on Aug. 5, 1854, in Holy Trinity parish, made his studies in Montreal, and was ordained on December 21, 1878. His first work was under good Father May, whose assistant he was until January 13, 1880, when he became chaplain of St. Catherine's Hospital. Here he exhibited the true vocation of the priest. It is related that he made 234 converts and administered the last Sacraments to over 1,500 patients. Father Hanselmann is one of the live priests of the diocese. He is quick to see necessities and to devise the means of meeting them. He took what was scarce. Father Zeller had made great ef-charge of St. Benedict's at a time when money forts to rid his church of debt, and Father Hanselmann found people willing to do all they could, and who had done great things with the little they had. The Rev. Father Hanselmann realized all this, but he must needs carry on the good work of his predecessor. He at once set to work to decorate the interior of his church; he put in beautiful stained-glass windows, and new Stations of the Cross; he organized societies of men and women, and excited his people to a holy life. In 1893 he began the erection of a new school on the north side of Herkimer street. It has a frontage of 67 feet and a depth of 55 feet, with a height of 70 feet from the court level, embracing three stories. The walls are of brick and terra cotta, with cornices of copper and galvanized iron, and the entire building is heated by steam. It is attended by some 300 children, under the care of six Sisters of Christian Charity. St. Benedict's Church property is now estimated to be worth \$130,000, with a debt of a little over \$20,000. Father Hanselmann is assisted by Rev. George M. Schaaf and Rev. Jacob A. Kunz. The present number of parishioners is estimated at 1,800.

St. Joseph's Church, on Pacific street, near Vanderbilt avenue, was founded in 1853, by the Rev. Patrick O'Neill. When it was decided to form a new parish in this part of the city,

a meeting of the Catholics in the vicinity was called to see what could be done. The people were not rich but they were ready to do what they could. Fifty families contributed \$500, and an equal amount was contributed by Messrs. Charles and Edward Harvey. With the amount thus secured ground was bought and a small brick church was erected in Pacific street, in which Mass was first said by Father Cassidy in April, 1853. It was not until October of that year that Father O'Neill took charge of the parish. Like Father O'Beirne, he had followed Bishop Loughlin from New York, and for nearly nine years he labored at St. Joseph's. He soon built a larger church, and in its tower was placed the first clock that proclaimed the hour from a Catholic church in the city of Brooklyn. In 1857 Father O'Neill established a school, which was attended by some 200 pupils, under the care of Mr. and Mrs. Garvey. This worthy couple continued to teach in St. Joseph's school until the advent of the Franciscan Brothers, in 1859. This was the first school in Brooklyn to have the Franciscan Brothers. In February, 1864, the Rev. Edward Corcoran became Father O'Neill's assistant. These two worthy priests worked together until September, 1867, when Father O'Neill was called to his heavenly reward. It devolved upon Father Corcoran to continue the work.

Father Corcoran was born Sept. 4, 1836, in the County Westmeath, Ireland, and was ordained at All Hallows College, Dublin, in June, 1863. He at once volunteered for the American missions, and on being adopted by Bishop Loughlin was assigned as assistant at the Church of the Immaculate Conception. After a service of seven months Father Corcoran was transferred to St. Joseph's. His succession to the pastorate of this church was by no means a sinecure. The parish was growing; it had a debt of some \$30,000; and the children of the parish were clamoring for increased school accommodations. Father Corcoran was a man of order; everything he un-

dertook was done in a most systematic manner. It was not long before he began making necessary improvements upon the church; next he erected an academy and a large hall for literary purposes, and also enlarged the parish schools. This work the zealous Pastor kept up until his death. In a few years the church property was the admiration of passers-by. It was 300 feet wide and extended from street to street. The church, school academy and hall were surrounded by beautiful lawns ornamented with statues. Father Corcoran died in 1893, and was succeeded by the Rt. Rev. Mgr. P. J. McNamara, V. G.

We have, up to this date, dealt with church foundations commenced before the establishment of the Diocese of Brooklyn. We shall now enter upon the Diocesan period.

PART II.—THE DIOCESAN PERIOD.

BISHOP LOUGHLIN.

The second period in the history of Catholicity on Long Island begins with the year 1853, when it became organized into a Diocese. At that time Long Island had in all only twelve churches, eight of which were in Brooklyn proper, two in Williamsburg and two in remote parts of the island. There was but one institution of charity, and that was situated on the corner of Congress and Clinton Streets. It was an orphan asylum, the Congress Street wing being occupied by the boys and the Clinton Street wing by the girls. This structure was erected by the Roman Catholic Orphan Society, which was incorporated in 1836, for the purpose of receiving the legal transfer of a house on Jay Street from the Rev. Father Walsh, second pastor of St. James'. That house, which then had but two stories and a basement, was the first orphan asylum in Brooklyn. Later, another story was added, and an equally large building adjoined to it. This house, which was the episcopal residence for thirty-five years, is now used as the rectory of St. James' Cathedral.

The Diocese of Brooklyn was established by Pope Pius IX in 1853. It comprises the whole of Long Island, which a legend says was known to the early Catholic explorers (Gomez, 1525) as the Island of the Holy Apostles, because it is said that they discovered it on the feast of St. Peter and St. Paul. Surely no name could have been more appropriate than this latter, for it seemed to have been a forecast of that apostle "sent of God whose name was John," and who more than 300 years later was to be its first representative of St. Peter, Prince of the Apostles.

On the morning of October 18, 1840, three young men, classmates at old Mount St. Mary's, Emmittsburg, Maryland, knelt in old St. Patrick's Cathedral, New York, before the valiant Bishop Hughes, and received at his hands the grand commission that sent them forth to preach Christ and Him crucified. They were Edward O'Neil, Francis Coyle and John Loughlin. These young men, full of zeal and energy, had chosen "the better part" and devoted the rest of their lives to the service of God and of their fellow men at the altar. They "were set for the rise and fall of many." Father Coyle was assigned to the missions of Sandy Hill, Lansingburg and Waterford. Father O'Neil became Treasurer and Professor of Natural Philosophy at St. John's College, Fordham; while Father Loughlin was assigned to St. Patrick's Cathedral, Mulberry Street, New York, of which he became Rector in 1848. While attached to the Cathedral, he went for a time to Utica to assist the Rev. Father Quarter.

John Loughlin was born near Rostrevor, in the County Down, Ireland, on Dec. 20, 1817. When only six years of age he was brought to America by his parents, who settled in Albany. In due time he entered the Albany Academy, where he had for professor the distinguished Latinist, Dr. Bullion. At the age of fourteen young Loughlin was sent to a college in Chambly, near Montreal, where he acquired a knowledge of the French language. Three years later he returned to the United

RT. REV. JOHN LOUGHLIN, D. D.
FIRST BISHOP OF BROOKLYN.

States and entered Mount St. Mary's Seminary, at Emmittsburg, Md. Here his remarkable talents were soon discovered, and he was, while yet a theologian, made tutor in the classics. The faculty of the college at that time was composed of such men as William Henry Elder, now Archbishop of Cincinnati; Rev. Dr. John McCloskey, and Rev. John McCaffrey, D. D. Having completed his studies, the Rev. John Loughlin bade farewell to Alma Mater and repaired to New York to receive the Holy Order of Priesthood.

While laboring at St. Patrick's Cathedral, Father Loughlin had as his fellow assistants: Rev. John McCloskey, a distinguished son of Brooklyn, and the first American raised to the dignity of the Cardinalate; and Rev. James R. Bayley, the future bishop of Newark and later Archbishop of Baltimore. Father Loughlin was an indefatigable worker, and when Bishop Hughes was obliged to go to Rome in 1850 he appointed Father Loughlin Vicar General of New York. This appointment made him Administrator of the Diocese in the Bishop's absence. It was during this time that Father Loughlin gave evidence of that peculiar wisdom, prudence and administrative ability that characterized him through life. In 1849 we find Father Loughlin at the Seventh Provincial Council of Baltimore acting as Theologian to Bishop Hughes. He served in the same capacity at the First Plenary Council of Baltimore, in 1852, and, when the Fathers at this Council proposed the creation of several new Dioceses, among them the Diocese of Brooklyn, Pius IX approved of their designs. By an Apostolic Letter, dated July 29, 1853, the new Sees of Brooklyn, Newark and Burlington, Vermont, in the ecclesiastical province of New York, were erected. When it became necessary to make a choice of a ruler for the new See of Brooklyn, the eyes of the assembled Fathers fell upon the Vicar General of New York.

On October 30, 1853, old St. Patrick's Cathedral was thronged to witness a ceremony

that was very unusual in those days. Three worthy laborers in the vineyard of the Lord were to be elevated to the episcopate. They were Very Rev. John Loughlin, Vicar General of New York, for the new Diocese of Brooklyn; Very Rev. Louis de Goesbriand, Vicar General of the Diocese of Cleveland, for the new Diocese of Burlington, Vt., and the Rev. James Roosevelt Bayley, Secretary to Archbishop Hughes, for the new See of Newark, N. J. Bishop Bayley was promoted to the Archiepiscopal See of Baltimore in 1872 and died in 1877. Bishop de Groesbriand had been a missionary and co-laborer of Bishop Rappe, in Ohio, and on the elevation of the latter to the See of Cleveland became his Vicar General and was laboring in that capacity when the Bulls came making him Bishop of Burlington. He died full of years and good works on November 3, 1899. The Consecrator of these Bishops was the Most Rev. (afterwards Cardinal) Cajetan Bedini, Papal Nuncio to the Brazils, and, at that time, on a special mission to the United States. The consecration sermon was preached by Archbishop Hughes. It was a sermon to be remembered, and it made a deep impression upon the Catholics of Brooklyn, who rejoiced that they had now a Bishop of their own.

Bishop Loughlin lost no time in entering upon his new field of labor, and on November 9 his installation took place in old St. James', which he selected for his future Cathedral. It would be difficult to describe the joy that filled the hearts of his flock as they prepared to meet their future Shepherd.

The ceremonies over, the Bishop lost no time in familiarizing himself with the needs of his diocese and his unusual capacity for managing affairs soon showed him the means for reaching those needs. It is interesting to note that among the first churches the new Bishop blessed in his diocese was St. Patrick's Church, which he worked so hard to complete. He at once began the work which before long gained for him the name of "the great church builder

of America." He had a quickness in comprehending the necessary growth of his episcopal city, and his promptness for recognizing and securing eligible sites for new churches is something remarkable. We have seen how poor the church in Brooklyn was when he became its Bishop, yet, on the occasion of the celebration of his golden jubilee, in 1890, he had acquired church property to the amount of \$6,000,000. In the course of thirty-seven years he had built 120 churches and chapels, 93 parish schools, two colleges, nineteen select schools and academies, five hospitals, two homes for the aged, one home for newsboys, and lastly, as the crowning of them all, a magnificent seminary for the education of the priests of the Diocese.

Church of the Immaculate Conception.—His first official act as Bishop-elect may be said to have been the laying of the cornerstone of the church of the Immaculate Conception, at the corner of Maujer and Leonard Streets, on August 1, 1853. This church was commenced by the Rev. Peter McLoughlin, but his pastorate, like that of his successor, the Rev. Anthony Farrelly, lasted only one year. The church was a substantial brick building with stone foundation, and calculated to seat some 1,200 persons. Father Farrelly was succeeded by Rev. Andrew Bohan, who ministered to the wants of his people for more than ten years. Father Bohan became Pastor during the days of Know-Nothingism, and while he suffered affronts and insults from time to time his church was never attacked. Later on Father Bohan opened a parochial school in the basement of the church. During part of his pastorate Father Bohan was assisted by the Rev. John McKenna, who later on became the founder of the Church of Our Lady of Mercy. Father Bohan died in 1867. Rev. John Crimmins, who was Pastor from 1879 to 1883, made some improvements in the old church; and his successor, Rev. M. F. Murray, erected the present pastoral residence. The next Pastor was the Rev. James Taaffe,

brother of the Rev. Thomas Taaffe, of St. Patrick's Church. He took charge of the parish in 1888. Father James was born at Dromard, County Longford, Ireland, and completed his preparatory studies at Clongoes Ward College, where he graduated in 1872. His ecclesiastical studies were made in France, partly at the College of St. Marie, at Toulouse, and at the famous St. Sulpice, in Paris. He was ordained in 1878, and on his arrival in this country in 1879 was appointed as assistant at St. Patrick's. Here he labored with the zeal peculiar to his family, until his appointment as Pastor of the Church of the Immaculate Conception, in 1887. Father Taaffe's first care was the erection of an academy, which was in due time placed in charge of the Sisters of St. Joseph, who also teach in the parochial school. Father Taaffe also made a very material reduction in the church debt. His pastorate here was not very long, as he was in a short time to succeed the Rt. Rev. P. J. McNamara, as Pastor of Our Lady of Mercy. In less than a year afterwards, Father James Taaffe died of a cold contracted while in the discharge of his duties. The chief mourners at his funeral were those who knew him best—the poor of the parish. He was succeeded at the Church of the Immaculate Conception by the Rev. James F. Crowley, who on Sunday, December 29, 1901, burned the last mortgage (of \$40,000) against the church, and now rejoices in a church free from debt.

St. Boniface's.—In the same year, 1853, St. Thomas' Episcopal Church, Bridge Street, near Willoughby Street, was purchased by a new German Congregation and dedicated under the invocation of St. Bonifacius, on Jan. 29, 1854. Father Raffeiener, of Holy Trinity, who was at that time Vicar General for the Germans, saw the necessity for a new German parish, and, with the approbation of Bishop Loughlin, encouraged the work. The congregation was at once formed, and through the kindness of Father Schneller the basement of St. Paul's was placed at their disposal until

the new church was ready for occupation. The new church property was purchased for \$4,500, by a board of trustees, of which Mr. F. J. Glatzmayer was the leading spirit. The dedication was performed by Bishop Loughlin, and his sermon on this occasion was pronounced by the local papers as "of great power and deep reflection." The first Pastor was the Rev. Moritz Ramsauer. The congregation numbered about 200, and the children of the new parish were cared for in a school opened in the basement and taught by a lay teacher. It numbered fifty pupils. Father Ramsauer was succeeded by Father Bonaventura Keller, a Franciscan, but, his health failing, he resigned and joined the brethren of his order in Wisconsin. He was succeeded, in 1858, by Rev. Joseph Brunnemann, whose pastorate was very short. He in turn was succeeded by Rev. John G. Hummel, O. S. B., who administered to the affairs of the parish for five years.

In 1865 Rev. Michael J. Decker became Pastor of St. Bonifacius'. Born in Germany Father Decker came to America at a very early age. In time he became a teacher in the school connected with the Church of the Holy Trinity, and later on entered the theological seminary and was finally ordained by Bishop Loughlin. He was stationed for a time at St. James' pro-Cathedral. Father Decker was a man of business and was not long in seeing that the growth of his congregation made it necessary to build a new church. In 1867 he was able to purchase two lots on Duffield Street, between Willoughby and Myrtle Avenues. It is a pity that he was not able to see the realization of his hopes. His health broke down and he was obliged to seek a more congenial climate. He was, however, successful in securing the services of the Dominican Sisters to take charge of his parochial school. In 1868 Father W. Oberschneider took charge of the parish, but at the end of a year he went to St. Michael's Church, East New York, and Father F. Biffi became pastor of St. Boniface's. As

his name indicates, Father Biffi was of Italian extraction, but had been educated in one of the German cantons of Switzerland, and of course spoke German. During his short pastorate the work on the new church had been going on steadily, and the corner-stone was laid by Bishop Loughlin. Father Biffi soon went to Ohio, and was succeeded at St. Bonifacius' by the Rev. P. De Berge. This zealous priest came to Brooklyn with a reputation as a church builder, from Wisconsin. He completed the new church and had it dedicated in 1872. Father De Berge soon after purchased additional property for a convent and school for the Sisters of St. Dominic. After a successful pastorate of four years, Father De Berge (in 1875) returned to his native land, and after a short sojourn there came back to America and again sought the scenes of his early labors in Wisconsin and died, near Milwaukee. Father F. Schwarz attended to the parish for nearly a year, when he was assigned to other duties in the Diocese, and in 1877 Father J. B. Willman became Pastor. He soon tore down the old frame buildings on Willoughby Street and replaced them with substantial brick houses. One of these became the pastoral residence and the other is a school-house, on the upper floor of which is a large hall suitable for lectures, meetings and entertainments. The present Pastor (1901) is the Rev. George Feser.

Church of the Visitation.—The Church of the Visitation, on Verona Street, was founded in 1854, by the Rev. Timothy O'Farrell. It was a brick building of modest proportions and was replaced in 1880 by a very fine structure of blue-stone, seventy-five feet by ninety feet. This splendid church was finished during the pastorate of the Rev. John M. Kieley, and was dedicated in March, 1880, by Bishop Loughlin. Solemn Pontifical Mass was then celebrated by Bishop Corrigan, of Newark (now Archbishop of New York), and the sermon was preached by the Rt. Rev. J. F. Stranahan, D. D., Bishop of Harrisburg.

St. Anthony's Parish, Greenpoint, now Seventeenth Ward, Brooklyn, has an interesting history. Its foundation goes back to the early years of Bishop Loughlin's episcopate. The first Mass in this section was celebrated in 1853 at the house of a Mr. Rider. Prior to this the Catholics of Greenpoint were attended by Rev. Sylvester Malone, of the Church SS. Peter and Paul, Williamsburg. In 1855 the Rev. Joseph Brunnemann, O. S. F., said Mass in a hall at the corner of Franklin and Eagle Streets. Father Brunnemann was a native of Bavaria, and after his arrival in America labored for a time at Newark, Ohio. Later on he came to Brooklyn, and, having been accepted by Bishop Loughlin, was sent to take charge of the new church at Winfield, N. Y. From here he attended Greenpoint and said Mass at such places as were then available, one of which was a hall at the corner of Union Street (now Manhattan Avenue) and India Street. In 1856 Father Brunnemann purchased two lots on India Street, and on Dec. 21, of that year, Bishop Loughlin laid the corner-stone of a new church which was thenceforth to be known as the Church of St. Anthony of Padua. The church was dedicated in 1858. For sixteen years the Catholics of Greenpoint worshipped in this church, but it had now become too small to accommodate the rapidly growing congregation started by good Father Brunnemann while he was pastor of Winfield.

In 1858, the year of the dedication of the church, Bishop Loughlin sent Rev. John Brady to take charge of the parish. Father Brady was a man of energy; he had done service as Pastor of the Church of the Holy Trinity, Hartford, Conn.; and, after being adopted into the Diocese of Brooklyn, labored at the Church of Sts. Peter and Paul, under the Rev. Sylvester Malone. His first care was given to the education of the children of the parish, and before the year was out he had established a parochial school of some five hundred children. In the fall of 1859 a pas-

toral residence was purchased on Manhattan Avenue (or Union Avenue, as it was then called), not far from India Street. Here Father Brady resided until the day of his death, which occurred on March 4, 1872. He was succeeded by Rev. William Lane.

Bishop Loughlin, who seemed to have an eye on every lot in his diocese that was suitable for church purposes, seeing the growth of the Seventeenth Ward, purchased from Samuel J. Tilden a piece of ground on the east side of Manhattan Avenue, at the head of Milton Street. Here was to be built a group of buildings, church, school and pastoral residence, and an additional piece of ground was purchased from Mr. Edward Crawford. This gave the church property the full depth of the block extending from Manhattan Avenue to Leonard Street. In the meantime Father Brady had gone to his reward, and Father Lane took up the work. The corner-stone of a beautiful new church, a model of Gothic architecture 164 feet by 72 feet, was laid on August 24, 1873, and by March 8, 1874, the work on the new St. Anthony's had so far progressed that Bishop Loughlin had the happiness of celebrating the first Mass said within its walls, in the basement. On June 13, following, the feast of St. Anthony, the new church was dedicated, and to-day its graceful spire, the cross on which is 240 feet from the street below, may be seen even from the great metropolis across the river. In October following Father Lane moved into the new parochial residence adjoining the church.

Father Lane's pastorate was not without trials. He took the parish with a debt of \$10,000. The ground that he inherited from his predecessor had cost \$23,000, and only \$10,000 had been paid upon it. Then it became necessary to add more ground to the property, and the purchase had to be effected at the time, if it was to be made at all, and it was necessary that it should be made. Thus Father Lane found himself confronted with a debt of \$32,000 for ground alone. The church was now

commenced, but hardly had the contracts been given out when a commercial panic came upon Greenpoint. Oil works, sugar refineries and factories of various kinds were obliged to "shut down," and employees were placed on half time. Father Lane saw himself in sore straits. His church was half built; to stop would injure what had been done, if not destroy it altogether; to go meant additional burdens upon his people and renewed heart-aches and responsibilities upon himself. Young and vigorous and full of hope, he looked forward to more prosperous times in the near future, and he decided to complete the work. But church building, at best, is not a thing of joy. Father Lane struggled on heroically for six years, then, broken down in health and spirits, he applied to his Bishop for a removal, and was transferred to the Church of the Visitation. During his trials he did not forget the education of the children, and in September, 1875, he succeeded in obtaining four Sisters of St. Joseph to take charge of the school which, up to that time, had been conducted by lay teachers. These good Sisters were first domiciled in a small frame house on Manhattan avenue, and their school was the original St. Anthony's Church on India street.

Father Lane's successor was the Rev. Michael J. Murphy, who was transferred from the pastorate of the Church of St. Mary, Star of the Sea, at Far Rockaway, L. I., on October 1, 1879. Father Murphy was not in the most robust health when he assumed the pastorate of St. Anthony's. Financial difficulties stared him in the face; added to this was the work of busybodies who always know more than anyone else and whose loose tongues are always ready to make trouble. Misunderstandings, and wrong notions as to what was really being done to put the parish on a solvent basis, created distrust, and distrust tightens purse-strings. Father Murphy was greatly beloved by his people, the better element of whom helped him even beyond their means. But the good Pastor's health was failing, and finding

that the work in hand was beyond his strength he resigned his parish on January 27, 1883. Father Murphy's first assistant was the Rev. John Loughran, D. D.; and, as the Bishop was not disposed to appoint a new Pastor for St. Anthony's, Dr. Loughran took charge and administered to the wants of the people until July 22, 1884, when the Bishop sent one of his own household, the Rev. Patrick F. O'Hare, to lift St. Anthony's out of its difficulties.

Rev. Patrick Francis O'Hare was born near Newry, County Down, Ireland, February 17, 1848. He was brought to this country when only four years of age, his parents settling near old St. James', Brooklyn, and later on moving to New York. His early studies were made under the Christian Brothers in New York, and for one year in Ireland. In September, 1862, he entered St. Francis Xavier's College, in New York, from which he graduated with honor in 1868, and was accepted by Bishop Loughlin for service in the Diocese of Brooklyn. He immediately repaired to St. Mary's Seminary, Baltimore, to pursue his ecclesiastical studies under the Sulpitian Fathers. On March 19, 1872, he was ordained to the priesthood in old St. James' Cathedral by Bishop Loughlin. He said his first Mass and preached his first sermon at St. James' Church, New York City, at the invitation of his old friend, the Rev. Felix Farrelly. Bishop Loughlin formed a strong attachment for the young priest,—an attachment which lasted until the end of his life,—and he at once made him a member of his own household. Father O'Hare remained at old St. James', Jay street, for seven years. While here he attended the Catholic sailors and marines at the Navy Yard, for whom he said Mass Sunday after Sunday.

After the death of the Very Rev. J. F. Turner, and the transfer of the Rev. John M. Kiely to the Church of the Visitation, Father O'Hare became the senior assistant at the Cathedral, and thus came in more direct contact with the people than formerly. He soon gained the confidence of the parishioners, and

friendships were formed which terminated only in death. Bishop Loughlin rejoiced in the prudent and judicious career of his protege, and when the new Cathedral chapel, at the corner of Clermont and Greene avenues, was opened, on July 12, 1879, Father O'Hare was appointed its Rector. He immediately set to work organizing the new parish. He instituted societies for various purposes, put a suitable organ in the chapel, inaugurated a movement to establish a Purgatorial Society for the priests of the diocese, arranged for the placing of new and beautiful stained-glass windows in the Cathedral chapel, and was largely instrumental in starting the movement for the erection of the present episcopal residence.

On July 22, 1884, Father O'Hare, by order of his Bishop, severed his relations with St. John's Chapel and went to St. Anthony's Church, Greenpoint. His new post was not one to be envied, but he has made it so to-day, by his tact, perseverance and devotion. He found St. Anthony's overwhelmed with debt and almost under the Sheriff's hammer. He rescued it and made it one of the most prominent parishes in the diocese. One of his first cares after redeeming the church from its financial difficulties was the education of the children of the parish. The parish school had been held for some time in the old church on India street. Father O'Hare at once replaced it by a suitable two-story building capable of accommodating 700 pupils. But this was only a temporary arrangement, for he already contemplated the erection of a building capable of meeting the growing needs of his people. The church edifice was sorely in need of renovation, but the means for doing it were hard to get, especially after the many calls made upon the poor people and their generous response. But the good Pastor was not discouraged, and God sent him a way out of his trouble in the person of Mr. John Good, one of his former parishioners at St. John's Chapel. He offered to meet all the expenses of the renovation of the church and of a suitable organ for so fine a building. On Sunday, Jan. 24, 1885, the

renovated church was opened, and the people of St. Anthony's rejoiced in the good work in which they had taken a most creditable part. Bishop Loughlin, Bishop J. F. Shanahan, of Harrisburg, and a large number of the Brooklyn clergy took part in the ceremonies. In April, 1885, Father O'Hare purchased five lots adjoining the church property, and in these, in time, he erected a spacious parish hall, which later on gave place to a magnificent school building with a frontage of one hundred and fifty feet on Leonard street, and costing over \$60,000, exclusive of the ground.

Father O'Hare is a man of strong convictions, as evinced in his war upon the illicit liquor traffic, upon intemperance and upon the violation of the Sabbath day. His temperance society is one of the largest in the diocese, and his Holy Name Society one of the most exemplary. He has also found time to do good work in the field of controversy and of literature.

We cannot follow Father O'Hare's work at St. Anthony's in all its details. Suffice it to say that when he took charge of the parish in 1884 he had to face a debt of \$140,000. He not only reduced this debt to less than \$50,000, but he has increased the valuation of his property to \$350,000. He has built a new parochial residence, giving the old one to the Sisters of St. Joseph for an academy. He has more than once renovated the church, introduced magnificent stained-glass windows, erected costly marble altars, provided a chime of bells of great power and sweetness of tone, organized societies to meet every necessity of his people and tending to their spiritual and temporal welfare.

In March, 1897, Father O'Hare celebrated the twenty-sixth anniversary of his ordination. The occasion was, to his devoted people, one of great rejoicing. St. Anthony's stands out to-day as a lasting monument to the work of a devoted Pastor and to the generosity of a self-sacrificing flock. In June, 1901, he was honored with the degree of Doctor of Laws by Villanova College.

St. Peter's.—The corner-stone of St. Pe-

ter's Church, Hicks and Warren Streets, was laid by the Rt. Rev. Bishop Loughlin on Sept. 4, 1859. The task of building this church was entrusted to Rev. Joseph Fransioli, then an assistant to Rev. Dr. Pise, at the church of St. Charles Borromeo. Father Fransioli was born in the canton of Ticino, Switzerland, on November 30, 1817, and, after making his studies at two famous seminaries in Italy, was ordained, in 1840. He labored in Ticino for some time and afterwards became Director of the Government Normal School at Milan, where he did much to advance the cause of education. After a career of sixteen years of almost unbroken labor his health failed and he came to America and offered his services to Bishop Loughlin, who assigned him to the Church of St. Charles Borromeo, in December, 1856. He immediately set to work to master the English language, and such was his success in that direction that in three years (1859) he was entrusted with the formation of a new parish. The wisdom of the confidence placed in him by the Bishop is manifested today in the beautiful church, the flourishing schools with some 2,000 children, the kindergarten, the parish library, the splendid hospital, the public hall and the endless societies for old and young, for males and females, with which Father Fransioli's energy and foresight have adorned the parish.

After a pastorate of nearly a third of a century, during which he gained golden opinions from all who knew him, whether Catholics or Protestants, Father Fransioli passed to his eternal reward, in October, 1890, while the Catholics of Brooklyn were celebrating the golden jubilee of their honored Bishop. A grateful and loving congregation erected a magnificent monument to his memory, but his greatest monument will ever be the grand institutions he erected for the honor and glory of God, for the education of youth, and for the alleviation of human misery.

St. Ann's.—Hardly had St. Peter's been erected in South Brooklyn when it became

necessary to erect another church in the vicinity of old St. James'. On August 20, 1860, the Rev. Bartholomew Gleeson broke ground for the erection of St. Ann's church, at the corner of Front and Gold Streets. This ground was not obtained without some little trouble. The owner had decided objections to selling his property for the erection of a Catholic church, even when offered a good price for it. Other ground was available, but the Bishop had set his heart upon having this corner. The services of Mr. Henry Breslin, a business man of the neighborhood, was engaged to obtain the property, which he did, purchasing it at a very low figure, and at once conveyed it to the Bishop. The first Mass was celebrated in St. Anne's on Christmas day, 1860, but the dedication of the church did not take place until Sept. 8, 1861. St. Anne's is a brick building 130 feet by 60 feet, surmounted by a tower 135 feet high, and has a seating capacity of 1,100. In November, 1869, a parochial school was opened in the basement. In 1871 it became necessary to erect a separate school building, which was formally opened in September, 1872. This building will accommodate 1,000 pupils. The female department was placed in charge of the Sisters of St. Joseph, and the male department was entrusted to the Franciscan Brothers. Father Gleeson resigned in 1875 and was succeeded by Rev. J. J. McMeel, whose kindness and genial disposition is still held in grateful remembrance. He was assisted by Father James J. Durick, a gentleman who not only proved a valuable assistant to his pastor, but who took a great interest in the young men of the parish. On the death of Father McMeel, Father Durick succeeded to the pastorate of St. Anne's.

St. Vincent de Paul's.—In the Eastern District the English-speaking and the German Catholics were also increasing. The year 1863 saw the erection of two new churches, St. Vincent de Paul's, at North Sixth street near Fifth' under the pastoral care of the Rev. Bernard

McGorisk, and the German Church of the Annunciation, under the care of the Rev. John Hauptmann. A frame building on the corner of North Sixth Street had long been used by the Presbyterians of this vicinity as a house of worship, but they were now about to remove to a more suitable church in another part of the city. Father McGorisk secured the frame structure and dedicated it to St. Vincent de Paul. Father McGorisk labored in his little parish for six years and was succeeded by the Rev. David O'Mullane, who built a very handsome church. He was succeeded in 1872 by the Rev. Martin Carroll, the present Pastor. Father Carroll is a progressive priest, and everything about his parish proclaims it. Although his congregation is composed of hard-working people their generosity is above question. Father Carroll has had the church beautifully frescoed and decorated, and marble altars have taken the place of the original wooden ones. But the work dearest to his heart will ever stand as a monument to his zeal in the interest of the children of his parish. In 1873 Father Carroll transformed the old frame church into a parochial school—the first in the parish. It was fitted up so as to accommodate about 500 pupils, but this was only the initiatory step to what he saw he would need before many years. In 1885 he erected a magnificent school-house, one of the finest in the city, capable of accommodating from 1,500 to 1,800 pupils, and the schools of St. Vincent de Paul's are now in a flourishing condition and have an excellent reputation.

The Annunciation.—The German Church of the Annunciation was founded by the late Rt. Rev. Monsignor Michael May, in 1863. The building of the church was entrusted to the Rev. John Hauptmann, who administered to the people of this parish until 1891. The first Mass was celebrated at the northeast corner of North Fifth street and Havemeyer Street. Father Hauptmann labored earnestly and not without difficulties, for before he could see his way clear to accomplish his de-

sires he was obliged to meet a law suit involving a loss of \$15,000 to his struggling parish. Yet, in the face of all this, Father Hauptmann succeeded in doing a great work. In 1870 he replaced the old church by a handsome brick structure 125 by 50 feet, and made other improvements. In 1891 he was transferred to St. Aloysius' Church, and Rev. George Kaupert became Pastor. His first thought was the education of the children of his parish and in 1892 he erected a fine three-story school-house 88 feet by 50 feet, and when completed he placed it under the care of six Dominican Sisters. The school is now taught by fifteen Dominican Sisters.

St. Nicholas'.—Rt. Rev. Mgr. May inherited the church-building spirit of his illustrious predecessor, and the German Catholics of Brooklyn are indebted to him for the foundation of more than one parish for the accommodation of his fellow countrymen. In 1865 he founded the new church of St. Nicholas, at the corner of Olive and Powers streets. The first Mass was celebrated in the old church on May 14, 1866, by the Rev. Charles Peine, and from four to five hundred persons were present. Father Peine did good service here until 1877, when he was succeeded by Rev. John P. Hoffmann, who built a new church at the corner of Olive and Devoe streets and turned the old building into a school. The old church was 40 by 100 feet: the new edifice, a decided improvement upon the old one, is 70 feet by 140 feet. The school has some between five and six hundred pupils. There is also a Convent of Sisters of St. Dominic dedicated to St. Catherine of Sienna, erected in 1867 by Father Peine. Father Hoffmann has endeared himself to his people by his zeal and devotion to their welfare. He is assisted in his work by the Rev. John J. Bender.

St. John the Baptist's.—During Bishop Loughlin's episcopate the Diocese of Brooklyn had but two Congregations of priests within its limits. The first to come were the Lazarists, or Priests of the Congregation of the

Mission. In the spring of 1868 the Rev. Edward M. Smith, of that congregation, was sent by his superiors to Brooklyn to open a new field for the special work of his community. He was fortunate enough to secure an entire block of ground, bounded by Lewis, Stuyvesant and Willoughby avenues and Hart street. It was bought by Very Rev. Stephen V. Ryan, subsequently Bishop of Buffalo, but who was then Visitor of the Congregation of the Mission in the United States. There was a little cottage upon this ground and it was soon transformed into a community house. A room was fitted up as a chapel, and here, on July 12, 1868, the first Mass was celebrated, before a congregation of not more than twelve or fifteen persons. On the same day the corner-stone of the temporary wooden church was laid, by Bishop Loughlin. In the following year, 1869, the Bishop laid the corner-stone of the new College of St. John the Baptist, and in September, 1870, it was opened, under the presidency of the Rev. John T. Landry. Rev. J. Quigley succeeded Father Smith as Pastor of the church in 1868, but Father Smith returned in 1870 and resumed the pastorate, and continued in that capacity until 1874, when he went to La Salle, Illinois. On February 9, 1875, Father Landry resigned the presidency of the college and his unexpired term was filled out by the Rev. James A. Maloney. In September following the Rev. P. M. O'Regan became President and Father Maloney became Pastor of the church. Father Maloney was a man of more than ordinary ability and his pastorate was marked by a growth and prosperity that was most gratifying. In September, 1877, the Rev. A. J. Meyer became President of the college and he continued in that capacity until 1882, when he was appointed Bishop of Galveston, Texas. Father Meyer's ambition was to be a good Lazarist and to die a good son of St. Vincent de Paul. He pleaded with the Holy See to be excused from so great an honor, and among other excuses urged his failing sight. Rome accepted

his excuse, and after years of useful service to his congregation as President of St. Vincent's College at Los Angeles, California, and of Kenrick Seminary, St. Louis, Missouri, he died—as he wished—a good Lazarist.

In 1882 the Rev. Jeremiah A. Hartnett, C. M., became President of St. John's College and Pastor of the church. The congregation had outgrown the old frame church and the college had increased in the number of its pupils because its standard had been raised to meet the requirements of the times. A new church was needed, and on June 24, 1888, Bishop Loughlin laid the corner-stone of one of the largest and finest church edifices in the State. It is 208 feet long; nave, including side chapels, 85 feet; width of transept, 135 feet; depth of chancel, 50 feet; and height of ceiling from floor, 95 feet. The material used in the construction of the church is blue granite; the style of architecture is Roman, and the building was under roof before there was a cent of debt upon it.

The new St. John's was dedicated in May, 1894. The occasion was worthy of the splendid edifice. The dedication was performed by the Rt. Rev. Charles E. McDonnell, D. D., second Bishop of Brooklyn; the Solemn Pontifical Mass was celebrated by the Most Rev. William Henry Elder, D. D., Archbishop of Cincinnati, and the dedication sermon was preached by His Eminence James, Cardinal Gibbons, Archbishop of Baltimore. Rt. Rev. Stephen Vincent Ryan, D. D., Bishop of Buffalo, but who as Visitor of the Congregation of the Mission, had purchased the splendid church property years before, occupied a seat in the Sanctuary. It was a happy day for Father Hartnett, and he deserved it. But his work was not yet over, as we shall see further on.

Our Lady of Lourdes.—Besides the Lazarists the only congregation or community of priests allowed in Brooklyn up to this time were the Fathers of Mercy, or "*Peres de la Miserecorde*." They are a society of mission-

ary priests, founded in France in 1806 by Father Jean Baptiste Rauzan. In 1842 they came to the United States, and under their Superior, the venerated Father Annet Lafont, took charge of the French church of St. Vincent de Paul, in New York city. In 1873 they established themselves at No. 1575 Broadway, Brooklyn, where they secured a private house, which became their novitiate, parish church and parochial school. Mass was said in the parlors of this house until 1875, when a neat brick church, one hundred feet long by forty feet front, was erected and placed under the patronage of St. Francis de Sales. This congregation, under the direction of Father Leneuf and his successors, has grown quite rapidly. Considerable improvements were made by Very Rev. E. H. Porcile, the present Superior, and a year or two ago the original church was replaced by a very handsome structure dedicated to Our Lady of Lourdes. The Fathers of Mercy have a flourishing parochial school attended by over four hundred children, under the care of the Sisters of St. Joseph. The Fathers attend a number of out-missions and charitable institutions, besides giving missions in all parts of the country.

St. Francis'-in-the-Fields.—Reference has already been made to Rev. Father Raffener, justly styled the Apostle of the Germans. Like Bishop Loughlin, he was a great church-builder, but it is a question whether he ever erected a more quaint or a more interesting church than that of St. Francis, built in 1850 on Putnam avenue, near Bedford. This little two-story church stood about the middle of a fine lot, surrounded by a high board fence, with an entrance on Putnam avenue. A narrow flagstone path extended from this gate to a wooden staircase which led to the church proper in the second story. After the burning of the Brooklyn Theatre, in 1873, when all the public buildings were required to have unusual means of exit, this staircase was doubled, so that persons might reach the ground from a

landing at the church door by two staircases in place of one. The church was built of brick, with shingled roof, and was surmounted by a little, slender steeple, in which was a bell, the tones of which, if not as melodious as some of larger proportions, were dear to those who frequented St. Francis'. Rev. Maurus Ramsauer, O. S. B., was its first Pastor; he was succeeded in 1855 by Rev. Bonaventure Keller. In 1857 he became superior of a house of his order in Philadelphia and St. Francis' was attended from Holy Trinity until 1861, when Father Raffener died, and the church was closed for a time. In 1866 Rev. Nicholas Balleis, O. S. B., took charge and made it his home up to the time of his death, December 13, 1891.

Father Balleis was born at Salzburg, Austria, November 22, 1808, and was ordained November 17, 1831. In 1836 he came to this country, at the invitation of Bishop Kenrick, of Philadelphia. He was the first Benedictine that came to the United States. He labored for a time in Philadelphia, at the Church of the Holy Trinity, and afterwards in other parts of Pennsylvania, and later on in New York. In 1841 we find him in Newark, New Jersey, organizing St. Mary's parish. Here he remained for some years, and they were years of severe trial. On September 5, 1854, a mob of Orangemen attacked his church, looted it, and Father Balleis and his assistants barely escaped with their lives. Father Balleis repaired the church and then obtained permission from his superiors to separate himself from his order. He ministered for a time to the wants of the German Catholics in Elizabeth, Hoboken and elsewhere in New Jersey, settled in Brooklyn in 1866, and took charge of the little church "in the fields." Here he lived in comparative seclusion, in the lower part of the church building. His bed was for a long time a board stretched across two trunks. His sitting-room or reception room was monastic simplicity itself. His only luxury was his library, well stored with theo-

logical and miscellaneous works of the choicest kind, for Father Balleis was a man of more than ordinary ability. In the centre of the church was a little wooden stairway leading down into the good pastor's living rooms below. At the foot of these stairs was his confessional. The sanctuary was a model of neatness and of regard for the "decency of divine worship." The ornaments were not always of the richest kind, but they were the best he could afford. His sermons were always very practical and full of instruction. He would frequently have a number of books and periodicals brought to him while preaching, and he would read extracts from them on the practical questions of the day, and comment upon them.

The church was a "free church," that is, there were no pews rented. It was customary to take up a seat collection at the Credo and the usual collection at the Post Communion. Father Balleis rarely spoke of money, but sometimes he would venture a playful remark upon the "number of brass pennies that had been hoarded up to put into the collection box." On November 27, 1881, he celebrated the Golden Jubilee of his ordination, in a very quiet way in the little church, and he lived on ten years longer, doing good to all who came in contact with him. Father Balleis was a most lovable character, generous with the little he possessed, and considerate with everybody. He would baptize, hear confessions, and attend "sick calls," but he would not perform marriage ceremonies. The old-time custom of the men sitting on one side of the church and the women on the other was followed in this church. The grounds around the church were ample. On the Putnam avenue side a nicely kept lawn afforded the Pastor an abundant crop of hay, while the ground on the Jefferson street side was occupied by rows of grapevines, some of which crept up the side of the church and shaded the worshippers from the summer sun. From the grapes Father Balleis used to make his altar wine. For a quar-

ter of a century this good man was seen at the altar every morning with scrupulous regularity. Even in his old age he persisted in singing the late Mass and preaching on Sundays in spite of the long fast this duty imposed upon him. His health continued good until the last year of his life. He was loth to accept the assistance tendered him by his brother priests, but he was obliged to yield at last and avail himself of kind offices of the Fathers of Mercy. A short time before his death his Benedictine confreres came from Newark and persuaded him to return to his convent and die with his brethren. He consented and went to Newark, where, on December 13, 1891, in the eighty-third year of his age and the sixtieth of his priesthood, he "gave his better part to God and slept in peace." "St. Francis in the fields" did not survive its Pastor. The property on which it stood passed into the hands of the Sisters Adorers of the Precious Blood and their beautiful monastery now occupies the site of the quaint yet historic old St. Francis'.

Our Lady of Victories.—The new parish of St. John the Baptist had hardly been organized when within a fortnight another Catholic church, in an adjoining parish, was dedicated. On July 26, 1868, the new Church of Our Lady of Victories, on McDonough street, corner of Throop avenue, was opened for divine service, under the pastoral care of the Rev. Patrick Creighton. This edifice was built of wood, and four years later was turned into a school-house, as a new structure, in course of erection, was then so far completed as to be used for church purposes. This building is of granite and is one of the most imposing in the city. It fronts on Ralph avenue. The pastoral residence, a handsome brick building, adjoins the church, and is amply provided for the needs of the resident clergy. Father Creighton labored here faithfully for some years, until his advanced age induced the Bishop to assign him to a less arduous charge. He is now Rector of St. John's church, River-

head. He was succeeded by Rev. James J. Woods.

New Cathedral.—Bishop Loughlin, it has been said with truth, was a far-seeing man and at the same time a man of wonderful prudence. He foresaw the marvelous growth of the city of Brooklyn and also that of its Catholic population. A city of the importance which Brooklyn was fast attaining deserved a Cathedral worthy of itself, and in 1860 Bishop Loughlin began to look around for a location upon which to build his new Cathedral. He found it near the summit on the "Hill," and in one of the most aristocratic quarters of the city. The property purchased by the Bishop in 1860 extended 470 feet on Clermont avenue, 200 feet on Greene avenue, 470 feet on Vanderbilt avenue, and 200 feet on Lafayette avenue. The ground was owned by Maria Spader and Jeremiah V. Spader and Margaret, his wife, who, on November 1, sold it to John McCahill, of New York, for \$75,200, the property being guaranteed against nuisances by a covenant in the deed. Mr. McCahill gave a mortgage for \$50,000, which was paid in November, 1865, when he conveyed the property to Bishop Loughlin.

Three years later, on June 21, 1868, the cornerstone of the new edifice was laid with imposing ceremonies by the Bishop. The sermon was preached by Archbishop McCloskey, of New York. In his sermon, referring to the grandeur of the new Cathedral, he said the edifice "will stand as a monument to Catholic genius, Catholic architectural taste and skill, and to be, besides, looked upon, as it will be, as adding a newer beauty and another glory and another honor and another source of pride to what is already the renowned City of Churches." Bishop Bacon, one of the pioneer priests of Brooklyn, came from his Diocese of Portland to take part in the ceremonies, as did also the Rt. Rev. Francis P. McFarland, D. D., Bishop of Hartford; the Rt. Rev. John J. Conroy, D. D., Bishop of Albany; the Rt. Rev. John J. Williams, D. D., Bishop of Bos-

ton; and the Rt. Rev. James F. Wood, D. D., Bishop of Philadelphia. A large number of priests from this and neighboring Dioceses made the occasion memorable by their presence.

The new Cathedral is to be dedicated to Almighty God, under the invocation of the Immaculate Conception; the style of architecture is to be Renaissance-Gothic of the thirteenth century, revised by Pugin. The entire length will be 354 feet; extreme breadth at the transept, 180 feet; the largest chapel, St. John's, is 90 feet long and 40 feet wide; the whole frontage is 160 feet, the large towers at the front will be 50 feet square at the base and 350 feet high. The entire structure will be of blue granite. The building is far from completion, as work has been suspended for years, owing to the greater need of churches, schools and institutions. The prudence of the Bishop told him that his Cathedral could wait until the more urgent needs of his Diocese had been provided for, and among these were the sick and the orphans.

But the building was not left entirely unfinished. The end towards Green avenue will give an idea of what the Cathedral is to be. St. John's Chapel was opened in 1879. It is handsomely decorated with frescoes representing Scriptural scenes; the altar is of pure white marble and the body of the chapel is furnished with neatly carved walnut pews. The opening of this Chapel formed the nucleus of the congregation that will some day worship in the magnificent structure when completed. The architect, Mr. P. C. Keely, left his plans, almost completed, to his successor, and he was correct in claiming that no church edifice in the country will be equal to the Brooklyn Cathedral in completeness or beauty when it is finished. The lapse of time and changes in architectural taste may interfere with some of his original ideas, but the structure itself, when completed, will stand as a lasting monument to Brooklyn's first Bishop.

Our Lady of Mercy.—Up to 1869 there

was no Catholic church between St. Paul's and St. Patrick's. The Catholics of that section of the city were divided between St. Paul's and St. James,' but in 1869 a new parish was formed in Debevoise Place, near De Kalb avenue. It is true that as early as 1857 the Catholics of this vicinity assembled in an old oilcloth factory, under the pastoral care of the Rev. John McCarthy. Among the first Trustees of this church were Mr. Clarence Bradley and Mr. Thomas McCarty, father of the present Pastor of St. Augustine's. Though the beginnings of this parish were very humble, it did not fail to grow. Father McCarty was succeeded by the Rev. John McKenna, who ministered to his growing flock until 1868, when he went to Flushing. Before going, however, he began the erection of the present church of Our Lady of Mercy, the cornerstone of which was laid in September, 1867. It was finished by his successor, the Rev. Thomas Taaffe, and dedicated by the Rt. Rev. Bishop Loughlin, on February 7, 1869. The church is a modern Gothic structure, 70 feet by 128, and is ornamented by a handsome stained-glass window back of the altar. A school was started in Father McKenna's time, and in 1864 numbered 290 boys, under the Franciscan Brothers, and some 200 girls. The school, which is opposite the church, is built of brick and is three stories high, and the class-rooms are well lighted and well ventilated. Adjoining the school is a select academy under the care of Sisters of St. Joseph, who also have charge of some 300 girls in the parochial school. The present convent was built in 1890, by Father McNamara. Father Taaffe built the present pastoral residence and placed the church upon a solid basis, and was then called to rescue St. Patrick's church from its financial embarrassments. He was succeeded by the Rev. James J. McElroy. Father McElroy was not in very robust health and his pastorate was not of very long duration. At his death, in 1877, he was succeeded by the Rev. P. J. McNamara, who had already done

good service as an assistant at St. Joseph's and for three years as Pastor of St. Malachi's Church. Under each of these Pastors the church progressed, and in 1884 Father McNamara presented a financial statement which was highly creditable to the business methods of the Pastor and to the generosity of his people. On the death of Father Corcoran, Father McNamara, after a pastorate of seventeen years at Our Lady of Mercy, was transferred to St. Joseph's. From the time of his ordination in 1870 Father McNamara worked quietly but effectively. He visited the prisoner and carried consolation to the homes of mourning, whether of the rich or the poor. His Bishop, recognizing his abilities, appointed him Vicar General of the Diocese and the Holy Father, Pope Leo XIII, invested him with the dignity of a Monsignor. His fellow students of St. Francis Xavier's College, New York, showed their appreciation of his worth and of his elevation to the prelacy by making it the special feature of one of their annual celebrations. May he long live to continue the good work he has been doing so long and so faithfully.

St. Stephen's.—In 1866 a small frame church on Carroll street, now Hicks, was purchased from the Episcopalians by the Rev. O. J. Dorris and dedicated under the invocation of St. Stephen. In 1873 the Rev. E. J. O'Reilly began the erection of a new church at the corner of Summit and Hicks streets, on lots that had been purchased some years before, and in October, 1875, the new St. Stephen's was dedicated by Bishop Loughlin. This is a beautiful structure, surmounted by a magnificent spire, on the summit of which is a cross that may be seen far out upon the waters of New York Bay. In years gone by this cross was illuminated at night, and was a beacon to mariners entering the "bellissimo lago of San Germano," as the Catholic explorer, Verrazano, was wont to call our bay. The old church was turned into a school and placed under the care of the Sisters of Charity.

In 1890 the Rev. Michael T. Fallihy became Pastor of St. Stephen's. He continued the work of his predecessor until the time of his death, in 1898. He was succeeded by the Rev. J. H. Mitchell, LL. D. Father Mitchell was born at Astoria, Long Island, in October 10, 1853. He made his ecclesiastical studies in Montreal, and was ordained by Bishop Loughlin on December 22, 1877. Immediately after his ordination he was appointed assistant at old St. James' pro-Cathedral, where he labored for some years. In time he became Secretary to Bishop Loughlin and Chancellor of the Diocese. He was a great friend of the young men and did much to improve their mental and spiritual condition. They were quick to recognize his interest in them, and he was elected President of the Young Men's National Union, succeeding the Rt. Rev. Bishop Keane (now Archbishop of Dubuque) in that office. He was one of the founders of the Brooklyn Catholic Historical Society and was its Vice-President for some years. The Presidency was offered to him more than once, but he refused, insisting that that position should be held by a layman. He was, nevertheless, the leading spirit of that society and one of its most indefatigable workers. One of the last acts of his life was the arranging of a public meeting of the society. He was foremost in the movement which culminated in the erection of a bust of Peter Turner, one of Brooklyn's pioneer laymen, in front of St. James' pro-Cathedral, and as chairman of the Publication Committee was collecting matter for the first publication of the Historical Society.

Father Mitchell's pastorate at St. Stephen's, though full of promise, lasted only two or three months. His people had just come to know him and to appreciate his work when he caught cold, which developed into pneumonia and ended in his death on April 17, 1898. This was a sad blow to his parishioners and to the Catholics of Brooklyn in general, for no priest in the Diocese was better known

or more beloved. So great was the esteem in which he was held that his name was one of the three proposed for a successor to the Rt. Rev. Bishop Loughlin. The Catholics of Brooklyn were anxious to do something to show their appreciation of this good priest. The Brooklyn Catholic Historical Society inaugurated a movement to perpetuate his memory. Under the Presidency of the late Joseph W. Carroll, a union of the Catholic societies of the Diocese was effected and all joined together in raising a fund of \$5,000 to secure a scholarship, to be known as "the Rev. James H. Mitchell scholarship," in the Catholic University of America, at Washington, D. C. The Rt. Rev. Bishop McDonnell approved and encouraged the movement, and in time he had the happiness of sending a check to the Rt. Rev. Mgr. Thomas J. Conaty, D. D., President of the university, for a scholarship which was to be for the benefit of Brooklyn theological students, for all time. Had Father Mitchell been consulted in this matter he would not have desired otherwise. The first Mass of many a young and zealous priest will be offered up for the repose of good Father Mitchell long after those who knew him and loved him and who contributed to this fund shall have passed away and been forgotten.

Father Mitchell's successor was the Rev. Nicholas J. Doran, the present (1901) Pastor of St. Stephen's.

St. Louis.—In 1869, on July 18, Bishop Loughlin laid the corner-stone of a new church for the French-speaking Catholics of the Eastern District. This church was later on dedicated to God, under the patronage of St. Louis. The Pastor was the Rev. Jules Jollon, a gentleman who has done missionary service in Africa as well as in America, and who has been signally honored by the French Government. In 1889 Father Jollon removed his congregation from Marshall street to Ellery street near Nostrand avenue. Here a handsome frame church with parochial school and pastoral residence has been erected. The

church has a seating capacity of 1,700. The French element, which at one time was largely from Alsace and Lorraine, is gradually diminishing, and the bulk of the congregation is now composed of English-speaking people. Father Jollon's assistants are English-speaking priests and sermons are delivered, on Sundays, in French and in English.

St. Cecilia's.—In 1870 two new churches were started, one in the Eastern District under the invocation of St. Cecilia, and the other in the Western District dedicated to St. Augustine. The old St. Cecilia's, a small frame building, and the frame pastoral residence, were about as primitive as it was possible to make them. The congregation started as a mission of old St. Mary's. At first Mass was said in a hall on Herbert street, between North Henry and Monitor streets. Some 200 persons constituted the original congregation and prominent among these were William Clarkson, Patrick Doyle, Michael Dowd, M. Riley, Thomas Riley and J. McCabe. In 1870 a small frame church, 25 feet by 50 feet, was built by the Rev. Father John R. McDonald. Rev. Florence McCarthy was the first resident Pastor, in 1874, and he built a second church, also a frame structure, 35 feet by 85 feet. After a pastorate of ten years Father McCarthy was succeeded by the Rev. Michael Malone, in 1884. In the meantime the parish had been growing and the time was fast approaching when a third church would become necessary. Father Malone labored for four years to meet the needs of his people, and in 1888 he was transferred to another field of labor. His successor was the Rev. Edward J. McGoldrick.

Father McGoldrick is a native of Brooklyn and made his early studies in old St. James' school. Later on he went to Manhattan College, where he graduated with honor. Having decided to devote his life to the service of God, at the altar he offered himself to Bishop Loughlin, whose quick discernment not only led him to accept the young aspirant for holy orders but to send him to the American Col-

lege in Rome to make his ecclesiastical studies. At the completion of his theological course Father McGoldrick was ordained in Rome, and on his return to Brooklyn was assigned to assist Father Taaffe at St. Patrick's.

Here he labored until 1888, when he was appointed Pastor of St. Cecilia's. The position demanded a man of prudence and energy; there was a considerable debt to be paid and the erection of a new church was an imperative necessity. Bishop Loughlin made no mistake in the man he selected to undertake this work. Father McGoldrick at once made an appeal to his people, setting forth the needs of the parish, and the people responded with alacrity. In a short time the old debt was paid off, and on September 27, 1891, Bishop Loughlin laid the corner-stone of the new St. Cecilia's, a white marble structure, 90 feet by 165 feet, in the Romanesque style of architecture, and with a seating capacity of 1,400. The ceremonies attending the laying of the corner-stone were of an unusual character. The musical part was performed by the Beethoven Liederkrantz, Oriole Glee Club, and picked soloists from the various Catholic choirs of the city. After the ceremony of the laying of the corner-stone was over, a sermon was preached by the Rev. William J. Donovan, Rector of St. Anne's church, Hampton Junction, New Jersey. An address was also delivered by Governor Albert, of New Jersey, who was a lifelong friend of the Pastor. Immediately adjoining the church is a handsome three-story pastoral residence of the same material (Georgia marble) as the church. The new St. Cecilia's was dedicated in 1893, and the first Mass was celebrated by Most Rev. Francesco Satolli, D. D., at that time Apostolic Delegate to the United States. The church property is now valued at some \$250,000. In time Father McGoldrick expects to build a school that will accommodate the children of his 6,000 parishioners.

St. Augustine's.—The corner-stone of the original St. Augustine's church was laid in

November, 1870, by the Very Rev. J. F. Turner, then Vicar General of the Diocese of Brooklyn. The church was situated at the corner of Fifth avenue and Bergen street. Rev. Louis J. Rhatigan was its Pastor, and he had the happiness of seeing his church completed and dedicated in March, 1871. This church, though small, was amply sufficient to meet the wants of the Catholics in that part of the city in those days. But it was not long before the congregation began to grow very rapidly, and the congregation of fifteen or twenty persons who attended the first Mass said in the Pastor's residence, at No. 43 Prospect Place, now began to be compressed in the original church, which was 100 feet by 50 feet in dimensions. Then, too, the noisy surface cars and the projected elevated line made a change of site desirable. Father Rhatigan died on March 23, 1876, at the age of thirty-six, after a pastorate of only six years.

He was immediately succeeded by the Rev. Edward W. McCarty, the present (1901) Pastor. Father McCarty at once saw the needs of his parish. The church property—200 feet on Fifth avenue and 160 feet on Bergen street, and 100 feet on St. Mark's avenue, together with the old church and parochial house—were sold, for \$70,000, to the Brooklyn Elevated Railroad Company. A new site was purchased, 200 feet on Sixth avenue by 245 feet on Sterling Place, by 145 feet on Park Place, and on it the present magnificent building was erected, at a cost of about \$350,000. An evidence of Father McCarty's tact and prudence will be found in the fact that the church is now practicably free from debt, and plans are now on hand for the erection of a chapel, school house and rectory. Among the families that were interested in the early foundation of the parish may be mentioned Mr. James Rorke's and Mr. Michael Bennett's. The parish has also given the church two of its distinguished sons: The Very Rev. William L. O'Hara, A. M., President of Mount St.

Mary's College, Emmittsburg, Maryland; and the Rev. John L. Belford, the successor of the late Rev. Sylvester Malone, as Rector of the church of Sts. Peter and Paul. The present church was dedicated in 1892. It is a grand English Gothic structure, 166 feet by 75 feet, and is considered by many to be the finest church in the Diocese. Father McCarty is a gentleman of taste and refinement and this is evinced in the appointments and decorations of his church, which are of the finest quality and most artistic in design.

St. Leonard of Port Maurice.—The year 1871 saw the erection of two new churches, St. Leonard of Port Maurice, for the Germans, and the Church of the Sacred Heart. St. Leonard's is situated at Hamburg avenue and Jefferson street, and was erected during the pastorate of the Rev. John J. Raber. Father Raber was a far-sighted man and was not slow to realize that his young parish was destined to grow. He seized the opportunity that presented itself and secured nearly the whole square block bounded by Jefferson and Melrose streets and Hamburg avenue and DeKalb avenue. He built a church suitable to the needs of his day and made it especially attractive on account of the beautiful paintings which decorated its walls. He erected a school, attended by some 730 boys and girls, and placed it under the care of the Sisters of St. Dominic. Father Raber died in 1888 and was succeeded by Rev. Henry Francis Weitekamp. The parish had now grown to such an extent that Father Weitekamp required two assistants. At this time he had the Rev. F. M. Schneider and Rev. Peter Henn. It was not long before he began to feel that a new and larger church was necessary, and he made arrangements to meet these requirements. But before he was able to carry out his designs he was called to a better world. He died January 8, 1895, at the age of thirty-two years. Father Weitekamp was a native of Brooklyn and was ordained in 1886. It was reserved for Father George D. Sander to undertake the

work of the erection of the new church. Father Sander had been an assistant of the Rt. Rev. Mgr. May, at the church of the Holy Trinity, and had profited by the experience of his former pastor. In July, 1896, ground was broken for the new building, a grand commodious structure costing some \$200,000. Father Sander has had the satisfaction of reaping the reward of his labors. His school has also increased, so that in 1901 he had some 1,400 children under the care of twenty-four Sisters of St. Dominic. His assistants are Revs. Francis X. Bettinger and Hermann Luegel.

Church of the Sacred Heart.—The church of the Sacred Heart, Clermont avenue, near Park, was started in the old primary-school building on Vanderbilt avenue in 1871. Like many other churches in the city of Brooklyn, its beginning was very humble, but the mustard seed grew in time. It is a pity that Father McGivern, the first Pastor of the Church of the Sacred Heart, was obliged by ill health to give up his charge before he had the opportunity of maturing the plans he had made for the future; but, finding that the work before him was beyond his strength, he requested the Bishop to turn it over to another. Bishop Loughlin rarely, if ever, made mistakes in his selections of men to fill certain places. Rev. John A. McCullum was an energetic young priest who had been assisting Father Taaffe at St. Patrick's church for some four years, and Bishop Loughlin confided to him the task of developing and shaping the plans of Father McGivern. Father McCullum at once set to work to organize the new parish. His first effort was the holding of a fair, which proved to be one of the most successful ever held in the city. A magnificent new church was soon erected on Clermont avenue, near Park. By the side of the church was erected one of the most spacious and best equipped parochial schools in the city. Father McCullum was ably assisted in his work by the Rev. John F. Nash, who on the death of Fa-

ther McCullum, on December 31, 1887, succeeded to the pastorate of the Church of the Sacred Heart and completed the work which he and his predecessor had commenced.

Church of the Nativity.—The year 1871 gave still another church to the city of Brooklyn,—the Nativity of Our Blessed Lord,—at the corner of Classon avenue and Madison street. On October 1, 1871, Bishop Loughlin sent the Rev. Michael J. Moran to form a new parish between St. Joseph's and St. Patrick's. Father Moran was well known in the district in which he was to labor, having assisted Fathers Fagan and Fitzpatrick at St. Patrick's, Kent avenue, for several years. He also spent a year at Flatbush, and while at the latter place attended Parkville, where he built a little church for the few Catholics who then resided in that vicinity. On being sent to organize a new parish he secured a most advantageous site, and on the feast of St. Patrick, 1872, he said his first Mass in the new parish, in the present parochial residence. The number of attendants was small, reckoned by the dozens only, but a start had to be made. On the 19th of May Father Moran had the happiness of seeing the corner-stone of the present church laid, and on the 21st of October of the same year the church was solemnly dedicated to the Nativity of Our Blessed Lord. Its construction indicates that it is only a temporary structure which later on, when the times are propitious, will become a school and give way to a handsome church worthy of the neighborhood. In the meantime Father Moran has provided for the education of the children of the parish by the erection, in 1885, of a commodious school house, and about the same time he purchased a property adjoining his own and opened a convent and academy, which he placed under the care of the Sisters of St. Joseph. In 1888 Father Moran secured a valuable property at the southwest corner of Gates and Franklin avenues, which eventually will be used for educational purposes, but which in the meantime is used by the lit-

erary and benevolent societies of the parish as a meeting place.

Father Moran was ordained in old St. James' Pro-Cathedral, December 8, 1865, and on December 8, 1890, he had the happiness of celebrating his Silver Jubilee. His congregation of a few dozen that assembled in the old rectory nineteen years before have grown to 4,000; his Sunday-school numbers some 1,000 children; and his parochial school and academy are in a prosperous condition. Among the more prominent members of his parish may be mentioned the Hon. Felix Campbell, former member of Congress and an ex-School Commissioner, a gentleman who has done the Church and the State good service.

St. Bernard's.—In 1872 the Rev. John J. Ammann gathered together the Catholic Germans living in South Brooklyn and said Mass for them in Temperance Hall, on Hamilton avenue, and two years later he succeeded in obtaining a church which had been used by Baptists and which he dedicated to God under the invocation of the great St. Bernard. In 1891 the feast of St. Bernard was celebrated in this church, with great pomp and ceremony. The Pastor at that time, the Rev. M. N. Wagner, left nothing undone to make the occasion worthy of the great saint. Bishop Loughlin, of Brooklyn, presided, and the late Rt. Rev. Winand M. Wigger, D. D., Bishop of Newark, pontificated. The sermon was preached by the Rev. Father Bonaventure, O. S. F. In 1891 a four-story brick dwelling on Woodhull street near the rear of the church was purchased for a parish school. The school is now (1901) under the care of six Sisters of St. Dominic. The Pastor is the Rev. Joseph Traenkle.

St. Alphonsus.—While the Germans of South Brooklyn were organizing St. Bernard's their fellow countrymen in Greenpoint, under the guidance of the Rev. Wendelin Guhl, were laying the foundations of St. Alphonsus' church on Kent street, near Manhattan avenue. The church was a frame building, the corner-

stone of which was laid by Bishop Loughlin in March, 1873. It was dedicated on August 8, of the same year. The first Mass was said in a little frame building on the same lot, and the people assembled in it every Sunday until their new church was finished. The dimensions of the present church are 56x85 feet. In the rear of the church Father Guhl has a parochial school, opened in January, 1892, and taught by Sisters of Notre Dame. Father Guhl is a hard worker and his school is in a flourishing condition.

St. Michael's.—The year 1874 saw the foundation of four churches: St. Michael's, at Fourth avenue and Forty-second street; St. Casimir's (for the Poles), on Green avenue, near Adelphi street; St. Teresa's, on Classon avenue and Butler street; and the church of the Transfiguration, Marcy avenue and Hooper street.

St. Michael's congregation was first organized in a private house, No. 1047 Third avenue, by the Rev. Michael J. Hickey. The first Mass was attended by about twenty-five persons. Later on a church was built on Fourth avenue. Father Hickey was succeeded in 1875 by the Rev. Joseph P. O'Connell, D. D. (now Mgr. O'Connell), who on January 3, 1886, opened a fine school, 70 feet by 45 feet. In September of the same year he opened a convent for the Sisters of St. Joseph, who have charge of the school, which now numbers 500 pupils. On March 9, 1896, Rev. Henry A. Gallagher became Pastor of St. Michael's. He made some very important improvements and enlarged the church, so that its present dimensions are 92 feet by 45 feet. He is doing good work in the parish and is ably assisted by Rev. Joseph Smith and Rev. Edward F. McGolrick.

St. Teresa's.—The foundation of St. Teresa's church was a little more propitious. The Rev. Joseph McNamee was sent, in April, 1874, to organize a new parish in the sparsely settled neighborhood of Classon avenue and Butler street. He looked around for a build-

ing in which to say his first Mass. Like Father Hickey, of St. Michael's, he found a good Irishman who was ready to open his doors to the priest, so that on the 4th day of May, 1874, the nucleus of the new St. Teresa's parish—one hundred and fifty souls—assembled at the residence of Mr. D. Gallagher, No. 685 Butler street, to welcome their future Pastor and extend to him their hearty co-operation. On the same day ground was broken. The corner-stone of the present building, 76 feet by 125 feet, was laid on August 2, 1874. By the following January (1875) the building had progressed so far that Rt. Rev. Bishop Loughlin was able to open the basement for divine service, but the beautiful church was not entirely finished and dedicated until October 16, 1887. On September 1, 1883, Father McNamee opened a fine school house, 50 feet by 90 feet, which was taught by thirteen Sisters of St. Joseph and two lay teachers. In November, 1883, he opened a convent for the Sisters; so that St. Teresa's is now a thoroughly equipped parish. During his pastorate Father McNamee has been assisted by Rev. Laurence J. Guerin (October, 1876, to January, 1891), Rev. Hugh Cassidy (January, 1885, to January, 1886), Rev. John J. Crimmins (October, 1885, to November 7, 1899, when he died), Rev. Joseph McGurley (1891), and Rev. James A. Higgins and Rev. Philip T. Brady, his present assistants.

Church of the Transfiguration.—At the corner of Marcy avenue and Hooper street stands a beautiful structure of the Roman style of architecture and erected in honor of the Transfiguration of our Blessed Redeemer. To see that building now, few persons would believe that in 1874 one hundred and ten Catholics of the neighborhood assembled to hear Mass by the Rev. John Fagan, in a carpenter shop at No. 208 Hooper street, but such is the fact; and yet, did not the Divine Founder of the Holy Catholic Church begin life in the carpenter shop of his foster father, St. Joseph? Perhaps this coincidence may account for the

success that has attended this parish. In 1875 Father Fagan moved his congregation into a neat brick structure, 40 feet by 75 feet in dimensions, which was intended ultimately for a parochial school. Father Fagan died in 1878 and was succeeded by Rev. William J. Hill, the present pastor of St. Paul's. Before Father Hill had time to accustom himself to his surroundings his services were required to infuse new life into old Mount St. Mary's College, Emmittsburg, Maryland, and he did it.

In 1881 Rev. John M. Kiely assumed charge of the Church of the Transfiguration. He saw at once that the parish had outgrown the old brick church erected by Father Fagan, and he immediately set to work to build the present church, a magnificent structure, 140 feet by 73 feet, and made it one of the largest and handsomest churches in the city. He also built the large and commodious pastoral residence adjoining the church. Father Kiely died in 1899, deeply regretted by his flock.

The priests connected with the Church of the Transfiguration are as follows: Pastors—Revs. John Fagan, 1874-78; Rev. William J. Hill, 1878-81; Rev. John M. Kiely, 1881-1899; Rev. William J. Maguire, 1900-. The assistants were Revs. Denis Tivenan, E. W. Dullea, C. H. O'Dougherty, Walter Mansfield, Joseph Kilpatrick, Walter Power, Peter Quealey, John J. O'Neill and Jeremiah J. Heafey.

Church of the Holy Family.—In 1876 the Rev. James J. Hanselman erected a church for the Germans on Thirteenth street between Fourth and Fifth avenues, and dedicated it to the Holy Family. Some time afterward Father Hanselman erected a fine school, which he placed under the care of the Sisters of St. Dominic. It is now attended by some 200 pupils. The year 1877 was marked by the opening of St. John's Chapel, one of the chapels of the new Cathedral on Clermont avenue, and which has already been described.

St. Agnes'.—Three new churches were added to the city of Brooklyn in 1878. The most prominent of these was St. Agnes', un-

der the pastoral charge of the Rev. (now Mgr.) James Duffy. It began in a modest frame structure on Hoyt street, near Sackett street. The congregation then numbered about 600. The corner-stone of the new church was laid in the spring of 1881. It was a massive Gothic structure of brick, brown stone and polished marble, 180 feet by 90 feet. The windows, which were very fine, were made in Munich, and the grand organ was said to have cost \$20,000. In the summer of 1901 this beautiful church was struck by lightning and totally destroyed. This was a terrible blow to Mgr. Duffy and his people, but they have set to work to rebuild their church and in time a new St. Agnes' will rise from the ashes of the old one. Mgr. Duffy also erected a magnificent school building, which is attended by over 1,300 pupils, under the care of six Sisters of St. Joseph and sixteen lay teachers. Mgr. Duffy is assisted by Revs. James J. Flynn, Louis J. Sloame, Louis M. O. Blaber and John I. Whelan.

Church of the Holy Name.—The next house of worship, built in 1878, was the Church of the Holy Name. The Rev. Thomas J. O'Reilly in March of that year gathered together the first congregation in "McCann's stable," at the corner of Eighteenth street and Eleventh avenue. On August 11 of the same year Bishop Loughlin laid the corner-stone of a new church on the corner of Ninth and Prospect avenues, and Father O'Reilly had the happiness of seeing it dedicated on Christmas day of the same year. It is a neat brick edifice capable of seating a thousand people. In addition to this Father O'Reilly has provided for the education of the children of his parish by erecting a school that now accommodates some 500 children, under the care of the Sisters of St. Joseph. Father O'Reilly is still in charge of the parish and is assisted by Rev. John McEnroe.

Church of the Fourteen Holy Martyrs.—The Church of the Fourteen Holy Martyrs is another new edifice, erected for the Lithuan-

ians. It is situated at Central avenue and Covert street. The first Mass was said in a house on Central avenue and Cooper street; some twenty-five persons attended. Soon after a church, 40x60 feet, was built, and dedicated in 1878. The Rev. Bernard F. Kurz was its first Pastor and is still in charge. He has also a parochial school in the basement of the church, under the direction of the Sisters of St. Dominic.

St. Matthew's.—Rev. B. J. McHugh was commissioned to build St. Matthew's church on Utica avenue near the boulevard. A fine brick building was erected, which for a time answered the needs of both church and school. At length Father McGlinchey, who succeeded Father McHugh, erected a new church and also a school, which is conducted by the Sisters of St. Joseph. They have over 300 children under their charge. In March, 1901, Father McGlinchey celebrated his silver jubilee. He was ordained by Bishop Loughlin on March 11, 1876, and was immediately assigned to assist the late Father Corcoran, at St. Joseph's, and continued in that capacity for nine years. He was then appointed Pastor of St. John's church, Riverhead, Long Island, and after five years of hard service here was called to the pastorate of St. Matthew's, where he is still doing good work.

St. Bridgid's.—The parish of St. Bridgid, Linden street and St. Nicholas avenue, was formed in October, 1882, by the Rev. John McCloskey. The corner-stone of the new church was laid in June, 1883, and the church was dedicated on Christmas day of the same year. Father McCloskey died in 1893, and was succeeded by Rev. Michael A. Fitzgerald, who remained here until 1897, when he was placed in charge of St. Peter's church. His successor was the Rev. Thomas E. Carroll, the present (1901) Pastor, who is assisted by Rev. William F. Blaber and Rev. Frederick Wunch.

St. Ambrose's.—In the year 1883 the Rev. Daniel J. Sheehy, who had been for some years.

an assistant at St. Augustine's church, was directed to build a new church at the corner of DeKalb and Tompkins avenues. An old frame house stood upon this corner and here Father Sheehy said his first Mass for the little congregation that was soon to be placed under the patronage of St. Ambrose. Father Sheehy was a man of action and before a year had passed he had erected a neat frame church to be replaced in time by a larger and more pretentious edifice. He also erected a large and commodious pastoral residence in the rear of the church. Father Sheehy secured the large double house on DeKalb avenue, just below the church, and converted it into a flourishing academy under the care of the Sisters of St. Joseph: Sister Mary Augusta is in charge. Father Sheehy died February 4, 1895, at the age of forty-five years, in the full vigor of manhood and with great possibilities before him. He was succeeded by the Rev. J. J. Crowley, who had been for nearly a quarter of a century Pastor of St. Patrick's church, Huntington, Long Island. There is as yet no parochial school attached to St. Ambrose's church, but there is a rapidly growing Sunday-school, which now numbers over 600 children. The church property is valued at \$120,000.

St. Thomas Aquinas.—The Church of St. Thomas Aquinas has a history. It is the forty-seventh Catholic church in the city of Brooklyn. In the winter of 1884 the Rev. James Donohue was sent by Bishop Loughlin to organize a new parish in Gowanus. The wigwam on Ninth street, near Fifth avenue, which had been used by the Twenty-second Ward Democrats during the presidential campaign, was presented to Father Donohue by ex-County Clerk Delmar, and it was gratefully accepted and used for church purposes until Passion Sunday, 1886, when the first Mass was said in the basement of the new church. The corner-stone of the church had been laid June 28, 1885. The church property has a frontage of 200 feet on Fourth avenue and 100 feet on

Ninth street. The style of the church is foliated Gothic; the nave is 75 feet by 100 feet, the transept 37 by 78, and the apse 16 feet by 32 feet. The upper part of the structure is of Philadelphia brick, the interior is finished in hard wood. The windows are of stained glass, and the church will seat 1,400 persons. It was dedicated to the service of God on Sunday, May 16, 1887, by the Rt. Rev. Bishop Loughlin, who also preached on the occasion. Among the most prominent benefactors to the church are ex-County Clerk Delmar and his estimable wife, and Mrs. Daniel Gray.

St. Francis Xavier's.—The church of St. Francis Xavier, on Sixth avenue, corner of Carroll street, and of which the Rev. David J. Hickey is happily still the Pastor, was organized in 1886. Father Hickey had been for many years assistant Pastor at St. Augustine's church and in that time had acquired an experience that proved invaluable to him in the great task entrusted to him. He went to work at once, and on September 17, 1886, rented the house No. 243 Sixth avenue, and by the following Sunday he had fitted up the spacious parlors into a temporary chapel, and here two Masses were said for the new congregation which crowded into the parlors, the halls and the stairways. Father Hickey is a graduate of St. Francis Xavier's College, and he did not forget alma mater when he started his new church. He had commenced his studies under the care of the Apostle of the Indies and he took pleasure in placing the great work of his life under the patronage of that saint. Ten vacant lots on the opposite corner of the house just mentioned were secured for the needs of the new parish, and these lots were subsequently supplemented by five more on Carroll street. On October 3 Father Hickey with his own hands turned up the first spadeful of earth, and by Christmas he had the happiness of seeing the work in his new church so well advanced as to enable him to celebrate the birth of Christ within its walls.

Twelve hundred persons gathered in the basement to hear Mass "in their own church." Father Hickey did not feel that he could, at that time, build such a church as he desired, but he did build a very neat and substantial church of wood and iron that was adequate for the immediate wants of his people, and he is now erecting a more lasting building. The original church was ninety-two feet deep by fifty wide, with a sacristy 16 by 32 feet and a seating capacity of from 700 to 800. The new church will be an ornament to the city and will continue in spite of the vast improvements that have recently been made in that part of the city to merit the name of the "Gem of the Hill."

Father Hickey was born in Brooklyn and is now in the full vigor of manhood. He was for a long time an altar boy at the Church of the Assumption under good old Father Keegan. In 1872 he graduated from St. Francis Xavier's College, New York, and made his ecclesiastical studies at the Seminary of Our Lady of Angels, Suspension Bridge. He was ordained in 1876. His parish has grown from 900 souls to over 3,000. Besides the church he has built a fine rectory, and his people have generously seconded his efforts. Although he began in 1886 without a cent in hand, he had the happiness, on Sunday, June 28, 1896, of announcing that his parish, church house, academy and all, valued at \$150,000, were free from debts of any kind. This is a record of which one may feel proud. But Father Hickey's work is not yet done. He is now building a magnificent new church.

The Church of Our Lady of Good Counsel, on Madison street, was built in 1886 by the Rev. Eugene P. Mahony, formerly Chaplain at the Penitentiary. This building has since been replaced by a handsome new edifice on Putnam avenue, which was dedicated by Bishop Loughlin on Sunday, October 4, 1891. The building is of Norwegian granite, English Gothic in style, and is said to have cost some \$80,000. It is one of the most complete

churches of its size in the city of Brooklyn. The structure was erected under the immediate supervision of its Pastor, who did a great deal of the manual work himself while superintending the work of others. Besides the erection of his fine church, Father Mahony has provided ample school accommodations for over 300 boys under the care of the Franciscan Brothers, and nearly 400 girls under the care of the Sisters of St. Joseph. Father Mahony was a quiet, unobtrusive man, shunning notoriety, but always an indefatigable worker, as his church and school will testify. He died a victim to his devotion on January 26, 1901. As Father Belford said in his beautiful eulogy over the dead pastor, "No priest ever worked harder, and few priests have met and conquered difficulties so wisely and so well."

Church of the Presentation.—In 1887 the Rt. Rev. Bishop Loughlin sent the Rev. Hugh Hand to organize a new parish at the corner of Rockaway avenue and St. Mark's avenue. It was called in honor of the Presentation of the B. V. M. On April 7th of that year Father Hand assembled his people in Luhr's Hall, at the corner of East New York and Liberty avenues. Thirty persons attended his first Mass, prominent among whom were Mr. Thomas F. Ryan and Mr. Timothy Berckley. In a short time Father Hand erected a church building, which he enlarged and improved in 1896. The edifice is 112 feet by 36 feet, ample enough for the accommodation of the Catholics of a new district. Father Hand has been hampered in his work by the immigration into his parish of an element not calculated to make it attractive to English-speaking people; nevertheless, he has had the happiness of seeing his congregation grow from the thirty who attended his first Mass to one that now requires the ministrations of two priests. Father Hand is still a young man and has plans for the future which will be realized as soon as the means for so doing are placed at his disposal.

St. Nicholas'.—The Rev. John Hoffman

in 1886 built a new church for the German congregation in Bushwick. On July 4th of that year Bishop Loughlin laid the corner-stone of the new St. Nicholas'. Over 1,500 men from the different German Catholic societies in the city participated in the ceremonies. Father Hauber preached the sermon, in German. The edifice is 148x70 feet, is Gothic in style without transept, and accommodates 1,000 persons on the floor and 200 in the gallery. The complete cost of the church is estimated at \$100,000.

Our Lady of Sorrows.—The church of Our Lady of Sorrows, at the corner of Morgan avenue and Harrison Place, was founded for the Germans in 1890 by the Rev. John Willmann and Rev. John B. Zentgraf. Father Willmann remained only two or three weeks after the foundation of the parish, and its organization devolved upon Father Zentgraf. A two-story frame building, 40 feet by 60 feet, constituted the first house of worship, and about 300 persons attended the first Mass. In October, 1892, Father Zentgraf added forty feet to the length of the building and improved it, both interiorly and exteriorly. He also built a school, 40 feet by 100 feet, which is under the care of eight Sisters of St. Dominic, who teach 180 boys and 190 girls.

In 1893 Father Zentgraf, knowing how dearly Our Lady of Sorrows loved the friendless and the orphan, erected a fine brick Orphans' Home, 100 feet by 75 feet, four stories high, and supplied with all modern improvements, and placed it under the patronage of Our Mother of Sorrows. Here are lodged some three or four hundred boys and girls who are cared for by twenty-four Sisters of St. Dominic. Father Zentgraf continues to look after the interests of his church, school and asylum and is assisted in his work by Rev. Herman Mertens. His parishioners now number about 1,000 souls. Some 400 children attend Sunday-school.

The New Theological Seminary.—The year 1890 was also marked by the opening of

the New Theological Seminary of St. John. This building adjoins the College of St. John the Baptist, at the corner of Lewis avenue and Hart street. This building was designed by the clergy of the Diocese as a testimonial of their regard for their Bishop on the occasion of the Golden Jubilee of his priesthood. No personal gift would have found favor in his eyes. This the clergymen knew too well; they consequently decided to give their memorial in the form of a monument that would continue the good Bishop's work long after he had ceased "to fight the good fight." He had long cherished the idea of founding a diocesan seminary, and his devoted priests decided to cheer his heart by the realization of this desire. The Bishop selected the ground adjoining the college as the site for his future seminary, and while both clergymen and laity questioned the wisdom of building a seminary in the heart of the city, where the seminarians would be deprived of the out-door exercise so necessary to student life, yet this was no time for crossing the Bishop's deep-set purpose, and work was at once commenced. The Lazarist Fathers were to be the trainers of his future clergy and upon Father Hartnett fell the task of erecting the building. The corner-stone was laid on Sunday, September 29, 1889. The style of the building is Romanesque; it is built of brick, with terra-cotta and stone trimmings and is three stories high, with a Mansard roof. The Lewis avenue front is sixty feet in length and the depth on Hart street is one hundred and eighty-five feet. At the extremity of this wing is a beautiful chapel adorned with stained-glass windows and handsome frescoes, representing St. Thomas Aquinas and St. Catherine. The altar is of white marble and of beautiful design. Over the chapel is the Diocesan Library. The classrooms, dormitories, halls and refectory are large, well ventilated and finished in hard wood, and are all heated by steam. The seminary was opened in the fall of 1891.

Church of the Holy Rosary.—In June,

1889, Bishop Loughlin decided upon the formation of a new parish, to be placed under the patronage of the Holy Rosary, on Chamney street, between Stuyvesant street and Reid avenue. His choice for its Pastor fell upon Rev. Dominic Monteverde, then an assistant at the Church of St. John the Evangelist. Father Monteverde was a native of Italy, but his early childhood was passed with his parents in England. After deciding to devote his life to the service of God at the altar, he went to Ireland, where he made his ecclesiastical studies at the famous Seminary of All Hallows, near Dublin. After his ordination he labored for some years as a missionary in California and Nevada. While attending some mission among the mountains of Nevada he was thrown from his horse and sustained injuries from which he never fully recovered. He came to Brooklyn and offered his services to Bishop Loughlin. They were accepted and he was assigned to duty as an assistant at the Church of St. John the Evangelist.

In 1889 he was directed to build the Church of the Holy Rosary. He set to work at once to survey the ground and lay his plans. Having no residence of his own, he accepted the hospitality of Father Corcoran, at St. Joseph's rectory, and before many days secured a building at No. 1747 Fulton street, near Reid avenue. Here he gathered his first congregation and said his first Mass in this improvised chapel. A week later he purchased a piece of ground 100 feet square for \$9,000, and upon it he built the church that to-day owes its existence to his unceasing labors: and it required all his energies to accomplish what he did. His people were not numerous, nor were they blessed with this world's wealth. Father Monteverde had made friends while at St. John's, among whom was the good pastor, who was not slow in offering a helping hand to his former assistant. Father Monteverde appealed to the people of St. John's for help, and they responded most generously. The new house of worship was start-

ed, and on May 4, 1890, it was dedicated. The good Pastor was anxious that everything about his church should be worthy of the great object to which it was devoted. His ambition was to have a beautiful marble altar. He did not live to see his hopes realized, but the money he had secured for the purpose was used according to his desires by the Rev. M. J. Flynn, who was for a time acting Pastor after the death of Father Monteverde. The main altar, which is Gothic in style and very massive, was consecrated by Bishop McDonnell on April 24, 1897, the month after the death of Father Monteverde, which occurred in Baltimore on January 2, 1897. The present Pastor is Rev. James McEnroe.

Church of the Blessed Sacrament.—In February, 1891, Rev. Joseph E. McCoy, an assistant priest at St. Anthony's Church, Greenpoint, was sent by Bishop Loughlin to found a new parish in the Twenty-sixth Ward. Father McCoy set to work at once, gathered his flock in Pflalman's Hall, Atlantic avenue and Crescent street, said Mass for them, and announced his intention of building a church for their use. Later on he said Mass in the parlors of a pastoral residence he had been able to secure. In a little while Father McCoy purchased ground for a church, at a cost of \$5,000. This lot has a frontage of 125 feet on Market street and runs back 150 feet. On this lot, on July 19th, Bishop Loughlin laid the corner-stone of a frame church, 45 feet wide by 90 feet deep and 40 feet high. The design is Gothic, the foundation is of stone and brick and it has a seating capacity of over 600. On November 22 Father McCoy had the happiness of seeing his church dedicated by the Rt. Rev. Bishop Loughlin. This was the last of the many churches founded and dedicated by that venerable prelate. The occasion of the dedication was one of great joy to both Pastor and people. The interior of the church is beautifully decorated and the little congregation that had gathered in the parlors of the rectory has now grown to nearly a thousand. Father

McCoy at once invited the Augustinian Fathers to give a Mission in his new church, and thus enkindled a zeal for religion that burns as brightly to-day as when the church was opened.

St. Edward's.—In May, 1891, Bishop Loughlin sent the Rev. J. F. Mealia to establish a new parish at the corner of Canton and Division streets (now known as St. Edward's street and Leo place). It was to be formed from parts of St. James', Our Lady of Mercy and the Sacred Heart parishes. Father Mealia lost no time in beginning the work entrusted to him. A suitable site was secured, ground broken, and on September 13 Bishop Loughlin laid the corner-stone of the new St. Edward's Church. The ceremonies were attended by a vast concourse of people, who listened to the address of the bishop with the deepest attention. In the territory assigned to this parish there was an estimated Catholic population of 3,500 souls. On December 8, 1891, work on the new church had so far progressed that the basement was opened and mass has been said there ever since. The new church will be completed during the present year, 1901, and will be, architecturally considered, a very handsome building. This parish claims to be the last one founded by Bishop Loughlin. It is estimated that the church and pastoral residence will cost some \$100,000. The style of architecture of the church is Romanesque, with rounded front flanked by two towers. The building will be 124 feet long, with an average width of sixty-five feet, and will seat about 1,000 persons. The material used in construction is gray brick, trimmed with terra cotta. The roof is tiled with slate. The rectory will be built in the rear. Father Mealia is keeping the debt well in hand.

Our Lady of Angels.—The village of Bay Ridge, now a part of the borough of Brooklyn, was a long time without a church, and the Catholics of that region were obliged to go to St. Patrick's Church, Fort Hamilton, or to St. Michael's, at Fourth avenue and Forty-

second street, to hear mass on Sundays and on holy days of obligation. In 1890 Bishop Loughlin conceived the idea of establishing a new parish for their relief. The people were not blessed with much worldly wealth, and it was nearly a year before the bishop could see his way clear to make a beginning. In September, 1891, he sent the Rev. Martin J. Loftus, one of the assistant priests at St. John's Chapel, to set the work in motion. A lot of ground 100 feet by 120 feet was secured on Seventy-third street, near Third avenue, and \$1,700 was subscribed toward a building fund. Father Loftus made a visitation of the territory assigned to him, and he found some three or four hundred Catholics who were to form the nucleus of his future congregation. He got them together in an engine house in Sixty-seventh street, where on Sunday morning, September 20, he said two masses, one at eight o'clock and the other at ten o'clock. A meeting of the parishioners was held, and Mgr. M. J. McNamara was appointed temporary chairman. Collectors were appointed to go through the village and raise funds for the erection of a church. Good Bishop Loughlin gave the work his blessing, but before the corner-stone could be laid he had gone to give an account of his stewardship. In the meantime Father Loftus secured additional ground, and it was not long before the corner-stone of a beautiful church, to be placed under the patronage of Our Lady of Angels, was laid by Bishop Loughlin's successor.

The structure is in the Italian Romanesque style of architecture, of washed brick with terra cotta trimmings, and a basement of blue stone. The tower is eighty feet high and the interior affords a seating capacity for 600 or 700 persons. The church was dedicated by Bishop McDonnell, on Sunday, September 21, 1893. Adjoining the church is a neat and commodious rectory. When it is considered that all this was done inside of two years and by a congregation by no means rich, too much praise can not be given to both pastor and

people. To-day the church property is valued at \$60,000, three-fourths of which has been paid.

BISHOP LOUGHLIN'S JUBILEE.

On October 17, 1890, Rt. Rev. John Loughlin, D. D., celebrated the fiftieth anniversary of his priesthood. The people of the diocese of Brooklyn, over which he had presided as Bishop for thirty-seven years,—priests and laity,—determined to celebrate the occasion in a truly Catholic manner. The celebration throughout was religious in character, affectionate in feeling and edifying in results. It was not a mere display of adulation, which would have been deeply offensive to the retiring modesty of the great Bishop. It was the outburst of grateful souls; grateful to God for having given them so good a bishop, grateful to the Bishop for the impetus he had given to religion in his diocese. And this gratitude proclaimed itself in the spontaneity and magnitude of the celebration. It is estimated that no less than 10,000 persons were present at the Clermont Avenue Rink and its immediate surroundings on the night of that memorable 17th of October, 1890. On the stage beside the jubilarian were seated Cardinal Gibbons, Archbishop of Baltimore and Primate of the American Hierarchy; Archbishop M. A. Corrigan, of New York; Archbishop Elder, of Cincinnati; Bishops Conroy, McNierny, O'Farrell, Wadham, Ludden, Keane (now Archbishop of Dubuque), Ryan (of Alton), McQuaid and Wigger; Monsignor Farley (now Auxiliary Bishop of New York), McDonnell (the successor of Bishop Loughlin); Rev. D. E. Allen, President of Mt. St. Mary's College (Bishop Loughlin's *alma mater*) and representatives of religious orders, in and out of New York.

At the appointed hour Mr. James H. McMahon, chairman of the Central Committee, read the opening address. It was very brief, and expressed the love of the people of Brooklyn for their bishop. This was followed by congratulatory addresses by Mr. Edward J.

Dooley, of the St. James' Catholic Club, of Brooklyn; Mr. Thomas W. Hynes, of the St. Vincent de Paul Society; Mr. Edward Feeney, of the State Council of the Catholic Knights of America; Mr. John Greene, on behalf of the alumni of St. Francis' College; Mr. John C. McGuire, of the Catholic Benevolent Legion; and Major John D. Keiley, Jr., on behalf of the laity. Following these addresses Mr. Jacob Zimmer, Treasurer of the Jubilee Fund, came forward and presented the Bishop with a check for \$25,000, the offering of the different parishes of the diocese.

The Most Rev. M. A. Corrigan, D. D., Archbishop of New York, was the next speaker. He made a hasty review of the church in the last fifty years. At the time of Bishop Loughlin's consecration Brooklyn contained but two Catholic churches. "The diocese then embraced the State of New York and the greater part of the State of New Jersey. There were but sixty priests and fifty-four churches, in whose territory there are now over 1,000 priests, 1,500 churches and 1,500,000 Catholics." The Archbishop concluded with a justly eulogistic tribute to Bishop Loughlin, which was most heartily endorsed by His Eminence, Cardinal Gibbons. Bishop Loughlin's reply to all this was characteristically brief and characteristically modest: "I can not take to myself any of the glory that has been ascribed to my labors, for, inasmuch as we are in the hands of Almighty God, we must accord to Him all the glory; next, to the clergy of the diocese, who have manifested such untiring energy in the discharge of their duties. Wonderful, indeed, has been their work. Nor can the glorious religious communities be overlooked. What could we do without them? Nothing. To these and to the faithful laity, who have always joined with the clergy in their beneficent suggestions, and to whom God has given the dispositions as well as the means to carry out these suggestions,—to these, but above all to God the Father, be honor and praise and glory and ben-

ediction forever and ever." Thus ended the exercises at the rink, and the vast audience filed out to the strains of the "Star Spangled Banner."

On the following day, October 18th, took place the Ecclesiastical celebration. It was held in old St. James', which had been the Bishop's cathedral for so many years, around which clustered all the memories of his early episcopate and among the people who had been his direct parishioners for so many years. Is it any wonder that "old St. James' was decked out in holiday attire?" At ten o'clock the procession moved out of the quaint old building that adjoins what had been Bishop Loughlin's home for so many years, and which he left so reluctantly. The procession was headed by a Cross Bearer and Sanctuary Boys; next came the Franciscan and the Christian Brothers; these were followed by some 200 priests; next came the Very Rev. Presidents of Colleges and Seminaries; the Very Rev. Vicars General; the Rt. Rev. Monsignori; the Rt. Rev. Bishops, to the number of thirteen; and next to these four Archbishops. When these had taken their places, Solemn Pontifical Mass was celebrated by the Rt. Rev. John Loughlin, D. D., Bishop of Brooklyn, with Very Rev. Michael May, V. G., of Brooklyn, as Assistant Priest. The Deacons of Honor were Very Rev. A. L. Magnien, S. S., D. D., President of St. Mary's Seminary, Baltimore, and Very Rev. Edward P. Allen, D. D., President of Mount St. Mary's College, Emmittsburg, Maryland; Deacon of the Mass, Rev. Thomas Taaffe, Rector of St. Patrick's, Brooklyn; and Sub-deacon, Rev. Martin Carroll, Rector of the Church of St. Vincent de Paul, Brooklyn. The Masters of Ceremonies were the Revs. James H. Mitchell, Rev. J. A. Brosnan, Rev. J. J. McCarron, all of the Cathedral. The sermon was preached by His Eminence, Cardinal Gibbons, who took his text from St. Luke, x, 1-9. In speaking of the work of Bishop Loughlin His Eminence said:

"Do you ever reflect, my brethren, on the immense weight of monetary obligations that

has been resting all these years on the shoulders of your Bishop? During the last forty years, how many powerful corporations, how many princely merchants, who have been regarded as the Napoleons of finance, have been crushed beneath the ruins occasioned by some financial crisis! During all that time your Bishop has been in business transactions for religious and charitable purposes. The property he has accumulated has amounted to thousands and tens of thousands, and hundreds of thousands, and even millions of dollars. He has come out of the ordeal with clean hands and a clean heart, without a single note of his protested. Now, I ask you to consider what foresight and tact and sound judgment must have been displayed by your chief pastor in passing through these financial operations with so much credit to himself and so much honor to the diocese over which he presides."

At the conclusion of the Mass the Bishop sat on his throne and received the various congratulatory addresses that were presented to him. The first was the address from the clergy of the diocese of Brooklyn, which was read by the Rev. Father Sylvester Malone. He quoted the prophecy of the great Archbishop Hughes at the time of the nomination of Bishop Loughlin for the new See of Brooklyn: "I have in my household a priest full of Apostolic spirit, with the simplicity of life, fruit of the indwelling spirit of God. He, I hope, will be ordered to take up the all but barren soil of Long Island, and it will flourish and bring forth the 'golden rod' of faith, hope and charity. Under his active ministry and unbounded zeal my episcopal joy will be full, and a great compensation will be given me now, nearing the close of a most boisterous and stormy episcopal life." "Has the great departed," asked Father Malone, "been disappointed? Did he err when he threw the weight of his mighty influence at Rome into the nomination of the Very Rev. John Loughlin, for first Bishop of Brooklyn? We are all here, in your presence, to answer No."

After the reading of the addresses of the

Clergy, the Rev. Thomas Taafe, pastor of St. Patrick's Church, advanced toward the Bishop and presented him, in the name of the Clergy, with a beautifully illuminated check for \$12,000.

Addresses were delivered by Brother John Evangelist, on behalf of the Christian Brothers, of St. James' School; by the Rev. Brother Superior of the Franciscan Brothers; and by Mr. Edward Rorke, on behalf of the "Old St. St. James' Parishioners." Bishop Loughlin's reply was the same as he always made when people sought to glorify his work: "All our efforts amount to nothing unless aided by Almighty God. Unless the Lord build the house, they labor in vain that build it."

Later in the day the Clergy gave their Bishop a banquet in the Academy of Music. About 200 participated in the ovation. Through deference to the Bishop's wishes, there were no speeches made at the banquet. In the evening a grand torchlight procession took place, in which 50,000 men participated, under the command of General James McLeer and his efficient marshals. The procession consisted of five divisions, in which every city and suburban parish in the diocese was represented. Professional men walked beside the artisan and the humble sons of toil. All were ready to sink their differences in one grand demonstration of love and devotion to their common Father in God. It was nine o'clock before the head of the procession reached the reviewing stand, and it was two o'clock before many of the delegations broke ranks at their respective churches.

The third day of the celebration was devoted to the children's procession. The Bishop was a great lover of little children, and it was his desire that they should have a prominent part in this celebration. Every Sunday-school and parochial school in the city turned out its hundreds and thousands, except St. Peter's, whose devoted pastor, Father Fransioli, had gone to his reward on the previous day. The pageant of this procession was marred by a

heavy fall of rain; but all, from the poor little orphans, who as the brightest jewels in the Bishop's mitre were accorded the right of line, down to the last little "tot" that turned out that day in holiday attire, had a chance to pass the reviewing stand, even if many of them did go home hungry, wet and tired.

The fourth and last day of the celebration was marked by a grand banquet in the Academy of Music, in which 250 guests participated. Among the guests were His Eminence, Cardinal Gibbons; the Archbishops of New York, Cincinnati and St. Paul; the Bishops of Lincoln, Nebraska; Trenton, Albany, Buffalo, Burlington; Springfield, Ogdensburg, Syracuse, Duluth; Rt. Rev. Dr. John J. Keane, the President of the Catholic University of America; the Vicar General of Brooklyn; and many of the Clergy. Besides these were Mayor Chapin, Murat Halstead, Andrew McLean, and a large number of distinguished laymen, both Catholic and non-Catholic.

Every school, academy, college and religious institution in the diocese, and colleges and many ecclesiastical seminaries outside of the diocese, sent letters and telegrams of congratulation and good wishes to the great Bishop of Brooklyn. In many respects this celebration was one of the most remarkable ever witnessed in this country. True, celebrations have been held which commanded the interest of a greater number of people, but they were national in character and appealed to the patriotism or sympathies of our people as a nation. Bishop Loughlin's Jubilee was of a local character and concerned only the people of Brooklyn, but it was unprecedented in spontaneity, in good will, and on the part of Catholics it was a grateful appreciation of an unselfish and sacrificing life.

Whatever Bishop Loughlin's feelings may have been regarding all this, he continued doing the work of the Master in the same quiet, unostentatious manner that had characterized his whole life. The money offerings he received on this occasion soon found their

RT. REV. CHARLES E. McDONNELL.

SECOND BISHOP OF BROOKLYN.

way to needy charities, so that, when Bishop Loughlin laid down the crozier he had so wisely and prudently wielded for so many years, his personal property was little more than that of the poorest of his flock. He left to his heirs,—his clergy and people,—a legacy of nearly one hundred churches and chapels, a seminary for the education of the future priests of the diocese; homes for the aged and the orphans, hospitals for the sick, and refuges for the fallen and forsaken.

DEATH OF BISHOP LOUGHLIN.

Bishop Loughlin died at the episcopal residence on Tuesday, December 29, 1891, deeply lamented by clergy and laity. At the time of his death he was the oldest priest ordained in the Diocese of New York, and with one exception, Archbishop P. R. Kenrick, of St. Louis, the oldest Bishop in the United States. He was a man of great humility and of great firmness. He knew what he wanted, and when his mind was made up it was useless to attempt to move him. This characteristic had been commented upon and has not infrequently given offense. This was a matter of no consequence to the Bishop; he felt that his decision was the correct one, and it was better to say no at first than to be obliged to say it later on. He was very simple in his habits and tastes, and full of wit and humor among his friends, and even with newspaper reporters. Above all, he was a man of the most unostentatious charity. He went to Brooklyn to be its Bishop and he continued to keep his hands at the helm of affairs until that hand lay cold in death. It may be said of him that he was the only Bishop in the United States who never wrote a pastoral letter. He was a sagacious and prudent counselor in all that related to the interests of the church and in what he deemed for the benefit of his people. At his death the Diocese of Brooklyn lost a pastor who vigilantly watched over it and who never flinched from the performance of his duty, and he left to his clergy an example of zeal and self-denial

in the accomplishment of their holy mission. When the summons came and God called him to Himself, he could well say: "I am ready to sheathe the sword I have wielded in the cause of truth and justice." His people and his clergy will hold his name in veneration and feel that he has merited the unfading crown of glory which the Master he served so faithfully had promised to "the good and faithful servant," and that he has been permitted to "enter into the joy of his Lord."

His funeral took place on New Year's Day, 1892. The remains were taken from the episcopal residence adjoining the new but unfinished Cathedral in Clermont avenue to old St. James' Cathedral. The streets along the route of the procession were lined with crowds of respectful citizens of every shade of religious belief, anxious to testify to the veneration in which the lamented dead was held by them. The Solemn Pontifical Mass of Requiem was celebrated by Archbishop Corrigan, of New York, and the funeral oration was delivered by the Rev. Frederick Wayrick, rector of St. Alphonsus' Church, New York. The Bishops of the province and many distinguished clergymen and laymen were present. After the ceremonies the remains of the deceased Bishop were deposited in a vault prepared for them, under the Sanctuary of old St. James', which he loved so well.

PART III.—BISHOP McDONNELL.

The third period in the history of Catholicity on Long Island begins with the year 1892, when the Rt. Rev. Charles Edward McDonnell, D. D., began his episcopate as second Bishop of Brooklyn.

Bishop McDonnell was born in the city of New York, on January 5, 1854, and his early life was spent in the Seventh Ward. In his youth his parents moved to Brooklyn. After studying for a time under the tuition of the Christian Brothers in old De La Salle Institute, on Second street, New York, he entered

the College of St. Francis Xavier. Young McDonnell was a diligent student, and he was thus enabled to begin his theological studies two years in advance of his classmates. In 1871 Cardinal McClosky sent him to Rome to pursue his studies at the American College. He was then scarcely eighteen years of age. On the completion of his theological course he took a supplementary course and earned the degree of Doctor of Divinity. He was ordained priest by the Rt. Rev. F. S. Chatard, D. D., on May 8, 1878, in the Chapel of the American College, where the Bishop himself had been consecrated only a week before. In the fall of 1878 Dr. McDonnell returned to the United States and was assigned, by the late Cardinal McCloskey, as an assistant at St. Mary's Church, Grand street. In January, 1879, he was transferred to St. Stephen's to assist the Rev. Dr. Edward McGlynn, then pastor of that church. In May of the same year St. Patrick's Cathedral, on Fifth avenue, was opened and Dr. McDonnell became one of the Cardinal's household, the Cardinal recognizing the necessity of having some one near him who was especially acquainted with the liturgy of the church, and Dr. McDonnell had been trained in this direction while in Rome by Mgr. Cataldi. In 1884 Mgr. John M. Farley, who had been secretary to Cardinal McCloskey, was made pastor of St. Gabriel's Church, in East Thirty-seventh street. Dr. McDonnell became his successor, and on the death of Cardinal McCloskey, when Archbishop Corrigan succeeded to the See of New York, he retained Dr. McDonnell in the Secretariat, and later on made him Chancellor also. He retained these offices until called to the dignity of the episcopate. In 1890 he accompanied Archbishop Corrigan to Rome, and while there Pope Leo XIII conferred upon him the dignity of Private Chamberlain, with the title of Monsignor. In the fall of 1890 Mgr. McDonnell was appointed Spiritual Director of the Catholic Club, in place of the late Vicar General Donnelly.

An experience of over ten years as private secretary and Chancellor of a great diocese like New York proved very valuable to Dr. McDonnell. His position made him acquainted with all the details of a diocese. He knew all its inmost workings; he came in contact with almost every priest in the diocese, and always managed, by his prudence and affability, to command the respect and good will of all. It is not surprising, then, that when the See of Brooklyn became vacant, he should have been chosen to succeed the great Bishop Loughlin.

On April 25, 1892, Mgr. McDonnell was consecrated Bishop of Brooklyn in St. Patrick's Cathedral, New York, by Archbishop Corrigan. The Assistant Bishops were Rt. Rev. Bernard J. McQuaid, of Rochester, and the Rt. Rev. Francis S. Chatard, of Vincennes. Over 500 priests participated in the ceremonies, among whom were Rev. Jeremiah A. Brosnan and Rev. John H. McCloskey, of Brooklyn, classmates of the new Bishop at the College of St. Francis Xavier. The sermon was preached by the Very Rev. Thomas J. Campbell, Provincial of the Maryland-New York Province of the Society of Jesus.

In referring to the new Bishop of Brooklyn, Father Campbell said: "You are not going into a new land, but into a great church which a noble pioneer of the faith planted and strengthened and adorned. You are going into a territory that had scarcely a cross or a spire when he raised his crozier over it forty years ago, and now, after a lifetime of toil, continued to the very end, when he lay down in his coffin with the royal robes of poverty about him, having given all to God, he hands it over to you rich in its magnificent churches; strong in its splendid charities and schools; with a zealous and devoted clergy and a flock of more than a quarter of a million, all on fire with zeal for the glory of the church of Christ. All this I know only fills you the more with consternation. But there are many things which seem like bright harbingers of a great

and happy episcopate. Do you remember how when death was palsying the lips of the dying prelate that almost his last words were unexpectedly addressed to you, giving you, for a moment, almost episcopal powers? Perhaps at that solemn hour it was vouchsafed him to penetrate the darkness that was closing around him. Why should it not be so, for the one who had stood long before the mystic veil of the Altar of Sacrifice? There has come spontaneously from every side evidence of warm and enthusiastic welcome, increased by the quick honor of your elevation; and who can doubt that it is a prophecy of the future and that the brightness of to-day will remain with you, not merely as a memory, but as a widening and deepening reality through the labors and difficulties of your new and great career?"

After the Mass of Consecration the clergy were entertained at a dinner, during which Mgr. Farley read the address of the clergy of New York, congratulating the new Bishop on his elevation to the sublime dignity of the episcopate and in their name presenting him with a check for \$7,490. On Monday, May 2, Bishop McDonnell took formal possession of the See of Brooklyn. Never did a Bishop enter a diocese under more auspicious conditions. No diocese in a purely Catholic country ever received its Bishop in a more Christian or more respectful manner. One hundred and twenty-five carriages, filled with clergy and laity, awaited the arrival of the new Bishop on the ferryboat "Texas," at the foot of Broadway. From the moment Bishop McDonnell set his foot upon the soil of Long Island he was among friends. His clergy were there in large numbers to welcome their future superior, and no sooner did his carriage emerge from the ferry house than they crowded around him to testify their allegiance and devotion. The faithful lined the streets along the entire route selected for reaching the cathedral to welcome their Bishop and receive his blessing as he passed along, clad in the robes of his sacred office. In that countless

mass were Catholics of all nationalities. Americans, Irish, Germans, French, Italians, Greek Uniates, non-Catholics, and men of no religious faith. All lifted their hats respectfully as they saluted a new citizen who was thenceforward to occupy a prominent position in their city.

At the Cathedral of old St. James' the ceremony of the installation took place. At and immediately after the installation the clergy, headed by Vicar General May, until now administrator of the diocese, and Chancellor James H. Mitchell, gathered around the new Bishop and kissed his ring in token of their loyalty to his person and to his holy office, and to receive a blessing from his newly anointed hands. The faithful laity followed the example of the clergy, and soon afterward Bishop McDonnell was escorted to the episcopal residence in Clermont avenue, which was to be his future home.

In the evening the Bishop was given a reception at the Academy of Music by the Columbia Club, the vast assemblage of from two to three thousand gentlemen, who crowded into the magnificently decorated Academy at the invitation of the club to greet the new Bishop; the warm address of welcome by its President on the part of the laity, and the graceful and dignified words that fell from the lips of the city's chief executive, His Honor Mayor Boody, as he welcomed the Bishop to the city of Brooklyn, were all incidents that might well awaken the just pride of Bishop, clergy and people, and which spoke volumes for the intelligence and liberal Christian feelings of the Brooklyn people at large.

Finally, as enthusiastic, though perhaps less pretentious, was the reception given to the Bishop on Tuesday evening by his fellow alumni,—his Brooklyn college friends and brothers of old St. Francis Xavier College, New York. In the Clarendon Hotel, Brooklyn, were assembled distinguished prelates and worthy priests and a body of laymen noted for intelligence and for the respectable standing

they occupied in the National Congress, in the State Legislature, on the bench, in the learned professions and in commercial life. All of these gentlemen joined in a hearty welcome to their old college companion and in assurances of their loyalty to the future Bishop of Brooklyn.

The first official act of Bishop McDonnell was the dedication of the new St. Augustine's Church, on May 15, 1892. The ceremony was witnessed by a vast concourse of people. After the dedication Solemn Pontifical Mass was celebrated by Bishop Ludden, of Syracuse. The sermon was preached by Bishop Chapelle, of Santa Fe (now Archbishop of New Orleans and Apostolic Delegate Extraordinary for Cuba, Puerto Rico and the Philippine Islands). Bishop O'Farrell, of Trenton, was also in the Sanctuary. On the Wednesday following Bishop McDonnell administered the Sacrament of Confirmation to 600 persons, at the Church of the Sacred Heart, in Clermont avenue. On Sunday, June 5, he celebrated his first Pontifical Mass in Brooklyn, in old St. James' Cathedral, and on the Sunday following, June 11, he conferred Holy Orders for the first time in his diocese, by raising the Rev. William J. Dunne, of Niagara University, to the dignity of the priesthood.

CHURCHES.

St. Frances de Chantal.—The Fathers of Mercy who have charge of the old Church of St. Francis of Sales, now known as the new Church of Our Lady of Lourdes, in 1892 founded another church at the corner of Fifty-seventh street and Thirteenth avenue. This church was placed under the patronage of St. Frances de Chantal. The first mass was said in the house of Miss Gorman, at Fifty-sixth street and Thirteenth avenue. There were about 125 persons present, among whom were William J. Powers, James Hanley and William May, who took special interest in the organization of the new parish. The church is a modest structure, 24 by 60 feet, with a seating

capacity of 400, but it proved a great accommodation to the people of that sparsely settled neighborhood. It was first attended by Father Michael Maloy, S. P. M. He was succeeded in 1894 by the Rev. T. McTague, S. P. M., and he in turn was succeeded in 1895 by the well-known missionary, Father Gaston Septier, S. P. M. These Fathers improved the parish until at present the number of parishioners has increased to 700. It is now attended by Rev. William McAdam, S. P. M., who is assisted by Rev. Alphonsus B. Parker, S. P. M.

Redemptorists in Brooklyn.—The late Bishop Loughlin gave very little encouragement to religious orders of men in his diocese; consequently, at the time of his death, the Lazarists and the Fathers of Mercy were the only regulars in the diocese. Bishop McDonnell, recognizing the necessities of the times in which he assumed control of the diocese, felt that those orders had now become a necessity and he opened the doors to them. The first to avail themselves of his hospitality and to offer their services to the faithful were the Redemptorist Fathers. The Brooklyn foundation of the Congregation of the Most Holy Redeemer (as the Redemptorist Fathers are called officially) was formally established on Easter Sunday, April 2, 1893. Very Rev. Ferdinand A. Litz, C. SS. R., was Provincial at this time of the Baltimore Province of the congregation (or order). Rev. F. W. Wayrick, C. SS. R., rector of St. Alphonsus' Church, New York City, acting in the name of the Provincial, bought from Messrs. Creamer and Gallagher the entire block bounded by Fifth and Sixth avenues and by Fifty-ninth street and Sixtieth street. The purchase was made on the feast of St. Peter of Alcantara, October 19, 1892. The formal opening of the church was deferred until the following spring. On April 2, 1893, however, Rev. J. B. Daily, C. SS. R., of St. Alphonsus' Church, New York, said mass for the first time in this parish at what was called Professor Moss'

house, at the corner of Fourth avenue and Fifty-fourth street. About forty persons were present at this mass. Although it was Easter Sunday, there were no communions, and the collection taken up amounted to the small sum of \$6.10. The limited attendance was due partly to the fact that the neighborhood was sparsely populated, and partly because it was not generally known that mass would be celebrated on that day. On April 22d the Fathers rented a house at the corner of Fifty-seventh street and Fourth avenue, near the site of the projected church. The congregation had now grown to 178. On May 9th Sunday-school was opened, with an attendance of forty-nine children. On May 30th the Fathers took the census of their parish and found that it contained just 348 persons. The parish now numbers 3,000 parishioners. Father Dailey managed the affairs of the parish until May 12th, when Father Augustus McNerney, C. SS. R., was appointed Superior, with Fathers Dailey and Crosby as assistants. On October 29th the corner-stone of a new church was laid by Bishop McDonnell, and Father Wayrick preached the sermon. The new residence for the Fathers was ready for occupation and they moved into it on December 7th, and mass was said in it on the 9th.

Our Lady of Perpetual Help.—On January 14, 1894, the new Church of Our Lady of Perpetual Help was dedicated by Bishop McDonnell. He was assisted by Very Rev. P. J. McNamara, V. G., Very Rev. James H. Mitchell, Chancellor of the Diocese, and a number of priests of the Congregation of the Most Holy Redeemer. The mass was celebrated by Rev. John B. Dailey, C. SS. R., and the sermon was preached by Rev. Francis Sigl, C. SS. R. On May 23d Father McNerney resigned the position of Superior, on account of ill health, and was succeeded by Father Dailey. On June 24th the six boys and ten girls who approached the altar on that day can "tell posterity that they had the honor to belong to the first band who made their first communion in the new

church." The Sunday-school, which opened on May 7th with forty-nine children, now numbers 550. The League of the Sacred Heart, established in December, 1895, numbers over 1,000 members. The community now consists of seven Fathers and two lay Brothers. It has become a missionary center, and some of the Fathers are constantly engaged, during the season, in giving missions.

St. Barbara.—A new parish for the Germans, under the invocation of St. Barbara, was founded in 1893; the church is situated on Bleecker street, between Central and Hamburg avenues. It was placed in charge of Rev. Isidore Wunch. The first mass was celebrated in a small building 20 by 60 feet, which was subsequently used as a school room. Among the first members of this parish were Joseph Eppig, William Wolf and John Pope. The corner-stone of a temporary church was laid on August 27, 1893, by Bishop McDonnell, assisted by Vicar General McNamara and Mgr. May, and it was dedicated on Thanksgiving Day of the same year by Bishop McDonnell. A Mass was celebrated by Rev. Peter Dauffenbach, of Winfield, assisted by Rev. Henry Weitekamp as Deacon, Rev. George Kaupert, Subdeacon, and Rev. John Hanselmann as Master of Ceremonies. The sermon was preached by Rev. John B. Zentgraf. Immediately after the mass the Rt. Rev. Bishop administered the Sacrament of Confirmation to a large number of children. The new church is a neat Gothic frame building with a front of forty-five feet on Bleecker street and a depth of ninety-five feet on Central avenue, with a seating capacity of 600. Father Wunch has a school of 600 children, in charge of thirteen Sisters of St. Dominic.

Church of the Immaculate Heart.—In October, 1893, Bishop McDonnell called the Rev. James J. McAteer, an assistant at St. Agnes' Church, to the pastorate of a new church to be erected in the neighborhood of Windsor Terrace. The new parish was to be formed of parts of the parishes of the Holy

Name, Flatbush, and St. Rose of Lima, Parkville. A plot of ground was secured near Ocean Parkway, and preparations were being made for the erection of a church. In the meantime Father McAteer celebrated mass in a hall at No. 38 Vanderbilt street, Windsor Terrace. At the first mass Father McAteer announced that he had a larger congregation than assembled at the first mass in St. Agnes' parish fifteen years before. The church was placed under the patronage of the Immaculate Heart of Mary. Father McAteer set to work at once to secure funds for the erection of his church; a fair given for the purpose was very successful, and in a short time ground was broken and the new church commenced. The corner-stone was laid September 26th. The edifice is 106 by 42 feet in dimensions, with a tower seventy feet high. The building will accommodate about 600. The congregation now numbers 1,200, and the church property is valued at \$35,000. The Sunday-school is attended by 200 children. Father McAteer is assisted by the Rev. William T. Conklin.

St. Mark's.—In the year 1893 a new church dedicated to St. Mark, the Evangelist, was opened at Sheepshead Bay, now East Fourteenth street and Sheepshead Bay road. It was intended to accommodate the summer guests who lingered around the popular resort until late in September. The place had been visited by the priest long before this, however, for as far back as 1861 we find that Father James Moran ministered to the people in this vicinity. Mass was celebrated in a little old building on the Bay road, erected by subscription. Mrs. Ellen McMahon, a convert, gave the ground. There were then only three Catholic families on the place, Messrs. Matthew Healy, John Boyle and a Mr. Dooley. Mrs. Ellen Johnson, who afterward married Mr. John McMahon, also became a parishioner. After Father Moran, the place was visited by Revs. Michael Moran, William Doherty, Thomas O'Reilly and James McKiverkin, who officiated at Sheepshead Bay until

1889. The old church, which was 30 by 20 feet in dimensions, was destroyed by fire. The new St. Mark's Church was built by Rev. J. J. Hefferman, who attended the mission and became resident pastor in 1889. It is a very pretty frame structure, 100 by 40 feet, with a neat rectory adjoining. The new church was dedicated by the Rt. Rev. Bishop McDonnell on Sunday, August 20, 1893. The sermon was preached by the Rt. Rev. John J. Keane, D. D., rector of the Catholic University at Washington. The mass was celebrated by the Rev. John M. Keily. Father Hefferman is still pastor (1901). He has a regular congregation of 500 or 600 people, but this number is largely increased during the summer months. He has also a flourishing Sunday-school, attended by some 200 children.

St. Simon and St. Jude.—On Sunday, October 23, 1893, Bishop McDonnell laid the corner-stone of the new Church of St. Simon and St. Jude, Van Sicklen street and Avenue T, of which the Rev. William A. Gardiner is Pastor. The sermon was preached by the Rev. Dr. Donohue, Rector of the Church of St. Thomas Aquinas. Before starting the work Father Gardiner held a fair in the town hall at Gravesend, which proved a great success and gave him a handsome sum with which to start the erection of a church. He now has a neat little church, with a seating capacity of about 600.

St. Aloysius'.—On Tuesday, May 30, 1893, Bishop McDonnell had the happiness of dedicating the new Church of St. Aloysius, for the German Catholics residing in the vicinity of Onderdonk avenue and Stanhope street. The Pastor is the Rev. John W. Hauptman. After the dedication Solemn High Mass was celebrated by Rev. Anthony Arnold, with Rev. Joseph Hauber, Deacon, and Rev. P. Dauffenbach as Subdeacon. The sermon was preached by the Very Rev. Michael May, V. G. Father Hauptman has devoted all his energies to the advancement of his people, and he now has a very handsome church, and a school of over

500 children, under the care of thirteen Sisters of St. Dominic. The number of parishioners now is nearly 3,000, in the spiritual care of whom Father Hauptman is assisted by Rev. Joseph Buser.

St. Finbar.—The Catholics of Bath Beach go back to the early 'eighties for the foundation of their parish. As the name of their church implies, the first Catholics in this vicinity were Irish, for St. Finbar was an Irish saint. The old church was a very modest edifice, which gave way in 1893 to a renovated St. Finbar's and a church property valued at \$25,000. Under the pastorate of the Rev. Hugh B. Ward (1893) the old church was enlarged to nearly twice its former dimensions and the entire building was turned around so that it now faces entirely on Bay Twentieth street. Mass was celebrated for the first time in the new church on Sunday, June 25, 1893, and the good people of the parish contributed very generously out of their limited means for the completion of their church. In January, 1894, Father Ward was promoted to the pastoral charge of St. Malachi's Church, East New York, and was succeeded at Bath Beach by the Rev. Andrew J. O'Rourke, who had been pastor of St. Agnes' Church, Greenport. The church will accommodate about 300 persons. Father O'Rourke is still in charge. Some eighty children attend the Sunday-school.

St. Francis of Assisi.—The growth of Catholicity in Brooklyn does not seem to be confined to any part of the city. New parishes are constantly springing up in every direction, and when we consider that 500,000 Catholics are to be provided for in the diocese it does not seem at all surprising that its Bishop is kept busy laying corner-stones and dedicating churches. Thus it came to pass that in the portion of the Twenty-ninth Ward bounded by the parishes of St. Teresa's, St. Matthew's and the Church of the Holy Cross, it became necessary to build another church. The site chosen was at Nostrand avenue and Lincoln

road, and the erection of that church was entrusted, in May, 1898, to the Rev. Francis Ludeke, who had long been an assistant to the Rev. Martin Carroll, at the Church of St. Vincent de Paul. Father Ludeke repaired at once to the scene of his new labors, and on August 28, 1898, Bishop McDonnell laid the corner-stone of the new Church of St. Francis of Assisi. The destruction of the little church on Putnam avenue, which will always be identified with the memory of "Dear Old Father Bulleis," left Brooklyn without a church under the patronage of the Seraphic Doctor. Father Ludeke deserves credit for his choice of a patron. It serves two purposes: it gives his people a holy patron and it helps to perpetuate the memory of good old Father Bulleis. Father Ludeke's task was not an easy one,—no priest's is when he starts to build a church,—but the great St. Francis, the apostle of humility and of holy poverty, did not forsake him, and on Sunday, October 22, Bishop McDonnell came to dedicate the new church. Father Ludeke had many friends at St. Vincent de Paul's, and they did not forget him in his new field; nor was his own congregation slow to appreciate his worth. The result may be seen to-day in the handsome church, valued at \$35,000, with its growing congregation, now numbering some 900 persons. Father Ludeke is assisted by Rev. Thomas J. Mulvey. The Sunday-school is attended by nearly 200 children.

St. Mary of Angels.—The Lithuanian parish of St. Mary of Angels was started on December 25, 1895, on Grand street, in a building that had been a Methodist Church, then a court room and next a skating rink. Later on the Rev. George W. Mundein, now Chancellor of the diocese, secured old Trinity Methodist Episcopal Church, and it was soon remodeled and dedicated by Bishop McDonnell in October, 1899. After a connection with the parish of some three months Father Mundein was transferred to another field. Father Vincent Krawezunas had charge of the parish

until October 12, 1898, when he succumbed to pulmonary trouble. He did much to unite his people and advance the interests of the church, and his death was deeply deplored. He was succeeded by the Rev. Anthony Milukes, and he gave way in time to the Rev. Vincent Varnagiris, the present Pastor. The church is now a very creditable building and is well attended, but it had to pass through many trying ordeals to reach its present prosperity. As we have seen, its beginnings were humble enough, for part of the time mass had to be celebrated in a hall over a store. Then came the unsavory administration of the Rev. Judyzius, who gave no end of trouble to his Bishop and to his people; but the Queen of Angels guided her devoted children out of their difficulties, and to-day the church has an attendance estimated at 2,000 people.

The Church of the Holy Name of Jesus, corner of Ninth and Prospect avenues, was founded in 1878, by the Rev. Thomas S. O'Reilly. The first mass was celebrated in a stable at Eighteenth street and Eleventh avenue. About 100 persons were present, among whom were Messrs. S. Donovan, P. Reigan, P. McGovern, Thomas Wall, S. Bannon and H. Corrigan. The present church is 84 by 96 feet in dimensions, with a congregation of over 2,000. It was founded March 17, 1898. In 1885 Father O'Reilly built a school-house, 40 by 98 feet, which is now attended by nearly 500 children, under the care of six Sisters of St. Joseph. Father O'Reilly has a congregation not over-blessed with this world's goods, but they have done much with the little they have. They have built a fine church and school and are encumbered with a comparatively small debt. Father O'Reilly is assisted in his work by the Rev. John McEnroe.

St. Elias'—Greek Uniate.—On Leonard street, Greenpoint, just in the rear of St. Anthony's Church, is a neat frame church, 100 by 30 feet in dimensions. It is surmounted by a steeple, at the top of which is a cross with three cross pieces. This indicates that

the church belongs to the Greek rite, though in communion with the Catholic Church and subject to the Catholic Bishop of Brooklyn. It is known as the Greek Catholic Church of St. Elias. The congregation was formed January 1, 1891, and the first mass was celebrated in St. Bridgid's Church, New York, through the courtesy of the Rev. Dr. McSweeney; there were about fifty persons present. In the course of time the congregation moved to Greenpoint. The first Pastor was the Rev. Alexander Sereghy. He was succeeded consecutively by Rev. Nicholas Sztoczovich, the Rev. Eugene Wolkay and the Rev. Vladimir Deak. The present pastor is the Rev. Theodore Damijanovich, who has done very good work among his people during his pastorate. He has a parochial school, attended by some sixty children, and a Sunday-school attended by about 700 children.

The Italian Churches.—The Italian population of Brooklyn has grown very rapidly within the last ten years, and it soon became evident that means must be provided for them to attend to their religious duties and to guard them against neglecting attendance at church because of a want of knowledge of the English language. Bishop Loughlin and Bishop McDonnell have both taken a deep interest in a people who are destined before very long to be a very important factor in our population. Care has been taken to place all priests educated in Rome in districts in which there is an Italian population. Then, too, Italian priests have been received into the diocese of Brooklyn that they might labor among their countrymen. Besides these, a band of Italian Lazarist Missionaries have taken up their residence in Brooklyn and are engaged in giving missions and retreats to the Italians, not only in churches strictly of their own nationality, but in all parishes having a considerable Italian attendance. At St. Patrick's Church, Kent avenue, for instance, there are 3,000 Italians receiving the ministrations of the reverend clergy attached to this church. The Rev. Dr.

William J. White devotes himself almost entirely to Italians, and his services are gratefully appreciated by them. He has within the last year opened a kindergarten school for the little children, and it is growing rapidly. There is another kindergarten connected with St. James' pro-Cathedral, established some years ago under the direction of the Rev. William B. Farrell. Bishop McDonnell has manifested quite an interest in the educational and industrial advancement of the Italian colony in Brooklyn. In November, 1894, he directed Father Pasquale De Nisco to open an industrial school in his parish and furnished the means for starting the work. He was anxious that Italian children should be brought up with a thorough knowledge of American institutions. He wanted their minds broadened and that they should learn the English language. Classism was to be a thing of the past and true American citizenship the only thing to be thought of. The school was placed under the direction of the Salesian Sisters.

The Church of St. Michael the Archangel, at the corner of Laurence and Tillory streets, was founded in 1891. The edifice was originally a Presbyterian Church. In 1880 the Polish Catholics purchased it from the Presbyterians and dedicated it to God under the invocation of St. Casimir. In 1891 they sold it to the Italians, and Father Serafino Santi became its first Italian pastor, and he placed it under the invocation of St. Michael the Archangel. In May, 1893, the Rev. G. Garofalo assumed pastoral charge. The church is a frame structure, with brick basement, and a seating capacity of about 300.

The congregation of the Church of Our Lady of Mount Carmel owes its start to the courtesy of the reverend clergy of the Church of the Most Holy Trinity, on Montrose avenue. In 1887 the Rev. Peter Saponara arrived from Italy and was appointed by the late Bishop Loughlin to take up his residence at the pastoral house of the Church of the Most Holy Trinity and to organize an Italian congregation which was to worship in that church

until other arrangements could be made for their accommodation. The church was then situated where the school now stands. During the same year Father Saponara moved with his people to the school hall of the German Church of the Annunciation, in the vicinity of which the Italian colony in the Eastern District had settled.

In June of the same year he accepted the hospitality of Father Carroll, at the Church of St. Vincent de Paul. In the meantime every effort was made to purchase ground and build a church for the Italians. Finally a suitable location was found and a lot was purchased on North Eighth street, near Havermeyer street, for \$3,000; but, as a more eligible site was found to be available on North Eighth street and Union avenue, the lot was sold for \$5,000. The new site was secured, but it was only after numerous difficulties had been overcome that Father Saponara was able to invite Bishop Loughlin to lay the cornerstone for his new church. This occurred on July 31, 1887. It was dedicated on November 20, 1887. The Italians were poor and unaccustomed, in their own country, to contribute to the erection of churches, as the government there does all the church building. Still, under the guidance of their good pastor, they persevered, and soon the congregation of the Church of Our Lady of Mount Carmel numbered 2,000 souls. Two masses were said every Sunday and holy day for their accommodation, but as their numbers increased rapidly it soon became necessary to have four masses said on these days. Three years later a neat rectory was built, and Father Saponara saw his congregation still growing until now it numbers 10,000. Five hundred children attend Sunday-school. Father Saponara has now an assistant, and still continues to do all he can for his people. They are gradually growing to understand American methods, and in time they will learn the advantages of building and supporting their own churches and charitable institutions.

The Church of the Sacred Hearts of Jesus

and Mary owes its origin, in a great measure, to the Rev. Father Joseph Fransioli. This devoted priest, seeing the necessity for having a church in which the Italians of the southern part of the city might hear sermons and receive instruction in their own language, in 1882 rented a hall on Warren street for this purpose, and, with Bishop Loughlin's consent, placed it in charge of Rev. Father Defini, who after a brief period was succeeded by Rev. John Baptist Volpe. After a year's trial it was found that another location was more desirable and the mission was moved to No. 30 President street, a site formerly occupied by the Protestant Evangelical Italian Society, and which Father Fransioli purchased for his people and placed under the care of Father Pacasson.

But Father Fransioli had something more than a mere mission station in his mind. In 1884, while in Rome, he called upon the Fathers of the Society of Pious Missions and induced them to send a priest to Brooklyn to take charge of the Italian parish it was his intention to found. In the same year, 1884, Rev. Pasquale De Nisco, of the Society, arrived in Brooklyn, and under the direction of Father Fransioli two lots, Nos. 37 and 39, were purchased, and the corner-stone of the present church was laid by Bishop Loughlin in 1885. This church, though inadequate to meet the wants of the growing congregation, has nevertheless realized the hopes of good old Father Fransioli. Father De Nisco has been followed by other priests of the Society of Pious Missions, until now it requires three Fathers to minister to the Italian population of that parish. The present pastor is Rev. John B. Vogel, who is assisted by Rev. Valentino Marino and Rev. John Corcoran. In 1892, as has already been stated, Rt. Rev. Bishop McDonnell purchased a building at Van Brunt and President streets, which had been used as a Protestant church, and converted it into a school for Italian children. It is now attended by 550 children, under the

care of eleven Salesian Sisters of the Sacred Heart. The attendance at school would be three times as large if accommodations could be provided for them.

The Church of Our Lady of Loretto, Powell street, between Liberty and East New York avenues, is the fourth church in Brooklyn for the use of Italians. The structure was originally a hall used by the Salvation Army. In June, 1896, Father Stephen Gesualdi, an energetic young Franciscan, was assigned by Bishop McDonnell to form a new parish. He secured this hall, enlarged it and otherwise changed it until now it presents the appearance of a Greek cross, 30 by 100 feet in dimensions, and its estimated value is set down at \$10,000. It is neatly furnished, has oak pews and a beautiful altar, the gift of the German congregation of the Church of the Annunciation. The first mass in the renovated edifice was sung on June 29, 1896, by the Rev. John M. Hanselmann, rector of St. Benedict's Church, assisted by the Rev. Hugh Hand as Deacon and Rev. G. Garofalo as Subdeacon. The sermon was preached by Rev. Assunto Faiticher, C. M., of the Mission House, Rome. Father Gesualdi has labored most energetically for the spiritual advancement of his countrymen. He is a young man, who came to this country in 1891. His first work was as assistant to Father Saponara, with whom he remained until appointed by Bishop McDonnell to the charge of the Church of Our Lady of Loretto.

St. Rose of Lima.—The parish of St. Rose of Lima (Parkville) was founded in 1870, by the Rev. Michael J. Moran, now rector of the Church of the Nativity, Brooklyn. The corner-stone was laid by the Very Rev. John F. Turner, V. G., on Sunday, August 21. It was a simple but very neat structure, and was dedicated by Bishop Loughlin on Sunday, November 27, 1870. The pastor is the Rev. J. McAleese.

The parish of St. Mary, Mother of Jesus, at Bensonhurst, was founded in 1888. The first mass was said by Rev. J. McAleese, of

Parkville, in a vacant house (now occupied as a drug store) at the corner of Twenty-second avenue and Eighty-sixth street. Mass continued to be said in this house until 1892. On June 26th of that year the Rev. Charles Wightman, who is now rector of the church, laid the corner-stone of a new edifice, privately. There is no record of any ceremony. The church was built and had been in use some time prior to the advent of Bishop McDonnell to the diocese, but it was never formally blessed or dedicated. On the day it was first opened for divine service, however, a Solemn High Mass was celebrated by the Rev. Daniel F. Cherry, assistant at the Church of Our Lady of Good Counsel, with Rev. James F. Melia as Deacon and Rev. Edward Duffy as Subdeacon. The opening sermon was preached by Rev. M. T. Killahy, rector of St. Stephen's Church.

St. Michael's.—The number of German Catholics in the town of New Lots, East New York, had been steadily growing for several years, and the need of a church for their accommodation was keenly felt, but it was not until January 25, 1860, that Father Philip Albrecht, Pastor of St. Benedict's Church, felt that he would take steps to provide one for this portion of his flock. He called a meeting of the more prominent German Catholics of the region and submitted to them his plan for the erection of a church for their use. At this meeting fifty of the best German families were represented, and they at once decided to give Father Albrecht all the assistance in their power. With the consent of Bishop Loughlin four lots were purchased on John street between Liberty and Atlanta avenues, and work was commenced. So rapidly did this work progress that the corner-stone of the new St. Michael's Church was laid by Rt. Rev. Bishop Loughlin on April 18, 1860.

The Germans are always very prudent, and that prudence manifested itself in the erection of St. Michael's. The building was small, 40x30 feet, a plain frame structure, sur-

mounted by a modest steeple. By the 3d of June, 1860, it was dedicated by Bishop Loughlin and placed under the invocation of St. Michael, the Archangel, and on the following Palm Sunday a bell was blessed and placed in the steeple. The Rev. Charles Peine became the first Pastor of this congregation. The church records show that the first marriage occurred on July 8, 1860, and the first baptism on August 6, 1860. Father Peine soon devoted himself to the care of the young lambs of his flock, and on May 12, 1861, nine boys and three girls made their first communion in his new church. On Palm Sunday of the following year the Stations of the Cross were hung around the church. In February, 1863, Father Peine was succeeded by the Rev. Cyril Zielinski, who in June of that year invited the Rev. Father Laufhuber, S. J., to give a Mission to his people. This Mission was attended with the most consoling results.

In August, 1863, the Rev. M. I. Decker took charge of the parish and began the erection of a pastoral residence, a part of which, according to the custom of the Germans in small parishes, was to be used for school purposes. The building was finished by Father Peine, who returned to St. Michael's in May, 1864. This time Father Peine remained with his old parishioners for two years, devoting himself to their service with the zeal that had marked his early efforts. In July, 1866, he was succeeded by Rev. Casper Muller, who, in February, 1868, purchased two lots adjoining the pastoral residence, on which it was proposed to erect a new school building. In August, 1868, the Rev. A. Oberschneider began a pastorate at St. Michael's, which lasted until January, 1871, when the Rev. I. Michaels became Pastor. Between 1871 and 1875 three Missions were given in this church by the Redemptorist, Capuchin and Jesuit Fathers respectively. In March, 1875, the Rev. August Maria Niemann became Pastor of St. Michael's. Father Niemann was not slow in realizing the fact that the growing needs of

his congregation demanded the erection of a new house of worship. This not being practicable, he obtained the consent of the Bishop to add sixty feet to the dimensions of the old building. This was done in September, 1875. Father Niemann was a great advocate of Plain Chant and he soon introduced it in his church, and its use was continued during his entire pastorate. He was fully alive to the needs of his people; he foresaw the rapid growth of his section of the city and consequently of his parish, and in 1876 he purchased three lots, in 1878 one and in 1879 two more. The wisdom of his purchases is evident to-day. In 1881 Father Niemann was given an assistant to aid him in the discharge of his duties. As time progressed Father Niemann's health began to fail and eventually he was obliged to withdraw from the active duties of the ministry. St. Michael's has since passed into the hands of the Capuchin Fathers, who still minister to the congregation.

St. Malachy's.—Before the advent of Bishop Loughlin to the Diocese there were very few Catholic families in the vicinity of Cypress Hills. True, there were a few Catholics working on the farms along the old New Lots Road and the Jamaica Plank Road, but they had no church and scarcely a house in which the priest might say Mass for them. Hence they were obliged to go to Flatbush, or for want of a better conveyance they must take the old-fashioned and dust-covered stage to Williamsburg or Jamaica. In 1853, however, good Father Andrew Bohan, of the Church of the Holy Cross in Flatbush, came to the relief of these people, as he did to that of many others on the outskirts of the city of Brooklyn. In the village of East New York he found, at the northwest corner of Atlantic and Vermont Avenues, a hostelry, a two-story frame building, then known as Altenbrand's Hotel. Father Bohan rented the dining-room of this inn, which was connected with the bar-room—but having also a door leading to the street; and here Father Bohan (as Father McCoy did in another neighborhood, fifty years later) of-

fered up the adorable sacrifice of the Mass, and Mr. Barney Farrell "had the honor of 'answering the priest.'"

But the asylum offered by this dining-room did not long satisfy Father Bohan. He soon found six lots on the east side of Van Sicklen Avenue, near the north side of Atlantic Avenue, and he secured them for his people. He secured the services of a Mr. Plunkett for the erection of a church suitable for that time. The preparing of the frame-work was done in Flatbush, and when completed its material was transported to East New York; and so rapidly was the church completed that on April 9, 1854, Bishop Loughlin had the happiness of dedicating it to the service of God under the patronage of St. Malachy. The congregation began to increase and Father Bohan used to attend them from Flatbush until 1855, when he was succeeded by Rev. John Dowling. Like his predecessor, the latter would come from Flatbush to St. Malachy's every Sunday, through sunshine and rain, through heat and cold, until 1858, when he was killed by being thrown from his buggy. His remains lie in Holy Cross Cemetery.

Father Bartholomew Gleason was the next Pastor of Flatbush, and attended St. Malachy's until 1860, when he became Pastor of the new Church of St. Anne. Father Stephen Cassidy, as Pastor of Flatbush, attended St. Malachy's for a year, or up to the time of his death. The next pastor was the Rev. Thomas McLaughlin, who seemed to take quite an interest in this mission. He established a Sunday-school at St. Malachy's and among the first teachers were Messrs. James Maguire, Thomas Landers and Maurice Murphy, and Misses Ellen Fleming, Bridget Farrell (now Mrs. John McCabe) and Margaret Delaney. Father McLaughlin also made what improvements he could in the appearance of the altar. The ladies gave him all the assistance in their power and collected \$20 for the purchase of lace and other necessary articles. The good Pastor also prepared the children for first communion and was prompt in the discharge

of his duty to the sick and dying. In 1862 he relinquished St. Malachy's to the care of the Rev. Patrick Creighton, who in April of that year became the first resident Pastor of the little church. "His first place of residence," says Rev. Wm. J. Maguire, "was a two-story frame building on the west side of Hendrix street (Smith avenue)."

He at once set to work renovating the little frame church. He next established the first Catholic school in the town and placed it under the charge of Mr. Simon Dunn, who later on practiced law in Brooklyn. The next teacher was a Mrs. French, who was assisted by her daughter, but, after a year's trial, Father Creighton determined to open a regular parochial school and was fortunate enough to secure a three-story brick building on Atlantic Avenue, together with the nine lots adjoining; and, after building an addition to the original building, opened his school. The boys were taught by Mr. Robert Whelan, and the girls, successively by Miss Dillon, Miss Herbert, Miss Galvin and Miss Shanahan. Father Creighton's work was appreciated by his Bishop, who, in August, 1868, promoted him to the pastoral charge of the new Church of Our Lady of Victory. He left St. Malachy's deeply regretted by all his people.

Father Martin Carroll, the next Pastor of St. Malachy's, continued the work of his predecessor with great zeal. In the autumn after his appointment he held a fair, which realized \$1,800, and in 1871 he secured the services of the Sisters of St. Joseph to take charge of his parochial school. He established a Temperance Society, and a Purgatorian Society, and took a great interest in the young people, who were so much in need of a guiding hand. During the four years of his pastorate he paid off \$6,000 of the church debt. In 1872 he was called to the pastorate of the Church of St. Vincent de Paul, and his devoted people presented him with a handsome testimonial of their appreciation of his labors among them.

Rev. John Purcell succeeded Father Car-

roll at St. Malachy's. His first care was to look after the needs of the poor of his parish and for this purpose he established the Society of St. Vincent de Paul, with Mr. James McGuigan as President. In 1873 he established St. Malachy's Home for Orphans and Destitute Children, which was placed under the care of the Sisters of St. Joseph. Father Purcell was a man of great zeal and devoted to his sacred calling, but his zeal was beyond his powers. In the spring of 1873 he went south in the hope of building up an exhausted constitution, but it was too late. He tried the south of France, but with no better result. Feeling that his end was near he turned his face toward his native Ireland, and died in 1874, at Thurnes, in the County Tipperary, soon after his arrival there.

Father Purcell was succeeded at St. Malachy's by the Rev. P. J. McNamara, the present Rt. Rev. Vicar General of the Diocese. He set himself to work to pay off the debt on the church. He met a call for \$1,200 and improved the decorations of the church. His watchful care extended over all the needs of his parish, and his people, realizing his worth, soon learned to love him; but higher honors awaited him in the future, and on August 15, 1877, he was transferred to the pastoral charge of the Church of Our Lady of Mercy. Bishop Loughlin, in looking for a successor to Father McNamara, turned his eyes to St. Patrick's, that mother of Pastors, as he had done once before, and Father Andrew O'Connell became pastor of St. Malachy's. He immediately enlarged the church, erected a splendid new school-house, established the Catholic Benevolent Legion and the Young Men's Catholic Lyceum. For ten years Father O'Connell devoted himself to the service of his people. He died on July 31, 1888. His successor was the Rev. Hugh B. Ward, who has carried on the work entrusted to him with all the zeal and prudence of his venerated predecessors.

Church of the Holy Cross, Flatbush.—The Catholics in the early '40s were obliged to go to St. Joseph's, the pro-Cathedral, and St.

Paul's, in order to hear Mass on Sundays and holy days. In 1843 they were visited occasionally by the Rev. James O'Donnell, and in 1844 by the Rev. William Hogan of St. Paul's. When Bishop Hughes purchased ground in Flatbush for cemetery purposes, the priests of the pro-Cathedral used to go out to perform the last sad rites over the dead, and Mass was said occasionally in private houses. Finally, through the efforts of the Rev. James McDonough, of St. James', a small frame church was built in 1848, in that part of the town known as the English settlement. It was located on Erasmus street, near Prospect street. The first resident priest was the Rev. Andrew Bohan. He had no rectory and was obliged to board with a family named Walsh, who lived in what is now Rogers avenue and Erasmus street. The first baptism recorded was on October 26, 1852, and is signed by Father Bohan. The little church had evidently not yet been named, as in Father Bohan's own handwriting the Baptismal Registry is entitled "The Baptismal Registry of the Catholic Church in Flatbush." Most probably, had it been otherwise, he would have inserted the words "Church of the Holy Cross." Father Bohan labored here until June, 1855, when he was transferred to the Church of the Immaculate Conception, in Williamsburg. He was succeeded by the Rev. John Dowling, who was killed by being thrown out of his wagon on Flatbush avenue, near Church avenue.

The next Pastor was the Rev. Bartholomew Gleeson, who went to Flatbush on October 3, 1858, and who was transferred to St. Ann's in 1861. His successor was the Rev. Stephen Cassidy, who remained only about one year. Father Frank T. McLaughlin became Pastor in 1861 and ministered to the wants of his people until 1864, when failing health compelled him to seek a season of rest. A voyage to Europe was advised, but just as he was about to embark on the steamer he was stricken by the hand of death. His successor was the Rev. J. Strain, who labored in Flatbush

until 1867, when he succumbed to a stroke of apoplexy and was found dead in his bed. The Rev. James Moran was Pastor of the church of the Holy Cross for two years, when he was transferred to St. Stephen's Church (1869.) During all these pastorates little was done towards the improvements of the parish. In 1869 Rev. Michael Moran became Pastor of Flatbush, and though full of zeal the conditions of his parish offered little to encourage him. Two years later, in 1871, he was transferred to a more fruitful field, where his energies would be taxed for years to come. He was sent to found a new parish at the corner of Classon Avenue and Madison Street. Here his life work began, and here, as rector of the Church of the Nativity, he still labors with undiminished zeal, as will be seen on another page of this history.

Father James J. Dougherty succeeded Father Moran, and it was during his pastorate that the present Church of the Holy Cross was built. The corner-stone was laid in 1872 and the church was dedicated by Bishop Loughlin in 1873. The old frame church was transformed into a school and it was placed under the care of the Sisters of St. Joseph. After a pastorate of ten years, Father Dougherty was replaced (in 1881) by the Rev. Bernard McHugh. During his pastorate of five years he built the church at Flatlands, and another church, since destroyed by fire, in that section, now comprising St. Matthew's parish. Having been promoted to the pastorate of the Church of St. John the Evangelist, he was succeeded by the Rev. Matthew O'Connell, who died Dec. 15, 1892. Four days later, Dec. 19, the Rev. John T. Woods took charge of the parish, which was then encumbered with a mortgage debt of \$18,000. By hard work Father Woods succeeded, in five years, in wiping out this debt. His next step was the decoration of the church, which was sadly needed, and this was accomplished at a cost of \$8,000. No sooner was this accomplished than Father Woods, in 1898, erected a new convent, cost-

ing \$16,000. The following year the estates of Clayton and McCrory, to the west of the church, were purchased, for \$8,000, and a new rectory, costing \$16,000, and a parochial school costing \$55,000, were built on the acquired estates. The old school-house is now (1901) being fitted up for a Young Men's Lyceum. From this it will be seen that Father Woods has not been idle. He now has 3,000 parishioners; 430 children attend his parochial school, which is under the care of the Sisters of St. Joseph, while 500 children attend his Sunday-school. The church property is estimated to be worth something like \$175,000, on which there is a comparatively small debt.

St. Stanislaus, for Scandinavians.—In February, 1891, the Rev. Claudius Dumahut, a French missionary who had labored for twenty-five years in Norway, was authorized by Bishop Loughlin to found a church for Catholic Scandinavians. He at once leased the house, No. 299 Fifteenth street, between Fifth and Sixth avenues. This house became chapel as well as pastorate residence. On Sunday, Feb. 15, the chapel was opened and Catholic Scandinavians from Brooklyn, New York and Jersey City filled the parlors in which the services were held. Since that time Father Dumahut has succeeded in building a church and rectory and his parish is in a flourishing condition. The number of Catholic Scandinavians is not very large, but with the help of the English-speaking Catholics who frequent the church they have succeeded in building a very handsome church edifice.

Suburban Parishes.—Up to the present we have dealt entirely with churches erected within the limits of the present city of Brooklyn; but there are many parishes on the island, all of which are worthy of special mention because they have connected with them stories of patient suffering, of unrelenting toil, of heroic devotion, wrapped up in the simple and unostentatious lives of the pioneer priests who planted the mustard seeds that have brought forth such abundant fruit.

Prior to 1834 there appear to have been few Catholics beyond the confines of Brooklyn proper. But in that year the faithful in the vicinity of Sag Harbor, near the eastern end of the island, began to be visited by priests from New York and Brooklyn. Later on, Flushing and Jamaica became mission stations. In 1843 Astoria had its church, dedicated to Our Lady of Mount Carmel; Flushing rejoined in St. Michael's; and Jamaica and Sag Harbor had been placed under the protection of St. Monica and St. Andrew. From this time forth Catholics began to settle in different parts of the island, and churches sprang up almost "wherever two or three were gathered together in His name."

In October, 1838, the Rt. Rev. John Du Bois, D. D., Bishop of New York, sent the Rev. Michael Curran, Jr., of Astoria, to found a parish at Jamaica, Long Island. He built a small frame church on Washington Street, on what is now known as St. Monica's Cemetery property. The little church was 80 feet long and 25 feet wide. In this quaint structure some 200 Catholics gathered together from miles around and assisted at Mass as best they could, some having to kneel outside the door. In time the parish grew and out missions began to depend upon it for their spiritual needs. Flushing (1843), Westbury (1850) and Far Rockaway (1848) became dependent on Jamaica. Father Curran said Mass in some of these places only once a month, and this continued until these missions grew into parishes. After six years of hard labor Father Curran was relieved of some of his outlying missions, and the Rev. John McGinnis took charge of St. Monica's, in 1844. In 1854 the Rev. Anthony Farley, Sr., became Pastor of St. Monica's, and by this time the congregation had outgrown the old frame church. In 1856 Father Farley erected a new and more suitable building, the old church was used for a time as a hall and was afterward sold to Patrick O'Rourke, who had it removed to Talford Lawn. In 1879 Father Farley opened a paro-

chial school and placed it under the care of the Sisters of Charity from Mount St. Vincent's on the Hudson. It is attended by 300 pupils. Father Farley ministered to the Catholics of Jamaica for thirty-five years, and died late in 1890.

In the following January (1891) the Rev. Michael J. Dennison, of Sag Harbor, came to Jamaica, and his pastorate, which extended over a period of ten years, was a very successful one. Before he had been Pastor two years he had made repairs and improvements on the church to the amount of \$5,000. He purchased a lot in Prospect street, and before his death he erected a new convent. Father Dennison was very highly esteemed by his parishioners, and even by people who were not of his religion. He died on March 1, 1900, and was succeeded by the present Pastor, the Rev. Maurice P. Fitzgerald, who is carrying on the good work with much zeal. He at once organized a church debt-paying society to assist him in paying off the debt on the church property, and the work of this society has already been felt.

Presentation.—In the meantime the German Catholic population of Jamaica had been growing, and a piece of ground was secured at the corner of Shelton and Flushing avenues, and on March 19, 1886, Rev. Ignatius Zeller laid the corner-stone of his new church, which he placed under the auspices of the Presentation of the Blessed Virgin. There were about forty people present at this ceremony, among whom were Messrs. Hartmann, Kissel, Prinz, Oertel, Bernhard, Peine, Braun, Siebert and others. Prior to this time Mass was said in an old farm house built in 1767, and which is still standing on the church property. The church was enlarged in 1894 by Father Zeller, and, with the rectory, is now 125 feet by 50 in dimensions. The first baptism administered by Father Zeller was on May 16, 1886. In 1893 Father Zeller erected a two-story school-house, 45 by 25 feet in dimensions. It is taught by nine Sisters of St. Dominic. Besides all this there is a convent and orphan asylum, dedicat-

ed to St. Elizabeth (widow), under the care of ten Sisters of St. Dominic, who provide for sixty or more orphans and look after other matters connected with the church.

Father Zeller has been a great worker among the German Catholics of the Diocese of Brooklyn, and it is to be regretted that his failing health has forced him to resign his parish (October, 1901) and seek the rest his long years of service have merited for him.

St. Andrew's, Sag Harbor.—Sag Harbor was visited back in the early '30s by priests from Brooklyn and elsewhere. In 1836 it was attended by Rev. John Wastl and Rev. Patrick Dougherty. In 1839 the church of St. Andrew was not yet dedicated, but the mission was visited by Rev. J. Cummisky and the Rev. James O'Donnell, O. S. A., the latter of whom continued his ministrations until 1845, when Father Curran, from Astoria, took his place. During the next two years the Rev. James McGinness, from St. Peter's, Barclay street, New York, used to attend to the Catholics of Sag Harbor. In 1848 Father McGinness, who was now resident Pastor of Flushing, continued his ministrations, until 1855, when he was relieved by the Rev. M. O'Neil, of Greenport. From 1860 to 1866 Sag Harbor was attended by Father Brunneman, from Southold. He was succeeded by Rev. John McCarthy. It was not until 1870 that St. Andrew's had a resident Pastor. This was the Rev. Felix O'Callaghan, but ill health compelled him to resign before a year had elapsed, and he was succeeded by Rev. J. J. Heffernan.

The history of this parish presents nothing very striking except the devotion of the good Catholics who lived there in early times, and who followed the priest from station to station on Sundays that they might hear Mass. In February, 1892, the Rev. Laurence Guerin made important repairs on the church, enlarged it and improved the parochial residence. The present Pastor is Rev. Michael C. Carey, who is assisted by Rev. E. P. Flaherty. A school is taught by the Sisters of the Sacred Heart of Mary.

St. Luke's, Whitestone.—Back in the '30s, Samuel Leggett, a member of the Society of Friends, a philanthropist and financier, erected a sort of union church for the use of all denominations in Whitestone and vicinity. It was known far and wide as the Quaker church, and was used as originally intended for some time. After the death of Mr. Leggett, it was used jointly by the Episcopalians and the Methodists. On Oct. 11, 1866, the property was sold to the Rt. Rev. Bishop Loughlin, and in a short time after it was dedicated to the service of God under the invocation of St. Luke. The Catholics of Whitestone were no longer obliged to drive or walk to Flushing to hear Mass. It was Father James O'Beirne who first ministered to the Catholics of Whitestone. He was followed by the Rev. William McCloskey; Rev. F. J. Blake, who came from the Diocese of Wilmington, Del.; Rev. William Connolly, who died in September, 1886; Rev. Peter Kearney, now rector of St. Raphael's Church, Blissville, who made quite a number of needed improvements in both church and rectory; and, finally, the present rector, the Rev. John F. O'Hara. Father O'Hara soon saw the need of a new church, and in due time he set to work. The new church is of brick, 50 feet by 123 feet in dimensions, the style is English Gothic, and is surmounted by towers. The basement alone will be completed at present.

Our Lady of Mt. Carmel, Astoria.—Astoria is one of the oldest parishes on Long Island. It was founded as far back as 1841. One of the earliest pastors, if not the earliest, was the Rev. Michael Curran, who attended Sag Harbor and some other out-missions. The first church was dedicated to St. John, and the congregation consisted of fourteen members, among whom were John Small and Michael Tuomey. After Father Curran came Father James Phelan, who took charge of the parish in 1858, and labored here until March, 1880, when he died of pneumonia. The corner-stone of the present church was laid on Sept. 9, 1871, and the edifice was dedicated by Bishop

Loughlin, Aug. 7, 1873. Father Phelan was succeeded by Rev. P. F. Sheridan, whose pastorate was only one year in duration. At his death, in 1881, he was succeeded by Rev. William McGinness. In 1883 the present Pastor, Rev. P. A. Walsh, assumed charge of the parish. During his pastorate he has erected a splendid parochial school, rebuilt the old church and made many valuable and needed improvements. On December 27, 1891, he celebrated the fiftieth anniversary of the foundation of his church. He has been honored with the title of Vicar Foraneus or Rural Dean.

St. Bridget's, Westbury.—Westbury mission was founded in 1850. The original St. Bridget's was an old farm house, one of the first houses erected in Westbury, that had been altered and adapted as nearly as possible for church purposes. It was attended from Hempstead and elsewhere, by Rev. Father McEnroe and other priests. On February 11, 1893, the Rev. Thomas McGronen, one of the assistants at St. Anthony's Church, Greenpoint, was assigned by Bishop McDonnell to take charge of Westbury. There was no house for the priest, and Father McGronen had to live as best he could. He at once set to work to better the conditions of his poor mission. He made appeals, Sunday after Sunday, to different congregations in Brooklyn, and in time was able, in February, 1894, to lay the foundations of a new church, 40 feet by 79 feet, on the south side of the old church. People began to gather around the new church, until in a short time Westbury came to be a flourishing parish. Hyde Park was one of its out-missions. In 1895 the Rev. Herbert F. Farrell became Pastor, and he has continued the good work commenced by Father McGronen. Westbury has now acquired the dignity of a deanery, and Father Farrell is the Dean for the county of Nassau.

WINFIELD AND ITS EARLY OUT MISSIONS.

It was here that appeared the first dawn of the faith in northwestern Long Island. In 1854 a Mr. Anderson presented to Bishop

Loughlin two lots with the understanding that they should be used for church purposes. They were accepted and the Church of St. Mary, Help of Christians, was erected during the following year. The priests in charge of this church established missions at Maspeth, Greenpoint, Laurel Hill, Middle Village, Dutch Kills, Corona and Hicksville, all of which were attended as opportunity offered, and nearly all of which are independent parishes today. Rev. Joseph Brunnemann, as we have seen, took charge of the new parish and founded St. Anthony's parish, Greenpoint.

Rev. Theodore Ignatius Goetz, a French Alsatian, ordained in Strasburg, in 1855, after spending some years as professor in the Ecclesiastical Seminary of his native Diocese, came to America, offered his services to Bishop Loughlin, and was accepted. He was a man of great learning, self-sacrificing and of extraordinary prudence. To this day his name is held in veneration even by those who have not always been remarkable for the charity with which they have spoken of their pastors. He established several mission stations and gave them constant attention at a time when Long Island did not possess the means of transportation it possesses today. While attending Hicksville, on one of his visits, he was nearly killed by a railroad accident. His labors extended over a vast field and were attended with no little hardship, but they did not prevent him from meeting in controversy those not of his faith and who were willing to hear him, and he has the happiness of effecting the conversion of the Rev. Ignatius Zeller, then pastor of the Lutheran Church at Maspeth, and the Rev. O. Schmurrer, also a Lutheran minister of the neighborhood, and who subsequently became editor of the *Orphan's Friend*, published at Columbus, Ohio.

After ten years of hard labor as pastor of St. Raphael's Church, Laurel Hill, Father Goetz died, on February 8, 1879, and was buried in Calvary Cemetery, near the scene of his trials and triumphs. The old grave-

diggers in Calvary point out his grave, and with hat in hand speak of his virtues with pious veneration. Strange to say, his successor was Father Ignatius Zeller, the Lutheran minister above alluded to, who had in the meantime studied Catholic theology and became a Catholic priest. His work in the Diocese of Brooklyn has been frequently referred to in this book. He soon introduced the Sisters of St. Dominic to assist him in the work of teaching the young. He attended at the same time outlying missions, where improvements were in contemplation, when that terrible "Black Friday," which scattered so many hopes with its blighting influence, made itself felt in this small, out-of-the-way place and put a stop to Father Zeller's plan.

In 1868 the church, school and rectory were destroyed by fire. Fortunately they were fully insured. In 1875 he was succeeded at Winfield by the Rev. John McElhinney, and he in turn was succeeded in 1876 by Rev. Peter Dauffenbach, and upon the transfer of the latter to the rectorship of the Church of the Holy Trinity, Brooklyn, he was succeeded by Rev. M. Schneider, the present Pastor.

St. Rita, Ravenswood.—The first Mass was said in Ravenswood as far back as 1833, by Rev. Father Phelan. The present Church of St. Rita, on the Boulevard between Webster and Washington avenues, was commenced on Nov. 4, 1894, by Rev. Wm. J. McGuire. For some months Mass was said in a store owned by Patrick Fitzgerald, and later on in a hall on Hancock street. Ground for a church building was broken in March, 1900, by the Rev. Thomas F. McGronen; and the cornerstone was laid on April 22, 1900, by the Rt. Rev. Bishop McDonnell. Among the prominent laymen present at this ceremony were Hon. John P. Madden, the late Patrick Jerome Gleason, former Mayor of Long Island City, and Francis D. Thorne, Esq. On August 6 Mass was said for the first time in the new building by the Rev. Thomas F. McGronen, the unsafe condition of the hall above referred

to having made it necessary to use the church before it was ready for dedication. The new church, 45 feet by 105 feet, was dedicated by Bishop McDonnell on Sept. 6, 1900. St. Rita's is an out-mission attended from St. Patrick's Church.

St. Patrick's, Dutch Kills.—In 1868 Father Goetz, pastor of St. Raphael's Church, Laurel Hill, near Blissville, founded the present St. Patrick's parish, at Dutch Kills (as an out-mission from Laurel Hill), at the corner of Henry and William streets. The original church was a modest frame building 25 feet by 60 feet, and no corner-stone was laid. In 1870 the church was moved to Crescent street, between Wilbur and Paynter avenues, and an addition built, which made the church cruciform. It was dedicated by Bishop Loughlin. In the fall of 1889 the church was partly destroyed by fire. In the spring of 1898 the present handsome brick church, 80 feet by 135 feet, was begun, the Rev. Thomas F. M. McGronen turning the first sod. The corner-stone was laid Sept. 15, 1898, by Bishop McDonnell, assisted by Rt. Rev. Mgr. McNamara. The sermon was preached by Rev. P. F. O'Hare. The dedication of this church took place Sept. 9, 1899, Bishop McDonnell officiating. A new rectory was completed and occupied on March 17, 1901. Father McGronen, though a young man, has accomplished a grand work in the few years of his pastorate.

St. Patrick's Church, Glen Cove, dates back to 1856, when the Rev. Patrick Kelly said the first Mass in this place, in a hall, in the presence of some fifty persons, among whom were Thomas McCormack and John Carroll. The first baptism dates back to March 30, 1856. Among the old tomb stones in the graveyard may be found those of Thomas Higgins and Andrew McGery, pioneer Catholics of Glen Cove. The original church was 60 feet by 30 feet. In 1876 the Rev. James McEnroe enlarged and otherwise improved it. Father McEnroe became Pastor on Nov. 1, 1858, and continued to minister

to the faithful of Glen Cove for nearly forty years. He is now Pastor of the Church of the Holy Rosary, Brooklyn. The present Pastor of St. Patrick's is Rev. Bernard O'Reilly.

St. Fidelis', College Point.—The history of this parish goes back to 1856, when College Point was known as Strattonport. In that year the Rev. Joseph Huber was sent to open a new church. There was not much to encourage him, but he set himself to work with a will and continued to labor here until his death, which occurred on January 1, 1889, at the age of sixty years. He was one of the veteran priests of the Brooklyn Diocese, and was always known as a quiet and unobtrusive worker. He was succeeded by the Rev. Ambrose Schumack, C. PP. S., the present incumbent. The present church will seat between 700 and 800 persons, and the parish numbers some 1,300 souls. A fine school, attended by 125 boys and 110 girls, is conducted by six Sisters of St. Dominic. The entire church property is estimated to be worth some \$100,000, on which there is merely a nominal debt.

Our Lady of Loretto, Hempstead.—The first Mass said in Hempstead was in 1849, in the house of Mr. Powers. Before that time the people had to walk across the great Hempstead Plains to Westbury, and then they were sure of Mass only once a month. The congregation was very small, and the priest, Father McKenna, came from Jamaica.

In 1851 the Catholics living in the territory now comprised within the limits of Nassau County held a meeting and resolved to build a church in a central location. Westbury was chosen and a very humble frame structure, valued at \$200, was erected. In 1853 a church was built. It is now used as a rectory by the Pastor at Westbury. In 1861 Rev. James McEnroe, now Pastor of the Church of the Holy Rosary in Brooklyn, attended the church from Glen Cove. In 1872 the Rev. Eugene McSherry was appointed to Westbury, but made Hempstead his residence. The present Church of Our Lady of Loretto

was built by him and it was dedicated by Bishop Loughlin. The money subscribed for the building of the church came largely from the Irish laborers then employed on the water-works and in laying out Garden City. They at first purchased a large house and some out buildings. Among these buildings was one that had been used as a Baptist meeting-house, and it was in "an upper room" of this building that the first parochial Mass was said, by the Rev. Eugene McSherry. The following year additions were made to this building. On June 22, 1872, the corner-stone of the present church was laid. It is a beautiful edifice and is said to have cost \$15,000.

Father McSherry died in 1879, when he was succeeded by Rev. Peter Kearney. He was succeeded alternately by Rev. Peter Plunkett, Rev. J. J. McCusker, Rev. Robert Boyce, and finally the Rev. William B. Farrell, the present Pastor. In spite of many difficulties, Father Farrell has greatly improved the appearance of the church. He has devoted himself to the moral and intellectual improvement of his people, and during the recent Spanish war he was unremitting in his ministrations to the soldiers encamped upon the plains and within the limits of his parish.

The following parishes are the outgrowth of the mustard seed planted in Hempstead: Westbury, Mineola, Hyde Park, Queens, Rockville Centre and Freeport. This shows the wonderful growth of Catholicity in this portion of the island in twenty-five years. Freeport is an out-mission of Hempstead and is attended by Father Farrell. The Church of the Holy Redeemer was founded in 1899.

St. Margaret's, Middle Village.—Quite a German population began to settle around Middle Village in 1858 and they have become quite numerous now. Many of the early German settlers were buried in the Lutheran Cemetery near by, the Catholics having no burial places of their own at that time.

In 1862 St. Margaret's Church was founded. It was at first attended from Winfield

by the Rev. Ignatius Theodore Goetz. In 1863 this church was attended by the Rev. J. M. Decker, of St. Michael's Church, East New York. The present Pastor is the Rev. Francis O. Siegelack. The parochial school is under the care of six Dominican Sisters. The church will seat about 300 persons, and the property is valued at about \$25,000, with little or no debt upon it. Besides the church property there is a very large and well situated cemetery known as St. John's, and which is destined at no distant day to rival Calvary and Holy Cross Cemeteries. Between sixty and seventy acres are now under improvement and Bishop McDonnell is having this laid out and the roads macadamized, so that St. John's will soon become the Catholic Cemetery of Brooklyn.

St. Mary's Church, Long Island City, was founded in 1868, by the Rev. John Crimmins. The first Mass was said in an old public-school house on Sixth street. There were about fifty persons present, among whom were Justice Madden, James Dennen, M. Smith and Joseph Tusil.

The original church was 45 feet by 90 feet in dimensions. Rev. John McGuire, who became Pastor on Jan. 1, 1879, enlarged and improved the church, but in 1893 a fire destroyed both church and school. Father McGuire immediately went to work to rebuild his church, and in 1899 he improved the new church and it may be said with truth that he built this church twice. The school destroyed by fire was a four-story and basement building, 95 feet by 50 feet; and a new building is now in course of erection. In 1897 Father McGuire opened a new lyceum building for young men on Fifth street, and had it dedicated by Bishop McDonnell.

In 1891 St. John's Hospital was founded. In 1896 the corner-stone of a new and much larger hospital was laid. It is conducted by the Sisters of St. Joseph, and will accommodate 150 patients. Patients are admitted regardless of race or religion. Father McGuire

has done a great work at Long Island City, and it is appreciated by all classes.

St. Stanislaus', Maspeth.—In January, 1872, the Rev. Ignatius Zeller was deputed to establish a new parish at Maspeth, which was to be detached from Winfield. The first Mass was said in the new church. From 600 to 800 persons were present, among whom were ex-Police Justice Francis McKenna and ex-Senator Edward Fagan. In June, 1872, the Rev. John McElhinney was appointed Pastor. He improved the church and built a rectory. Rev. John Baxter was Pastor from 1877 to 1880, when Father Malone came, and ministered to the parish until Dec. 17, 1881, when he was succeeded by Rev. F. X. Pauletigi. The present Pastor is Rev. Joseph A. Bennett. The congregation now numbers some 1,300, and the church property is estimated to be worth about \$10,000.

St. Aloysius', Great Neck—Great Neck was for a time a dependency of Roslyn, and in February, 1876, the Rev. P. F. Sheridan, Pastor of the latter place, founded the Church of St. Aloysius at Great Neck. The first Mass was said in the new church on May 20, 1876. About 100 persons were present, among whom were Hon. Wm. R. Grace, John Chester, John Ryan, P. Regan, William Shea and others. In 1896 the church was enlarged from 45 feet by 30 feet to 60 feet by 30 feet. The succession of Pastors is as follows: Rev. P. F. Sheridan, from 1876 to 1880; Rev. Edward J. Smith, from April 25, 1880, to 1898; and the Rev. Daniel F. Cherry, the present incumbent.

St. Ignatius', Hicksville.—In 1859 the Rev. Joseph Huber, of Strattenport, was sent to organize a new mission at Hicksville. The corner-stone was laid on Aug. 31, of that year, on the site of the present church. The ground was donated by Adolph Pasker. Father Theodore I. Goetz was the first resident Pastor. He was succeeded by Revs. Casper Miller, Joseph Huber and L. Schneider. Very Rev. Lawrence Fuchs, V. F., the present Pastor,

took charge on Sept. 1, 1872. Under his care the congregation has grown and the church property has been improved. On May 12, 1891, the corner-stone of a new edifice, 40 feet by 96 feet and surmounted by a spire 110 feet high, was laid by Bishop Loughlin, and on December 15, 1891, it was dedicated. The older building has been remodeled and otherwise improved and turned into a parochial school. Father Fuchs is held in high esteem by his people. He is one of the Rural Deans of the Diocese.

St. Benedict Joseph, Morris Park.—The first parish founded by Bishop McDonnell on Long Island was at Morris Park (Clarenceville). It was placed under the patronage of St. Benedict Joseph Labre, and the Rev. William J. McGuire was its first Pastor. Some time in August, 1892, Bishop McDonnell purchased a number of city lots at a moderate price for a church site and the new church was dedicated on Oct. 8, 1892, by Bishop McDonnell. The dedication sermon was preached by Rev. A. P. Doyle, C. S. P. Father McGuire labored hard to raise the necessary means to start his church and God rewarded his efforts. When removed to a more responsible cure he was succeeded by the Rev. Patrick J. Fahey, the present Pastor. The parish was formerly a part of St. Monica's.

Church of the Holy Ghost, New Hyde Park.—In 1893 the Catholics of Hyde Park, under the pastoral care of Rev. Thomas F. McGronen, began to think of having a house of worship of their own. In August of that year, they raised \$1,500. This amount steadily increased until May, 1894, when Bishop McDonnell laid the corner-stone of the new Church of the Holy Ghost. On August 15 of the same year a very pretty church edifice was dedicated by Bishop McDonnell. The sermon was preached in Polish by Rev. Father Leo. The church commands an imposing site on the Jericho turnpike. The interior is in Gothic style. It is 40 feet by 67 feet in dimensions and will seat 420 persons. It is heated with

hot air, and is lighted by seven stained-glass windows on each side. The altars, pews and windows were presented by the Church of St. John the Baptist, Brooklyn, and the organ by Father Zeller, of Jamaica. The present Pastor is the Rev. Thomas Videnz. Over 100 children attend a school conducted by the Sisters of St. Dominic.

St. Joachim's, Cedarhurst.—In September, 1893, ground was broken for a new church at Cedarhurst. It was placed in charge of the Rev. Patrick McKenna, of Hewlett's Station, and on Oct. 24 following, the corner-stone was laid by Bishop McDonnell, assisted by Vicar General McNamara, Rev. John I. Bennett, Secretary to Bishop McDonnell and the Rev. Pastor. The sermon was preached by Rev. Wm. Hill, Rector of St. Paul's, Brooklyn. The church was dedicated in June, 1894, by Bishop McDonnell, and the dedication sermon was preached by Rev. James H. McGean, Pastor of old St. Peter's, New York. The church was destroyed by lightning on July 12, 1899 and rebuilt in 1900. Father McKenna still attends St. Joseph's Church, Hewlett's, but has for some years past resided at Cedarhurst, where he has the gratification of seeing his congregation rapidly increasing under his fostering care.

St. Joseph's, Hewlett's.—In 1871 the seventeen Catholics gathered together in and near Hewlett's and formed themselves into a congregation and for nine months heard Mass said by Father Doris in the house of Mr. Daniel Longworth, who later on donated a plot of ground on Broadway, upon which, in May, 1872, the corner-stone of the present St. Joseph's Church was laid by Bishop Loughlin. The new church was dedicated in May of the same year.

St. Mary's, Roslyn.—St. Mary's Church, Bryant avenue, Roslyn, was founded by the Rev. Father O'Donnell in the latter part of the '60s. In November, 1872, the Rev. P. F. Sheridan became Pastor, and during the four years of his pastorate he improved the church

and built the rectory adjoining the church. Father Sheridan died in May, 1876, and was succeeded by the Rev. Mortimer C. Brennan. The parish grew, in the meantime, so that some of its out-missions were detached and formed with separate parishes. In July, 1886, the Rev. N. J. Doran became pastor. On the death of Rev. Dr. Mitchell, in 1898, he was transferred to St. Stephen's, Brooklyn, and was succeeded here by Rev. Myles J. O'Reilly, in July, 1898. The present Pastor is Rev. M. J. Hogan.

St. Sebastian's, Woodside.—By the year 1894 the Catholic population of Woodside had so far increased as to warrant the erection of a church of their own. Up to this time they were obliged to go to Blissville or Winfield to hear Mass on Sundays and holy days. The organization of the new parish was entrusted by Bishop McDonnell to Rev. Edward W. Gannon, one of the assistants at the Church of the Sacred Heart, Brooklyn. Father Gannon set to work at once to collect funds for the erection of his new church. A tract of land was bought in one of the most desirable parts of the town, and on June 14, 1896, he had the happiness of having his church dedicated by Bishop McDonnell. The church will accommodate some 800 people.

Church of the Sacred Heart, Bayside.—The corner-stone of the Church of the Sacred Heart at Bayside was laid on Sunday, Sept. 1, 1895, by Very Rev. P. J. McNamara, V. G. It is a neat frame structure of Gothic architecture, and together with the parochial residence the church property is valued at some \$18,000. The Pastor is the Rev. Matthew J. Tierney, who also attends to the needs of the Catholic soldiers at the military post at Willet's Point.

St. Adalbert's, Elmhurst.—In December, 1891, the Rev. Joseph Fyda was sent by Bishop Loughlin to found a church at Elmhurst for the Poles. In the early part of the following year he gathered together about 150 of his countrymen, in St. Mary's Church, Winfield,

and said Mass for them. Later on he erected a church, 50 feet by 100 feet, at Elmhurst, the basement of which he utilized as a school, which he placed under the care of the Sisters of Nazareth. It is attended by over 100 children. Father Fyda was succeeded in 1896 by the Rev. B. Puchalski, and in Dec. 9 that year the church was transferred by Bishop McDonnell to the Capuchin Fathers from Syracuse. The present Pastor is Rev. Felix Baran, O. M. C., who is assisted by Rev. Benedict Langa, O. M. C., and two lay Brothers.

Corpus Christi, Mineola.—This is a comparatively new mission, although Mass was said in Mineola some years before by the reverend clergy of Hempstead. In 1897 the Rev. Herbert Farrell, of Westbury, of which Mineola is still an out-mission, invited two Paulist Fathers from New York to give a retreat to the faithful, in Allen's Hall. The result of the mission was the formation of a little congregation of some eighty Catholics, who resolved upon building a church of their own. On Sunday, Aug. 14, 1898, Bishop McDonnell dedicated the new chapel or church, which has neat stained-glass windows and will seat 200 persons.

St. Agnes' Church, Rockville Centre.—The first Mass said at Rockville Centre was by Rev. Thomas V. Robinson, C. S. P., in a private house. The next Sunday, owing to the increasing number of attendants, Mass was said in a shed. Later on, through the exertions of a Mr. Vincent, the Rockville Institute was secured and converted into the present St. Agnes' Church. It was first attended by the Rev. Patrick McKenna. In 1894 the Rev. Thomas Carroll was appointed Pastor. He was succeeded by the Rev. Patrick M. Fitzgerald, the present Pastor.

St. Kilian's, Farmingdale.—Farmingdale has the honor of being the first parish on Long Island under the care of the Sons of St. Benedict. In the fall of 1896 Bishop McDonnell invited the Benedictine Fathers of the Bahama Islands to establish themselves in the Diocese

of Brooklyn. Accordingly a band of Benedictine Fathers, under the Rev. Gerard Spielmann, went to Farmingdale, and on Sunday, Oct. 11, 1896, they said Mass for the first time in a building which had formerly been a Protestant house of worship. In February, 1897, the Fathers secured a beautiful mansion with four acres of land, in the heart of the village, for their monastery, church and school. The new church was dedicated on July 4, 1898, by Bishop McDonnell, and the ceremony was participated in by a large concourse of people. Besides the Benedictine monastery, Farmingdale has the Nazareth Trade School, which is attended by 300 orphan boys, who are cared for by 28 Sisters of St. Dominic.

St. Joachim and St. Ann's, Queens.—On a plot of ground situated at the junction of Hollis and Franklin avenues and Joseph street stands the Church of St. Joachim and St. Ann's. The corner-stone was laid on Sunday, Sept. 12, 1897, by Very Rev. P. J. McNamara, V. G. The sermon was preached by the Rev. Dr. James H. Mitchell, Chancellor of the Diocese. The church is 50 by 100 feet in dimensions. It is a frame structure, Gothic in style, and has a seating capacity of about 600. The parish was organized in 1896 by the Rev. Ignatius Zeller, of Jamaica. A small building on Bennett street, formerly used by the Episcopalians of Queens, was secured, and is still used. About one month after the organization of the parish the present Pastor, the Rev. Frederick W. Dotzauer, was appointed Pastor. He has about one hundred families under his charge, and his Sunday-school numbers about one hundred children. The congregation is drawn from Queens, Elmont and adjacent places. In its early days Queens was a dependency of Hempstead.

St. Martin's, Amityville.—This is a comparatively new parish, and as such dates from June, 1897. A plot of ground of two acres on Union Avenue, was secured, and Father Gerard Spielmann, O. S. B., from St. John's Benedictine Abbey, Collegeville, Minn., was en-

trusted with the erection of a church, rectory and school. Mass was first said in Liberty Hall. The present Pastor is Rev. Benno Ferstl, O. S. B., who also attends Massepegua and Wantagh.

St. Michael's, Flushing.—St. Michael's Church, Flushing, is among the oldest foundations on the island. The original church building, a small frame structure, was erected in the early '40s (1843), when Father Michael Curran, of Astoria, visited this and a number of other missions on the island. Later on the mission was attended by Fathers Dennis Wheeler, the first resident Pastor, and McMahon. In 1853 Rev. James O'Beirne was appointed Pastor of St. Michael's and continued to minister to its people for twenty-one years. He built the present St. Michael's church, and, in 1864, he purchased the ground upon which the convent and academy of the Sisters of St. Joseph now stands. In 1874 Rev. Henry O'Laughlin became Pastor. After a pastorate of a few years he was succeeded by Rev. John R. McKenna, who died in 1893. His successor was the Rev. Eugene Donnelly, the present Pastor, who had been an assistant at St. Michael's for some years. Father Donnelly built the present parochial residence and otherwise improved the church property. He has a flourishing parochial school, attended by nearly 300 pupils under the care of the Sisters of St. Joseph. The church will seat about 800 persons, and the entire church property is valued at \$150,000. Father Donnelly is a graduate of the American College in Rome and is one of the Rural Deans of the Diocese.

St. Boniface, Foster Meadow.—This mission was founded in 1854 and was attended by the Rev. B. Keller, and later on by Rev. Joseph Huber, of Strattonport. The church, which was placed under the patronage of St. Boniface, was not dedicated until 1858. Father Hauber, who became Pastor in 1870, has done all that circumstances will permit. He has a school attended by about 150 pupils, under the care of the six Sisters of St. Dominic. The

congregation now numbers 800, and the church property is estimated to be worth about \$25,000, with little or no debt upon it.

St. Dominic's, Oyster Bay.—In 1871 Oyster Bay was attended from Glen Cove by the Rev. James McEnroe, who built and paid for the little church that was used for many years. In 1883 Oyster Bay became an out-mission of Huntington and was attended by Rev. Jeremiah J. Crowley. During his pastorate he collected some \$9,000 for a new church, and the mission was in a prosperous condition, when, in 1895, Bishop McDonnell sent Rev. John L. Belford to become its first resident Pastor. Father Belford built and paid for a handsome rectory, and then set to work on a new church, 102 feet long by 53 feet wide, with a seating capacity of 450. Father Belford gave a new impetus to religion at Oyster Bay, and its proximity to the sea has made it quite a summer resort. On the death of Father Malone, Father Belford was promoted to the pastoral charge of the church of St. Peter and St. Paul, Brooklyn, and he was succeeded at Oyster Bay by Rev. Walter J. Power.

St. Laurence, Sayville.—In 1895 the Catholics of Sayville came together to discuss the prospects of having a church in their village. The Rev. Thomas S. Duhigg was assigned by Bishop McDonnell to look after them, and form a new parish in Sayville. An old Methodist church, no longer used by that denomination, was rented, and on June 2, 1895, Mass was said for the first time in Sayville. Father Duhigg made an earnest appeal to his people. Ground was purchased at the corner of Handsome avenue and Main street, and work was commenced at once. On Sunday, Oct. 1, 1896, Father Duhigg had the happiness of seeing his new church dedicated to St. Laurence, by Bishop McDonnell. High Mass was celebrated by the Rev. E. J. McGoldrick, Rector of St. Cecilia's Church, and the sermon was preached by the Rev. P. F. O'Hare, Rector of St. Anthony's Church, Greenpoint. The church is pure Gothic in style, with gallery and organ

loft. It will seat 500 persons. Father Duhigg has been honored by the Bishop with the title of Rural Dean for Suffolk county.

Ronkonkoma, which has long been an out-mission of Sayville, was organized into a separate parish in 1901, and placed under the charge of the Rev. M. P. Heffernan. The mission was opened in 1884.

St. Mary's, Islip.—Until 1870 the Catholics of Islip were attended from Greenport. After that and up to 1876 they were attended from Huntington, by the Rev. Jeremiah J. Crowley. In 1882 St. Mary's Church was built, and the mission continued to be attended from elsewhere. Rev. J. E. Bobier, of Bayshore, attended it during the '80s. It is now under the pastoral charge of the Rev. E. A. Duffy, who resides in Islip.

Southold and Cutchogue.—In 1854 the Rev. Joseph Brunnemann, O. S. F., organized old St. Patrick's parish when there were very few Catholic families in the neighborhood. Father Brunnemann's work was appreciated, for it was not long before Mr. Jacob Apley purchased the old Southold Academy, which had become financially involved, and presented it to the Catholics. It was soon remodeled and converted into a Catholic church, and Father Brunnemann erected a rectory adjoining it. In 1870 Rev. John R. McKenna succeeded Father Brunnemann, and remained until 1876, when he went to Flushing. He was succeeded by Rev. Richard S. Foley. In the meantime Southampton, Cutchogue, Mattituck and other places looked to Southold for spiritual attendance. Southold was growing in importance as a summer resort. Rev. James H. Lynch became Pastor of St. Patrick's after Father Foley, and in September, 1901, having built the church of the Sacred Heart at Cutchogue, he took up his residence in that village and was succeeded at Southold by Rev. Peter F. Mathews, formerly of Fort Hamilton.

St. Patrick's, Huntington.—This parish was founded as an out-mission in 1849, and was attended by Rev. J. McGinnes, and later

on by Rev. John McCarthy. The first Mass was said in a private house about a mile and a quarter from the village. Nearby was the little country burying-ground. The first baptism of which there is any record was performed by Father McCarthy in December, 1854. This clergyman attended Huntington until 1857, when he was succeeded by Rev. Father O'Neil, who continued his ministrations until October, 1860. On Nov. 11, 1860, Rev. Jeremiah J. Crowley succeeded him. Father Crowley lived at Bay Shore, from which place he attended a number of mission stations. On April 4, 1864, he moved to Huntington and became its first resident Pastor. Prior to this time Father Crowley said Mass in Huntington once in three or four weeks. Like the country pastors of those days he would say Mass in one place early in the morning and then drive fifteen or twenty miles, fasting, to say Mass at another mission. In the meantime the church was used during the week as a school, which was attended by about 60 children. These children were in time taught to sing hymns for benediction, and they also learned to sing an easy Mass.

In February, 1867, the church was entirely destroyed by fire. Father Crowley rented a hall in the village and at once set to work to build a new church. He secured a lot in a most central position in the village and the corner-stone of the new St. Patrick's Church was laid by Bishop Loughlin on Thanksgiving Day, 1867. The new church was to be of brick, with stone foundation, 114 feet by 45 feet. Bishop Loughlin had misgivings about the ability of Father Crowley to complete the work he had undertaken, as the people were very poor, but the good Pastor had friends who came to his rescue and on June 21, 1871, Bishop Loughlin dedicated the beautiful new church. It was Father Crowley's ambition to secure good ground for school purposes or for an academy, but he was unable to do so.

After a successful pastorate of forty-one years, Father Crowley was promoted to the pastorate of St. Ambrose's Church, Brooklyn,

in November, 1895, as the successor of the late Rev. Daniel J. Sheehy. While at Huntington he attended Oyster Bay, Islip, Cold Spring, Penataquit, Patchogue and Smithtown. His successor at Huntington was the Rev. John C. York, the present Pastor, who also attends West Neck. Father York has not been idle since he assumed charge of St. Patrick's. In 1896 he purchased a large plot of ground for a new cemetery and had it blessed on Memorial Day of that year.

St. Anne's, Brentwood.—Up to eight or nine years ago a Catholic was almost unknown around Brentwood. In 1895 the Rev. Edward F. Hannigan, one of the assistants at St. Joseph's, Brooklyn, said the first Mass in that village. Since that time Catholics have settled in the village, and now they are quite numerous. In the summer of 1895, Mr. Charles B. Van Nostrand, whose father was a convert to the faith, called a meeting of Catholic residents to consider the best means of securing a priest to minister to them. The Sisters of St. Joseph had already purchased Hotel Austral and its annex, Hotel Brentwood, and several cottages which had been built on speculation when Brentwood was considered a promising summer resort.

The advent of the Sisters gave an impetus to religion. Mr. Van Nostrand and his friends had gathered the children of the neighborhood together on Sundays that they might be instructed in their catechism; but a church had become a necessity, and as the Bishop was absent in Europe, Mr. Van Nostrand and his friends applied to Mgr. McNamara, the Administrator of the Diocese, in the Bishop's absence. He sympathized with these good people and sent them a priest from his own household, until the Bishop's return. A small store adjoining the postoffice was rented and Mass was said in it on Sundays. Bishop McDonnell, on his return from Europe, approved of the formation of the desired parish, and in October, 1895, appointed Rev. Henry F. Murray to take charge of it. Father Murray collected a

sufficient amount among his friends in the city to build a church, and the present St. Anne's was erected. Father Murray was succeeded by the Rev. John M. Kiely, who improved the church, introducing steam heat, and by erecting a handsome set of Stations of the Cross. Father Kiely also attends Central Islip. Brentwood has of late become the seat of the Annual Retreat of the Reverend Clergy of the Diocese of Brooklyn.

St. Mary's Star of the Sea, Far Rockaway.—In 1848 Far Rockaway was visited by clergymen from the city and from older and stronger missions on the island. In time, St. Mary's became an independent parish and was very numerously attended, especially during the summer months. Rev. Henry J. Zimmer was Pastor here for a time and he erected a fine Gothic church, the interior of which is handsomely decorated. The Stations of the Cross are all painted in oil, and a beautiful altar piece, representing "Hope," was presented to the church by the late John Kelly, former head of the Tammany Society in New York. In 1896 the Rev. M. G. Flannery became Pastor. Father Flannery is a gentleman of artistic taste, and his church shows it. The marble altar, the gift of the parishioners, the onyx altar railing and brass pulpit are the gifts of Messrs. William and James Caffrey in memory of their parents. Father Flannery has a flourishing school, under the care of the Sisters of St. Joseph.

St. Philip Neri, Northport.—This mission was founded about 1868, by the Rev. Jeremiah J. Crowley, of Huntington. Father Crowley was a hard-working priest and the fruit of his labor can be seen in many parts of Long Island. Mass was first said here in an old hall at the foot of Main street. In 1875 Father Crowley purchased a site on which stood a Presbyterian church, for some \$4,000. The building was transformed into a Catholic church and was used until about 1878. At this time Father Crowley was attending Bay Shore and Islip, besides Huntington and Northport, and cir-

cumstances were such that he was unable to continue his ministrations at Northport. The church here was purchased by Mr. Robert Murray, who moved it to his own property and turned it into a carriage house. In 1893 the Rev. P. J. Tuhigg reorganized the parish, secured the old church, still a carriage house, and Mass was said in it for some time. The mission was attended by the Lazarist Fathers, of Brooklyn, from Christmas, 1893, until May, 1894, when the Rev. Maurice Fitzgerald was appointed to Northport, and from this time the parish took on new life. The land on which the first church had stood was in the market for fifteen years, when it was repurchased by the Catholics and the present church was built upon it. The corner-stone was laid Sept. 9, 1894, by Bishop McDonnell, and the dedication took place November 3, 1895. It is a wooden building, Gothic in style, and is 50 feet by 100 feet in dimensions. The present Pastor is the Rev. Francis A. McCarthy, S. T. D.

OTHER CHURCHES ON THE ISLAND.

The progress of Catholicity on Long Island has been truly marvelous.

Besides the churches already mentioned there is the Church of Our Lady of Sorrows at Corona, of which the Rev. James J. Corrigan, D. D., is Pastor. It was founded in 1870, and now has a congregation of nearly 1,000 souls.

St. Elizabeth's, at Woodhaven, was founded in 1873. The present Pastor is the Rev. Joseph Ernst. Attached to this church is a school of nearly 250 children taught by the Sisters of St. Dominic.

St. Joseph's Church, Schutzen Park (Astoria), under the care of the Rev. C. Eisele, is a flourishing German parish, with about 7,000 souls.

St. Agnes', Greenport, dates back to 1855, when it began as a little out-mission. It is now under the care of the Rev. Patrick J. Farrelly, Rural Dean, who attends Orient and Shelter Island.

St. John's Church, at Riverhead, is under

the pastoral care of the venerable Father Patrick Creighton, so long known in Brooklyn as the Pastor of the Church of Our Lady of Victories. This parish was founded in 1870. Attached to it as an out-mission is the Church of the Immaculate Conception at Quogue.

Centre Moriches and Babylon were both founded in 1875: the latter is under the pastoral charge of the Rev. Joseph Kilpatrick. Attached to St. John's Church, Father Kilpatrick has a school taught by the Sisters of St. Joseph.

Kings Park (1884) is under the pastoral care of Rev. William Donaldson, S. T. D., assisted by Rev. Nicholas Keating. They also attend Port Jefferson.

The Church of the Sacred Hearts of Jesus and Mary, at Southampton, was dedicated on July 3, 1893. The Rev. Lawrence J. Guerin was its first Pastor, and he has been succeeded by the Rev. Wm. S. Kirby, the present Pastor.

OTHER CATHOLIC INSTITUTIONS.

The space allotted to this paper will not permit a detailed account of the Religious Orders or Communities in the Diocese, nor of the colleges, academies, hospitals, orphanages or asylums and homes directed by them. They can be referred to only in the following summary:

St. Vincent's Home for Boys is under the supervision of the St. Vincent de Paul Society, with Rev. William L. Blake as chaplain. The Benedictine Fathers have foundations at Farmingdale and Amityville; the Fathers of Mercy, the Redemptorist Fathers, the Fathers of the Pious Missions, the Lazarist Fathers and the Capuchin Fathers all have foundations in Brooklyn; the Franciscan Minor Conventuals are at Elmhurst, while the Christian Brothers and the Franciscan Brothers have colleges and academies, and conduct the boys' departments of the parochial schools of the city.

The Sisters of Charity have charge of St. Joseph's Orphan Asylum, St. Mary's Female Hospital, St. Mary's Maternity, St. Mary's General Hospital, St. Paul's Industrial School

and a number of parochial schools in Brooklyn.

The Sisters of Christian Charity from Wilkesbarre, Pennsylvania, have charge of the school of St. Benedict's Church.

The Sisters of St. Dominic have their mother house at Montrose and Graham avenues, Brooklyn, and their novitiate at Amityville. They conduct St. Catharine's Hospital and two asylums in Brooklyn; St. Catharine's Infirmary at Amityville; St. Joseph's German Orphan Asylum, Long Island City; St. Elizabeth's Orphan Asylum, Jamaica, and St. Dominic's Home, Hyde Park. Besides these they have charge of the German parochial schools of the Diocese.

The Sisters of the Poor of St. Francis conduct St. Peter's Hospital, Brooklyn.

The Sisters of the Good Shepherd have charge of the House of the Good Shepherd, for fallen women and wayward girls.

The Sisters of the Holy Family of Nazareth provide for the wants of sick, destitute and orphaned Poles in Brooklyn and at Elmhurst.

The Sisters of St. Joseph have their mother house and an academy at Flushing, St. John's Home for Boys, Home for Females Seeking Employment and some ten or twelve academies in Brooklyn; a seminary for boys at Bayside; academies at Brentwood, Far Rockaway; St. John's Hospital, Long Island City, and various other charitable works.

The Little Sisters of the Poor have two homes for aged men and women in Brooklyn.

The Sisters of Mercy have their mother house in Brooklyn, where they also conduct St. Francis Orphanage, and take charge of three parochial schools and of similar schools at Blythebourne and Syosset.

The School Sisters of Notre Dame have charge of the German school of St. Alphonsus' Church, Greenpoint.

The Salesian Missionary Sisters look after the wants of Italian children.

The Soeurs du Sacre Coeur de Marie Vierge, from France, have a convent and boarding academy for girls at Sag Harbor.

The Ladies of the Sacred Heart of Mary have charge of St. Joseph's Institute for Deaf Mutes on Buffalo avenue, Brooklyn.

The Visitation Nuns have a convent and flourishing academy on Clinton avenue, Brooklyn.

Sisters Adorers of the Precious Blood, a contemplative community, have a monastery on Putnam avenue, Brooklyn.

In fine, the Diocese of Brooklyn comprises:

RECAPITULATION.

CAPT. CHARLES HEWLETT'S HOME, NEAR WOODBURY, OYSTER BAY. (Now owned by Charles Van Sise.

CHAPTER LIX.

NASSAU COUNTY.

DESCRIPTION AND HISTORY.

NASSAU county owes its creation to the movement which brought about the Greater New York. Roughly speaking it comprises all the sections of the old county of Queens not included in the big metropolis. The act constituting the county was signed by Governor Black, April 28, 1898. Its officials, County Judge and Surrogate, District Attorney, Sheriff, Treasurer, Clerk and Superintendent of Poor were elected November 8 following, and the county commenced business on January 1, 1899.

The county is made up of the towns of Oyster Bay, North Hempstead and the greater part of Hempstead. Mineola, the county seat, is in North Hempstead township, and

has a population of some 900. There are the following villages: Oyster Bay, with a population of 2,000; Hempstead, 5,000; Freeport, 2,500; Glen Cove, 4,000; Rockville Center, 2,000; Hicksville, 1,500; Farmingdale, 1,100; Manhasset, 800; Sea Cliff, 1,300; Roslyn, 1,300; Port Washington, 1,250; Lynbrook, 1,000; and Garden City, 800. The latter with its magnificent cathedral and schools, and splendid array of homes, churches, etc., promises in time to develop into one of the most important towns on Long Island for residential and educational purposes. The county has a total area of 320 square miles and is 16 miles in width from the borough of Queens to the county line of Suffolk and 22 miles in

length from Long Island Sound to the Atlantic. On the Sound it has several fine harbors—Little Neck, Hempstead, Oyster Bay and Cold Spring. On the Atlantic front its water line is more adapted for summer resorts than for commerce. Hempstead Bay and its islands present hundreds of spots which can be and will be utilized in that way and quite

a number are in existence today. It was estimated that when the new county started out it had over 200 miles of splendid new macadamized roads, over which continued improvements have since been in progress and at a cost of very nearly \$3,000,000. The assessed valuation and tax lists in 1899 (the latest figures available) was as follows:

TOWNS.	Assessed Value Real Estate.	Assessed Value Personal Property.	Town Taxes.	County Taxes.	State Taxes.	State Tax for Schools
North Hempstead.....	\$ 4,465,785	\$429,100	\$ 42,596.90	\$ 9,637.80	\$10,700.76	\$ 4,500.56
Hempstead	6,845,562	394,600	97,950.44	13,970.98	15,511.76	13,316.03
Oyster Bay.....	8,499,015	756,920	45,170.93	17,687.23	19,637.05	8,510.67
Totals.....	\$19,810,362	\$1,580,680	\$185,718.27	\$41,296.10	\$45,849.57	\$26,327.26

Population, census of 1900, 55,448.

It cannot be expected that a county which dates back only two or three years can present much in the way of historical data, and really all that could be said of Nassau would be simply a resume of a constant movement looking to improvement. Already it has become what might be called the society section of the island and it seems steadily attracting to it men and families of vast wealth whose estates almost put them on a level, for the extent of their holdings with the old patroons, while many of the mansions recently erected are palaces in all but name.

But while the county has practically no history, its townships are among the richest in that respect on Long Island, and to them we will now turn.

With Nassau County we may fairly be said to have entered upon the most picturesque coast line of Long Island, and here some reference to that entire coast line may be in order, so full of interest and beauty on the south, so wild and romantic on the north side of the island. The Lighthouse Board of the United States has established the following lights at the most dangerous points:

Montauk Point, on the extreme east of Long Island.

Shinnecock Bay, on Ponquogue Point, Shinnecock Bay.

Fire Island, on the east side of Fire Island Inlet.

Little Gull Island, south side of easterly entrance to Long Island Sound.

Plum Island, Plum Island, Gardiner's Bay, northeast extremity of Long Island.

Long Beach Bar, entrance to Orient Harbor and Peconic Bay, Long Island.

Cedar Island, entrance to Sag Harbor.

Greenport Harbor, outer end of Breakwater, Greenport Harbor.

Horton Point, Horton Point, north of Southold village.

Stratford Shoal, in Long Island Sound, nearly opposite Port Jefferson.

Port Jefferson Breakwater, east side of entrance to Port Jefferson Harbor.

Port Jefferson W. Beacon, west side of entrance to Port Jefferson Harbor.

Old Field Point, north of Setauket.

Eaton's Neck, east side of entrance to Huntington Bay.

Lloyd Harbor, southeast end of Lloyd Neck.

Cold Spring Harbor, easterly point of shoal, entrance to Cold Spring Harbor.

Great Captain Island, near Greenwich Point.

Execution Rocks, off Sands Point.

Sands Point, northwest extremity of Manhasset Neck.

Whitestone Point, P. L., Whitestone Point. Flushing Bay, P. L., dike in Flushing Bay.

Riker's Island, P. L., north end of Riker's Island.

North Brother Island, south end of North Brother Island.

South Brother Island Ledge, west entrance to South Channel, East River.

Lawrence Point Ledge, west entrance to South Channel, East River.

Blackwell's Island, on northerly point of Blackwell's Island.

Coney Island, on Norton Point, western end of Coney Island.

Ft. Lafayette Fog Bell, east side of Narrows.

In years gone by, in fact from about 1670 to 1850, whaling was the great trade on the Long Island coast—except during the crises of 1776 and 1812, when commerce was interrupted, but even then the whaleboats played a most important part in other ways. At a town meeting in Huntington, on April 12, 1671, the following was enacted:

"It was ordered and agreed by and with the consent of the whole town, that no foreigner or any person or persons of any other town on this island shall have any liberty to kill whales or any other small fish within the limits of our bounds at the south side of the island, neither shall any inhabitant give leave, directly or indirectly, unto any such foreigner or other town's inhabitants, whereby the companies of whalenien or fishermen may be daunnified [injured], except any such foreigner or other town's inhabitant comes into the said company, or any of them, as a half-share man."

In a note on this resolution, Mr. C. R. Street, the editor of Huntington's records, says: "It indicates that the people at that early day understood their rights over the waters as well as the lands under the Colonial grant. At this period the Government claimed and received one-fifteenth of the oil out of whales cast up on the shore, and "the right of drift whales" was a privilege bought and sold.

But the industry seems to have had a be-

ginning much earlier at Southampton. Mr. William S. Pelletreau, the able and painstaking historian of that good old town, says:

One of the most important sources of revenue to the town in early days was the drift whales that floated upon the shore. In 1644 it was ordered that "if, by God's Providence there shall be hence forth within the bounds of this plantacon any whales cast up" the town should be divided into four wards (eleven persons in each ward—this number probably embraced all the grown men at that time), and when a whale was cast up two men of each ward were to be employed to cut it up, and they were to have a double share; the remainder was to be equally divided among the townsmen. Soon after this began the business of killing whales, and whaleboats manned by hardy and fearless crews did not hesitate to attack the monster of the wave in his native element. In 1658 John Ogden fitted out a small vessel and began catching whales along the coast. In the agreement between him and the town it was stipulated that the whaling company should have the privilege of landing and trying their oil at any part of the coast, and the right to cut firewood for that purpose, and all dead whales bearing the marks of their harpoons, were to belong to them. This was the beginning of the enterprise that in after years Long Island whaler carried to the farthest extent of the known world: and there is not a shore on the habitable earth that has not felt the tread of their adventurous feet, and not an island in the mighty ocean but has welcomed the coming of their spreading sails.

Whaling stations were established at various points, and in these a new element of power was introduced. The crews of the whaleboats were in many instances composed of Indians, and in this business their native courage found full play. The state of war no longer existed. The pleasing business of killing their enemies and the equally pleasing prospect of being killed in return made a state of things that had passed away, and their courage was

now devoted to the far better purpose of killing "whales and other great fish," under the direction of the race that owned their lands and controlled their destinies. The records abound in agreements made with the Indians in relation to whaling. Among them the following may serve as an example:

"Know all men that we Towsacon and Phillip, Indians, by these presents have bound and engaged ourselves (God permitting life and limb) unto Josiah Laughton and to his assigns, to goe to sea for them for the full term of three compleate seasons, at Mecox, for ye killing and striking of whales and other great fish. And that in the said time we will attend all opportunities to goe to sea for ye promoting of ye said designe. And in consideration he the said Josiah Laughton or his assigns doe engage unto us, the said Towsacom and Phillip, that for every season they will give unto us three Indian coats, one pair of shoes or a buck neck to make them, one payre of stockings, three pound of shot, halfe a pound of powder, and a bushel of Indian corne. Witness our hands this 15 Nov. 1670."

Whalefishing from Easthampton has been traced back to 1651, and at Southold to the year 1652. In the former township a town meeting in 1651 ordained "if any whale should be cast up within our bounds that every householder shall do his part to save the whale according as his turn shall come;" also, "If any Indian shall find a whale and forthwith bring tidings of it he shall have 5s. If any Englishman of this town do accidentally find a whale, and bring first tidings, he shall have a piece of whale three feet broad."

For some years it was evident that whaling was simply confined to lying in wait for the monsters who managed to get stranded on some beach or who allowed themselves to get into positions where they might be attacked from shore. About 1680 the people put off from the coast in their light canoes and attacked a solitary whale, and by 1700 the warfare seems to have been conducted in boats

specially constructed, strong and roomy structures, with broad beam and stout sides, so as to withstand damage from the monster slipping under the boat with the object of tossing it in the air or pounding its timbers out of place by the lashing of its tail. It was then that the fishing may be regarded as an industry, and a most profitable one it was, for the big fish were around the coast in enormous quantities, and by-and-by whaling stations were to be found dotting its entire line. It was an industry full of excitement and danger, but it brought substantial reward, and until the race died out Long Island's whaleboat men were regarded as among the most substantial of the citizens of each township from Oyster Bay to Montauk, even although many of their "yarns" of the sea were justly regarded with suspicion and showed that they had prolific imaginations as well as comfortable purses.

Writing of the early importance of the industry, Mr. R. M. Bayles said: "Some idea of its magnitude may be gained from the statement that about 1690 the following companies were engaged in it, forming a picket line for about fifty miles along the eastern end of the island beach: John Gardiner & Co. and Samuel Mulford & Co., at Easthampton; Henry Pierson & Co., Robert Norris & Co., James Topping & Co., and Shamgar Hand & Co., at Sagg; John Cook & Co. and Joseph Moore & Co., at Mecox; Isaac Raynor & Co. and Abraham Howell & Co., at Wickapog; Francis Sayre & Co., at Southampton; Joseph Pierson & Co. and John Post & Co., at "The Pines," just west of Shinnecock Point; Thomas Stephens & Co. and James Cooper & Co., at Quogue; John Jessup & Co., at Ketchabonack; Stephen Bailey & Co., at East Moriches; and Col. William Smith, at Mastic. The profits of a season's business were variable. In 1687 the returns varied among the different companies reported from two barrels to twenty-five barrels for each man in the company. Ten or twelve barrels to a man was common. Earl Bellamont, in his report to the Lords of Trade,

in 1699, declared that Col. Smith admitted to him that he had in a single year cleared five hundred pounds sterling, by the whales taken along the beach claimed by him. The Hampton stations obtained in 1687 about two and a quarter thousand barrels of oil. The oil was generally shipped to England. Whales were so frequent along the coast in those days that on one occasion, in 1702, as many as thirteen were sighted in riding the seven miles from Easthampton to Bridgehampton. During the season of 1726 eleven whales were killed at Southampton, six of which yielded 220 barrels of oil and 1,500 pounds of bone. An ordinary yearling whale would then make about forty barrels of oil. Older ones produced fifty or sixty barrels. In 1707 it was reported to the English Lords of Trade that Long Island produced 4,000 barrels of oil. The whaling season began about the middle of October and continued until March."

Naturally, after being hunted for years, and being hunted without much regard to anything but capture, the whales began to forsake the shores of Long Island. Then the adventurous whalers concluded to try their fortunes on the high seas and built craft for the purpose, fitted by their stanchness to brave an ocean voyage and by their size to carry a good cargo of oil. This branch of the industry commenced about 1750, but the Revolution caused a suspension of its operations before it gained much headway. With the return of peace, however, it was resumed with Sag Harbor as its centre. In 1785 Capt. Stephen Howell, whose monument still stands over his grave in the cemetery of Sag Harbor, in partnership with Col. Benjamin Hunting, fitted out a large vessel which brought in a splendid cargo, and so, as the inscription on his tomb claims, became "one of the founders of that extensive and successful business which for a long period characterized and distinguished his native town." Mr. Bayles, already quoted, says:

"In 1790 there was one vessel, a brig of 150

tons, engaged in whaling from this port. In 1807 there were four; in 1820 there were six; in 1832 there were twenty; in 1838 there were twenty-nine; in 1841 there were forty-four; in 1843 there were fifty-two; in 1845 there were sixty-one, and in 1847 there were sixty-three. During the year last mentioned there were thirty-two arrivals, the returns of their work being 3,919 barrels of sperm, 63,712 barrels of whale oil, and 605,340 pounds of whalebone. During the thirty years, from 1820 to 1850, the four hundred and ninety returning vessels brought into Sag Harbor oil and whalebone to the value of fifteen million dollars. From about the year 1847 the business began to decline. While the whale fishery in deep seas and on distant oceans was enjoying its season of prosperity, the village of Greenport felt something of its impulse. The first ship sent out from that port was purchased in 1830, and at the high tide of its prosperity twenty vessels hailed from that port. New Suffolk, on Peconic Bay, had in 1843 two or three whaling ships at sea, and Jamesport a like number. At Cold Spring Harbor, on the north side of the island, the impulse of this business was felt. About 1843 that port had nine or ten ships engaged in whaling. But in all these places the business declined about the same time, and the last vessel was withdrawn from the business nearly twenty years ago. In the height of its success at Sag Harbor it employed a capital of nearly two million dollars and furnished occupation to eight hundred men and boys. The cooper shops of that village manufactured 25,000 oil barrels a year.

"In 1844 the American whaling fleet comprised about 650 vessels, the fleet of Long Island amounting to one-seventh of this number. As to prowess, Long Island ships and sailors were not left in the shade by their associates. In 1849 Capt. Roys, of the bark "Superior," of Sag Harbor, entered the Arctic Ocean at Behring Straits in July and cruised from continent to continent, going as high as latitude 70 degrees, and saw whales wherever

he went. He "cut in" his last whale on the 23d of August, and returned through the straits on the 28th of the same month. On account of powerful currents, thick fogs, the vicinity of land and ice, and imperfect knowledge of the region, he found it difficult and dangerous to continue, although there were plenty of whales. During his cruise no ice was seen, and the weather was pleasant, so that the men could work in light clothing. In most

170 barrels of oil; the second was a polar whale; and the third was a small whale, peculiar to that ocean. The last three yielded over 600 barrels."

The dangers as well as the beauties of Long Island Sound have been duly appreciated by mariners since its discovery. As early as 1657 the ship "Prins Mauritz," with emigrants from New Amsterdam, went ashore in a gale off Fire Island and was completely wrecked,

ON THE COAST LINE.

parts of the cruising ground there was anchorage, in fourteen to thirty-five fathoms of water, and part of the time the vessel lay at anchor. The first whale was taken at twelve o'clock at night. It was not difficult to whale during the whole twenty-four hours, for it was so light that one could read at midnight. The whales were tame, but different from any Capt. Roys had ever before taken. He captured three species, one of the largest yielding 200 barrels of oil. The first species resembled the Greenland whale, affording nearly

although the passengers and crew were saved. This is the earliest disaster of importance on record. During a storm on the night of Jan. 22, 1781, the British frigate, "Culloden," was wrecked off Montauk, and the spot where it went down has since been known as "Culloden Point." A pitiful disaster was the wreck of the British sloop of war, "Sylph," which went ashore near Southampton in a snowstorm on Jan. 15, 1815, and out of 117 men on board only six were saved. The Savannah, the first steamboat to cross the ocean, was wrecked,

October 27, 1822, on a voyage from Liverpool, on the beach opposite Fire Island, and her captain, John Coles, of Glen Cove, and crew of eleven drowned. She had been launched as a steamboat in 1818, but for some years before her wreck her career as a steamer was over and she had been transformed into a sailing ship. On Oct. 21 the Atlantic ship Bristol, with sixteen men in her crew and over one hundred passengers, was driven in a gale on the beach at Rockaway and eighty-four of those on board perished. Another most harrowing catastrophe was that which, on Jan. 2, 1837, wrecked the bark Mexico which, with 112 steerage passengers, and a crew of 12 men, had left Liverpool on Oct. 23, 1836. She weathered the dangers of the Atlantic all right and arrived off Sandy Hook on December 31. A gale, however, threw her ashore on Hempstead beach and she rapidly went to pieces. In all, 116 persons perished.

One record says: "The Sound steamer Lexington took fire on the evening of Jan. 13, 1840, when off Eaton's Neck. In a few moments she was enveloped in flames and burned to the water's edge. One hundred and eighteen persons perished either by the flames or the waters, only four of all those on board surviving." On July 19, 1850, the ship Elizabeth was wrecked off Fire Island, and among the passengers lost was Margaret Fuller, the famous American writer, her husband and their child. A bronze tablet commemorative of this disaster was unveiled at Point o' Woods, Fire Island Beach, July 19, 1901. The tablet describes Margaret Fuller as "author, editor, poet and orator." She was a power in her day, and her influence and example are yet potent in the cause of the advancement of her sex. The ship John Milton, of New Bedford, returning from the Chicha Islands, Feb. 20, 1858, went ashore on Montauk, in a snow-storm. She was a vessel of nearly fifteen hundred tons burden and was loaded with guano. The entire crew, composed of the captain, three mates and twenty-two seamen, were

drowned. In September, 1858, the brig Haidee, of New York, was scuttled and sunk by her crew when off Montauk. The brig had been to the coast of Africa, whence she had taken a cargo of 960 slaves to Cuba. After landing the slaves the captain and owners sent the brig in charge of the mate north to be sunk. The entire crew of twenty-two men came ashore in boats and scattered, some going to New York and others to New London. The mate was arrested near New Bedford and three of the men in New York. The schooner Helen J. Holway was wrecked on Flat Beach, opposite Sayville, April 4, 1876, with a loss of six lives. The ship Circassian was stranded on the beach opposite Bridgehampton, Dec. 30, 1876. In her destruction by the waves twenty-eight lives were lost; many of them being Shinnecock Indians, who were at work on the wreck trying to rescue the cargo from the waves."

Every winter adds a new chapter to the story of disaster and death. On the north side the battle between the waves and the rock-bound coast is often a terrific one, and woe to any unfortunate vessel which at such times gets into the power of the sea through any accident or miscalculation. On the south side the storms beat with awful fury on the great sand bar, sometimes seemingly lifting it up and tossing it about, changing its appearance, closing up one inlet and opening another, covering one stretch entirely over and raising a temporary sandhill of considerable proportions on another. There, again danger lurks for every passing vessel. The lighthouses, with their beacons and whistles and bells of course do much to lessen the number of such disasters, while the life-saving stations save many lives each winter. These stations virtually cover the whole of the island and are as follows:

Amangasett, Amagansett.

Bellport, four miles south of Bellport.

Blue Point, four miles and a half south of Patchogue.

Ditch Plain, three and a half miles southwest of Montauk light.

Eaton's Neck, east side of entrance to Huntington Bay.

Forge River, three and a half miles south of Moriches.

Fire Island, half a mile west of Fire Island light.

Georgica, one mile south of the village of East Hampton.

Gilgo, west end of Oak Island.

Hitcher Plain, half mile southwest of Fort Pond.

Jones Beach, east end of Jones Beach.

Lone Hill, eight miles east of Fire Island light.

Long Beach, near west end, Long Beach.

Mecox, two miles south of the village of Bridgehampton.

Moriches, two and a half miles southwest of Speonk.

Napeague, Napeague Harbor.

Oak Island, east end of Oak Island.

Potunk, one and a half miles southwest of Potunk.

Point of Woods, four miles east of Fire Island light.

Point Lookout, two miles west of New Inlet.

Quogue, half a mile south of Quogue.

Rockaway, near the village of Rockaway.

Rockaway Point, west end of Rockaway Beach.

Rocky Point, about four miles northerly from Greenport.

Southampton, three-fourths of a mile south of Southampton.

Shinnecock, two miles east-southeast of Shinnecock light.

Smith's Point, abreast of Smith's Point.

Short Beach, half mile east of Jones Inlet.

Tiana, two miles southwest of Shinnecock light.

Zach's Inlet, west end of Jones Beach.

Tales of piracy in connection with Long Island used to be plentiful and some of these are elsewhere related in these pages. Coney Island and Rockaway in particular were hotbeds of pirates, principally the small fry who ought to be more properly classed as smugglers, but who were equally as ready to murder and to rob as to cheat the revenue of what the revenue claimed to be its just due. There is the

story of Captain Kidd, who is claimed to have hidden treasures in so many places along the coast that if he had only dropped one strong box in all the places alleged to be his "hiding places" he must have had enough of such boxes to have burdened an entire fleet. The legends of the pirates are too vague to be of much use in history. But the record closes with a veritable story. On Nov. 9, 1830, the brig Vineyard left New Orleans with a valuable cargo and \$54,000 in specie. Had this last detail not been known to the crew all might have gone well, but the fact that it was on board aroused the cupidity of the fo'c'sle and the apparently innate desire of ignorant, lawless men to get rich quickly. A mutiny was determined upon so as to gain possession of the money and the plans arranged were put in effect when the brig was off Cape Hatteras. The Captain and mate were murdered and the crew of seven men took possession of the brig. They determined to proceed to the Long Island shore and there abandon the ship and scatter, each with his share of the plunder. The vessel arrived all right within a few miles of Long Island and was, in accordance with their plans, burned and sunk. They took to the small boats intending to land at different places. Then the troubles of the mutineers began. One boat with three men upset and its occupants were drowned. The other boat had a hard time making shore and much of the money had to be thrown overboard to lighten the little craft. The four pirates landed near Coney Island with some \$5,000, and then began quarrelling with the result that their crime became known and their arrest followed. Two of them were hanged on April 22, 1831.

As Nassau county is the heir to so much, some few particulars regarding the fighting spirit of Long Island may also be presented in this place.

Long Island from the beginning of her history contributed her full share to the fighting force of the country. In the old Colonial

French War, when Britain and France were struggling for the mastery of the continent, Major Nathaniel Woodhull, of Mastic, Suffolk, Colonel Isaac Corsa, of Flushing, Captain Richard Hewlett and others led Long Island troops in the campaign under Abercrombie, and took part in the capture of Frontenac. A strong militia force was maintained on the island from an early period even for home defense.

In 1693 the enrolled militia of Kings county numbered 319 commanded by Colonel Stephanus Van Cortlandt, of Queens county; 580 commanded by Colonel Thomas Willett, and of Suffolk county, 533 commanded by Colonel John Young, a tight little army of 1,432 men, very nearly one-half of the entire force in the province. In 1700 Kings county militia had 280 men, Queens, 601, and Suffolk, 614. In that year the official returns gave the names of the officers of the three regiments and the various companies, as follows:

Of ye Regiment of Militia of ye County of Suffolk on ye Island Nassau.

FIELD OFFICERS.

Isaac Arnold.....Colonel
Henry Pierson.....Lieut. Col.
Matthew Howel.....Majr

THE SEVERAL COMPAS IN YE SAID REGT.

The Foot Compa in the town of Brookhaven.

COMMON OFFICERS.

Sam. Smith.....Captain
Richd Floyd.....Lieut.
Joseph Tucker.....Ensigne

Of the Foot Compa in ye town of Huntington.

COMMON OFFICERS.

Thos. Wicks.....Capt.
Jon Woods.....Lieut.
Epenetus Plat.....Lieut.

Of ye Foot Compa in ye town of Southampton.

COMMON OFFICERS.

Abra. Howell.....Capt.
Joseph Fordham.....Lieut.
Isaac Halsey.....Ensigne

Of another Compa in ye said Town.

COMMON OFFICERS.

.....Capt.
Jon Lupton.....Lieut.
Joseph Moore.....Ensigne

Of another Compa in ye said Town.

COMMON OFFICERS.

Tho. Stephens.....Capt.
Joseph Pierson.....Lieut.

This martial spirit was well understood by the leaders on both sides when the Revolutionary War broke out and accounts in a great measure for the importance which the island assumed during that struggle. Besides being one of the approaches to New York, the Continental generals knew there was a fighting force on the island worth winning, and the British fully realized that if not already won to their side that force should be prevented from being of service. This accounts for much of the completeness and severity of the "occupation" from the date of the Battle of Brooklyn until the sun went down on the last British vessel on the day of the evacuation of New York. By the disunion of the Long Islanders when the struggle began, its fighting

strength was rendered of little avail, and its divided councils practically made the entire island a prey to official or military or thieving Tory or to Whig freebooter alike. So it suffered terribly, and the suffering, like the rain, fell alike on the just and the unjust,—the patriot and the loyalist. Silas Wood estimated that the loss sustained by the islanders during the occupation at \$500,000, a very low estimate.

But the hardest blow administered to Long Island came after peace was declared, when the New York Legislature taxed her \$195,000 for not having been in a condition to take an "active part in the war against the enemy." Thus, comments Dr. Prime, "their misfortune was interpreted a crime; and because they did not emancipate themselves from a mighty army to whose power the whole Continental force had abandoned them in the very commencement of the contest they must be subjected to a very heavy fine; and after being pillaged by a remorseless enemy and tortured by their presence for six gloomy years they must be taxed to repair the losses of those who had been subjected to occasional depredations!"

In Nassau county we begin to see the old mills which are such prominent features of the Long Island landscape. Some of these, notably out by Southampton and East Hampton, are at least a couple of centuries old, and were any of them removed the appearance of their surroundings would change as completely as though a hill had been leveled or a natural landmark destroyed.

On the North Shore, at Port Washington, is the largest tidewater mill ever built on Long Island. It was erected by Adam Mott in 1730, near his home, which is still called the "Mill House." When the troops of Lord Howe had driven the American army across the Harlem River this old mill was seized along with its owner, and thereafter until the war of independence was over the unwilling miller, who was a Quaker, was forced to grind rations for

the invading army. Another large mill was built near this one in 1785, and to these two mills the village of Port Washington owes its early importance; the mills were supplied with wheat from the Mediterranean Sea, and did a large business.

On the beautiful shores of Manhasset Bay, formerly known as Little Cow Neck, stands the well-known Plasdome Mill, built by William Nicolls in 1735. It was spoken of as Latham's Mill in 1746. It was afterward owned by the learned and renowned Dr. Samuel L. Mitchell,—one of Long Island's famous men,—who named it Plasdome, meaning a pleasant place. Part of it was carried away by the great wind and flood of August 10, 1826. It was rebuilt, and remained unchanged until 1863, when it was changed to its present form, with additions.

At Babylon, on the south shore, is the old Monfort Mill, rich in historic interest and legends of olden days, when the sturdy farmers of Suffolk county claimed citizenship with New England. It was built in 1680, and is one of the oldest mills on Long Island. It was run by Judge Garret Monfort for fifty years. The Monforts sold it to the Oakleys, a family of millers, who ran it for sixty years as a grist mill. It is now used as a toy whip factory, the only one in the United States. At Mill Neck are the ruins of the old Cocks Mill and homestead, dating back to 1675. Old Thomas Cocks was a staid owner, and only on certain days would he turn the water against the old mill wheel. On other days he would attend to his estate of 180 acres.

At Smithtown is another old-time mill, and at Cold Spring, across from the State fish hatcheries, not far distant from the spot where Nathan Hale landed on his perilous undertaking, is a mill dating back to long before the Revolution. This is one of the few mills that now run by the over-shot wheel, the power for which is obtained from a narrow canal built along the hillside.

CHAPTER LX.

HEMPSTEAD.

IN an earlier chapter the entire story of the settlement of Hempstead has been treated somewhat at length, so it is only necessary to say here that the first patent was issued by Governor Kieft November 14, 1644, and this patent was confirmed by those issued March 6, 1666, and April 17, 1685, by Governors Nicolls and Dongan, respectively. In 1784 the territory was divided into North Hempstead and South Hempstead townships. South Hempstead was recognized as a town by the Legislature on March 7, 1788, and in 1796 it dropped its prefix and became simply Hempstead. Under its organization statute each township was to enjoy the right of oystering, clamming and fishing in the other, and both continued to cut grass on the south meadows until 1815. In 1797 a litigation commenced between the two townships with relation to the grass cutting right, which was only settled in December, 1828, with such victory as there was to Hempstead. It was at best a miserable dispute, and, like most of the boundary disputes, so frequent in the early history of the various Long Island townships, seems to us silly in these days. Empty land was about them all, yet they wrangled for years over a field or two. In 1830 Hempstead disposed of all its public lands by auction, a consummation that added greatly to its future internal peace. Hempstead township lies on the south side of the island, has a frontage on the ocean of some twenty miles, and a total area of nearly 100 square miles. Down to 1784 the history

of the two townships must be considered as one, and after the division the story follows the fortunes of the southern section, the section which now monopolizes the plain title of Hempstead.

While much is doubtful as to the early history of Hempstead, two things seem certain. It was a theocratic colony, like Southold, and it was peopled by a congregation, or part of a congregation, from Stamford, Connecticut, most of them being natives of England. One of the first things they set up was a building for public worship, as already told in this work. But the town had a civil history as well. Among the early settlers who came after arrangements for their reception had been completed by the Rev. Robert Fordham, their clerical leader, and John Carman, were Richard Gildersleeve, Edward Raynor, Thurston Raynor, William Raynor, the Rev. Richard Denton, Matthew Mitchell, John Underhill, Robert Coe, Andrew Ward, Jonas Wood, John Ogden and Robert Jackson. Most of these people, if not all of them, were possessed of more or less means, and several had been prominent in public life in Connecticut, such as Richard Gildersleeve, Thurston Raynor, Robert Coe and others. The patent was obtained from Governor Kieft in 1644, which may be accepted as the date of the foundation of the township, although many antiquaries would place it a year earlier, when Fordham and Carman had bought the territory from the Indians. With these helpless aborigines the settlers of Hempstead seemed to get

along fairly well; there were several unpleasant details in the early relations, but it would seem to a less extent than was the case in most of the other settlements. In 1656 a sort of treaty of peace governing the relations of the two races was made and settled the boundaries of the white man's land, confirming a prior agreement made in 1647. As a result of this the following deed was drawn up:

July the 4th, 1657. Stilo novo.

Know all men by these Presents, that We, the Indians of Marsapege, Mericock, and Rockaway, whose Names be underwritten, for ourselves, and all the rest of the Indians that doe Claime any Right or Interest in the Purchase that hempsteed bought in the year 1643. And within the bounds and limitts of the Whole tract of Land, Concluded upon with the governor of Manhatans as it is in this paper Specified, Doe, by these p'sents, Ratifie and Confirme to them and their heires forever, freely, firmly, quietly and Peaceably, for them and their heires and success's for Ever to enjoye without any Molestacon or trouble from us, or any that shall pretend Any Clayme or title unto itt.

The Montooke Sachem being present att this conformance.

In Witness whereof Wee, whose names bee here under written, have hereunto subscribed.

THE MARKE OF TAKAPOSHA.
THE SACHEM OF MARSAPAEQUE.
THE MARKE OF WANTAGH.

JOHN HICKS.

Vera copia concordans cum originalis
scripsit, per me, JOHN JAMES, cler.

When the payments had all been completed the following document was drawn up and signed:

Wee, the Indians above written, doe here-

by acknowledge to have received from the Magistrates and Inhabitants of Hempsteed, all our pay in full satisfaction for the tract of land sould unto them, according to the above and within written agreement, and according to the patten and purchase. The General bounds is as followeth: Beginning att a place called Matagarretts Bay and soe running upon a direct line, north and south and from north to south, from Sea to Sea, the boundes running from Hempsteed Harbour due east to a pointe of Treese adjoining the lands of Robert Williams, where wee left marked trees, the same line running from Sea to Sea. The other line beginning att a marked tree Standing att east end of the greate plaine, from that tree and running a due south line and att the South Sea, by a Marked tree, made in a Neck called Maskutchoung and from thence upon the same line, to the South Sea. And we whose names are hereunto subscribed, do further Ingage ourselves and our successors, to uphold and maintain this our present act, and all our former agreements to bee just and lawfull; that the aforesaid Inhabitants of Hempsteed Shall Enjoye the Said Lands according to the Equity-marked bounds with all privileges thereunto Any way belonging or Appertaining, for them, their heires and success's for Ever. And we doe binde ourselves to save and defend them harmlesse from any manner of Claime or pretence that shall bee made to disturbe them in their right or any prte thereof, hereby binding us and our success's to cause them to Enjoye the same Peaceably without Any Molestacon or Interrupcon for them, their heires and success's for Ever. Whereunto we have subscribed, this eleventh day of May, anno 1658. Stilo novo.

Subscribed by Wacombound, Montauk Sachem, after the death of his father, this 14th February, 1660, being a generall town meeting of Hempsteed.

A true copy, Compared with the Originall and both of them being written by me,
JOHN JAMES, Clerk.

In 1647 there were fifty-seven freeholders in the township, and a formal division of the

land was made among them. They were as follows:

John Carman, Jeremy Wood, Richard Gildersleeve, William Raynor, Benjamin Coe, John Ogden, Samuel Strickland, John Toppin, Jonas Wood, John Fordham, William Lawrence, Henry Hudson, Thomas Ireland, Richard Valentine, William Thiekstone, Nicholas Tanner, William Smith, Edmund Wood, John Smith jun, Thomas Armitage, Simon Sering, Terry Wood, Thomas Willet, Henry Pierson, Joseph Scott, Henry Whitson, Richard Lewis, Thomas Stephenson, John Coe, William Scott, John Storge, William Williams, James Smith, William Rogers, Richard Ogden, Robert Jackson, John Foucks, John Lawrence, Thomas Sherman, Francis Yates, John Ellison, Abraham Smith, William Shadding, Thomas Ffoster, Roger Lines, John Lewis, Christopher Ffoster, Samuel Clark, John Hudd, Thomas Pope, Daniel Whitehead, Robert Williams, Edward Raynor, John Sewall, John Smith sen, Samuel Baccus, John Strickland.

In 1673 the list had passed the hundred mark, as may be seen from the following enumeration preserved in Vanderkemp's Translation of Dutch Records, XXII:

John —, John Smith Blew, Richard Geldersly, Sen, Vrolphert Jacobs, Jan Carman, John Symans jun, Robert Jackson, Symon Tory, John Smith, Peter janse Schol, Richard Gildersly, Robbert Beedill, George Hallet, Samuel Allen, Richard Valentyn, Kaleb Carman, John Williams, Thomas Richmore, John Ellesson, Edward Spry, William Osborne, Edward Remsen, John Fossaker, John Sorram, James Payne, William Fixton, Samuel Denton, Robbert Hobbs, Thomas Sodderd, John Smith jun, Joseph Williams, Ralph Haal, Daniel Beedell, John Jackson, Jonathan Smith, John Champion, John Hobbs, John Langd, Jonathan Semmes, John Bordes, Robbert Marjssseu, Mos Hemmery, John Beets carpenter, Samuel Embry, Matthew Beedel, Comes, Thomas Ellison, Philip Davis, —Hopkins, Adam View, Edward Titus, Richard Ellison, John Seavin, Thomas Teasay, Thomas Ireland, Thomas Ellison, Joseph Gem, Thomas Champion, Joseph Pettet, Richard Fotter, John Beddell, Thomas Southward, John Beates, Calvet Goulet, Christoffel Yeomans, John Wouilly, Edward Banbury, Thomas Gowes, John Mavein, Wm. Thorne, Joshua

Watske, Benjamin Symenson, Jan Roelossen, Elbert Hubssen, Lewis Niot, John Ellison jun, Thomas Seabrook, Samuel Jackson, John Pine, Peter Jansen, William Ware, Solomon Semmar, Teunis Smith, Richard Valentin jun, Joseph Wood, Herman Flouwer, William Dose, Symon Foster, Henry Mott, Wm. Fourmer, Joseph Smali, Walter pine, Josia Carman, John Peacock, John Quakerson, Thomas Daniels, John Napper, Richard Osborn, George Robbert, Charles Abram, Thomas Appelbe, Samuel Smith, —Persell, Adam Mott Junr, Samuel Jackson, Joseph Truax, Joseph Hoyt & Nine others whose names are lost.

The original condition on which the first patent was granted was that the people should pay a tax to the Council at New Amsterdam of a tenth part of their farm produce ten years after the first general peace with the Indians. It would seem that it was not until 1658 that the people declared their readiness to contribute to Stuyvesant's treasury. In that year they informed the Governor that they had "voted and put upon denomination our former Magistrate, Mr. Gildersleeve, and with him William Shodden, Robert Forman and Henry Pearsall," all of them known "men of honest life and of good integrity," as their Magistrates, and Stuyvesant, invariably gracious to the English settlements, at once confirmed the selection. The same year Magistrate Gildersleeve was authorized to go to New Amsterdam and arrange about the payment of the taxes, provided the Governor was reasonable in his views of the matter, as he seems to have been.

The early government of Hempstead was by town meeting, over which the influence of the Presbyterian Church was predominant until the beginning of the eighteenth century, and long after that its influence in the affairs of the township continued to be important. The town meeting did everything even to the extent of naming the value of the various products of the farm and fixing the price of labor. A day's work was adjudged to be worth 2s 6d, but then a night's lodging was only valued at 2d and two days' wages paid for a

week's board. At that rate the laborer of 1658 was at least as well paid as his brother of the present day. Attendance at church was early voted a prime necessity, and it was ordered that any man or woman who did not occupy a place in the church at the Sabbath services should be fined five shillings,—the value of a week's board,—for the first offense, and ten shillings for the second, and twenty shillings for the third. Those who still absented themselves after being so mulcted were deemed incorrigible under lenient measures and were to be dealt with by means of corporal punishment, and after that, if the remedy failed, were to be banished from the town. Drunkenness seems to have been one of the common faults of the brethren, if we may judge by the severe measures taken. These fines and punishments were not, however, determined as to their application by the town meeting, but after trial in the regular local court. Some of the records of that tribunal are interesting for the light they throw on the domestic history of that early time, and we quote the following from Onderdonk's "Annals of Hempstead:"

1658, July 25.—Richard Valentine having reported that Thomas Southard went up and down with a club, the latter, meeting him one morning as he was going about his avocations, struck him on the face. As Southard still menaced and threatened to further beat him, he took oath that he stood in danger and fear of his life, and required the peace and that Southard might put in security for his good behavior. It is therefore ordered by Mr. Richard Gildersleeve, for that Thomas Southard did contemptuously resist authority in refusing to obey the marshal with his warrant, and did fly the same and betook himself to his own house for his refuge, in consideration of these outrages and misdemeanors he is required to put in security for his appearance at court. And said Southard doth bind himself and all his lands, goods and chattels, to appear at court, and meantime to keep the peace and good behavior.

At a court held December 28, on the submission of Southard, and paying all costs, the penalty and fault are remitted in hopes of his

reformation. Valentine is also reconciled, and doth remit the abuse done unto him.

1659, January 2.—Thomas Ireland complains of Richard Brudenell, keeper of an ordinary, for using deceitful dealings, and produces in court the following witnesses:

Mary, wife of Richard Willis, sent her child for a pint of sack and he afterwards demanded pay for a quart.

William Jacocks bought four cans of beer, one day last spring, and was booked seven. He paid it.

Thomas Langdon was charged for four bushels of oats and had but two, and a few oats in a piggion and a tray—being half a bushel.

Richard Lattin, four or five years ago, agreed with Brudenell for diet of himself and son for twelve shillings the week, and had it a week and four days, which did come to twenty shillings. Lattin said it was ten days, but Brudenell made it eleven, and said if he would not pay for eleven he would show him such a trick as he never had seen; that is, he would set upon his book a guilder a meal and eight pence a night for his bed, and then he should pay whether he would or not.

The court find, January 14, that Brudenell's books are false and not fit to pass in law, and he is to pay twelve guilders for calling a court, else execution to follow.

1659, January 14.—Robert Lloyd, having spoken unseemly words to the dishonor of God and the evil example of others, is fined ten guilders. But having, February 11, made an acknowledgment of his fault, the court hath remitted the fine, on his reformation.

1659, January 16.—Daniel Whitehead, when he lived at Hempstead, lost linen and other goods, and upon search he found at Richard Brudenell's a brass candlestick and one small striped linen carpet and one table napkin which he doth judge to be his own. Whereas Brudenell would not enter into recognizance and utterly refused the favor of the court, he is condemned to restore fourfold—that is twenty-eight shillings sterling—else execution to follow in fourteen days. He appeals to the governor, and the answer in Dutch may be seen in the Hempstead court minutes.

1659, May 1.—Robert Jackson *contra* Richard Lattin—action of the case, defamation to the value of £100 sterling damages. Jackson in his declaration says that, having occasions of account with Lattin, upon some debate he

gave him very bad language tending to his defamation and scandal, and amongst other evil words called him a rascal. The court, June 5, sentences him to forty guilders fine, or corporal punishment, unless he submissively acknowledges, in presence of the court, that he hath wronged Mr. Jackson, and is sorry for it.

1659, May 1.—Robert Williams sent to the mill of Hempstead six bushels of good Indian corn and delivered it into the keeping of William, son of Peter Cornelissen, to be ground. He received two bushels, but the rest of the meal lay on the mill-bed and had been spoiled by the rain beating upon it, and was grown sour and not fit for man's food. When Williams demanded satisfaction Cornelissen refused, and said he had carried corn himself to Manhattan's mill and it took damage and he could get no recompense. He then desired Cornelissen to put out the meal and give him the sack, but he told him he would not meddle with it. The court adjudged Cornelissen to make good the damage done unto the sack and meal by giving him good meal, and in case they cannot agree, then to stand at the judgment of two indifferent men; and Cornelissen is to pay court charges and give satisfaction within fourteen days, or before he depart the town, else execution to follow.

1659, June 11.—It is ordered that all wills proved in this court at Hempstead shall pay six guilders unto the use of the court, and the clerk and marshal's fee.

1658, September 2.—Among other items in the last will of Nicholas Tanner is that "a beast shall be sold to buy some linen to bury me in, and also a sheet and other things that shall be needful, and the white-faced cow killed at my burial and given to the neighbors."

1659, November.—Richard Lamson put out a cow to Joseph Schott to winter. He removed that winter from Hempstead, and the cow was to be returned next spring to Samuel Clark, his agent, but Schott refused, though Clark tendered security. Schott says the cow proved unsound in her bag, and the spring following, being farrow, he put her down to the common pasture to feed, and in the fall sold her to D. Whitehead. Her calf he maintained till it came to be a cow, and she had one calf, and another which was destroyed by wolves. The cow, being well so far forth as he knew, was found dead one morning, leaving a calf. The court order Schott to pay for the cow £6.10, and 20s, for one summer's milk, with one guilder on the pound interest upon

interest for eight years, and costs, and 10s. for the plaintiff's charges for this journey. Schott (*ultimo* January, 1659) makes a tender of goods to the valuation of the aforesaid sum, to be publicly sold at outcry by the marshal, and engages to save him harmless. *Primo* February Schott's barn and appurtenance, with his home-lot (three acres), is sold to George Hewlet for £5.4 in present passable pay. I, Thomas Skidmore (May 6, 1659), have received £15.9.6 in full satisfaction of the above sentence, in behalf of Edward Higbie of Huntington.

1660, January 21.—John Smith, Jr., sues Thomas Ellison in an action for trespass, for that he did ride his mare double, contrary to his knowledge, and his mare was lamed to his damage 40s. Ellison answers that he was at John Carman's door, and at his wife Hannah's request did ride before her to Oyster Bay, on Saturday, and on the Lord's day kept the mare there and on Monday rode her back and delivered her to John Carman. The court doth condemn the plaintiff in all the court charges, to be paid within fourteen days, else execution to follow.

The change brought about by the downfall of the Dutch Government and the institution of English authority, seems to have been accepted with equanimity by the Hempstead settlers. Governor Nicolls introduced among them a new "industry," that of horse-racing, for which purpose the great Hempstead plain was so well adapted, and his lead in that regard was still further developed by his successor, Governor Lovelace, and Salisbury Plain, near the present pleasant village of Hyde Park, became celebrated for its sporting events on both sides of the Atlantic. The sport still continues a favorite one in Hempstead, although it has there lost much of its vulgar and debasing features, and, as at Mineola, is an exhibition of racing pure and simple.

The Duke's laws were felt in Hempstead, as elsewhere, to be oppressive and unjust, and it can not be said that when the Dutch regime in 1673 was once more established in New Amsterdam, the Hempstead people mourned over the change. As soon as Governor Colve

took hold of the reins of power he sent a letter of instructions to Hempstead and other Long Island towns, in which he really granted as full a measure of local self-government as was conceivable in those days. Some of his instructions were:

3. All cases relating to the Police, Security and Peace of the Inhabitants; also to Justice between man and man, shall be finally

each one shall be entitled to an appeal to the Governour General and Council here.

4. In case of inequality of votes, the minority shall submit to the majority; but those who are of a contrary opinion may have it recorded in the minutes but not divulge it without the meeting on pain of arbitrary correction.

5. Whenever any cases occur in the meeting in which any of the Magistrates are interested, such Magistrate shall, in that instance,

OLD LONG ISLAND SCHOOLHOUSE. (Photographed at Woodbury.)

determined by the magistrates of each of the aforesaid Villages, to the amount of sixty florins, Beaver, and thereunder without appeal: In case the sum be larger the aggrieved party may appeal to the meeting of the Sheriff and Councillors delegated from the Villages subject to his jurisdiction, for which purpose one person shall be annually appointed from each Village who shall assemble in the most convenient place to be selected by them, and who shall have power to pronounce final judgment to the amount of fl. 240 Beavers and thereunder. But in all cases exceeding that sum

rise and absent himself, as is hereinbefore stated.

6. All Inhabitants of the abovenamed Villages shall be citable before said Sheriff and Schepens or their delegated Councillors who shall hold their meetings and courts as often as they shall consider requisite.

7. All criminal offences shall be referred to the Governour General and Council, on condition that the Sheriff be obliged to apprehend the offenders, to seize and detain them & to convey them as prisoners under proper safeguard to Chief Magistrate with good and

correct informations for or against the offenders.

8. Smaller offences, such as quarrels, abusive words, threats, fisticuffs and such like, are left to the jurisdiction of the Magistrates of each particular Village.

9. The Sheriff and Schepens shall have power to conclude on some ordinances for the welfare and peace of the Inhabitants of their district such as laying highways, setting off lands and gardens and in like manner what appertains to agriculture, observance of the Sabbath, erecting churches, school houses or similar public works. *Item*, against fighting & wrestling and such petty offences—provided such ordinances are not contrary but as far as is possible, conformable to the Laws of our Fatherland and the Statutes of this Province; and therefore, all orders of any importance shall, before publication, be presented to the Chief Magistrate and his approval thereof requested.

With the return of the British power and the advent of Governor Andrus upon the scene the "Duke's laws" were again enforced, even more rigidly than before. Under Governor Dongan, the great charter monger, in 1685, the town, much against the will of a majority of its people, was compelled to take out a new charter. It seems to have taken three years of negotiations to perfect an instrument which was thoroughly satisfactory to Hempstead, and probably the gift which the people gave to Dongan of a plantation of 650 acres had something to do with directing his mind in the right direction on many mooted points of boundary and in the township's annual tax being placed at twenty bushels of good winter wheat or four pounds of good current money,—a reasonable enough impost.

From that time until the outbreak of the Revolutionary struggle there is little to tell of the civil history of Hempstead. In 1702 the Colonial Assembly proposed to erect a public school in its bounds. About that same year the Episcopalians organized a congregation in Hempstead,—represented by the present St. George's Church,—and, as was then

customary, took possession of the meeting-house and manse of the Presbyterians.

In 1775, when the crisis with the mother country became acute, Hempstead was pronouncedly against any change in the relations between the crown and the colonies, and a public meeting held on April 4th pledged renewed allegiance to King George III and declined to send deputies to any provincial congress or assembly. It seems, however, to have changed its views so far as to elect Thomas Hicks and Richard Thorne to represent it in the provincial congress, but Hicks refused to attend, saying that Hempstead wanted to remain peaceable and quiet. Under the circumstances we can understand its becoming a favorite hunting ground for Tories in the days immediately preceding the landing of the British forces in 1776. Colonel Heard and the other Continental raiders captured many stacks of arms and stores of ammunition in Hempstead and sent many of the local Tories into exile. That, however, did not win the inhabitants over to the side of the patriots, and although under orders from the Whig leaders, it contributed several companies to the Queens county militia under the redoubtable Colonel John Sands, the heroes composing the regiment were found to be of little avail when the real hour of trial came and stern service was demanded.

But when that time came, when the British were in possession of the island and Hempstead was overrun with redcoats, the people found small comfort in their Toryism. The soldiers rode roughshod over Whig and Tory alike, helped themselves to produce and provender without stint and paid prices of their own choosing, burned up fences and barns for firewood, robbed orchards and farm buildings without fear, turned the Presbyterian meeting-house into a barracks, and even desecrated the interior of St. George's Church (built in 1733), although the rector, the Rev. Leonard Cutting, was pronounced in his Toryism, so much so that when the war was over he was

forced to abandon his charge summarily and secretly.

At the time of the Revolution Hempstead village consisted probably of a dozen dwellings and the English and Presbyterian meeting-houses, and its progress was slow, the progress of a hamlet without any interests to attract the outside world. When Mr. Cutting summarily left the parish with the departure of the British, his place was filled by the Rev. Thomas Lambert Moore, a native of England, who seems to have developed into a most loyal American soon after his arrival in this country. He was one of those who took part in the church proceedings necessary when the civil government had thrown off the English yoke to make the Episcopalian body equally independent of the authorities in London. In the old Prayer Book which had been sent to St. George's as a gift along with a communion set, presumably from Queen Anne, he pasted in new prayers for the President and United States authorities in place of those commending the British King and royal family and Parliament. In this church, in 1785, the first ordination in the American Episcopal Church took place, when John Lowe was admitted to holy orders. Lowe was a native of Scotland, a man of many fine qualities, and, having received a university training, was for a time employed as tutor in the family of a wealthy landed proprietor in Galloway, not far from the English border. He fell in love with one of the young ladies of the family, and it is said she reciprocated his affection, but somehow the hoped-for marriage never took place. While the billing and cooing was going on one of the sisters of the young lady dreamed that she saw her sweetheart, a ship surgeon, and that the wraith had told her that the ship with all on board had gone down, and urged her not to weep for him, as she would soon join him in the other world. After many months it was learned that the lover had actually been drowned at sea. On hearing the dream related Lowe went to his room and wrote the following beautiful lines:

The moon had climbed the highest hill
Which rises o'er the source of Dee.
And from the eastern summit shed
Her silver light o'er tower and tree;
When Mary laid her down to sleep,
Her thoughts on Sandy far at sea;
When, soft and low, a voice was heard,
Saying, "Mary, weep no more for me!"

She from her pillow gently raised
Her head, to ask who there might be;
And saw young Sandy shivering stand,
With visage pale and hollow e'e;
"O Mary, dear! cold is my clay—
It lies beneath a stormy sea;
Far, far from thee, I shall sleep in death—
So, Mary, weep no more for me!"

"Three stormy nights and stormy days
We tossed upon the raging main,
And long we strove our bark to save,
But all our striving was in vain.
Even then, when horror chilled my blood,
My heart was filled with love for thee:
The storm is past, and I at rest,
So, Mary, weep no more for me!"

"Oh, maiden dear, thyself prepare,
We soon shall meet upon that shore,
Where love is free from doubt and care,
And thou and I shall part no more."
Loud crowed the cock, the shadow fled,
No more of Sandy could she see;
But soft the passing spirit said,
"Sweet Mary, weep no more for me!"

This song, the only piece of poetry Lowe wrote that is worth reading, has won for him an honored place among the minor poets of his native land. When his love passage ended Lowe came to this country and studied for holy orders, which resulted in his ordination in St. George's Church. He afterward went to Virginia, made an unfortunate marriage, fell into dissipated habits, and died at Fredericksburg in 1798. Mr. Moore was a most successful pastor, and under his care the congregation became the most flourishing of

any in the township. Under him a new rectory was built in 1793, a large, commodious dwelling, and many important improvements were effected in the church building itself. In 1799 Mr. Moore passed away, and was succeeded by the Rev. J. H. Hobart, who afterward became Bishop of New York, and the ministry has since been held by a succession of talented divines, several of whom have been prominent in the affairs of the church at large.

The Methodist congregation was organized about 1812, the people meeting in each other's houses until 1816, when a house was rented and fitted up for service. In 1820 they built their first church, a small structure on the site which is now occupied by the building now in use.

With the beginning of the past century Hempstead village commenced slowly to grow, for it became noted as a place of summer residence and many people from New York began spending a season there, and as a result quite a number of attractive homes were added to it year after year. Communication with Brooklyn was maintained by means of stages, and until the advent of the railroad Hempstead had a regular service of three stages in each week. The streets are lined with trees and are well and cleanly kept, and up to the present day, when it is credited with a population of nearly 4,000, it still retains many of the rural features which made it so attractive in the past and which half a century ago enabled it to start on its modern era of prosperity. It is a residential town, its manufactures amounting to little in a business way, and it depends to a great extent on the trade which comes to it from the needs of the villa residents and its summer population. It has all modern improvements in the way of gas, electricity, macadamized roads and social features of the highest class. Near it the Meadow Brook and Farm Kennel Clubs have their headquarters, and attract to it year after year many hundreds of people representative of what are called the foremost classes in New

York City's aristocratic circles. On the outbreak of the late war with Spain Hempstead came prominently before the people of the State, for about to the north of it was located Camp Black, where for many months several thousand volunteers were housed and drilled in readiness to be sent to the front or into active service according to the requirements of the War Department. Had the war lasted any length of time there is no doubt that Camp Black would have been retained as a military depot, but the rapid victories of the American forces on land and sea brought hostilities to a more speedy conclusion than had been anticipated, and the camp was abandoned and has since been "a waste of furze and brush."

In point of historic antiquity the settlement in the township which dates closest to that of Hempstead village is that of Jerusalem, now a hamlet which has lost all its former prestige and pre-eminence and has apparently been forgotten. It is on the border line of Oyster Bay township, the creek known as Jerusalem River separating it from that territory. When the exodus from Stamford which peopled Hempstead took place, in 1644, one of the immigrants, Captain John Seaman, and Robert Jackson purchased on their own account 1,500 acres of land from the Indians and settled upon it with their families. Their houses, as usual, were placed almost side by side, and after a time the dwellings of their children (Captain Seaman had eight sons and eight daughters, it is said, while Jackson had two sons and two daughters) made up quite a village a few hundred feet east of the Jerusalem River. Additions to the real estate holdings were made from time to time until the village territory included some 6,000 acres,—some of it the most fertile land on Long Island. Descendants of these pioneers are to be found all over Long Island, and many have held high positions on the bench, in the learned professions, in Congress, and in the military service of the United States.

The Seamans and Jacksons and their collateral branches devoted themselves to agriculture, and the settlement would have passed on without attracting much attention but for the fact that it became one of the gathering places of the Long Island Quakers. The Seaman family, or many of them, early adopted the tenets held by these "peculiar people," as they were then described by those who described them most tenderly; and for nearly a century, from 1697 until 1793, regular meetings for worship were held in one or other of the Seaman homes at more or less regular intervals. A regular meeting-house was built in 1827, and there Ardon Seaman preached and labored until his death, in 1875. By that time, however, the Society of Friends had lost its hold in the vicinity, many of the old settlers moved away, the land through a long series of years of mismanagement had lost its fertility, and the new settlers who came in belonged to other communions. So the meeting place was abandoned, and with its passing Jerusalem began to fade. Early in the nineteenth century, when it was seen that the land was losing its original fertility, an effort was made to introduce manufactures, a grist mill and a paper mill were built, and long afterward a tannery and wood mill were introduced, but none of them made much headway. It seems a pity that a place so full of treasured memories should pass into oblivion, but such seems to be the fate in store for Jerusalem unless a change speedily sets in, and of that there is yet no sign.

The crowning glory of Hempstead is Garden City, which was founded in 1869 by Alexander Turney Stewart, long the most noted of New York's merchant princes. A shrewd, far-seeing and wonderfully successful man in his business, Stewart, when wealth came to him, engaged in schemes which he deemed philanthropic and which at the same time were likely to return to him the money actually expended on them. He gave several large donations in charity, but as a general rule he had no con-

ception of giving away money in the fashion of more modern millionaires. He was ready to help a public enterprise with his means, willing to inaugurate an undertaking which was to benefit the people, but he wanted some return for the money expended. For instance, one of his schemes was the erection of a hotel solely for women in New York, by which he thought he could benefit the hundreds of professional women in the great city and the hundreds of women who visited it from day to day, and at the same time gain five or six per cent. on the money he should invest in it. The hotel was built, but its restrictions were such that no one was satisfied, and it was soon abandoned.

So, too, he conceived the idea of erecting a town which would in its way be a model community, a little republic, a revival in nineteenth century days of the old theocratic settlements. It would be far enough away from New York to keep away excursion parties, its land should be common property, should not be sold outright, and even the houses would be built by the corporation and only leased to the settlers. It would be a complete community within itself, make and enact its own laws, have a large hotel capable of accommodating the most refined travelers, wide streets, superb schools, and all manner of modern improvements and equipments. Everything would be hedged about with restrictions, the place would be exclusive and refined, and the entire community should so commend itself that it would be regarded as a garden spot,—a veritable Eden. With these notions of town building Mr. Stewart looked about for a site, and in 1869 selected a plot of 7,170 acres on the historic Hempstead plain, not far from the old village, for which he paid to the township \$394,350. By an act of Legislature this money was to be invested and the proceeds devoted to educational purposes in the town he proposed to establish and for the support of its poor, should it have any poor.

So the place received the name of Garden

City, was surveyed, cut up into streets and avenues, the hotel was built, houses were erected, but the people did not flock in. Americans do not like to be hampered by restrictions, and the class of people he aimed at securing preferred to own their country homes outright, and it seemed as though Garden City would end in being regarded as a merchant's folly. For two or three years its main purpose was to advance the price of Hempstead real estate and to afford the land boomers a chance to throw into the market other tracts of the great plain. Stewart died in 1876, before he had time to fully mature his plans for the success of the new town, but it is difficult to understand how the policy he had outlined, and which he would have clung to with all the dogged pertinacity of his nature, would have ended in anything but failure.

But with his death a change came over Garden City. Many of his foolish restrictions were quietly thrown aside and the town was permitted to grow on the regular lines of supply and demand. But the demand would have been slow had not his widow designed to make the town a memorial of her husband. She determined to build in it a grand cathedral, rivalling in size and beauty some of the great European religious shrines and to associate with it a school whose educational advantages should be unsurpassed. Some have averred that the cathedral and school were but a part of A. T. Stewart's original scheme, but that is merely surmise. The millionaire left the bulk of his vast estate to his wife untrammelled by obligations, and the cathedral, the school and the bishop's palace were her free offering, and all she asked in return was that the group of buildings should become the seat of the Bishop of Long Island and that the crypt of the cathedral should be the last resting place of her own body and that of her husband, whose memory she thus desired to honor. Mrs. Stewart's purposes were heartily approved by Bishop Littlejohn and his clergy, architects were set to work and plans prepared, and on

June 28, 1877, the corner-stone of the cathedral was laid by the Bishop with imposing ceremonies. The following description of the cathedral and school is from the pen of the Rev. Dr. T. S. Downe:

The plan of the edifice is cruciform, with tower and spire, baptistery, organ apse, crypt and mausoleum. The style employed is decorated gothic of the thirteenth century, but the architect has given freshness and independence to the treatment by adopting the foliage and flowers of this country, and following nature rather than the old and stiff conventional forms. Unusual beauty and grace are attained in this manner in all the carved work of the triforium, capitals, bosses and corbels, which furnish everywhere varied and pleasing subjects for study. The exterior is constructed of Bellville (New Jersey) stone, and the interior of Berlin (Ohio) stone, with the use of native and foreign marbles in the pavement, chancel steps, baptistery and mausoleum. The proportions of the building are admirable, the extreme length measuring 190 feet, width of the transept including the porches 109 feet, of the nave and aisles 52 feet. The choir and chancel are 60 feet deep, separated by marble steps, with the bishop's throne on the north side and the dean's on the south. The tower, which is monumental in character, with bold buttresses, ornate gables and pinnacles, is 124 feet high; and the delicately tapering spire, crocketed and surmounted by a large illuminated cross of colored gems, is 97 feet, making the whole height 221 feet. In the upper stage of the tower is hung the chime of bells, thirteen in number, exhibited at the Centennial exhibition in Philadelphia, from the noted McShane foundry in Baltimore. The spire of the baptistery is beautiful in design and workmanship, with its flying buttresses and pierced belfry; and from the aisle walls also spring flying buttresses to the nave, giving lightness and elegance to the general effect of the exterior, while the cornices are enriched with gargoyles and pinnacles. The roof is slated, and finished at the apex with a bronze crest, bearing a crown at the junction of the nave and transepts, and a cross over the chancel.

In the interior the work is equally elaborate and carefully finished. The baptistery is connected with the choir and transept by large arches, filled with elegant stone tracery, and is finished with columns of variegated foreign

marbles, with capitals of statuary marble exquisitely carved, supporting the gothic groining of the dome above. Around the walls runs a wainscoting of statuary marble with panels of vert antique. In the center of the inlaid marble pavement stands the white marble font, adorned with appropriate symbols and figures, and covered by a rich canopy. The seats of the bishop and dean as well as the stalls of the clergy in the ante-chancel are of mahogany, with elaborately carved canopies; and in the sanctuary the stalls and canopies are of carved stone, as well as the piscina and credence. On a platform of raised steps stands the altar, constructed of the purest statuary marble, with panels presenting in bold relief the chief events of our Lord's incarnate life, with their prophetic types in the old dispensation. The pavement of this portion of the edifice is a rich mosaic of colored marbles. In the choir and transepts are large niches for appropriate figures, executed in marble.

The crypt is connected with the choir and nave by staircases, and contains a large chapel, with a spacious hall and vestibules of carved oak filled with panels of stained glass. At the west end under the choir is another smaller chapel, and adjoining it the mausoleum, which is polygonal in form, having 14 bays, wrought in the most elegant manner in statuary marble, with clustered columns of the costliest European marbles at each angle of the walls, supporting the vaulting and its pendant crown. The symmetry and variety of the columnar treatment, the exquisite finish of the floriated capitals, corbels and mullions, all of which are separate studies, the stained glass presenting the story of our Lord's passion, death and resurrection, the graceful statuary and the massive sarcophagus all combine to render this mortuary temple a triumph of architectural genius.

The architect is Henry G. Harrison, of No. 67 William street, New York, and the contractor James H. L'Honmedieu, of Great Neck, Long Island. The stained glass of the crypt is from the manufactory of Colgate, New York; and that of the mausoleum and the cathedral itself from the celebrated London firms of Heaton, Butler & Bayne, and Clayton & Bell. When completed the edifice will have cost \$1,000,000.

The organ, built by H. L. Roosevelt, of New York, ranks among the largest, and in several respects is one of the most remarkable in the world. It has four manual keyboards,

and one pedal keyboard, and comprises one hundred and twenty speaking stops and about eight thousand pipes. Though placed in different parts of the cathedral, it is all played from one key box, situated in the choir, the remote portions being connected by cables of electric wire, over twenty miles of which are used for this purpose. The main body of the instrument is in an octagonal chamber built on the north side of the choir for this purpose. The next largest portion is at the other end of the building, in the stage of the tower immediately below the chimes and separated from the church by a stained glass window, which is opened and shut from one of the swell pedals in the choir by means of electricity. A third part is in the chapel under the nave, and can be played there from its own keyboard for chapel services. A fourth, above the ceiling, is called the Echo organ, and is played also from the choir. Two other portions are on either side of the choir. The chimes are also played from the solo manual by electricity, or from a separate keyboard in the tower. The combination pedals are so arranged that the organist can change any combination to suit himself, small knobs being placed above the drawstops for this purpose. Three steam engines, located in different parts of the building, are employed to work the bellows. The cost of the instrument, which was not completed at the time of writing, was over \$60,000, and the ornately carved mahogany cases cost about \$30,000 additional.

Relative to the site of the cathedral a writer in the *Sanitarian* remarks:

"The setting of this gem of the pure gothic order of architecture, instead of being in arid metropolitan streets, is in a locality which will yet have a world-wide reputation for all that is most attractive to the eye and grateful to refined taste in landscape and architectural beauty, and all the luxury that wealth can accumulate in its surroundings. Approached by any of the various lines of railway, or by the substantial and well kept carriage roads, worthy of the appellation sometimes given them of 'Roman roads,' the cathedral seems firmly planted upon an elevated plateau, with gently rolling surface, here and there broken by valleys sweeping in graceful curves, robed in green, and enlivened by flowers and crystal

fountains, shaded with trees luxuriant in growth and of every variety known to the climate, fanned by delicious breezes, invigorating and exhilarating to both body and brain, and elevating to the soul."

We may appropriately close our sketch of this noble edifice with the following eloquent passage from the address of the Rev. Dr. Snively at the laying of the corner stone:

"From this home of reverent worship and this center of earnest work there shall go constantly the messengers of peace on earth and good will to men, and in the Master's name and work shall kindle upon unseen altars the flame that shall illumine the world. And this cathedral, which at once enshrines the memory of the departed and gives untold efficiency to the missionary capabilities of the church, shall be both the instrumentality and the prototype of that sublime spiritual temple erected of human souls and cemented by a living faith—a temple which gathers its stones from many quarries, and hews its timbers from the forests of many lands, and which, without the noise of axe or hammer or saw, is rising through the centuries to its glorious consummation in Jesus Christ, its chief Head and Corner-stone.

"The cathedral idea is an element in the organic life of the visible church. It has been well said that its embryo was in the upper room in Jerusalem, where solemn conferences were held while awaiting the coming of the Comforter. From then until now the necessity of a central rendezvous and rallying point for the church, a common altar and common conference ground in devotion and debate, has been profoundly felt, and this necessity has been relieved by the cathedral. We rejoice, then, not so much over the architectural cathedral, whose walls rise and beautify this broad-bosomed plain; nor again over the memorial cathedral, which shall in silent eloquence move the present and coming ages with the story of human love sublimed in Christ, honoring and soul-helping; but chiefly we rejoice over the great spiritual edifice, whose corner stone we have laid in the Master's name, whose walls

shall be salvation, and whose gates praise through a far-reaching gospel future.

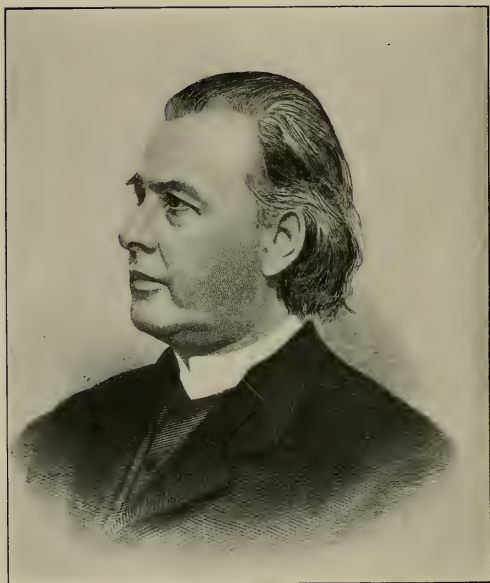

"The cathedral, in its whole idea, its theory and method, is designed to fuse into a holy harmony the whole evangelical work and devotional life of the diocese. To build a cathedral, equip it, and endow it, and then give it to God for the worship of his people, is something without precedent in the annals of Christian charity. And then how beautiful the blending of the wifely affection and the Christly devotion, making a mausoleum for the loved and lost of earth, and vaulting it over with a temple for the worship of the King of heaven."

A fine pictorial view of this cathedral is given on page 582 of this volume.

The Cathedral School of St. Paul occupies a slightly position about a quarter of a mile northwest of the cathedral. It is in style an adaptation of English gothic, and is massively constructed of brick, made at the brick works of the estate, with brown stone and Dorchester yellow stone for windows, doorways, porches and other ornamental features.

The edifice consists of an imposing facade, which with the port-cochere is 290 feet long, and three wings 170 feet deep, forming a ground plan something like the letter E; and is four stories in height, with additional stories in the center and at the angles, which have high mansard roofs. Besides these projections the exterior is diversified with ornate porches of carved stone, a clock and bell tower and a broach spire in copper for the ventilation of the laboratory. Over the main entrance is inscribed: "IN MEMORIAM ALEX. TURNEY STEWART," with the name of the school beneath, and over the east and west doorways, "Historia et Scientia," and "Ars et Philosophia."

The interior arrangements have been carefully planned, and appear to successfully combine the best features of modern collegiate edifices, whether in this country or abroad. The whole building is fire-proof, admirably ventilated, and supplied with gas and hot and

A. M. Littlejohn

cold water in every room, with abundant bathing facilities, and steam heating apparatus after the Holly system. The different stories are connected by two elevators, and several commodious stairways, constructed of iron and stone. The first floor comprises the main hall, 270 feet long and 10 wide, and lateral corridors 170 feet long, wainscoted with tiles and marble, and paved with Minton tiles of beautiful designs; reception rooms on either side of the central entrance, connecting with a library and parlor, each 21 by 50 feet, the head master's and the matron's apartments, dormitories in the east wing; the dining hall in the central wing, 43 by 62 feet, with serving rooms; and the two assembly rooms in the west wing for the higher and lower school, about 50 feet square, with several recitation and lecture rooms, each 20 by 24 feet. The second story is devoted to teachers' and pupils' rooms, varying in size from 9 by 20 feet to 18 by 25 feet; and in the center, occupying two stories, is the chapel, 42 by 65 feet, which is arranged with longitudinal sittings for some four or five hundred pupils, and has at the north end a chancel, organ and sacristy. On the third floor are situated in front the music rooms, the art gallery, 25 by 62 feet; the infirmary, 25 by 40 feet, with apartments for nurses, and in the corridors a large number of dormitories. The fourth story contains, besides dormitories, the laboratory, 20 by 44 feet, studios for art pupils, and the gymnasium, 37 by 62 feet, with dressing rooms, in the central mansard. In the basement are play rooms in the school wing, the armory, the laundry and drying rooms, the steward's room and the servants' hall, the store rooms, butcher's shop, refrigerators, dairy, engine room, ovens, kitchen, scullery, etc.; and in the east wing the servants' dormitories. Throughout the building the wood work is of ash, black walnut, oak and mahogany, finished in the most elegant and substantial manner, with solid and appropriate furniture specially manufactured for the school after the most approved designs.

The Right Rev. A. N. Littlejohn, D. D., the first Protestant Episcopal Bishop of Long Island, took up his headquarters at Garden City as soon as a home was prepared for him and from there managed the affairs of the diocese until his death on August 3, 1901. The sad event took place at Williamstown, Massachusetts, where the venerable prelate was spending a brief vacation from his many and exacting duties. His sudden death created a profound sentiment of regret, not alone on Long Island but throughout the Church of which he was so long recognized as a leader.

Dr. Littlejohn was born December 13, 1824, at Florida, Montgomery county, New York. Entering Union College, Schenectady, when seventeen years old, he was graduated with honors in 1845, and, after a course of three years in theological studies, he was ordained a Deacon by Bishop William H. De Lancey in 1848. His first church position was that of assistant in St. Anne's, Amsterdam, New York, whence he went not long afterward to accept a corresponding place in St. Andrew's, Meriden, Connecticut.

In 1850 he was called to Springfield, Massachusetts, as rector of Christ Church, but he remained there only a year, leaving to take charge of the important parish of St. Paul's, in New Haven, Connecticut. It was while in this church that he began to be well known throughout this country and Europe, his writings on ecclesiastical and literary subjects attracting favorable attention generally.

After ten years at New Haven, Dr. Littlejohn, who in the meantime had been honored with the degree of Doctor of Divinity by the University of Pennsylvania, came to Brooklyn to be rector of the Holy Trinity Church, at Clinton and Montague streets. Before this he had been offered the Presidency of Geneva College, now called Hobart College, but had declined the position. He had also been a lecturer on pastoral theology in the Berkeley Divinity School, Middletown, Connecticut, for seven years. He was the second rector of Holy Trinity Church in

Brooklyn, succeeding the Rev. Dr. William H. Lewis.

During the nine years Dr. Littlejohn stayed there the debts of the church were paid off, and the steeple, which had been unbuilt for lack of funds, was reared to its full height.

Dr. Littlejohn's career was distinguished by an occurrence that is said to be unique in the records of the Protestant Episcopal Church in this country. When the Dioceses of Central New York and Long Island were formed he was elected Bishop for both of them, almost simultaneously. His acceptance of the latter territory was made on the ground that he was more familiar with the needs of the diocese where he had been working than with those of the one up the State. He was consecrated on January 27, 1869, Bishop Henry C. Potter officiating, with the assistance of eight other Bishops.

In 1874 Bishop Littlejohn was appointed to take charge of churches established in Europe by the Protestant Episcopalians of America, and he consecrated the Church of St. Paul's-Within-the-Walls, in Rome, and opened the American Church in Paris. Later, however, he was forced to transfer his foreign duties to the Bishop of North Carolina, church affairs in Long Island demanding his entire attention.

The University of Cambridge, England, made Bishop Littlejohn a Doctor of Laws in 1880, and he received the degree of Doctor of Civil Laws from the University of the South, at Sewanee, Tennessee, in 1897. From the time of his residence in New Haven he continued to write regularly. Among his published works are "The Philosophy of Religion," "The Metaphysics of Cousin," "The Life and Writings of Coleridge," "The Poetry of George Herbert," "The Bible and Common Sense," "The Outwardness of Popular Religion," "Human Progress," "The Alt-Catholic Movement," "Conciones ad Clerum," "Stephen's Lectures on the History of France," "Roger's Eclipse of Faith," and "The Christian Ministry at the Close of the Nineteenth Century."

In February, 1899, services commemorative of the Bishop's thirty years of service were held in the Cathedral of the Incarnation. The last public service of unusual importance that Bishop Littlejohn attended was that which celebrated the fiftieth anniversary of the organization of the Church Charity Foundation, in which he had always been interested. It was noticeable at this service that he was very feeble, and since then there has been frequent talk of his having a coadjutor. He persistently refused this offer, even taking occasion to say at a meeting of the clergymen and laymen of the diocese that he was well able to take care of the affairs of the diocese.

Dr. Littlejohn was a strict Churchman, and was heard to express himself emphatically more than once about certain innovations in the worship of his church that he regarded as altogether wrong. Although his reputation as a writer and scholar was the greater, he achieved no small note as an orator, and there were those who ranked him among the best pulpit preachers.

Even with all its advantages, the population of Garden City has crept up but slowly. In 1891 it had something like 600, in 1896 it had increased to 700, in 1900 it had added about fifty more, and there it remains. But time is on its side and it will undoubtedly grow in importance and influence as time speeds on. It is now recognized as a splendid center of church and education work; and the beauty of its streets and of its situation is yearly becoming more widely known: its hotel has even now become a resort and in many respects it is the pride of Nassau county. Mrs. Stewart has been lying at rest in the crypt for several years: it is presumed that the body of her husband is there too, although nothing on that point is known. The Stewart millions have been dissipated, some of them in a fashion that would have roused his indignation. But the haste which his widow showed in erecting this great architectural pile and in so lavishly providing endowments have been amply justified by the story of the dispo-

sal of these millions, and prove that her native shrewdness had almost-forecasted the end of it all. So Garden City's cathedral has become the merchant's enduring monument, and still keeps by its healthful agencies part at least of his own great fortune engaged in useful and beneficent work.

There has been talk, more or less vague, for some time of a municipal union between Hempstead village and Garden City, and while the time for it seems hardly ripe, there appears no reason to doubt its taking place ultimately unless the Greater New York takes another leap and adds Nassau county to its domain. Even that has been talked about, and certainly as unlikely things have happened in the history of the big city.

Rockville Center, which now claims a population of some 2,500, was settled mainly in 1854, but its Methodist Church has an existence dating back to 1790, when a small hamlet sprang up around it. The first church was torn down in 1817 and a new edifice was built on its site, which served until 1874, when the present structure was erected. As usual, the first church was erected as a meeting-house for the use of any body of worshipers, and its surrounding cemetery was for the reception of the fathers of the little hamlet as one by one they fell into that sleep which knows no waking. But after a while it appears that there were no residents of the vicinity who belonged to other than the Methodist body, and so they seem to have entered into full possession. In 1870 the Methodist Episcopal Church of St. Mark erected a temporary church, which in the following year gave way to the now existing building. Rockville Center remains a residential village, its high school is a most attractive building, and as a spot for home building it possesses many peculiar attractions.

As much may be said of Pearsalls, which also dates practically from the middle of last century, but without any old church to bind it to the remote past. From a religious point

of view Pearsalls may be regarded as the sister of Rockville Center, for the religious work and influence of the one is always shared by the other. In 1841 the old Methodist Church at Rockville helped to found a church at Pearsalls, and St. James' Church at the last named was the result of a division of the work at St. Mark's. A school-house was one of the first buildings erected at Pearsalls after it was laid out, and the construction of the water-works for Brooklyn made it a busy place in 1857. After that commotion passed it assumed its proper place as a residential point, which it has since retained. Its present population is estimated at 1,400.

Freeport, one of the centers of the oyster industry; New Bridge, the happy hunting grounds of the Merrick Indians and possessing some weird local traditions of Revolutionary events; Seaford, Bellmore, Valley Stream, Ridgewood, Baldwin's, Norwood, are all pleasant villages devoted to summer visitors, or oystering, or both. Some of them are beautifully located, and in all of them the village church is generally the most noticeable feature of the landscape.

One of the most lovely of these smaller villages is Merrick, or Meric, Moroke, or Merihoke, as the name has been variously spelled, and which thus keeps alive the name of the old Indian tribe which formerly owned its land. The history of the town has recently been written by Mr. Charles N. Kent, and from his monograph we gather many details of much interest not only regarding the village itself, but of this section of Long Island.

The Carman family early sent representatives to Merrick from the settlement on Hempstead Plains. To John Carman was born, January 9, 1643, the first white child in the settlement. He was christened Caleb. The Carmans and Smiths intermarried, and appear to have held in common land westward from the eastern line of what is now the property of Mr. H. H. Cammann, on Merrick avenue. There is also evidence that these two families pre-empted the entire territory "from Merrick

river east to Cove Spring Landing, Merrick Cove, and from the bay north to Hempstead Plains."

John Rock Smith settled west of the present lakes on either side of Merrick road—his house on the north and barn on the south side. Jonathan Smith Black laid out his farm east of Merrick path, which afterward became the Hempstead turnpike; and Jonathan Smith Rock settled to the west, there being between them a wedge of land known as the Hewlett farm. It is reported that this wedge was contributed equally by the two Smiths to induce the Hewletts to settle thereon.

Richard Valentine had land, undescribed, in Merrick as early as 1657. He was a town marshal and a man of some parts.

One of the first houses was built by Jonathan Rock Smith. It is still in existence, and stands back from the present residence of Mrs. Elijah Smith. The house of Mr. William E. Hewlett was erected at about the same time.

From carefully preserved records now in the possession of Mr. George T. Hewlett and Mr. George M. Hewlett it appears that the first of that family to reach America was one of the judges who passed sentence of death upon King Charles (1648). The name in the King's death warrant is differently spelled, and it is supposed to have been purposely changed afterward to avoid pursuit and detection. The first Hewlett settlement (about 1649) was on Riker's Island, near Hell Gate; the house was destroyed by Indians, although the family being warned, escaped, and we next hear of them in Hempstead, whither they probably migrated. There were then three brothers, George, John and Lewis, and one sister. George and John both died unmarried, the former at Hempstead, the latter at Cow Neck. Of the others there is no record. The first George Hewlett to come to Merrick settled "between Whale Neck and New Bridge road," including what is now known as Cedar Swamp. There is also record of an early Hewlett settlement upon the farm of Mr. George M. Hewlett, which has always remained in the family. The original house has been incorporated in the more modern residence occupied at the present time. An old clothes press brought from England is still in its garret, as well as portraits of Colonel Hewlett and his wife. The people were largely Tories in the early period of our struggle for independence. Washington wrote to the Committee of Safety

(1776): "The inhabitants of L. I. have discovered an apparent inclination to lend a helping hand to subjugate their fellow citizens," and Jonathan Sturges writes to Governor Trumbull: "Long Island has the greatest proportion of Tories of any part of this colony." The women, too, assumed a royal attitude, and went even to greater lengths to signify their devotion to the crown. We may be pardoned, perhaps, for copying the following statement from an old record: "A young woman in our town [Hempstead] formed an intimacy with a Highlander in the British army. When the British were about to evacuate the island she was missing. The distressed father expressed his apprehensions to the commanding officer that his daughter had eloped, and was now in the company of her lover. Forthwith the men were drawn up, and the father walked along the ranks, wherein he discovered his daughter, in Highland uniform, and in the guise of a soldier, by the whiteness of the skin where the garter is usually tied." The Hewletts were among the leaders of the Royalist party, and at times were in imminent danger, but finally a declaration of submission to the Continental Congress was drawn up, and among its signers were John Carman, John Smith Rock, William Smith Black, Benjamin Hewlett, Benjamin Hewlett (2d), Joseph Hewlett, George Hewlett and John Hewlett. The Hewlett coat of arms represents two owls upon a shield, with the mottoes: "To stake one's life for the truth," and "By courage, not by craft." The name was sometimes spelt *Hulit*, and also "*Owlett*," the latter probably derived from the Yorkshire dialect and the representative owls. In the last generation of our first George Hewlett's descendants there were twelve brothers and sisters. Of these Mr. George T. Hewlett and Mrs. Mary Willetts are now (1900) the sole survivors.

As an illustration of the deserved prosperity and enterprise which have ever characterized the Hewletts the following, copied from an old newspaper dated February 28, 1800, will serve as an example: "The curious are invited to a sight of one of the most astonishing productions in nature, a large ox, raised by Mr. George Hewlett. He is to be seen at Mrs. Delouf's Flymarket. Admittance, one shilling. To give an idea of this ox, it need only be mentioned that he is nineteen hands high, seventeen and a half feet in length,

and nine feet in girth, forming a tremendous mass of animation. Not to view him as he now stands argues that want of curiosity which tends to enlarge the mind." And again, in 1831, we read: "George Hewlett, of Merrick, has a cornstalk on which grew thirteen perfect ears."

The old Merrick Path, beginning near the present Hempstead turnpike and passing east of the house of Mr. Benjamin Seaman, in a northerly direction to the plains, probably first did duty as a road in this part of the new township. It is said that one with sharp eyes can still discern its outlines. It was simply "brushed out," and indicated more distinctly by "blazed trees." This path later on was known as the "Hempstead Road," and then as the turnpike.

The Merrick Road, or as sometimes designated, the great south road, came next in order. It was built in sections, not continuously; and not until about 1850 was it completed between Merrick and Freeport. Before that time its local terminus in Merrick was west of Merrick river, where a connection was made with the southerly Freeport road, south-west to the old mills and again in a northerly direction into Freeport village.

At about this time (1850) a company was organized for the construction of the South Oyster Bay Turnpike, including the Merrick Road from Babylon to the old Hempstead Turnpike in Merrick, and thence north to Hempstead Plains. The work seems to have been accomplished with but little delay and resulted in pretty general satisfaction to all but stockholders. The original road in Merrick ran within twenty feet of the front door of Mr. John J. Hewlett's house, now occupied by his son, Mr. William E. Hewlett. When the Commissioners reached that point in laying out the new turnpike, to obviate an unnatural curve the course was laid further south, as the road now runs. To this the senior Hewlett strenuously objected, urging as a sufficient reason therefor that it would "cut him off" and leave his house too far away from the travelled thoroughfare. A still more potential argument on his part was a refusal to take additional stock in the company if the change was insisted upon. This might have brought the company to terms had there not been—unfortunately for Mr. Hewlett—another householder further west who insisted with equal pertinacity that the southerly course

should be confirmed, in order that he might thus secure a "larger door yard," and agreeing in consideration therefor to take and pay for more stock than would otherwise be purchased by Mr. Hewlett. Such diplomacy was irresistible and the road was changed accordingly.

There were regular lines of stages on the new turnpike from Babylon to Hempstead—thence to Jamaica and Brooklyn. South Oyster Bay had a postoffice, and one was soon after established for Merrick in the old hotel and store combined on the Hempstead Turnpike north of the present railroad crossing. The building was destroyed by fire in 1896. The Merrick postoffice was a general point for distribution, and the nearest station for people residing in Freeport.

To the west of Mr. Cammann's present residence, and extending from the road in a northerly direction, was a high board fence erected to screen from view objectionable farm buildings further on. In course of time, however, the southerly boards of this fence were cut off at a reasonable height so that stages might the more easily be seen from the house as they passed to and fro upon the Merrick Road.

The Plank Road to Jamaica was built about 1854. It commenced at the junction of Hempstead Turnpike with the Merrick Road and extended over the latter in a westerly course, bridging Freeport swamps, and furnishing a direct thoroughfare between that village and Merrick. The new road was not a profitable investment, and was soon acquired by the town.

Merrick avenue, extending from the Bay north to the railroad and thence to and beyond the camp grounds, is perhaps as fine a road with its surroundings as can be found on Long Island. It is, the greater part, beautifully shaded, and has a macadam foundation. Previous to 1850, however, it was but a cow path, more particularly designated as "Whale Neck Road," from the stranding of a whale at Whale Neck Point, which whale was later subdivided and transferred in carts over the cow path to settlements further north. A pair of bars then closed Merrick avenue to the public at its junction with the Merrick Road. The necessity for making the path a highway soon became apparent, and it was accordingly set apart for that purpose and reconstructed. Freight from the Merrick dock, at the foot of this avenue, before the days of a railroad,

was then received from vessels and conveyed in wagons to all parts of the surrounding country. Indeed, at this period, nearly all freight to and from Hempstead and New York was so transferred. The good ship "Native of America," commanded by Captain Thomas Raynor, made regular trips between the two ports.

To go back to an earlier date, we find what might now be called private roads, but laid out by Commissioners, and entered in the town records. The following is a copy of one of these entries:

"Articles of agreement made by the owners of a certain tract of Meadow Lands Lying in the Township of Hempstead on Little Merrick is as follows: Whereas, we the subscribers whose names are hereunto Written, Do agree for Ourselves, our heirs and assigns forever that we will take a Road that the Commissioners Shall Lay out. One Rod Wide In Leu of all other Rights or Priviledge that we Heretofore have had, to Pass to and From our Meadow, For the Use of Carting the Hay Cut on our Respective Meadows, Said Road to Begin at Duryea's Bars, Running as the Path Now Runs to the Bars Near Jacob Smith's and Timothy Titus' House, and from thence To the Island as the Cross Way Now Is. One Rod Wide Easterwardly from the Ditch on the West Side of Said Crossway. The Priviledges above written are no Other than the Priviledges we had In the Old Road which we have given for the New One. In witness Whereof We set our Hands, Nov. 9, 1809."

Agriculture naturally occupied the early attention of our colonists and has remained a principal occupation. Records show enormous crops gathered from productive soil, good prices in return for the same, and a gradual increase in the comforts and surroundings of the farmer. Nevertheless, we find him complaining of exorbitant taxes, illegal assessments, and protesting to the Colonial Governor his inability to pay them. It is on record that this contention came to naught, but once resulted in an edict from Governor Lovelace to "lay such taxes upon them in future as may not give them liberty to entertain any other thoughts, but how they shall discharge them." This was in 1668.

The Merrick River was then a stream of some importance and for years a source of great value within the hamlet. Upon its banks were no less than four paper mills. The first,

about a quarter of a mile north of the present railroad track, was owned by Gilson Willis; Joseph Smart had another, still further north; the next belonged to Isaac Willis, and the last to F. S. Molineaux, but is now transformed into a grist mill. They all did a thriving business for years, and furnished a good market for all straw farmers could bring to them. Rags came from New York and were returned in the form of white paper, by a regular line of packets; leaving a dock below the present residence of Mr. Gilbert Smith. There was every evidence of a long continued prosperity in this branch of manufacture, when that which has proved so destructive to the Eastern End of Long Island—the "Brooklyn Water Works Company"—by authority from the legislature reached out into the township, like the octopus sucking through its tentacles, water from streams and springs to its reservoirs and conduits, until the streams ran dry, the mills were closed, and so the industry came to an end. The several fulling mills which had long done a thriving business were also obliged to close for the same reason.

"Flotsam" and "Jetsam" were terms well known and understood. A copy of one recorded document bearing upon goods of this nature appears of sufficient interest to warrant its repetition:

"In March, 1814, the Privateer Mars were Drove on Shore near the New Inlet, by the British Cruisers, and set on fire by them. We, the Subscribers, saved Sum property from her. Jacob S. Jackson and Thomas Treadwell made an agreement with the agent and part owner, Peter H. Schenck to Save the property from her to the Halves and Deliver said property when saved to New York to said Schenck and to have the one half of the neate proceeds for saving the same. And the above said property or part of it Whare Delivered to Mr. Schenck at New York by James Bedell, which said Schenck refused to make a settlement for. Now we the subscribers do agree that the sum of money that were lodged in the hands of Patrick Mott should go towards bringing a sute against Mr. Schenck, and if not a sufficient sum to carry on the sute, we the Subscribers agree to pay all charges that may a Crew in carrying on said Sute.

"February the 14th, 1816."

As a means for promoting industries, building churches, establishing schools and divers other public works, the lottery was frequently

resorted to and was pretty generally in vogue. In 1763 the Reverend Samuel Seabury recorded in his dairy: "The ticket No. 5866 in the Light House, drew in my favor, by the blessing of God, £500, for which I now record to my posterity my thanks, and praise to Almighty God, the Giver of all good gifts, Amen."

"There is abundant evidence," says Prime, "that the first settlers of all these towns, from East to West, considered the establishment of schools as second in importance to nothing but the institutions of the gospel, and many of them were as careful to bring their school masters as their ministers with them." Flint records that schools must have been opened immediately after the colonists settled in Hempstead. As early as 1671 we find an order, signed by Governor Lovelace, to the overseers of Hempstead commanding them to "cause speedy payment to be made to Richard Charlton, who kept a school; otherwise he will have good remedy against you at Law." In 1871 there was a school on Cow Neck, taught by George Sheresby.

The first school house in Merrick was built early in the last century. It was of rough boards and timbers hewn from logs—from its size evidently not intended for a large number of pupils. The remnants of this building may still be seen in rear of Mr. William E. Hewlett's residence, where until fallen into decay they did duty for many years as a chicken house. The old boards and logs bear indications that the boys then, as well as now, had jack knives and knew how to use them; they record, cut deep in the wood, initials of many a girl and boy, long since passed away, and of whom there is probably no other memorial extant.

The second school house, on the Merrick Road, east of Mr. Hewlett's, was erected in 1844, and used until the modern building further east was completed in 1892. In this second edifice many of the present residents of Merrick received their education; and for years this school produced the best scholars and gave the most thorough instruction of any on Long Island. The early teacher lived on the premises, sleeping over the school room, and cooking his frugal meals upon the rough apology of a box stove. It is said of one that his chief nutriment was derived from buckwheat cakes in their season, and other kinds of cakes during the rest of the

year. An "old boy" remembers that this teacher was famous for his skill in cooking, "and when the process was about to commence the scholars gathered around to watch him flop the cakes on top of the hot iron."

"In Merrick," writes Thompson, "the Methodists have a meeting house, erected in 1830, and another east in 1840." This first meeting house referred to has been identified as one which stood near Hempstead Turnpike in Freeport, about one mile north of the Merrick Road; it was formerly known as the Sand Hill Church. The grave yard, with its head stones, is yet to be seen in the still kept inclosure where the building formerly stood. The edifice east, to which Thompson refers, was probably the Merrick school house, where services were occasionally held and a regular Sunday-school maintained.

The first building erected within Merrick precincts for religious services was undoubtedly the Union Chapel, commenced in the fall of 1875, completed in the summer of 1876, and dedicated Sunday, August 27th, of that year, by Methodist Elder Graves.

The famous Merrick camp meeting attracts hundreds of Methodists in August every year. It was established about a quarter of a century ago, and is now held on a tract of ninety acres of land, off Merrick avenue, about a mile from the railroad station. An auditorium, capable of seating 1,500 persons, stands in the center of the grounds and around it are grouped some sixty cottages.

Probably the best known portion of Hempstead, the portion which attracts the most visitors every year and has done so now for nearly half a century, is the great sand bar which practically stretches along the entire south front of Long Island, forming a succession of inland seas—Hempstead Bay, Jamaica Bay, South Bay—and which is known by many names. The part included in Hempstead township, Long Beach, virtually a continuation of Rockaway Beach, became famous in 1880 for the mammoth summer hotel which was then opened for guests. It was a huge structure, capable of entertaining 5,000 guests at one time. Far Rockaway, now incorporated in the Greater New York, was purchased from the Indian proprietors in 1676 by a pioneer

named Cornwell, and remained for many years in possession of his descendants. Its Marine Pavilion was long a popular resting place by the sea, and later came more elaborate structures. For the past twenty years Far Rockaway has had a settled community and many really beautiful villas adorn its streets. It does not now attract such throngs of visitors as it formerly did, but it cannot be said that those who have built their summer homes there much regret its loss of popularity in that respect.

From an interesting and valuable monograph on the "History of the Rockaways," by Mr. William Soper Pettit, we quote the following interesting details concerning Rockaway and its environs:

Over half a century ago, this part of Long Island was a fashionable resort, as is shown by the following extracts from the New York Mirror of 1833: "For a number of years the Rockaway beach has attracted numbers of our townsmen with their families to that healthful and agreeable part of Long Island. The atmosphere there is fresh, cool and delightful; invalids soon find themselves invigorated by the constant sea breeze; and the tired denizens of the town, whose scorching pavements have long blistered his feet, and whose heterogeneous and fanciful odors from gutters, sewers, piles of filth, dust and smoke, have regaled his olfactory organ, finds a plunge or two in the Atlantic a truly delicious luxury. They have a real pleasure in perspective, who have never ridden down to that broad, white, endless, magnificent beach, where the heavy swell of the ocean rolls so superbly to the snowy and silvery sand. One after another forever the waves come heaving, swelling, breaking, tumbling, flashing, foaming and roaring in. Hither the stranger delights to resort when the fervor of the long summer day begins to abate. For miles and miles around the eye wanders over the dead level. Fearless of interruption, he loves to feel the grateful, wet, velvet sand crushed beneath his feet as he wanders into the foaming tide, for the next billow. Soon it comes; he takes his place so as to stand exactly within its green transparent curve, when it lifts its head just in the act of breaking. The emerald wall rises suddenly before him, and, with a skillful spring, he plunges headlong into

the liquid mass, which bursts above him with stately and measured sweep, while, with a few well timed strokes, or, with an attitude braced with more than ordinary care, he stems the swift current of the returning flood, rejoicing in this exercise of his amphibious abilities, till some crab, perhaps as large as his thumb nail, seizes him by the foot, as if the ocean were not big enough for them both, and warns him that he is but a timid intruder in the empire of Neptune."

In 1841, Howe in his history says: "Far Rockaway, about 29 miles from New York, (by the old road) has grown into importance as a fashionable watering place. The Marine Pavilion, a splendid hotel, was erected here in 1834, near the beach, 76 rods from the ocean."

From the foregoing extracts it will be seen that the Rockaways have long been known and appreciated by the citizens of New York.

Mention has been made of the "Marine Pavilion." This was a hostelry of note in its day; it stood near the Cheever mansion in Wave Crest. In speaking of this hotel Thompson says: "It is a large and splendid edifice standing upon the margin of the Atlantic, and has hitherto been kept in a style not excelled by any hotel in the Union. The main building is two hundred and thirty feet front, with wings, one of which is seventy-five, and the other forty-five feet long. The peristyles are of the Ionic order, the piazza being two hundred and thirty-five feet in length by twenty in width. The dining room is eighty feet long, and the drawing room fifty." The sleeping apartments numbered one hundred sixty. It was erected by an association of gentlemen of the city of New York, and the building cost forty-three thousand dollars.

This grand hotel was destroyed by fire on June 25th, 1864; not a vestige of it remains. "It was made memorable by its old-time hospitality and the distinguished persons who patronized it, among whom were conspicuous, Longfellow, N. P. Willis, Washington Irving, Trumbull the artist, and General George P. Morris," and Herbert, who it is believed indited from its porch the well known lines:

On Long Island's sea-girt shore

Many an hour I've whiled away,
Listening to the breakers' roar

That washed the beach at Rockaway.

Transfixed I've stood while Nature's lyre,

In one harmonious concert broke,
And catching its Promethean fire

My inmost soul to rapture woke.

Oh, how delightful 'tis to stroll
 Where murmuring winds and waters meet,
 Marking the billows as they roll
 And break resistless at your feet!
 To watch young Iris as she dips
 Her mantle in the sparkling dew,
 And, chased by Sol, away she trips
 O'er the horizon's quivering blue.—

To hear the startling night winds sigh,
 As dreamy twilight lulls to sleep,
 While the pale moon reflects from high
 Her image in the mighty deep:
 Majestic scene where Nature dwells,
 Profound in everlasting love,
 While her unmeasured music swells
 The vaulted firmament above.

These verses were put to music, and were popular for many years; "they are supposed to have been inspired by the measured rhythm of the waves breaking against the magnificent jutting headland which is Rockaway's pride."

Other well known personages have had their summer homes in this section: there were the Franklins, of Philadelphia; the Blennerhassets, of Blennerhasset, on the Mississippi; the Livingstons, of Livingston Manor; the Van Rensselaers, descendants of the famous patroon; Admiral Wilkes; the Bleckers, the Hoffmans, the Aspinwalls, and the famous Mme. Jumel, widow of Aaron Burr.

At this early period no railroad extended to Rockaway; it was not until 1832 that the Long Island Railroad Company was chartered to run from Brooklyn to Jamaica. All our visitors came in carriages and stage coaches, driven by way of Hempstead. Before the bar was formed opposite Far Rockaway, the beach at low tide stretched out many rods and was known as The Strand. During the height of the season it was customary to see the white sand dotted with portable tents, under whose shelter were groups of gay young folk from the city and adjoining towns. Bathing was then carried on in a peculiar fashion. The bath houses were on wheels and driven directly into the surf. The bath chair was also in vogue. The scene resembled that of Brighton, in England.

Within the last half of the nineteenth century the towns known as Lawrence, Cedarhurst, Arverne, and Edgemere have sprung into existence and have received their names from various sources. Lawrence was named in honor of its founder, Mr. John Lawrence,

brother of Messrs. Newbold and Alfred Lawrence. This place was recently incorporated and now includes territory formerly within the bounds of Cedarhurst. With its peaceful inhabitants, its scenic landscape, and its clean, shaded and well sprinkled streets, Lawrence is indeed a model village. The ideal name Cedarhurst was given to that section fronting the Hempstead Bay, where primeval pine and cedar abound. Here ultra-fashionable colonists have erected handsome summer residences. Cedarhurst is also the home of the Rockaway Hunt Club, an organization that has done much to popularize polo with society people.

Arverne was founded in 1880 by Remington Vernon, who coined the name Arverne, from R. Vernon. Within five years the sand hills of this section were converted into a pretty village.

West of Wave Crest is Edgemere, a fashionable summer resort that has recently come into prominence through the construction of the magnificent hotel of that name, which is directly on the ocean, at the head of the Inlet, with its rear to the bay. "The Edgemere," in its unique position, is one of the most aristocratic hotels on the Atlantic Coast. It enjoys to-day the reputation the "Marine Pavilion" had a half century ago.

Mr. Lancaster's original idea was to have a "New Venice" at this place, but the uncontrollable deep convinced him that this plan was not feasible.

Until a recent period the development of this part of the beach was very slow, but now it gives promise of becoming the most picturesque section of all "The Rockaways." The arrangement of the streets and the disposition of the houses are worthy of favorable comment.

Far Rockaway, called "Far" in contradistinction to "Near" Rockaway, measuring from the town seat, Hempstead, is said to be the brightest gem in the diadem of Imperial Manhattan. It is the City by the Sea, which has not been deprived of its rural features. Its railroad facilities and other modern advantages may, without hesitation, be compared with those of any section of our greater city.

The streets in and about Far Rockaway recommend themselves; they are well graded and are either brick or macadamized; all are shaded with maple or other trees. The drives through the adjacent country are unsurpassed. Beautiful scenery and interesting sights

abound. The educational facilities of Far Rockaway are exceptionally good. The high school and grammar school, with their efficient corps of teachers, stand second to none in educational advantages. The attractive, convenient and imposing high school building was erected in 1894. Since that time the school has grown to a surprising extent. In 1896 it was necessary to add two wings on the north and south ends, thus nearly doubling the size of the original building. In 1900 a well equipped gymnasium was added, together with a new library of several hundred volumes. During the early part of last year the Board of Education set up a physical laboratory and business department, which is a new and admirable feature of public school education.

West of Far Rockaway lies beautiful Jamaica Bay, on the shores of which nestle many unique and handsome cottages.

The Bayswater Yacht Club, incorporated in 1892, at the foot of Bayswater avenue, lies situated some four hundred feet from the shore, surrounded by water. This is the meeting place for those who are fond of yachting and social pleasures. On its roll of membership are to be found the names of Judge Edmund J. Healy, John M. Frucks, S. B. Alt-haus, Thos. Henderson, Watkin W. Jones, Edgar Mott, Richard Mott, F. L. Richmond, Daniel Whitford, John Renehan, John Dohse, David N. Carvalho, Chas. E. Pretz, Rev. Henry Mesier, E. A. Brinkerhoff, Sr.; Fredk. Hawley, Hubert Cillis, John Guilfoyle, John W. F. Nichols, P. F. Griffin, Frank M. Cronise, Franklin B. Lord, Louis J. Bossert, John F. Schumann, Edward Roche, Andrew McTigue, E. N. Dickerson, Hermann Miller, Malcolm R. Lawrence, Harold Werner, John N. Moser, John W. Masury, H. G. Heyson, F. J. Heney, S. N. Decker, C. R. Betts, A. C. Haynes, J. A. North, D. L. Starks, Wm. J. Buckley, R. W. Buckley, Otto L. Roche, Andrew L. Sullivan, Frank Jenkins, Philip R. Simmonds, Houghton Wheeler, James Lynch, Henry Frielman, and others.

The property designated as Wave Crest (so named by Mr. John H. Cheever) on the west boundary of Far Rockaway, includes the

land formerly owned by the Marine Pavilion Association, and what was known as the Clark estate. Until a recent date the grounds were enclosed as a private park, with lodges at the entrances.

To-day the gates of Wave Crest are open to the public and it is the delight of all to drive through this picturesque park, with its meandering roads and beautiful lake. Among the residents are: Messrs. A. W. Nicholson, E. A. Brinkerhoff, John Cowdin, Murray, Benjamin F. Einstein, I. A. Bach, M. Foster, Louis Auerbach, Lowenstein and A. J. Bach, Mrs. E. N. Dickson and Mrs. J. Cheever.

Perhaps before closing this sketch it would be appropriate to tell what finally became of the Rockaway tribe of Indians. Alas! They met the same sad fate as the Mohicans.

To the whites these aborigines were just, generous, and hospitable, and less warlike than many other tribes of North America. Their admirable qualities were esteemed by our Quaker forefathers, and from the time of the treaty of 1657 there never was an actual breach of friendship between the English and the Rockaway Indians.

After the natives sold their property at Far Rockaway, for a few cents an acre, they moved eastward to Cedarhurst and, in that vicinity, lived for nearly a century. In the woods near the old turnpike road, at Cedarhurst, lived and died the last of the Rockaway sachems, Culluloo Telawana, who, there is every reason to believe, was a lineal descendant of Tack-pou-sha. Mr. Abraham Hewlett, who, in his boyhood, was personally acquainted with this chief, erected a monument to his memory at Cedarhurst, L. I., opposite the Hewlett homestead. About 1819 the tribe left Cedarhurst in a body and joined their brethren on Barnum's Island at Near Rockaway, (now East Rockaway) and there, with the aid of the White Man's fire-water, one by one, went to the happy hunting grounds.

For them—the children of Tack-pou-sha—the beautiful waters laugh no more, for the pale-faces are masters of the earth, and the time of the red men has not yet come again.

FARM SCENE.

From "Flatbush, Past and Present." By permission of the Flatbush Trust Company.

CHAPTER LXI.

NORTH HEMPSTEAD.

AS has been said, the present township of North Hempstead was taken from 1784. It lies upon Long Island Sound the original Hempstead township in between Hempstead Harbor and Little Neck Bay, while to the south it extends to the center of Hempstead Plains. It was computed to contain 34,470 acres. A range of hills extend east and west near the center, and from them spurs extend to the Sound, giving to the northern part of the township a peculiarly hilly character. The coast line is rocky and rugged and is indented with several deep and irregular bays—Hempstead Harbor, Manhasset Bay, and with several "points," Hewlett's Sands' Baker's—while immediately off the coast are a great number of half sunken rocks—such as the Execution Rock; and the whole coast line, as

may readily be conceived, is dangerous to navigation. The soil, as a general rule, is light and sandy, but in the northern section is a stretch of loam which is markedly adapted for farming purposes. Harbor Hill is the highest point on Long Island—380 feet above tide water.

While, however, the coast line is dangerous it is very beautiful, sometimes beautiful even in its ruggedness and desolation, sometimes in its stretches of sand, its coves and eddys, and many charming villas have been erected in these open places, notably on Great Neck. The light house on Sands' Point, erected first in 1809, caused that spot to become quite a resort up to about the middle of the century, and quite a number of private residences sprung up in its vicinity. Communication with New York by rail is ample, while from Roslyn,

Glen Cove, Sea Cliff and other places there is abundant facilities for water communication with the great city.

The earliest settlement of which we have record was in 1640, when a party of adventurers from Lynn, Massachusetts, armed with a permit from Lord Stirling's agent, landed on the west side of Cow Neck, tore down the arms of the Netherlands, which they saw nailed to a tree so that all the world might know their "High Mightinesses" held sway there, and carved a fool's face on the tree instead. Then they took possession of the land, erected dwellings and entered into negotiations with the Indians for the sale of a generous slice of the soil. The aborigines, however, carried information of these wayward doings to Governor Kieft, and the blood of that peppery little man boiled with indignation at the recital. The settlement, unauthorized as it was, might be forgiven and arranged, but the insult to the arms of the Fatherland could not be condoned. So he sent twenty-five picked soldiers to Cow Bay, who made short work with the settlers. They took most of them captives, demolished their houses and effectually quenched their aspirations. Many of those thus summarily dispossessed aided in the settlement of Southampton. The more methodical settlement under Fordham and Carman in 1644 was arranged peacefully enough, and settlements gradually spread north as well as south from Hempstead village. In 1676 Great Neck was fairly well settled and the records tell of other early colonies.

The majority of the settlers in this township were opposed to the separation from the mother country when the time came to decide that most momentous question. When the crisis became acute, however, the Whig minority was found to be the most active, and under the leadership of John Sands held a meeting in which the authority of Congress was acknowledged. A militia regiment, or skeleton of a regiment of militia, was also organized through the instrumentality of Sands, and he

was rewarded with its colonelcy. He was most successful and persistent for a time in annoying the local Tories, had many of them arrested, saw to it that the public offices were filled with patriots and on a small scale introduced a reign of terror. It is said that his militia took part in the Battle of Brooklyn, but there is much about that story that is not very clear, and the presence of that half-hearted command is at least doubtful, although some of its members were in the ranks of the defending force. With the close of that battle, however, Sands' reign of terror was brought to a summary conclusion, and the Tories had their innings. The British forces soon found their way to all sections of Hempstead, seized Sands and several other leading Whigs, sent them off to prison, and sequestered all the grain, live stock, and wagons of rebels they could lay hands on. A little later, the requirements of the campaign caused them to sequester the grain, horses and cattle of the Tories, and to force them to supply wood to the soldiers, but these things were paid for, although at prices fixed by the King's officers. But the "occupation" unsettled all order and authority except that upheld by the rigors of martial law, and all classes of the people suffered from its continuance. Mr. H. G. Onderdonk wrote:

The Friends, not feeling free to aid war, were great sufferers. March 3, 1777, Elias Hicks, their great preacher, was deprived of a great coat worth twenty-six shillings on a demand for twelve shillings to pay the hire of men to repair the British forts at Brooklyn; April 4th a pair of shoes worth ten shillings was taken from him on his refusal to stand guard; on August 28th he was distrained of a pair of silver buckles worth eighteen shillings, two pairs of stockings, worth fifteen shillings, and a handkerchief worth five shillings, all because he would not go on an alarm in armed pursuit of the enemy; and in June, 1778, a pair of stockings worth five shillings and a razor case with two razors, worth four shillings, were taken from him for some like cause.

Besides the outrages of British soldiers in stealing, burning fences and robbing at night, North Hempstead suffered greatly from the

nightly depredations of whale boatmen, as they were called, who had their quarters in Connecticut. Guards were stationed along the shores of the sound. After years of mischief the head of a gang of these robbers was shot, and the governor of Connecticut, on a representation made to him by the sufferers, refused to commission any more. On a Thursday evening (October 26, 1782,) two whaleboats with muffled oars landed a number of whaleboatmen in Cow Bay at Thorne's dock (afterward Judge Kissam's) and proceeded to James Burr's store, Manhasset Valley. Burr had been robbed once before, and slept in the store with his gun loaded. As soon as they demanded admittance he fired. Judging of his position by the report, the robbers fired diagonally through the front corners of the store. Burr received a ball in his body, went to the bedside of his little brother, told him he was a dead man and fell. Being unable to force open the door, the robbers ripped off the boards, entered through the side of the store, and loaded themselves with goods. As they returned and were rounding the corner of John Burtis' blacksmith shop, west of the house occupied by the late Dr. Purdy, David Jarvis, an apprentice boy, fired on them one after another, from the second story window, Burtis, loading the guns and Molly, his wife, handing powder. In this way several were wounded, till at last came their leader, Captain Martin, staggering under an enormous load of goods, who received a buckshot in the center of his forehead and had his breast also tattooed with shot. Throwing down his carbine, he stumbled up the hill north of Dr. Purdy's dropping his load by the way, and fell down dead on the summit, where his body was discovered by George Onderdonk. The firing alarmed the neighbors, who had now assembled in great numbers. Before it was yet day Joseph Onderdonk was dispatched for Major Kissam, who came and held an examination. In Martin's pocketbook were found a list of his crew and a captain's commission from the State of Massachusetts authorizing him "to cruise against the enemies of the United States," but not to go on land. Captain Martin's clothes, shoes with silver buckles, and watch, together with the guns dropped in the flight, were given to Jarvis. He was also presented with a pair of new pistols as a reward for his heroic daring. Jarvis had on a previous occasion beaten off a party of whaleboatmen and wounded one Jim Brown. Mar-

tin's body was buried in a corner of Martin Schenck's land, south of the Episcopal church. The rest of the gang escaped to their boats, which were seen by Joseph Onderdonk during the alarm of firing slowly dropping down the bay to a preconceived spot, probably Mitchell's landing. The night was overcast. Joseph Onderdonk, a lad of sixteen, was stationed with a gun in a young locust northeast of his father's house to fire an alarm in case the house was attacked. While he was here a fellow ran up to him, crying out, "D—n their blood, they've wounded me!" On discovering his mistake he made off and was out of sight in an instant. Captain Martin had been a lucky fellow, having captured a number of prizes.

The old block-house now standing at Hericks was erected for a store on the Jericho turnpike near Westbury, during the Revolution. It was bullet proof and had portholes in the second story to afford protection from robbers. Not only was there a loss of property on land from the whaleboatmen, but their captures of boats plying between here and New York were numerous. The prizes were carried over to the Connecticut shore. Thomas Dodge was once a passenger and sat in the cabin when a boat was taken. Hearing a noise he tried to get on deck, but found he was fastened down. He sang out, "What are you about up there? Open the door and let me up, or else come down yourselves, and let us drink for better acquaintance." The captors came down, and were treated with a bottle of spirits from Dodge's provision basket. They had a jolly time of it, and on Dodge's arrival at Horse Neck he found many old friends, and was allowed to return on parole. This exempted him from the fatigues of military duty (which consisted in frequent trainings and patrolling the coast at night) until he was exchanged.

At the peace in 1783 many loyalists sold out and left North Hempstead for Nova Scotia for fear of being punished by the Whigs; but some returned after they found it safe to do so. The Legislature passed the "trespass act," by virtue of which suits were brought against all British agents who had impressed horses, cattle, wagons, forage or persons, or carted off wood during the war. Many farmers thus recovered damages. Only two farms in North Hempstead were confiscated to the State. One was that of Daniel Kissam, the elder (now occupied by Howell and Adrian Onderdonk, at Flower Hill). It consisted of three hun-

dred and thirty acres and was bid in by the widow for £2,000, August 5, 1784. The other belonged to the Ludlows.

The Legislature ordered a special town meeting December 2, 1783, when Whigs were chosen to office in place of the loyalists who had held office during the war, viz.: Adrian Onderdonk, supervisor; John Schenck, clerk; John Searing and John Burtis, constables; Peter Onderdonk, Abraham Schenck and Benjamin Everitt, commissioners of highways, etc. Such was the antipathy of the Whigs of North Hempstead to the loyalists of South Hempstead that the Legislature, April 16, 1784, divided the town by the line of the "Country road."

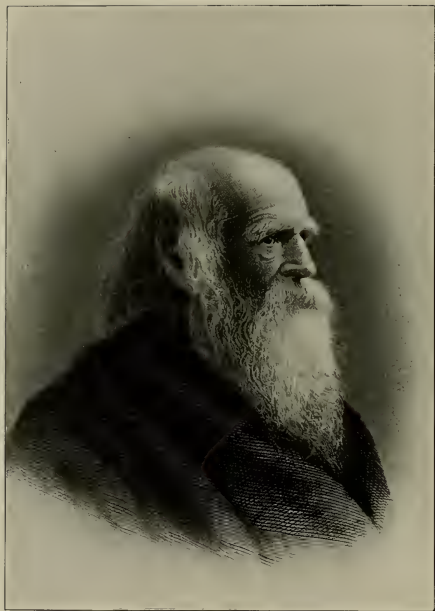

But we are treating of North Hempstead, and its history does not begin until 1784, and by that time the Revolution was over and "King George he reigned no more," so far as New York was concerned. North Hempstead quietly settled down to work out its own story as an agricultural community. In 1832 oyster culture was added to its industrial field through the efforts of Henry Cock and John Mackey. Since then that business has grown to wonderful proportions, and the oysters of Cow Bay, in particular, are in high repute; the clams with which the shore abound have also given rise to a most extensive industry. But still the main feature of North Hempstead is agriculture and floriculture—the products of the soil, varied within the past two decades with the "summer boarder business," which, however, lasts only about two months in each year.

From the first North Hempstead has been a religious community, a stronghold almost equally of Quakerism and Methodism. The former has been traced back to 1671 and the latter to 1785. The Dutch Reformed church had a congregation at Lakeville in 1730. All the other denominations represented are of modern date. The Episcopalians did not have a place of worship until 1803, when Christ church was erected at Manhasset, and the first meetings of the Presbyterian body were held at Roslyn in 1849, and the first Roman Cath-

olic place of worship was that of St. Bridget's, Westbury Station, which was dedicated in 1856—the second Roman Catholic church erected east of Brooklyn. The history of none of these bodies presents any very remarkable features, features likely to be interesting outside of their own immediate constituencies, and there is little need of presenting such details in a general history like this. Possibly the Society of Friends might be made an exception from the force of this remark, but the organizations of that body really had their center in Oyster Bay, and in our sketch of that township their story will be found treated at considerable length. The Dutch Reformed church at Lakeville was housed in a little octagonal structure, with high sloping roof, very much after the style of those of the same denomination in Kings county. The seats were allotted at the rate of twenty-five shillings each among the male members, while the sisters paid twenty shillings each. At first, with the church at Oyster Bay, it was under the care of the churches at Newtown and Jamaica, and services were held once a month. In 1813 the members residing in Manhasset withdrew and erected a tabernacle of their own, and this severely weakened the old congregation. They held together with a struggle until 1830, when they were compelled to disband on account of the paucity of their members, and the venerable little tabernacle which had spread the light of the Gospel for exactly a century was sold the same year and demolished.

The principal villages in this township, with their present population, are as follows: Great Neck, 1,600; Port Washington, 1,250; Manhasset, 800; Mineola, 900; Roslyn, 1,300; Westbury Station, 400; Thomaston, 350; New Hyde Park, 500; Old Westbury, 375; Hericks, 125; Searington, 150; Alberson, 240. Some of these may now be considered in detail.

Probably the best known of them all is Roslyn, not so much on account of its own in-

William Cullen Bryant

herent beauty, but because it is associated with the name and fame of William Cullen Bryant, one of the greatest of American poets. Independent, however, of this it has considerable historical data connected with it to invest it with interest to the antiquary. Down to the middle of the nineteenth century it bore the name of Hempstead Harbor, and besides being the leading village of the township was known as a manufacturing center. The first paper mill in the Province of New York was established here in 1773 by Hendrick Onderdonck, grandfather of the two bishops of that name, along with Hugh Gaine, a well known New York printer of that time, and Henry Remsen. There were also several grist mills at an early day, one at least dating from prior to 1700. General Washington, who visited Hempstead Harbor in April, 1790, commended such local industries in pleasant terms. Several paper mills were established at later dates, but did not seem to prosper, and in 1880 a silk mill was added to the attractions of the village. It is a prosperous community, with savings bank, public library and other accessories demanded by modern culture and requirements, and although its industries are still important it has developed of late years more and more as a settlement of refined homes. In this there is no doubt William C. Bryant led the way.

The life story of this brilliant man of letters is part of the literary history of the United States and need not be dwelt upon here at any great length. He was born at Cummington, Massachusetts, November 3, 1794, was educated at Williams College, and when only in his twenty-first year was admitted to the bar. He entered upon the practice of the legal profession at Plainfield, and after a while he removed to Great Barrington, where, it is said, he won considerable prominence in the local courts. But his success was not substantial. The law, as Sir Walter Scott used to say, is a jealous mistress, and Bryant, even before he had assumed the dignity of a full-fledged lawyer, had been coquetting with literature,

so much so that he was recognized as a man of letters even ere he had attained his majority. When thirteen years of age he was a regular contributor of poetry to the country papers, and had written a long effusion in the nature of a political squib which was justly considered an extraordinary production by those interested in the lad and the argument, but is now, happily, forgotten. When nineteen years of age he wrote his remarkable poem, "Thanatopsis," which at once assumed a foremost place in American poetic literature, and still remains the most popular and most often read of all his works. The poem first appeared in the North American Review and at once attracted wide attention, and as soon as the authorship became known gave him a place in the highest literary circles of his time. He also contributed several prose articles to the Review, and so demonstrated that he wielded a facile pen in prose and was a graceful, clear and cogent writer on whatever theme he concentrated his thought. Under these circumstances it was easy to foresee that with law on the one side and literature on the other, each claiming his attention and each demanding all his powers, one would have to be abandoned, and, happily, he turned away from law and made literature his sole companion.

In 1825 Mr. Bryant settled in New York and became one of the editors of "The New York Review." A year later he became associated with the Evening Post, and a few years later assumed the duties of editor in chief and maintained his connection with it until the end of his long career. But while engrossed in the editorial cares of a newspaper which became in his hands one of the most powerful in the country and one that exercised a most marked influence upon the political, economic and literary history of its time, he did not neglect his own literary work. His frequent visits to Europe had made him personally acquainted in all the literary centers there, and had broadened and widened his own views of men and matters, had made him

see that all the world was really akin, and wherever he went he was a ceaseless student of language, art, manners and customs, thoughts and aspirations. All that became reflected in his poems, his orations and even in his editorial and critical articles in the "Post." Before settling in New York he had published, at Cambridge, a small volume of poetry. In 1832 he again printed that work, with addi-

marvellous writings of "the first of poets." Literally Mr. Bryant continued in harness almost until his "summons" came, June 12, 1878.

Most of his time in his later years was spent at Roslyn, and he took a most active part not only in promoting the beauty and amenity of the village, but in enhancing its material prosperity. His own home, to which he gave

CEDARMERE—THE HOME OF WILLIAM CULLEN BRYANT.

tions, and several editions followed. In 1866 he issued a volume entitled "Thirty Poems," which has since been incorporated in his collected writings. He was an indefatigable worker and after he had attained his seventieth year he began the translation in blank verse of Homer's "Iliad," and followed it up with a version of the "Odyssey." His work as a translator was conceded by many of the most competent critics and scholars to be the best English dress which had been given to the

name of Cedarmere, he loved almost as passionately as Scott loved Abbotsford. The house was originally built in 1787 by Richard Kirk, a zealous Quaker, who seemed to have taken a considerable interest in laying out the house and its land, about forty acres. Then it passed into the possession of Joseph White Moulton, the historian and antiquary, joint author with T. V. N. Yates of a history of New York, and was sold by him to Bryant in 1846. Bryant remodelled the house, en-

larged it on all sides and introduced many peculiar architectural features and added to its surrounding grounds until they measured 200 acres. It was his kingdom, his hobby, his pride, even more than his literary triumphs; every field had for him a story and some peculiar feature greeted the visitor at almost every step, and visitors to Cedarmere came in plenty, for Bryant was never happier than when acting as host and surrounded by his literary and artistic friends. His remains were laid in Roslyn's beautiful cemetery, in which he had taken a most marked interest, and the Bryant Circulating Library, named in his honor, is housed in a beautiful building, which, with its grounds, was presented to the village by his daughter, Miss Julia S. Bryant, in accordance with an expressed wish of the venerable poet shortly before his death.

The library still continues to be the main feature of the village life. Within the past year or so it has been the object of much kindly interest on the part of Mrs. Clarence Mackay, wife of one of the owners of one of the modern baronial estates on Long Island, whose palatial home, as will be seen, is in the immediate vicinity of Roslyn village. Shortly after settling there Mrs. Mackay asked permission from the Trustees to take possession of the library and to furnish it, and stipulated that no one was to make any suggestions, as she wished to be free to do as she liked. Her desire was granted, and she secured Miss Maud Johnson and Miss Susan Clendenning, graduates of Pratt Institute, Brooklyn, and trained librarians. After inspecting the books then on the shelves four hundred were retained and four hundred and fifty new ones added, and all arranged after modern methods. Miss Johnson, who is an ardent book lover, and who has assisted in classifying and cataloguing many rare and valuable collections, was interested deeply in the discovery of the old books. The books were such as the general public does not care for and therefore were allowed to drop out of sight. Their neglect seems to in a way justify the criticisms

of Mr. Bryant by his friends and neighbors at the time he gave the library for bestowing such works upon so small an institution.

Outsiders have often come to the rescue of the library. The Bryant family, the Goodwin family, and George A. Thayer preceded Mrs. Mackay in aiding it. Besides adding to the number of books and rebinding the old ones, Mrs. Mackay has redecorated and recarpeted the rooms.

There is as usual an inharmonious note heard, due to the removal of the portraits, fine lithographs of Bryant and Longfellow, and some engravings given by the Goodwin and Bryant families. These no longer appear on the walls, and some of the old residents who are not in sympathy with the radical changes and who retain a loyal affection and gratitude for the poet founder, think this is a mistake.

Cedarmere is now the property of the poet's grandson, Harold Godwin.

But with the passing of William Cullen Bryant Roslyn did not lose its literary celebrity, for his place was at once taken by his son-in-law, Parke Godwin, who was long associated with him on the Evening Post and had won a measure of success as a man of letters even when he married the poet's eldest daughter, and for many years his home, Clover Croft, was a gathering place of famous men, just as Roslyn had been. Nowadays Mr. Godwin has no home, in one sense, in Roslyn. He gifted over Clover Croft to his daughter, Mrs. F. N. Goddard, when he began to feel the need of husbanding his strength to complete his literary work; but no man is better known in Roslyn than he, and his frequent visits, spent either at Clover Croft or Cedarmere, keep up his connection with the village which has now continued over many, many years.

Writing of Clover Croft and Mr. Godwin, a recent visitor says:

"The great attic of Clover Croft, which is the length and breadth of the house, has a big storage of theater flies and stage details, which in the past were often called into

requisition for impromptu entertainments, when the neighbors were hastily bidden to meet some prominent actor or singer. The dramatic strain in Mr. Godwin's many sided nature has always been in evidence, whether as an enthusiastic and appreciative frequenter of his box at the opera or during the winter's series of plays, or when as a brown haired man he took part in the amateur theatricals at Clover Croft, when Roslyn was but a little hamlet and the summer home of Charles A. Dana, Bryant, Richard Storrs Willis and the brilliant friends they entertained. The wit and humor of Mr. Godwin's character songs, his strong, rich voice, natural grace and intense magnetism made him the life of all gatherings which he shared.

"There has been a wide range of experience in his eighty-seven years, and his marvelous memory recalls this to the happy listener, when Mr. Godwin is in the mood to talk. Had he been less the dreamer, poet, philosopher and student, with ambition equal to his abilities, these would have kept him continually before the public eye and ear. He has, however, responded reluctantly to appeals, especially when desired as a speaker, but his addresses are notable as fine mosaics of terse phrases, graceful imagery, sound sense and a wide range of knowledge. Memorable addresses are, one delivered in the Century Club on its fiftieth anniversary, his eulogy on George W. Curtis at the same place, and at Paterson when that city celebrated its centennial and he stood before a great audience as the oldest living representative of the first white settler, Abraham Godwin, when Paterson was Tatwana. His latest addresses, the one at the memorial service of Edwin Booth, and at Cummington, when the one hundredth anniversary of Bryant's birth was celebrated, were made when his plenitude of years might have caused a weakening of the old forces, but his magnetic earnestness, rich, clear and sonorous tones made him, as in the past, the chief attraction.

"A marked feature of the Booth commemoration ceremonies was the volume of cheers the newspaper men gave the great journalist when he came forward on the stage, one of a group comprising Henry Irving, Tomasa Salvini and Joseph Jefferson, and the next day they reported that 'Mr. Godwin's delivery was even finer and more impressive than that of any of the three professional actors who spoke from the stage,' and 'we think that any person in the audience who did not know the men on the stage would, in judging by appearance, have picked out the seventy-seven-year-old Parke Godwin as the greatest tragedian of the lot.'

"Mr. Godwin is an art critic of intelligence and discrimination, and the lectures on art given at Princeton, his alma mater, are held up to the students as models in diction and knowledge. In his personal relations as friend and neighbor, he is delightful, and when the ball of thought is sent rolling into the past it is a great privilege to be a listener. He likes to tell how strangely the current of his life was changed, when as a young lawyer he tried to wait patiently for the cases so slow in appearing. At this time his Sunday afternoons were spent with a young married cousin, of whom he was very fond, and to whom he went for advice and sympathy. On one of these occasions he inquired if in her neighborhood he could find a boarding place where accommodations were pleasant and prices reasonable, and was referred to 'a house across the way, lately changed from a school to a select boarding place.' This soon became a popular resort for clever men, and not long after Mr. Godwin's establishment there he noticed a finely intellectual-looking man, always grave, silent and thoughtful and alone.

"There was something so distinguished about his personality that Mr. Godwin asked of one of the attendants the stranger's name. The answer was so carelessly given that the next day Mr. Godwin again made inquiries

and was told that the man was William Cullen Bryant, who was a transient boarder during the absence of his family from the city, and that he had sought this unpretentious place because of its quiet and nearness to the office of the Evening Post. The interest was mutual, however, and ordinarily shy and reticent as Mr. Bryant was, he one day, finding himself seated near Mr. Godwin, and the two the only occupants of the room, interrogated him in a friendly way as to his occupation, which Mr. Godwin frankly acknowledged was only in embryo. 'Then,' said the elder man, 'as you are not busy, why can you

her appeal to the public to dethrone Shakespeare and substitute Bacon as the author of the immortal plays and sonnets. Mr. Godwin has always been an ardent student of Shakespeare, and he published the article only as a literary curiosity, the mental disorder of the writer being quite apparent, and it was a satire of fate that Miss Bacon should offer her uncanny imaginings to a man who had studied his Shakespeare as devoutly as he loved and believed in his personality.

"In the early years of Mr. Godwin's married life he occupied in the summer an old-fashioned home on the southern part of Mr. Bryant's estate at Roslyn. It was simple in construction, but quaintly attractive, and stood midway between the waters of Hempstead Harbor and the winding lake from which the place takes its name. It was here, on the grassy slope just above the salt waters, where Margaret Fuller, a frequent and beloved guest, would throw herself after a swim in the harbor and talk breezily to her friends with that captivating magnetism which made her a beloved companion at Brook Farm.

"When the Godwins were living at Roslyn occurred the frightful storm which shipwrecked on Long Island Sound the vessel on which Margaret Fuller Ossoli, her husband and child were passengers, and it was a curious psychological fact that Mrs. Godwin was so much under the influences of the night of disaster that she could not sleep, but restlessly walked her room until morning, insisting that some one they knew and loved was in danger. The first person Mr. Godwin met the next morning near the Evening Post building was Bayard Taylor, who told him of the sad news, which was a mutual sorrow.

"In the gradual developing of the Cedar Mere grounds the low brown house was torn down, and some time later on its site was built an attractive cottage, known as Golden Rod. It has of recent years been rented for the summer, one of its tenants having been Albert Sterner, who used the west balcony

AT ROSLYN.

not take the place of my assistant, who is ill.' Godwin tells with much humor that he assured Mr. Bryant he could be of no earthly use to him, as he had never been in a newspaper office. But he accepted the offer, and the regular assistant dying soon after, he continued to serve with Mr. Bryant the interests of the Evening Post from 1837 to 1853, and after a long interval resuming editorship in 1865 for another period of years. The business relations with Mr. Bryant led to a friendly intimacy, resulting in the marriage of Mr. Godwin to Mr. Bryant's eldest daughter. An episode of his journalistic life which was always of interest to him was when as editor of Putnam's Magazine Miss Bacon presented to him

for a studio. Among the changes Mr. Godwin deploras is the shutting out of the Sound view from Clover Croft piazzas by the magnificent trees of Willow Mere. When these were planted by the direction of the mother of Mrs. Richard Storrs Willis, Mr. Godwin foretold they would prove a future barricade to his view; but his neighbor assured him that they would not be likely to give him trouble, as years would come and go before they would attain such proportions as to change the landscape. To-day Mr. Godwin is the only one left to bear witness to the truth of his prediction.

"For a man who has in his nature the essentials of a dreamer and a poet Mr. Godwin has had a keen and practical interest in politics, and at one time was deputy collector of the New York Custom House. Many of the reforms he advocated in the Democratic Review were afterward embodied in the constitution and code of New York. Mr. Godwin's years of Shakesperean research have culminated, since his retirement from newspaper work, in an analytical arrangement of the sonnets of Shakspeare. He began by careful and continuous reading, determined to find the author's meaning which he believed the sonnets were written to convey, at last grouping them, adding marginal notes, after thoughtful readings, and now he declares that the key to their various moods is that they tell the history of the author. Mr. Godwin, with this loving tribute to the great master, closes his literary work. He believes that his vigorous physical and mental vitality is due not only to the inheritance of a sound mind and body, but to his restful summers at his Roslyn country home and the exercise of horseback riding. Friendly guests at both homes of whom Mr. Godwin often speaks are Bayard Taylor, Hawthorne, Fitz-Greene Halleck and Richard Storrs Willis, Edwin Booth, Salvini, Lord Houghton, Sir Henry Irving, Justin McCarthy, Orville Dewey, Robert Collyer, Edwin Forest, Horatio Green-

ough, Samuel J. Tilden and scores of others, of whom many were women prominent as singers, writers and artists."

It has been said that Bryant brought fame to Roslyn and made its beauties known to thousands, inducing many to build homes within its boundaries or to select it as a place in which to recuperate mind and body in a summer rest each year. Bryant and later Parke Godwin used to declare that they owed much of their triumph over the wear and tear of years by the splendid health-giving qualities of Roslyn's pure air and its restfulness. Perhaps the most advanced form of this spirit of home building has been the palace on Harbor Hill which has been erected for Clarence Mackay, son of one of the California millionaires. By it Harbor Hill is now closed to the public, and the palace rises on the apex where for many years the United States Government maintained an observatory by the undignified right of "squatter sovereignty." When he selected the site for his summer residence Mr. Mackay bought up as much of the surrounding farmland as he deemed was necessary for his purpose and the proper seclusion of his home and of its appendages in the way of barns, stables, cottages for work-people, etc., and now it is said is in possession of some 650 acres, all enclosed and all in process of development, for at the date of this writing neither the house nor the "improvements" on the property have been completed. The whole "scheme" of the estate is being worked out according to carefully thought-out plans, covering the most minute details, and everything has had to give way to these from Uncle Sam's observatory and public roads to a humble negro burying ground, which had been in use for a century or more. The following newspaper account of the details of the work is fairly correct and is worth preserving:

The estate itself was, and to a great extent is yet, simply a wild waste of hill and dale, covered with a tangled mass of undergrowth, so thickly intertwined that in most

places it is impossible to force a way through it without an axe and a bush hook. Stately oaks, massive hickories, groves of mammoth chestnuts, pine, cedar and maple, undisturbed by the woodman's axe, abound. It is a wilderness which for hundreds of years has been invaded only by the hunter. Two roads only intersect the property; one, the primitive road cut through from the village to the site of the old United States observatory; the other, a mere bridle path running diagonally across the estate, the closing of which a month or so ago aroused the animosity of a few of the villagers. The daily papers had the stories of how the Roslyn residents purposed to invoke the law to uphold their alleged prescriptive rights to pass through the property over this road. When, a week ago, I made inquiries about Roslyn in reference to the alleged unlawful closing of the old road, I was unable to find a resident of the place who would admit that he had any grievance against Mr. Mackay on account of his action in the matter. They all said that it was simply a path through the jungle, which, although it had been used for many years, never was a road, and consequently had not become a right of way by prescription.

Early in the course of the preparation of plans Mr. Mackay made known his preference for the natural wilderness of the estate and of his desire to preserve this feature as much as possible.

It was decided that the house should be built on the very apex of the hill, with a tower which should extend even higher than the old United States observatory, which formerly occupied the space, so that an even better general view of the surrounding country could be obtained. To reach this spot, high above the surroundings, a long road was necessary. The point nearest the railroad station, only about three minutes' ride by carriage from it, was chosen for the site of the lodge, the entrance to the estate. Here it was decided to build a gate, modeled after the old English style. The lodge, the foundation of which has already been completed, is to be of solid granite. It will consist of two houses or structures, with a bridge containing other rooms, connecting the two, over the roadway leading into the estate.

A huge iron gate, suspended between the two main wings of the lodge, will be closed to all except the friends and invited guests

of the owner. A gatekeeper will be installed in the lodge, who has for years been a servitor of the Mackay family and has married and grown gray in the service. He has a number of children, who, following the old English feudal idea, are all staunch adherents of the Mackay family. Having served in the family since the days when the Mackays began to keep a retinue of servants, the gatekeeper and his wife know every friend or acquaintance of the family, and there is little chance of their affronting anyone for whom Mr. Mackay has the slightest regard. The quarters of the gatekeeper, who will be in supreme command of the guards surrounding the estate, will be in every way superior to many fire-class city residences, not only in architectural beauty, but in size, surroundings and fittings as well.

The problem which was submitted to the civil engineers connected with the huge staff engaged in the work of laying out the estate was how to run the road to the summit of the hill so that the grade might be uniform throughout the whole distance, without abrupt rises, or too many short turns. That they have solved the problem is a feather in their caps, which all engineers who have looked over the work are willing to recognize. A topographical map of the entire estate was first made, and from it the route was laid out. It winds in and out like a snake, through cuts in the hills, over seemingly natural bridges, through defiles and over filled-in ravines, keeping the same relative rise for its entire distance, of from a mile to a mile and a half, all within the Mackay domain, until it finally ends at the terrace leading to the house. This road is nearly completed. There is no portion of it less than sixty feet wide, and in many places it broadens out to 100 feet. Throughout its entire length it is to be macadamized, under a guarantee that it will be as lasting as the best macadam road in this city.

In its windings it meets hills, through which it is necessary to bore. This has been done, and in one instance the cut is between thirty and forty feet deep. Then it meets ravines, which have been filled in, some of them to the depth of from twenty to thirty feet. In one instance it was necessary to skirt a hill with a sheer, almost perpendicular descent of a hundred or more feet. A portion of the side of the hill had to be excavated,

but, as in a short time if left in that condition the weather would have washed the new road entirely away, it was necessary to build a stone stay or abutment on the precipitate side. This was done with unhewn rocks dug from other portions of the road. The retaining wall at its deepest point is about fifty feet, and extends from one side of the gully to the other, something over 500 feet.

This retaining wall at the bottom is twenty feet thick, tapering up to a nine-foot thickness at the level of the roadbed. Just before reaching the apex of the hill, where the castle is to be situated, a valley is met, which has taxed the ingenuity of the engineers. After trying all sorts of plans, it was finally decided to fill it in for the roadway, and this is now being done—has been in course of filling for upward of a month.

Mr. Mackay has kept careful count of everything which has transpired in the effort to transform the howling wilderness into a luxurious abode, and has personally conducted many of the plans. He is jealous of his wild woodland effect, and is spending tens of thousands of dollars in saving the trees. One instance of this was shown when he ordered a change from the original lines of the road, because if the work were continued on the original plan it would cut through a noble grove of old chestnuts and naturally destroy many of them. It cost him between \$4,000 and \$5,000 to change the route, but he seemed to consider the money well spent when it saved his beloved grove of chestnuts from destruction. Strict orders were given by him that no tree or shrub, however insignificant, should be destroyed if money could save it.

In complying with these orders, thousands of trees which grew in valleys along the site of the road, and which would have to be buried or half buried in filling in the ravines for the road were encased in boxes from the roots to a height above the level of the filling, with air space between the trunk of the tree and the boxing. One noble oak which I noticed, standing just on the edge of the surveyor's line, in the bottom of a valley, would have been buried to its lower branches in the filling in earth, and would have eventually died had it not been boxed in from the roots to the lower branches, fully twenty-five feet. The tree measured fully four feet in diameter at the bottom. To encase it for twenty-five feet, took a square box four by four by twenty-

five feet, allowing for the necessary air space. The timber used was spruce—worth five cents a foot. The saving of this one tree cost twenty dollars, for material alone, not counting the extra labor. One little maple sapling, which the owner insisted upon saving and which the ordinary mortal walking through the woods would smash with his cane, without a second thought, cost him eight dollars for boxing, so that it should not die!

His love for nature at her wildest, together with his fear lest some portion of his magnificent domain should be marred by the ruthless hand of the contractor and his employes, has led Mr. Mackay into extravagance which he scarcely could have contemplated in the beginning. The original contract for cutting through the mile or so of road to the site of the residence was moderate. His exactions since then, in respect to the saving of trees, shrubbery, etc., which was not contemplated in the original agreement, will probably augment the total cost to at least three times the original contract price.

The approach to the mansion alone will cost close to \$150,000, and this is only the actual approach and does not include the appropriation for the landscape engineer. Every cut through a hill will have to be sodded, seeded, planted and set out so as to carry out the general scheme of native wilderness. All of the ravines which have been filled in will have to be mossed over and made to look natural. Every portion of the approach will have to be so treated by the gardeners and architects in order that it may be a complete contrast to the surrounding estates. So much for the approach to the house alone.

Then will come the fencing in. A portion of the vast estate will be inclosed by heavy, substantial stone walls. Another portion will have a high and closely woven wire fence as a protection, and still another section will be inclosed by a thick thorn hedge. It will depend entirely upon the topography of the ground. And this, also, is but the beginning.

The house, which Mr. Mackay has said would be "his little summer place," will, as a matter of fact, probably be the most magnificent summer home in America. It is Mr. Mackay's ambition to eclipse all others. The homes of the Vanderbilts, Astors, Whitneys and Goulds are to be nothing in comparison to the splendid place planned by Mr. Mackay. The house proper, which the builders after

IN AND AROUND PORT WASHINGTON.

nearly a year's work have gotten up to the second story, is 238 feet wide—larger than the ordinary city block—and 110 feet in depth. This is the main building and does not embrace various small L's and additions. On the north side of this is to be a glass conservatory, 100x100 feet, which will make the actual frontage of the mansion 338 feet.

The outside foundation wall is of granite, the inside walls being of pressed brick. Above the floor level the building is of Illinois sandstone, handsomely chiseled and of the same shade as the granite foundation.

The entrance to this palace will be in the center, facing south, and is composed of three doorways. One big double one and two smaller—one on each side. These lead into a hall forty by eighty feet, in which, it will be seen, four ordinary small city houses could be put. To the right of this will be the salons, reception rooms, music rooms, etc., while to the left will be the banquet hall, dining room, picture gallery, breakfast room, etc.

The second floor will be divided into suites of apartments for the family and guests, and the third floor will contain the billiard room and other rooms for guests, while in a wing, separated from the main structure, will be the servants' rooms. The ceilings of the main floor are eighteen feet in height and of the two upper floors fifteen feet each. There will also be a tower from which the finest view obtainable on Long Island may be enjoyed.

Under the whole house is a concreted cellar fifteen feet deep, and intersected by passageways, running both lengthwise and across. Here one can almost lose himself. The various rooms are of brick and most of them are to have iron doors. They will be laundries, store rooms, cold-storage plant, wine cellars, etc. Two elevators run from the cellar to the top floor, and a large steam and hot-water heating plant will furnish warmth of two different and independent sorts. The electric-light plant is situated in a natural valley, some distance from the house and entirely hidden from it by surrounding trees. It is proposed not only to light the house, stable and immediate grounds, but the entire mile and a half of roadway, the lodge and other buildings connected with the estate, from this plant, which will also furnish power for a pumping station to fill a perfect little reservoir near the house from springs on various parts of the estate, from whence the water will be pumped to the house, stable, etc.

The approach to the house is to be a marvel of beauty, built on the old Roman order of architecture. Just in front of the house will be an oblong plaza, nearly as large as the main front of the house. In the center of this will be a fountain, capable of presenting prismatic effects in the evening. Around this will be rare plants, and on the outside a marble walk, surrounded by solid marble balustrades. At the side opposite the house three steps will lead down to another marble plaza, with antique lamp posts at either end. Three more steps will lead down to a third level like the second, and so on until the final circle is reached, where the carriages stop. For use on rainy days, when the owner may not wish to ascend the graduated plazas, a road will be built from the carriage circle to the left, and through a tunnel under the main plaza into the cellar of the house, where an elevator will take the occupants to the rooms above.

It is proposed by Mr. Mackay to keep the property as far as possible in its present state of wilderness, and it will be stocked with game of various kinds.

It is estimated by those who are conversant with Mr. Mackay's plans that it will cost all of \$5,000,000 to carry them out, and that the place will be one of the most magnificent, if not the most magnificent, of America's summer residences.

Great Neck has risen in importance and increased in population since the opening of the railroad through it, but although it has been settled since about 1670, there is little about it to call for notice beyond saying that it is a prosperous agricultural community. The splendid estate of ex-Mayor William R. Grace, of New York, which bears the name of Graceland, is one of many attractive properties which wealth and taste combined have created out of what was indeed a wilderness.

Port Washington is the terminus of one branch of the Long Island Railroad, and with the opening of that bit of railroad line in 1898 its annals as a modern resort will in the future date. But at present its story is mainly of the past. Up to 1875 it was known as Cow Bay, and its oystering business gave employment to the bulk of its adult population, and it could rejoice in its antiquity, as it was the scene of

the surrender of the English to the Dutch, already narrated in this chapter. In the early part of the eighteenth century two tidewater grist-mills were erected at Cow Bay, and with them the village may be said to have begun.

Manhasset looms up a little more prominently than its two neighbors we have just been writing about from the historian's point of view. It was formerly called Cow Neck by its white inhabitants, and Sint Sink by the red men, but Manhasset has been its legal designation since 1850. Since the opening up of the railroad it has added greatly to its population, and it promises ere long to be one of the most popular resort towns on the north shore. In most of the guide books a traditional story is printed which connects Manhasset with a very remote past and may be reprinted here:

"Stout Miles Standish came so far, and with him a young man named Davis. The latter was of fine stature and gentle birth, so there must have been some unusual attraction in the Indian girl who ensnared his heart. The story is as old as the region of which we speak. It has been told of other lovers in all climes, but it loses no interest because of the romantic surroundings here. The girl was loved by a young brave of the village, but she returned the affection of her white admirer, and sought to flee with him. He was faithful even unto death, and when they were pursued, with his back against the great stone upon which is engraven his name, fought gallantly until they slew him. Plucking the fatal arrow from the heart of her lover, the Indian girl took her own life, and they were buried where they fell. Rugged vines and great patches of moss are on the stone near where they rest, but their names, graven upon the rock, are yet to be deciphered, and the lovers of to-day who make of the spot a favorite trysting place, repeat the ancient story with hushed voices and find a tender inspiration in recalling it."

Turning to another section of the town,

we find the rifle ranges of Creedmoor, where year after year the State militia compete for marksmen's badges and where the famous series of international rifle matches for the "Palma" trophy were held in the 'seventies. At that time the rifle butts of Creedmoor were as well known as those of Wimbledon, but in recent years its competitions have been local and humdrum. Floral Park is the site of the Childs Nurseries, and one of the prettiest sights on Long Island is that of these gardens in bloom,—and something or other seems to be blooming there all the year round. The little village beside the nurseries, Floral Park, is of modern date, but already boasts a population of about 400. Hyde Park was formerly a horse-racing center, and at one time bore the name of Newmarket. Hyde Park was formerly the residence of Judge George D. Ludlow, and his mansion was for many years the most notable dwelling in the neighborhood. Judge Ludlow was an intense Tory during the Revolution and his brother Gabriel was Colonel of a regiment of American loyalists during the same period. As a result of this, when peace was declared, their estates were forfeited and the two brothers settled in New Brunswick, Canada, and Hyde Park saw them no more. In 1816 William Cobbett, the English political reformer and agitator, was compelled to leave London on account of having excited the ire of the Government of that day, and coming to this country until the storm should blow over, leased a farm at Hyde Park. He resided in the old Ludlow mansion, and it was while in his occupancy, in 1817, that it was destroyed by fire. Cobbett did not remain long in America, for in 1819 he was again in England and earning his livelihood by his pen.

Mineola, the "seat" of the county of Nassau, has sprung into prominence since the erection of the county, when it received that designation. Its origin (1860) is of recent date, and in French's "Gazetteer" it is described as "a scattered village at the junction of the Long

Island and Hempstead Branch Railroads." Still in 1892 it had a population of some 600, so that it can not be said that its applied honors have boomed it to any very great extent. Since 1866 it has been the headquarters of the Queens County Agricultural Society, which from its beginning in 1841 had up to that time been wandering around the country giving its exhibitions at Jamaica and elsewhere. In 1866 a tract of forty acres of land was deeded to it at Mineola and on that property it has since had its permanent home. Its buildings have been erected in the most substantial manner, and its exhibitions have steadily increased in attractiveness until now

OLD QUEENS COUNTY COURT HOUSE.
NEAR MINEOLA.

the "fair" has become one of the most fashionable functions not only in Nassau county, but in the borough of Queens, for it is hard for the people of Jamaica to understand that they have legally parted company with an institution they did so much to build up. According to the annual report of the society, issued at the close of 1900, it expended that year in premiums alone \$12,831, giving prizes for horses, cattle, vegetables, fruits, flowers, etc. The Presidents of the society from the beginning to the present time have been:

Westbury derives its name from Westbury, Wiltshire, England, that being the birthplace of Henry Willis, who first settled within the present precincts of the village in 1670 and applied the name to it. Willis was a Quaker, and had suffered much persecution before crossing the Atlantic. Westbury was long noted as one of the centers of Quakerism on Long Island, and most of its old families still belong to that body. It has become a golfing ground since the craze for that ancient and royal Scottish game has assumed its present American popularity, and quite a number of handsome homes and large and well-appointed club-houses have in recent years been added to its old attractiveness.

Before leaving this catalogue of the more important villages of North Hempstead, the more important that have any historical significance or interest, mention should be made

of one which seems in recent years to be retrograding, but which had a bit of history attaching to it that is worth remembering. That is the village of Lakeville, almost on the old border line of Flushing. Indeed, it is its closeness to Flushing that is due its historical interest. It contained a country seat belonging

to Governor Dongan, and part of the 600 acres or so which he received when Flushing and Hempstead received their charters, and which, while not exactly a bribe, was at least a diplomatic gift. Lakeville used to be called Success from a pond in its neighborhood which bore that name.

OYSTER BAY AND VICINITY.

CHAPTER LXII.

OYSTER BAY.

THE township of Oyster Bay, which is the largest in Nassau County, as it was the largest in the old County of Queens, extends across the entire island from the Sound to the ocean. The north shore is deeply indented, and on the south it is separated from the ocean by the Great South Bay, with Jones or Seaford Beach in front. The bay encloses several small islands which are included in the township, but for the most part they are of very little value. Its first patent was issued by Gov. Nicolls in 1667, and in 1677 the document was confirmed by Governor Andros. But its history goes back to a much earlier date, and it was one of the sorrows of old Peter Stuyvesant. It was neither English nor Dutch. The English held it; the Dutch claimed it; so it was a sort of no-man's land, caring little for the Dutch laws and looking to Connecticut for protection, although nominally under Dutch jurisdiction. Its sovereignty was claimed for a time by the colony of New Haven, but Stuyvesant never formally admitted that claim, although there is little doubt that it was a just and lawful one, as just and lawful as a treaty could accomplish. But the accession of Gov. Nicolls settled all such disputes, overthrew the Dutch rule, made Long Island an integral part of the Province of New York, and, except for the brief interval of the Colve opera bouffe supremacy, crushed for ever its hopes of being part of the New England Confederacy. But all this has already been told in an earlier part of this work, and

treaties and the like may be passed by here and the story of actual settlement be dwelt upon.

The earliest deed for the disposal of land in Oyster Bay Township was unearthed some years ago by Mr. W. S. Pelletreau. It was issued in 1639 by the agent of the Earl of Stirling, and although Mariner Sinderland does not seem to have profited by the deed it may be inserted here as it shows the value of the land, and also proves that even in spite of the grant of the "Royal King" the Indians had to be reckoned with:

Know all men whom this p'snt writeing may concerne that I, James ffarrett, gent., Deputy to the right Honorable the Earle of Starelinge, doe by these p'sents, in the name and behalfe of the said Earle, and in my own name as his deputy as it doth or may any way concerne myselfe, give and graunt free leave and liberty unto Mathew Sinderland, Seaman at Boston in New England, to possesse and ymprove and enjoy two little necks of Land, the one uppon the East side of Oyster Bay Harbour, and the other uppon the west side of the said Harbour, w'ch two necks, and every part of them, and all belonging thereunto or that the aforesaid two necks may afford, to remain unto the said Mathew Sinderland, his heires and assignes for now and ever, with full power to the said Mathew to dispose thereof at his own pleasure. But, forasmuch as it hath pleased our Royall King to grant a patent of Long Island to the said Earle, in consideration thereof it is agreed upon that the said Mathew Sinderland shall pay or cause to be paid yearly to the said Earle or his deputy tenn shillings lawfull money of England, and

the first payment to bee and beginn at our Lady day next ensuinge, in the year of God one thousand six hundred and fforty yeares, and so to continue. And it shall bee lawfull for the said Mathew to compound and agree with the Indians that now have the possession of the said necks for their consent and good will.

In witness I have sett my hand and seale this day, beinge 18th of June 1639.

ROBERT TURNER. JAMES FARRETT.

Whereas Mathew Sinderland, seaman, hath apporcon of Land at Oyster Bay on Long Island from one James Farrett, in the name and behalfe of the Earle of Starelinge, and the said Mathew is to pay for the said proportion tenn shillings a yeare to the said Earle or his deputy, Know you that I James ffarrett to have received from the said Mathew twenty shillings, and for the rent of the said land for the first yeare of his possession, beinge from thirty-nyne unto the fortieth, wch I reseaved and graunt the receipt thereof.

Witness my hand the 4th of September 1639. JAMES FARRETT,

Recorded the 1st of March 1660, by me.

WILL: WELLS, Recorder.

The first real settlement was begun in 1653, when land was bought from the Matinecock Indians by Peter Wright, Samuel Mayo and William Leverich, and the purchase included the present bounds of Oyster Bay village. The price paid was on a much more liberal scale than usual and included "six Indian coats, six kettles, six fathom of wampum, six hoes, six hatchets, three pair of stockings; thirty awl blades or muxes, twenty knives, three shirts, and as much peague [wampum shells] as will amount to four pounds sterling." The others included in the purchase were William Washburne, Thomas Armitage, Daniel Whitehead, Anthony Wright, Robert Williams, John Washburne and Richard Holbrook, and these men may justly be regarded as the pioneers of the township. Several others joined immediately after the agreement was made, if they were not even then on the exact spot. Twenty lots were laid out at first, of 6 acres each. Not much is known of the personal history of any of the settlers. Mr.

Leverich we have already met in our story of Newtown. In Oyster Bay he does not appear to have been recognized as a leader, although he was the accepted minister of the settlement until 1657. His great aim in settling on Long Island seems to have been to work among the Indian tribes, and he certainly found many opportunities. Peter Mayo was a remarkably enterprising fellow. He owned the good ship "Desire," of Barnstable, and in it carried the adventurers and their goods and possessions to Oyster Bay. He seems to have been the business man of the enterprise and looked after the affairs of the colony, apportioning its plantations or farms to those new-comers who proved agreeable to the town meeting. Peter Wright was probably regarded as the leading man in the settlement, and Richard Holbrook built the first house in what is now Oyster Bay village. Robert Williams is described as having been a near relative of the celebrated Roger Williams, and was the first purchaser of the property which afterward became known as Dosoris. Daniel Whitehead soon removed to Jamaica, Anthony Wright prospered in Oyster Bay until his death in 1680, and the Washbournes moved to Hempstead. Most of them were natives of England, and while the settlement they formed was not a religious one it was a moral community in every way. They seem to have freely admitted new-comers to share in the privileges of settlement, and Gov. Andros's patent presents us with several new names. As we have not printed any of the manifestoes of this potentate, we may here present a copy of the patent he issued to Oyster Bay:

Edmond Andros Esqr., Seigneur of Sausmares, Lieut. and Governor General under his Royal Highness James Duke of York and Albany &c. of all his Territories in America, To all to whom these Presents shall come sendeth greeting.

Whereas there is a certain Town in the North Riding of Yorkshire on Long Island commonly called and known by the name of Oyster Bay, situated, lying and being on the

north side of the Island, towards the Sound, having a certain Tract of land thereunto belonging; the East bounds whereof begin at the head of the Cold Spring, and so to range upon a Southward line from the Sound or North Sea to the South Sea, across the Island to the South East bounds of their South meadows at a certain River called by the Indians Narrasketuck; thence running along the said coast westerly to another certain River called Arrasquaung; then northerly to the Easternmost extent of the Great Plains where the line divides Hempstead and Robert Williams' bounds; from thence stretching westerly along the middle of the said Plains till it bears South from the said Robert Williams' marked Tree at the point of Trees called Cantiagge; thence on a north line to the said marked tree, and then on a north west line somewhat westerly to the head of Hempstead Harbor on the East side, so to the Sound; and from thence Easterly along the sound to the aforementioned North and South line which runs across the Island by the Cold Spring aforesaid: Bounded, on the North by the Sound, on the East by Huntington limnits, on the South part by the Sea and part by Hempstead limnits, and on West by the bounds of Hempstead aforesaid, including all the Necks of Land and Islands within the afore described bounds and limnits.

Know ye that by virtue of His Majesty's Letters Patents and the commission and authority unto me given by his Royal Highness I have Ratified, Confirmed and Granted, and by these presents do hereby ratify, Confirm and grant unto Henry Townsend senr., Nicholas Wright, Thomas Townsend, Gideon Wright, Richard Harcker, Joseph Carpenter, and Josias Latting, as Patentees for and on behalf of themselves and of their associates the Freeholders and Inhabitants of the said Town, their Heirs, Successors and Assigns, all the afore mentioned Tract of Land within the said bounds, with the Islands and Necks of Land aforesaid, together with all the Wood lands, Plains, Meadows, Pastures, Quarries, Marshes, Waters, Lakes, Rivers, Fishing, Hawking, Hunting, and Fowling, and all of the profits, commodities, emoluments, Hereditments to the said Town Tract of Land and premises within the limnits and bounds aforementioned described belonging or in any wise appertaining; To have and To hold all and singular the said lands, Heriditments and premises, with their and every of their appurtenances

and part and parcel thereof, to the said Patentees and their Associates, their Heirs, Successors and Assigns, to the proper use and behoof of them the said Patentees and their Associates, their Successors and Assigns forever. The Tenure of the said lands and premises to be according to the Custom of the Manour of East Greenwich in the County of Kent in England, in free and Common Soccage and by Fealty only. Provided allways notwithstanding that the extent of the bounds afore recited in no way prejudiced or infringed the particular propriety of any person or persons who have right by labour or other lawfull claim to any part or parcell of Land or Tenement within the limnits aforesaid, only that all the lands and Plantations within the said limnits or bounds shall have relation to the Town in general for the well Government thereof; and if it shall so happen that any part or parcell of the said land within the bounds and limnits afore described be not all ready purchased of the Indians it may be purchased (as occasion) according to Law.

I do hereby likewise confirm and grant unto the said Patentees and their associates, their Heirs, successors and assigns, all the priviledges and immunities belonging to a Township within this Government, and that the place of their present habitation and abode shall continue and retain the name of Oyster Bay, by which name and Stile it shall be distinguished and known in all bargains and Sales, Deeds, Records and writings; they making improvements thereon according to Law, and yielding and paying therefor yearly and every year unto his Royal Highness' use as a Quit Rent one good fat Lamb on the 25th day of March unto such Officer or Officers as shall be empowered to receive the same.

Given under my hand and sealed with the seal of the Province in New York this 20th day of September in the 29th year of his Majesty's Reign, Anno Domini 1677.

ANDROSS.

Examined by me, MATHEW NICHOLS, Sec.

This is a true Record of the original patent of Oyster Bay, written and examined by me,
JOHN NEWMAN, Recorder.

On the back side of the before written patent is the following endorsement:

NEW YORK, November 1st, 1684.

Memorandum.—That it is agreed and consented unto by us whose names are underwrit-

ten, deputed from the town of Oyster Bay to adjust and ascertain the bounds and limits between the towns of Oyster Bay and Hempstead before the governor and council at Fort James in New York, that the bounds and limits between Oyster Bay and Hempstead begin at the Barrow Beach, according to an agreement made the 25th day of October 1677. Witness our hands—Thos. Townsend, Nathaniel Coles, John Weeks, Isaac Horner.

Signed in the presence of John Sprague, George Farewell, George Brewerton.

Gov. Andross' patent was needed, for the vagueness of the boundary lines had given trouble. The Indians had not been promptly paid in the first place and that involved considerable negotiations, and the precise limits of the western boundary involved another dispute with the red men, while a similar trouble was started in 1663 with Huntington over the eastern boundary, but that dispute lasted for over a century and its details are too wearisome to be followed, especially as the matter has long ago lost its living interest—if it ever really had any except to a handful of people.

In the internal government of the township the town meeting ruled in everything. So far as is known no clergyman was appointed in Mr. Leverich's place when he left and it was many years before a meeting house was erected. In 1677 "Thomas Webb, Schoolmaster," was appointed town clerk, but the title is all the reference to show that there was any educational provision in the town. In 1693 the town meeting "met together in order to a late act of Assembly for settling two ministers in the county, but nothing done about it; but made return that it was against their judgment, therefore could act nothing about it." Now it is impossible to believe that these people were without public worship from the time Mr. Leverich left in 1657 or thereabouts, and the probability is that the Quaker doctrines had made headway among them.

It would seem that at first the land was

to be held in common, except the six-acre home lots. That theory, however, was soon departed from and in practice all sorts of notions prevailed. Privileges were granted to one and withheld from another. Some lots carried rights to privileges in the meadows, pastures and woodlands, others did not; sometimes lots were given to people with the proviso that they should build houses on them, others received lots without any proviso at all. It was the rule that the town meeting should pass upon the merits or demerits of intending settlers, but after a while lots were transferred without asking the leave of the meeting. All this in the long run led to confusion and bickering, recrimination and law suits. The fathers seemed to have had some ideas of settling the land question, but appeared unable to carry them out and the result was trouble all around. So burdensome did all this become that a meeting was held in 1677, "when there was confirmed, by name, every freeholder which hath a free vote for giving and granting of common rights, and not otherwise; and that from henceforward no grant of township or common rights shall be confirmed, or held legal grants, without every freeholder hath legal warning that such a meeting is to be appointed, or that there are lands to be given out; and, after legal warning given them by the officer appointed, it shall be held legal, to all intents and purposes, all gifts or grants by common rights to either man or men, given by the majority of freeholders that doth appear at the time and place appointed. And it is further agreed that for every town right that any freeholder doth possess he shall have so many votes in the giving and granting land and common rights, and not otherwise to be understood, but to grant and divide, as they shall see cause."

The freeholders named were: Henry Townsend, Joseph Dickinson, Edmund Wright, Anthony Wright, Joseph Ludlum, Samuel Weeks, Nicholas Simpkins, John Jones, Francis Weeks, William Frost, John

Rogers, John Dickinson, William Buckler, Nicholas Wright, Job Wright, Elizabeth Townsend, John Townsend, Josiah Latting, Nathaniel Coles, Richard Harcott, Adam Wright, Latamore Sampson, (Simon Cooper), Daniel Coles, John Wright, John Townsend, Caleb Wright, Isaac Doutty, James Townsend, John Weeks, Samuel Andrews, Matthias Harvey Fyde, Samuel Furman, Alice Crabb, Henry Townsend, Jr., Gideon Wright, Richard Crabb, George Dennis, Thomas Townsend, Joseph Weeks, John Weeks, of Warwick, Thomas Weeks, Moses Furman, James Weeks.

Only freeholders could vote in town meeting, but all lot owners were not freeholders and thereby arose another complication. In fact the early land question in Oyster Bay is about as interesting a puzzle as a legal antiquary would delight to study.

From the first the settlers looked to New Haven as their suzerain, so to speak, and it would seem that New Haven accepted the charge, and in 1662 named John Rigebell as Constable of Oyster Bay. The colonists seem to have thought this hardly in keeping with their ideas of municipal liberty and in 1664 they joined with Hempstead, Newtown, Jamaica and Flushing to make up a sort of federation and manage their own affairs without crossing the Sound. How this federation would have panned out is hard to say: certainly Connecticut would have opposed it, and just as certainly Stuyvesant would not have tolerated it so far as such places as Flushing and Newtown and Jamaica were concerned. But the advent of Richard Nicolls settled all such matters, as has already been noted. It is said that Rigebell became so unpopular in Oyster Bay village owing to his willingness to accept Connecticut's nomination that he was glad to sell his property and wander away.

Rigebell is described by some as the pioneer merchant of Oyster Bay and Newtown. The second was a George Dennis, who, however, if he was the second merchant was the

first bankrupt, for we are told that he had to turn over his property to his creditors. But Oyster Bay soon became noted as a mercantile centre, and as early as 1668 there was talk of building a wharf at what afterward became known as Ship Point. In 1661 the first grist mill was erected by Henry Townsend. The miller engaged to run the concern, Richard Harcut, was not a very polished or a very politic gentleman and seemed to offend several of the customers of the mill and much grumbling ensued. The matter, as was certain, was discussed at a town meeting in 1672 with the following result: "That if any person or persons do not like their usage at the mill they are to give notice of it to the miller and attend himself, or his wife if he have one, and see their corn grinding if they will; but if they will not attend the grinding * * * they are at liberty to grind in another place and the miller is at his liberty whether he will grind again for any such person or persons."

By the close of the 17th century Oyster Bay had become quite a port and fifty years later its merchants had an extensive trade with the various Sound ports and even with the West Indies. The outbreak of the Revolution, however, dissipated all that prosperity and blighted even the work of the fields for several years.

Oyster Bay seems to have been fairly divided when the great question which the War of the Revolution decided first began to assume a critical phase. It was loud in its protestations against the misgovernment and the stupidity which brought the matter of separation to an issue, but when the time came to take the step one way or the other which was to determine her position she seems to have hesitated.

As early as March 6, 1766, a town meeting was held at which the following stirring protest against the stamp act was drawn up and addressed to "The Committee of the Sons of Liberty in New York":

GENTLEMEN: By order of a committee of the Sons of Liberty in Oyster Bay we are to acquaint you that at a meeting of the inhabitants, on Saturday, February 22nd, 1766, it was unanimously agreed and resolved:

I. That the person, crown, and dignity of our rightful sovereign King George III, with all his just and legal rights of government, we will to the utmost of our power support, maintain, and defend.

II. That the liberties and privileges which we as Englishmen have still enjoyed, particularly those of being taxed by representatives of our own choosing and being tried by our own juries, we will also support, maintain, and defend.

III. That the late Stamp Act is destructive of these our liberties, and is by us deemed to be arbitrary and unconstitutional; that as such we will to the utmost of our power endeavor to oppose and suppress the same.

IV. That the measures which you have taken and the several noble efforts you have made in vindication of the general cause of liberty we do heartily approve of, and that with our lives and fortunes we stand ready to assist you in the same.

V. That the committee now chosen do signify these our resolutions to the Sons of Liberty at New York, and elsewhere as they may think proper; that the said committee do for the future keep up appointed meetings, as may be thought necessary, at the house of George Weeks, in Oyster Bay, and maintain a correspondence with your committee, in which we expect your concurrence.

This shows that the good people of Oyster Bay were not afraid to express their views in plain language; but when the question of separation came before them in 1775 they were emphatically opposed to it. At the annual town meeting that year the clerk, Samuel Townsend, stated that he had received a letter from the Committee of Safety in New York recommending that the people of Oyster Bay should get together and elect deputies to the Provincial Convention. The letter and its purport were discussed at considerable length, some urging the immediate election of deputies, some advocating delay and still others contending to leave the matter severely alone. The whole discussion finally resolved

itself into the simple question whether or not deputies should be selected, and when the vote was taken it was found that 205 had voted against deputies and only 42 were in favor of sending them. However, when the result was declared, the minority, who were enthusiastic and active in the furtherance of their views, at once got together and elected a deputy in the person of Zebulon Williams. Field, the historian of the battle of Brooklyn, characterizes the entire proceedings as a bit of adroit politics. However that may be, Williams went to the Provincial Congress and was accepted as the representative of Oyster Bay. He bore with him the following document: To the Provincial Convention:

Whereas the unhappy dispute between the mother country and the American colonies, we humbly conceive, has arisen from assumed power claimed by the British Parliament to pass laws binding on us in all cases whatsoever, and hath given us great uneasiness; and, as we conceive, unanimity among the inhabitants of the colonies is the only means under Providence to secure the essential rights and liberties of Englishmen; and, in order that the inhabitants of the different colonies should know each other's sentiments and form general plans for the union and regulation of the whole, it is necessary there should be delegates appointed to meet in general Congress. And whereas the committee of correspondence of New York did request the people of Queens county to choose deputies, in consequence thereof there was a town meeting at Oyster Bay on April 4th, for the appointing of one deputy; but there appearing at said meeting a majority against it, yet nevertheless we the subscribers, freeholders of Oyster Bay, being determined to do all in our power to keep in unity with you and the colonies on the continent, and desirous of being in some measure represented at the general Congress, do hereby appoint Zebulon Williams as our deputy, giving unto him full power to act in our behalf in the premises aforesaid. In confirmation whereof we have hereunto set our hands respectively:

George Townsend, Micajah Townsend, William Seaman, David Layton, George Bennet, Joseph Carpenter, John Schenck, Peter Hegeman, James Townsend jr., John Wright,

Gilbert Wright, Richard Weeks, James Townsend, Wm. Townsend, Prior Townsend, Wm. Latting, B. Latting, Joseph Thorney Craft, William Hopkins, Joseph Coles, Albert Albertson, John Luister, Rem Hegeman, Samson Crooker, Jacobus Luister, Albert Van Nostrand, Jotham Townsend, William Laton jr., William Laton, Peter Mutty (x mark), Benjamin Rushmore, William Wright, John Carpenter, James Farley (captain), Samuel Hare jr., Benjamin Birdsall, Joseph Doty, Isaac Bogart, Samuel Townsend, Gideon Wright, Gilbert Hare, Benjamin Townsend, Josiah Lattin.

Emboldened by their success, the combined results of patriotism and politics, the Whig element at once, on learning of their recognition by the Provincial Congress, proceeded to carry out their plans with a high hand. The Tory Justices, Thomas Smith, John Hewlett and John Townsend, protested against the rather high-handed doings at a town meeting; but in December, 1775, they and 26 others were summoned before the Provincial Congress to explain their attitude, but a significant fact is that when the Oyster Bay company of militia was ordered to repair to headquarters there were more delinquents—they should hardly be called deserters—marked on the roll than the number of those who personally responded. Captain Sands—now Colonel—instituted a ruthless search throughout the township for deserters and Tories, and as soon as it was evident that the crisis was at hand and that Long Island was to be the scene of hostilities, the effort to crush out the opposition to the patriot cause throughout the whole of Kings and Queens counties was carried on with increased determination, and in some instances with increased cruelty. Civil law practically ceased to be enforced in Oyster Bay as elsewhere and the power was in the hands of the local Committee of Safety. On July 29, 1776, the following orders were sent to Lieut. Jotham Townsend:

1. You are to take command of the recruits, and march them down to Matinecock Point, where you are to place sentinels in the

most advantageous places to discover the enemy; likewise to be very careful there is no communication to the ships of war. Should you discover any persons attempting it, you are to put them under guard.

2. You are to build a shelter if there be none convenient. Should you want any materials, take such as will answer your purpose best.

3. Charge your men that they insult nor abuse any of the inhabitants, or destroy their effects.

4. Should you discover the enemy attempting to land, you are to send off express to me, and order the owners of stock to drive them off with all expedition on the Great Plains.

5. Should any of your men disobey orders, steal, or abuse the inhabitants, you are to put them under guard.

6. Minute down daily what happens, and make a return Saturday next by 10 o'clock, at my house.

JNO. SANDS, Col.

Westbury, July 29th, 1776.

Additional orders, August 3d:

Should you discover the enemy in sight you are to immediately hoist your signal, then send off your express.

You are not to suffer your men to play at cards, dice, or any unlawful game, nor intoxicate themselves with strong drink. You are to observe that no small craft passes and repasses having any transient persons or negroes on board. Should you discover any you are to take them up. If, upon examination, you find them clear, discharge them; if guilty, put them under guard till discharged by the town committee. You are not to let your men waste their cartridges by firing wantonly at game. You are to exercise your men four hours every day.

But the disaffection could not be kept down. Many of the Tories to escape persecution went into hiding, but on August 12, 1776, some 20 belonging to Oyster Bay were arrested and sent over to Connecticut. The committee which represented the Patriot cause for a time in reality used the name of liberty to cover persecution.

When the news of the result of the battle of Brooklyn reached the township, a change came almost in the twinkling of an eye and

the hunters became the hunted. The Committee of Safety, which received the news at Matinecock, disbanded in a hurry and some of them hurriedly departed to insure their personal safety within the Patriot lines. Joost Montfort ran away from the township, too, but he hurried to the British camp and gave himself up to General Robertson, who handed him a certificate of loyalty and so saved him further trouble. Several leading Whigs took to the swamps where the Tories had so recently been sheltered, and it was not long before British cavalymen were engaged in the ugly task of hunting for them just as they a short time before had been engaged in "rooting out" the Tories from the same hiding places. The saddest fate befell George Townsend and John Kirk, both of whom had made themselves particularly obnoxious during the reign of the committee. Townsend, in fact, was its chairman, and seems to have been almost rabid at the very name of Tory. Townsend and Kirk were arrested and taken to New York, where they were thrown into the Provost prison, and endured its horrors for nine weeks—a sufficient punishment, it would seem, for any conceivable crime to be visited on men accustomed to the refinements and decencies of life! While there Kirk contracted smallpox and died from its effects. His wife and infant child died from the same disease, so that virtually three lives were thus made to pay the penalty of one man being just a little too positive and premature in his patriotism. Townsend came out of prison hating the Tories worse than ever, and in 1782 seems to have had another taste of the hospitality of the Provost.

Toward the close of 1776 Gen. Oliver De Lancey took up his headquarters at Oyster Bay and assumed military control of the district. Then the full force of martial law began to be felt. Prices were fixed by the British officials for grain, provisions, provender, horses, cattle, and all these had to be delivered up to the soldiers without question. Some of

the farmers were left with hardly enough fodder to sustain their stock, teams were impressed without regard to their local necessity and while money was paid for all this to the loyal farmers, it was said that when the farm of a Whig was raided and emptied the money was generally retained at headquarters. Business was paralyzed under such circumstances and farming practically was at a standstill, for though payment was made for what was appropriated it was not enough to pay for the outlay and the labor, and the presence of the military guaranteed neither order or safety. The gold paid for the produce was really a burden to those who received it. They could not spend it, they had no place in which to deposit it and so had to conceal it about their premises, and a knowledge of this was an incentive to the thieves in the army and to the large body of desperadoes which followed the troops—as such men have followed all armies from the beginning of history.

An effort was made to enlist a corps of loyalists at Oyster Bay and Captain Henry Seton, who took charge of the recruiting, had stations at Oyster Bay, Huntington and Jericho. In March, 1778, a proclamation was issued calling for recruits and promising increased bounty money and all sorts of inducements to make up the strength of the Queen's Rangers, while \$1 was promised to each person instrumental in bringing in a recruit. It would seem that 350 recruits were obtained and the Rangers were stationed at Oyster Bay and on Lloyd's Neck until May 16, 1779, when they left for King's Bridge, New York. The following extract from the "History" of Lieut. Col. J. G. Simcoe, who commanded the Queen's Rangers, refers to military operations in Oyster Bay Township in 1778:

There was a central hill [in Oyster Bay] which totally commanded the village and seemed well adapted for a place of arms. The outer circuit of this hill, in the most accessible places, was to be fortified by sunken fleches,

joined by abattis, and would have contained the whole corps; the summit was covered by a square redoubt, and was capable of holding 70 men; platforms were erected in each angle for field pieces, and the guard-house in the center, cased and filled with sand, was rendered musket-proof, and looped so as to command the platforms and surface of the parapets; the ordinary guard of 20 was sufficient for its defense. Some of the militia assisted in working one day when Sir Wm. Erskine came to Oyster Bay intentionally to remove the corps to Jericho, a quarter of the legion was to quit in order to accompany him to the east end of the island. Lieut. Col. Simcoe represented to him that in case of the enemy's passing the sound both Oyster Bay and Jericho were at too great a distance for any post to expect succour, but that Jericho was equally liable to surprise as Oyster Bay; that its being farther from the coast was no advantage, as the enemy, being acquainted with the country and in league with the disaffected inhabitants of it, could have full time to penetrate undiscovered through the woods, and that the vicinity of Oyster Bay to the seacoast would enable him to have a more watchful eye over the landing places, and to acquire a knowledge of the principles of the inhabitants in these important situations; and that provisions from New York might be received by water. Sir W. Erskine was pleased to agree with Lieutenant Colonel Simcoe; and expressed himself highly satisfied with the means that had been taken to ensure the post. * * * The garrison in New York being in great want of forage, Oyster Bay became a central and safe deposit for it, and frequent expeditions towards the eastern and interior parts of the island were made to enforce the orders of the commander-in-chief in this respect.

The people suffered much from the troops under General De Lancey, but when Fanning's Loyalists came along they found, Whig and Tory alike, that they were in the hands of a gang of thugs and cut-throats. Military law prevailed in its harshest form, corporal punishment was inflicted on the slightest provocation, the soldiers, most of them billeted in the villages, destroyed property, furniture and buildings without scruple. The officers tried to stop the reign of plunder, but

seemed to be helpless. The Baptist meeting house became a barracks, that of the Friends a store house for the Commissary. A battalion of Hessians, commanded by Col. Von Janecke, robbed right and left in defiance of their officers and murdered in cold blood many citizens who opposed their designs. It was related that in one instance where Jacobus Montford wounded a Hessian who was robbing his yard and was arrested, the officer dismissed him, saying if Montford had shot the Hessian he would have given him a guinea, but as a general rule the citizens did not escape so easily when they attempted to defend their property from the blackguards who were arrayed on the side of King George and disgraced the cause they were enlisted to support.

One of the most remarkable features of the story of the Revolution at Oyster Bay was what is known as the Whaleboat campaign, which resulted in much annoyance and loss to the Loyalists. The whaleboats were taken into the service of the Continental Congress and the purpose was to cut off the supplies being sent to Long Island from the mainland, to capture prisoners and the smaller boats in the service of the British, to harass the coast of the island, and now and again to make a descent and capture some prominent Tory, who might thus be made to serve his country by serving as a ready exchange for some equally prominent Continental held as prisoner in the camps or jails of the Royalists. Sometimes it must be confessed that, especially toward the close of the struggle, there was little difference between the doings of many of the crews of these whaleboats and the acts of ordinary harbor thieves and coast pirates, but on the whole they fulfilled their purpose creditably. The following synopsis of their campaign is based on Onderdonck's researches, from which, indeed, the material on which this whole story of Oyster Bay in the Revolution has been taken:

One of the first reports of the capture of a boat plying between the ports of this town and

New York was published in New Haven, Dec. 14, 1778:—"Peggy" and cargo, Darby Doyle, master, navigated with forty men, under a commission of Val. Jones, to supply New York with fuel, forage, and provisions, was taken by Peter Griffing, captain of a company of rangers."

Dec. 22, 1777, Gaine says: "Sunday night, 14th, the rebels landed at Cold Spring, and carried off two market boats loaded with flaxseed, wood, cider, &c., &c." About the same time the sloop "Dove," with cargo, was taken in Cold Spring Harbor by Thomas Sellew, in the armed sloop "Lucy." The "Flying Fish," of Rye, captured the "Industry," Captain Abraham Selleck, from Oyster Bay to New York, loaded with fifteen cords of wood, seventeen half-barrels of cider and vinegar, seven or eight bags of meal, and rigging and sails for another vessel.

About 12 o'clock March 3, 1778, seven men, with arms, were discovered crossing Lloyd's Neck, bending their course for the narrow beach that leads off the Neck. They were pursued and taken by a party of loyal refugees. They were the noted William S. Scudder and his gang, as appears from his confession. He says he quit Long Island in September of 1776. After going with several expeditions he went to Hog Island with a party to take Squire Smith, but missed of him and took a Quaker, and plundered the house of considerable value. He had been with all the expeditions which had come to the island, and was the man who took Mr. Ireland. He had been on the east end of the island in the interest of General Parsons, and some time afterward was of the party who took two sloops out of Cold Spring Harbor. He was of the party that had lately come over to Long Island and burnt the three vessels cast away while coming from Rhode Island, and it was his design in coming over at present to collect what he could from the wrecks then burnt. They robbed Samuel Skidmore's cider-mill house, and then attempted to go over to the other shore; but, the wind being contrary, and the day becoming extremely cold, freezing their fingers and feet, they had to make for the first land, which proved to be Lloyd's Neck. The confession is dated March 3, 1778, and signed by William Smith Scudder, with Tyler Dibble, a refugee, and William Quarme, captain of the guard ship "Halifax," in Oyster Bay, as witnesses. The prisoners on Saturday afternoon,

March 7th, were brought to New York in the boat of the "Halifax," and secured.

General Putnam on the 22d of December following wrote a letter to Governor Clinton concerning Scudder, in which he mentions that Scudder had a commission from Governor Clinton to cruise the sound in an armed boat against the enemies of the United States; but complained that he had violated the orders of the commander-in-chief by seizing private property on Long Island. General Putnam adds that he knows nothing, personally, against Scudder, but has heard that he is a brave man, has suffered much, and done considerable service in the cause of his country.

On a Monday evening in the latter part of April a party of loyal refugees were cutting wood on Lloyd's Neck when they were attacked by two row galleys and an armed vessel, and carried prisoners, eighteen in number, to Connecticut. A little later in the same month Tyler Dibble and 15 wood-cutters were carried from Lloyd's Neck by a galley carrying a 12-pounder, and four whaleboats. The alarm reaching the man-of-war on that station, the boats were pursued, but without success. On the 5th of May a small boat commanded by Captain Adamson, with six men and ten swivels, went into Oyster Bay and fell in with the tender of the British ship "Raven," which mounted eight swivels and had nine men armed. The boat, after discharging her swivels and small arms, boarded the tender, and carried her the next morning into Stamford. She had on board three hogsheads of rum, several casks of bread, beef and other articles for the ship, and some dry goods.

Early in June the Schooner "Wild Cat," of fourteen swivels and forty men, came from Connecticut to Oyster Bay and landed fourteen of the crew, who shot some sheep at Oak Neck. This vessel is described as having a large number of oars, which enabled it at every calm to cross over and pillage the inhabitants of the island. A few days after this the "Wild Cat" and the "Raven's" tender, with four whaleboats well manned, came to Lloyd's Neck to harass the wood-cutters, when a number of boats from the British ship pursued them, capturing the "Wild Cat," and recapturing the "Raven's" tender and a wood boat, which had been taken when coming out of the harbor, together with some of the whaleboats, and thirty prisoners, killing two men, with no loss to the pursuers.

After the first of September the scale of success was changed again, and Major Grey, of Colonel Meigs's regiment, killed three Tories on Lloyd's Neck, and carried off fifteen. A privateer also carried off a sloop loaded with wood and provisions. A party consisting of James Ferris, a refugee from the island, Benjamin Howell, Nathaniel Sacket, of Bedford, Obadiah Valentine and Patrick Stout, came over from Connecticut on Thursday evening, a week after this, and plundered the house of William Cock of goods to the amount of £140, obliging him and his family to carry the goods nearly two miles to the whaleboats. On Saturday following another party came over, in two boats, to Red Springs, near Mosquito Cove, and robbed the houses of Jacob Carpenter and John Weeks of a quantity of valuable effects, and then made off, but returned that evening and robbed two unfortunate weavers at Oak Neck. On the 9th of June following, Clark Cock, at Oyster Bay, was robbed of considerable cash, and goods to the value of over £400, by another band from over the sound. The "True Blue," Captain Elderkirk, captured the "Five Brothers," a schooner of 24 tons, with Abraham Cock master, nine miles west of Huntington Harbor, on the 3d of February, 1779. A sloop of 45 tons, going to New York, the property of one Youngs, was captured on the 15th, four miles west of Oyster Bay, on the high seas.

"Simcoe's Journal," dated April 18, 1779, relates that a party of refugees, led by Captain Bonnel, with Captain Glover and Lieutenant Hubbell, furnished with arms, agreeable to orders from headquarters, went from Oyster Bay to take the generals, Parsons and Silliman, from the opposite shore. They did not risk an attack on General Parsons, but brought Brigadier-General Silliman to Oyster Bay. He was sent next day to New York. About the first of September following, Captain Glover, who headed this party, was himself, with twelve others, with some plunder, carried off from Lloyd's Neck by a whaleboat from Connecticut. On the 11th of the next month a continental armed schooner, commanded by T. White, captured the "Charming Sally" and cargo in Oyster Bay. Justice Hewlett and Captain Israel Youngs were carried off in June by a party from Connecticut. A number of refugees soon after went over to Connecticut and returned with thirteen prisoners, four horses, and forty-eight cattle.

"Livingston's Gazette" tells us that on Monday night, July 3d, a party of rebels, supposed to be from Horse Neck, headed by one Benjamin Kirby, attacked the house of Abraham Walton, at Pembroke, Mosquito Cove, and took him, together with his silver plate, and Mrs. Walton's money. They then proceeded to the neighbors, and took Dr. Brooks, Albert Coles and eight more Loyalists, and carried all to Connecticut. In the latter part of July, at 2 o'clock on a Tuesday morning, John Townsend of Oyster Bay was carried off by a company of rebels, led by one Jonas Youngs. They also carried away most of the valuable articles in his house, besides partly demolishing the house itself. Arnold Fleet, a millwright, was carried off at the same time. The men, fearing the militia, several companies of whom were stationed near, hastened away, carrying their boats over the beach, and left their sentinel, a young man, on Mill Neck. He wandered about the neck until compelled by starvation to give himself up.

On a Monday in October five vessels came into Oyster Bay and captured a guard pier pierced for 14 guns, with 10 mounted; also a sloop of six guns, commanded by Samuel Rogers, who had been taken and carried to Connecticut three times since the first of March preceding. Three other sloops, also a schooner from under the battery at Lloyd's Neck, were taken and all safely conveyed into port on the Connecticut shore.

Hon. Thomas Jones, Justice of the Supreme Court of New York, a noted and active Loyalist, was much coveted by the Americans as an offset for General Silliman, whose capture has already been mentioned. An attempt was made for his capture and conveyance to Connecticut; the mode and results are recorded as follows:

"Fishkill, December 9th, '79.—On the evening of November 4th about twenty-five volunteers, under Captains Hawley, Lockwood and Jones, and Lieutenant Jackson and Bishop, crossed the sound from Newfield [since Bridgeport] to Stony Brook, near Smithtown, and marched to the house of the Hon. Thomas Jones, justice of the supreme court of New York, at Fort Neck, where they arrived about 9 o'clock on the evening of the 6th, hiding in the woods by day. The whole distance was 52 miles. There was a ball in the house, and the noise of music and dancing prevented the approach of the adventurers being heard.

Captain Hawley knocked at the door, and, receiving no answer, forced it and found Judge Jones standing in the entry. He told him he was his prisoner, and immediately conducted him off, and a young man named Hewlett. A guard of soldiers was posted at a small distance from the road. When they came near the spot the judge hemmed very loud, but was forbidden to repeat it. He did, however, but on being further threatened desisted. An alarm arose, which obliged the men to retreat rapidly, traveling 30 miles the same evening, and to secrete themselves the next day, by which time the British light horse were near. The next evening they reached their boats, having taken two prisoners more, and arrived safe at Black Rock, Fairfield county, on the 8th, except six men in the rear, who were overtaken and captured by the light horse. Judge Jones was taken to Middletown, and in May, 1780, was exchanged for General Sullivan, a prisoner at Flatbush. Mr. Hewlett was exchanged for the general's son, one Washburn being thrown in as a make-weight. After the exchange the judge and general dined together."

Judge Jones had been paroled in Connecticut as a prisoner of the United States just three years, to a day, before the date of the above article.

"New Haven, Nov. 24, '79.—Monday sen't two small privateers, of four guns each, commanded by Captains Lockwood and Johnson, ran into Oyster Bay under British colors, where four wood vessels under protection of a large eight-gun brig, who asked the privateers, 'Where from?' and on being answered, 'From New York,' they were permitted to run alongside the brig unsuspected, and, boarding her, the crew were surprised into immediate surrender, without firing a gun, though manned with 20 stout fellows; on which the other vessels also submitted, and were brought out of port, destined for Norwalk or Stamford; but, on being pursued by some armed vessels from Huntington Harbor, the brig unluckily ran on a reef of rocks near Norwalk Harbor, and fell again into the enemy's hands, who got her off and took her away. The other prizes got safe into port."

This brig was a guardship in the mouth of Oyster Bay. The first ship, the "Halifax," under Captain Quarme, was after two years condemned, when he was succeeded by Cap-

tain Ryley, who became superannuated. Then came Captain Townsend, who had been for some time ashore sick at William Ludlam's, in the house now occupied by Henry Ludlam on Hog Island. One day after he had begun to be able to walk about he invited Mr. Ludlam to walk to the other side of the island to look at his vessel, when, to their surprise and chagrin, they saw the privateers run alongside and capture the craft, which was the above mentioned brig. The British had been expecting their own fleet of privateers; so did not suspect the trick. Mr. Ludlam was always sorry for his friend.

The "Lively," of seventy tons, was taken in Oyster Bay December 7th, with a cargo of salt. "Rivington's Gazette," July 25th, says that two whaleboats, the "Association" and "Henry Clinton," crossed from Fort Franklin, on Lloyd's Neck, to Norwalk, landed 38 men, and returned to the island to escape observation, but were to be back at a given hour. The party marched five miles from the shore, and remained hidden in the woods till 2 o'clock. Captain Frost surrounded the sanctuary where the people of Middlesex (now Darien) had assembled for prayer, and took fifty "notorious rebels, their reverend teacher at their head. Forty horses ready saddled were taken care of at the same time, and all safely brought to Long Island." Onderdonk adds: "They were all ironed, two and two, on the green in front of Wooden's, Oyster Bay, and so marched to the provost."

On the evening of November 24th, 1781, Lieutenant J. Hull, of Colonel Fitch's corps, came over the sound in a whaleboat, navigated by eight men, and landed near Hempstead Harbor, the entrance to which was guarded by an armed vessel. He left his boat with two men, and with the others marched to Mosquito Cove. Finding a canoe, and embarking, they boarded nine vessels which lay in the cove and made prisoners of sixteen men; not deeming it safe to try to take the vessels away, they were ransomed and the prisoners paroled. The whole party returned without the loss of a man. About the first of December a number of whaleboats came into Oyster Bay and unrigged Captain Sheddan's boat at Ship Point, and carried off another, which was ransomed for £200.

"Rivington's Gazette," under date of Sept. 18, 1782, says:

"As Captain Thomas, of the 'Association,'

carrying ten 4-pounders and 30 men, was conveying a fleet of wood boats down the sound, they were attacked off Tinnicock by two gunboats and 11 whaleboats manned with 200 men, the largest boat having a brass six-pounder in her bow. Captain T. hid his men, housed his guns, and thus decoyed the boats within musket shot, when his men suddenly discharged their muskets, and canister shot from the four-pounders. A number fell, but they did not desist from their attack, but towed off detached vessels, as it was a calm. They were, however, all retaken after a combat of six hours. These pickaroon gentry greatly infest our coast."

In the latter part of December the schooner "Peggy," John Envidito master, and her cargo of broadcloths, coating, linen and other goods, were taken.

On one occasion the whaleboat men found a vessel aground at Cold Spring. They attempted to get her off, but failed. Threats of burning caused the vessel to be ransomed. The whaleboat men robbed the store of one Youngs at East Woods, and hid the plunder in the bushes near the shore, in order to remove it at a more suitable time; but, the goods being discovered, they were prevented. Nicholas Wright's store was robbed. Justice Smith, of Hog Island, was robbed of silks, etc., and William Ludlam, a tailor who lived with him, was robbed of a great many suits of clothes which he was making up for his customers. Sarah Wright, at Cove Neck, was robbed, among other things, of a silver milk pot, which was carried to Stamford. Seth Wood's store at East Woods was also robbed. The house of John Willets, at Cedar Swamps, was broken open, his hands were tied, every threat was used, and his house was even set on fire, to make him give up his money, but in vain.

Probably the people of Oyster Bay, whether Whig or Tory, felt relieved when the scound of war ceased and the horrors of martial law became a thing of the past. When peace was proclaimed, industry was resumed, but the township had been so seriously drained of its resources, its fields had been so trampled on and destroyed, its granaries, when spared, had been so emptied, and its financial resources so reduced, that it took a long time to regain what had been lost during the few years of

conflict. Agriculture was at that time the main industry, for the war had shattered the shipping trade which had been promising so much prior to 1776. But the soil, not the sea, was, after all, the mainstay of the people, and so until the nineteenth century had pretty well advanced, the story of the township is mainly a record of improvement in crops, in farm stock, in extension of the farm land by a steady clearance of the brush and wildwood, and in the development of the breed of horses, horses for pleasure as well as for work. The apple seems to have been the principal fruit cultivated, and Oyster Bay became noted for its cider.

Oystering did not develop into much of a business until about the middle of the last century. The oysters of the town's Sound shore front had been famous among the Indians, and the white settlers prized them as food. So did others, for we find, in 1784, a special town meeting declared that outsiders should not be permitted to "take or carry away any of the oysters from off the oyster beds lying in the town on penalty of five pounds, to be recovered by the persons hereafter named [Samuel Youngs, James Farley, Amaziah Wheeler], and to be paid to the Overseers of the poor." In 1801 a town meeting came to the protection of the oyster by declaring "that no oysters be caught in the harbor of Oyster Bay with rakes or tongs from the first day of May next to the 1st day of September following, under the penalty of five pounds for each and every offence." There was probably grave reason for this, for the quality of the oysters and the demand for them evidently threatened a shortage in the supply. Up till then the oyster fishing had been one of the privileges of the township and seemed to be part of the common property of the people, but in 1807 the beginning of a system of private property in the bivalve was inaugurated, when a town meeting granted Robert Feeks ten square rods under water "for the purpose of making an oyster bed where no valuable bed has been

known." This was a beginning, and private ownership in oyster beds soon became so widespread as to threaten the occupancy of the entire harbor and remove from the people a right which they had enjoyed since the settlement. The courts were appealed to, but decided that any inhabitant could plant an oyster bed in a spot not previously occupied, and the bed should be regarded as private property. Thereafter there ensued a long struggle between the people and those who had thus acquired property rights, and the battle was waged for years. The people could pass and did pass resolutions regulating the trade, protecting the growth of the oysters, and laying down laws for close or open seasons, but when the question came to be an invasion of private property rights the courts sternly interfered. In 1843 a meeting declared "we will defend the rights of the town to the exclusive ownership of the oysters in Oyster Bay," but that gallant defence went practically no further than the paper on which it was written. In 1847, however, they got down to a tangible issue when they declared that "the oysters in the bay or waters of the town be free to all of the inhabitants of the said town the ensuing year." The owners of the oyster beds at once took issue with this, the law was appealed to, and the rights of the planters to the exclusive use of their property was sustained.

We may now turn our attention to the religious life of Oyster Bay, a subject which is of equal interest and importance with its civil history. It has already been said that the first community was not a theocracy, although the Rev. Mr. Leverich was among the pioneers and was regarded as their minister until he moved away in 1657. It is held that in 1659 a regular meeting of the Society of Friends was established at Oyster Bay, in the residence of Anthony Wright, and a marriage was solemnized there between Samuel Andrews and Mary Wright, August 8, 1663. There are some signs also that some of Mrs. Hutchinson's converts visited Oyster Bay and

held religious meetings, so that in one way or another the place was not without its spiritual leaders, and Oyster Bay became the religious centre for a wide district. In 1672 George Fox paid it a visit and preached in the woods, with a rock for a pulpit, because there was no house in the place large enough to accommodate the number of his auditors, and it was in that year that Anthony Wright gave land, part of his house lot, to the Society of Friends, on which to erect a meeting house and lay out a burial plot. The house was finished early in the following year and seems to have been a comfortable little structure, with double doors, eight windows and plain benches. The Society waxed strong, and large congregations were formed in Matinicoek in 1671, Jericho in 1676, and in Bethpage in 1698, while on the lonely farms the simple faith of the Society was that held by possibly nine-tenths of the people. For a time it would seem that next to Flushing, Oyster Bay was the most important centre of the Society on Long Island. So the burly and blustering Keith reported, in 1701, as the result of his personal observation. But even then a change had taken place, and the adherents of the Society gradually fell off in the village. The first meeting house was taken down in 1693, and a second was not built until 1749. In 1797 the number of Friends had dwindled down until little more than "a remnant."

This, however, was not caused by any falling off in the religious spirit of the town, but because other influences had been at work and had weakened the hold of the Society. The Baptists had been zealously at work even when the Society seemed supreme, and had gradually won converts to their views. About the year 1700 William Rhodes settled in Oyster Bay village from Rhode Island, and at once began to hold regular meetings, and so organized a congregation—a congregation that was made up mainly, if not wholly, of persons who had been numbered among the Quakers. It has been held that he was not an ordained minis-

ter, that he was without denominational authority, but in the early history of either the Quakers or the Baptists such matters were not deemed of prime importance in the face of results. In 1724 a Baptist meeting house was erected, but the congregation lost its up-builder, for Mr. Rhodes in that year was called to his reward. He was succeeded, Prime tells us, by "an individual by the name of Robert Feeks, the son of a Quaker preacher," who had been his assistant. "He was ordained," says Prime, "in 1724 by Elders from Rhode Island. He was what is called a Free-will Baptist, and as no other qualification was considered necessary in a candidate for baptism than a desire to be saved, his church was, of course, numerous. * * * He labored many years, and died [1773] in the 89th year of his age." But he was not without his troubles. In 1745 the Rev. Thomas Davis was appointed his colleague, and, being a stern and unyielding Calvinist, his sentiments were on many points utterly opposed to those of his senior. This led to bickerings and confusion and might have caused the creation of another congregation had not Davis, after some three years of agitation, retired from the vineyard on account of ill health. The people then held together, each section certain of ultimate triumph. Caleb Wright, a grandson of the pioneer Rhodes, had been educated for the ministry and was to be ordained and installed as Mr. Feeks's colleague. The people had listened to his preaching for over a year, and there was a strong hope that he would lead the people into quiet waters, that he would heal the past differences. But the day appointed for his ordination turned out to be that of his burial, and the Rev. Isaac Still, of New Jersey, who had been appointed to ordain, preached his funeral sermon. After that contention broke out worse than ever. Mr. Davis returned for a brief visit in the hope of restoring peace, but seems to have made the confusion worse than ever, and if we read Prime's story of the trouble aright, he and the now venerable Pastor

Feeks had a regular set-to in the pulpit one Sunday, and Davis proved the victor, put Feeks out and preached the sermon!

In 1759 David Sutton was called to the pastorate, and for a short time peace prevailed, but the result was a schism and the formation of a new congregation, calling themselves the "New Lights." The pastor of this body, or its spokesman and preacher, was Peter Underhill (a grandson of the famous Captain John Underhill), but its real leader was his mother-in-law, Mrs. Sarah Townsend, who, having in her early years been a schoolmistress, was generally known as Madame Townsend; a woman of much ability, evidently, and one who had certainly studied the Scriptures closely and believed in expounding them according to her lights. She refused to believe in denominational restraints, believed in the indiscriminate outpouring of the Spirit, and believed that all would, at one time or other, be converted. When the new body attempted, after a little experience, to draw up a set of rules to maintain order and decorum, she shouted "Babylon!" and withdrew. However, she seems to have soon returned, and the little community lasted for some thirty years, when she and Underhill and the others gave up the struggle and became associated again with the regular Baptist Church. By that time that body had been reduced to nine members, and even six years later it was only blessed with a membership of forty. In 1801 the Rev. Marmaduke Earle, having settled in Oyster Bay to assume charge of the Academy, also agreed to supply the pulpit of the Baptist Church, and under his ministry, which continued until his death, in 1856, the Baptist body has had a history in Oyster Bay in every way worthy of its aspirations and its high position as a body of earnest, devoted Christian workers.

Along with the Baptist body the Episcopalians aided in the disintegration of the Quaker supremacy. Keith, the renegade Quaker, mentions that he had considerable success in his proselytizing efforts in Oyster Bay, among

other places on Long Island, in 1701. A church building was erected in 1707, but for many years the congregation was under the pastoral charge of the clergyman at Hempstead. After the Revolution services were conducted irregularly, but the congregation remained intact and the church authorities in New York in 1787 appointed Andrew Fowler as "reader" to the people at Islip, Brookhaven and Oyster Bay. Mr. Fowler afterward became rector at Oyster Bay. He did not remain long with the people after being ordained a priest. It is doubtful if the church building was much used after the Revolution for Divine service, as the Hessian troops had used its timber for their own purposes and destroyed much of the internal fittings. In 1804, however, the structure was blown down and the material of which it was composed was then sold for \$67, which sum, however, the local church authorities did not receive until 1845. Its site was used for the Oyster Bay Academy. With the removal of Mr. Fowler, in 1791, the congregation seems to have again passed under the care of a reader, with occasional visits from the rectors at Huntington and North Hempstead. When the Academy was completed the people worshipped in one of its rooms. In 1835 it was made a missionary station under the Rev. Isaac Sherwood. In 1844 Oyster Bay again became a district charge, a new church building was erected in 1845, and the modern history of the congregation may be said to have then begun. The present beautiful structure in which the congregation now worships was erected in 1878, when the cornerstone was laid by the then rector, the Rev. George R. Van de Water, now of New York.

It was not until 1846 that a Presbyterian congregation was formed at Oyster Bay.

The present village of Oyster Bay has a population of 2,320. In 1846, in a moment of irresponsibility, it was decided to change its name to Syosset, but the change only lasted, fortunately, for about a week. Besides its im-

portant oystering and shipping trade it is the centre of a colony of summer homes of the very highest class. Its importance has steadily increased since the railroad gave it easy access to the outer world. Its cottages are most picturesque and reach out from it in all directions, and it is well supplied with hotels and boarding houses. As the home of the Scawanhaka Yacht Club it is a centre for that class of sport, and the clubhouse of that organization, a most imposing structure at the entrance of the bay, with more or less of its "fleet" in front and its dock always a busy, bustling place during the season, is itself a prime attraction to visitors. Oyster Bay, in fact, has become quite a fashionable centre, and its dignity in this respect seems certain to steadily increase. Of recent years it has come into especial prominence as the residence of Theodore Roosevelt, ex-Governor of New York, and now President of the United States. His splendid cottage has been the scene of many an important gathering since his return from Cuba, where, as Colonel of the famous "Rough Riders," he won a national pre-eminence and became one of the foremost figures in American public life. As the first Chief Executive which Long Island has given to the United States, his career is entitled to particular consideration in a work like this and it will be found treated at length at the close of this chapter.

Matinickock is now best known to the outside world from the fact that its "point" has become a "mark" in the local yachting competitions. Yet, in spite of that and in spite of the fact that its population increases but slowly (125 at last reckoning), it has a most interesting history. For a long time it was claimed by Hempstead as part of its territory, but that claim was disproved in 1666, but although the Oyster Bay settlers claimed to have bought it from the Indians in 1653, and that claim has been allowed to stand, there does not seem to exist any tangible proof of it. But it was settled soon after, for in 1659 we find that people

from Matinick attended the services of the Society of Friends in Oyster Bay. In 1660 the famous—or infamous—Capt. John Underhill received 150 acres of land in Matinick from the Indians as a gift, and in 1663 he added to his possessions by purchase. About the same time his brother-in-law, John Feeks, a Quaker preacher, bought an adjoining tract, and the dwellings of these two worthies were erected close together. The only son of John Feeks became the pastor of the first Baptist Church in Oyster Bay. In 1682 a stated meeting of the Society of Friends was inaugurated here, and in 1682 a meeting house was erected, which was followed by the erection of a larger structure in 1725. From the first Matinick has been a farming community and so remains. Locust Valley (formerly called Buckram), which has a population of 625; Lattingtown (200), and Bayville (400), are all pleasant villages in the old territory of Matinick which call for little comment, although the schools of the first named have won more than a local reputation. In these places the influence of the Society of Friends is still very great.

Dosoris can date from 1668, when Robert Williams bought 1,000 acres there from the Matinick Indians, including two islands known by the prosaic names of East and West. The property, after several changes, came into possession of Daniel Whitehead of Jamaica, who bequeathed it to his daughter, the wife of John Taylor. It was inherited by the only offspring of that marriage, a daughter, Abigail, who became the wife of the Rev. Benjamin Woolsey of Southold. He it was who gave it its name—a contraction or adaptation of the Latin *Dos Uxoris*—a wife's dower. Apart from the singularity of its name there is nothing to demand our attention in the village, which has only a little over 100 of a population. But it is a beautiful and romantic place, and when it becomes easier of access is certain to attract a large share of the summer business of Long Island. For many years Charles A. Dana, of

the New York Sun, occupied West Island, and Townsend Cox, a long and leading politician in New York, had his home on West Island.

In September, 1868, Glen Cove celebrated its bicentennial, and there was a procession, music, oratory—mainly an oration by Mr. H. T. Scudder—and a feast of clams, sandwiches, coffee, etc. It was a good old-fashioned jollification, it was open to all who chose to listen or partake, and when the day was over the good folks of the village were ready to swear that Glen Cove had not its equal in all Long Island.

In 1668 Joseph Carpenter, a resident of Rhode Island, after a short stay at Oyster Bay, bought some land from the Indians at Mosquito Cove, Nathaniel Coles, Abra Carpenter, Thomas Townsend and Robert Cole. That purchase was taken to mark the beginning of Glen Cove by the local antiquaries. The little colony was soon enlarged, and in 1786 the settlement had no fewer than 32 taxpayers. They were:

Caleb Coles, 125; Benjamin Coles, 100; Jacob Valentine, 277; Coles Mudge, 80; Jordan Coles, 19; James Bennett, 3; Henry Mott, 26; Charles Thorne, 19; Thomas Kipp's estate, 6; Joseph Wood, 120; Benjamin Craft, 73; Joseph Craft, 147; Solomon Craft, 60; Morris Carpenter, 15; William Hyde, 11; Coles Carpenter, 200; Albert Coles, 75; Derich Coles, 62; William Coles, 48; Benjamin Coles, jr., 100; Isaac Coles, 19; Daniel Coles, 120; Ananias Downing, 156; William Hopkins, 80; Thomas Hopkins, 140; Silas Downing, 20; Jeronias Bennett, 80; George Bennett, 80; Thomas Pearsall, 185; Charles Frost, 3; John Frost, 3; William Bennett, 6.

The first industry, outside of agriculture, was that of milling. Joseph Carpenter erected the first sawmill and in 1677 added a grist mill, in connection with which he entered into the following agreement with his neighbors:

Agreed yt whereas I, Joseph Carpenter, haveing Built A grist-mill joyneing to oure new saw-mill, and upon ye stream which be-

longeth to us five purchasers—Nathanel Colles, Daniel Colles, Robert Colles, Nickolas Simkins and my selfe—and in consideration of three parts in ye streme and timbar I Joseph Carpenter doe pledge my selfe, my heyres, Exsexetors, Administrators, and Asignes, soe long as my selfe, my heyres, Exsexetors, Administrators, or Asignes shall keep or maintaine ye said mill, tto grind ye aforesaide proprietors' corne and grayne for each of their families well and Tolle-free for ever; and iff my selfe, my heyres, Exsexetors, Administrators, or Asignes for ye futar shall see case to Lett ye sayde grist-mill fall, and not to keep it in repayre for ye fulfilling of ye conditions as above inserted, that then and after, forever, ye aforesayde streme to remaine to us five proprietors and our heyres and Asignes for ever, to order and dispose of as we shall see Case—to which I have sett my hand and seale ye 14th of Janewry 1677. JOSEPH CARPENTER.

Signed, sealed and delivered in ye presence of us—Tho. Townsend, Samuel Pell.

These mills appear to have done quite a large business, and indeed prosperity seems to have been the characteristic of life at Mosquito Cove until the crisis of 1776. Its people then were mainly found on the side of the Patriots, and quite a number of its youth—a company indeed—marched away to the scene of battle and gave up their lives under the leadership of the gallant Woodhull, whose own life was also sacrificed for the cause of liberty.

From the declaration of peace, Glen Cove seems to have been forgotten by the world, until about 1828, when a joint stock company was organized to run a steamer between it and New York and intermediate ports. A steamer, the Linneus, had for some time been run between Glen Cove and New Rochelle by Capt. Peck. The stock company built a splendid new dock and the adventure proved quite a success. It is still continued, even although many thought that the railroad would force its cessation. Some of the most substantial boats that ever plied on Long Island Sound have been on this route, the "Flushing," "American Eagle," "Mayflower," "General Sedgwick," among them. Two of the boats, the "Glen

Cove" and the "Long Island," were sent South during the Civil War and were there burned. The saddest incident of the line's story was that of the burning of the "Seawanhake," on June 28, 1880. She had left her pier in New York on that date with some 300 passengers on board. When passing Ward's Island, the vessel seemed suddenly to become a mass of flames and the Captain hastily determined to run it on to a marsh known as the Sunken Meadows. By this action the lives of most of those on board were saved, but between deaths by burning and drowning the casualties reached 61.

It was the establishment of the Glen Cove Manufacturing Company—for the making of starch—in 1855 that has given to the village its position as a manufacturing place and made its name to be known almost all over the civilized world. The product was perfect from the start and speedily won its way, while the awards it received at the great London Exhibition of 1862 gave it a position which it has since maintained, that of making a starch which is not surpassed for purity by any in the world. The subsequent "world's exhibitions," Paris, Philadelphia, Chicago and others, have emphasized the praise bestowed on it by the London experts when it first entered into open competition with all other makes. Its first factory, erected in 1856, was destroyed by fire in February, 1858, but a new establishment was erected at once. Nowadays the company operates an immense establishment, and to it, more than to any other single agency, Glen Cove owes its eminence as the most richly populated village in Oyster Bay township, the latest returns placing it at 4,700.

It has been held that a Methodist congregation was formed in Glen Cove as early as 1785 under Jesse Coles as class leader. The services were held in private residences until 1827, when provision was made for them in the school building, and a Sabbath school organized. In 1844 a church building was erected, which gave way in 1861 to a much more

commodious structure. St. Paul's Episcopal Church was founded here in 1833, and was at first closely associated with the church at Manhasset, and a Presbyterian Church was organized in 1868 with fifteen members.

Writing of Glen Cove, a recent guide-book says: "Adjacent to Glen Cove is the Pratt property, an estate of eight hundred acres, magnificently located, with a frontage on Long Island Sound. On the Pratt estate is the tomb of the late Charles Pratt, in his lifetime the most prominent personage identified with Glen Cove. He located his country home upon the estate above referred to, and established a model educational school building for the town, which he designed to stand as his most enduring monument. He died before the realization of his hopes, but his sons carried out as a sacred injunction the favorite design of his lifetime, and the building was dedicated with due solemnity on May 24, 1893. The institution maintains an agricultural department which is operated upon a portion of the estate, and here the students are initiated into the best and latest researches of modern farming. Contiguous to the Pratt estate the veteran editor of the New York "Sun," recently deceased, laid out his magnificent possessions, known as "Dana Island." This beautiful property is known far and wide, and the late Charles A. Dana lavished upon it a constant and unremitting care. It is as celebrated in the records of horticulture as the famous Shaw's Garden of St. Louis, and contains trees, plants, and shrubs collected from every portion of the globe. Dull care and business were never allowed to enter this ideal spot. To Mr. Dana it was a happy Valley of Rasselas. His last hours were spent here, and the estate is to be maintained in its integrity and beauty with the same reverent care as was lavished upon it by its lamented owner."

Sea Cliff, which might be called a suburb of Glen Cove, was founded in 1871 as a religious settlement by a corporation having its headquarters in New York. It was to be a

place for the summer residence of Christian families of moderate means, where they might lease a small plot of ground, erect modest cottages and enjoy fresh air and rest with such spiritual enjoyments as camp meetings and other forms of public worship. The ground was at first intended to be leased, not sold, and an annual rent of ten dollars on each lot was to be devoted to paying the interest on the money invested and in improving the grounds, opening up and grading the streets, policing, etc. But the beauty of the place soon overturned these primitive calculations, and after a while the early restrictions were abandoned, the streets were widened, the size of the lots increased, and palatial villas began to arise beside the modest cottages. The system of leasing gave way to selling outright, and Sea Cliff is now one of the most popular of Long Island's "summer" cities, and has a population estimated at 1,475. It has good hotels, splendid bathing accommodations, and in many respects is a model settlement.

East Norwich was named after their father's birthplace in England by James and George Townsend, sons of John Townsend, of Oyster Bay. They secured a tract of land in 1680, about two miles south of Oyster Bay village, and around their farms a small village gradually sprang up. It was never very populous, it now only claims 425, but at an early period in its history it became a centre of Methodism, and the light started there in 1784 is still burning. The history of East Norwich really centres round its little Methodist church, and as it is curious in many ways the following story of its career by Mr. H. H. Frost may not be without interest to the general reader:

"The Rev. Philip Cox, a Methodist minister belonging to the Jamaica circuit, preached in this place in 1784. Services were held at private houses. From 1784 to 1822 traveling ministers of the Jamaica circuit officiated here. In 1822 the Rev. Joshua Burch was located here, and held services at the residence of

Thomas Cheshire. During the summer of 1833 a grove meeting was held at Muttontown, then called Christian Hill. This grove meeting was a memorable one; out of it grew a well organized and efficient working Methodist society in this place, and the erection of a suitable building. About forty persons were converted upon this occasion, and among them we find the name of James Vernon. The first thought of this good man after his conversion was to devise plans for a suitable place of worship. He aroused enthusiasm among a few neighbors. They held a meeting in a barn now standing, drew up a paper stating their object, and Mr. Vernon started the list of subscribers with \$40, a very large sum in those days. Attached to this paper are seventy-four names, with the amount promised. George Peters, Thomas Cheshire, Henry Cheshire, John Nosstrand, Abraham Remsen, Catherine, Mary and Sally Peters and Andrew C. Hegeman gave \$25 each; Thomas Cheshire and William Duryea, \$20 each; John Van Cott, \$15; Jackson Vernon, George Remsen, John Jackson, John Layton, John Cheshire, Charles Cheshire, Joseph White, C. & J. Stores, Samuel Mott, Gideon Wright and Townsend W. Burtis, \$10 each; and others from five dollars down to one as they were able. The members of the Society of Friends also contributed liberally.

"The church was built in 1834, and it has been of great use and benefit to the entire neighborhood. It is 31 by 37 feet, located just south of the village, and is worth, with the ground attached, about \$2,500. The site was a gift from James Vernon. The parsonage, situated a short distance north of the village, is a two-story structure, built in 1866 or 1867, and, with the plot of ground, worth perhaps \$1,500."

Bethpage is another community which for long was a religious center. Thomas Powell, a Quaker from Huntington, bought a large tract of land in 1695, and in 1698 a Friends meeting was established, which was maintained until a year or two ago, when it seems to have died out. The population at present

is given as 150, and brickmaking is the only industry, excepting farming.

A much more important religious center was Jericho, a pleasant village near the center of the town. It was settled first about 1650, and the present population of 325 is mainly descended from the first settlers, such as Seamans, Willets, Underhill, Williams. In early times Jericho was known as "The Farms," or Springfield, and the Indians called it Lusum. Most of the early settlers were of the Society of Friends, and meetings for worship were held in the homes of the people with more or less frequency from 1676 to 1787, when a regular meeting house was built. In that tabernacle some wonderful reunions have been held, and Elias Hicks preached in it for several years. It is still a place of worship, but the old palmy days have gone, although the sixty members on its roll make up a congregation as earnest and devoted as any that ever assembled in its walls.

The mention of the venerated name of Elias Hicks recalls to us the town named in his memory and which, although it seemed for a long time incapable of growth, now has a population of 1,300, a number of factories and industries, and appears destined to grow steadily in importance as a manufacturing center, even if it fails to become a resort. It was founded in 1836, when a number of members of the Society of Friends bought part of the land on which it is situated, and laid out a few streets on a map and gave it the name of Hicksville. But the population expected did not appear, and the place seemed dead. In 1842 the Long Island Railway reached it and built a station, an engine house and some storage places, and on the strength of all that the original projectors took heart and erected a hotel and a dozen cottages. But the venture even then seemed a failure. For some reason or other the Rev. Dr. Prime, the historian, was bitterly opposed to Hicksville, mainly because he was opposed to the doctrines of Elias Hicks. He wrote in 1845:

"It [Hicksville] is a village of recent origin

Theodore Roosevelt-

situated on the western line of the town about midway of the great plain. It originally consisted of a large depot and workshops, a hotel with its outhouses and five or six small private dwellings. The railroad having been extended to Greenport in 1844, the depot being burned down about the same time, and no additions whatever being made to the private dwellings, the 'village' bids fair to remain in statu quo. Its business, however, is undiminished, as it is a point at which several stages and private conveyances arrive daily with passengers from the adjoining villages, and after remaining an hour or two depart with their return cargoes. Of course, its principal trade consists of hay and oats for horses, and cakes and pies and coffee, or whisky, for men, all of which are articles of foreign production, as there is no land under cultivation. Indeed, all the houses stand 'out of doors' without any enclosure except a small garden attached to the hotel. And although the whole territory is as level as a barn floor and building lots can be purchased far cheaper than in New York, the public seems determined not to buy them. * * * It does not seem likely to be selected as a place of residence of any man in his senses. East New York and Jamesport are privileged spots compared with Hicksville. The name may live, but the 'village' is a miserable abortion."

All of which is another instance proving that while Dr. Prime may have been a very good preacher, he was a mighty poor prophet. In 1849 Frederick Heyne purchased 1,000 acres of land and several others, Germans, like himself, also purchased land in the vicinity. In 1850 the idea was broached of making Hicksville a German settlement, and the idea was quickly put into practice. Streets were again surveyed and lots staked out, and in 1852 a school house was erected. The people, mostly Germans, began to buy up the lots and build, and long before Dr. Prime died, in 1856, he could have seen a thriving village rising on the spot concerning which he uttered his sarcasms and his lamentations.

Farmingdale is a thriving village of some 1,600 inhabitants, and with its church, educational advantages, its School of Technology, its one or two factories, and its beautiful situation, it is one of the pleasantest little towns to be met with even in Long Island. It lies at the foot of the Comac Hills and is really one of the healthiest places to be found within a wide circle of New York. In olden times it rejoiced in the name of Hardscrabble, but how or when such a cognomen was first applied has not come down to us in any satisfactory shape.

Among the other villages in Oyster Bay township mention might be made of Glen Head, "a summer city," with a population of 500; Plainview, 230; South Oyster Bay, 475; Syosset, 368; Wheatly, 175; Laurelton, 125; Greenvale, 192; Central Park, 375; Bayville, 400; Glenwood Landing, 268; Mill Neck, 200; New Cassell, 225; Woodbury, 350; and Plain Edge, 137.

BIOGRAPHICAL SKETCH OF PRESIDENT ROOSEVELT.

The eyes of the nation have never been turned with more anxious questioning to one man than to Theodore Roosevelt; they now rest upon him with good will, confidence and trust. Under the administration of President McKinley the country had enjoyed over four years of marked growth, advancement and progress. Through his kindly nature, his great diplomacy and powers of statescraft he had done more than any other individual to bring the whole country into harmony and unity, and had given it prestige among the great world powers. The marvelous hold which he had upon the affections of the people, east and west, north and south, was manifest in the universal grief which reached its culmination in the five minutes of absolute silence which prevailed throughout the land in every avenue of life as the hour for his burial arrived.

And the people turned to their new ruler anxiously and yet with faith in their hearts,

for he had proved his bravery on the San Juan hills, had manifested the purity and strength of his purpose in public office and in his earnest and purposeful way had shown himself to be the peer of some of the most gifted men of the nation. He is, however, the youngest chief executive that has presided over the destinies of the United States, but since he has handled the reins of government he has shown a wonderful insight into public affairs of every description. The man of war has become the

man of peace; the man of action has become the man of thought; his diplomacy has elicited the highest commendation; and while his great strength of purpose has in no wise diminished, he has directed it in different channels, having marked influence upon the public good.

President Roosevelt springs from one of the old and distinguished families of German origin. This family was one of considerable importance in Holland, as shown by the coat of armor, indicating the origin of the family. Arms, argent on a mount vert, a rose bush with three roses ppr.; crest, three ostrich feathers per pale, gules and argent; motto, *Qui plantavit*

curabit [the one who planted it will take care of it]. This is the same in substance as that borne on the arms of the State of Connecticut, viz., *Qui transtulit sustinet* [he who transplanted sustains].

Claes Martinzen Van Roosevelt, meaning Nicholas the son of Martin, of the Rosefield, who emigrated to America from Holland in 1654, was the first of the name in this country. His descendants intermarried with the Schuylers, Bogaerts, Provosts, Van Schaicks, DePeysters, Latrobes, Hoffmans, Barclays, Van Courtlandts, Lisenards, etc. The family early obtained an extensive tract of land in New York city, extending from Chatham street to the East river, lying between Pearl, Roosevelt and Catharine streets, or, as it was originally called, Ruger's old farm. Hence in this way and by its commercial enterprises it has become affluent. The family has been represented in Colonial and State affairs through every generation down to the present period, and owing to the achievements of the present representative of the family the name is as familiar to every schoolboy throughout the country as is that of Washington or Grant.

The wife of Claes Martinzen Van Roosevelt was Jannetje Samuels or Thomas, probably the latter.

Nicholas Roosevelt, fourth child of Claes and Jannetje Roosevelt, was baptized October 2, 1658, and married December 26, 1682, Heytje Jans, who was an Alderman of New York, 1698 to 1701. He removed to Esopus, and died July 30, 1742.

Johannes Roosevelt, eldest child of Nicholas and Heytje (Jans) Roosevelt, was baptized February 27, 1689. He was assistant Alderman of New York from 1717 till 1727 and Alderman from 1730 until 1733. He married Heltje Sjverts. This name is also spelled Hyla Suerts in the Dutch records of New York. She was the daughter of Olphert Suerts, who married Margrieji Cloppers, born May 30, 1708, a daughter of Cornelius Jansen Cloppers.

Jacobus Roosevelt, fifth child of Johannes,

was born August 14, 1724. He married Annetje Bogart, and his second wife was Eleonora Thompson. The sixth of their seven children was Jacobus Roosevelt, who was born October 25, 1759, and died August 13, 1840. He was known as James I. Roosevelt, and was commissary during the war of the Revolution, giving his services gratuitously. "Getting supplies" for the Continental army became so impressed on his mind as to enter into his every-day transactions, and long after the war, whenever he went to market, as was the custom of the head of the family in those days, taking a servant along to carry the basket, he always referred to it as going for "supplies." He married Mary Van Schaick.

Cornelius Van Schaick Roosevelt, youngest child of Jacobus (2), was born January 30, 1794. From his father and grandfather he inherited a large fortune, and this he augmented by various successful financial ventures, becoming one of the richest men in New York. For many years he was engaged in the importation of hardware and plate glass. He was one of those who founded the Chemical Bank on the single principle of honesty, and that institution has never failed to pay its obligations in gold, and during the Civil war redeemed its notes at one time at \$280 in greenbacks. He introduced in business the principle of giving no notes. Mr. Roosevelt married Margaret Barnhill, of Pennsylvania and of Scotch-Irish ancestry. Her grandfather was Thomas Potts, a member of the Continental Congress. The issue of this marriage was: Weir, C. V. S., Jr., James A., Robert and Theodore (1st).

Theodore Roosevelt (1), youngest child of Cornelius Van Schaick Roosevelt and Margaret (Barnhill) Roosevelt his wife, was born in New York city, September 29, 1831, and died there February 9, 1878. He joined the firm of Roosevelt & Company, glass importers, then located at No. 2 Maiden Lane, and continued in that business till 1876, when he established a banking house in partnership with his son at No. 32 Pine street. Mr. Roosevelt was among the pioneers in the development of

what was known as the up-town district of Manhattan island. He built an elegant residence on West Fifty-seventh street, and there he passed the last hours of his life.

At the time of his death Mr. Roosevelt was one of the three state commissioners of public charities, a position for which he was admirably fitted by his experience and his peculiar devotion to philanthropic enterprises. He was vice-president of the Union League Club and a member of the Century, St. Nicholas and various kindred organizations. When Arthur was supposed to be on the point of giving up the position of collector of the port of New York, attention was turned upon Mr. Roosevelt as a gentleman conspicuously fitted for it, and one who, it was thought, would discharge its functions to the advantage of the community and his own honor. At first an opposition was made on account of his participation in an importing business from which some believed he had not entirely alienated himself. He was tendered the position by President Hayes, but the senate, for the above named reasons, failed to confirm the appointment.

Mr. Roosevelt's charitable enterprises were so numerous and varied in character that it is difficult to refer to them all, but perhaps no more useful institution owes to him a share of its paternity than the Orthopaedic Hospital in Fifty-ninth street, near Ninth avenue, New York. Knowing that prompt and skilled treatment would in many instances spare the victims of accident or disease from becoming deformed, he had lent his best exertions to establish an institution where such permanent treatment would be readily accessible. The Newsboys' Lodging House is also deeply indebted to him for its success. From its inception he paid special attention to the development of its resources and the perfection of its management. The up-town branch of the establishment devolved entirely upon him for a support which was liberally accorded. He also greatly enlisted himself in the Young Men's Christian Association, and aided by his

counsel and his purse in developing its usefulness. In fact, during a business career which absorbed a great part of his time and thought for the amelioration of his fellow creatures' conditions, he was evolving plans for having charity more widely distributed and turned to the best advantage. When the scheme of uniting all benevolent organizations for the purpose of mutual assistance and general co-operation was proposed, Mr. Roosevelt warmly encouraged the movement. He took part in organizing the Bureau of United Charities, which he believed would subserve a great object, but was forced with his associates to give over his design by the disinclination of some charitable institutions to make their methods and resources public.

He married Martha, daughter of James and Martha Oswald Bulloch, of Roswell, Georgia. Her maternal great-grandfather was Daniel Stewart, who joined the Revolutionary army when a boy and was captured by the British, but escaped from a prison ship and afterward served as captain under Sumter and Marion. Martha Bulloch's paternal grandfather was James Bulloch, who was a captain of the Georgia troops in the Revolution and an original member of the Society of the Cincinnati. James Bulloch's father was Archibald Bulloch, first Revolutionary Governor of Georgia, who married Mary de Vaux, whose paternal grandfather, a Huguenot, fled from France after the Revocation of the Edict of Nantes. Her maternal grandfather was Edward Belinger, one of the Carolina land-graves. Archibald Bulloch's father was James Bulloch, who came from Scotland about 1715 and settled in Georgia, was a member of the Provincial Congress, and held positions of honor and trust. He was a blood relative of the Douglasses, Bartons and other prominent families. Their children were Anna, wife of Captain W. S. Cowles, of the United States Navy; Theodore; Elliott; and Corinne, the wife of Douglas Robinson, Jr. Mrs. Roosevelt died February 15, 1884. She was a member of the Rev. Dr. Hall's church, and

took a deep interest in many charities, including the Orthopaedic Hospital, of which her husband was one of the founders.

Theodore Roosevelt, the leading subject of this sketch, was born in New York city, October 27, 1858, and was graduated at Harvard with the class of 1880. Among the early New York families to establish a summer home at Oyster Bay, Long Island, was that of Cornelius Van Schaick Roosevelt, the grandfather of the President. The place where he resided was known as Tranquillity, and to him it was all that the name implied—rest, peace and quietness. His son, Theodore Roosevelt, Sr., became very much attached to the place and spent the long summer and autumn months at this most delightful resort. Thus it happened that the early childhood of young Theodore was spent amid these surroundings. It was said that "he was a mere wisp of a boy, pale and puny, without health or strength; but he had a will, and determined to overcome his lack of physical vigor." The boys in the neighborhood knew him as the wiry, earnest, determined little fellow, perfectly fearless and ready to encounter any difficulty or danger that would add to his bodily health and strength. He "rode and swam and climbed and jumped;" his "yacht" was a row-boat in which he could exercise his muscles and toughen every limb, and this "toughening" process was continued years after on his western ranch.

Memories of his childhood days at Oyster Bay clung to him long after he left home to prepare for his great life work, and not long after his graduation in 1880 he purchased one hundred acres, mostly woodland, to which he gave the name of "Sagamore Hill"—a name at the time having no particular significance—but, associated with his subsequent achievements, it is fitly named.

Politics seemed to have a fascination for Colonel Roosevelt from an early age, but before entering the field he called on his Uncle Robert and said, "Uncle Bob, I want your advice. Shall I run for the Assembly?" "I

can't say," replied his uncle. "Here is Colonel Charles Hutchinson, of Utica, who may answer the question." "Take it," said Hutchinson; "there's an opening for young men of independent fortune and good education in public life. You ought to make the experiment." Young Roosevelt "made the experiment" and succeeded, as he has in every subsequent "experiment" of his life. The word "fail" is not a part of his vocabulary. He literally "batters down" all opposition as he did on the famous field of San Juan, and then quietly surveys the situation and sums up the cost preparatory to a second onslaught if necessary.

A writer in one of the New York dailies gives his impressions of the young man as he saw him at a State convention some time after his first election to the Assembly. "Mr. Theodore Roosevelt in the convention seemed to be a light-footed, agile, nervous, yet prompt boy, with light brown, yet slightly curling hair, blue eyes and an eye-glass, and ready to rise and speak with a clear, sharp boyish voice, a manner more of the undergraduate than the finished orator, but unmistakable, candid, untrifling and withal kind and chivalric. He has a slight flush of the countenance and resolute expression of the head, well adapted to start sympathy and possibly enthusiasm. I was a little reminded of Blanche Roosevelt, the singer. He applauded Warner Miller with his hands when the latter was applauded in rising to make a counter nomination. George Bliss applauded Roosevelt with his feet but did not applaud Miller. Roosevelt sometimes turned and conferred with Robert McCord behind him. He set the conciliatory, yet manly tone in much which characterized the whole convention, and I never saw a State convention anywhere in the Union, though I have seen them from Massachusetts to Michigan and South Carolina, equal in modesty, intelligence and appearance to this."

Young Roosevelt was elected to the Assembly as a Republican. He led the minority during the session of 1882, was active in reform measures, and on his re-election in 1883

was largely instrumental in carrying out the State civil-service-reform law and an act for regulating primary elections. As chairman of the committee on cities in 1884, he succeeded in abolishing the fees of the county clerk and register and in providing for their payment by salaries; curtailing abuses in the sheriff's and surrogate's offices; and securing the passage of a bill that deprived aldermen of the power to confirm appointments to office, and centered in the mayor the responsibility of administering municipal affairs. He was chairman of the New York delegation to the National Republican Convention in 1884, and an unsuccessful candidate for Mayor of New York in 1886. He was nominated as an independent but was endorsed by the Republicans. In May, 1889, President Harrison appointed him Civil Service Commissioner, and he served as President of the board until May, 1895. He succeeded in changing the whole system of public appointments and in establishing important reforms. He resigned in May, 1895, to accept the position of president of the New York Board of Police Commissioners, and with characteristic energy and vigor he began the work of reform by the application of civil-service principles in appointments to and promotions on the force. He rigidly enforced the excise law and succeeded in closing the saloons on Sunday, and in purifying the city of many corrupting influences which then existed.

Colonel Roosevelt's life on his ranch on the borders of the Little Missouri river in the far West, with all of its exciting adventures, has been given in his *Hunting Trips of a Ranchman*. He went out as a "tenderfoot," but he was soon able to give the cowboy and the ranchman points that they little dreamed of.

Colonel Roosevelt is as modest as he is brave, and his most intimate friends could never succeed in drawing from him any incident of his life the description of which necessitated any reference to himself as the hero. The following incident would probably never

have found its way into print but for the fact that the local editor considered the joke on the "profession" too good to be suppressed: It appears that the Colonel, while stopping at a hotel in a border town, was approached by a typical western "tough," who with accustomed Western politeness invited the "tenderfoot" to take a drink. The invitation was politely declined with thanks. It was repeated, and this time *pressed* by the "tough" with his finger on the trigger of his gun. Suddenly he felt something between his eyes and the ball struck wide of the mark and entered the ceiling above. He fell backward and went to sleep. When he awoke he was not certain whether he had been struck with a cannon ball or the heels of a mule; he concluded, however, that it was not always safe to meddle with a "tenderfoot."

Colonel Roosevelt first became known to the general public outside of his own State when he accepted the position of Assistant Secretary of the Navy in 1897. Shortly after he assumed the duties of office he asked for an appropriation of eight hundred thousand dollars for ammunition for practical target-shooting in the Navy, and a few months later for another appropriation of five hundred thousand dollars for the same purpose. The results at Manila and Santiago justified what was considered at the time reckless extravagance. His connection with the Spanish war which followed is best told in the language of Colonel Watterson in his History of the Spanish-American War. He says:

"It is the nature of Americans to welcome bold experiments and to applaud success. There was no volunteer body of the war that received as much attention and invited as much interest as the regiment of cavalry known as Roosevelt's Rough Riders. That was its popular name although Lieutenant-Colonel Roosevelt was but second in command. His was the resolute spirit that prompted its organization and fixed public interest upon it.

"The Hon. Theodore Roosevelt was Assistant Secretary of the Navy at the opening

of the war, one of those characteristic personalities in the public and private life of the United States that represent the vigor of democracy without regard to difference of opinion. Of the old Dutch stock of New York's oldest settlers, he was born to great wealth and with determined character. Carefully educated in universities, he made his entrance into politics early, with vigorous ideals and practical methods. Greeted with the epithet of the 'dude politician,' he received the epithet with the good nature that an athletic, courageous and good natured man would naturally exhibit. He was soon a representative in national conventions, was the forlorn hope of his party for the Mayoralty of New York, was appointed President of the Civil Service Commission, was Police Commissioner of New York and became Assistant Secretary of the Navy in 1897. Recognizing then the probabilities of the war with Spain, he began to encourage the system of State naval reserves, and made many addresses in which he upheld the manful necessity of war to compel peace and secure justice. The good condition of the navy at the outbreak of war was largely due to his labor and enthusiasm. When war was inevitable he resigned his position as Assistant Secretary and asked for a commission to organize a regiment of cavalry of which Dr. Wood was to be commissioned Colonel. Great was the public surprise. His friends remonstrated with him and urged that he was jeopardizing his career. The authorities suggested that he would be invaluable in the Navy Department. 'The Navy Department,' he answered, 'is in good order. I have done all I can here. There are other men who can carry it on as well as I; but I should be false to my ideals, false to the views I have openly expressed, if I were to remain here while fighting is going on after urging other men to risk their lives for their country.' He declined a Colonel's commission and asked it for his friend Dr. Wood. There was his answer in this self-reliant courage of American manhood. Mr. Roosevelt had written admirable historical

works, exciting stories of adventure in hunting 'big game' while he was leading the life of a ranchman in the far West. He was at once at the beginning and end of the American type, rich, intelligent, thoughtful, cultured, and had 'sand.'

Referring to Colonel Roosevelt's participation in the battle of San Juan, Hon. Henry B. Russell in "The Story of the Two Wars" said: "A little before 4 o'clock occurred the second thrilling episode of the day. Under the brow

THEODORE ROOSEVELT.

of the little hill a council of war was held, the question being whether they should push on and take the main hill where the Spanish block-houses were. Colonel Roosevelt volunteered to head the charge. It seemed a mad rush. A foreign officer standing near the position when the men started out to make the charge was heard to say: 'Men, for heaven's sake don't go up that hill. It will be impossible for human beings to take that position. You can't stand the fire.' But with a terrific yell they rushed up to the enemy's works, and the Spanish, whose courage had fled after the

first charge, retired, and when night came they had been driven back upon the city."

Colonel Watterson in describing the charge said: "After a moment's pause for formation, the volunteers, with Lieutenant-Colonel Roosevelt marching in front of the line, made a dash for the block-house, the men raising the terrible yell of the Western Indians as they went. A murderous fire poured from the block-house. Lieutenant-Colonel Roosevelt turned and waving his sword called on his command to follow him up the hill. The Spaniards poured a steady fire and for a second the volunteer fighters hesitated under the shock of it. At that critical moment the Tenth Cavalry on the valley road to our left and the First Cavalry in the rear that had been ordered against the wings of the enemy had made their attacks and charged up the slopes with the intrepidity of disciplined veterans. The sound of the guns was echoed by cheers from the Rough Riders, who dashed against the block-house with cyclonic force. At the sight of such impetuous daring the enemy burst from the fort and ran to the cover of the woods behind, leaving seventeen dead on the ground as they fled. Then they gave way on both wings and three thousand Spaniards were in full flight before nine hundred and fifty Americans that had fought against enormous odds and disadvantages. No pursuit was possible, and our victorious troops camped on the ground and held it."

The most authentic as well as the most graphic of the famous charge of Colonel Roosevelt is that given by himself in his volume on "The Rough Riders." He says: "The infantry got nearer and nearer the crest of the hill. At last we could see the Spaniards running from the rifle pits as the Americans came on in their final rush. Then I stopped my men for fear they would injure their comrades, and called to them to charge the next line of trenches on the hills in our front, from which we had been undergoing a good deal of punishment. Thinking that the men would all come, I jumped over the wire fence in front

of us and started at the double; but, as a matter of fact, the troopers were so excited, both with shooting and being shot, and shouting and cheering, that they did not hear, or did not heed me; and after running about a hundred yards I found I had only five men along with me. Bullets were ripping the grass all around us and one of the men, Clay Green, was mortally wounded; another, Winslow Clark, a Harvard man, was shot first in the leg and then through the body. * * * There was no use going with the remaining three men, and I bade them stay where they were while I went back and brought up the rest of the brigade. This was a decidedly cool request, for there was really no possible point in letting them stay there while I went back; but at the moment it seemed perfectly natural to me, and apparently so to them, for they cheerfully nodded and sat down on the grass firing back at the line of trenches from which the Spaniards were shooting at them. Meanwhile I ran back, jumped over the wire fence, and went over the crest of the hill, filled with anger against the troopers, and especially those of my own regiment for not having accompanied me. They, of course, were quite innocent of wrong doing; and even while I taunted them bitterly for not having followed me, it was all I could do not to smile at the look of injury and surprise that came over their faces, while they cried out, 'We didn't hear you; we didn't see you go, Colonel; lead on now, we'll sure follow you.' I wanted the other regiments to come too, so I ran down to where General Sumner was and asked him if I might make the charge, and he told me to go and that he would see that the men followed. By this time everybody had his attention attracted, and when I leaped over the fence again, with Major Jenkins beside me, the men of the various regiments which were already on the hill came with a rush and we started across the wide valley which lay between us and the Spanish intrenchments. * * * Long before we got near them the Spaniards ran, save a few here and there, who either surrendered

or were shot down. * * * Lieut. Davis' first sergeant, Clarence Gould, killed a Spanish soldier with his revolver just as the Spaniard was aiming at one of my Rough Riders. At about the same time I also shot one. I was with Henry Bardshar, running up at the double, and two Spaniards leaped from the trenches and fired at us, not ten yards away. As they turned to run I closed in and fired twice, missing the first and killing the second. My revolver was from the sunken battle-ship Maine, and had been given me by my brother-in-law, Captain W. S. Cowles, of the Navy. At the time I did not know of Gould's exploit, and supposed my feat to be unique; and although Gould had killed his Spaniard in the trenches not very far from me, I never learned of it until weeks after.

"There was a very great confusion at the time, the different regiments being completely intermingled—white regulars, colored regulars and Rough Riders. General Sumner had kept a considerable force in reserve on Kettle Hill, under Major Jackson of the Third Cavalry. We were still under a heavy fire, and I got together a mixed lot of men and pushed on from the trenches and ranch houses which we had just taken, driving the Spaniards through a line of palm-trees and over the crest of a chain of hills. When we reached these crests we found ourselves overlooking Santiago.

"While I was re-forming the troops on the chain of hills, one of General Sherman's aides, Captain Robert Howze—as dashing and gallant an officer as there was in the whole gallant cavalry division, by the way—came up with orders to me to halt where I was, not advancing further, but to hold the hill at all hazards.

"I now had under me all the fragments of the six cavalry regiments which were at the extreme front, being the highest officer left there, and I was in immediate command of them for the remainder of the afternoon and that night. * * * The Spaniards who had been holding the trenches and the line of hills, had fallen back upon their sup-

ports and we were under a very heavy fire both from rifles and great guns. Our artillery made one or two efforts to come into action on the firing line of the infantry, but the black powder rendered each attempt fruitless. The Spanish guns used smokeless powder, so that it was difficult to place them. As night came on the firing gradually died away. Before this happened, however, Captains Morton and Boughton, of the Third Cavalry, came over to tell me that a rumor had reached them to the effect that there had been some talk of retiring, and that they wished to protest in the strongest manner. I had been watching them both, as they handled their troops with the cool confidence of the veteran regular officer, and had been congratulating myself that they were off toward the right flank; for as long as they were there I know I was perfectly safe in that direction. I had heard no rumor about retiring, and I cordially agreed with them that it would be far worse than a blunder to abandon our position.

"Soon after dark General Wheeler, who in the afternoon had resumed command of the cavalry division, came to the front. A very few words with General Wheeler reassured us about retiring. He had been through too much heavy fighting in the Civil War to regard the present fight as very serious, and he told us not to be under any apprehension, for he had sent word that there was no need whatever of retiring, and was sure we would stay where we were until the chance came to advance. He was second in command, and to him more than to any other one man was due the prompt abandonment of the proposal to fall back—a proposal, which, if adopted, would have meant shame and disaster. Shortly afterward General Wheeler sent us orders to intrench. * * * We finished digging the trench soon after midnight, and then the worn-out men lay down in rows on their rifles and dropped heavily to sleep. * * * Before any one had time to awake from the cold, however, we were all awakened by the Spaniards, whose skirmishers suddenly opened fire

upon us. * * * At the alarm everybody jumped to his feet, and the stiff, shivering, haggard men, their eyes only half opened, all clutched their rifles and ran forward to the trench on the crest of the hill.

"The sputtering shots died away and we went to sleep again. But in another hour dawn broke and the Spaniards opened fire in good earnest. * * * In this fight our regiment had numbered four hundred and ninety men, as, in addition to the killed and wounded of the first fight, some had to go to the hospital for sickness and some had been left behind with the baggage or were detailed on other duty. Eighty-nine were killed and wounded, the heaviest loss suffered by any regiment in the cavalry division. The Spaniards made a stiff fight, standing firm until we charged home. They fought much more stubbornly than at Las Guasimas. We ought to have expected this, for they have always done well in holding intrenchments. On this day they showed themselves to be brave foes worthy of honor for their gallantry.

"In the attack on the San Juan hills our forces numbered about 6,600. There were about 4,500 Spaniards against us. Our total loss in killed and wounded was 1,071. Of the cavalry division there were, all told, some 2,300 officers and men, of whom 375 were killed and wounded. In the division over a fourth of the officers were killed or wounded, their loss being relatively half as great again as that of the enlisted men,—which was as it should be. I think we suffered more heavily than the Spaniards did in killed and wounded, though we also captured some scores of prisoners. It would have been very extraordinary if the reverse was the case, for we did the charging; and to carry earthworks on foot with dismounted cavalry, when the earthworks are held by unbroken infantry, armed with the best modern rifles, is a serious task."

The city surrendered on the 17th of July, and soon after this the men, being relieved from the constant strain and excitement, began to feel the effects of the climate. Colonel

Roosevelt says: "Every officer other than myself except one was down with sickness at one time or another. Very few of the men, indeed, retained their strength and energy, and though the percentage actually on the sick list never got over twenty, there were less than fifty per cent. who were fit for any kind of work. Yellow fever also broke out in the rear, chiefly among the Cubans. It never became epidemic, but it caused a perfect panic among some of our own doctors and especially in the minds of one or two generals and of the home authorities. * * * The Washington authorities seemed determined that we should stay in Cuba. They unfortunately knew nothing of the country nor the circumstances of the army. Several suggestions were made, and among others it was proposed that we should go up the mountains and make our camps there. * * * The soil along the sides of the mountains was deep and soft, while the rains were heavy. We could, with much difficulty, have got our regiments up the mountains; but not half the men would have got up there with their belongings; and once there it would have been an impossibility to feed them. About the last of July General Shafter called a conference in the palace of all the division and brigade commanders. * * * It was deemed best to make some record of our opinion in the shape of a letter or report which would show that to keep the army in Santiago meant its absolute and objectless ruin, and that it should at once be recalled. At first there was naturally some hesitation on the part of the regular officers to take the initiative, for their entire future career might be sacrificed; so I wrote a letter to General Shafter, reading over the rough draft to the various generals and adopting their corrections. Before I had finished making these corrections it was determined that we should send a circular letter on behalf of all of us to General Shafter, and when I returned from presenting him mine I found this circular letter already prepared and we all of us signed it. Both letters were made public. The result was immediate. Within

three days the army was ordered to be ready to sail for home. This letter was known as the famous 'Round Robin.'"

Colonel Roosevelt with his Rough Riders was encamped at Montauk Point, Long Island, and in the following autumn, peace having been formally declared, he bade farewell to his men, every one of whom was devoted to him, and returned to his home at Oyster Bay.

On September 27, 1898, Colonel Roosevelt was nominated for Governor of New York State. He conducted his own campaign, visiting every important town in the State. His brilliant military record gave him great prestige, and he was enthusiastically received wherever he went. He carried the State by a plurality of 18,079. As Governor he encouraged honest legislation and carried through every reform measure to which he had pledged himself. He carefully scrutinized every bill and withheld his signature from all that had the least taint of irregularity, regardless of party obligations. No man ever had a more difficult task to carry forward the work of reform which he had planned than did Governor Roosevelt at this time. The political pressure brought to bear upon him by the leading men in his own party was very great, but he remained firm and true to his own convictions, even at the risk of losing the influence of those on whom he relied for support. Above all, he put in office as high-minded and able a set of public officials as the State has ever had since its foundation. It was his wish to be elected for a second term that he might complete the work he had begun, but circumstances beyond his control and that of his friends changed all his future plans.

Governor Roosevelt was a delegate to the Republican convention held at Philadelphia in the summer of 1900. The re-nomination of President McKinley was a foregone conclusion. Two or three candidates were brought forward for the vice-presidency, but from the very beginning a pressure was brought to bear by those who sought to defeat his aspirations for a second term as Governor to force on him

the nomination for Vice-President. They failed, however, to accomplish their object, and Governor Roosevelt compelled the New York delegation to definitely abandon its efforts to put him forward, and at the same time he introduced the name of Lieutenant-Governor Woodruff, hoping thereby to secure his nomination, but the delegates simply refused to consider any other candidate and insisted on the Governor's nomination in order to save the electoral votes of half a dozen Western States and thereby assure a majority in Congress. Under these circumstances Governor Roosevelt felt that he was in duty bound to accept, and he was nominated for Vice-President, amid the greatest excitement and enthusiasm, the East and the West, the North and the South rallying around him and pledging him their earnest support.

The presidential campaign of 1900 was the most remarkable of all ever held in this country, and from the beginning to the end Governor Roosevelt fought the battle almost single-handed and alone. He represented honest money, honest principles and a defense of President McKinley's administration; while his opponent, William J. Bryan, clung to his "16 to 1" silver policy, on which he had been defeated four years previously, and exposed the "expansion" policy of the administration. Colonel Roosevelt traveled from one end of the country to the other, even invading the home territory of his opponent, speaking several times a day from the train platform, in the open air on improvised platforms and in public halls, and wherever the people could gather to hear him. With one or two exceptions he met with a hearty reception wherever he went,—even in "the enemy's country." The result was one of the grandest victories ever achieved by the Republican party and Governor Roosevelt was duly inaugurated Vice-President of the United States on the 4th of March, 1901. In his inaugural address he said:

"The history of free government is in a large part the history of those representing

legislative bodies in which, from the earliest times, free government has found its loftiest expression. They must ever hold a peculiar and exalted position in the record which tells how the great nations of the world have endeavored to achieve and preserve orderly freedom. No man can render to his fellows greater service than is rendered by him who with fearlessness and honesty, with sanity and disinterestedness, does his life work as a member of such a body. Especially is this the case when the Legislature in which the service is rendered is a vital part in the governmental machinery of one of those world powers to whose hands, in the course of the ages, is entrusted a leading part in shaping the destinies of mankind. For weal or for woe, for good or for evil, this is true of our own mighty nation. Great privileges and great powers are ours, and heavy are the responsibilities that go with these privileges and these powers. Accordingly as we do well or ill, so shall mankind in the future be raised or cast down.

"We belong to a young nation, already of giant strength, yet whose present strength is but a forecast of the power that is to come. We stand supreme in a continent, in a hemisphere. East and west we look across the two great oceans toward the larger world life in which, whether we will or not, we must take an ever increasing share; and as, keen-eyed, we gaze in to the coming years duties new and old rise thick and fast to confront us from within and from without. There is every reason why we should face these duties with a sober appreciation alike of their importance and of their difficulty. But there is also every reason for facing them with high-hearted resolution and with eager and confident faith in our capacity to do them aright.

"A great work lies ready to the hand of this generation; it should count itself happy indeed, that to it is given the privilege of doing such a work. A leading part therein must be taken by this, the august and powerful legislative body over which I have been called to preside. Most deeply I appreciate the privi-

lege of my position, for high indeed is the honor of presiding over the American senate at the outset of the twentieth century."

On Friday, September 6, 1901, the startling news was flashed over the wire that President McKinley, while visiting the Pan-American Exposition, had been shot by a Polish anarchist named Czolgosz. Vice-President Roosevelt hastened to Buffalo as quickly as possible, reaching there the following day. He was completely overwhelmed by the news, but on arriving at the house of Dr. Milburn, where the President had been taken and where he had been stopping with his family for some days previously, he was overjoyed to learn from the attending surgeons that the wound was not necessarily fatal and that there were hopes of his recovery. He remained in Buffalo for a few days, until the danger point seemed past. He then went on a hunting trip in the Adirondacks. Soon after this a change for the worse took place in the President's condition, and as soon as it was found that death was inevitable, messengers were sent to the Vice-President, who traveled day and night, reaching Buffalo some hours after the President's death. He was driven at once to the house of his friend, Mr. Ansley Wilcox. As soon as he entered Mr. Roosevelt was told that it had been planned for him to take the oath of office at once. This agreement had been reached at a meeting of the cabinet held during the forenoon at the Milburn residence. The new President refused to recognize it as an agreement, and he declared he was not ready to take the oath yet. He was here more for the purpose of paying his respects to William McKinley than of qualifying as William McKinley's successor.

"But, Mr. President," he was expostulated with, "everything is in readiness. Don't you think it would be far better to do as the cabinet has decided?"

"No," retorted the President; "it would be far worse. I intend to pay my respects at William McKinley's bier as a private citizen and offer my condolence to the members of the

family as such. Then I will return and take the oath."

In the face of such an emphatic stand by the new chief executive all arguments availed nothing and President Roosevelt had his own way. He left the Milburn house about half past two o'clock and entered his carriage alone. When he found that he was being escorted by a squad of mounted policemen he stood up and shouted: "Get back! I want no escort. I will have no escort. I am now on a mission as a private citizen." He then drove swiftly to the Milburn house and after paying his respects to the dead President returned to the Wilcox house to take the oath, reaching there shortly after three o'clock. All the members of the cabinet and a number of others were assembled there. Among these was Judge Hazel, who was to administer the oath.

"President Roosevelt," said Mr. Root, "I have been requested by all the members of the Cabinet of the late President who are here in the city of Buffalo, being all except two, to request that for reasons of weight affecting the administration of government, you should proceed without delay to take the Constitutional oath of office."

A silence fell upon the group. It lasted but a minute and then Mr. Roosevelt spoke: "Mr. Secretary, I shall take the oath at once, agreeable to the request of the members of the Cabinet, and in this hour of trouble and national bereavement I wish to state that it shall be my aim to continue absolutely unbroken the policy of President McKinley, for the peace and prosperity and honor of our beloved country." He then took the oath and Vice-President Theodore Roosevelt became the twenty-sixth President of the United States. Although but a few brief months have since passed at this writing, his course is so clearly marked that all recognize his policy, and although the youngest who ever occupied the presidential chair he has the confidence and support of leading men throughout the nation.

It is difficult to conceive how any one so

thoroughly absorbed in public affairs could find time to devote to literary work, and yet Colonel Roosevelt has achieved a world-wide reputation as an author, and his works have become standard on the subjects he has treated. Among the best known are: "History of the Naval War of 1812" (1882) and "Hunting Trips of a Ranchman" (1883). As a biographer he has won fame as the author of the "Life of Thomas Benton" (1886); and "Life of

the United States of the territory west of the Alleghanies, and in their intrinsic merit and their importance as contributions to history they rank with the works of Parkman. His books have been characterized as "marked by felicity, vigor and clearness of expression, with descriptive power."

As a man of letters it may be said as more completely true of Mr. Roosevelt than any other writer, whose books are as numerous

PRESIDENT ROOSEVELT'S LIBRARY.

Gouverneur Morris" (1888). He has also published "History of the City of New York" (1890); "Essays on Practical Politics" (1898); and has collaborated with Captain A. S. Mahan in writing the "Imperial History of the British Navy;" he is also joint author with Henry Cabot Lodge of "Hero Tales from American History." The most important of his works, however, are the volumes bearing the collective title "The Winning of the West." These have for their subject the acquisition by

and widely read as his are, that he has merely adopted literary expression with the aim of placing before the public facts and ideas which he sincerely believes to be worthy of consideration and preservation. His presentation of facts, however, is useful and stimulating rather than merely entertaining, while his ideas represent an eloquent appeal for a general and wholesome examination of the truths which he so fervently believes and so ardently advocates. In other words, Mr. Roosevelt is

in no sense a professional author. The books he has written simply represent one phase of a very active career. On the title page of "Ranch Life and Hunting Trail" we find cited that passage from Browning ending with the words—

How good is man's life, the mere living.

which speaks more eloquently and is more characteristic of Mr. Roosevelt as a man, and, therefore, necessarily as an author, than all that litterateurs have written and all that poets have sung about the beauties of rhetoric and the philosophy of style.

Mr. Roosevelt's first published work was his history of "The Naval War of 1812," which bears the date of 1882, and it is a singular coincidence that his most recent production, written just as his term as Vice President of the United States was to be brought to a fateful close, should be a contribution to an English work on the same subject,—*"The Royal Navy,"* Vol. VI, by Laird Clowes. A comparison of these works offers an excellent opportunity to observe the mental development of the man in a most important field of historical study and observation. One was written at the age of twenty-three; the other at forty-two. It is not from the fact that we find the patriotism less intense, or the presence of any taint of Anglomania in the later work, but because the man has learned to think for himself, has freed himself entirely from the anti-British prejudices which for years have inspired the makers of many American school books; and he has from a fuller knowledge been able to appreciate the merits of the enemy and to point out the reasons for his misfortunes in a clear, almost scientific manner and without undue laudation of American enterprise and courage. Moreover, it is not singular that his historical works, particularly *"The Winning of the West,"* should have a vitality which few histories possess. It is because he has lived with and knows intimately the trapper, the hunter, the frontiersman of to-day, that he has been enabled to reproduce the dis-

tant predecessors of these men and their surroundings with marvelous intimacy.

In the last nineteen years Mr. Roosevelt has written over a dozen books, which are included in many departments—history, biography, travel, observation and politico-ethical discussion. At the same time he has occupied successively various positions in public life upon which he has left the stamp of his individuality and the results of his tireless energy. What these offices were and what he did in them have taken their place in our State, municipal and national history, and are now more or less familiar to every one. But the more one becomes familiar with Mr. Roosevelt's public achievements the more must one marvel that he could have produced the books that he did, which, from the point of view of mere mechanical and mental labor, would have been considered more than adequate to establish the literary reputation of a professional writer.

To attempt a character sketch of Colonel Roosevelt is a most difficult undertaking. He can be judged only by his acts. His motive is always apparent, for he is incapable of duplicity. His utterances both public and private are clear, distinct and unequivocal. Whether his opinions are right or wrong they are honestly held and are stated with simplicity and directness. He is emphatically a man of action, and his writings deal with matters of observation rather than thought; he is no theorist, but intensely practical. With determination and undaunted courage he combines tenacity of purpose. If he ever experienced the sensation of fear it is known only to himself. He has the instinct of a soldier, and in emergencies does not stop to consider whether or not the odds are against him, but obeys orders with decision and accepts the consequences. He is as generous as he is brave; bears no malice; and after inflicting punishment on an adversary he would instantly seek to alleviate the pain he has caused. With the heart of a lion in danger, he is moved to pity at the sight of suffering, and without a moment's hesitation would befriend a fallen ad-

versary. His qualities and achievements have made him a popular hero, and in a democratic society like ours there is no distinction which he may not hope to attain.

Colonel Roosevelt married, first, Miss Alice Hathaway Lee; second, Miss Edith Kermit Caron, and his children are Alice, Theodore, Jr., Kermit, Ethel, Archibald and Quentin. The children rough it at their country

cool breezes of Oyster Bay in summer and a warm, comfortable stall in winter.

The entrance to Sagamore Hill is up a winding road through a thickly wooded country for some distance until a "private road" turning sharply to the left is reached, which leads up to the home of the Vice-President. The view on reaching the crest of the hill is a most beautiful one, although partly obscured

PRESIDENT ROOSEVELT'S HOME, OYSTER BAY.

home, Sagamore Hill, as did their father, enjoying the utmost freedom, apparently unconscious of the honors that have been showered upon the father by a grateful and appreciative constituency. The veteran war horse "Texas" that carried him through the Santiago campaign munches his oats and hay in the stable in peace and quietness, glad no doubt that his campaigning days are over and that for the remainder of his life he can enjoy the

on the west and south sides of the house by the dense growth of forest trees. From the east and south sides a fine view of the bay is presented. A lawn of several acres slopes down to the wall of forest trees, and the other side, which is nearly level, is devoted to farming purposes. The character of the exterior of the dwelling is known as the Queen Anne style of architecture. It is a substantial edifice, the first story being of brick, the second

and third stories of frame. A wide piazza extends around two sides, from which a beautiful view of the surrounding country is obtained. The entrance to the house is through a vine-covered port-cochere. The wide hall, simply furnished, contains numerous trophies of the Colonel's life in the far West. The large

library looks like the workshop of an active brain worker. A portrait of the father which hangs on the wall looks benignly down on the son, who, with unceasing energy and tireless industry, works out the great problems of life, stimulating in others a desire to be something and do something for their fellow men.

BY COURTESY OF THE LONG ISLAND RAILROAD COMPANY.

OLD WINDMILLS ON LONG ISLAND.

CHAPTER LXIII.

SUFFOLK COUNTY.

UFFOLK county includes all of Long Island lying to the east of the township of Oyster Bay. Its greatest length is about ninety miles and its greatest breadth, from Eaton's Neck to the Great South Bay, twenty miles, and its area measures about 1,200 square miles. The eastern extremity of the county is divided by Great and Little Peconic Bays and Gardiner's Bay, into two narrow, unequal branches, between which are Gardiner's, Shelter, and Robin's Islands, which, with a number of smaller islands, form a part of the territory of the county.

From 1665 to 1683 the county formed the East Riding of Yorkshire. The first settlement of white people was made in 1639 on Gardiner's Island, and then in quick succession settlements were effected on the mainland and town governments set up. The settlers were mainly from New England and most of them were devout, God-fearing people, strongly imbued with Puritan doctrines and zealous in their religious observances. Some of the towns they founded were even more thoroughly theocracies than was to be found in New England. They kept aloof from the Dutch and held that whatever state allegiance they owed was to Connecticut. In the Revolution the county was strongly patriotic, and willingly contributed its quota of troops to the forces of the Committee of Safety. "Suffolk county," writes the historian of the Battle of Brooklyn, "had early given evidence of its hearty zeal for republican doctrines. Out of its whole popu-

lation of freeholders and adult male inhabitants, numbering 2,834 between the ages of sixteen and sixty, only 236 were reckoned as being of loyalist proclivities. The enrolled militia of the county exceeded 2,000, of whom 393 officers and privates were in the ranks of Colonel Smith's regiment, the best disciplined and armed on the island. It was the only one that could be considered in any form to have survived the shock of the 27th of August, and only a small part even of this body ever did service after that fatal day." General Nathanael Greene seems to have fully appreciated the value of Colonel Smith's regiment, if we correctly interpret the following letter he sent that officer:

Camp at Brookland, Aug. 9, 1776.

Sir: Enclosed are the resolutions of the Provincial Congress ordering you to join my brigade immediately. On the receipt of this you will march the troops under your command immediately to this camp. You will make all possible expedition, as the enemy has embarked part, if not all, the troops on Staten Island, and are making dispositions as if they meant to land here. You will send out scouts and parties to get intelligence. If the enemy should make their landing good on any part of the island and hear of your coming they may send out a party to intercept your march. Keep good front, flank and rear guard to prevent being surprised.

I am, Sir, your most obedient, humble servant,
NATHANAEL GREENE.

Colonel Josiah Smith.

After the battle some, at least, of the Suffolk and Queens troops joined the main body

of the patriot forces, but the hearts of the men seem to have been in their defenseless homes. Onderdonk says:

"The Committee of Safety on September 3, 1775, in session at Fishkill, hearing that Colonel Smith's and Rensen's regiments are dispersed or have been disbanded without permission of the State, resolved 'that General Clinton detain as many of said levies as possible, even if they produce passes, it being of the utmost consequence that so large a number of armed men should not be added to the enemy's power on Long Island, and that the committees of West Chester, Horse Neck, Stamford and Norwalk diligently watch all boats passing from the main to Long Island.'

"Most of the militia recrossed to Long Island and took British protection to save their property from confiscation and their families from insult. Some followed Congress to Fishkill, where we find Lieutenant Onderdonk 'in some distress' and Captain B. Coe 'in distressed circumstances, who recovered £20 due him. Colonel Smith returned to Long Island and was subsequently taken from his home at Moriches and thrown in Provost by the British. His daughter, Hannah, in her labors and excursions to procure his release, caught a cold that brought on a deafness, from which she never recovered."

During the occupation of Long Island Suffolk county was in a terrible plight. British troops were stationed at various points; descents of patriots, Tories and pirates on her coasts were frequent, the exactions of the military were most severe and military law was often exerted in its most cruel form. The people seemed to have remained, outwardly at least, quite passive, and Governor Tryon, after a tour through Long Island, wrote to his home government as follows, in a letter dated December 16, 1776:

"On the 10th inst. I reviewed the militia of Queens county at Hempstead, when 820 men were mustered, and on Thursday following I saw the Suffolk militia at Brookhaven,

where nearly 800 appeared, to all of whom, as well as to the militia of Queens county, I had in my presence an oath of allegiance and fidelity administered. * * *

"A very large majority of the inhabitants of Queens county have indeed steadfastly maintained their loyal principles, as have small districts in Suffolk. Some men from South and East Hampton, who attended the review, assured me that rebel parties from Connecticut were then on the easternmost part of the island, and which prevented in general the settlers in that quarter from attending my summons, but that they are very desirous to be under a peaceable obedience to his Majesty's authority. * * * Three companies, I learned, had been raised out of Suffolk for the rebel army, most of whom, I was made to understand, would quit that service if they could get home. I have the pleasure to assure your Lordship that through the whole of this tour I did not hear the least murmur of discontent, but a general satisfaction expressed at my coming among them, and, to judge from the temper and disposition I perceived of them, there is not the least apprehension of any further commotions from the inhabitants on Long Island. * * * The General has been pleased to give my Secretary, Colonel Fanning, a warrant to raise a battalion of Provincials for the American service, and for the term of two years, or during the war, at the General's discretion."

When the occupation was over Suffolk county was assessed £10,000 as her share in the cost of the war, or, as Silas Wood puts it, "for not having been in a position to take an active part in the war against the enemy!"

The county lost no time after the declaration of peace in getting back to its old quiet and prosperous channel. Its farmers resumed work in their fields, the deep-sea whale-fishing trade was inaugurated, and by 1791 the county had progressed far enough to see its first newspaper, the "Long Island Herald," established at Sag Harbor by David Frothingham.

In the war of 1812 a British fleet was stationed off its coast and several trifling descents were made, but practically, except for the worry and excitement, that conflict interfered but little with Suffolk county. Since then its progress has been slow but steady until within a few years ago, when the extension of the railroad to its eastern end by degrees brought even its extreme points into close touch with the rest of the county, and made much of it available for the summer colonies which are now so numerous and important.

Up to 1872 Suffolk county was divided into nine townships. In that year the present town of Babylon was formed, making the entire number ten, as follows:

Huntington.	Riverhead.
Babylon.	Southampton.
Smithtown.	Easthampton.
Islip.	Southold.
Brookhaven.	Shelter Island.

At the annual meeting of the Historical Society of Suffolk County, held at Riverhead in February, 1900, the Rev. Dr. Ephraim Whitaker delivered an address on "Fifty Years of Suffolk County," which, with his permission, is here reproduced:

The life of any region springs fundamentally from its physical basis. In its conditions and relations of land and water our country for the last half-century has maintained the attractive and desirable features of its earlier years. The sinking of the land along the Atlantic shore from Cape Cod to Florida has been too slow to produce much effect upon our condition. This decadence of the land may be due merely to those changes in the life of our planet which cause the ceaseless cooling and consequent shrinkage of the surface of the earth. This solid surface may be fifteen miles in thickness, and equal in depth to that of the atmosphere surrounding our globe—not as thick in comparison with the earth as a sheet of tissue paper on a man's head in comparison with the height of a man. This decadence has given us a few earth-

quakes within the last fifty years, but none like that which gave Charleston so dreadful a shake.

The new lighthouse, built in water several feet deep, at Orient Point, stands where living men have seen fields of grain ripening for the harvest. Along the shores of the ocean and the Sound we have lost a small quantity of fruitful land. We have gained as much by the accumulation of rich soil around lakes and ponds and other bodies of shallow water. Furthermore, this natural make of rich and valuable soil has been wisely increased in many places by human implements and industry.

Our county retains its great physical attractiveness. It is abundant in scenes of picturesque beauty. It has no mountains; but close at hand, throughout its whole length of nearly a hundred miles from the line of Nassau county to Montauk Point and Fisher's Island, we see the grandeur and the sublimity of the ocean, which surpasses the impressiveness of the unchanging mountains, because it is alive with the movement and partakes of the magnificence of the illimitable heavens. And everywhere, throughout our bounds, the eye is delighted with charming pictures of hill and valley, lakes and rivers, and all forms of inlets, coves and bays.

The terminal moraine of the Arctic glacier is the firm rampart (from end to end of our county) that gives strength and stability to all its parts, and under its abiding protection the gentle plains spread their sunny slopes to the life-giving breezes of the ever-changing sea. Here Nature has permitted no lack of variety and beauty, and no scarcity of fruitfulness for the support, the comfort, the enjoyment of man. And all these resources, which Nature has so amply provided, the people of our county have in these fifty years past been making more available and valuable.

The northern half of the county is signally diversified. It contains every form of hill and dale which the forces of ice and water and gravitation can produce. From hundreds of pleasant elevations one beholds on Sound and bays and inlets the inextinguishable laugh which Homer saw on the face of the sea before the drop serene veiled his and Milton's eyes.

There are nowhere choicer sites for elegant country homes than our whole north shore presents from Huntington to Orient, not to mention our Fisher's Island.

Men are greatly affected by the climate in which they live. It may be cold, hot, dry, moist, rare or dense. In many places, as in our own county, the climate depends more or less upon the presence or absence of forests. In many parts of our county the half century has seen forest land converted into fruitful fields. But this advantage has produced no want of balance in our healthful climate. Tens of thousands of trees for fruit, shade and beauty, with shrubs and vines for ornament and use, have well supplied the absence of common trees. Villages that fifty years ago were in the summer season scorching in the glowing sun now resemble pleasant parks adorned with goodly trees of resplendent variety and attractiveness. The desert has become paradise. Furthermore, many of these well-adorned villages have doubled their size since 1850. The people of the county have changed far more than the soil they occupy or the healthful and genial air which they breathe.

The bringers of Christian civilization hither two hundred and fifty years ago were nearly all people of pure English blood. There were among them a few French, Scotch, Welsh and Dutch families. The French appear in the names of L'Hommedieu, Diamant (Dimon), Fithian, Pelletreau, Sallier, Boisseau. The Scotch are seen in Muirson, Blythe, Gelston. The Welch in Floyd, Wines, Lloyd. The Dutch in Schellenger and others.

After the greater part of Long Island was torn governmentally from its kindred New England in 1662 the people here were doubly isolated. The Sound and the ocean were less a barrier than the repulsive government and the uncongenial population of New York. Hence our people lived signally within themselves for several generations. The county produced its own men and women—its own farmers, mechanics, merchants, sailors, fishermen, ministers, lawyers, doctors. It produced, also, in great measure its own food, clothing, utensils, buildings and other supports and comforts of its citizens. It asked no favors and received little benefit from the great world beyond it. This somewhat undesirable but thoroughly natural state continued until near the middle of the century which has just ended.

For two hundred years young people had swarmed from the teeming hive. Few persons from abroad had made their homes within

its bounds. Now and then a young man, who, for trade or toil, had gone forth and found the treasure of his life elsewhere, returned with his bride. But cases of this kind were rare. For Suffolk county girls were then, as they are now, good enough for any man. When this uncommonness of our condition terminated, the population of our county was about 37,000. In these fifty years it has nearly doubled its resident citizens. During the summer, including visitors and cottagers, it is above 100,000.

The rate of increase in wealth has been far greater than in population. An indication of this fact is seen in the establishment of banks. The county, it is supposed, had no bank in it fifty years ago. It certainly had no savings bank. It now has two national banks in Greenport, one in Sag Harbor, one in Southampton, one in Riverhead, one in Patchogue, one in Babylon, one in Port Jefferson, and one or more elsewhere. There is a private bank in Easthampton, one in Sag Harbor, one in Riverhead, and others, it may be, in different places.

The Southold Savings Bank was organized in 1858. This has been followed by the organization of those of Riverhead, Sag Harbor and Patchogue. These savings banks now have six millions of dollars deposited in them. It is believed that the Suffolk county depositors in savings banks equal in number one-tenth of its whole population, as many as half the men who voted last year at the election for county officers. Furthermore, our citizens have millions of dollars invested in life insurance. It is needless to conjecture how many millions they have in Government bonds and in other bonds and stocks.

Many causes have been active to effect the changes already indicated. The building of the railroad from one end of the island to the other brought into the county a small army of men born on the other side of the sea. Many of them saw the fitness of the land to reward industry, to afford health, and to make pleasant living. They set up their banners all along the road, and they have not ceased for half a century to call their kindred and countrymen effectively to their standard. These and their descendants are now an important part and element of our people. The railroad has notably fostered a change in the agriculture of the county by making quick and ready access to the best markets for the produce

of the soil. And this change has summoned a multitude of men of alien birth to work the ground. The facilities of travel by cars and steamers between the great emporium and our beautiful shores and villages, with their ocean waters and health-giving air, have brought hither in ever increasing throngs the summer visitors who have profoundly affected our native citizens and rural ways.

The opportunities for thrift and gain of riches here have also led many other classes of persons to build their homes within our bounds.

These enlargements of the life of our country have not turned away our people from agriculture as their chief employment. They are well pleased with the ways of Cincinnatus and the Master of Mount Vernon. But they have revolutionized the methods of their fathers. These gave a large part of their time and strength to the work of gathering fertilizers for their fields. The seaweed of the ocean, the grass of the bays, the sedge of the marshes, the fishes of the briny deep, and even the leaves of the trees were diligently and toilsomely collected to be used in giving heart to the land and making it yield fruitful harvests.

The products of the soil in those days were little else than grain, potatoes, turnips and hay. Step by step the farmers have had recourse to chemically prepared fertilizers and to the raising of a wide range of marketable crops. The vast regions of the West and Northwest of our country have made the cultivation of grain on Long Island unprofitable. Formerly Suffolk county land, in broad fields, raised wheat and rye and oats. For these crops its occupation is gone.

On the other hand, our nearness and facilities of access to the great markets in the populous cities of New York and New England enable our farmers to raise and sell green crops to advantage. Strawberries, cranberries, cabbage, cauliflower, and kindred vegetables, as well as various fruits, have come to be a prominent part of the sources of our support and wealth. Increase of this kind of industry and profit has come from the ever-increasing accession of summer guests and cottagers and from the multiplication of factories for canning fruits and vegetables in the neighborhood of their growth.

All of this transformation has been animated and fostered by the beginning which

invention has made in the creation of manifold and effective agricultural implements. The farmer of fifty years ago, if he should now return to us, would not know the names of half the tools and utensils that his son now employs. He could not name a monkey wrench; and the boys of to-day will hereafter use more implements of future invention than all that now exist. The weeder, the mower, the tedder, the reaper, the binder, the thrasher, the sifter, the planter, the drill, the digger, and others, separate or combined, and with or without steam power, have come after the hoe, the spade, the plow and the harrow, but there are many more to follow that have not yet been invented. These inventions have already made the farmer's life easy and pleasant in comparison with his toilsome days and weary nights five decades ago. He does not now sling a peck of wheat over his shoulder, trudge over soft, uneven, plowed ground, and scatter the seeds with his ever swinging and ever increasingly weary arm. He pours his grain into a box, mounts his seat behind his fine span of horses, says to them "go," and the drill does the rest.

Next to the cultivation of the soil the most interesting industry of our country for these years has been the building and use of sea-going vessels. The departments of productive activity dependent upon navigation and fishing, or included in them, were in full vigor, operation and fruitfulness at the beginning of the period under review. The shipyards of Greenport, Patchogue, Port Jefferson, Setauket, Stony Brook, Northport and other places in the county were scenes of skillful and profitable employment, where capable designers and draftsmen and expert mechanics created the finest crafts that pierced the waves and delighted the hearts and justified the pride of seafaring men. Every year these yards sent forth both sloops and schooners of shapely beauty and excellent fitness for profitable use or healthy pastime. Some of these yards also built brigs and barks and barkentines—vessels that asked no favors of any others of their respective classes that sailed the sea.

In the midst of this prosperity came the union of British lords and American slave masters with the infernal purpose of destroying our nation. They lighted the highways of the ocean with our flaming ships and swept from all the courses of foreign commerce our

whole merchant marine. These things are said

"Lest we forget—lest we forget."

This violent outbreak of the confederacy of envy abroad and oppression at home made the soaring eagle of our Suffolk county shipyards a feeble bird with broken wings. Our beautiful flag of stars and stripes—the red, white and blue—that waved so proudly on our clipper ships in all the commercial ports of the globe, disappeared from human vision there like a vanishing cloud that shrinks away from the heavens under the burning rays of the noonday sun.

But, though the field of foreign commerce was lost in the flames which British and Confederate ambition kindled, all was not lost. There remained, as in the hero of Milton's sublime creation, the unconquerable will:

"And courage never to submit or yield
And what is else not to be overcome."

The coasting trade and the fisheries continued to be available; and our vessel-builders made the best of these important and valuable remainders. In the harbors along the Sound, and at Greenport and other places, the enterprise of our shipwrights—no other workers are more enterprising than they—rose to the height of the demand made upon their genius and diligence.

But unhappily they had in those days to fight another battle, which soon became a somewhat unequal contest. It was the defensive battle of the wind against the invading power of steam. It was essentially the same kind of a combat which steam is now compelled to wage against the encroaching power of magnetism. It is said that when Edison crossed the ocean he could not sleep during the voyage. This was not due to the ceaseless tossing of the ship which conveyed him, but to his inability to see how he could harness the forces of the waves—old Neptune's steeds—and make them work for man under human control and direction on the land. Well, he need not be too much cast down; for doubtless the whole globe is a magnet, and Edison, Bell and Marconi and others are following Henry and Morse and showing how it can be put into harness on both land and sea.

The Hon. Lewis A. Edwards, of Orient,

one of our society's in memoriam members, was a man whose soul was commensurate with the statelyness of his physical frame and with the dignity and winsomeness of his bearing and manners. Not a small part of his well-earned and comfortable fortune was at one time invested in sailing vessels. I remember distinctly how he said to me: "I formerly believed that steam would never master wind upon the high and open sea for the conveyance of freight. I believed that the inexpensiveness of the one would be more than a match for the greater constancy and certainty of the other. But I have changed my mind. The last two years have decided the battle, and the steamers have won the victory." That was perhaps twenty-five years ago, and our Suffolk county shipwrights were building sailing vessels.

Furthermore, this was not the only battle fought and lost which affected the shipbuilders of the county. Another contest was that of iron and steel against wood, and the triumph of the former, while our shipwrights were generally workers in wood. To maintain their business and make it profitable they had to unite in themselves the daring of the mariner, the courage of the soldier, the venturesomeness of the merchant and the genius and skill of the engineer. One fact shows their eminent ability: they have at no time ceased to build seafaring vessels—crafts of nearly every kind, rowboats, fishing smacks, pleasure yachts, scollipers, sloops, schooners, barks, brigs. The trader has given employment to hundreds of men; and they have matched in the excellence of the fruits of their toil that of the worthy architects, builders and mechanics who have erected houses, barns, mills, bridges and other structures which have within the last fifty years utterly changed the face of the county for the better so far as this can depend on the work of men's hands. For the period in review has made nearly all things new in the villages not only, but also on the farms. Advance and improvement in size, style, surroundings are seen everywhere. Increase in wealth has made the delightful change not more than the growth and progress of intelligence and the elevation and refinement of taste.

The builders of houses have perhaps made no more remarkable advancement than men in other employments have manifested. In every department of mechanic arts are seen

the gratifying improvements of the half-century.

In other directions may be seen noteworthy changes in the employments and conditions of our industrious and thrifty fellow citizens.

Within the last decades many poultry farms have been established. From some of these severally three or four thousand ducks are sent to market every year. Others yield one or two thousand each. Changes for the better in the incubators and other apparatus as well as in the buildings, and the business generally, have been made and continue.

The whaling business in Suffolk county culminated a few years before the beginning of our half-century. One of the causes which depressed it was the transfer of California from Mexico to the United States, and the discovery of abundance of gold there. The fascination of luck always had an influence in drawing men to the pursuit of whales. It is true that courage, coolness, skill and strength were required in striking them, but even with these manly qualities there was much uncertainty in capturing them. Furthermore, there was no full assurance of finding them even in the most likely places. The business always contains an element of fisherman's luck.

The pursuit of gold in California presented at not a few points a striking resemblance to the pursuit of whales. The successful pursuers must be enterprising, brave, resolute, venturesome, patient in hardships and capable of immense endurance.

So our adventurous men fifty years ago made their way to the Pacific coast for gold. Nearly an hundred sailed under Captain Henry Greene in one ship. Many others went to try their fortunes by other means of venturiance. The experience which they acquired in that distant region—then far away—afforded them no little advantage on their return home. Some, alas! never returned. Their burial place is like that of Moses. The change in the method of fishing for menhaden a few years later gave to the same sort of men desirable employment. During the first half of the century these fish were mainly taken by Suffolk county people in huge seines cast around them and drawn to the shore. They were used in a crude way to enrich the fields. Many millions were thus taken and used every year. Sometimes a million were caught and landed at one haul, making seven hundred tons or more. The seines were drawn

ashore with the fish by horses. It was not till 1850 that these fishes were steamed for the extraction of oil from them. The building of factories for this purpose soon led to a new method of fishing, which is used in the deep water of the bays, the Sound and the ocean. The seines of several hundreds of feet in length are discarded and shorter nets are used. These are cast around a shoal of fishes and then drawn together like a purse, and hence called "purse nets." From these purses the fish are scooped out and conveyed to the factories.

These developments caused the invention of new models for seagoing vessels, which were constructed, especially steamers, accordingly. The mental originality, ingenuity and constructiveness applied to the business are extremely commendable, and the various parts of the business now employ millions of capital and many hundreds of men. In its present models, it is wholly a creation in the last half-century, and is a signal illustration of the methods by which creating Mind has produced the advance and diversity of Nature.

All the wealth which comes from the business is drawn from the boundless treasures of the sea—far more inexhaustible than any mines of the earth; and if the product should be multiplied a thousand fold the illimitable sources of it would not be perceptibly diminished.

It is time to look at some other aspects of the life of our county. Thirty-nine years ago the leaders of the slave masters of our country began a war to divide and destroy our nation; to stop the flow of the Mississippi unvexed to the sea. The national government called all patriotic citizens to defend the life of the nation. The young men of Suffolk county heard the call. They did not lag and scheme for commissions, but many of them resolutely accepted the hardest and most dangerous service. They were ready to risk their lives around the dear old flag that had proudly floated from the Atlantic to the Pacific, from the Lakes to the Gulf, over courthouses and capitol, over forts and arsenals, and over American ships in every commercial port of the globe. Their mothers, wives, sisters, sweethearts were as patriotic as they dared to be, and bore up under the burden of their absence and the peril or loss of their lives.

The flowers that deck the graves of our heroes, and the starry flag that waves over

them, and the tender and grateful remembrance which we cherish for them with each returning spring time in the cemetery of every village of our county, attest the devotion and the unselfish love of country which the men and the women of old Suffolk have shown.

They died not in vain. They laid down their lives that the nation might live, and that righteousness, freedom and Christian excellence might flourish on earth. And no lips can speak the wonders of that prosperity, wealth, power and glory which have come like a new creation from the rescue of the nation in whose behalf they gave their precious blood. The fruits of their virtues, toils and death have made our country the astonishment of the world.

Fifty years ago there were three newspapers published in the county—perhaps four or five. The last Year Book of our Society contains the names of twenty-three now published. We have seen a score of these outshoots of the press in twice as many years bloom and wither. They derive their origin and support mainly from political partisanship and show plainly the character of their parentage. They put to rout the oral gossips and perform a desirable function in the social life of our villages.

One cannot present a full list of the list of the authors, native or resident, of this county, who have in these five decades published separate volumes. An incomplete list includes the Rev. Drs. James B. Finch, Enoch C. Wines, Edward Hopper, William P. Strickland, Samuel E. Herrick, Egbert C. Lawrence, Samuel H. Kellogg, Allen Page Bissell, Ephraim Whitaker, William Force Whitaker, Joseph Newton Hallock, John Balcom Shaw, Robert Davidson, the Rev. Messrs. Alanson A. Haines, Abraham S. Gardiner, James Coote, Edward Warriner, Jacob E. Mallmann, Samuel Whaley, Charles E. Craven, Joseph H. Young, Phineas Robinson, John Reid, Charles Hoover, the Hon. Henry P. Hedges, the Hon. Joseph Nimmo, Jr., Prof. Eben N. Horsford, Prof. Alonzo Reed, Prof. Edward R. Shaw, Prof. Isaac F. Russell, Archivist George R. Howell, Frank A. Overton, M. D., Isaac McLellan, David Philander Horton, John O. Terry, Alonzo Foster, Mrs. Mary L'Hommédieu, G. Horsford, Mrs. Ella B. Hallock, Miss Cornelia Huntington, Miss Mary B. Sleight, Miss Mary Hubbard Howell, Miss Anna Reeve Aldrich, Augustus Griffing, David

Gardiner, Richard M. Bayles, William S. Pelletreau, Charles B. Moore.

Many artists have made their respective homes in various parts of the county, and their famous school at Shinnecock Hills is the gathering place of scores of them during a long season from spring to autumn every year.

Yacht clubs, golf clubs, fishing and gun clubs, and other organizations for sports and pastime, give zest and pleasure to the country life of hundreds of cottagers. These and the cyclists have made their first conspicuous appearance in the half-century.

So have the brave and skillful life-savers at the long line of stations which the nation has established along the coast. To obtain this service for humanity my friend, William A. Newell, M. D., Governor of New Jersey, and subsequently of Washington Territory, had himself elected to the Congress of the nation, and made it his chief concern there to secure the passage of a law to begin and establish the service which Sumner I. Kimball, Superintendent, has so worthily directed and promoted.

The schools of the county have become less numerous than formerly, and have lost in some measure their individual traits of character. They have generally approximated an uninteresting and typical sameness of manner and quality.

The public schools having become a part of the machinery of the political parties, with extreme power of taxation, and millions of money in the hands of a few central operators, to be used for their purposes every year, these schools have a character distinctly unlike those of earlier days. They have been effective in gradually closing the academies that were formerly sources of intellectual life in the several villages of Easthampton, Remsenberg, Bellport, Southampton, Franklinville, Riverhead, Mileir's Place and elsewhere.

These academies were generally taught by able and ambitious young men of liberal education, whose instruction, impulse, example and inspiration animated and impelled their bright pupils to aim at excellence and noble ends. These teachers sometimes entered upon other pursuits and won eminence, distinction and honor in walks of professional usefulness. Thus they led onward an attractive and inspiring procession of worthy followers. Their day is past.

The schools of the county are now far less

individually distinctive and far more mechanical. They work with magnetic energy to bring all their pupils to the same level in their respective classes. All the public schools were made free about thirty years ago. More recently the attendance at schools of children within certain ages has been made compulsory, and by these means the likelihood of deplorable illiteracy has been diminished.

Remarkable changes have occurred in the churches of the county. In 1850 there were as many as ten African churches, most of them Methodists; and these about equally divided between Methodist Episcopal and Methodist Episcopal Zion. There were also African churches unconnected with each other. These African churches, for the most part, continue alive, with no great variation in the number. There were four Baptist churches. These remain, and twice as many have been added to them. The Congregational churches then numbered fifteen, and do now. Four Lutheran churches have been organized and are flourishing. The Methodist Episcopal churches are forty. About half of them have been organized within the period of fifty years. The Methodist Protestant churches are two, as formerly. The two New Jerusalem churches have become one. One Pentecostal church has been organized. The twenty Presbyterian churches have become forty-two, including eight chapels in which public worship is held on Sundays. The Protestant Episcopal churches have multiplied from five to twenty that are ordinarily served by clergymen, though several of them are open in the summer only. One Reformed church has been organized. The Roman Catholic churches, with one exception, have all been established within these fifty years. They are twenty-four in number, with several missions in addition, and are served by sixteen priests. There are two Universalist churches—one formed earlier, the other later, perhaps, than 1850.

Thus the churches within the half-century have more than doubled in number, and increased more rapidly than the whole population of the county. This is not twice as numerous as it was fifty years ago. These churches combined are now served by as many as 140 clergymen. The full pastoral service of a minister does not probably exceed, on the average, twenty years. To maintain the supply requires an accession of seven each year. At this rate three hundred and more come and

go in half a century. Doubtless, 200 have passed away since 1850.

In the various towns of the county, from their origin, 250 years ago, there has always been a Christian ministry of high character in morals and religion, of eminent ability, and of liberal education. There has been no lowering of the standard during the period under review.

Among those who have passed away in this period may be mentioned: Baptist—Charles J. Hopkins, Alvin Ackley. Congregationalist—Charles J. Knowles, Henry T. Cheever, Christopher Youngs, Thomas N. Benedict, Charles Hoover, Aaron Snow, Henry Woodruff, Eusebius Hale. Methodist Episcopal—Thomas G. Osborn, Seymour Landon, Marvin R. Lent, George W. Woodruff, Edward Warriner, George Hollis, Stephen Rushmore, Samuel A. Seaman. Presbyterian—Enoch C. Wines, Edward Hopper, Hugh N. Wilson, William B. Reeve, M. D., Augustus T. Dobson, William H. Cooper, Daniel M. Lord, Carson W. Adams, Daniel Beers, James T. Hamlin, Phineas Robinson, Abraham Luce, George F. Wiswell, Zachariah Green, Ezra King, James S. Evans, James McDougall. Protestant Episcopal—D. V. M. Johnson, J. M. Noll. Roman Catholic—John McKenna. Universalist—Dr. Emerson.

The flood of years has borne away from the legal profession some of the ablest judges, counsellors and advocates of justice who have at any time given dignity and worth to the judicial office of the county.

Selah B. Strong was a judge who had few peers in the highest court of the Empire State—upright, impartial, recondite, diligent, considerate, and pure and spotless as the snowy ermine, the precious emblem of his proud and conspicuous office.

Worthy to be associated with him were the judges of our county who have passed away within the period in hand: Hugh Halsey, Abraham T. Rose, William P. Buffet, George Miller, J. Lawrence Smith. The successors of these men are their peers. There has been no abatement of the lofty judicial standard.

The Surrogates, James H. Tuthill and others, when not the same as the judges of the county, have not been inferior to them in legal knowledge, elevation of character and soundness of judgment. Their decisions have not been often contested—rarely overruled by higher courts.

Of the clerks of the county, George S. Phillips, Samuel A. Smith, Joseph Wickham Case, like the judges of the county who have died within the half-century, have been known to me. What a splendid list of courteous and capable gentlemen they and their successors present to grace the annals of our county for the last fifty years!

It has been my good fortune to be free from all unpleasant grips of the sheriffs of old Suffolk. But I have been the guest of these faithful and courageous officers who have joined the great majority, namely, Richard W. Smith, Silas Horton, John Clark, Samuel Phillips, John Shirley.

I have had occasion to meet the Grand Jury and obtain the indictments of a criminal, but it so happened that no one of the eight District Attorneys, diligent and commendable officers, whom I have known has written an official indictment against myself.

The occupants, including the Treasurers, of the chief county offices known to me in these fifty years have been Democrats, both hunkers and barn burners, Know Nothings and Republicans, and all alike have been good citizens, and nearly or quite all have been honest, capable and trustworthy officials. How their personal conduct and the performance of their public duties put to shame the partisan abuse and rancor that were so common fifty years ago.

The attorneys and counsellors who have been officers of the courts of the county include a goodly array of legal gentlemen, eminent for honor, learning and eloquence. One calls to mind among the departed, Samuel S. Gardiner, Selah B. Strong, William H. Gleason, James H. Tuthill, Abraham T. Rose, J. Lawrence Smith, Henry J. Scudder, Everett A. Carpenter and others.

Among the physicians and surgeons who have adorned their benevolent profession and conferred priceless benefits upon their fellow men were Doctors Ebenezer Sage, Frederick W. Lord, Henry Cook, Levi D. Wright, Ezekiel D. Skinner, Franklin Tuthill, Abraham B. Luce, Richard H. Benjamin, John E. Hartranft, James I. Baker, Nathaniel Miller,

Abraham G. Thompson, and a score of their compeers.

There are not many features in the face of the county where its life has made a more charming and notable change than in its live stock. Herein the Suffolk County Agricultural Society has been efficient, and among the chief who have made this improvement may be named Richard B. Conklin, the breeder of Rarus; Henry L. Fleet, the owner of Black Eagle; Carl Burr, David Carl and Edward Dayton, whose oxen in strength and beauty were admirable types of their kind; and when the old Greek poets, the most tasteful and artistic of mankind, wished to put the finishing touch to their description of the Queen of Heaven, they called her ox-eyed.

It is not in the lower forms of life only that improvement is seen. The people of the county have advanced to a higher degree of intelligence, culture, refinement and manifold traits of Christian excellence.

In referring to this article the local paper said:

" 'Fifty years of Long Island,' at the kindly and competent hands of the Rev. Dr. Whitaker, the Southold historian, is, it is superfluous to say, a competent and authoritative review. No man is better qualified than Dr. Whitaker for the agreeable task; none could write with a fairer appreciation of the relative importance of the changes which have come over the eastern county during the last half-century, and his work is timely and of permanent and historical importance. A peaceful revolution has been wrought in the people, the industries and the characteristics of eastern Long Island, which may be studied in detail in Dr. Whitaker's entertaining and instructive paper. It is also well worth while to notice that the historian is an optimist as well; that he does not return regretfully to the good old times, but speaks like 'a man of cheerful yesterdays and confident to-morrows.' The future of Long Island, largely in the hands of Suffolk county, now there is no longer danger that Brooklyn will drink it dry, would seem to be effectively assured."

HUNTINGTON VIEWS.

CHAPTER LXIV.

HUNTINGTON.

HIS township, which extended its authority across the entire island until 1872, when the southern half was raised into the dignity of a separate local government and became the township of Babylon, was incorporated under a patent issued November 30, 1666, by Governor Nicolls. It is not clear when or where the first settlement was effected. The earliest Indian deed, between the Sagamore Raseokan, of the Matinickock tribe, on the one hand, and Richard Houlbrock, Robert Williams and Daniel Whitehead on the other, when certain lands in the township about six miles square were sold by the Sagamore to the pioneers for "6 coats, 6 kettles, 6 hatchets, 6 howes, 6 shirts, 10 knives, 6 fathoms of wampum, 30 muxes, 30 needles," is dated April 2, 1653, and it was not until six years later that a town meeting was called, so far as existing records show. Another tract of land was in 1656 sold by "Asharoken, Mattinickock Sachem, and the rest of the Indian owners with him," to Jonas Wood, William Rogers and Thomas Wickes, "for themselves and the rest of their associates," covering land from Northport and Smithtown Harbor, and including Eaton's Neck. That neck, however, was afterward claimed and held under a supposed Indian deed dated 1646 to Theophilus Eaton. This claim was allowed in law and was confirmed by a grant by Governor Nicolls. Where the pioneer white settlers came from seems also uncertain. Mr. C. S. Street says: "I incline to the belief that the first and oldest company

came across the Sound, perhaps under the leadership of the Rev. William Leverich, from the vicinity of New Haven and Branford, landing at Huntington Harbor and locating principally along the valley where the eastern part of Huntington village now is, this having been always called "the town spot" or "old town spot;" that the second immigration was an off-shoot from the Hempstead colony, led thither by Rev. Richard Denton soon after 1640, originally from Wethersfield, Massachusetts, and for a time at Stamford, Connecticut; and the third influx came from the vicinity of Salem, Massachusetts, after stopping a short time in Southold and Southampton, principally in the former town." The Indian name of the territory was Ketewomoke, and its English name may either be a corruption of that of the old town of Huntington or of Huntington,—the latter being significant of the abundance of wild game when settlement began. Probably the first surmise is the correct one. The Indians gave little trouble. They were few in number, remnants, in fact, of the Matinickock, Marsepagne and Seucatogue tribes, and the advent of the white man completed the process of extinction which had been begun by the evil fortunes of war with the tribes on the mainland.

"In the first years of the settlement," says Mr. C. R. Street in his "Town Records," vol. I, p. 13, "the pioneers built their rudely constructed dwellings around and near the 'town spot,' where they had a fort and watch houses and where the 'train bands' were drilled. Their

animals were daily driven out and herded under guard, some in the 'east field,' now Old Fields, and some in the 'west field,' now West Neck, and at night the cattle were driven back and coralled near the watch house. Gradually, however, the more adventurous pushed out in all directions and made themselves homes where they found the richest soil and most attractive surroundings, and at their meetings grants of 'home lots' were made. At first the women pounded their corn in mortars, and the men wrought logs and clapboards for building with axes and cleavers, but soon dams were constructed across the streams, small mills were built for grinding grain and sawing lumber, rude tanneries were constructed for tanning leather, and spindles or looms were made or procured for the manufacture of coarse flaxen or woolen fabrics for clothing. The ox-cart was their only vehicle for travel and cart-paths their only highways. They used wooden ploughshares tipped with iron. Their match-lock guns were even more clumsy than the old flint-locks, but some of their swords were wrought by Spanish artisans and were tempered with a skill that is among the lost arts."

The patent of 1664 covered with the privilege of a township the entire region between Cold Spring and Nesaquake River and from the sound to the ocean. The exact boundaries were not very clearly set forth, neither were they in the Dongan patent of 1686 or the Fletcher patent of 1694, and this as well as the weakness of the Indian deeds afterward gave rise to much litigation, which once occupied a great deal of thought and temper, but does not invite any general interest nowadays. But the town as a settled and self-governing community dates really ahead of the Nicolls patent, for the town meeting was in operation as early as 1659, and one would judge from one entry in the records that the brethren had advanced so far in the art of governing that by 1660 the stocks had been built wherewith to detain and punish offenders. The

town meeting at once rose into power. It divided and awarded lands, voted allegiance to Connecticut, elected deputies to the General Court at Hartford, made and repaired highways, fixed legal fees, administered justice in criminal as well as in civil cases (thirty trials being recorded up to 1664), apparently according to the pioneers' ideas of justice until the Duke's laws were forced upon them; elected constables; ordered fences built to keep cattle and hogs from wandering; and fined without mercy. The town meeting even banished a man,—Richard Latting,—agreeing "that ould Laten shalle take away his cattel out of this town bounds within a fortnight, or 14 days, or pay to the town 10 shilling a head." His imputed offense was, according to Mr. Street, his refusal to recognize the sovereignty of Connecticut, but he must have been a bad man clear through, for he was afterward expelled from the immediate jurisdiction of Hartford, where he had taken refuge, for his "turbulent conduct." He then apparently wanted to settle in Huntington once more, but the town meeting would have none of him, and resolved that if any person "shall either by way of gift or paye do give or selle entartanement to Richard Laten for more than the spase of one week every person so offending shall pay forty shillings fine for every time he shall offend in brakeing this order made for the pease of the Town."

But the most significant evidence of independence was,—as in all of the town meetings in the Island towns,—that the meeting was the sole arbiter as to who should settle within their domain, and in 1662 the Rev. Mr. Leverich, Will Smith, Thomas Weekes, John Lum, Goodman Jones, James Chichester and Jonas Wood were appointed as a committee to pass upon the character and credentials of every applicant for admission into the little community. No one interfered with the town meeting's edicts; it was a law unto itself; its verdict was supreme, and there does not seem to have been any idea of an appeal from its

decisions to a higher court. With Governor Nicolls and the Duke's laws that state of independence passed away.

Huntington was not a theocracy. Its early Magistrates were elected by the people, and if the confirmation of the General Court at Hartford was asked, it was more in the nature of a formality than anything else. The Rev. William Leverich, whom we have already met in our studies, was one of the pioneers and preached to the people and exercised his sacred offices, but he was necessarily absent from among them frequently, and besides his worldly occupations must have occupied quite a part of his time. He built and ran the first mill in the township, and seems to have been a general merchant, selling cloth and other articles, so that while he was the first minister in Huntington he could hardly be rightly described as the first minister of Huntington. A Presbyterian Church was erected in 1666 and enlarged in 1686, but the influence of the church did not seem to become dominant any more than it would in any well-regulated Christian community. In 1676 the Rev. Eliphalet Jones was chosen as the first minister of Huntington, but he was chosen by the representatives of the town meeting, and as a result of a vote at a town meeting and not so far as we can see on the initiative of the church session and congregation, as such. Mr. Jones ministered in the town until his death, in 1731. He had then attained the patriarchal age of ninety-three years. In 1719 the Rev. Ebenezer Prime became his assistant and successor. In 1766 the Rev. John Close became Mr. Prime's successor, but withdrew in 1773. Six years later Mr. Prime died. By that time the British had taken possession of the church building and turned it into a storehouse and so it remained until 1782, when it was torn down. There were then two other Presbyterian congregations in the township, one at Comac in 1730, and another at Fresh Pond, (now Northport), but later by several years.

In 1746 St. John's Episcopal Church was

constituted under the name of Trinity Church. It was ministered to by the Rev. Samuel Seabury, rector at Hempstead. In 1749 the first church building was erected, and in 1773 the Rev. James Greaton, of Boston, was settled as the first sole rector.

Loyal, in sentiment if in no other respect, to Connecticut, Huntington made short work of the claims of the redoubtable Capt. John Scott in 1663 as the direct representative of King Charles II, but we are inclined to think that if Connecticut's claims to active sovereignty, which she made in 1664, when she sent commissioners to collect taxes and establish additional courts on Long Island, had been pushed the sentiment of Huntington would not have proved powerful enough to have yielded. Fortunately the envoys of Connecticut did not reach Huntington, so the reign of sentiment continued. Governor Nicolls cut it short, however. He summoned a meeting of all the Long Island towns at Hempstead, and Jonas Wood and John Ketcham were chosen representatives of Huntington. As such they attended the meeting, accepted all the Governor's promises and changes, and signed the obsequious address to him which was so heartily repudiated as far as possible by the people, and returned to their constituents with a manuscript copy of the Duke's laws, which were henceforth, except for Colve's brief interruption, to rule the roost. These two men were the most popular in Huntington when they set forth on their journey to Hempstead, but when they returned and their doings were known they lost their popularity entirely. However, it was too late. The die was cast. Long Island was a part of New York; there was to be no more dallying with Connecticut; a strong man was at the helm; the Duke's authority and laws had been accepted, and, having no choice in the matter, little town governments like Huntington had no recourse but to accept the conditions that presented themselves and get along as well as possible. But it was not long before the fact was experienced that the old perfect

freedom and autonomy were things of the past; a higher power than the town meeting had come, and come to stay, with Colve's opera bouffe sort of interruption, until the Revolution, and then, although changed in name and style, the outside power remained.

The annals of Huntington, outside of a lawsuit or two, each now an obsolete story, and a little grumbling at much of the Duke's laws, might be described as quiet and peaceful until the advent of the Revolution, calling for the recital of nothing more than purely local and domestic in point of interest. But then the history of the Revolutionary movement began early in Huntington. At a town meeting held on February 21, 1670, consideration of a demand by Governor Lovelace for a "contribution" toward the cost of repairing the fort at New York was discussed with the following emphatic result: "We of the town of Huntington can not see cause to contribute anything toward the Repaireacon of the forte for these following reasons: First, because we conceive we are deprived of the liberties of Englishmen; secondly, we conceive we have little or no benefits of the Law; thirdly, we can not conceive of any benefit or safety we can expect from the fort; fourthly, we find ourselves so much disenabled by manifold troubles when we thought ourselves in peace that we can not imparte with any such disbursement." A copy of all this was sent to Lovelace, and he pronounced it "scandalous, illegal and seditious," and had the document publicly burned. But Huntington did not pay, and so this spirited protest was one of the earliest defiances against "taxation without representation," and accomplished its purpose.

This meeting, however, was the beginning of the Revolutionary movement in the town. When Governor Andros came in after Colve's short reign he made the usual array of glittering promises, and then the old restrictions and the Duke's laws were enforced more rigidly than ever. The town meeting protested, Andros sent several of the citizens to jail, but even that did not cause the grumbling to

cease. Governor Dongan tried to pacify every one by calling a meeting of deputies at New York, but the meeting accomplished nothing practical. Dongan pretended he saw a weakness in the old patents of Huntington, and directed a new one to be made. It was drawn up in such a way as to meet the views of the local authorities, and in their fullness of heart they offered to pay £20 for the document, but Dongan fixed the price at £29 4s 6d, and this was eventually paid with much grumbling. When the "Glorious Revolution" of 1688 sent Governor Slaughter to these shores a greater meed of liberty followed, and popular representation in the affairs of government was no longer a dead letter, but afterward the blindness of Parliament and the unfitness of many of the royal Governors gradually aroused the spirit of opposition and led to revolt. In this Huntington was outspoken from the first, and was most pronounced and determined in its adoption of the patriotic cause. At a town meeting held June 21, 1774, it was declared, among other things:

"That every freeman's property is absolutely his own, and no man has a right to take it from him without his consent, expressed either by himself or his representatives.

"That, therefore, all taxes and duties imposed on His Majesty's subjects in the American colonies by the authority of Parliament are wholly unconstitutional and a plain violation of the most essential rights of British subjects.

"That we are of the opinion that our brethren of Boston are now suffering in the common cause of British America.

"That it is the opinion of this meeting that the most effectual means for obtaining a speedy repeal of said acts will be to break off all commercial intercourse with Great Britain, Ireland and the West India colonies.

"And we hereby declare ourselves ready to enter into these or such other measures as shall be agreed upon by a general congress of all the colonies."

There was thus, so far as the surface indi-

cations go, no thought of separation; but as events unfolded themselves and militia companies were formed and drilled, independence became the issue, and 100 pounds of gunpowder was sent by the Provincial Congress to Huntington in September, 1775. On June 29, 1776, a local war committee was chosen, consisting of Joshua Ketcham, John Buffet, Platt Conklin, Platt Carll, Josiah Wood, Wilmot Oakley, Jesse Brush, Timothy Ketcham, Gilbert Fleet, Richard Conklin, Jonas Rogers, Thomas Wicks, Benjamin Y. Prime, Timothy Conklin, Solomon Ketcham, David Rusco, Henry Smith, Gilbert Potter. The enrolling and drilling of the troops continued and preparations were zealously prosecuted for meeting the armed crisis which, it was felt, was near at hand. In a general appendix to the story of Suffolk county the names of all her military heroes are given, so there is no use in mentioning any of them here, but on January 24 Chairman William Smith, of the Suffolk committee, estimated the county's entire militia as 2,000 men. On July 5, 1776, Congress sent 1,000 pounds of powder to the Huntington committee. By that time the immortal Declaration of Independence had been launched, and the fiat had gone forth that "these United Colonies are, and of right ought to be, free and independent States." On July 22 the edict of independence was celebrated in Huntington amid much rejoicing. A letter from there, written the day after and published in Holt's New York Journal, tells the story:

"Yesterday the freedom and independence of the thirteen United Colonies was, with beat of drum, proclaimed at the several places of parade, by reading the Declaration of the General Congress, together with the resolutions of our provincial convention thereupon; which were approved and applauded by the animated shouts of the people, who were present from all the distant quarters of this district. After which the flag used to wave on liberty pole, having Liberty on one side and George III on the other, underwent a reform, *i. e.*, the union was cut off, and the letters George

III were discarded, being publicly ripped off; and then an effigy of the personage represented by those letters, being hastily fabricated out of base materials, with its face black like Dunmore's Virginia [negro] regiment, its head adorned with a wooden crown, and its head stuck full of feathers, like Carleton's and Johnson's savages, and its body wrapped in the union instead of a blanket or robe of state, and lined with gunpowder, which the original seems to be fond of—the whole, together with the letters above mentioned, was hung on a gallows, exploded and burnt to ashes. In the evening the committee of this town, with a large number of the principal inhabitants, sat around the genial board, and drank 13 patriotic toasts, among which were: The free and independent States of America, the General Congress, The Convention of the 13 States, Our Principal Military Commanders, and Success and Enlargement of the American Navy. Nor was the memory of our late brave heroes who have gloriously lost their lives in the cause of liberty and their country forgotten."

On August 12, 1776, Colonel Josiah Smith marched from Smithtown for Brooklyn, picking up the companies of his regiment on the way. There seems some doubt as to the number of men he took with him into the brief campaign which ended in the retreat of the Continental forces from Long Island. Mr. Henry P. Johnston, in his "Campaign of 1776," estimates the whole at 250, but Mr. Pelletreau seems to think this an underestimate. Nor can we determine exactly the number of men from Huntington who were in the disaster of August 27th. It would seem, however, that on that day 100 men were sent from Huntington to join General Woodhull and assist him in his humble mission of driving away the cattle from before the enemy. The results of the battle of Brooklyn paralyzed all military effort, although some of the ardent spirits at Huntington were for continuing the struggle; but on September 1st General Oliver De Lancey and the Seventeenth Dragoons were in full control, and a day later Hunting-

ton's Chief Magistrate, Isaac Wood, formally surrendered it to the royal authority, and the awful reign of the army of occupation commenced.

Then followed the usual acts of pillage, confiscation and ruin, of which we have seen so much. In Huntington there was no room for doubting the sentiments of the great body of the people, as there might have been justly in Queens, and so it seems that the troops carried on their mission in a much more high-handed manner in this township than even in Oyster Bay. One of the first of the British hauls was a prize of 160 casks of oil and twenty gallons of molasses, which were put on board two vessels, which were also virtually confiscated, and sent to New York City. Every horse fit for troop or team work was seized, wagons, boats, grain, live stock, forage,—all that could be useful to an army were seized, paid for at valuation fixed by the military authorities when the victim was a Loyalist or confiscated when a pronounced or suspected Patriot. Even men were impressed into the royal service to drive the teams or convey the live stock to Jamaica, or to cut down wood for the use of the military. The requirements of the troopers pressed heavily on all classes, many of the most pronounced Patriots abandoned their property and sought refuge in Connecticut or service in the Continental army; the oath of allegiance was ordered to be taken by all of the adult male population, and the records show that 549 of the dwellers in Huntington gave this evidence of their lip loyalty at least to the dominant cause. Those who had belonged to the local militia were compelled to do military duty, such as guard mounting, etc. As the period of the occupation progressed and the township was overrun by the Loyalist regiments,—the scum of the population in the large cities,—robbery and wanton destruction of property became the rule and all pretence of any law except that of might and the drum-head was abandoned. The people were openly accused of being reb-

els, even those who had taken the oath being regarded with suspicion, and those who escaped that declaration of lip loyalty were few, for Governor Tryon had swept Suffolk county as with a dragnet and forced the acceptance of the declaration with the alternative of an enforced trip to Connecticut.

Huntington was strongly guarded, for its position on the sound made it a likely place for landing parties of Patriots. Fort Franklin, at the west end of Lloyd's Neck, with seven or eight guns and a garrison generally of 300 or more men, was supposed to safeguard this bit of coast from attack, but it became a place from whence marauding parties fitted out expeditions for shore robberies, and the pirates cared little when a chance for plunder appeared about distinguishing whether their victims were Loyalists or Whigs, whether the booty was money, blankets or teaspoons. Even the regular soldiers got up pillaging parties, and "the Honorable Board of Associated Loyalists" was simply a refined name for a gang of thugs and cutthroats who, under the name of loyalty, enjoyed a season of liberty and rascality, and robbed whenever, wherever and whoever they could. An attack on this fort was made on July 1, 1781, by a force of Americans and Frenchmen, but they were repulsed by superior numbers, and the fort as a centre for pillaging parties continued for a little while longer.

In the center of the village of Huntington is a hill commanding a fine view of the sound. The people of the village had selected it as a place for the burial of the dead, and for over a century it had been so used, and the stones which marked its graves bore the names of every family in the place. It was, in fact, to them, holy ground, and we can imagine the indignation that was felt when, in 1782, Colonel Benjamin Thompson (afterward known as Count Rumford) decided to build a fort on the hill, and especially when his edict went forth that the people of the village were to assemble with spades, axes and teams and help

ON HUNTINGTON HARBOR.

in the work of desecrating the graves of their ancestors. * The local militia were impressed into the unhallowed work, and over a hundred tombstones were removed and the ground leveled. For the erection of the fort a church was torn down, and even buildings in use were stripped of their outer walls, while orchards, trees, fences were cut down or carried away without the slightest regard to personal property. The tombstones were used as flooring, some went into the construction of ovens, and bread was often seen bearing part of the inscription on a tomb from contact with one of these stones in the oven. The fort was completed and bore the appropriate name of Golgotha. Its remains are yet discernible. Some of the old gravestones left untouched by Thompson's troopers and more or less unwilling helpers are still to be seen, fragments of them, rather, for the hill was often swept by cannon shot. The hill itself is a veritable memorial of the Revolution, more precious than mere human hands could contrive.

These cruelties and oppressions and robberies, however, belong to the past, and time has helped to soften the sense of their miseries and degradation. But the events of the Revolution have left in Huntington one memory which is as bright as ever, one hero whose name, which is and ever will be held in the very foremost rank of American patriots and whose dying declaration, "I regret I have only one life to lose for my country," will always be regarded as among the watchwords of liberty.

Nathan Hale was born in Coventry, Connecticut, in 1755, and was educated at Yale with a view to entering the ministry. After he was graduated, in 1773, he taught school at East Haddam, and afterward at New London. He was so engaged when the news reached New London of the engagement at Lexington, and was one of the speakers at the town meeting that was called at once to consider the situation. He advised immediate action, saying, "Let us march immediate-

ly and never lay down our arms until we have obtained our independence." He at once enrolled and was given rank as lieutenant. After the siege of Boston, in which his regiment participated and where he was promoted to a captaincy, he was ordered with his command to New York. There he distinguished himself by capturing one of the supply boats carrying provisions to the Gubernatorial ship of refuge, the "Asia," and the provisions provided quite a feast for his soldiers. In response to a call from General Washington Hale volunteered to pass the British lines in search of data, and in the guise of a Loyalist schoolmaster he entered most of the British camps on Manhattan and Long Islands, estimating their forces, sketching their fortifications and acquiring other information which he deemed might be useful. His work was almost completed on Long Island. He had crossed the sound from Norwalk, landed at Huntington Harbor at a point called the Cedars, and traversed all through the British posts, returning to Huntington according to a date previously arranged about two weeks later to meet a boat that was to take him back to Norwalk. He saw a boat on the morning arranged approach the shore of Huntington Bay, and, supposing it to be the one he waited for, stood on the beach until its crew was landed. Then he saw he had made a terrible mistake, and the lowered rifles pointing at him made escape impossible. He was taken on board a prisoner and rowed to the frigate "Halifax," then in the bay, and the evidence found concealed in his boots left no doubt of his guilt. Hale was taken to New York and condemned to death as a spy. His execution took place September 22, 1776, in New York City. The exact place is not known, although it is generally conceded to have been elsewhere than in City Hall Park, where MacMonnies' statue representing Hale just before his execution now stands.

Huntington is proud of her association with this hero. In 1894 a neat fountain lamp

was erected in the village "to commemorate the patriotism of Nathan Hale," and on the shores of the bay, near the scene of the capture, a boulder weighing forty-five tons was laid from a field near by. It bears three massive bronze memorial tablets, one of which repeats a part of Hale's words when he accepted the mission which demanded his life.

service its claims to the performance of that service are imperious."

Huntington Bay is about a mile from the village, and is one of the most delightful "bits," as a landscape painter might say, along the coast of Long Island Sound. "As a whole," said a writer in *Scribner's Magazine* for May, 1881, "it resembles the track of a bird. The

NATHAN HALE MEMORIAL AT HUNTINGTON.

"I will undertake it. I think I owe to my country the accomplishment of an object so important and so much desired by the commander of her armies. * * * Yet I am not influenced by the expectation of promotion or pecuniary reward. I wish to be useful and every kind of service for the public good becomes honorable by being necessary. If the exigencies of my country demand a peculiar

rear claw is the narrow entrance from the sound; the center of the foot is the main body of water, and three or four claws are spread from this westward, southward and eastward. Each long, narrow harbor is diversified with many points and coves that surprise you as you explore it. You pass farther and farther inland, among the wooded hills and along the clean sand beaches. A sloping field here and

there, an orchard covering a low farm-house, or a villa on a commanding knoll, are minor points in the charming panorama of the shores. In-and-out, in-and-out, is the course of land and water; and in their devious way they play many tricks at hide-and-seek, and draw you on from nook to nook by the most attractive pictures. At last you reach the head of the harbor, with its salt meadow of waving grass, its old tide mill, its pond, and the shady village sheltered among the encircling hills. You can explore still farther with pleasure by following the roads and lanes through scenes of unusual beauty. The road may skirt the beach of a sand-locked bay bordered with forest; it may lead past old farm-houses, orchards and typical barn-yards; or it may mount the hills of a headland or neck commanding extensive views of tortuous harbors, rounded headlands, long tongues of white sand dividing the blue water, the wide horizon of the continent, and the sound stretched eastward to the Atlantic."

When hostilities ceased the population was only a little over 1,000, and the township's losses by the occupation were figured at about £75,000. Civil law was quickly restored; the town meeting again held its supreme position as the arbiter of local affairs, and farm and mill combined to make Huntington once more a prosperous as well as a peaceful community. By 1790 the township had doubled its population, but it would seem that some of the newcomers had not proved either well-doing or prosperous, or perhaps deserving of either, for the overseers of the poor then found it necessary to buy a building in the village for the purposes of a poor-house. This house was continued to be used for that purpose until 1868, when a poor farm was bought at Long Swamp. In 1872 the paupers belonging to the township were removed to the county institution as Yaphank, Brookhaven township.

The War of 1812 caused a good deal of alarm in Huntington, considerable powder was sent there, as in 1776, and the local militia once marched to Lloyd's Neck on a false alarm

that the British were landing troops in that vicinity. But the war only brought rumors, and the township was permitted to work out its problems of progress and development in peace.

The Civil War found Huntington again ready to "rally round the flag." Many of her sons went to the front and never returned, but the handsome soldiers' monument and memorial house show that their devotion has not been forgotten. The course of the Civil War brought into active service, after he had been officially retired, a veteran whose home had been in Huntington for many years. This was Admiral Hiram K. Paulding, a son of John Paulding, one of the trio which captured Major Andre. Admiral Paulding entered the navy as a midshipman in 1811, took part in the victory of September 11, 1814, on Lake Champlain under McDonough, and was promoted lieutenant in 1816, during the Algerian War. By the usual slow process of promotion through the various grades he was retired with only the rank of captain, when he reached the age limit for active service, December 21, 1861. On July 16, 1862, he obtained the rank of rear admiral and was in command of the Brooklyn Navy Yard until May, 1865, when he returned to Huntington and again resumed the pleasures of private citizenship. He died there October 20, 1878.

In 1872 the township was divided by the general consent of the people, the southern part becoming an independent township under the name of Babylon. It was said at the time that the reason for this change was simply a lack of sympathy or coherence between the people on the northern side of the township and those on the south, but possibly the real reason was that the Long Island Railroad, when it had completed its road from Hicksville to Greenpoint in 1844, practically divided the township into two sections, and in 1868 the northern half got a railroad of its own by the extension of the branch from Syosset.

In these modern days Huntington village

is a thriving country place, proud of its past and more than hopeful as to its future. It has eight churches, a bank, two weekly papers, exceptional educational facilities, and an estimated population of 4,000, a Masonic lodge (Jephtha, No. 494), an Odd Fellows' lodge, and a number of other organizations.

Northport, formerly Great Cow Harbor, now boasts a population of some 1,800. Its Presbyterian Church has a record dating from 1794, although not always located in the village. The most famous of its ministers was the Rev. Joshua Hartt, who held forth to its people from about 1780 until 1809, by which time the congregation had dwindled down until only a handful remained. The Rev. N. S. Prime, the historian of Long Island, then took hold and succeeded in reviving it so that at the conclusion of his stay of eighteen months it had a membership of forty. The

Rev. Mr. Hartt continued to act as "pulpit supply" until his death, in 1825. He was a great "marrying minister," for some reason or other, and probably mated more couples in Huntington than any other clergyman, one record placing the number as high as 500. It is now a manufacturing village, with an increasing summer boarding business. As much might be said for Centerport, which in olden times rejoiced in the name of Little Cow Harbor, and for Cold Spring, the surroundings of which have been described as being "as charming as those of the Lake of Como." There are several other smaller settlements all through the township. It possesses many splendid agricultural sections, but its glory lies in the part lying between the railroad and the coast, and in that portion of the township there is little doubt that rapid and wonderful developments are certain in the immediate future.

NEW SCHOOL BUILDING, COLD SPRINGS HARBOR, N. Y.

CHAPTER LXV.

BABYLON.

PROPERLY speaking, the history of Babylon township only commences with March 13, 1872, when she was constituted to the dignity of a separate community with the following as her boundary lines, according to the act of the Legislature:

"On the north by a line commencing at the boundary line between the towns of Huntington and Oyster Bay, one mile north of the line of the Long Island Railway, and running thence easterly and parallel with said Long Island Railway until it reaches a point on the boundary line between the towns of Huntington and Islip one mile north of the Long Island Railroad; on the east by the town of Islip; on the south by the Atlantic Ocean; on the west by the town of Oyster Bay; the eastern and western boundaries being the lines now established and recognized as the town divisions of the said several towns respectively."

Up to the time the act took effect, on the date above given, the general history of Huntington applies to Babylon. It had its Revolutionary experiences and heroes, it had its little excitements in 1812, and it contributed its full proportionate share to the heroes who went to the front in the Civil War, yet these are part of the history of Huntington and only belong to Babylon in a sort of reflected light as the glory of Shakespeare and Milton belongs to the literature of America.

The part of Huntington now included in Babylon had a slow growth. Mr. James M. Cooper, the town's historian, says: "Doubtless

few if any dwellings or other buildings were erected in this portion of Huntington previous to the year 1700. The land first purchased on the south side was bought by the settlers on the north shore. They bought the marshy necks of land on the South Bay, which were then and are now covered with an abundant growth of salt sedge and black grass. These lands at that period appear to have been more highly prized by the inhabitants of the town than the uplands. The farmers were in great need of hay with which to feed their domestic animals, and English grasses were but little cultivated on Long Island until about 1800. The early yeomen spent the early portion of the fall months in cutting, curing and carting the hay from these marshes to their north-side homes." Mr. Cooper also remarks: "It is rather a singular fact, although more than two centuries have elapsed since the town has been settled by the white race, and its western limits are only about thirty miles from New York City, more than three-quarters of the land in the town remains in an uncultivated state, that portion which is cultivated being on the eastern and northwestern parts and along the southern or post road."

That was written in 1880, and although the population has wonderfully increased since then, and the railroad mileage more than doubled, and the land boomers have been zealously at work, the same sentence might be penned at the present writing (1901). The shore is now lined with pretty villas and mansions. Babylon and Lindenhurst and other places

have become popular centers for the "summer boarder" business, vast hotels have sprung up, some of them among the most perfectly fitted up and most beautifully attractive of any near the metropolis, golf links have been laid out, sporting clubs of all sorts have been organized, and even the sandy wastes of Oak Island and Muncie Island have been adapted to the uses of man and been transformed into health or pleasure resorts; but still the track of all this excitement is bounded pretty much by the lines laid down in 1881. Then, too, it lasts only for about four months in each year, and for the rest of the time, except for its oystering and clamming industry, Babylon township, as a whole, resumes its old-time quietness and solitude.

"The oldest house in the town," writes Mr. Cooper, "perhaps in the county, is situated near the Huntington line. It was built by Captain Jacob Conklin, who was impressed on board of Captain Kidd's ship and served under him on one of his voyages. On Kidd's return from his last voyage, and while his vessel, the 'San Antonio,' lay in Cold Spring Harbor, Conklin and others, having been sent on shore for water, hid themselves and did not return to the ship. Doubtless they feared Kidd's arrest and trial, and dreaded lest they might be punished with him. They were for some time secreted among the Indians. Conklin purchased a large tract of land from the natives, of which the farm late the property of Colonel James F. Casey is part, and upon which the venerable mansion above alluded to is situated. The house was probably erected about 1710, and every part of it bears evidence of its antiquity. The high hill behind the dwelling commands a splendid though distant view of the ocean and bay. Near by are several fine springs of water, one of which is said to be of medicinal character.

"Captain Jacob Conklin was born in Wiltshire, England, probably in 1675, and died at his residence in this town in 1754. His wife was Hannah Platt, of Huntington, by whom

he had several children, among them Colonel Platt Conklin, who was an ardent patriot during the Revolution. The latter had only one child, Nathaniel, who was Sheriff of the county. He was the third owner of the premises above described. This property descended to the grandchildren of Sheriff Conklin, thus having been owned by four successive generations of the family. It has since been owned by Dr. Bartlett, formerly editor of the 'Albion,' Colonel James F. Casey, and Ulysses S. Grant, Jr."

The village of Babylon has an existence of about a century, and seems to have originated in a saw mill and a flouring mill built in the closing years of the eighteenth century, although there is a local tradition that the first house was erected about 1760. In 1801 Nathaniel Conklin built a tannery and a cloth mill was begun by Timothy Carll about 1810. Conklin was the owner of large tracts of land in the vicinity of his mill, and it seems to be generally agreed that it was his mother who gave to the place its modern name.

The leading industry in Babylon in these modern times might be described as "hotel-keeping," and the business has been associated with it from almost the beginning of its history. In the beginning of the nineteenth century an inn was opened by Jesse Smith, and the business then established is still known as the American House. It has perhaps, from the historian's point of view, a more interesting record than any existing house of entertainment on Long Island. It was one of the stopping places in the days prior to 1841 of the coaches carrying the mails, and was then a popular place of "refreshment for man and beast." Among its many distinguished guests mention is made of Prince Joseph Bonaparte, ex-King of Spain and a brother of Napoleon the Great, who in the course of a tour through Long Island in 1816 put up at the hostelry for several days,—longer than he intended to, but he was overtaken by a sudden illness. This distinguished individual traveled around with

a good deal of style, and his illness was doubtless a most fortunate source of increase to the week's financial returns. The Prince was in search of a piece of property on which he might settle, but apparently was unable to find what he wanted and continued the search elsewhere, finally locating at Bordentown, New Jersey. In 1840 a much greater man than this King who had retired from business, was a guest for a night at the American House,—the immortal Daniel Webster, who rested at Babylon while on his way to arouse the Patchoque Whigs into a proper condition of enthusiasm. This he did, for on such an expedition failure with him was an impossibility.

The Presbyterian Church of Babylon claims an existence since 1798. That was the date when the Presbyterian Church government was effected by the election of a session and trustees, although the charge of the congregation was formally assumed by the Presbytery of Long Island April 11, 1797. It seems to have been an off-shoot from a congregation which in 1730 built a church in Islip township. The Methodist congregation dates from 1840, and Trinity Episcopal Church from 1862, but that parish was afterward merged into that of Christ Church, West Islip. The Baptists founded their church in 1872, and St. Joseph's Roman Catholic Church dates from 1878.

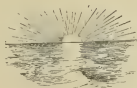

Amityville, which was once known as West Neck, seems also to have had its origin in a grist and saw mill, and dates back to about 1780. It had an inn as early as the date of

Washington's tour through Long Island, for we read in Onderdonk's "Annals" that the Father of his Country "dined at Zebulon Ketcham's Huntington South and begged the landlord to take no trouble about the fare, and on leaving gave a half Joe and a kiss to his daughter, (Ketcham's)."

However, Amityville must be classed as a modern town. Its oyster business is large and prosperous, its hotels are modern and well appointed, and its health sanitariums are famous all over the country. It has all modern improvements in the way of splendid roads, electric lights and boating and fishing appliances for pleasure seekers and attracts a yearly increasing colony of summer residents of the highest social class.

Lindenhurst, formerly Breslau, only dates back to 1869, when it was founded as a German colony, with manufacturing as its feature, and that feature it still retains. It now has a population estimated at 1,080, an increase of only about 100 in a decade. It is, however, a thriving place, and well adapted as a manufacturing center.

South Oyster Bay, under its modern name of Massapequa, has within the past few years assumed considerable importance as a summer residential village, with its fine hotel and many beautiful and attractive villas. It has an estimated population of about 500. Deer Park, with an estimated population of 275, West Deer Park with 200, North Babylon with 257, and Maywood with 60, are among the other settlements in the township.

CHAPTER LXVI.

SMITHTOWN.

SMITHTOWN is another one-man township, and over all of its early history the sturdy personality of Richard [Bull] Smith appears,—the Smith from whom it takes its name. The story of this man's career has already been told, and need not be here referred to in detail. Up to 1656 he was a resident of Southampton, a man of much influence, one of the "Proprietors," but apparently of a most litigious disposition, one of those individuals who are never so happy as when they have a law-suit on hand. On September 15, 1656, he was ordered by the General Court at Southampton to leave that township within a week and not to return under a penalty of twenty shillings. His crime was "unreverend carriage towards the Magistrates," contempt of court, Pelletreau calls it, and probably some one of the judicial decisions aroused his ire beyond the limits of circumspection. He did not obey the order to its fullest extent, for he remained in the town for several weeks after the decree went forth, but it marked the end of his usefulness in Southampton, and he sold his home lot and other property and removed to Setauket. "The great aspiration of his life," writes Mr. Pelletreau, "Records of Smithtown" (Introduction, p. 9), "seems to have been a desire to be an extensive landlord and to possess a domain of which he was to be the sole ruler, and free from the domination of other jurisdictions." In this he succeeded so far as the extent of his domain was concerned, but up to the close of his earthly career he was almost constantly engaged in liti-

gation with "other jurisdictions" on matters of boundary rights. He was an honest, chivalrous man, a useful citizen, a typical pioneer, a firm friend and a zealous upholder of law and order,—but he evidently loved a law-suit and was never so happy as when he had one on hand.

Smithtown's historians generally date its settlement from 1650. There is extant an Indian deed of that year in which for the inevitable hatchets, kettles, coats, etc., the natives sold "a certain quantity of land, beginning at a river called and commonly known by the name of Nesaquake River, and from that river eastward to a river called Menanusack, lying on the north side of Long Island, and on the south side from Conecticott four necks westward." The buyers named in the deed were Edmond Wood, Jonas Wood, Jeremy Wood, Timothy Wood, Daniel Whitehead and Stephen Hudson.

These men were simply speculators, and there is no evidence that any of them ever settled on the property thus acquired. There is a "rider" on the document signed in 1663 by Jonas Wood, stating that he in company with Jeremy Wood and Daniel Whitehead "went to view" the territory and found the Indians they met quite disposed to acquiesce in the sale of the lands. But even if the authenticity of all this be admitted, it presents no evidence of settlement, and it seems certain that Jonas Wood and his associates were only land boomers and sold their "rights" as soon as they could. Jonas' "rider," if it be authentic, which is open to doubt, was simply added

to perfect Smith's title. Certainly the deed to Jonas and others was never completed, so far as they were concerned, according to law. The territory now included in the township was peopled only by the Indians when in 1659 most of it was conveyed to Lion Gardiner under the romantic and touching circumstances already related. The following is a copy of the deed of transference, the original being now in the possession of the Long Island Historical Society:

EAST HAMPTON, July 14th, 1659.

Be it known unto all men both English and Indians, especially the inhabitants of Long Island, that I, Wyandance, sachem of Paumanack, with my wife and son Wyandabone, my only son and heir, having deliberately considered how this twenty-four years we have been not only acquainted with Lyon Gardiner, but from time to time and from much kindness of him by counsell and advice in our prosperity, but in our great extremity, when we were almost swallowed up of our enemies—then, we say, he appeared to us not only as a friend, but as a father in giving us his money and goods, whereby we defended ourselves, and ransomed my daughter; and we say and know that by this means we had great comfort and relief from the most honorable of the English nation here about us; so that, seeing we yet live, and both of us being now old, and not that we at any time have given him anything to gratify his love and care and charge, we, having nothing left that is worth his acceptance but a small tract of land left us, we desire him to accept for himself, his heirs, executors and assigns forever. Now that it may be known how and where this land lyeth on Long Island, we say it lyeth between Huntington and Setauket, the western bound being Cow Harbor, easterly Acatamunk, and southerly crosse the island to the end of the great hollow or valley, or more than half way through the island southerly; and that this is our free gift and deed doth appear by our hand mark under written. Signed, sealed and delivered in the presence of

RICHARD SMYTHE.

THOMAS CHATFIELD.

THOMAS TALMADGE.

WYANDANCE F M, his mark.

WYANDABONE III, his mark.

The sachem's wife S M, her mark.

Richard Smith was a friend of Lion Gardiner of many years standing, and, as will be seen, was one of the witnesses to the above important transfer. Gardiner appears to have done nothing with the property thus presented to him except to hold it. But Smith, from his home at Setauket, saw the land and knew it to be good and concluded it to be the place by which his long cherished desire for a large estate might be gratified. What the consideration was is not clear, but in 1663 Gardiner conveyed to Smith his entire rights. Gardiner died that year, and it seems doubtful if the transfer was fully effected. However, on the 15th of October, 1664, David Gardiner, son and heir of Lion, endorsed the original Indian deed to Smith, acknowledging to have received "satisfaction," and so the transfer from the Gardiner family was complete. On April 6, 1664, Smith added to his holding by a fresh purchase from the Indians, which, it was thought, wiped out any claim which might linger among those connected with the Jonas Wood syndicate:

This writing witnesseth, that when Nassesconset sould that part of land on the est side of Nessequage River unto Jonas, Jerime, Timothy wood, and daniell whitehead, and others, that then my sayed unkle did Resarve half the sayed Neck, called and Knowne by the name of Nesequage neck, to himselve and Nesequage Indians, to live and to plant on. I Nas-sekege, being soele haire to all Nassesconset's land on the Est side of Nesequage River, doe by these presents for me and my haieres make over all our interest in the sayed halve neck unto Richard Smith, of Nessequag, senyer, the same to have and to hould, to him and his haieres forever; and Nassekege doth further wittness of my knowledge that Nineponishare was formerly apoynted, Nesaconnopp and myselve was apoynted by young Nassesconset my unkle, as Joynt haieres to them both, to mark the bounds of Nessequag land for Richard Smith, and we did doe it acording to the saels which they had formerly made unto Raconkumake, a fresh pond aboute the middle of long Island, according to the order that they both did give to us, beeing acompained with John Catchem and Samuel Adams and Maw-

hew, to mark the trees—aperell 6th 1664. I Nassakeag, doe owne that the above saied was witnessed by Richard Odell, and Richard Harnett doth promis to own the above saied before the governor or any else, Nassekeag X mark having Reserved full satisfacktion for the premises to his content.

wittnes MASSETUSE X his mark.

the wrieting above was owned by Nasekeag and Massetuse to be true in my presens.

RICHARD WOODHULL.

DOROTHY WOODHULL.

So far as the Indians were concerned Smith had now a clear title to most of his land. But Indian deeds were not titles at law, being simply evidences of possession. The land, according to the British law, belonged to the Crown and could only pass from it by a direct patent, the Indian documents being generally accepted as indicating boundary lines and as evidence of conformity to the statute ordaining that the aborigines were to be satisfied in the first instance as a means of keeping these children of nature in good humor. So Smith applied for and obtained the following patent from Governor Nicolls:

A confirmation of a tract of land called Nesequake granted unto Richard Smith of Long Island.

Richard Nicolls Esqr, Governor under his Royall highness James Duke of Yorke &c of all his Territories in America, To all to whome these presents shall come sendeth greeting. Whereas there is a certain parcel or tract of land situate, lying and being in the East Riding of Yorkshire upon Long Island, commonly called or known by the name of Nesaquauke Land, Bounded Eastward with the Lyne lately runne by the Inhabitants of Seatalcott as the bounds of their town, bearing Southward to a certaine ffrish Pond called Raconkamuck, from whence Southwestward to the Head of Nesaquauke River, and on the West side of the said River so ffarr as is at this present in ye possession of Richard Smith as his proper right and not any wayes claymed or in controversy betweene any other persons; which said parcell or tract of land (amongst others) was heretofore given and granted by the Sachems or Indian proprietors to Lyon Gardiner of Gardiner's Island, deceased, and his

heirs, whose interest and estate therein hath bene sold and conveyed unto Richard Smith and his Heires, by vertue of which hee claymes his propriety; and whereas the commissioners authorized by a Genall Court held at Hertford in his Maties Colony of Conecticot did heretofore—That is to say in ye month of June 1664—make an agreement wth the said Richard Smith, That upon the conditions therein exprest hee the said Richard Smith should place Twenty ffamilies upon the said land; Now know yee that by vertue of the commission and authority given unto mee by his Royall Highness the Duke of Yorke, I do ratify and confirme the said agreement, and do likewise hereby give, confirme and graunt unto the said Richard Smith, his heirs and assigns the said Parcell or Tract of land called or knowne by the name of Nesaquauke Lands, bounded as aforesaid, together with all the lands, woods, meadows, Pastures, Marshes, Waters, Lakes, ffishings, Hunting, and fflowing, and all other proffitts, commodities and Emoluments to the said parcell or tract of Land and Premises belonging, with their and every of their appurtenances and of every part and parcell thereof, To have and to hold the said Parcell or Tract of Land, with all and singular the appurtenances, unto the said Richard Smith, his Heirrs and Assignes, to the proper use and behoefe of the said Richard Smith, his Heires and assignes for ever, upon the conditions & Termes hereafter exprest, That is to say: That in Regard there hath arisen some dispute and controversy between the Inhabitants of the Towne of Huntington and Capitaine Robert Ceely of the same place concerning that Parcell of land lying to ye westward of Nesaquauke River, which for the consideracon vertue of the aforementioned Agreement was to enjoy, But now is molested and hindered in the quiet Possession thereof, The said Rich'd Smith shall bee obliged to Settle onely tenne ffamilies on the lands before mentioned within the space of three years after the date hereof. But if it shall hereafter happen that the said Richard Smith shall cleere his Title and bee lawfully possesst of the premises as aforesaid, that then hee the said Richard Smith shall settle the full number of Twenty ffamilies within Five yeares after such Clearing of his Title, and being lawfully Possesst as aforesaid, and shall fulfill whatsoever in the said Agreem't is required. And for an en-

couragement to the said Richard Smith in his settling the families aforementioned the Plantations upon the said Nassaquauke Lands shall, from the first settlement untill the expiration of the Terme or Termes of years, bee free from all Rates or Taxes, and shall have no dependence upon any other place; but in all respects have like and equall privileges with any Town within this Governm't, Provided always That the said Richard Smith, his Heires and Assignes shall render and pay such other acknowledgements and duties as are or shall be Constituted and Ordained by his Royall Highness the Duke of Yorke and his Heires, or such Governor or Governors as shall from time to time be appointed and Sett over them.

Given under my hand and Seale at fort James in New Yorke this 3d day of March in the Eighteenth yeare of the Rayne of our Sovereign Lord Charles the Second by the Grace of God King of England, Scotland, France and Ireland, Defender of the ffaith &c., And in the year of our Lord God 1665.

RICHARD NICOLLS.

Still the Indians were not entirely satisfied and Smith had to give a dozen coats, a blanket, a gun, some powder and shot and various other commodities before he satisfied, in 1665, the last of the Indian claimants to his extensive possessions. It will be seen that the Nicolls patent conferred upon the territory the dignity and privileges of a town, and soon after its receipt the patentee, "Mr. Richard Smith of Nessaque," as he is described, identified his own name with his estate as "Smith-field," at least we find it so mentioned on March 8, 1666. The patent also shows he had a dispute on hand with the people of Huntington as to his boundary lines, and soon afterward he had similar trouble with Brookhaven and a long course of litigation followed, lasting until 1775. Into the details of that long controversy over boundaries there is no occasion to enter here; the interest in the matter is purely antiquarian, and is of no practical or even historical importance. Smith fought every phase of the dispute with dogged pertinacity and on the whole was successful in his claims. A curious feature of his defensive

operations was his defense against a claim set up for some of his lands by John Saffin, administrator of the estate of Captain Thomas Willett, to whom the Jonas Wood syndicate had disposed of an interest in their purchase of 1650. The claim was duly entered, but the claimants were silenced in some way by Smith, for it seems not to have been pushed. Several other claims were brought against this property under the same 1650 deed, but he seems to have settled them out of court. The last settlements of which there is record were dated on March 3, 1684, by the sons of Daniel Whitehead and Timothy Wood.

But long before that date Smith had still further fortified his position by obtaining a fresh patent from Governor Andros, in which the township honors were renewed, the boundaries again defined and the name of Smithtown, for the first time, given to the territory. That patent read as follows:

Edmund Andros, Esquire, Seigneur of Sausmarcs, Lieutenant and Governor General under his Royall Highness James Duke of York and Albany, and of all his territories in America, To all to whom these presents shall come sendeth greeting. Whereas there is a certain parcell of land situate, lying and being in the East riding of Yorkshire upon Long Island, commonly called or known by the name of Nesaquake lands, bounded eastward by a certain runn of water called Stony Brook, stretching north to the Sound, and southward bearing to a certaine fresh water pond called Raconkamuck, being Setalcott west bounds, from thence Southwestward to the head of Nesaquake River, and so along the said river as it runs unto the Sound; Also another parcell or tract of land on the West side of the said river, extending to the westernmost part of Joseph Whitman's Hollow, as also to the west side of Leading Hollow to the fresh pond Unshemamuck, and the west of that pond att high water mark, and so to the Sound, being Huntington east bounds; which said parcell or tract of land, on the East side of Nesaquake River, was heretofore granted by patent unto Richard Smith, the present possessor, by Coll. Richard Nicolls, and to his heyres and assigns forever; as also that on

the west side of said river, with some provisoes and restrictions; the which has since, by due course of law, att the General Court of Assizes held in the year 1675, been recovered by the said Richard Smith from the town of Huntington.

Know ye that by virtue of his Ma'ties letters patent, and the commission and authority unto me given by his Royall Highness, have rattified, confirmed and granted, and by these presents do ratify, confirm and grant unto the said Richard Smith, his heyres and assigns, the aforesaid parcells or tracts of land on both sides of the Nesaquake River. Together with all the lands, soyles, woods, meadows, pastures, marshes, lakes, waters, fishing, hawking, hunting and fowling and all other profits, commodities and emoluments to the said parcells of land and premises belonging, with their and every of their appurtenances, and every part and parcell thereof. To have and to hold the sayd parcells or tracts of land and premises, with all and singular the appurtenances, unto the said Richard Smith, his heyres and assigns, to the proper use and behoof of him, the said Richard Smith, his heyres and assigns for ever. The tenure of the said land and premises to bee according to the custom of the manor of East Greenwich, in the County of Kent, in England, in free and common soccage and by fealty only. As also that the said place bee as a township, and bee called and known by the name of Smithfield or Smithtown, by which name to be distinguished in all bargains and sales, deeds, records and writings. The said Richard Smith, his heyres and assigns, making due improvement on the land afore mentioned, and continuing in obedience and conforming himself, according to the laws of this government, and yielding and paying therefor yearly and every year unto his Royal Highness's use, as an acknowledgement or quit-rent, one good fatt lamb unto such officer or officers as shall be empowered to receive the same. Given under my hand and sealed with the seal of the province in New York, this 25th day of March in the twenty-ninth year of his Ma'ties reign Anno. Dom. 1677.

E. ANDROS.

Smith does not appear to have troubled himself about bringing settlers to his domain. He had nine children—Jonathan, Obadiah, Richard, Job, Daniel, Adam, Samuel, Eliza-

beth and Deborah. Obadiah was accidentally drowned Aug. 7. 1680, and was buried at Nissequogue, near his father's home, being the first white man interred in Smithtown. Elizabeth married, as his second wife, Col. William Lawrence, of Flushing, and her sister, Deborah, married a son of that gentleman by his first wife, so that the family relations became a little mixed. On her husband's death, in 1680, Elizabeth was left with seven children. A year later she married Philip Carteret, Governor of East Jersey, and gave her name to the town of Elizabeth. Carteret died in December, 1682, and she afterward married Col. Richard Townley.

Richard Smith's six sons all settled in Smithtown and their descendants until the Revolution and long after made up the bulk of the population. In 1689 some land to the south of that covered by the Smith patents, "known by ye name of Winnecomac," was sold by the Secatogue Indians to John Scidmore and John Whitman and this tract was afterward sold and subdivided and the whole was incorporated in the township in 1788, and then defined its boundaries as follows: "All that part of the county of Suffolk bounded southerly by Islip, northerly by the Sound, westerly by Huntington and easterly by the patent of Brookhaven, including Winne Comick shall be and hereby is erected into a town by the name of Smithtown."

When the war of the Revolution broke out the population of Smithtown was 555 whites and 161 negroes. Town meetings had been held at least from 1715, when the existing records commence, but they had very little to discuss except surveys, ear-marks, highways, the "disposition of the claims in Stony Brook Harbour," and the like, until the time of the great crisis was at hand. Living to a great extent by themselves, making their own little laws and apparently regardless of whether the continent was in the hands of the English, the Dutch or the Continentals, one would have thought that the interest of Smithtown in the

Revolutionary movement would have been passive. But the opposite was that case and nowhere on Long Island was there to be found a greater proportion of patriots. In fact when the time came for men to declare themselves only 15 Loyalists were to be found in the town. At a town meeting in 1774 the position of the people was clearly stated and its representative in the Provincial Congress, Thomas Treadwell, was one of the most outspoken and determined patriots in that body. Smithtown contributed a company to Col. Jonah Smith's regiment of militia and it is supposed that it took part in the battle of Brooklyn, but as to that there is no certain knowledge.

The names of those who signed and of those who refused have been preserved and as the list has a genealogical value, apart from its historic interest, it is here presented:

Solomon Smith, Daniel Smith, Thomas Treadwell, Epenetus Smith, Philetus Smith, Jacob Mills, Edmund Smith, jun., William Phillips, Esq., Elemeul Smith, sen., William Phillips, jun., Samuel Blydenburgh, Isaac Smith, jun., Samuel Mills, Richard Platt, Job Smith, jun., Samuel Buchanan, Benjamin Brewster, Nathaniel Smith, Samuel Smith, Paul Gillet, Ebenezer Smith, Jedediah Mills, Joshua Smith, Daniel Brush, Thomas Wheeler, David Smith, George Wheeler, Joseph Smith, jun., Jonathan Mills, Samuel Hazard, Job Smith, Joseph Blydenburgh, Jeffery Smith, Obadiah Smith, Isaac Smith, Abner Smith, Jacob Longbottom, Selah Hubbs, Samuel Tillotson, jun., Micah Wheeler, Elias Gerrard, Jacob Wheeler, William Nicoll, Jacob Concklin, James L'Homedieu, Ebenezer Phillips, Isaac Mills, Samuel Soaper, Daniel Tillotson, William Mills, John L'Homedieu, Nathaniel Taylor, Lemuel Smith, jun., Jesse Arthur, Stephen Rogers, Floyd Smith, Benjamin Gerrard, Caleb Smith, Joseph Platt, Timothy Mills, Zephaniah Platt, Jonas Wheeler, John Stratton, Zebulon Phillips, Aaron Smith, Richard Smith, Henry Rosecron, Jacob Smith, Obadiah Smith, Jesse Smith, Samuel Phillips, Benjamin Blydenburgh, Benjamin Nicolls, jun., Platt Wheeler, John Gerrard, Nicholas Tillotson, Jacob Longbottom, Nathaniel Gerrard, John L'Homedieu, Zophar Mills, Nathaniel Platt, Floyd Smith, Timothy Wheeler, sen.,

Jonas Mills, Timothy Wheeler, jun., Stephen Nicoll, William Gerrard, Micah Smith, Israel Mills, Daniel Wheeler, Israel Mills, Jacobus Hubbs, James Paine, Zophar Wheeler, Platt Arthur, Benjamin Nicoll, Gamaliel Concklin, Thomas Wheeler, Jonas Mills, Jeremiah Wheeler, Epenetus Wood, Jonathan Sammis, sen., Nathanael Sammis.

The recusants were:

Isaac Newton, Caleb Newton, John Newton, James Smith, William Smith, Jonathan L'Homedieu, William Thompson, Alexander Munsel, Peter Smith, John Edwards, Stephen Smith, Gershom Smith, Joseph Gould, jun., Silas Biggs, Zophar Scidmore.

During the occupation Smithtown was the scene of several encounters, chief of which was the fight at Fort Slongo, in which Col. Tallmadge figured so heroically. Many of the leading citizens, such as Richard Smith—the representative of the founder of the town—the third in direct descent—the Rev. Joshua Hart, the Presbyterian preacher, Zephaniah Platt, and others, were sent to prison in New York. Others fled over into Connecticut and all who remained were compelled to take the oath of allegiance. The coast line was a constant scene of turmoil and pillage and Whig and Tory alike proved equally welcome prey to the marauders, who under the guise of patriotism or loyalty really performed the crimes of shore pirates.

Smithtown recovered slowly, very slowly, from the effects of the occupation. Farming was resumed, a few mills were erected here and there, the oyster business was languidly prosecuted, and clamming formed quite an industry, but fishing seemed more of an amusement than a serious occupation. Until the advent of the railroad Smithtown was forgotten by the rest of New York and seemed to be quite content with that condition of things. Even to the present day it is felt that the resources of the township have never been fully developed, and its healthfulness, picturesque coast and rich natural scenery have never been fully made known, and that it has not become the fashion among the "sum-

mer people" as Islip or Southampton. But all things come to him who waits and it requires little of the gift of prophecy to say that the time is not far distant when Smithtown will fully share in the harvest reaped by her sister townships. Already it has two fashionable clubhouses—the Wyandanch and the Rassapaque—and of late years many attractive villas have been erected along the shore of the Sound. The "land boomers" have helped to retard the growth of the township, perhaps more than aught else in these modern days.

From a religious point of view the early history of Smithtown is pretty much a blank. It does not seem that the original Smith or his immediate descendants made any provision for the maintenance of a clergyman in their domain. Prime says that the first church was erected at Nissequague, but could not give any date for its erection. It seems that it was removed to Smithtown Branch in 1750, and that in 1751 it had seven members. Its ministers seldom stayed long and there were long intervals between the pastorates—20 years on two occasions. In 1808 a Methodist church was erected at Hauppauge, and in 1845 a Roman Catholic congregation was formed there. In 1853 an Episcopal church was built at St. James, the modern name for the village of Sherrawog.

Smithtown Branch, with an estimated population of 500, is the most thickly populated of all the villages in the township, with the exception of Kings Park or St. Johnland, which mainly through its institutions claims some 1,050. Smithtown Village ("Head of the River") only has 215, and St. James, in spite of several years successive "booming," 400. Hauppauge has 380, but the rest of the villages will fall below the 300 mark.

It is the custom to treat of the homes of the Society of St. Johnland in a separate division from the other attractions of King's Park,

that is, they are regarded as in that village but not of it. There is no more useful or more truly charitable work carried on anywhere than in these institutions, where aged men are enabled to await the close of life's generally disastrous and poverty-stricken journey in comfort and peace and where children are received, clothed, fed and educated in a manner calculated to develop them into strong, active and intelligent citizens whose labors in years to come will add to the general welfare of whatever section where their lots may be cast. During the year ending December 1, 1901, the Society had maintained in these institutions 51 aged men, 83 boys and 60 girls, at a per capita cost of about \$175, and had received legacies during the same period amounting to \$27,761, which had been added to its general fund—the fund which insures the permanence of the work. Truly in this case the perpetual power of good is clearly illustrated. Dr. Muhlenburg, the founder of the institution, has long rested from his labors, leaving behind a sainted memory, yet his example and his work still bring forth good fruit and daily render grand service to the cause of humanity—the cause of Christianity. At the annual meeting of the Society of St. Johnland held in the closing week of 1901, the following officers were elected:

The Rev. Dr. Henry Mottet, President; William Alexander Smith, Vice-President; Dr. Frederick D. Hyde, Secretary; Francis M. Bacon, Treasurer. Trustees—W. Alexander Smith, Bishop Henry C. Potter, A. W. Hard, George Blagden, the Rev. Dr. Mottet, John A. McKim, Joseph Park, J. H. Hewson, James McLean, F. M. Bacon, Theodore Thomas, Roswell Eldridge, Dr. F. E. Hyde, the Rev. Dr. W. M. Grosvenor, John H. Cole, George E. Chisholm, John Seely Ward, Jr., the Rev. James E. Freeman, Avery D. Andrews, Alfred G. Vanderbilt, S. Nicholson Kane, William N. Wilmer, James K. Gracie, and William G. Davies. Superintendent—Rev. N. C. Halsted.

CHAPTER LXVII.

ISLIP.

IF Babylon Township be practically stripped of its ancient history, its neighbor, Islip, fully makes up for it in this regard, even although its career as a township only dates from 1710 and the township records from 1720. It has an area of about 72,000 acres, is about 16 miles in length, and in breadth measures about 8 miles, from the "backbone" of the island to the shores of the Great South Bay. It never was, it probably never will be, a fertile region, except in its southern portion, and it was a region of slow growth until it was discovered by the summer boarder. In 1880 its population was 6,490, in 1890 11,073, and in 1900 12,545. In the latter decade it had not only been discovered by the summer boarder but had been taken up by society and been made fashionable.

In his survey of the history of this township, Mr. Prime commences with a plaint that is much better founded than most of his pessimistic utterances—and these are many. He said: Here we have a striking illustration of the pernicious influence on the interests of population resulting from the accumulation of land in the hands of a few owners; especially where that accumulation is perpetuated by the old feudal law of entailment. Although a large portion of this town is naturally incapable of maintaining a large population, as it embraces extensive tracts of sterile plains and vast swamps, yet the necks and other tracts of land are good and capable of sustaining a much larger number of inhabitants than it now contains; and as the law of entailment is now ab-

rogated, it may be expected that the evil will be gradually remedied, though time will be required to render the work effectual." This was written in 1845, and the trouble complained of has been most effectually remedied, but it is to be questioned whether Islip's real popularity and prosperity were retarded even for a year by the arrangement so denounced. The iron horse was the great clearer of feudal notions and Puritanic isolations on Long Island as elsewhere.

Its coast, on the Great South Bay, is an exceedingly beautiful one, while the waters of the bay itself afford aquatic sport of all kinds. Its shores are lined with pleasant cottages and huge hotels, summer boarding places of all descriptions, while here and there rise veritable palaces, and now and again we encounter enclosures of private property almost rivaling in size baronial manors and certainly exceeding most of such old-time relics in the elegance of their equipment and the extent of their resources. Even Fire Island, that part of the great sand bar which separates the Great South Bay from the Atlantic, has been brought into requisition for the summer boarder trade, although, it must be confessed, without the same degree of financial success that has crowned the efforts of the upbuilders of such resorts on the mainland of the township.

The story of Islip, the story, that is, from the time when the white man generously took up its burden from the red man, introduces us in the first place to a single landgrabber rather, as in other townships, to an organization of

men seeking to benefit their worldly prospects or to promote their religious freedom and fellowship, or to enjoy civil liberty according to their own ideas. Matthias Nicolls, the compiler, it is alleged, of "the Duke's laws," and secretary of the Province, and connected in one way or another with it in an official capacity almost until his death, in 1687, was so fond of Long Island that he secured quite a large estate at Great Neck in the present township of North Hempstead. His son, William, followed in his footsteps and became famous as a lawyer and local politician. In 1683 he purchased a large tract of land from the natives, of which

AN ANCIENT HOME NATHANIEL SMITH'S HOUSE, EAST MORICHES.

more anon, and the same year he was appointed clerk of Queens County. In 1687 he was appointed Provincial Attorney General. After his father's death he settled in New York and became a leader in politics and at the bar. He opposed the little movement of Jacob Leister, and was held by that serio-comic potentate as a prisoner. When that crisis was over he got his reward in being made a member of Council, and in 1695 he was sent by the New York Assembly on a mission to the crown with the view of getting the other colonies to share in the cost of the defence of Britain's strip of coast against the inroads of the French, which fell almost wholly upon New York from its geographical position. In 1698, in the course

of the kaleidoscopic change so frequent in the history of American politics, Nicolls was again among the outs. Gov. Bellomont summarily dismissed him from the Council. However, he soon showed the extent of his influence, for in 1701 he was elected a member of Assembly from Suffolk county, but was not permitted to take his seat on the ground that his election was illegal, he being a non-resident. He got over that by erecting a mansion—Islip Grange—on the Great South Bay, and in 1702 was again chosen to represent Suffolk and so continued for 21 years, and for 16 years was Speaker of the Assembly. He died at Islip Grange in 1723.

The land which in 1683 Nicolls bought the Indians was confirmed to him by patent issued in the following year by Gov. Dongan. In 1686 he still added to his holdings by further purchases from the Indians, and again Gov. Dongan issued a confirmatory patent, and he secured another addition in 1697 by deed from Gov. Fletcher. Thompson estimates the area of Nicolls' holdings at 60 square miles. In 1692 Nicolls had a neighbor in Andrew Gibb, Clerk of Queens county, who that year got a patent for a big tract at the east side, while in 1695 a tract on the west side of the Nicolls lands was given by Gov. Fletcher to Thomas and Richard Willets. Other patents were those in 1692 to Stephen Van Cortlandt, and in 1708 to John Mowbray, who is described as a tailor from Southampton. All the patentees seem to have settled more or less on their respective holdings, excepting Van Cortlandt, who was probably the most active of the local statesmen of his time, filling every office of importance in the Province except that of Governor. He was a soldier, a merchant, Mayor of New York, member of Council, Judge of the Common Pleas in Kings County, and it is hard to tell all what.

Practically all of the present township of Islip was held by these men, excepting a small portion in the north which no one seemed to want. Mowbray seems to have gone into the

business of selling portions of his extensive real estate as soon as all the legal requirements which invested him with proprietorship had been complied with. The others, however, held on to theirs, probably, as in the case of Nicolls and his heirs, with the view of keeping intact a great estate, which would by its very extent confer distinction.

But under such circumstances the territory did not attract much additions to its population. William Nicolls did not spend much of his time for many years at Islip Grange, and there is a tradition that Andrew Gibb, in his anxiety to have a neighbor he could speak to, deeded a large share of his land to Amos Willets, a Quaker, on condition that the latter should live near him, and the bargain was carried out. There is also a tradition that William Nicolls tried to induce a settlement in or near the present village of Islip but was not very successful. It was probably not until all of the original patentees had been gathered to their fathers that the entrance gates were unbarred sufficiently to permit others to enter and "enjoy the land."

In 1720, when the records of the township, as such, commence, the freeholders were:

Benjamin Nicolls (Supervisor),
 Thomas Willets (Assessor),
 John Mowbray (Assessor),
 Isaac Willets (Collector),
 David Akerly,
 Joseph Dow,
 John Moger,
 James Saxton (Constable),
 William Gibb,
 George Phillips, jr.,
 John Arthur,
 Amos Powell,
 John Smith,
 Samuel Muncy,
 William Green,
 Richard Willets,
 William Nicolls,
 Anning Mowbray,
 Joseph Saxton,
 James Morris,
 Israel Howell,
 John Scudder,

Ananias Carll,
 Stephen White,
 Amos Willets,
 Daniel Phillips,
 Joseph Udall,
 Samuel Tillotson.

The town meeting was a humble affair until long after the 19th century had dawned. It could not be otherwise in the presence of the large landed interests which were on every side of "the precinct of Islip." In 1737 Ananias Carll, John Arthur and John Scudder were elected Overseers of the Poor, which may be accepted as evidence of increasing population and advancing civilization, but the principal work of the town meetings even up to 1820 was to attempt to restrict the harvest of the sea, or as much of it as lay before them, to the actual residents. Fishing was for long the main industry of the people, and clamming and oystering in time reached large proportions, and continues to afford employment to several thousands of people in one way or another. For many years the forests of pine and oak, which seem to have in primitive times covered the township, afforded a revenue for the patentees and much employment to the people. But as the timber was cut down it was not replaced, and as the supply of nature gave out the employment ceased, the mills which had been built to cut the wood into staves, etc., fell into decay, and the ground on which the "monarchs of the forest" stood was given over to brushwood. Several mills were started from time to time, and no part of Long Island was better adapted for manufacturing purposes, but few had any pronounced success, few lasted over a decade in any one's hands. Stock-raising, although extensively engaged in for some years, gradually became unprofitable, and in 1876 was abandoned altogether as a recognized industry. The population increased slowly; in 1820 it was figured as 1,156, in 1830 as 1,653, in 1840 as 1,909, and in 1850 as 2,602. It was not until the land monopoly was abandoned and the railway crossed its territory that

Islip began to assume its modern position and popularity.

The early church record of Islip is an extremely scanty one, as might easily be imagined from the way in which its territory was portioned off. Thompson gives the first church building as that of St. John's Episcopal, "a grotesque-looking edifice of small dimensions and singular shape, standing upon the country road near the middle of Nicolls' patent. It was erected in the year 1766, principally, if not entirely, at the expense of the then opulent proprietor of that immense estate." Prime places the erection of the building three years later, saying: "In 1769 a small church edifice was erected by the patentee near the middle of the town on the south road, designed for the celebration of divine worship according to the forms of the Episcopal Church, and was occasionally used for that purpose, though it long remained unblest by prelatical hands. From 1814 the Rev. Charles Seabury, rector of Caroline Church, at Setauket, acted as missionary to this congregation and devoted a portion of his time to its service. In 1843 this church was repaired and enlarged, and on the 6th of July duly consecrated by the Bishop." Prime also mentions an Indian congregation but seems to doubt if it had a regular house of worship.

The Methodist Church in Islip village dates from 1810, although the first church was not erected until 1828. It was a wooden structure measuring about 22 feet by 32, and was erected so as to be as convenient as possible to the brethren in Penataquit as Bay Shore was then called. It was not until 1850 that Methodism organized a separate society at Bay Shore, and about 1854 a small chapel was erected. The best of feeling during all the separation proceeding seems to have prevailed between the brethren at Islip and those at Penataquit. Amos, Doxsee, the leader of the first class at the latter place, was, like all of his family, a staunch supporter of Methodism, a believer in the most literal interpretation of the Scriptures and in their verbal interpretation. It is

told of him that at a meeting of the clergy and laity to give expression of their views on dancing, which was beginning to creep into the early church, having held back and being appealed to by the pastor for his opinion, he stood up and, slowly raising his tall, gaunt figure on tiptoe, said: "Now I'll tell you what I think about dancing. Let a man be filled with the Holy Ghost and if he wants to dance, let him dance."

One of his brothers, Leonard, was class leader for over 20 years, and another brother, Benjamin, was a trustee for some 40 years and was proud at being able, in spite of the weight of years, to work a little on the walls of the Tabernacle of 1892, the latest development of the home congregation which his family had been so prominent in founding. Many of the old members of the church even now recall the grand "seasons of refreshing" in 1877 and 1878, when the Rev. Stephen Rushmore led in a series of revivals which are said to have stirred Bay Shore to its depths.

A Methodist class at Sayville was organized about 1838 by members of the church at Patchogue, but it was not until 1847 that a house of worship was erected, and it continued to be associated with Patchogue until 1866, when it became a separate charge. A class was formed at Great River in 1872 and at Bayport in 1874.

St. Mark's Episcopal Church at Islip was organized in 1847 under the Rev. William Everett. Its present building was erected in 1880 by William H. Vanderbilt. This church has mission stations at Central Islip since 1869, and at Brentwood since 1872. Emanuel Church at Great River was organized in 1862 by St. Mark's, but in 1878 it was erected into a separate parish. Christ Church, West Islip, dates from 1869, and St. Ann's at Sayville from 1866. The Presbyterian Church of Islip had its beginning in 1854, and the Dutch Reformed Church dates its entrance into the township from 1866, one year before its church at Sayville was erected.

Writing 20 years ago, one of Islip's histo-

rians said that "so thickly are summer residences scattered along the South Road through this town that it is almost a continuous village." For some years past that word "almost" could be eliminated and the sentence would hold good to-day. All along the line of the railroad and the South Road is a continuous succession of villages, hamlets, county seats and villas from Udall's Road to Bayport. Some of the villages have considerable population—Bay Shore, 3,135; Islip, 1,956; Sayville, 3,369; Youngsport, 571; Central Islip (including the Manhattan State Hospital), 1,600; Great River, 571,—but all are new—too new to have acquired much in the way of history, except such society data as might pass as such among a class, but data of that kind, doings of coaching and kennel clubs, the progress of horse shows and the ups and downs of the ancient and royal game of golf are hardly worthy of serious chronicle. Bay Shore, which was once called Mechanicsville, and then Penanquit (the Indian name of a small stream in the vicinity) is, next to Islip, the most ancient village in the township, but like Islip, its modernity is its chief characteristic. The main business of all the villages except, perhaps, Bohemia, is summer-boarding; and summer boarders, especially of the class which seems to have taken hold of Islip, want modern improvements; for Islip has become fashionable. Its splendid hotels and clubhouses, and the magnificent estates of W. K. Vanderbilt, F. G. Bourne, W. K. Aston, the Cutting family, as well as the hundreds of palatial villas which have been erected mainly by New Yorkers for their summer homes, have drawn to it

people of the very highest class, people who by their means and tastes have made even much of its sandy wastes blossom into veritable gardens. There is an air of exclusiveness outside of the villages and hotels which seems to be especially pleasing to those who regard themselves as the fashionable world, while such enterprises as the group of Moorish houses, erected by H. O. Havemeyer at Bayberry Point, near Islip, is an experiment in the way of co-operation among the very rich which will be watched with curious interest. The Vanderbilt estate at Oakdale, with its new mansion costing, it is said, \$1,600,000, and its thousand acres of farm garden and wood land, and its iron fence, beautiful entrances, lodges, farm buildings, game preserves, and it is hard to tell all what, is a veritable fairy-land and one of the wonders of Islip. It is a part of the old Nicolls patent, and when it first passed into the hands of the Vanderbilts was a mass of brush and shrub, half-starved fields, and broken-down steadings. Now its gardens, its groves of oak and maple, its well kept lawns and smiling fields seem to speak eloquently of how man can triumph over nature with the aid of determination, taste, ambition and money. During late years trees have been planted liberally all along the line of population, and Islip now boasts of her pine and other forests, while nature has also been at work replacing the damage done by the depletion of a generation that has now passed, and it is safe to say that the value of such forests is now too highly appreciated to permit again of their wanton destruction for purposes of firewood.

CHAPTER LXVIII.

BROOKHAVEN.

BROOKHAVEN is the largest township on Long Island. It extends the entire width of the island and has 20 miles of coast line on the Sound, 221 on the Great South Bay and about 30 on the Atlantic, facing Fire Island or Great South Beach. Its acreage has been figured at 152,500, its square mileage at 250, and besides it rejoices in the possession by geographical and legal right of some 70 square miles of water.

The first purchase of land was made in 1655 from the Setalcott Indians by a party of 6 pioneers, who were evidently acting on behalf of others, prospecting, as it were, for a spot on which to establish a colony. Five of these were from Massachusetts—John Scudder, John Swezie, Jonathan Porter, Roger Chester and Thomas Charles, and one, Thomas Mabbs or Mapes, belonged to Southold and was one of the original settlers of that township. Probably he accompanied the others as being a man of experience in dealing with the natives; it could hardly be because he had any knowledge of the land. The party had with them the usual collection of coats, hatchets, powder, knives and the like with which to do a land business with the Indians, and appear to have driven a fairly good bargain.

Pretty soon those for whom the prospectors were acting began to arrive; most of them were from New England, but several came from other portions of Long Island, from Southampton and even from Jamaica. Within

years the following were found in the settlement according to a list in "Thompson's History":

Richard Woodhull,	Thomas Ward,
Zachariah Hawkins,	John Roe,
Peter Whitechaire,	John Budd,
John Jenners,	Henry Brooks,
Henry Perring,	William Williams,
Andrew Gibb,	Robert Woolley,
William Satterly,	Samuel Akerly,
Thomas Biggs,	Arthur Smith,
John Tooker,	John Combs,
Henry Rogers,	Richard Waring,
William Fancy,	Joseph Mapes,
Jacob Longbothorn,	Thomas Thorp,
Daniel Lane,	Richard Bryant,
Richard Floyd,	Samuel Eburne,
Francis Muncy,	Timothy Brewster,
Obed Seward,	John Brewster,
John Wade,	William Poole,
William Salyer,	Daniel Brewster,
Robert Smith,	Thomas Sharpe,
Edward Avery,	George Phillips,
John Smith,	Thomas Smith,
Samuel Dayton,	Moses Burnet,
John Davis,	Richard Smith [Bull],
William Frost,	Thomas Helme,
John Thomas,	Joshua Garlick,
Elias Baylis,	John Moger,
John Thomson,	Robert Akerly.

It was essentially a New England community and as usual the scheme of town government was at once set up. A town was fixed which afterward became Setauket and around it were the home lots, one of which was reserved for a meeting house, and one for the minister, when he should come. Each of the original settlers had a home lot and a

further allotment of meadow, or a lot on the beach, besides each settler was at liberty to buy what additional land he pleased, only the purchase had to be confirmed by town meeting. That power was put in operation very early in the story of the colony, and probably a town meeting decided the primal allotment of the lands. A house was in time built upon the home lots, which served the purpose of a place for town meetings and for divine worship until the first church was built in 1671. So far as can be seen the colony was an independent body; its town meeting was the supreme dictator of all its affairs until 1661, when it voluntarily acknowledged itself as under the Government of Connecticut and sent Richard Woodhull and Thomas Pierce to represent it in General Meeting. That connection, sentimental as it mainly was, did not last long, and Gov. Nicolls made it clear, soon after he assumed control, that the Long Island colonies should look to New York and not to Hartford for protection and support.

The town of Setauket had hardly been founded than additional tracts of land were secured by the colony from the Indians. In 1657 a large tract at Mastic was purchased; in 1664 their purchases gave them a vast tract from the Great South Bay to the middle of the island, and for a coat, a knife, a pair of stockings, two hoes, two hatchets and two shirts they secured practically the land along the north shore from Old Man's Harbor to Wading River. In 1675 the purchase of all the land from Stony Brook to Wading River was confirmed by the Indian Sachem Gy, and bit by bit all the territory included in the present limits of the township, and indeed much more, was given up to its representatives so far as the Indian power of disposal was concerned. In accomplishing all this quite a large variety of coats, stockings, penknives, powder and the like was doubtless expended, but the Indians were made complaisant in another way, for in 1671 the buyers were told to "take some likers with them to the Indians," and charge the cost to the town.

The principal negotiator in all these transactions, evidently the leading and most representative citizen of the young town, was Richard Woodhull, the founder of a Long Island family, which from his day to this has given a large number of distinguished citizens to the State and Nation. He was born in England in 1620, and in 1640 came to this country and settled at Lynñ, Mass. For a time he resided in Southampton, then in Jamaica. He was a man of superior attainments, a practical surveyor, of undoubted personal courage, a born diplomat and an able executive, all the qualities in fact which were reproduced in the most famous of his descendants, General Nathaniel Woodhull, the Long Island hero of the Revolution.

There does not seem to have been any idea of anything but a civil government at Setauket and the town meeting passed the usual laws for the regulation of affairs just about the same as we have seen similar bodies legislating in previous chapters of this history. Yet a clergyman was present, if not among the first batch of settlers at least very soon thereafter. This was the Rev. Nathaniel Brewster, a grandson of William Brewster, one of the Pilgrim Fathers. His three sons were among the pioneers and it is thought that he merely went to Setauket to visit them and was induced to stay. There is no record that for a number of years, at least, he was regarded as the minister of the town. In fact, in 1662, the town meeting extended a call to a dominie named Fletcher to become the minister at a salary of £40 a year, but whether he accepted or not cannot be determined. But from his arrival Brewster acted as minister, and in 1665 seems to have fully accepted the charge, for a house was purchased for his use as a manse. It was evidently a most superior structure, for it had doors and glass windows and other modern improvements. Brewster died in 1690. In 1685 he was laid aside from active work through ill-health and Samuel Eburne, one of the men in Thompson's list, was chosen as his successor. He was to re-

ceive a salary of £60 per annum "soe long as hee should continue to preach amongst them." At the end of the year, however, the salary was not forthcoming—probably they did not think much of his preaching—and he appealed to Gov. Dongan to enforce payment. This the Governor ordered, but probably the controversy destroyed Mr. Eburne's usefulness and closed his ministerial career. In 1687 Mr. Jonah Fordham, of Southampton, became minister, and from then on the town meeting was always zealous in seeing that the spiritual interests of the people were attended to, but the church as such had no special power in the community.

In 1666 the town received a patent from Gov. Nicolls and in 1686 that patent was confirmed by a fresh one issued by Gov. Dongan. Besides the territories contained in these patents there were four large tracts, which, about 1770, were formally annexed to the town of Brookhaven—the Moriches Patents—on land originally purchased from the Indians in 1677, the Winthrop Patent for land between Islip and Bellport and extending to the center of the island Halsey's Manor, bought in 1716 from Col. W. H. Smith, and the Smith Purchase, the largest of them all. When these became part of the legal territory of the township it started in, in 1797, to define its boundaries and then ensued a series of squabbles with its neighbors, which were not wholly settled until 1860.

In the Revolutionary struggle Brookhaven was most emphatically on the side of the Patriots from the beginning of the conflict. While the struggle lasted it was the scene of many exploits which have already been chronicled in these pages, and it had its own full share of the hardships and wrongs of the days of the occupation. But the special glory of Brookfield in this connection is in the men she contributed to the cause of American liberty—General Woodhull, William Floyd, one of the signers of the Declaration of Independence; Caleb Brewster, a descendant of Setau-

ket's first minister and who did such grand service with his fleet of whaleboats; Major Benjamin Tallmadge, a son of a minister of Setauket and born in that village; Captain Nathaniel Norton, who was at the capture of Burgoyne and his army; Col. Josiah Smith, who led the Suffolk County Militia, and many others who might be named. Her record in the Civil War, while it did not furnish so many brilliant names, amply demonstrated that the fighting qualities of its citizens had not diminished with the years of "inactive ease." To that conflict it furnished more men by far than were demanded by the drafts, while in a financial sense its contributions were most generous.

The modern story of Brookhaven presents little to detain us. After the Revolution was over it resumed the quiet and even tenor of its ways and until the advent of the iron horse was apparently forgotten. Its people were farmers, shipbuilders and fishermen, and very little manufacturing was done within its bounds. For many years shipbuilding was the greatest of its industries, the one that kept it most in touch with the world, but as the era of wooden ships passed, so passed that industry, although yacht building has in recent years made some of the old yards lively again and opened many new ones. Manufacturing has been tried at Setauket, but has never reached anything like the proportions it was at one time hoped it would attain, and it remains yet a village with only some 600 inhabitants.

Yet Setauket is a place with a good deal of historic interest. Tradition says that its ancient "Green" was the headquarters of the Setalcott Indians and that on it the bargain was struck by which the red men abandoned their lands for a few trinkets. The Green still remains the centre of Setauket's story. The origin of the Presbyterian Church, as a town meeting house, has already been touched upon. A new and large structure devoted wholly to religious uses was built in 1671 and

around it lay the spot which the fathers had selected as the town's burying ground. This structure served until 1714, when a grander building was erected on its site and by a vote of the town was to be "a Presbyterian meeting house forever." It gave way, however, to another building, still larger, in 1766, which was used by the British during the occupation as a barracks and before they left was completely destroyed. However, it was soon replaced. The church during its long existence has had many well-known pastors, the Rev. David Youngs from 1745 to 1751; the Rev. Benjamin Tallmadge from 1754 to 1786; the Rev. Zechariah Greene from 1797 until 1858. During the latter part of his ministry Mr. Greene had several "helpers," and the last of these, the Rev. James S. Evans, entered the charge in 1850, and continued until 1867, when he was succeeded in 1868 by the Rev. W. H. Littell, who is still its pastor.

Setauket has got another old church—Caroline Episcopal—which dates from 1730. In detailing its history Mr. R. M. Bayles wrote:

The church was organized during the first quarter of the last century. The earliest notice on the books of the "Society for the Propagation of the Gospel in Foreign Parts" is of the appointment of the Rev. Mr. Wetmore as missionary in the town of Brookhaven in 1723. That the services of the Church of England were known here, and worship in accordance with that form conducted many years before that date, there is scarcely room to doubt. It is not known, however, that the church had an edifice of its own until the present one was erected in 1730. For this building, which appears to be enjoying a robust old age, is claimed the double honor of having been the first church edifice ever erected at the expense of the Episcopal denomination on Long Island, and at present being the oldest church edifice standing on the island. The original name of the church was Christ Church, but the name was changed to its present one in compliment to Queen Caroline of England, who had presented to the parish a silver communion service and embroidered altar cloths. This royal gift was sacrilegiously abstracted

during the Revolutionary period. Through a long term of years the society in London helped to sustain the missionary stationed here by a contribution of from £50 to £60 a year. The church was stronger and its services were more largely attended during the colonial period than for many years afterward.

Within a few years past the parish has recovered somewhat. Since 1878 a new fence has been set up around the churchyard, a

CAROLINE EPISCOPAL CHURCH, SETAUKET.
Built 1730.

rectory of handsome appearance and comfortable dimensions has been erected, and the church repaired and thoroughly painted. Within the same period 24 adults and the same number of infants have been baptized, 38 have been confirmed, 33 communicants added anew and 22 received from other parishes. There are now 70 communicants. The Sunday-school, under the superintendence of the rector, consists of 50 children and six teachers. The following is a list of the rec-

tors, which also shows the term each served the church, as nearly as can be ascertained:

Rev. Mr. Wetmore, 1723-1725; Rev. Mr. Standard, 1725-28; Rev. Alexander Campbell, 1728-30; Rev. Isaac Brown, 1733-43; Rev. James Lyons, 1746; Rev. T. Lambert Moore, 1781-83; Rev. Andrew Fowler, 1788-90; Rev. Mr. Sands, 1800; Rev. N. B. Burgess, 1811-14; Rev. Charles Seabury, 1814-44; Rev. William Adams, 1843, 1844; Rev. Frederic M. Noll, 1844-77; Rev. Robert T. Pearson, 1878. [Rev. D. Marvin is the present rector.]

The Rev. Charles Seabury was the son of the first American bishop, and was introduced at the recommendation of Bishop Hobart, in 1814. After 30 years of faithful service he was buried in the churchyard, and a marble pillar there marks his tomb. Rev. F. M. Noll, who served the church 33 years, was unmarried, and for many years occupied rooms at the rear of the church, where the graves in the surrounding churchyard lay so near that one could step upon them from his threshold or reach the marble slabs from his bedroom windows. Amid such gloomy surroundings he enjoyed undisturbed seclusion.

In 1662 the shipbuilding industry in Setauket appears to have had its beginning and the yards afterward turned out some famous craft. The Hand family were for years conspicuous in this line and as late as 1870 David Bayles constructed a vessel—the Adorna—of 1,700 tons, but the industry has since then lost its vitality.

Near Setauket is Strong's Neck—Little Neck it used to be called. It was once a royal seat and a favorite residence of the Indians. The principal part of the neck was bought from the red men by Daniel Lane, whose title was transferred to the town proprietors in 1663. According to Thompson a certain part, called the "Indian Ground," about 70 acres, not included in this purchase, was bought of the Indians by Andrew Gibb Nov. 28, 1685, and a patent was issued for the same by Governor Dongan December 20th, 1686. Colonel William Smith bought the interest of the town proprietors in this neck Sept. 11, 1691, and it was included in his patent of 1693. His

grandson, William Smith, in 1768 sold it to Andrew Seaton, reserving a mortgage upon it. This being soon after foreclosed the property was bought by Selah Strong, and by him and his descendants it has ever since been held.

The most thriving place in the township is Patchogue, which, with a resident population of some 4,250 and four times as many in the summer season, its handsome stores, its large hotels, its surrounding country seats and its general air of wealth and refinement, has been called "the Queen City of the South Shore." Its oyster trade has reached wonderful proportions, while some of the fastest yachts on the South Shore waters are from such yards as those of S. C. Wicks & Co., Fillmore Baker, G. Smith and De Witt Conklin. Patchogue has a history which extends back until the middle of the 18th century, and has been more or less of a manufacturing centre since about the year 1800. It still has many establishments of that class, among them being extensive silk mills. But the glory of the place is its summer business. It is a gathering place for bicyclists, canoeists, yachtsmen, automobilists and all sorts and descriptions of pleasure seekers; its roads are among the best on Long Island, its streets are macadamized and lighted by electricity, its bathing facilities are of the best, and it caters in a sensible and progressive way to the wants and wishes of the great army of "summer folks," who descend upon it year after year, and add to its popularity and its material wealth.

As much might be written of Port Jefferson if it would only throw off its inertia and try a step or two in the march of progress. But somehow or other it seems to defeat every movement which has been begun to open up its many beauties to the world. Its location is a beautiful one, on one of the finest harbors on Long Island Sound, a harbor which brings up many stirring memories. Paul Jones used to rendezvous here, one of his vessels was fitted out in the harbor, and here he killed two officers belonging to the British frigate "Na-

hant." In the war of 1812 two British frigates sailed into the bay and made off with six sloops, and a seventh which they burned at Dyer's Neck.

At that time, up, in fact, to 1836, Port Jefferson rejoiced in the name of Drown Meadow. Its modern history may be said to begin with 1797, when John Wilsie began the shipbuilding industry. At that time there were only five houses in the village, and for a number of years the increase was small. Wilsie built a dock into the bay on his property; and seems to have done a good trade, but up to the time of his death, in 1818, the shipbuilding industry remained in his hands and added but little to the prosperity of the place. But a beginning had been made, and by 1825 there were several firms in the business.

"About the year 1836," wrote Mr. Bayles, "a new era seemed to open to the progress of this industry and the improvement of the village generally. This was in a considerable measure owing to the enterprise of Captain William L. Jones, who probably ventured more capital and energy in developing the village than any other man has ever done. Captain Jones was a member of a native family, and was born about the year 1792. In early life he naturally took to the water. His parents were Daniel and Bethia Jones. He inherited considerable landed property about Comsewogue, which furnished him with the means for carrying out the designs of an inventive and enterprising genius. The estate of the Roe family comprised the greater part of the present village site, and from this Captain Jones purchased a large tract, reaching from about the site of the Presbyterian Church, along the west and north sides of Main street to the neighborhood of the Baptist Church, and so northerly to the shore of the bay; including also a tract on the east side of Main street, up Prospect street as far as the residence of John R. Mather. November 10, 1837, he received a grant from the town for a dock into the bay from the shore of his property, and at the same

time entered into an agreement to construct a causeway over the salt meadows to the dock through his land, so as to make a public highway 18 feet wide, to be stoned up on either side and of sufficient height to be above ordinary high tides. This two-fold enterprise was completed in a few years, at a cost of several thousand dollars. The dock is maintained in part, and the highway thus opened over the flooded meadows is now the busy street that runs from Hotel square to the shore. Nearly half the business of the present village is carried on upon the land that forty years ago was owned by Captain Jones, the greater part of which was made available for business by the improvements just noticed. Captain Jones was married November 30, 1814, to Hetta Hallock. After her death he married the widow of Richard Mather, and his third wife was Hannah Hallock, who survived him. He died in 1860."

For a time Port Jefferson really was prosperous, and its shipbuilding industry grew until it had the largest business of that kind of any town in Suffolk county, and other industries—notably milling—found entry. A Methodist Church was erected in 1836, a Presbyterian Church in 1854, and a Congregational tabernacle in 1855. Up to 1868 it seemed on the high road to prosperity, but somehow it began then to recede, and even the opening of the railroad, in 1892, does not appear to have renewed its old-time business prosperity. It has a splendid body of citizens, everything that has made other Long Island shore villages so successful, but it seems to fail to make them available. Its streets are narrow and ill-kept; its electric lights are few and far between and are turned off carefully at midnight. It has miserable bathing accommodations. In fact, as one of its citizens remarked to the writer, "it does not care about visitors." In winter it is virtually dead, and has not, like Patchogue, even the memory of summer gayeties and profits to carry it smiling through the gloomy months of the year. The late P. T. Barnum once took a fancy to Port Jefferson and in-

tended to "build it up." He would certainly have succeeded, but he found that his plans were impeded by the very people who would most quickly have profited by them. It is hoped that this inertia will soon be thrown off and Port Jefferson take the place which seems hers by right—that of the most popular village on the North Shore.

Stony Brook now boasts a population of some 700, and can trace its history to 1699, when a mill was established by a pioneer bearing the afterward famous name of Adam Smith. Its population grew slowly, but surely, and in 1801 it reached the dignity of having a school-house, and in 1817 a church building. For many years its principal trade, outside of farming, was the manufacture of cord wood and fertilizers, and in 1843 it boasted a fleet of 1 brig, 8 schooners and 15 sloops. Then it became a little manufacturing place, but that soon passed, and it slowly drifted backward until, with the opening up of the railroad, it received a new lease of life and is steadily winning a place among the popular resorts. In 1900 it had a population of 500, so its progress has been fairly satisfactory. Its situation is one of exceeding beauty, and it possesses many rural and aquatic attractions concerning the curious Brookhaven village of Bohemia. The following interesting details have been supplied by a recent visitor:

One of the quaintest places to be found near New York city is the village of Bohemia, which lies a few miles from Stony Brook, a prosperous village on the Long Island Railroad. This village is inhabited by Bohemians who maintain in the heart of Long Island the customs, manners, language and prejudices of their native land.

There are about three hundred inhabitants in the village. It has one main street, on which are shops and stores with the names of the proprietors and the character of the business marked in words that appear to be made up mostly of consonants.

The inhabitants seem primitive in many ways. The men wear the heavy shoes, short jackets and caps of the European Bohemia and

the women wear the wooden shoes of their fatherland and go bareheaded. A New Yorker who happens suddenly to fall in among these people can scarcely believe he is still on Long Island. The men are mostly farmers, some working tracts which they own and which lie beyond the village. Others work for American farmers in the neighborhood. They are sober and industrious and hard times have never struck the village.

Here on a Sunday afternoon the people give themselves up to amusement. The music sounds strange to the American, but it is that of the ancient kingdom. The villagers gather in the public dance halls and young and old dance and make merry. The provisions of the Sunday liquor law do not seem to apply to the village, and between the dances the hop brew and wines of the old country pass freely around. While the men are good citizens, still, there is more talk of the happenings in the country across the sea than of what is going on in the United States.

One of the most prominent features of the village is a monument erected to John Huss. It stands near the village church. Recently the monument has fallen into decay. Some of the leaders of the village have started a fund to repair it.

Moriches, a district rather than a village, and generally understood as covering Moriches, Centre Moriches and East Moriches, may be said to lie between Forge River and the village of Eastport, on the line of Southampton township. The territory formed a part of the Moriches patent. It is a popular summer resort, with large hotels and boarding houses of all sorts and degrees. It is a place given over in the summer season to outdoor amusements, and in the other months of the year to oystering.

Coram, in the centre of the township, is one of the oldest settlements, and Middle Island has likewise some claim to considerable antiquity. Both are small farming communities. Yaphank started in 1739 as a mill-site, and in time other mills were started and a settlement grew slowly, but it was not until 1853 that it was large enough to have a church, and in that year St. Andrew's Protestant Episcopal

Church was erected. In 1871 the Suffolk County Almshouse was erected in the village on a farm of 170 acres, and which, in 1879, was extended by the addition of 80 acres.

Mount Sinai, a village which according to the records formerly boasted a larger population than now, lies on the coast some three miles eastward from Port Jefferson. It was called by the Indians Non-o-wan-tuck, but the more commonplace New England settlers dubbed it "Old Man's." It seems to have come into use as soon as the choice plots in Setauket were appropriated, for its rich meadows appeared desirable settling places, while its forests stretched away in the distance in seemingly inexhaustible extent. But the soil did not prove as fruitful as it looked, and Old Man's grew very slowly. Early in the nineteenth century sloopbuilding was begun, and for many years cordwood was shipped in great quantities, and the business in clams reached large proportions. In 1720 a preaching station in connection with the Setauket Presbyterian Church was established, and it grew into a separate congregation in 1760. It has, however, long since disappeared. A Congregational Church, founded in 1789, upon, it is supposed, the "remnants" of the Presbyterian fold, has fared better, and still continues to shed the light of the Gospel with an active membership of 120. The total population of Mount Sinai is about 225.

Still eastward along the Sound is Miller's Place, a settlement with a population of some 200, which takes its name from its original settler, Andrew Miller, who removed there

from East Hampton in 1671. Its antiquity is all that calls for remark, as it is a widely scattered farming community. Rocky Point and Woodville are small settlements between Miller's Place and Wading River—the latter town lying on the boundary line between Brookhaven and Riverhead, but belonging mainly to the latter. From St. James' to Wading River, Brookhaven possesses a magnificent stretch of shore line, which will some day be utilized for resort purposes and will bring to the township a degree of prosperity it has not yet dreamed of. The opportunity lies waiting and only needs energy, enterprise and capital to develop rich and lasting results.

Among the other villages in the township are: Bellport, population 795; Mandeville, 380; Old Field, 200; Mastic, 50; Blue Point, 355; Brookfield, 380; Dyer's Neck, 150; Lake Grove, 330; Ector, 355; and Brookhaven, 325. The latter used to bear the name of Fire Place up to about 1876. It is entirely a place of modern growth, its first church society dating from 1848. South Haven, a neighboring village, is much older, although its population is only about 100. It was large enough in 1745 to have a Presbyterian meeting house and several mills. At that time it was known as Yamp-hank Neck. The name was changed to South Haven in 1757 as the result of a vote of its people, so we see that the fashion of substituting more fanciful names for the often homely but always expressive primitive ones is not quite as modern a fad as is commonly supposed.

CHAPTER LXIX.

RIVERHEAD.

HE story of Riverhead Township, the county town of Suffolk, begins with 1792, when it was formed out of Southold. It is 15 miles in length, with an average width of 5 miles, and contains something like 36,500 acres. Its north shore runs along the Sound, while its south shore is on Peconic Bay, and the Peconic River separates it from Southampton and Brookhaven. Farming is exclusively carried on, but in no part is the land noted for its fertility and even to the present day large sections of the township can hardly be said to be under cultivation. Yet within recent years a vast improvement has been effected and bit by bit acres which have been given over for a century or more to wildbrush and weeds have been recovered and are yielding abundant return in the shape of grain or garden truck. Many thriving communities have sprung up and Riverhead from being, as the Rev. Dr. Dwight described it in 1804, "a miserable hamlet" is now one of the most prosperous and beautiful and progressive towns on Long Island, with a population estimated at about 2,500.

The territory in the township, or most of it, was purchased from the red men in 1649, another part was purchased from Col. William Smith and divided among settlers in 1742. The population increased very slowly, the settlements were small and widely scattered and the people were poor. The territory added nothing to the wealth of Southold. It had no harbors, no commerce, no excess of crops

and was very little heard of even in the town meetings. The county was not particularly adapted for traveling. The distances were great and from Aquebogue westward the territory to the Brookhaven line was in Southold, but not of it. Therefore there was little excitement when it became known that on March 13, 1792, the Legislature had cut off the territory and erected it into a separate township, apparently by the unanimous desire of the people. The bill which so enacted read as follows:

Whereas, many of the freeholders and inhabitants of Southold, in Suffolk county, have represented to the Legislature that their town is so long that it is very inconvenient for them to attend at town meetings, and also to transact the other necessary business of the said town, and have prayed that the same may be divided into two towns; therefore,

I. Be it enacted by the people of the State of New York, represented in Senate and Assembly, that all that part of the said town of ginning at the sound and running thence Southold lying to the westward of a line easterly to the bay separating the towns of Southampton and Southold, and which is the eastern boundary or side of a farm now in the tenure or occupation of William Albertson and is the reputed line of division between the parishes of Ocquebogue and Mattetuck, shall, from and after the first Monday in April next, be erected into a distinct and separate town, by the name of River Head; and the first town meeting of the inhabitants of the said town shall be held at the dwelling house of John Griffin, at River Head; and the said town shall enjoy all the rights, privileges and immunities which are granted to the other towns

within this State by an act of the Legislature passed the 7th of March, 1788, entitled "An Act for Dividing the Counties of this State into Towns."

II. And be it further enacted, that the poor of the town of Southold, on the first Monday of April next, shall afterwards be divided by the town of Southold and the town of River Head, in such proportions as the supervisors of the county, at their next annual meeting, shall direct, and the contingent

frame building had there been erected, which served as courthouse and jail, and on March 27, 1729, a Court of General Sessions met there for the first time. The first court of Oyer and Terminer under the State Government in Suffolk County convened at Riverhead Sept. 4, 1787. The town meeting seems to have revised its laws in 1794, but the proceedings at these gatherings included little of

RIVERHEAD.

charges and expenses of the town of Southold that have already arisen, or shall arise before the first Monday in April next, shall be assessed, levied and paid in the same manner as if this act had not been passed.

The first town meeting was held as directed in the act, on April 3, 1792. The laws of Southold were those by which the new community was governed. Riverhead being the county town gave the new township a certain dignity to start with. In 1725 a two-story

interest to us. One exception to this might be made in the care taken of the poor. When the township was formed it had only 6 paupers and these were let out for one year to the bidder who offered to maintain them for the least money, and this method of disposing of such dependents continued to prevail until 1832, when a farm was purchased at Lower Aqueboque and the poor were gathered together and removed there, and that establishment was maintained until the county system

came into law and the paupers of Riverhead were transferred, in 1871, to Yaphauk, and the old poor farm was sold.

When the war of 1812 commenced the town meeting passed resolutions heartily endorsing the action of the Government in beginning hostilities, but that was about as much as they were directly concerned so far as that episode went. But when the Civil War broke out the people of Riverhead got a chance to show their patriotism. Every call of the Government was loyally met, large bounties were awarded to volunteers, and altogether the conflict seems to have cost the town over \$81,000.

But in spite of its dignity as a township and its position as the county town, Riverhead advanced very slowly. In 1800 its population was 1,498; in 1820, 1,857; in 1825, 1,816; in 1835, 2,138; in 1840, 2,373, and twenty years later it had only reached 2,734; two decades still further it had advanced to 3,939, and the census in 1890 showed that it practically stood at these figures, the census returns showing only 4,010. As a county—a county engaged in farming, its history under these circumstances can be understood as passing along without much in the way of interest for the annalist unless he chose to fill up his pages with statistics or tax returns, census reports and lists of local officials, all of which, however, fails to arouse any interest even in the mind of the reader of local lore.

But in the stories of the various villages and settlements deserving of a much more dignified title, we find much deserving of study. Even the story of the village of Riverhead, modern as most of it is, is full of interesting detail, all of which tend to present it before us as a typical American country town, and one which at the present day is full of ambition and life and is making full use of its natural beauty of situation and its ready adoption of all that in these modern times is regarded as necessary to municipal success to make it become one of the most attractive and popular of Long Island cities. It is a beau-

tiful place, it combines city and country in its broad and well paved streets, its stately trees lining the sidewalks everywhere, its business establishments and banks, its many really handsome villas, its steadily increasing popularity among summer visitors and its loyal, energetic and enterprising body of regular residents, who have an abiding faith in its future and are ready and willing at all times to bestir themselves in every movement likely to aid in its development. At the same time it is a "homely" place, using the word in its original meaning, homelike. It has in its population no man or class who might be described as rich in the modern multi-millionaire meaning of the term; it has no very poor and all are, more or less, neighbors. A poor man is respected equally with the wealthy one so long as both respect themselves and act the part of good citizens.

Like so many other centers of population on Long Island Riverhead began with a saw mill erected on the banks of the Peconic in 1659 by two pioneers—John Tooker and Joshua Horton. The erection of the court house does not seem to have aided its growth very much, for in 1812 it contained only four buildings besides the court house and jail, and of these one was a tavern kept by John Grifing and another a grist mill owned by Josiah Albertson. By 1825 a new court house had been erected and a separate building constructed for a jail, and there were five stores, and in 1828 a woolen factory was added to the industries, deriving power from the Peconic. In 1835 an effort was made to deepen the channel of the river; but, although a beginning was effected, the work had to be abandoned owing to a lack of funds and it was not until 1882 that the work was completed by Congressional appropriation. In 1854 a new court house was completed at a cost of \$17,800, but it was not until 1881 that a new jail was provided, with all the modern improvements to which a jail could then aspire. The excellent power furnished by the Peconic

River began about the middle of the last century to attract many manufacturing enterprises to Riverhead—molding and planing mills, a soap factory, fertilizer works (both fish and wood being the staple of manufacture), organ building and quite a number of other industries increased its wealth and importance. Such establishments rarely add much to the aesthetic beauty of a place and Riverhead in its march of improvement might have lost some of its attractiveness but for the organization, in 1881, of the "Village Improvement Society," which not only accomplished much and lasting good by its own direct work, but exerted a healthy influence on the entire community.

In 1868 the citizens showed their public spirit and their sagacity, by purchasing 20 acres of ground in their village and presenting the property to the Suffolk County Agricultural Society as its permanent headquarters. The story of that organization has been told in 1881 by Mr. Nat W. Foster, long its secretary, an office now held by his son, and it is here given in his own words:

The first record we find of an agricultural society in this county is a printed copy of the "Constitution of the Suffolk County Agricultural Society adopted Oct. 6, 1818"; article 2 of which states the society's object to "be the advancement of agriculture in all its various branches, by collecting and circulating the knowledge of improvements, and by bestowing premiums for the most successful exertions." Article 9 provides for "two meetings each year, at the court-house in Riverhead, in May and in October;" article 10 for "an annual fair and cattle show, time and place to be appointed by the managers." The officers were: President, Thomas S. Strong; 1st vice-president, Sylvester Dering; 2nd vice-president, Joshua Smith; 3d vice-president, Nathaniel Potter; 4th vice-president, John P. Osborne; corresponding secretaries, Charles H. Havens and Henry P. Dering; recording secretary, Ebenezer W. Case; treasurer, David Warner. Twelve managers were also elected. We find no mention of any meetings or fairs.

In Volume I of the Transactions of the

New York State Agricultural Society for 1841 is found the statement that the Suffolk County Agricultural Society was organized in that year. In the "Transactions" for 1842 are several statements by persons receiving premiums for crops from this county society, of which William W. Mills was then president. In the volume for 1843 is a report by William C. Stout, president, stating that the third annual fair was held Nov. 15, and \$186.50 paid in premiums. Richard B. Post was secretary, David C. Brush treasurer, and there was a manager from each town. "The society is not in so flourishing a condition as I would like to see it, owing almost entirely to the immense length of our county, thereby rendering it difficult to fix upon the proper place at which to hold an annual fair and give general satisfaction. Measures are in progress, however, to correct this evil by organizing two societies."

In the volume of 1846 J. Lawrence Smith, president, writes under date of March 20, 1847, that "the county society was dissolved in 1843, and a new society formed from a smaller and more thickly settled portion of the county." This society was known as the "Western Branch of the Suffolk County Agricultural Society." Its records show that fairs were held each year from 1843 to 1852 (excepting 1844), respectively at Comac, Smithtown, Comac, Islip, Huntington, Greenport, Babylon, Smithtown and Huntington. The officers during this period were as follows, so far as recorded:

Presidents—W. C. Stout, 1843, 1845; J. Lawrence Smith, 1846, 1847; Joshua B. Smith, 1848; Harvey W. Vail, 1849, 1850; Edward Henry Smith, 1851; Dr. John R. Rhineland, 1852; Edwin A. Johnson, 1853.

Vice-Presidents—W. H. Ludlow, 1845; Lester H. Davis, 1846; Samuel N. Bradhurst, 1847; William Nicoll, 1851; Samuel L. Thompson, 1852, 1853.

Secretaries—Henry G. Scudder, 1845; Nathaniel Smith, 1846, 1847, 1851; Dr. Abraham G. Thompson, 1848-50; Edward K. Briar, 1852; J. H. Carll, 1853.

Treasurers—R. B. Post, 1843; Nathaniel Smith, 1845; Richard Smith, 1846, 1847; Jarvis R. Mowbray, 1848; Elbert Carll, 1849, 1850; William Lawrence, 1851; David C. Brush, 1852; William H. Ludlow, 1853.

At the fair at Comac Oct. 16, 1843, premiums were awarded amounting to \$110. At

Smithtown in 1845 the premiums amounted to \$95. An address was delivered by Dr. John R. Rhineland. In 1846 the premiums were \$79. An address was given by Samuel A. Smith.

At a meeting (date not given) held between the fairs of 1846 and 1847 it was resolved "that this society be hereafter known and called by the name of the 'The Suffolk County Agricultural Society.'" At the fair of 1847 mention is made of "corn planted three feet apart, four stalks in each hill, showing that good corn may be produced on much less ground than is usually required;" and "fine flat turnips grown since oats were taken off." The address was by William H. Ludlow, and the premiums aggregated \$94. At Huntington October 10th, 1848, a new constitution (prepared by the secretary, Dr. A. C. Thompson, as instructed at a previous meeting) was presented and adopted. An address by Dr. Thompson "reviewed the past and present operations of the society, the benefits resulting from the formation of agricultural societies, and urged the importance of system, of industry, and economy in managing agricultural matters."

The first fair held in the eastern part of the county was at Greenport, Oct. 2, 1849. The address was by John G. Floyd.

At a meeting of the managers, April 6, 1850, it was resolved, "on condition that the residents of Babylon and vicinity pay or secure to be paid to the treasurer of the society, on or before May 1, 1850, the sum of \$100, and that the necessary cattle pens be erected, a suitable building or tent be provided, and that arrangements be made for the conveyance of passengers to and from the railroad free of all charge, that the fair will be held in that village Sept. 24, 1850." Also resolved, "in case the residents of Babylon and its vicinity do not agree to the above resolution, the exhibition will be held in Islip in case the said conditions be complied with." In addition to the premiums offered the year before, premiums were offered for crops grown on the "Plain lands." The fair was held at Babylon. "F. M. A. Wicks, of Thompson's station, exhibited cheese, pumpkins, citron, melons, fine potatoes and Isabella grapes raised on the 'Plain lands,' adjoining the Long Island railroad at Thompson's station. Ira L'Hommedieu exhibited tomatoes, blood beets and egg plants raised on land of Dr. E. F.

Peck at Lake Road station. These productions showed conclusively the error of the idea that the lands contiguous to the Long Island railroad are worthless." "The society is indebted to Mr. Francis M. A. Wicks and to Dr. E. F. Peck for proving beyond objection that these desolate lands can be made productive under a proper course of cultivation. The perseverance shown by these two gentlemen is deserving the highest commendation, and it is hoped that success may attend their efforts." The annual address was delivered by John Fowler, Jr.

At the winter meeting, Dec. 4, 1850, a premium was awarded to Samuel S. Thompson, of Setauket, "for 84½ bushels, 4 quarts and 1 pint of Australian or 'Verplank' wheat, raised on two surveyed acres, the weight being 63½ lbs. per bushel; the standard of 60 lbs. per bushel being allowed, the yield of the crop was 80 bushels 2 pecks on the two acres. * * * Deducting the expenses, the net profit was \$341.75."

"William Burling, of Babylon, raised 65 bushels of onions on one-eighth of an acre, being at the rate of 520 bushels per acre." The net profit was \$24.65.

At Smithtown Sept. 25, 1851, the address was delivered by Dr. Franklin Tuthill, of New York City. Mr. Brush, the treasurer, dying before the next fair, John D. Hewlett was appointed treasurer in his stead. At the fair at Huntington, Oct. 21, 1852, the address was by Henry J. Scudder, of New York City. It is reported that another fair was held in 1852, at Islip, but the record shows no further meeting till February 1, 1865, when the society was reorganized at Thompson's station, with the title "Suffolk County Agricultural Society." The officers elected for the first year were as follows: President, William Nicoll, Huntington; vice-president, Robert W. Pearsall, Islip; secretary, J. H. Dooxsee, Islip; treasurer, William J. Weeks, Brookhaven; directors, H. G. Scudder, Huntington; Caleb Smith, Smithtown; Robert O. Colt, Islip; Thomas S. Mount, Brookhaven; D. H. Osborne, Riverhead; David G. Floyd, Southold.

The officers from this time have been:

Presidents—William Nicoll, 1866, 1867, 1872-74; Dr. B. D. Carpenter, 1868-71; Henry Nicoll, elected in 1872, not serving, William Nicoll was appointed; Henry E. Hunting, 1875, 1879, 1880; Hon. John S. Marcy, 1876-78; Alvah M. Salmon, 1881, 1882.

Vice-Presidents—Dr. B. D. Carpenter, 1866, 1867; Samuel B. Gardiner, 1868; Henry G. Scudder, 1869-71; Lewis A. Edwards, 1872; Henry E. Hunting, 1873, 1874; R. T. Goldsmith, 1875; Stephen C. Rogers, 1876-78; Alvah M. Salmon, 1879, 1880; George W. Cooper, 1881, 1882.

Secretaries—J. H. Doxsee, 1866, 1867; Thomas S. Mount, 1868-71, 1875; Henry D. Green, 1872-74; Nathaniel W. Foster, 1876, 1877, 1879-82; J. L. Millard, 1878.

Treasurer—W. J. Weeks, 1876, 1877; Joshua L. Wells, 1868-71; David F. Vail, 1872-74; Samuel Griffin, 1875-82.

The first fair after the reorganization was held at Riverhead, Sept. 27 and 28, 1865. "The board of managers are fully satisfied with the results of the fair, both in the interest manifested by the people of the county and the pecuniary result arising therefrom." The receipts were \$1,600, and the disbursements \$800. From this time the fair has been held each year at Riverhead, excepting 1867, when it was at Greenport. The addresses have been delivered as follows: In 1865 by Hon. Henry Nicoll, of Mastic; 1866, Hon. William H. Gleason, Sag Harbor; 1867, Hon. Samuel A. Smith, of Smithtown; 1868, Hon. Henry P. Hedges, of Bridgehampton; 1869, William Nicoll, of Islip; 1870, Robert W. Pearsall, of Brentwood; 1871, Hon. Henry J. Scudder, of Northrop; 1872, Hon. Horace Greeley, of New York; 1873, General Stewart L. Woodford, of Brooklyn; 1875, Hon. Townsend D. Cock, of Queens county; 1876, Hon. L. Bradford Prince, of Flushing; 1877, Hon. John R. Reid, of Babylon; 1878, Hon. Nathan D. Petty, of Riverhead; 1879, Hon. James W. Covert, of Flushing; 1880, P. T. Barnum, of Bridgeport; 1881, Hon. R. B. Roosevelt and E. G. Blackford, of the New York Fish Commission, and Barnet Phillips, secretary of the American Fish Cultural Association.

In 1866 the question of permanent location came up, was discussed and laid over; also "the propriety of uniting with Queens county to form a Long Island agricultural society," October 29, 1867, the managers accepted from the citizens of Riverhead a deed donating to the Suffolk County Agricultural Society "land lying near and westerly of the Riverhead Cemetery, for fair grounds, with this condition—if the society shall fail for two consecutive years to hold a fair thereon, the grounds shall revert to the donors." The

grounds are pleasantly located, conveniently near to the village and to the depot of the Long Island Railroad, and of very ready access from all directions.

The matter of fitting up the grounds was referred to the President, Vice-President and Treasurer, and it was "resolved that the sum of \$200 be appropriated to pay the Treasurer for his extra services in behalf of the society." The first fair on the new grounds was held September 30th and October 1st and 2d, 1868. Again \$200 was paid to the Treasurer for services.

B. D. Carpenter, Stephen C. Rogers, Joshua L. Wells, John S. Marcy, William Nicoll and Robert W. Pearsall were the building committee that supervised the erection of the Exhibition Hall. The architect was George H. Skidmore, of Riverhead. The contract for building was awarded to Fielder, Skidmore & Co. The building was completed in time for the next annual fair, October 6, 7 and 8, 1869. In the evening of the 6th a public meeting was held in the court house, and papers were read by Robert W. Pearsall, of Brentwood, and Hon. Henry P. Hedges, of Bridgehampton, the latter upon "Fertilizers and their Application." "Mr. William Nicoll in a few appropriate remarks called attention to the Exhibition Hall, and, with a view of liquidating the debt incurred by its erection, he moved that a committee be appointed for soliciting life members of the society upon the payment of ten dollars each. The motion having been passed and the committee appointed, Mr. Nicoll manifested his earnestness in the movement by the payment of seventy dollars, making his wife and children life members. Others immediately followed the example till \$400 had been contributed." The annual meeting in the evening of the 7th was addressed by Mr. Nicoll.

On June 22 and 23, 1870, occurred the first horticultural exhibition, a festival and reunion, which was very successful, bringing together a very large and pleasant company. Others were held June 14, 1871, and June 19, 1872. There being few if any professional florists in the county and the strawberry growers being particularly busy marketing their fruit, it was found to be impracticable to attempt at present more than one fair each year.

In 1876, besides the usual annual meeting on Wednesday evening during the fair, meet-

ings were held at the court-house on Tuesday and Thursday evenings for discussion of matters of interest to the county and its people; but the attendance was so small that no encouragement was felt to repeat the experiment.

During this year the grounds were improved by planting trees, which were donated to the society by Isaac Hicks & Sons, of Old Westbury, Queens county; P. H. Foster, of Babylon; E. F. Richardson, of Brentwood, and Israel Peck, of Southold. Adjoining Exhibition Hall was built a cloak or package room, which has proved a great convenience to visitors and a source of profit to the society. New features were introduced into the exhibition, viz.: "Centennial relics" and "a display of antiquities." This being the Centennial year this feature seemed to touch every heart, bringing out a warm response throughout the county, and, not stopping with county limits, was similarly responded to in several other counties as a striking feature in their fairs. The suggestion, coming as it did from this county, at once introduced this society to many sister societies that before hardly knew of it. A display of "plans" for farm buildings, etc., by Suffolk county architects (which has been of much service by favorably introducing to visiting strangers such architects as exhibited, and also by elevating the standard of architecture in the county) and a "collection of foreign curiosities" were very successful in themselves and added much to the exhibit. A new and notable feature of the fair was the gathering of the children of the public schools of the county,—teachers and pupils being admitted free on one specified day,—the effect of which was so gratifying that it has become one of the fixtures of each fair, thereby cultivating in the rising generation an interest in the society. This year, too, more largely than ever before, was the power of the county press shown in arousing throughout the county a new and general interest in the society, and a strong desire to attend the fair. All together, notwithstanding the greater attraction offered by the Centennial Exhibition at Philadelphia, this year seems to have been a turning point in the history of the society. Partly from the geographical situation of the county, partly from the difficulty experienced in reaching the fair with articles for exhibition, and from various other reasons, a feeling of more than indifference seemed very largely to have possessed the

people of both east and west. This now gave place to a desire to promote the success of the fair.

In 1877 the new features of the preceding year were retained and a new department, an "exhibit of school work," was introduced, whereby the public schools became interested in the society; also exhibits of minerals and Indian relics. This fair was made more attractive by a fine display from the Long Island Historical Society of Brooklyn, through the kindness of Elias Lewis, Jr. The attendance was larger, by reason of the improved railroad connections and facilities, whereby people were brought from all parts of the island and returned at reduced rates. Not only the society, but many people throughout the county were much benefited by a donation from J. N. Hallock, formerly of Suffolk county, now publisher of "The Christian at Work," New York city, of subscriptions amounting to \$100, which were largely used as premiums. This year \$600 was paid on the debt, and in 1878 \$400.

In 1879 more new features were introduced—displays of decorated pottery, rare china, native woods, and leaves and nuts of trees growing in the county. Among the cattle exhibited were a pair of immense oxen, weighing over 4,600 pounds, exhibited by Elbert Rose of Bridgehampton, and some superior Jerseys from the well-known stock-yards of William Crozier of Northport. Point judging on cattle and horses was now introduced. The exhibit of school work, first introduced in 1877, showed gratifying progress. The hall was made more cheerful by the exhibit of a large number of the bills and posters of the different county societies of the State. The debt was reduced \$250 this year.

A very important feature of the fair of 1880 was the addresses of P. T. Barnum, at the hall in the afternoon and at the court-house in the evening, replete with humor and wisdom. Some very fine Early Rose potatoes, that took the first prize, were grown in beach sand. One man reported a crop of 500 bushels of potatoes raised on an acre of ground. This year the debt was again reduced \$250.

At a meeting of the board of managers held at Riverhead Jan. 27, 1881, Austin Corbin, the newly elected president and receiver of the Long Island Railroad Company, and several of the directors were present; also reporters from

the city papers. Mr. Corbin and others explained the condition of the road and the company and their plans and intentions for the future. Mr. Corbin, as a Suffolk county farmer, made a donation to the society of \$250.

Before the fair the railroad company offered \$500 in special premiums for stock, grains, fruit, etc., which greatly stimulated the exhibitors and added much to the interest of the exhibition. H. W. Maxwell, one of the directors of the railroad company, offered five gold medals, of the total value of \$100, to be competed for during the fair by the pupils of the public schools of the county, in reading, arithmetic, United States history, geography and English language. Three of these were taken by pupils of the Greenport school, one by a pupil at Yaphank, and one by a member of the school at Patchogue. During this year the grounds were improved by planting more trees. The addresses at the fair were on fish culture, out of the regular course, but of great interest to the whole county. The debt was still further reduced \$500.

Again a new departure: The officers of the society, not content with showing their county's products to those that might come to the county fair, proposed to the farmers and others of the county an exhibit of their good things at the State fair at Elmira, which exhibit, although an experiment, was very encouraging in its results, the first premium (\$25) being awarded to R. O. Colt, of Bay Shore, for the best collection of vegetables, besides other premiums to different exhibitors; while a new wagon gear invented and exhibited by C. M. Blydenburgh, of Riverhead, attracted great attention, as did also the wood of which the wagon was built—Suffolk county oak. The exhibit brought the county into very prominent and favorable notice.

Another institution which has proved of great service to the upward progress of Riverhead is the Savings Bank, which was established in 1872, mainly through the efforts of Mr. Nat W. Foster and Orville B. Ackerly. The latter, who was for many years a resident of Riverhead, has been engaged in business in New York for a considerable time past. He was County Clerk of Suffolk for six years and had previously been Deputy Clerk for twelve years, and not only proved a most

capable official but was one of the most popular men in the county, and that popularity he still retains, although the prosecution of his business necessarily removes him from its associations—at least to the same extent as formerly.

The bank started out with the following trustees: James H. Tuthill, John Downs, N. W. Foster, Jeremiah M. Edwards, Gilbert H. Ketcham, Daniel A. Griffing, J. Henry Perkins, Moses F. Benjamin, Edwin F. Squiers, John R. Corwin, Orville B. Ackerly, Richard T. Osborn, Isaac C. Halsey, Simeon S. Hawkins, Richard H. Benjamin, John F. Foster, Thomas Coles, J. Halsey Young, John S. Marcy, Abraham B. Luce, Jonas Fishel, and John P. Mills. It was a success from the first, and during all the years that have passed, in spite of periods of panic, depression and financial restlessness, it has maintained a clean and honorable record, and by its wise management has done much to develop the prosperity of the town. According to the latest report its resources amounted to \$3,189,770, and its deposits to \$2,859,829, giving it a clear surplus of \$329,941. But that report showed another detail which ought to be a matter of local pride, showing as it does the thrifty character of the people, and that was the average of each account in 1900 was \$457.93, an amount exceeded by only two others of the savings banks on Long Island.

But the Savings Bank rendered a most valuable service to Riverhead and to the county in a widely different direction from its finances, for it was at a meeting of its board of trustees in 1886 that the organization of the Suffolk County Historical Society was first broached. The Rev. Dr. Samuel E. Herrick, of Boston, a native of Suffolk county, was a guest at the usual luncheon which was a feature of the trustees' meetings, and in the course of a most interesting address suggested the formation of an organization which should gather up the records of the past and preserve them. "Too many of these have been already lost," he

said, "because such an institution has not existed. Suffolk county may for all time rejoice in her illustrious citizens. Who would forget Captain Mercator Cooper, of Southampton, who, in the whaleship *Manhattan*, of Sag Harbor, first carried the United States flag into Japanese waters, at the same time returning to their homes more than a score of shipwrecked sailors he had rescued? Who would be willing to lose record of the illustrious patriotism and devotion of General Nathaniel Woodhull or of the valuable services of Ezra l'Hommedieu and many others? Shall the story of their brave and heroic lives be lost, or shall they be saved to inspire others to good works? Why, then, may not something at once be done?"

Before the close of the year the Suffolk County Historical Society was fully organized. The following account of its progress has been drawn up by Mr. Foster, now its President:

The early members were: Hon. James H. Tuthill, George F. Stackpole, Nat W. Foster, Daniel W. Reeve, William C. Ostrander, Ahaz Bradley, Professor Charles S. Stone, the Rev. Samuel Whaley, Benjamin K. Payne, Dr. Howard H. Young, William R. Duvall, Holmes W. Swezey, Sheriff Henry W. Halsey, James L. Millard, John Walsh, Jr., Gilbert H. Conklin and Samuel Tuthill, of Riverhead; Wilmot M. Smith, Hon. John S. Havens, William H. Newins and George M. Ackerly, of Patchogue; Joseph H. Petty, of Amityville; Stuart T. Terry, the Rev. Ephraim Whitaker, D. D., and N. Hubbard Cleveland, of Southold; Richard M. Bayles, of Middle Island; Salem H. Wales, of New York, with a country residence at Southampton; James Slater, of Central Islip; Henry A. Brown, of West Deer Park; A. M. Salmon, of Peconic; Theodore W. Smith, of Smithtown; Benjamin T. Robbins, of Northport; Charles E. Shepard, of Huntington; Sidney H. Ritch, of Port Jefferson; and W. W. Thompson, of Orient.

The officers for the first year were: Presi-

dent, James H. Tuthill, Riverhead; Vice-presidents, the Rev. Dr. Ephraim Whitaker, Southold, and Joseph H. Petty, Amityville; Recording Secretary, Stuart T. Terry, Southold; Corresponding Secretary, Richard M. Bayles, Middle Island; Treasurer, James H. Pierson, Southampton; Custodian, George F. Stackpole, Riverhead.

Mr. Tuthill was re-elected President until his death, in January, 1894.

At the next annual meeting after Mr. Tuthill's death, February 20, 1894, Nat W. Foster was elected as his successor, the Rev. Dr. Whitaker declining the position and continuing as Vice-president along with Floyd, of New York. At the evening meeting special services, memorial of the life of the late President, were held, addressed by the Rev. Dr. Whitaker, the Rev. William I. Chalmers, B. K. Payne and Professor J. M. Belford.

In 1895 Orville B. Ackerly, now of New York City, was made Corresponding Secretary.

In 1896 the Rev. Charles A. Stonelake, of Aquebogue, was elected Recording Secretary, and continued to so act until suddenly called out of the State, when, at the next annual meeting, February 15, 1898, Miss Ruth H. Tuthill, daughter of the late President, was chosen for that position.

At a special meeting of the society held on July 1, 1893, the Riverhead Savings Bank building, at the corner of Main street and Griffing avenue, was purchased for \$4,000. One-half was paid and \$2,000 remained on bond and mortgage. This mortgage has since been reduced to \$1,300.

Addresses have been delivered at the public meetings of the society as follows:

June, 1887. The Rev. Dr. Whitaker: "Union of Church and State, Past and Present."

June, 1888. John R. Reid: "Historic Studies."

October, 1889. Henry P. Hedges: "Priority of Settlement, Southold and Southampton."

October, 1890. James H. Tuthill: "Proper Work of an Historical Society, and How It Should be Done."

February, 1893. The Rev. W. I. Chalmers: "Urging Deeper Interest in Historical Work and the Suffolk County Historical Society."

February, 1895. The Rev. Dr. Whitaker: "The Rise of Woman." District Attorney W. H. Jaycox: "The Value of Historical Knowledge." George F. Stackpole: "What May be Done in the Future in the Way of Developing Long Island." The Rev. R. M. Edwards: "Impressions of Long Island."

February, 1896. William Wallace Tooker: "Cockinoo de Long Island." Edward P. Bufett, Jr.: "Fort Salonga."

February, 1897. Augustus Floyd: "Suffolk in Revolutionary Times." The Rev. A. C. Stonelake: "The Collections of the Society."

February, 1898. R. C. McCormick: "Value of Local Historical Societies." William S. Pelletreau: "Richard Smith of Smithtown."

The objects of the society as stated in Article II of its constitution read, "To foster the historical spirit in thought, study and purpose; to encourage historical and antiquarian research; to disseminate historical knowledge; to collect and preserve such autographs and other manuscripts, maps, plans, charts, paintings, engravings and other pictorial representations, books, pamphlets, newspapers, curiosities and antiquities of every kind as may have been or shall be the products of Suffolk county, or of its several towns, some of which are the oldest English settlements and religious and civil organizations within the bounds of the State of New York; and also to discover, procure and preserve whatsoever material of any kind may illustrate the history of its several towns."

The society, since its organization in 1886, has gathered a large number of valuable historical documents, old sermons and addresses by Suffolk county men, statistical reports, portraits, Indian and Revolutionary War rel-

ics, pre-Revolutionary implements of industry and other articles of interest. Among the valuable historical works are the following: Records of Boston and New Haven, the former comprising twenty-seven volumes, showing the origin of many Long Island families, presented by Orville B. Ackerly; Mallman's "History of Shelter Island;" "Early Long Island Wills," by W. S. Pelletreau; All the town records of the several Long Island towns as published by the town authorities; Thompson's "History of Long Island;" Genealogical and biographical record of New York; and a copy of the laws of the Colony of New York from 1691 to 1799, presented by Elbert Carli Livingston, containing in its fly leaves a family register. (The first death recorded on the fly leaf in manuscript is that of "Captain Jacob Conklin in Dec. ye 8 1754 on the 1st day of the week at 9 o'clock at night.")

Among rare documents and publications are: Early Long Island wills of Suffolk county, known as the Lester Will Book; manuscript copy of the roster of soldiers stationed at Sag Harbor under command of Major Benjamin Case in War of 1812; proceedings of the New England Historic Genealogical Society and of the Massachusetts Historical Society, all presented by Orville B. Ackerly; papers in the case of the trustees of Southampton against Frederick H. Betts, giving a full history of the early settlement of the town and the partitioning of the lands and meadow rights; unbound journal of New York Assembly Journal, 1796, and Senate, 1806; the origin and meaning of English and Dutch surnames of New York State families; list of ancestors and descendants of John Howell Wells; seventy old almanacs between the years 1811 and 1896; and "Long Island Journal of Philosophy and Cabinet of Varieties," published at Huntington in 1825.

Among the curiosities is a framed commission by the Postmaster General to Elihu S. Miller as postmaster at Wading River, February 1, 1869, to his father, Sylvester Miller,

July 30, 1844, and to his grandfather, Zophar Miller, February 26, 1825.

A letter from the Postmaster General to Congress transmitting a statement of the net amount of postage accruing at each postoffice in the country for the year ending March 31, 1826, shows the following to have been the receipts of various Long Island offices: Jamaica, \$164.27; Hempstead, \$36.57; Huntington, \$64.50; Suffolk Court House (now Riverhead), \$29.40; Wading River, \$2.74; Bridgehampton, \$50.22; Cold Spring, \$18.63; Cutchogue, \$10.20; Deer Park, \$7.37; Easthampton, \$59.33; Islip, \$20.40; Jericho, \$18.07; Jerusalem, \$1.27; Mattituck, \$18.86; Oyster Bay, \$23; Oyster Bay South, \$7.39; Oyster Pond (Orient), \$25.32; Patchogue, \$24.31; Sag Harbor, \$117.06; Setauket, \$28.46; Smithtown, \$56.16; Southampton, \$47.62; Southold, \$35.35; and Westhampton, \$9.61.

Among other interesting documents are the records of the First Strict Congregational convention, held at the house of the Rev. Daniel Young, Riverhead, August 26, 1791. The Rev. Daniel Young, pastor of the First Congregational Church of Riverhead, organized March 26, 1758; the Rev. Jacob Corwin, the Rev. Noah Hallock, Bridgehampton, and Deacons Daniel Terry and Richard Robinson, delegates from the churches at Riverhead and Wading River; the Rev. Jacob Corwin, pastor of the Second Congregational Church, founded at Aquebogue, or East Riverhead, in 1787, and the Rev. Paul Cuffee, a native Indian of the Shinnecock tribe, located at Canoe Place, "a man of great influence and reputation." His grave is prominent to-day in the cemetery east of Good Ground Station. The appointment of Calvin Cook as ensign of "the regiment of militia in Suffolk County," signed by Daniel D. Tompkins, is prominently displayed. There is an interesting exhibit of flax seed, a sheaf of the flax raised in Suffolk county, unhetchelled and hetchelled flax, thread and linen cloth. There are also shown the various old-fashioned flax machines, including

flax hackler, flax wheel and swift reel. A relic of historical interest is a piece of cedar from the British sloop of war "Sylph," built in Bermuda in 1811 and wrecked on Southampton Bar on January 17, 1811, when, out of a crew of 121, 115 were lost, including Captain George Dickens, commanding officer; Lieutenants George Butt and H. S. Marsham, Surgeon James Still and Thomas Atwell, master. This piece of cedar was part of a fence post underground on a farm at Quogue for seventy-five years, and is still as fragrant as ever. Among the Indian relics are arrow heads from Fort Salunga, Indian arrow heads, stone axes, hoes, tomahawks, mortars, found mainly in Southold and Southampton. Some of these were taken from a well twenty feet underground, and the stone was of a character such as is found only in the outcropping ledges of Massachusetts. It puzzles scientists to know how four of the preglacial stone arrow and spear heads came to be found on Long Island and at such a depth below the surface, where they have evidently been buried for ages past. Wampum and other Montauk Indian relics are also displayed here. An old plow with a wooden mould-board, used in the town of Southold a hundred years ago, and several British cannon balls fired over to Long Island from British men-of-war in the War of 1812-15 and picked up by the farmers in their fields, are shown.

Among other curiosities are: Curious fish found in the waters of Suffolk county; shimplasters issued by local merchants in the War of the Rebellion; old merchandise bills and receipts; old State bank and Continental bills; piece of first flat rail used on the Long Island Railroad in 1836, size of rail two and one-half by three-fourths, ordinary tire iron, also the chain used for holding the ends of the rails; ivory paper-cutter used by Daniel Webster and presented by him to Charles Taylor, of Peconic; photographs of the exhibits at the Suffolk County Agricultural Society's fair by H. B. Fullerton; a bear's skull, found at Great

Pond many years ago; a ten-pound piece of meteor that came down on the farm of R. M. Bowne at Glen Cove in 1794 (the original piece weighed fifty pounds); a Latin Vulgate and Greek text Bible, printed in 1544 in Venice; assessment roll of Riverhead in 1839, in an ordinary writing book; and picture of tombstone of John Gardiner, proprietor of Gardiner's Island, who was born in 1752 and died in 1823, and of David Gardiner, second proprietor of Gardiner's Island, in the Hartford Cemetery, Connecticut.

Among the engraved portraits are those of Thomas George Hodgkins, who was born in England in 1703, and died in Setauket in 1792; the Rev. Charles J. Knowles, former pastor of the Congregational Church at Riverhead, who died in 1880.

Ezra L'Honmiedieu, member of Continental Congress in 1779-83, member of the Senate of New York, clerk of Suffolk county, 1784-1810, and regent of the university 1787-1811.

Nathaniel W. Foster, who has been for years the prime mover in these three institutions and is one of the best known and most generally popular men in Suffolk county, is entitled to a word or two in this place. He was born at Riverhead September 24, 1835, and through his father traces his descent from Christopher Foster, who in 1635 settled in Boston from England and in 1651 made his home in Southampton, Long Island. From that day to this the name has been prominent in the affairs of the island, and its members have taken part in all the great wars from the Revolution to the conflict between the States. His grandfather, Rufus Foster, fought in the War of 1812, and was for a time stationed at Sag Harbor, and his father, Herman D. Foster, settled at Riverhead in 1834. On his mother's side Mr. Foster can claim an ancestry equally prominent, as she was one of the descendants of Richard Woodhull, so prominent in the early history of Brookhaven.

Nat W. Foster was trained to business in the dry goods store of his father, and after-

ward the business was carried on by him in partnership with Mr. O. B. Ackerly. In 1874 he retired from that connection to devote his entire time to other enterprises which claimed his attention, and primarily to his work as the local agent of the Equitable Life Assurance Society, an appointment he had held for some years and which he still retains. Then, too, the savings bank of which he has since become president began to demand a share of his time, much of the local public business was thrown on his shoulders, and the secretaryship of the Suffolk County Agricultural Society of itself furnished enough work for one man. Mr. Foster's life has been a busy one; and while his career has been prosperous, it has always been on lines calculated to bring prosperity and happiness to others, and no fact is more heartily recognized throughout Suffolk county to-day than that.

In 1888 Mr. Foster was elected treasurer of the Long Island Bible Society and has held the position ever since. He was an organizer of the Riverhead Cemetery Association, has been a trustee since the organization and for several years the president. He is also president of the Village Improvement Society, in which he takes a great interest, and which has done good work through his direction and influence. In early life he was deeply interested in temperance work and was connected with nearly every temperance society of importance in village, county or State. He was particularly interested in the Sons of Temperance, and in 1865, unexpectedly to himself, he was called to the head of the order in eastern New York.

Mr. Foster has traveled quite extensively, both in the United States and Europe. He is a liberal supporter of the Congregational Church, where he has been a member since sixteen years of age, and for several years has served as deacon.

In the year 1858 Mr. Foster married Fannie, daughter of Sylvester Miller, of Wading River. Mr. Miller was Supervisor of the

town for twenty years and justice of the peace for many years more. Mrs. Foster died in 1888, leaving five children: Warren W., a Justice of the Court of General Sessions in New York; Millicent F., who was educated at Wellesley College; Sylvester M., a graduate of Dartmouth and the secretary of the Suffolk County Agricultural Society for some years past; Herman D., who died in infancy; and Fannie Estelle.

Aquebogue has more to boast of in the way of antiquity than Riverhead. It seems to have been the site of an Indian village of considerable size, so it is possible that the early settlers in the district from Southold simply took up the red man's improvements in the way of clearances and trails, and the strange temple and graves discovered in 1879 demonstrate the affection and reverence which a primitive race must have had for the territory,—possibly an older race than that which sold the ground to the white pioneers from Southold. From Lower Aquebogue, which some suppose to have been settled before any other part of the district, the comparatively modern village of Jamesport was formed about 1830, seemingly one of those paper cities which for a time was so common in the story of American life, and was ridiculed so mercilessly in Dickens' novel, "Martin Chuzzlewit." Dr. Prime tells us that in 1833 there was not a single house in the place and that it owed "its origin to the speculation fever of a single individual who ruined himself by the operation." The site was nicely mapped out, streets were surveyed, a wharf was built and a rather imposing hotel was erected. For a year or two it seemed as if the hopes which centred in it would be realized; one or two whaling ships made use of the wharf. But there was no earthly reason why ocean boats should seek a harbor at such a place, at the extremity of Peconic Bay, that was open to no vessels larger than coasters, and that was at all times difficult of access. So the mariners, after a trial or two, sought other and more convenient headquarters, and

Jamesport's commerce fell away and its hopes were blighted. A few years ago its beautiful situation began to attract the "summer people," and it has become quite popular with that class, so much so that at the height of the season it is rather difficult for all who desire accommodations to secure them. But that is a matter that can be remedied and there is little doubt it will be. Under these circumstances Jamesport can look forward to a brighter future than ever was anticipated for it at its inception or that seemed possible in 1843, when the early glamor had passed and it boasted some forty houses.

At the other extremity of the township, on the boundary line dividing it from Brookhaven, is the village of Wading River, the terminus, for the present at least, of what is known as the Port Jefferson Branch of the Long Island Railroad. It is supposed that a settlement was effected about 1670, and in 1708 a mill was established by John Roe. Some four miles eastward is the settlement of Baiting Hollow, which is said to date from 1719. Like Wading River, it did a considerable business in the first half of the nineteenth century in cutting and marketing firewood, but the source of supply did not prove inexhaustible, and when it passed farming remained the only industry, for even to the present day the summer boarder has not discovered this region to any great extent. During the War of 1812 an exciting skirmish is said to have been fought on the shore between Fresh Pond Landing and Jericho Landing. Several sloops belonging to Baiting Hollow and engaged in carrying firewood, were espied on the beach by a British squadron cruising in the sound, and two boats' crews were dispatched to seize them. The local militia was, however, on the lookout, and under Captain John Wells opened fire on the invaders with such effect that although they had landed and had boarded one of the sloops, they were glad to effect a retreat. It is said that the British had

a cannon in each of their boats and used them, but this part of the story may well be doubted.

Manorville (380 population), Calverton (350), Northville (412), Roanoke (200), Buchananville (200), Laurel (197), are all farming centers, and there are a number of others still more slenderly populated, of which nothing interesting can be said. In fact, outside of Riverhead village, the township is almost wholly given over to farming.

In the Fifty-sixth Congress Mr. Townsend Scudder made an effort to give a new port to Riverhead by having an appropriation for a breakwater at Northville, or rather at Luce's Harbor, where a small amount of local traffic is carried on through local efforts at harbor-making. In his speech on presenting the subject to Congress Mr. Scudder said:

"Along the north shore of Long Island Sound, between Port Jefferson and Mattituck, there stretches a vast area of country which has failed to receive the attention and consideration to which it would seem to be entitled. Intercourse between it and the markets of the metropolis, as well as of the cities on the sound, in the State of Connecticut, are denied to it through lack of available means being afforded its people to transport their goods and products to places of sale.

"For many years the farmers of this neglected locality have felt the necessity of having their produce carried to city markets at a rate that would return them something for their labor. The railroad to New York was too remote to permit profitable carting, even if the freight rates by rail had permitted shipments to market by that carrier. To overcome these difficulties the people of this community have constructed out into the open waters of Long Island Sound a pier. This work was accomplished by these people with a laudable desire to improve their condition at the cost of a self-denial almost beyond description. The pier now affords a means of shipment to the city markets, weather permitting, but being unprotected from wind and wave, and projecting out

from an open coast, it is not always available, and is often in danger of being washed away.

"It is the pride of many of the great governments of Europe that where harbors did not exist in times past through the farsight of those having in control the reins of government now are to be found ports of great commercial importance, harbors of refuge, commercial activity, and prosperity.

"It seems to me that the case of these Long Island farmers which I now plead demands for them some consideration. Appropriations for harbor improvements are justified by the promotion of commerce which it is assumed will result. This dock is the only place of debarkation on Long Island Sound between Port Jefferson and Greenport, a stretch of over forty miles, excepting Mattituck Harbor, which, through failure of the National Government to complete the improvements there projected, is not available for the purposes for which the dock under consideration is used, even if it were within profitable carting distance, which it is not. This dock is open to all shippers, to all who desire to take passage from it on the vessels touching at it. Its use is unrestricted, I am told, for the greatest good to the greatest number. It will do much toward the development of a section of Long Island that has been sadly neglected, and which only requires proper transportation facilities to come to the front. This section of country, while one of the most productive on Long Island, is isolated and cut off from the great centers of business.

"The chairman of the committee seems to have been touched by my appeal in behalf of these people, for he tells me he will not oppose the adoption of my amendment by the House. I submit the same in full confidence that it is a worthy object.

"I trust the survey may be made at an early date, that a favorable report will be received from the engineers, and that the next Congress will make a proper appropriation to construct the desired breakwater and thereby protect the shipping which will flow from this

point and bring to these hard-working people the benefits of safe transportation facilities to which they are entitled by their enterprise and sacrifices."

The early church history of Riverhead is involved in considerable doubt. A Presbyterian Church seems to have been organized at Upper Aquebogue, beside the now ancient cemetery, but little concerning it has been learned beyond the names of two of its early pastors, a Mr. Lee and the Rev. Timothy Symmes, and as the latter became a minister in New Jersey in 1746 the period of the beginning of the Aquebogue congregation must have preceded that date by several years. At Lower Aquebogue a Presbyterian Church was erected in 1731, at Baiting Hollow in 1803. None of these early churches survive. A Congregational Church was organized at Upper Aquebogue in 1758. In 1785 a congregation of the body known as the Strict Congregational Convention of Connecticut was organized at

Wading River, and in 1791 a similar congregation was formed at Baiting Hollow, and these three bodies continue to the present time. In 1815 a Swedenborgian Church was established at Baiting Hollow and existed at least up to a few years ago, and the same people set up a congregation at Riverhead in 1839, and in 1855 erected a building for public worship.

In 1833 the first Congregationalist Church in Riverhead village was organized, and the Methodist Episcopal body in the village had its beginning the same year. Services under both these denominations had, however, been held in the court house from a much earlier date. The first mass was celebrated in 1844 in a private house at Upper Aquebogue in the presence of four persons. It was not until 1870 that the Episcopalians commenced the effort which in 1872 resulted in the erection of Grace Church in Riverhead village, and it still continues the sole representative of that body in the township.

CHAPTER LXX.

SOUTHOLD.

THE township of Southold occupies the north division of the eastern end of Long Island from the Riverhead boundary to Orient Point, a distance of twenty-three miles. At its widest part it measures only about four miles and it is said to contain 29,446 acres. On its Long Island Sound side its coast line is rugged and precipitous, but that facing Peconic Bay is flat, with wide stretches of rich meadow land. The soil in the interior is very fertile, and the climate, on the whole, may be ranked as healthy and bracing. The township has several "dependencies" in the shape of islands,—Robin's Island, Plum Island, Fisher's Island, and others, but these can hardly be said to add either to its dignity or importance.

The story of the founding of the colony in 1640, by the Rev. John Youngs and his associates, has already been told in this work. It was never an independent colony, like that, for instance, at Huntington or at Brookhaven, but from its beginning owed allegiance to the commonwealth of Hartford, to full association with which it was brought in 1649. But, except for the trial of grave criminal offenses and of the more important law-suits, the connection with the mainland was little more than nominal. The commonwealth never seems to have interfered with the town, and the town was ruled by the town meeting and the town meeting was subordinate to the church. It was a pure theocracy, and unless a man was a member of the church he was not allowed a voice in town meeting. His certificate of

church membership was his evidence of citizenship. If he had not such a document he was not regarded as on an equality with those who had, and his presence was not desired in the community. The town meeting attended to the highways, the cleaning of the streets, the removal of obstructions, the education of youth, the division of lands, the hunting of wolves, the marking of cattle, and the defense of the settlement. The town meeting was held every three months, and a fine of twenty shillings was imposed for non-attendance.

Mr. W. S. Pelletreau, the ablest living historian of Suffolk county, wrote the following sketch of the first settlers of Southold in 1880, and the sketch is inserted here with his permission:

Tradition and history alike unite in awarding to Rev. John Youngs the honor of being the founder of this town. The first notice we have of this remarkable man is found in the following entry, copied by Samuel G. Drake from the original records in London and printed in his "Founders of New England," p. 49: "The examination of John Yonge of St. Margretts, suff. minister, aged thirty-five years, and Joan his wife, aged thirty-four years, with six children—John, Thomas, Anne, Rachel, Mary and Josueph. Ar desirous to passe for Salam in New England to inhabitt." Against the above entry in the place of the date is written: "This man was forbidden passage by the commissioners and went not from Yarmouth." This entry follows six other entries, dated May 11, 1637, and is followed by two entries of examination on May 12, 1637. Neal in his history of New England, published in London in 1720, mentions

Rev. Mr. Youngs of Southold among the list of Puritan ministers "who were in orders in the Church of England, but being disturbed by the ecclesiastical courts for the cause of nonconformity transported themselves to New England before the year 1641."

In Lambert's History of New Haven, which is a work of original research and considered good authority, it is stated: "Mr. Youngs reorganized his church at New Haven on the 21st of October, 1640, and, with them and such others as chose to accompany him, in the latter part of the month passed over to the island and commenced the settlement of the plantation." Moore's "Index of Southold," an invaluable work, which embraces in small compass the fruit of a vast amount of patient research, speaks of him as organizing a church in New Haven, to be located at Southold, October, 1640. We have no positive knowledge as to who the men were who constituted this church, and any attempt to make a list of the early settlers must be based upon inference more than actual knowledge; but the following list contains the names of those persons whom we believe to have been residents of the town prior to 1654:

Robert Akerly, Richard Benjamin, Thomas Benedict, John Bayley, John Booth, Thomas Brush, John Budd, Henry Case, Roger Cheston, Richard Clark, John Conklin, Thomas Cooper, Matthias Corwin, Philemon Dickerson, Jeffry Easty, John Elton, ——— Frost, Charles Glover, James Haines, Peter Hallock, (?), John Herbert, Josiah Hobart, Barnabas Horton, Thomas Hutchinson, John Ketcham, Thomas Mapes, Thomas Moore, Humphrey Norton, Thomas Osman, Isaac Overton, Peter Paine, Edward Petty, John Peakin, William Purrier, James Reeves, Thomas Rider, William Salmon, Thomas Stevenson, John Swezy, Richard Terry, Thomas Terry, Thomas Terrill, John Tucker, Henry Tuthill, John Tuthill,* John Underhill, Jeremiah Vail, William

Wells, Abraham Whittier, Barnabas Wines, Rev. John Youngs, Colonel John Youngs, Joseph Youngs.

To give an account of each of these would take us far beyond our limits, and a brief notice of a few of the more important names must suffice. The leader, Rev. John Youngs, had five sons—Colonel John, Thomas, Joseph, Benjamin and Christopher—and daughters Anne, Mary and Rachel. His son, Colonel John had arrived at man's estate at the time of the settlement, and until the end of his life was the foremost man of the colony.

Barnabas Horton was without doubt one of the original company who came with Mr. Youngs. He was born at Mously, in Leicestershire, England, in 1600. After coming to this country he is said to have lived at Hampton, Massachusetts, till 1640, when he joined the church organized by Mr. Youngs. He had sons Joseph, Benjamin, Caleb, Joshua and Jonathan, and daughters Hannah, Sarah and Mary. In 1654, 1656 and 1659 he was a deputy from Southold to the court of New Haven. He was admitted freeman of the Connecticut colony in 1662, and was deputy in 1663 and 1664. His name occurs as one of the patentees of the town in 1676, and he was intimately connected with all public affairs till his death. His tomb in the churchyard in Southold is covered with a slab of blue slate, said to have been imported from his native place and bearing the following inscription:

"Here lieth buried the body of Mr. Barnabas Horton, who was born at Mously, Leicestershire, Old England, and died at Southold on the 13th day of July, 1680, aged eighty years.

"Here lies my body tombed in dust,
Till Christ shall come and raise it with the just.
My soul ascended to the throne of God,
Where with sweet Jesus now I make abode.
Then hasten after me, my dearest wife,

*From this pioneer a recent local genealogical writer traces the descent of the late President Benjamin Harrison, as follows:

I. John Tuthill, Jr., of Southold, son of Henry Tuthill, of Tharston, England, and Hingham, Mass., was born July 16, 1635, and married Deliverance, daughter of William and Dorothy King.

II. Henry Tuthill, of Southold, born May 1, 1665, married Bethia, daughter of Captain Jonathan Horton.

III. Henry Tuthill, of Southold, born 1690, married Hanna Bebee (or Crouch).

IV. Henry Tuthill, of Aquebogue, born before 1715, married Phoebe Horton.

V. Anna Tuthill, born 1741, married John Cleves Symmes.

VI. Anna Symmes married President William Henry Harrison, son of Benjamin Harrison, signer of the Declaration of Independence, and for three terms Governor of the State of Virginia.

VII. John Scott Harrison married Lucretia K. Johnson.

VIII. Benjamin Harrison, late President of the United States, born August 20, 1833, died March 13, 1901.

To be partaker of this blessed life.
 And you, dear children all, follow the Lord;
 Hear and obey His public sacred word,
 And in your houses call upon His name,
 For oft I have advised you to the same.
 Then God will bless you with your children all,
 And to this blessed place He will you call."

"Heb. xi. 4—He being dead, yet speaketh."

William Wells, who was second to none in influence, is said to have come from England June 19, 1635, in the same ship with John Bayley, another of the early settlers. The first notice of him on Long Island is the following entry in the records of Southampton: "March 15th, 1643, William Wells, Gent., was censured for some unreverent speeches to Daniel Howe, who confessed his offence and promised reformation." In 1646 his name appears in the same records among a list of men who had evidently abandoned the settlement. The exact time at which he became a settler at Southold is unknown, but he was a resident here before 1649. He was a native of Norwich, England, and was born in 1608. Throughout his life he was the legal authority of the town, and pre-eminently the business man of the place, and it was through him that the purchases were made from the Indians of the region of Cutogue, Mattituck and Ockabock, including the town of Riverhead. As the inscription on his tomb narrates, he was a "justice of the peace and first sheriff of Yorkshire," being appointed to that position by Governor Nicolls in 1664. He died November 13, 1671, aged sixty-three, and left a wife Mary, who afterward married Thomas Mapes. His first wife, Bridget, was the widow of Henry Tuthill, and had the following children: William, Joshua, Mary, Bethia and Mehetabel. His tomb may still be seen in the old burial ground, and after a lapse of two centuries is in a perfect state of preservation, thanks to the reverent care of his descendant, the late William H. Wells. The magnificent genealogical work, "William Wells, of Southold, and His Descendants," by Rev. Charles Wells Hayes, contains a full account of this illustrious man and his family.

John Budd, according to Moore's "Index," was in New Haven in June, 1639, and signed an agreement as a freeman. He is reputed to have been one of the original company of settlers. The first actual knowledge we have of his presence on Long Island is in October,

1644, when we find this entry in the Southampton records: "Mr. Jones hath the lott granted unto him which was formerly granted unto John Budd of Yeanocock" (Southold). This clearly indicates that he was a dweller there at a very early date. In 1645 "it is ordered that John Budd shall have graunted unto him 4 Acres of new ground adjoining to his other 4 acres, to make up an 8-acre lott." In 1650 he is mentioned in Southampton as the owner of a water-mill and as running the same, and he is called "Lieutenant." In 1651 he appears as plaintiff in a suit against John Hubbard, but after that his name occurs no more. It is certain that he was a land owner in Southold in 1649, and left a large estate to his son John, who was one of the wealthiest men in the town. In 1657 he was deputy from Southold to New Haven. He removed to Westchester county about 1660, probably on account of some difficulty with his neighbors, and died there previous to 1670. He had children John, Joseph and Judith. None of his descendants are now found in this town.

Thomas Cooper was not, as some of the historians of Southold suppose, the same person who was among the first settlers in Southampton. The former died in 1658, leaving a wife Margaret and daughters Abigail and Mary, who married respectively Stephen Bayley and Elnathan Topping. The tombstone of Mary Topping is in the burying ground at Sagg (Bridgehampton), where she died April 26, 1704, aged sixty. Thomas Cooper left a large estate to his widow and daughters.

Matthias Corwin was doubtless an original settler. Previous to his settlement here he was a resident at Ipswich, Massachusetts. He was a man of the same rank as Colonel Youngs and Mr. Wells, and in 1656 was one of the men appointed to order town affairs, a position of great responsibility. He died in 1658, leaving two sons, John and Theophilus, and a daughter Mary, who married Henry Case, the ancestor of the numerous family of that name. The descendants of Matthias Corwin are widely spread, and among them are to be found some who have held the highest positions in church and State.

John Conkling was not among the original company, but came here previous to 1651. Before this he was a resident of Salem. There are few families on Long Island that have exerted a wider influence. His brother Ananias

was the founder of the East Hampton family. From his son Timothy are descended the families in the town of Huntington and the western part of the county; while from his sons John and Jacob are sprung the families in this town, and the name is found in all sections of our country. He is said to have been a native of Nottinghamshire, England. Tradition states that he and William Salmon, the proprietor of Hashamomack, were neighbors and playmates in their boyhood days, and this is supposed to have been the reason why after a short stay in Southold village he removed to the neighborhood of his former companion. About 1661 he removed to Huntington, and died there about 1683, at the supposed age of eighty-three.

Few of the early settlers have left more distinguished descendants than Philemon Dickerson. In 1637 he came to America in the same vessel in which Minister Youngs had vainly attempted to obtain a passage. In 1639 he appears at Salem, Massachusetts, where in 1641 he was admitted as a freeman. He is supposed to have come to this town in 1646, but the date is unknown. He died in 1674, aged seventy-four, and left sons Thomas and Peter. From these are sprung a numerous posterity, embracing some of the most noted public men of the land. In 1651 Hon. Mahlon Dickerson, Secretary of the Navy, erected in the ancient burying ground of this village a massive monument to the memory of his ancestors.

John Goldsmith, though not one of the first settlers, was a prominent citizen, and has left a numerous and respected posterity. He is supposed to have been the son of Thomas Goldsmith who was a resident in Southampton in 1651, and was living there as late as 1677. In 1661 he bought of Richard Barrett his house and land. It was a part of this land that John Goldsmith sold to widow Margaret Cooper in 1678, in exchange for a lot in Cutchogue. The deeds may be seen in vol. I printed records of Southold, p. 209, 210. He moved to this town at that time, and died in 1703, leaving children John, Richard, Nathaniel, Mary, Thomas, Daniel and Elizabeth.

Thomas Moore left England in 1635. In 1636 he and his wife Martha were admitted as members of Salem Church, and they came to Southold about 1650. In 1658 he was deputy from this town to the General Court at New Haven. He was appointed a Magistrate

by the Dutch officers in 1673; he declined, but accepted the position under English rule in 1685. He was a large land owner and a prominent man during his whole life. He died in 1691, leaving children Thomas, Martha, Benjamin, Nathaniel, Hannah, Jonathan, Mary and Sarah. His son Benjamin married Anne, daughter of James Hampton, of Southampton, who came to that place from Salem. The descendants of this family are very numerous. Among them none is more worthy of respectful mention than Charles B. Moore, of New York, whose genealogical indexes must ever be an authority of the greatest weight upon the subject.

Colonel John Youngs, next to his venerable parent the minister, was justly considered the foremost man in the town, and there are few names in the early history of the county more prominent than his. He was born in 1623, early became master of a vessel, and was in active service against the Dutch. In 1654 he was appointed by the commissioners to cruise in the sound as a part of a naval force, and was actively engaged in this service two years. In 1660 and 1661 he was a delegate to New Haven, and after the union with Connecticut he was a delegate to Hartford. He assisted in collecting a military force to assist in the conquest of New Amsterdam, and was one of the representatives in the first Assembly at Hemstead under the Duke of York. Through him was obtained a new deed from the Indians, confirming their previous sales. He was one of the patentees in 1676, was made Sheriff of Yorkshire, and was a member of the Colonial Council from 1683 to 1697. At the age of seventy he was in command of the militia regiment of 533 men. We have only time and space to briefly mention the offices he filled and the acts he performed, but the life and public services of this famous man must ever be a bright page in Long Island history. His eventful life closed in 1698. His tomb may still be seen in the ancient burial place, and the stone that covers his remains bears the following:

"Here lieth interred the body of Colonel JOHN YOUNGS Esquire, late one of His Maiestie's Councell of the Province of New York, who Departed this life the 12day of April Anno Domini 1698, Aged 75 years."

In 1654 an order was made that each man who had not already done so should bring in to the recorder a description of his lands—

"how they ly East, west, north and South, between whom, and in what places." Thanks to this order we have a pretty accurate knowledge as to where each of our ancestors had his abode. Parson Youngs and his little band landed at the head of Town Creek, and here they established their future home. That the minister's lot should have been the best and most advantageously situated was a thing to be expected. We will in imagination turn back the wheels of time, and endeavor to present a picture of the village in the early days and locate the homes of our honorable ancestors.

On the west side of the road that leads from the main street to Town Creek was the home lot of Minister Youngs. This lot extended westward as far as the western side of the deep hollow west of the Methodist Church. The pastor's dwelling was on the eastern part of the lot and near where the house of Henry G. Howell now stands. Here he lived, and labored, and died.

Next west came the home lot of his neighbor, Robert Akerly (now the "Cochran place"), but in 1653 he had moved to another place, and his home lot is described as "Twelve acres more or lesse, the highway going into the old field lying north, the land of Thomas Cooper lying at the rear of his home lot south." This was near the present residence of William Horton.

Next came the home lot of John Booth. His lands were recorded in 1685, and at that time his homestead was six acres, bounded west by John Herbert and east by Benjamin Youngs. These premises are now the residence of the family of the late Israel Peck.

Next came John Herbert's homestead. This descended to his son John, who in 1699 sold it to "the inhabitants of the township of Southold" for 75 pounds in silver. From that time it has been used as a parsonage lot, and the Presbyterian Church stands upon it.

Next west was the home lot of Richard Benjamin, and its western boundary was the present easterly line of Richard Carpenter's lot.

The lot of Ananias Conkling, who afterward removed to East Hampton, was next west, and this was purchased by Richard Benjamin; his boundary then was "Benjamin's lane," a road that ran from the town street by the east end of Deacon Moses Cleveland's barn to Jockey Creek Point, but was long since closed.

Upon the corner lot now the homestead of Moses C. Cleveland, and upon which the Universalist Church now stands, was the home of George Miller in 1656. It was sold by him to John Tuthill in 1658, and passed into the hands of Joseph Sutton in 1660, which was probably the time when John Tuthill went to Oyster Ponds. In 1668 it belonged to John Swazey, who sold the west part of it to Samuel King.

On the corner where the main street turns to the south the first lot was Samuel King's, who owned it from 1658 to 1666. In the words of Hon. J. Wickham Case: "John Tuthill, Richard Brown and Samuel King formed a remarkable trio. They lived side by side for a score of years in perfect harmony. They made purchases jointly; they divided, they exchanged with and they sold to one another; entrusted their property to each other. King only four years before Tuthill's death gave him a writing of assurance for exchanges of land made forty years before and for which no legal papers had ever been executed." The lot of Samuel King is now in possession of the daughters of Mrs. Sophronia Jennings.

Next south came the lot of John Elton, 1658. This lot he obtained of William Purrier, who bought it of Matthew Edwards. It now belongs to the heirs of Mrs. Sophronia Jennings.

The lot where Gilder S. Conkling now lives was the original home lot of Thomas Mapes. He added to these the home lot of Jeffrey Esty, who lived next north, and also that of John Elton. This gave him a front of about fifty rods from the south line of the present home lot of Gilder S. Conkling. Thomas Mapes was born about 1628, and could not have been one of the original settlers. He was a land surveyor and divided "Calves Neck," receiving for his services the privilege of having his share next his own home lot.

Next came the homestead of William Purrier, who was repeatedly a delegate to New Haven and filled many places of honor and trust, but left no sons to perpetuate his name. His lot is a part of the farm of Hiram Terry, and is opposite the house of Edward Huntington.

Lastly, at the south end of Main street, at the head of Jockey Creek, was the home lot of Philemon Dickerson, now owned by Hiram Terry, and Dickerson's house stood a few rods east of Hiram Terry's barn. He is mentioned

in old deeds as a "tanner," and the remains of his tan-vats have until recently been visible in the hollow west of the barn.

The road running north from Main street to the railroad station, and called in modern phraseology Railroad avenue, was in ancient times known as "Cooper's lane," and it is probable that Thomas Cooper, from whom it derived its name, had his home lot on its east side. To the west of this highway was the home lot of William Wells, so prominent in all town affairs. This lot extended as far as the westerly side of G. F. Hommel's lot, and the original site of William Wells's house is now occupied by H. W. Prince. From the description of Thomas Cooper's lot as given in the town records it would seem as if Mr. Wells must at one time have resided on the lot east of the road, now owned by D. B. Wells, but probably this was only for a short time.

The next neighbor of William Wells on the west was John Conkling, who owned the lot now bounded on the west by the east line of D. F. Conkling. This lot was in his possession but a short time, when he gave it to his son and removed to Hashamomack.

Next was the lot of a man whose name was famous in New England as well as upon Long Island, Captain John Underhill. During his short stay in this town, which was probably in the years 1658 and 1659, he resided on this lot. It is situated in the heart of the village, and at the present time is owned by D. F. Conkling and William C. Buckingham. Captain Underhill's career is fully narrated in Thompson's History of Long Island. His was an eventful life—fighting with Indians at one time and at another with church authorities, he was in all respects a "moving man." Southold was probably too dull for him, and in 1659 he sold his lot to Thomas Moore and sought and found new fields of action.

Thomas Brush owned the next lot, but sold it in 1658 and removed to Huntington, where his descendants are still to be found. His lot is now owned by Hezekiah Jennings.

Matthias Corwin, whose claim to be one of the original company has never been disputed, lived on the next lot. This was left by him to his son John, who was the owner for many years after his father's death, and then removed to what was called the "Indian Field" farm, in what is now the village of Pe-

conic. This homestead of Matthias Corwin is directly opposite the Presbyterian Church, and is now owned by David A. Jennings and Mrs. M. A. Rose.

Barnabas Horton's home lot, the only one which has come down to modern times through an unbroken line of descendants, was next to Matthias Corwin's. His homestead consisted of two home lots, separated by what is called in the old record "the highway leading toward the North Sea," now called "Horton's lane." The Catholic Church stands on the east lot, and also the Presbyterian Chapel, and the residence of the late Ira Tuthill. Upon the west lot stood until within the last few years the original house of Barnabas Horton, which was at the time of its destruction, in 1873, the oldest house in Suffolk county. It was here that the courts were held in ancient times, and it was for this purpose that the original house was enlarged in 1684. After the death of the first settler it passed in succession to five generations of his descendants, all bearing the name of Jonathan Horton, and after a brief ownership by Henry Hunting and Dr. Sweet it has returned to its ancient line of proprietorship, and is now in the possession of D. Philander Horton, of the seventh generation from Barnabas the first. Careful drawings of this ancient mansion were made before its destruction, and will perpetuate in time to come the memory of one of the most noted landmarks on Long Island.

At the angle of the town street, and bounded on the west by the road anciently known as "Tucker's lane," was the homestead of Lieutenant John Budd, and afterward of his son John. The Budds were in that day the wealthy family of the town, and upon this lot they erected a mansion, yet standing, which must have exceeded in magnificence any of the other houses of the early settlement. In 1679 John, Jr., sold the west part, with the house upon it, to John Hallock, and it is now owned by Jonathan W. Hunting. The eastern part was sold to Jeremiah Vail, and is now in the possession of Samuel S. Vail.

The next lot was the homestead of John Tucker, and was bounded north by the road that bore his name. The lot seems at first to have belonged to Roger Cheston, of whom we know but little, and afterward to Nehemiah Smith, of whom we know still less. John Tucker in 1659 removed to "Ockabock," and was the first man who set up a saw-mill on the

stream at Riverhead. He was an officer in the early church, and is mentioned as "Deacon Tucker." His home lot is now owned by Barnabas H. Booth.

Joseph Horton, oldest son of the first Barnabas, records his home lot as "lying between the land of John Tucker east and Barnabas Wines west." In 1665 he sold it to his father and removed to Rye in Westchester county, where his descendants are still remaining. The lot continued in the Horton family for some generations, and is now owned by Captain Benjamin Coles.

Next was the homestead of Barnabas Wines, who recorded it in 1665. From him it descended to his second son, Samuel. His first son, Barnabas, went to Elizabethtown, New Jersey, in 1665, but after some years returned and settled at Mattituck, on a farm still owned by his posterity. The original home lot is now owned by heirs of Moses Cleveland and of Joseph Horton.

Thomas Scudder lived next, and recorded his home lot with his other land in 1654. In 1656 he sold it to John Bayles and removed to Huntington, with his brothers Henry and John. It is now owned by Charles A. Case.

Richard Terry lived next. It is probable that he was one of Minister Youngs' company. His brother Thomas was either one of the first settlers in Southampton, or was at least a witness to their agreement. Richard Terry, Jr., was styled "recorder." About 1673 he removed to Cutchogue, where he owned a large tract of land, including a part of Pequash or "Quasha" Neck. Richard, Sr., died in 1675, and his widow Abigail and son John then continued on the old homestead. It now belongs to Moses Cleveland, Charles S. Williams and George B. Simons. Between Richard Terry and his brother Thomas lived Thomas Reeves, the ancestor of the families of that name throughout the town, unless we make an exception in the case of Hon. Henry A. Reeves, so widely known as a politician and editor. His line of descent from Thomas Reeves who settled in Southampton in 1670 is as follows: 1, Thomas; 2, John; 3, Stephen; 4, John; 5, Edward; 6, Lemuel; 7, Henry. This home lot is now owned by Edward Huntington, who inherited it from his father, Rev. Jonathan Huntington, in 1850.

Last came the home lot of Thomas Terry, which is mentioned as "next the bridge," and doubtless there was a swamp or morass there

in early days; even now a small bridge is deemed necessary for the highway to cross the "run." He died in 1672, and the lot went to his son Daniel. It was in after time the dwelling place of "Good Jonathan Horton," a great-grandson of Barnabas. It is now owned by Patrick May.

Colonel John Youngs, the right arm of the settlement, had his homestead on the east side of the road running from Main street to Town Creek and opposite the dwelling place of his father, the minister. Here he lived till his death, in 1697. The history of the lot subsequent to this can not be traced, but about 100 years ago it came into the possession of Richard Peters, a merchant, and the house now occupied by Richard L. Peters, or a part of it, is believed to be the identical mansion occupied by Colonel Youngs during his long life. Upon this lot also stands the dwelling house of Hon. J. Wickham Case, whose efforts to preserve the relics of our early history have placed the town under a debt of gratitude which can never be repaid.

To the east of Colonel Youngs lived John Haynes in 1656, and on the south of these two lots and next the creek was the home lot of Isaac Arnold, one of the foremost men of the second generation, and Judge of the county from 1693 to 1706.

To the east of John Haynes lived John Corey and Peter Paine, while next the creek was the home lot of Thomas Moore. This is described in the record of 1658 as "six acres more or lesse, the widdowe Payne's habitacon Southwest, the Creeke on the north east side." This is the present residence of William T. Fithian. The house which stood on this lot was famous as being the place where the Dutch Commissioners sent from New York in 1673 had their formal meeting, and made their endeavors to bring the town under the Dutch government.

At the east end of Main street, near the residence of Mrs. Beulah Goldsmith, was the home lot of Henry Case. The first mention of him occurs December 15, 1658, when the town granted him a home lot of four acres "next to the east side of the lot late granted to Richard Skydmore." It was provided that he should remain and improve the same for three years. In 1658 he married Martha, only daughter of Matthias Corwin. He died in 1664, leaving two sons, Henry and Theophilus. To give a record of all his descendants would

far exceed our limits, but one branch deserves an especial mention. Henry 2d had a son Samuel, who had a son Lieutenant Moses, who died September 25, 1814, aged ninety-one, leaving sons Gilbert, Matthias and Luther. The last was the father of Hon. J. Wickham Case, whose knowledge of the local history of the town is not exceeded by that of any living man, and for whose assistance the writer is under the deepest obligations.

The original Indian deed of sale given to minister Yöungs and his associates has been lost, but in 1665 a confirmatory deed was drawn up and signed by the Indian chiefs covering all the purchases up to that time. It ran as follows:

To all people to whom this present writing shall come, greeting. Know yee that, whereas the inhabitants of Southold, their predecessors, or some of them, have, in the right and behalf of the said Inhabitants and Township, purchased, procured and paid for, of the Sachems and Indians our Ancestors, all that tract of land situate, lying and being at the East ward end of Long Island, and bounded with the river called in the English toung the Weading Kreek, in the Indian toung Pauquaconsuck, on the West to and with Plum island on the east, together with the island called Plum island, with the Sound called the North sea on the North, and with a River or arme of the sea wch runneth up betweene Southampton Land and the afore said tract of land unto a certain Kreek which fresh water runneth into on ye South, called in English the Red Kreek, in Indian Toyonge, together with the said Kreek and meadows belonging there to; and running on a streight lyne from the head of the afore named fresh water to the head of ye Small brook that runneth into the Kreek called Panquaconsuck; as also all necks of lands, meadows, Islands or broken pieces of meadows, rivers, Kreeks, with timber, wood lands, fishing, fowling, hunting, and all other commodities what so ever unto the said Tract of land and island belonging or in any wise appertaining, as Curchaug and Mattatuck, and all other tracts of land by what name soever named or by what name so ever called; and whereas the now Inhabitants of the afore named town of Southold have given unto us whose names are under written, being the true

successors of the lawful and true Indian owners and proprietors of all the aforesaid tract of land and islands, fourty yards of Trucking cloth, or the worth of the same, the receipt where of and every part of the same we doe hereby acknowledge and thereof acquit and discharge the Inhabitants, their heirs, successors or assigns, and every of them by these presents.

Now these presents witnesseth that wee whose names are under written, for the consideration aforementioned, hath given, granted, remised and confirmed, and doth by these presents grant, remise and confirm unto Captain John Yöungs, Barnabas Horton and Thomas Mapes, for and in behalf of the Inhabitants and township of Southold, and for the use of the aforesaid Inhabitants, according to their and every of their several dividends, to have and to hold to them and their heirs forever, by virtue of the afore recited bargain, bargains, gifts and grants of what nature or kind soever made with our predecessors, we under written doe confirm all the afore named tract or tracts of land, contained with the afore mentioned bounds, as also Plum island, with warranty against us, our heirs or any of us or them, or any other person or persons' claime, or from, by or under us, them, or any of us or them, or any other person or persons, as our, theirs or any of our or their right, title or interest; as witness our hands and seals this seventh of December, 1665, in the Seventeenth yeare of ye reigne of our Sovereigne Lord Charles by the grace of God of England, Scotland, France and Ireland King, defender of the faith &c.

[Signed by Ambuscow, Hammatux and 41 others.]

Sealed and delivered in ye presence of us
BENJAMIN YÖUNGS,
BENONI FLINT.

In 1662 the commonwealth of New Haven became merged in that of Connecticut and Southold appears to have accepted that change with reluctance, but the connection was a brief one, for in 1664 Governor Nicoll asserted the authority of his patron, the Duke of York, and it was not long thereafter that Governor Winthrop, of Connecticut, acquiesced in that claim and virtually told the English towns on Long Island to make peace with the agent of

their new master. Southold, like the others, accepted the new condition of things, and Nicolls was profuse in his promises as to their rights to regulate their own local affairs, elect their own magistrates and the like. When Colve's Dutch regime was in possession the claim of Connecticut to the eastern towns was again renewed, and again asserted by the communities interested. The Dutch sent an agent to visit these towns and arrange matters, but his reception at Southold was such that he deemed it useless to proceed any further and returned to New Amsterdam to report the failure of his mission. What the upshot would have been it is not difficult to predict, but the trouble was ended with the resumption of British authority. Even then Southold and the rest of the English settlements desired to be under Connecticut, but Governor Andros would not listen to any such claim or petition and insisted that each town should take out a patent as holding from the Duke of York.

Southold had never held any such document and demurred. The people said they had held their lands for thirty years and had bought them from the Indians with the approval of the agent of Lord Stirling, the then patentee under the Crown, and had never heard that a patent was necessary. Besides, Governor Nicolls had promised to maintain them in the full and free occupation of their lands. But Andros would not listen to any such pleas, and so on October 31, 1676, the representatives of Southold accepted the document from the Governor which virtually made their hopes for association with Connecticut, come to an end forever. The document for the first time clearly defined the boundaries of the township: "Ye western bounds whereof extend to a certain River or creek called ye wading creek, in ye Indian tongue Pauquacunsuck, and bounded to ye eastward by Plum Island, together with ye said Island; on ye North with ye sound or North sea, and on ye South with an arm of ye sea or River which runneth up between Southampton land & ye

aforesaid tract of land unto a certain creek which fresh water runneth into, called in English ye red creek, by ye Indians Toyoungs, together with ye said creek and meadows belonging thereunto (not contradicting ye Agreement made between their town and ye town of Southampton after their tryal at the Court of Assizes); soe running on a strit line from ye head of ye aforenamed fresh water to ye head of ye small brook that runneth into ye creek called Pauquacunsuck; including all ye necks of land and Islands within ye aforescribed bounds and limits." The patentees named in the document were Isaac Arnold, John Youngs, Joshua Horton, Samuel Glover, Benjamin Youngs and Jacob Coxey. They in turn gave a deed of confirmation to the freeholders. Mr. Pelletreau says that this deed proved that the lands in the township did not of right belong to any one simply because they held a residence in the town. The first comers had bought the land and had used as much as they wanted, but they never had any idea that those who afterward settled among them should enter into possession of any of the common land except by purchase or by grant of the town meeting for some specified purpose or public benefit.

It has been estimated that in 1650 the population of Southold township was about 180; in 1698 it had increased to 880; when the war of the Revolution broke out it was in the neighborhood of 2,000. In that conflict Southold was wholly on the side of the patriots, and its citizens were well represented in the forces which the county sent into active service. During the British occupation it felt all the rigors of that hated period, the rigors of which were not removed even after Governor Tryon had forced the acceptance of the oath of allegiance.

Joy reigned throughout the township when it was known that the war was over and the victory won. After the rejoicings had passed the township resumed its peaceful progress. The trouble of 1812 seemed to concern it but

little, and it probably dreamed little of wars or rumors of wars until the conflict between the States was precipitated in 1861. During that struggle Southold manfully stood by the Government, and many of its bravest sons gave up their lives on Southern battlefields in defense of the stars and stripes. It met all the claims of the Washington authorities without a murmur, bonds were issued freely to meet the various expenses incurred, and it was not until 1871 that the principal of these was wholly extinguished and the financial cost of the war troubled the tax assessors no more.

The history of the village of Southold is little more than a history of its church, and that has already been told. It now has a population of nearly 1,000 and is already beginning to be appreciated by the summer boarders who desire quiet and rest rather than excitement and "functions." Its old church still points upward, and since 1819 it has had a Methodist tabernacle as a neighbor, although since 1795 that body had a congregation in the village.

The business center of the township, however, is Greenport, a thriving commercial city with some 3,000 inhabitants. It was originally part of the land of Captain John Youngs. The territory was given the name of Stirling in honor of the first patentee. It seems to have been a favorite rendezvous for shipping from an early period, owing to the fact that its harbor was never frozen even in the severest winters. In early times a wharf was erected at the mouth of Stirling Creek, and not far inland was an inn and two or three houses. Such was the beginning of Greenport. Washington passed through the place in 1757 and in 1763 George Whitefield wrote on a pane of glass in Captain Webb's tavern, "one thing is needful," and the glass, with the inscription intact, is now one of the exhibits of the Long Island Historical Society's collections. It was not until 1825, however, that the town really entered upon its

progressive stage, owing mainly to the shipping which sought its harbor. In 1827 Main street was laid out and the trade with the West Indies seemed to steadily increase. In 1831, however, began its whaling industry, which first established its commercial activity on a sure basis.

"The first whaling ships which sailed from this port," writes Mr. Pelletreau, "were the 'Triad' and the 'Bayard,' the former commanded by Captain Nathaniel Case and the latter by Captain John Fordham, of Sag Harbor. About the same time sailed the 'Potosi,' which was wrecked on the Falkland Islands. The first mentioned being successful, other vessels were purchased, among them the 'Delta' (commanded by Captain Isaac Sayre, of Southampton), 'Caroline,' 'Kanawha,' 'Neva,' 'Italy' and others, twenty in all, and most of them made full voyages. Captain David Wicks, of Babylon, commanded the 'Delta' twenty-one years, and died in 1870. The result of this prosperity was that the village was rapidly built up.

"The first house was built by Lester Brooks and stood not far from the lumber yard west of Main street. This house was afterward bought by John Ashby and moved, and it now stands two doors north of the corner of Main and Amity streets. The first store, built in 1828, by Walter Havens, stood at the foot of Main street, east side.

"The name Greenport was adopted at a meeting held in 1834. A postoffice was established in 1832, and John Clark was the first postmaster.

"The first vessel built here was a sloop named Van Buren, built by Calvin Horton in 1834. The first ship was the Jane A. Bishop, built by Hiram Bishop and named after his daughter. Steamboats began running here in 1836.

"The whale fishery had its decline and fall almost as sudden as its rise. It ended for this place in 1860, and the last ship was the Italy.

"Since then a new business has sprung up in the shape of the menhaden fishery, and there at the present time twenty-one steamers engaged in the enterprise. The number of fish caught in 1881 was 211,000,000; fish oil made, 1,013,350 gallons; tons of scrap, 22,100. The estimated catch of fish within the collector's district by bay and other fisheries is 400,000,000, with a value of \$975,000."

In 1882 Congress passed a resolution to protect the harbor with a breakwater at a cost of \$46,000, but it was not completed until 1893. It has proved a splendid improvement and done much to increase the business of the port, which is now estimated at 200,000 tons annually. Its shipbuilding trade is also advancing by leaps and bounds.

There has been a Baptist meeting house in Greenport since 1831, and a Presbyterian church since 1833. The Congregational church, which claims to be the real representative of the first church at Southold, has worshipped in its own building since 1848. The school system of Greenport is justly regarded as inferior to none on Long Island—or anywhere.

Mattituck lies on the shore of Mattituck Bay, which will be one of the best harbors on the Long Island coast when the Government completes the extensive improvements which it has promised and planned. But it is hard to tell when that will be, for in such matters Uncle Sam's ways "are peculiar." In the meanwhile it remains a quiet farming community, although it boasts a population of about 1,200. Its settlement was begun about 1680, and in 1716 its population had so increased that a church building was erected on a couple of acres of ground presented for the purpose, and also for a burying place by James Reeves. A pastor was at once called—the Rev. Joseph Lamb—who seems to have remained over a long series of years. In 1752 the church was united with that at Lower Aquebogue and that arrangement lasted until 1853, since which time it has continued a sep-

arate charge. In 1878 an Episcopal church was built in the village.

Cutchogue is a farming village, which seems to have been peopled since about 1661. "Probably one of the first settlers," writes Mr. Pelletreau, "was Benjamin Horton, who had a house here in 1664. By various sales and exchanges he secured a large estate. His will is of such an extraordinary nature that we give it entire:

In ye name of God Amen. febr ye 19 1685-6, according to the computation of ye Church of England, I, Benjamin Horton, in ye County of Suffolk in ye Province of N. Yorke on Long Island, being in perfect memory, doe make & ordain this my last will & testament.

Item.—I give to Caleb Horton & Joshua Horton & to Jonathan Horton & Mersy Youngs 80 bushels of wheate & Indian, 20 swine, 20 sheep, to be devided to them four alike.

Item.—I give my house & land & meadows except my Meadow of Common over the River to the Sacrament table yearly for evermore.

Item.—I give to my friend Thomas Tusten one lot of the common meadows over the River, and a coate cloth that is at Stephen Bayles, and the corne that is more than the 80 bushels I give to Thomas Tusten.

Item.—I give ten oxen for a bell for the meeting-house to call ye people together to worship the Lord God.

Item.—I give the rest to the poore.

Item.—I give to my man Joseph one sow, one gun, one sheep & his time, to be out next may day.

Item.—I give to my sisters my wives clothes to be devided to them two.

Item.—I give all the rest of my goods to my brother Joseph Horton.

I make my brother Joshua Horton sole executor of this, my last will and testament revoking all other wills and testaments, to see all my debts paid. BENJAMIN HORTON.

The church referred to in the above will was the venerable house at Southold. It was not until 1732 that a church was erected in Cutchogue. It held an independent congregation until 1848, when it entered the Presbyterian fold. Four years later the old build-

ing was pulled down and a handsome structure erected in its place; in 1830 a Methodist church was built and a Congregational church in 1862.

One of the most interesting of the villages of Southold is that known as Orient, which lies at the eastern extremity of the island on what is virtually an island. The land from Stirling Creek to the extreme point at Plum Gut was surveyed in 1661, and the 400 acres which now make up the center of the village of Orient became the property of Gideon Youngs, who held them until his death, in 1699, when they passed to his children. At that time the property was known as Oyster Pond Lower Neck. In 1650 there were probably thirty persons resident in Orient, and in 1740 a wharf was built by Richard Shaw.

Mr. Pelletreau, from whom we have quoted so much in this chapter, thus sketches the church history of Orient:

A church was founded and a house for worship built previous to 1717. The earliest record we have found is this:

"David Youngs, in consideration of 5s. paid by the persons that have builded a meeting-house in ye Oyster Ponds Lower Neck, sells to them so long as they shall keep up a meeting-house all that piece of land that ye sd meeting-house stands upon; that is soe much of land as the sd meeting-house stands upon, bounded west by Thomas Terry's land, south by ye highway, north and east by land of mee the sd David Youngs.—Jan. 1, 1717."

According to "Griffin's Journal" (a work of the highest value wherever the venerable author speaks from his own knowledge, but wandering very far indeed from historic truth when he trusts to tradition) this building was a singular edifice. "It was about 30 feet square, two stories high, and on the top another building about ten feet square and nine feet high, and then a finish something like the lower part of a steeple, with an iron spire which supported a sheet iron figure of a game cock, showing the course of the wind." This building stood for a century, and was torn down and a new one built on the same site in 1818. This being inconvenient, a more elegant one was built on the same place in 1843,

which still remains, a very neat and commodious edifice. We have seen that David Youngs in 1717 sold the site for 5s. When the present church was built a few rods of land were added as a cost of fifty dollars. Griffin quaintly observes: "Thus we see that five shillings in 1700 were worth four hundred shillings in 1843. How things change!"

The first clergyman who labored here of whom we have any knowledge was Rev. Jonathan Barber, who, according to Griffin, was here in 1735, and the records of the presbytery speak of him in 1757 as having been here "some years." At that time the church appears to have been in a very weak condition, and could hardly be said to be established.

Methodism was introduced in this village in the autumn of 1802, and the first preacher of that denomination was Rev. John Finnagan, an Englishman. As in many other places at that time, there was much prejudice excited against the new sect, whose religious exercises were in those days not unfrequently conducted in a manner more likely to excite the ridicule of the profane than the veneration of the righteous. The first meetings were held in the school-house, contrary to the wishes of many, but before spring some of the prominent families of the place became more favorably inclined, and no further opposition was made. From Mr. Finnagan's departure in 1803 until 1820 there was very little preaching by any clergyman of this denomination, and the Rev. Cyrus Foss was the first who made any stay. That the prejudice was fast wearing away is shown by the fact that the church was used by him when not occupied by the regular pastor. The corner stone of the Methodist church was laid June 3d, 1836, the services being conducted by Rev. Samuel W. King. From that time the pulpit has been regularly supplied and the congregation is prosperous and increasing.

The author of "Griffin's Journal" gives from his own experience a description of a remarkable storm, which we quote as an undoubtedly truthful account:

"On the afternoon of the 24th of December, 1811, the wind was light, from the west; at 11 P. M. very moderate, and cloudy, gentle breeze, S. E.; at 12 o'clock nearly calm, with a little sprinkle of rain. In one hour after it commenced almost instantaneously blowing a gale, with snow and the most intense cold. A more violent and destructive storm has not been known for the last hundred years. Many young cattle froze to death in the fields. Two vessels bound to New York were lost and most of the crews perished."

Griffin also narrates the accounts he had heard of the great snow storm of 1717, which was doubtless the most remarkable fall of snow that has ever occurred in this country since the settlement. Houses in Orient were buried to the second story windows, and one on Plum Island was entirely covered. Cotton Mather states that the snow in Boston was twenty feet in depth. This storm occurred in February. The winter of 1780 was remarkably cold, and the ice was so thick that Noah Terry rode on horseback from Orient Harbor to Shelter Island.

On the 23d of September, 1815, occurred one of the severest easterly storms of rain and wind ever known, and it is still spoken of as the "September gale." About 11 A. M. the wind blew so violently as to unroof houses, blow down barns and uproot trees. The tide rose to a wonderful height, and Griffin narrates that one of the families living near the wharf came in a boat and landed near his house. The Atlantic coast was strewn with wrecks, and many a sailor sunk into a watery grave.

The year 1816 was remarkable as having a frost every month.

In the summer of 1849 this place was visited by a very fatal epidemic, to which physicians gave the name of "cholera dysentery." Within a space of half a mile there were more than sixty cases in two weeks. In the street leading to the wharf scarcely a house escaped. Mr. Griffin records that within a hun-

dred rods of his house there were twelve deaths, and in one district one-fourth of a mile square thirty persons died in two months. All business was at a stand and the place seemed almost deserted.

The other settlements in Southold are small and unimportant. Peconic is the modern name of a village once known as Hermitage, and has now a population of 385, mainly devoted to farming, and Franklinville, another farming community, has barely 200, although it lies in two townships, being on the River-head boundary line. East Marvin, in the other extremity, a neighbor to Orient, is a fishing village, with a population nearly reaching to 400.

Of the dependencies of Southold—as its islands might be called—Fisher's Island is the largest and claims a population of 250, which in the summer season is increased to about 1,000. Its association with Southold is a freak of political geography, as it is in close proximity to Connecticut. In 1668 Governor Winthrop accepted a patent for the island from Governor Nicolls, of New York, thus acknowledging the New York title, and the island remained in the possession of Winthrop's descendants until 1863. It has since been opened for settlement. Robin's Island is mainly a game preserve. Plum Island, which once bore the more distinguished name of the Island of Patmos, supports a population of fifty, and the Gull Islands are useless except for lighthouse purposes, although the Government has utilized Great Gull Island by erecting important fortifications on it as part of the system of coast defense. Plum Island has also been fortified.

The Gull Islands got their name, as might be supposed, from the vast quantities of gulls, or terns, which used to make their home there. But as a result of the depredations of plume hunters these birds began some years ago to leave their habitat, and the military operations frightened away altogether what remained, so that now a gull is rarely seen in the islands bearing its name. The headquarters

of these beautiful birds are on the eastern end of Fisher's Island and the small islets—Flat Hammock, Wicopesset, mainly—beside it. Between Fisher's Island and Gardiner's Island is the famous waterway known as the Race, the most famous fishing ground off the Long Island and Connecticut coasts. Immense catches are made there every year; vast schools of bluefish, mackerel and menhaden and small fish in limitless number pass through the Race every day or linger awhile in its swirling, dashing, ever white-capped waters. The Race is also the happy hunting ground of the tern and it is said their movements are of great importance to the fishermen. The latter watch the careening of the birds and know from experience that where they congregate most numerous in that bit of water will be found the best fishing ground, for that day at least. The Race is well watched by these beautiful little birds, and the presence of a school of bluefish is known to them long before man discovers the fact, and these active aerial beauties have generally hunted to their hearts' content before the fishermen begin op-

erations by driving them away. A recent writer says:

"One of the colonies from Gull Islands migrated to Gardiner's Island, and the birds have even since nested and bred there, in spite of opposition, persecution, and persistent destruction. There are two large colonies on Gardiner's Island, one located at the north and the other at the south side of the island. These colonies are the largest in existence in the Sound or anywhere along our neighboring beaches, and they have received more attention and protection as a consequence than any other. Two wardens have been employed right along to protect these colonies and to see that robbers did not take the eggs or kill the old birds. The colony on the north side of the island numbers 2,000 or more birds, while the one on the south side is rather larger, if anything, making nearly 5,000 terns on Gardiner's Island. This number constantly increases every year. The birds show every disposition to make this their permanent home, and they return to it regularly season after season to nest and breed."

CHAPTER LXXI.

SHELTER ISLAND.

 HIS is the smallest of the townships in Suffolk county in extent of territory and in population. Just why it should have been elevated to the dignity of a separate town is not easy to imagine, except that the difficulty of attendance at the Southold town meetings, of which township it was virtually a part until 1730, led to its securing in that year the right to a town meeting of its own. Its acreage seems to vary according to the surveyor. It has been placed as high as 10,000 and as low as 7,298, and is generally placed at 8,000, which is probably correct enough for all practical purposes. Its name is probably derived from its Indian cognomen, which in English was the "island sheltered by islands." It was evidently at one time the home of quite a powerful tribe of red men, but the last of the race—an aged woman—died in 1835.

The island was sold by James Farret, Lord Stirling's agent, to Stephen Goodyear, of New Haven. In 1651 it was sold by Goodyear to Thomas Middleton, Thomas Rouse, Constant Sylvester and Nathaniel Sylvester for 1,600 pounds of "good merchantable muscovado sugar," and this syndicate secured, in addition, a deed to the island from the Indians in 1652, which is generally held to be the year that the white settlement was begun. By 1664 the Sylvester brothers had become sole owners of the island, and as a result of a lump payment to Governor Nicolls, partly in money, partly in pork and partly in beef,

obtained a release from taxation in the following patent:

Richard Nicolls, Esq., Governor under his Royoll Highness James Duke of Yorke and Albany &c. of all his territories in America, to all to whom these presents shall come. Whereas Nathaniel Sylvester of Shelter Island, Merchant, for and on the behalfe of himselfe and of his brother Constant Sylvester of Barbadoes, Esq., hath, of his own voluntary free will and good affection to this government, advanced and paid toward ye support and maintenance thereof the sum of £150, the receipt whereof I doe hereby acknowledge, Now know yee that, by virtue of commission and authority given unto me by his Royoll Highness James Duke of York, I, for and in consideration of the afore said sum of £150 and for other good causes and considerations me thereunto moving, doe hereby grant unto ye said Nathaniel and Constant Sylvester, and to their heirs and assigns forever, That ye said Island called Shelter Island is and forever hereafter shall bee by these presents discharged, exonerated and acquitted from all taxes and rates either civil or military, and from all traynings, setting forth and keeping any souldiers, horses, arms, troops or other warlike provisions, other than what they shall voluntarily do for the defence of their said island and this government in case of a foreign invasion, or disturbance by the natives. Given under my hand and seal in ffort James ye 25 day of May in ye yeare Anno Dom. 1666.

RICHARD NICOLLS.

Within a short time a patent of confirmation of their rights to the island was granted by Governor Nicolls to the two brothers Sylvester, conveying the following:

A tract of Land lying and being in a certain bite, bay or arm of the sea, which runneth between the lands of East Hampton, Southampton and Southold, in the East Riding of Yorkshire upon Long Island, heretofore purchased from the Indians by James ffaret, agent to William Earl of Sterling, and which hath since came by several deeds, conveyances and grants to the said Constant Sylvester of the Island of Barbadoes, Esq., and Nathaniel Sylvester, then inhabiting and residing in Shelter Island aforesaid, merchant; and which said island shall be held, reputed, taken, and be an entire enfranchised town ship, manor and place of itself, and forever have, hold and enjoy like and equal privileges and immunities with any other town, enfranchised place or manor within this government; but not to extend to the protecting any traitor, malefactor, fugitive or debtor flying into the said island, to the damage of any person or the obstruction of the laws. The same to be held as of his Majesty the King of England, in free and common soccage and by fealty only, yielding and paying yearly one lamb upon the first day of May, if the same shall be demanded.

RICHARD NICOLLS.

Dated June 1st 1666.

The Sylvesters came to America about 1640, and were representatives of an old English family. Nathaniel Sylvester has been described by Alden J. Spooner as "a man of great enterprise and integrity, and who received and protected on Shelter Island a number of families of fugitives from the persecution of the colony of Massachusetts in early times, some of whom died on the island."

Another writer, basing his story on an article in the Magazine of American History, wrote:

"The island did not get its name from the Indian's phrase, but from the fact that some Quakers, exiled by the Puritans, and wandering, heart-sick and weary, in search of a refuge, here found a shelter, under the protecting arm of the tolerant Nathaniel Sylvester. To these Quakers it was a "rock in a weary land, and a shelter in the time of storm;" and in gratitude for the haven they bequeathed to it the name of Shelter. Sylvester was engaged in the sugar trade in the West Indies

when he acted the part of patron to the friendless Friends, and permitted their founder, George Fox, to preach from the front steps of his manor-house. This structure, the center of much gaiety and hospitality, was built of bricks brought over from Holland, with queer biblical tiles for the chimneys, and with windows and doors from England or Barbadoes. The prime floral denizens of the old-fashioned garden were immigrants, too, and to this day a flourishing boxtree and a hawthorn hedge attest the loving care of the first lords of the manor. The surrounding woods were cut away to furnish timber for hogsheads used in the sugar trade. The present manor-house, almost on the site of the original one, belongs to a later day, yet it is over one hundred years old. It was the summer residence of the late Professor Hosford, of Harvard, and with his co-operation a monument was erected commemorating the landing of those early Quakers. These were not the only exiles to whom Sylvester extended a brotherly hand. When the uncompromising Puritans had imprisoned, whipped and banished Lawrence and Cassandra Southwick from Boston because of their faith, these unfortunates also found a refuge in Shelter Island, where they passed the rest of their lives with the kindly inhabitants."

The subsequent changes in the ownership of the island have been thus successively traced by Mr. W. S. Pelletreau:

"In July, 1673, by the recapture of New York, the Dutch regained possession of this lost territory. It was at this time that the Dutch government sent an armed vessel to the east end of Long Island to bring the different towns to their allegiance. According to one account Constant Sylvester was reported to have made a will leaving his half of Shelter Island to his sons. This will he had left at home and was absent at the time of the visit of the Dutch force. Under the supposition that he was dead the Dutch officers undertook to confiscate the interest of his heirs, and his

portion was sold for £500 to Nathaniel Sylvester, who thus became the sole owner of the island. He had five sons—Giles, Nathaniel, Constant, Peter and Benjamin, and left his island to them in equal parts. Three of these sons died without issue. Their parts reverting to Giles, he became the owner of four-fifths of the island, and Brinley Sylvester (son of Nathaniel last mentioned) owned the remaining fifth. In 1695 Giles Sylvester sold to William Nicoll, the patentee of the town of Islip, one-quarter of the island, which included the part still known as Sachem's Neck, for the sum of £500. Nathaniel, father of Brinley Sylvester, had previous to his death (which occurred in 1695) sold 1,000 acres of his part to George Havens. Giles Sylvester died in 1706 without issue, and left one-quarter of the island to William Nicoll, who thus became the owner of half of the whole. The remainder, excepting the 1,000 acres in the middle of the island which belonged to George Havens, still remained in the hands of Brinley, the son of Nathaniel. He had been living in Rhode Island, where his father had resided at the time of his decease, but at this time he returned to this island. The portion of it which he now owned was all that part north of a line drawn from the head of Dering Creek to Cockle's Harbor. In 1737 he built a stately mansion, which is now standing, a most interesting relic of a long-past age. The residence of the first Nathaniel had stood very near the spot where the new house was reared. The doors and many other portions had been brought from England, and were of a make and material impossible to procure in the infant days of the new world. These were made a part of the new building, and are now existing after a lapse of two centuries.

"Upon the decease of Brinley Sylvester his estate was left to his daughter Mary, who married Thomas Dering March 9th 1756. After his death, in 1785, it descended to his two sons Sylvester and Henry. After the

death of Sylvester (better known as General Dering) his estate was bought by Ezra L'Hommedieu, whose grandfather Benjamin had married Mary the daughter of the original Nathaniel Sylvester. It passed at his death into the hands of his daughter Mary, who married Samuel S. Gardiner, and for a long time it was widely known as the 'Gardiner Estate.' The offspring of this marriage was three daughters, one of whom married Professor Lane, of Cambridge, Mass.; the other two were successively the wives of Professor Horsford of the same place. At the settlement of the estate it finally passed into the hands of the latter gentleman, whose children are the lineal descendants of the first Sylvester."

The old manor house is now occupied by Miss Hosford, the last descendant of Nathaniel Sylvester on the island, and the building, together with its many interesting memorials of a by-gone age, are carefully preserved by her. Among these is a piece of gold chain, several links, which was given to a Sylvester by the redoubtable Captain Kidd in payment of some supplies. The local story is that the pirate, "as he sailed," got short of fresh meat and landed at the head of a party of his desperadoes on Shelter Island in search of some. In the Manor House yard they came across two pigs, which they appropriated in the easy manner usual with pirates. But the pigs objected and began to squeal, and the racket brought out on the scene a servant girl who defied the whole gang and demanded that the pigs be dropped. A cowardly historian has suggested that if she had known she was dealing with Captain Kidd and his freebooters she would have run away to the other end of the island. That, however, is a base slander. Captain Kidd saw he had a determined woman to deal with, so he called a halt, explained his necessity in the way of provender, tore off several links of the gold chain he wore—far more than the value of the pigs. She accepted the payment and left the pigs to their

fate, and handed the bullion to her mistress, who had watched the entire scene with fear and trembling from an upper chamber window. She had recognized Kidd and would willingly have let him take all the stock he could lay his hands on if only he and his crew would have departed in peace.

The old Sylvester burying ground, not far from the Manor house is one of the attractions to visitors in search of the ancient and the picturesque.

It occupies but a small space measuring about fifty by twenty-five yards. It is well shaded and is in every way such a spot as would be selected by the first resident proprietor of the manor of Shelter Island. Nathan Sylvester would have taken umbrage at one feature of his earthly resting place. It is enclosed by a fence made of oaken posts and iron piping. Of the latter there are two rows. Above the top row is a strip of barbed wire. It looks curiously out of place and one wonders why it was put there. Had the fence been of wood the wire would have been no protection against relic hunters, but even the most feeble minded of that class would hardly contemplate the demolition, bit by bit, of the iron piping. Besides there is something unpleasantly incongruous about a barbed wire fence around a seventeenth century graveyard. Relic hunters have perhaps chipped away bits of the slate head stones, but the weather, doubtless, has had much to do with their time-worn appearance. The inscriptions upon the slate headstones are much more easily decipherable than those of the granite tablets. Of these headstones there are nineteen.

In the centre of the burying place is a monument of rather imposing dimensions. The upper and lower slabs are covered with inscriptions. The upper slab is of marble and the inscription denotes that buried beneath it is the body of Nathaniel Sylvester, "First Resident Proprietor of the Manor of Shelter Island, Under Grant of Charles II., A. D., 1666." It also contains the family coat of

arms. The monument is approached by three stone steps. These contain the following curious inscriptions:

"The Puritan in his pride, overcome by the faith of the Quaker, gave Concord and Lexington and Bunker Hill to history."

"The blood and the spirit of Victor and Vanquished alike are of the glory of Massachusetts."

"Daniel Gould bound to the gun carriage and lashed.

"Edward Wharton, the much scourged,

"Christopher Holder, the mutilated."

"Ralph Goldsmith, the shipmaster, and Samuel Shattuck of the King's missive: these stones are testimony."

"Lawrence and Cassandra Southwick, despoiled, imprisoned, starved, whipped, banished.

"Who fled here to die."

"Mary Dyer, Marmaduke Stevenson, William Robinson and William Leddra, who were executed on Boston Common."

"Of the suffering for conscience sake of friends of Nathaniel Sylvester, most of whom sought shelter here, including

"George Fox, founder of the Society of Quakers, and of his followers."

Some of the above is apt to give one the impression that freedom of thought, particularly religious thought, was a dangerous commodity in pre-Revolutionary days. Shelter Island was so named for the best reason in the world, because it was a place of shelter from all kinds of storms, of which those of the wind and wave seemed to be less dangerous than the maelstrom of religious bigotry in which so many perished in the "godly" days when Miles Standish made the mistake of entrusting his courtship of Priscilla to John Alden. They were a dour lot in those days, and could they be transported in the flesh to-day to Shelter Island and brought face to face with the five or six hundred guests of one of the big hotels there about an hour after dinner, when dancing is in full swing and gleaming shoulders are much in evidence, they would either put every mother's son and

daughter to the sword or drop dead of heart disease.

Shelter Island has changed much in the last couple of centuries. The husbandman no longer tills his fields with an uncertain flint-lock strapped across his back, with one eye on the furrow and the other on the surrounding territory. His ear no longer expects the fear-some war whoop, for it is many cycles since the gentle redskin was induced to remove to other hunting grounds. Captain Kidd's piratical craft would meet with a short shrift to-day as the target practice of the Essex and Lancaster, training ships, can be heard quite plainly on the island. Moreover, is not Station No. 5 of the New York Yacht Club on the island, and are not yachts almost as plentiful as sea bass in the vicinity?

William Nicoll, the patentee of Islip, was in 1706 the owner of half of the island. At his death it was left to his son William, who was a member of the Colonial Assembly from 1739 to 1768 and was universally known as "Speaker Nicoll." He died without children in 1768, and the estate then went to his nephew William (a son of his brother Benjamin), who, having been county clerk from 1750 to 1775, was commonly called "Clerk Nicoll." By will made in 1778 he left it to his son, Samuel Benjamin Nicoll, during his life, entailing it to his oldest son, Richard F., who by the act abolishing entails became the owner in fee. He sold it to his brother, Samuel B. Nicoll, and from him it descended to its present owners in 1865; the estate has been in the possession of the family 187 years. The portion of the Sylvester estate that was owned by Henry Déering was sold to Lawrence V. B. Woodruff, and portions of the Nicoll and Havens estates were sold to various parties.

At the first independent town meeting, in 1730, the names of the adult male inhabitants of the island were as follows, the list being taken from Thompson's "History of Long Island:"

William Nicolls (supervisor).
John Havens (assessor).
Samuel Hudson (assessor).
George Havens.
Elisha Payne.
Ivel Bowdelet.
Abraham Parker.
Edward Havens (collector).
Samuel Vail.
Thomas Conkling.
Edward Gilman (clerk).
Brinly Sylvester.
Jonathan Havens.
Joseph Havens.
Noah Tuthill.
Henry Havens.
Samuel Hopkins.
John Bowdelet.
Daniel Brown.
Sylvester L'Hommedieu.

Mr. Pelltreau estimated that these twenty names represented a population of 100 and figures that in 1790 the population was 201. It was probably about the latter figure during the Revolutionary War, during which crisis the island suffered little except from thefts by the whaleboats and from the carrying away of all its growing timber by order of the British authorities.

In 1742 Jonathan Havens gave half an acre of ground on which a church might be erected and a burial place laid out. The church building was put up the same year, a little square box with a peaked roof. Its little pulpit was open to any clergyman who came along, although it would seem William Adams, who was chaplain and tutor in the family of Brindley Sylvester, preached in it for over thirty years. In 1764 the famous George Whitefield preached in its pulpit at least once. In 1816 the old box church was pulled down and a new building erected, which, with improvements and alterations, has served until the present day. In 1812 the congregation placed itself under the care of the Long Island Presbytery, and in 1848 the Rev. Daniel M. Lord was installed as the first regular pastor of the island. In 1873 an Episcopalian church was erected on a site almost in the center of the

island, the gift of Dr. S. B. Nicoll, and it received the name of St. Mary's chapel, in memory of the wife of Matthias Nicoll, one of the most liberal contributors to its building and a staunch and generous supporter.

Since 1870, when a campmeeting ground of some 200 acres was purchased by the Methodists on the west side of Dering's Har-

bor, Shelter Island has slowly risen to the first rank among the summer resorts of Long Island. Its immense hotels and luxuriant cottages, its yacht houses, golf links and all the etceteras of a refined resort, together with its exclusiveness and its healthfulness, seem to make it become more and more popular season after season.

CHAPTER LXXII.

SOUTHAMPTON.

IN Governor Winthrop's "History of New England" (ed. Savage, 1853) we read that about forty families in Lynn left that town in 1640 to found a new home on Long Island. They organized a church before leaving, and with the Rev. Abraham Pearson, of Boston, as their minister, prepared to set out. The advance party went in a vessel in charge of Captain Daniel How to Cow Bay, bought some land there from the natives, tore down the insignia of the States General and prepared to settle. As we have seen, however, in the story of North Hempstead, this settlement was quickly and ignominiously dispossessed as soon as Governor Kieft learned of the presumption of the pioneers in settling without his leave and of the indignity they inflicted on the emblems of his Government. Sixteen of the Lynn contingent, however, were taken in Captain How's ship to the south fork of Long Island—too far away from Kieft's authority to be easily assailable by him, and there got a tract of land from the Indians and set up a colony—that of Southampton. Besides this purchase they had authority to effect a settlement from the agent of Lord Stirling. As soon as the preliminaries were adjusted the first settlers were joined by others, and within a few years Southampton was a Connecticut town and was represented in the General Court. Such in brief is the story of the founding of Southampton.

From a reference in Winthrop's story one might think that the colonists were poverty-

stricken, but the opposite was the case, at least so far as the majority was concerned. Those who were its leaders—"Undertakers," they called themselves—possessed considerable available means. When the colony was in course of formation they bought a ship for transportation purposes, which they transferred to Captain Daniel How under the following restrictions, dated March 10, 1639:

March 10 1639 In consideration that Edward Howell hath disbursed 15lb and Edmond ffarrington 10lb, Josiah Stanborough 5lb, George Webbe 10lb, Job Sayre 5lb, Edmond Needham 5lb, Henry Walton 10lb, and Thomas Sayre 5lb, itt is agreede upon that wee the forenamed undertakers have disposed of our severall pts of our vessel to Daniel How. In consideration whereof hee is to transporte them soe much goods either to them, their heirs, executors and Assignes (If they shall desire it) as their Several Somme or Sottes of Monney shall Amount unto. And moreover, to each of those persons Above named or their Assignes he shall transporte to each man A person and a tunne of goods free. But in case that any of the forenamed persons shall not have occasion for the transportacon of soe much goods as his money shall Amount unto, that then the said Daniell is to make them payment of the remainder of the monney by the end of two yeares next ensuing the date hereof. And likewise this vessel shall be for the vse of the Plantacon, and that the said Daniell shall not sell this vessell without the consent of the Maior pt of the Company. And that the vessell shall be reddey at the Towne of Lynne to Transporte such goods as the Afforesaid vndertakers shall Appoint, that is to say, three tymes in the yeare.

Ffurthermore, if In case that any Person or Persons shall not have occasion to Transport any goods, that then the said Daniel is to pay them their Somme or Sommes of Monney, together with Allowance for A tunne of goods and A person, within the tearme of two years next ensuing the date hereof. And for the full performance of [two words gone] said Daniel How hath our [three lines gone]. Ffurthermore, whareas it is expressed formerly that the vessell shall come to our Intended Plantacon three tymes in the yeare, we thought good to express the tymes, viz. the first Moneth, the ffourth moneth and the eighth moneth. Ffurthermore, ffor the rates of persons, goods and chattell if there proue any difference between vs the vndertakers and the Said Daniell How, that then it shall be referred to tue men whome they and he shall chuse. Ffurthermore, for as much as Allen Bread, Thomas Halsey and William Harker Are by the Consent of the company come into and party vndertakers with vs, we Edward Howell, Daniel How and Henry Walton have consigned three of our parts—that is, to each man A howse lott, planting lott and fframe, answerable to the rest of ye vndertakers—for their disbursement of five pounds A man to vs the above said vndertakers. That is to say, whereas Mr. Howell had 3 lots he shall have but two, and Daniel How for 3 lots shall have but two and Henry Walton for 2 lots shall have but one.

EDWARD HOWELL,
DANIEL HOW,
HENR. WALTON.

The Undertakers also drew up an agreement among themselves, the agreement clearly showing that when it was agreed to no exact location for the proposed colony had been determined on. But they arranged what might be called a constitution for the government of the intended "plantacon," the most interesting features of which were that the Undertakers were to dispose of the land within the limits of the colony, "so that what they laid out for a house lot should always continue so and that but one dwelling house should be builded upon it," regulating the transfer of the lot, providing against absenteeism, and also the foundation of a church.

The influx of new settlers was also carefully guarded against unless with the consent of the Undertakers. It was to be a Christian community. "Whensever it shall please the Lord and He shall see it goode to adde to us such men as shall be fitt matter for a church that then we will in that thinge lay ourselves downe before ye constituters thereof, either to be or not to be received as members thereof according as they shall discerne the worke of God to be in our hearts." The entire production was simply drawn up from that of most of the New England town governments, excepting that those who paid out the necessary money for the purchase of the land or the transportation of the settlers claimed the right of disposal of the lands outside of those apportioned at the beginning among the original members of the colony.

Having thus arranged their preliminaries, the Undertakers secured their first warrant—that of a permit from the agent of the patentee to settle on eight square miles of land on Long Island. That patent, still preserved in Southampton, reads as follows:

Know, all men whom this present writing may concerne, thatt I James Farrett, of Long Island, Gent., Deputy to the Right honorable the Earle of Sterling, Secretary for the Kingdom of Scotland, doe by these presents, in the name and behalf of the said Earle, and in mine own name as his deputy, as it doth or may in any way concerne myself, Give and Grant free leave and liberty to Danyell How, Job Sayre, George Webbe, and William Harper, together with their associates, to sitt downe upon Long Island aforesaid, there to possess, Improve and enjoy Eight miles square of land, or so much as shall containe the said quantity, not only upland butt alsoe what soever meadow, marrsh ground, Harbors, Rivers and Creeks lye within the bounds or limitts of the said Eight miles, the same and every part thereof quietly and peaceably to enjoy, to them and their heires forever, without any disturbance, lett or molestation from the said Earl, or any by his appointment or procurement for him or any of his; and that they are to take their choyce to sitt downe vpon as

best suiteth them. And allsoe that they and their Associates shall enjoy as full and free liberty in all matters that doe or may concerne them or theires, or that may conduce to the good and comfort of them and theirs, both in Church order and civell government, together with all the easements, conveniences and accomodations what soever which the said place doth or may afforde, answerable to what other Plantations enjoy in Massachusetts Bay. Butt in as much as itt hath pleased our Royall King to give and grant the patentee of Long Island to the aforesaid Earle, In consideration thereof itt is agreed upon that the trade with the Indians shall remaine to the said Earle of Sterling, to dispose of from time to time and at all times as best liketh him; Onely the aforesaid Daniel How and his co-partners shall have liberty to make choyce of one man amongst them that shall freely trade with the Indians in their behalf for any victuals within their owne plantations, but not for wampum. And if any of the aforesaid persons or any for them shall secretly trade with the Indians for Wampum, whether directly or indirectly, without leave or license from the said Earle or his assigns, the person or persons soe offending shall pay for every fathom so traded, to the said Earle or his assigns, the sum of twenty shillings. Ffurther itt is Agreed vpon that what soever shall be thought meete by the Right Worshipfull John Winthrop, Esq., Governor of the massachusetts Bay, to be given to the Earle of Sterling in way of acknowledgement as the Pattentee of the place, shall be duly and truly paid; and fffurther more it is agreede upon that noe man shall by vertue of any gift or purchase lay claim to any land lying within the compass of the eight miles before mentioned, but only the aforesaid Inhabitants shall make purchase in their owne names and at their owne leisure from any Indians that Inhabit or have lawful right to any of the aforesaid land or any part thereof, and thereby assume itt to themselves and their heires as their Inheritance for ever. In witness whereof wee have hereunto sett our hands and seals the 17th day of Aprill 1640.

Memorandum.—That the true meaning of Mr. Farrett is that, whereas he hath formerly purchased certain lands in Long Island for the Earle of Sterling or him selfe, that he doth by these presents fully release all claims and interest in the land above mentioned or persons that shall sitt downe upon it, with all

title to government, whether in Church or Commonwealth, all which is to bee clearly and fully drawne up accordinge to the true meaning of this agreement when things shall be settled and concluded by the Right honorable John Winthrop above named.

JAMES FFARETT. [L.S.]

Sealed and delivered in Presence of Theoph. Eaton, John Davenport.

Upon the back of this document was afterward written the following:

I John Winthrop within named, having seariously considered of that which in this writing is reffered to my determination, although I am very unwilling to take it vpon me & as unfitt also, the rather being to seeke of any rule or approued precedent to guide me herein, yet being called hereunto, I shall express what I conceive to be equall vpon the considerations here ensuing, viz.: The land within granted being a meere wilderness, and the natives of the place pretending some Interest which the planters much purchase, and they might have had land enough gratis (and as convenient) in the massachusetts or other of the Collonies, with liberty to trade with the Indians (which they are debarred from), and for that they had possessed and improved this place before any actual claim made thereto by the Right honbl the Earle of Sterling or had any neede of his lordships patent; and whereas his lordship (vpon consideration I suppose of the premises) required nothing of them but in way of acknowledgement of his interest, I doe hereupon conceive and doe accordingly (soe farr as power is given mee) order and sitt downe that the Inhabitants of the tract of land within mentioned, or the plantation now called Southampton, vpon Long Island, and their successors for ever shall pay yearly to the said Earle of Sterling, his heirs or assigns, vpon the last day of 7 ber, att Southampton aforesaid, foure bushells of the best Indian Corne there growing, or the value of soe much, in full satisfaction of all rents and services (the 5th part of gold and silver oare to the Kings majesty reserved always excepted). In testimony whereof I have hereunto sett my hand, dated 20 (8) 1641

JO. WINTHROP.

The legal right being thus established, the settlers made an agreement with the Indian

tribe occupying the land, and on the 13th of December, 1640, obtained the following deed:

This Indenture, made the 13th day of December Anno Dom. 1640, betwene Pomatuck, Mandush, Mocomanto, Pathemanto, Wybennett, Wainmenowog, Heden, Watemexoted, Checkepuchat, the native Inhabitants & true owners of the eastern pt of the Long Island, on the one part, and Mr. John Gosmer, Edward Howell, Daniel How, Edmond Needham, Thomas Halsey, John Cooper, Thomas Sayre, Edward Farrington, Job Sayre, George Welbee, Allen Breade, Willm Harker, Henry Walton, on the other part, witnesseth, that the sayed Indians, for due consideration of sixteen coats already received and alsoe three score bushells of indian corne to be payed vpon lawfull demand the last of September, which shall bee in the year 1641, & further in consideration that the above named English shall defend vs the sayed Indians from the uniuert violence of whatever Indians shall illegolly assaile vs, do absolutely & for ever giue & grant, and by these presents do acknowledge ouerselues to have given & granted, to the parties above mentioned, without any fraude, guile, mental reservation or equivocation to them and theire heires & successors for ever, all the lands, woods, waters, water courses, easements, profits & emoluments thence arising whatsoever, from the place commonly knowne by the place where the Indians haile over their cannoes out of the North Bay to the south side of the Island, from thence to possess all the lands lying eastward between the foresaid bounds by water, to wit, all the lands pertaining to the parteyes aforesaid, as alsoe all the old ground formerly planted lying eastward from the first creek at the westernmore end of Shineeock plaine; to have & to hold forever, without any claime or challenge of the least title, interest or propriety whatsoever of vs the sayd Indians or our heires or successors or any others by our leave, appointment, license, counsel or authority what soever, all the land bounded as is above said. In full testimone of this our absolute bargaine, contract & grant, indented, & in full and complete satisfaction & establishment of this our act & deed of passing over all our title and interest in the premises, with all emoluments & profits thereto appertaining or any wise belonging from sea or land, within our limits above specified, with-

out all guile wee have set to our hands the day and yeare above sayd. Memorand.—Before the subscribing of this present writing it is agreed that the Indians aboue named shall have the libertie to break vp ground for theire vse to the westward of the creek above mentioned on the west side of Shineeock plaine.

Witness of the deliverie & subscribing this writing: Abraham Pierson, Edward Stephenson, Robert Terry, Joseph Howe, Thomas Whitehone, Joshua Griffiths, William Howe Manatacut x his mark, Mandush x his mark, Wybenet x his mark, Howes x his mark, Secommecock x his mark, Mocomanto x his mark. These in the name of the rest.

This deed, however, elaborate as it is, did not quite satisfy the Indians, or rather the children of the original settlers. There gradually grew rumors of trouble and to adjust them the territory was again bought by a new deed in 1686. This pacified these children of nature, but in 1703 another generation arose and it too had to be pacified, and in that year a fresh deed was granted, which settled the claim forever.

According to Mr. Pelletreau the original settlers up to 1650 included: "Edward Howell, Thomas Halsey, Thomas Sayre, Job Sayre, William Harker, William Wells, John Moore, Thomas Talmadge jr., Thomas Talmadge sen., Abraham Pierson, Henry Pierson, Daniel Howe, Richard Barrett, William Rodgers, Fulk Davis, Nathaniel Kirtland, Phillip Kirtland, Thomas Farrington, John Farrington, Richard Mills, Thomas Tomson, Allen Breade, Henry Walton, Josiah Stanborough, Edmond Needham, Thomas Terry, George Welbee, John Gosmer, John Cooper, Henry Seymonds, Richard Post, John Stratton, Thomas Hildreth, Isaac Willman, John Budd, Thomas Burnett, Thurston Raynor, John Odgen, John White, Arthur Bostock, Richard Smith, Joshua Barnes, Theodore Vale, Thomas Topping, Jonas Wood, George Wood, John Mulford, Richard Odell, Edward Johnes, William Browne, Theodore Robinson, John Kelley, William Barnes, Robert Rose, Ellis Cook, John Cory, Robert Marvin, Jeremiah Howe,

Christopher Foster, John Lum, William Mulford, Robert Talmage, Robert Bond, John Ogden, Mark Meggs, Thomas Beale, Thomas Pope, Isaac Willman, Richard Woodhull, Richard Jacques, John Hand, Tristram Hedges, Samuel Dayton, Raphael Swinfield, John Jessup, John Jagger, Thomas Doxy.

"Of these many remained but a short time, and some of them were among the first settlers of East Hampton. Richard Smith removed from the town at an early date and became the founder of Smithtown, and his name is celebrated in Long Island history as "Bull Smith." It is generally believed that Richard Odell and Richard Woodhull, whose names appear as above, were one and the same person, who afterward settled in the town of Brookhaven, and whose illustrious descendant General Nathaniel Woodhull has left an imperishable name as a martyr to the cause of Long Island liberty. Of the original Undertakers, Edward Howell, the acknowledged leader, was a native of Marsh Gibbon in Buckinghamshire, England; Thomas and Job Sayre were, as before stated, from Bedfordshire; John Cooper was from Olney, county of Bucks or Buckinghamshire; family tradition states that Thomas Halsey was from Yorkshire; Josiah Stanborough was from Stanstead, in Kent. These are the only ones of the 14 founders whose descendants are now found in the town."

A glance at the map of the township will show that it seems divided into two parts, which are joined by a narrow neck at what is now Canoe Place. The original purchase only extended to the portion eastward from this isthmus. It was not until 1658 that Wyandance gave a deed to Lion Gardiner for lands to the west of this isthmus; the Quogue purchase as it was called, was made in 1659 by John Ogden (it was afterward sold to the valorous Capt. John Scott), and the Topping purchase in 1662 by Capt. John Topping. These holdings led to trouble, and in 1666 Gov. Nicolls decided that all the lands so pur-

chased were to be regarded as within the bounds of Southampton.

The land in the original purchase was at first divided into 40 home lots valued at \$150 each. The proprietors received lots according to the amount they had invested in the enterprise and also a share in the undivided lands. A share or lot was afterward laid aside for the minister, and the entire number of home lots increased to 51. Sometimes a lot was subdivided into three and a third awarded to a mechanic—a mechanic whose handicraft was of general benefit and by such a gift was induced to offer himself as a candidate for settlement. But such instances of free gift were few, and it may be said in general that each settler had to pay for his lot according to the terms fixed by the Undertakers and afterward by the town meeting. The lots were carefully measured. Bit by bit the undivided lands were apportioned until 1782. The "Undertakers," and their descendants and successors, under the more modern name of proprietors, continued in reality to rule the township until 1818, when they became an incorporated body to attend simply to their personal interests.

At first the town meeting in regular or special assembly arranged all the details of local government and was the court of last resort. It yearly elected magistrates who really do seem to have been terrors to evil-doers and saw to it that the edicts of the town meeting were carried into effect. In 1644 a meeting formally voted to enter the Confederacy of Hartford, and as the General Court of that Commonwealth that year agreed to its admission Southampton came under its jurisdiction. By this step, however, it threw off its independence and lost its power of electing its magistrates, that being the prerogative of the General Court. However, Southampton simply presented three names, of which two were accepted. Outside of this, however, the connection was little more than a nominal one; not even attendance at the General Court, except by proxy, being insisted on. The Con-

stable seems to have been elected by vote and so were the "Townsmen," as those who acted as Overseers of the Poor, Assessors, etc., were called, and the town meeting continued to be as authoritative in local affairs as ever. Its allegiance was transferred to Connecticut after the union of the New Haven and Hartford Commonwealths in 1662.

The political connection with Connecticut came to an end when Gov. Nicolls began to assert his authority and to proclaim the extent of his royal master's dominion. Southampton seems to have quietly admitted his claims and submitted to his authority, yet the citizens openly acknowledged they would have preferred the Connecticut arrangement to continue. But when, in 1676, Gov. Andros insisted that the town should possess a patent the people demurred. They sent a long remonstrance showing clearly and emphatically their sense of the uselessness and injustice of such a document and also its future danger. "The patents we have seen seem to bind persons and towns in matter of payment to the will and purpose of their lord and his successors, and who can tell but in time to come those may succeed, who through an avaricious distemper, may come upon us with such heavy taxes as may make us or our poor posterity to groan like Israel in Egypt." But here is the protest in full:

Southampton, February 15, 1670.

To the Governor:

Honorable Sir.—We, the inhabitants of this town, do hereby present unto you our humble service, &c. to show our respect to your honor's pleasure, and our obedience to the order of the honorable court of assize—we are bold to manifest herein unto you some reasons why we are unwilling to receive any further patent for our lands, as followeth:

1st, Because, as we have honestly purchased them of the natives, (the proper and natural owners of them,) so also we have already the patent right, lawfully obtained and derived from the honorable Earl of Stirling, we being to pay one-fifth part of gold and silver ore, and four bushels of Indian corn yearly.

2dly, Because the injunction laid on persons and plantations by the laws in 1666, to take forth patents for their lands from our then governor, we groundedly conceive intended not the plantations on this east end of the island, but only those at the west end who were reduced from a foreign government, even as heretofore. Those English that came to dwell within the precincts which the Dutch claimed took out land briefs from the Dutch governor.

3dly, Because those of us, who were first beginners of this plantation, put none but ourselves to the vast charge in our transport hither, we greatly hazarded our lives (as some lost theirs) here amongst and by the then numerous and barbarously cruel natives; yet through divine Providence we have possessed these our lands above thirty years without interruption or molestation by any claiming them from us, and therefore we cannot see why we should lose any of our rightful privileges, so dearly and honestly purchased, or how our lands can be better assured to us by taking out another patent from any one.

4thly, And materially because by our said patent we had license (we being but few) to put ourselves under any of his Majesty's colonies for government, whereupon accordingly, by willing consent on all sides, we adjoined ourselves to Hartford jurisdiction, and divers of us became members of the king's court there, and when the worthy Mr. Winthrop obtained a patent from his Majesty our present lord, King Charles II, for the said colony of Hartford, our town is included, and some of the then chief members of our town expressly nominated in the patent; so that this place became undeniably an absolute limb or part of the said colony; and moreover, since that and after his Majesty's commissioners came into these parts, his Majesty of grace and free motion was pleased so far to encourage his people of the said colony, as by his letter to assure them that their ecclesiastical and civil privileges which he had granted them, should not be infringed or diminished by his said commissioners, or any others whatsoever.

5ly, It is not only in all our experience beyond all parallel that each town should be constrained to take forth a patent, but also the patents here imposed and those given forth, which yet we have seen, seem to bind persons and towns in matter of payment to the will and mercy of their lord and his successors, or lieutenants; and who can tell but in time to come those may succeed who, through an avaricious

distemper, may come upon us with such heavy taxes and intolerable burdens, as may make us, or our poor posterity, to groan like Israel in Egypt.

6ly, Because people are enjoined to acknowledge in the said patent (if we mistake not greatly) that his royal highness the Duke of York is sole proprietor of the whole island; which we cannot consent unto, because we know ourselves to be the true proprietors of the land we here possess, with the appurtenances thereunto belonging, and also because men are enjoined by the said patent to pay not only all just dues, but also all demands that may be made by his royal highness or his authorized agent.

7ly, Because we are more than confident his Majesty will desire no more of us than already we are, even his faithful liege people, who have many of us already taken, and the rest of us are ready to take, the oath of allegiance unto him. Willing we are to pay our just dues in town and to the country, and ready to serve his Majesty with our lives and fortunes; we are his subjects, and we know that he will not make us slaves to any.

8ly, Because General Nichols gave it under his hand that we at this end should have as great privileges as any colony in New England, and yet we are denied our deputies at the courts; we are forced to pay customs for goods imported, for which custom hath before been paid to his Majesty's use in England.

9ly, and lastly.—The king's commissioners, in the year 1664, by their proclamation, seemed to demand only the government, with exact and full promise that the people should enjoy whatsoever God's blessing and their own industry had furnished them withal; and we see not what more a patent can assure us, especially considering that the patents here taken forth by places, or particular persons, secure them not absolutely; for it seems to us by the order of the court of assizes, even from them who have received a patent, wood and timber may be taken away without leave and without pay; in all which respects, and some other, we cannot be willing to take forth more patent than we have. And if we do succeed otherwise than we expect, we hope we shall, like good christians, patiently bear the pressure that may be permitted to fall upon us, yet never fail to be fervent votaries for your honor's real happiness.

[Signed by Thomas Halsey, jun., and 49 other inhabitants of the town.]

But the remonstrance was unavailing. Andros placed little value by such things and an ultimatum was sent to Southampton, the terms of which were such that the town had to comply with the Governor's demand or lose all its township rights. So the patent was issued. As a historical document its only interest for us is that it defines for the first time and with understandable clearness the boundaries of the town. Its main features were as follows:

Edmond Andross, Esqr., Seigneur of Sausmarez, Lieut. and Governor Gen'l under His Royall Highness James Duke of York and Albany &c. of all his Territoryes in America, To all to whom these presents shall come sendeth Greeting. Whereas there is a certain Towne in the East Riding of Yorkshire upon Long Island commonly called and knowne by the name of South Hampton, situate, lying and being on the South side of the said Island, toward the Maine sea, having a certaine Tract of Land thereunto belonging, the Eastward Bounds whereof extend to a certaine place or plaine called Wainscutt, where the bounds are settled betwixt their Neighbors of the Towne of East Hampton and them; Their southern bounds being the Sea, and so runs westward to a place called Seatuck, where a Stake was sett as their farthest extent that way; Then crossing over the Island to the Northward to Peaconick great River (not contradicting the agreement made betwene their Towne and the Towne of Southhold after their tryall at the Court of Assizes), and soe to run Eastward along the North bounds to the Easternmost point of Hogg neck over against Shelter Island; Including all the Necks of land and Islands within the afore described bounds and Limits;

Now for a confirmation unto the present Freeholders Inhabitants of the said Towne and precincts, Know Yee that by virtue of his Majestie's Letters Patents and the Commission and Authority unto mee given by his Royall Highness I have Ratified, Confirmed and Granted * * * unto John Topping (Justice of the Peace), Captain John Howell, Thomas Halsey Senior, Joseph Raynor (Constable), Edward Howell, John Jagger, John Foster, and Francis Sayre (Overseers), Lieut. Joseph Fordham, Henry Pierson, John Cooper,

Ellis Cooke, Samuel Clarke, Richard Post and John Jennings, as Patentees, for and on the behalfe of them selves and their Associates the freeholders and Inhabitants of said town, * * * All the afore mentioned tract of land * * * with all Rivers, Lakes, waters, Quarrys, Woodlands, Plains, Meadows, pastures, Marshes, fishing, Hawking, Hunting and fowling, And all other Profits and Commodities * * * To Have and to Hold all and singular their said lands and premises, * * * The Tenure of said land to be according to the custome of the Manor of East Greenwich in the County of Kent in England, in Free and Common Socage and by fealty only. * * * And I doe hereby likewise Confirm and grant unto the said Patentees and their Associates all the privileges and Immunities belonging to a Town within this government. And that the place of their present Habitacon and abode shall continue and retain the name of South Hampton, by which name and Stile it shall be distinguished and known in all Bargaines * * * and writings. Yeilding and paying therefor as an acknowledgement or Quit rent One fatt Lamb unto such officer or officers there in authority as shall be Empowered to receive the same.

Given under my hand and sealed with the Seal of the Province, in New York, the first day of November in the Eight and twentieth year of his Majestie's reign, *Annoque Domini* one thousand six hundred and seventy-six.

E. ANDROSS.

Gov. Dongan, of course, insisted on the town taking one of his patents which was issued in 1686. It confirmed the rights, etc., of the former document and ordered that twelve trustees should annually be elected "of the freeholders and commonalty of the town of Southampton, two constables and two assessors." The first trustees under this patent were John Howell, Thomas Halsey, senr., Edward Howell, John Jagger, John Foster, Francis Sayre, Joseph Fordham, Henry Pierson, Samuel Clark, Job Sayre, William Barker and Isaac Halsey. It is noticeable that by this charter others than the proprietors or freeholders were made qualified to vote.

Southampton was a Christian, democratic town, but by no means a theocracy. Its rea-

sons for formally annexing itself in 1644 to Hartford rather than to New Haven was that, under the laws of the last named commonwealth, church membership was an essential to the full rights of citizenship, to the right to speak and vote at town meetings. This decision, however, lost to the community its first minister, the Rev. Abraham Pierson. He had hoped that the town would develop into a community in which the church would be supreme, and he had even organized the congregation with seven members before the first batch of colonists left Lynn. But from the first he probably was dissatisfied with the results. A church building was erected at Southampton in 1640, but when Pierson left he took part of his people with him and set up a new tabernacle at Bradford, Conn. The Rev. Robert Fordham, the pioneer of Hempstead, succeeded Pierson in the ministry of Southampton, and concerning that Dr. W. Wallace Tooker, in an unpublished monograph from which many data have already been obtained, says:

"His arrival and locating at Southampton undoubtedly gave a boom to that weak colony, then to a great extent disorganized by the departure of Minister Pierson and the few who agreed with him, as well as by the dissensions that occasioned it. The best and most influential townsmen, however, remained to welcome 'the well-beloved servant of the Lord, Mr. Fordham,' as they expressed it, in April, 1649, in their contract with him as their minister. Before his coming to Southampton the townsmen had become dissatisfied with their 'old' town site, which possessed many disadvantages unseen and unthought of in the haste of laying out the first settlement, and after his arrival they began to lay out and to build upon the new, now represented by the present wide and beautiful main street of Southampton village. So, with Fordham's ministry, the town of Southampton entered upon a different order of things, as well as upon a new era of prosperity, which has continued until the present day. Under Mr. Fordham a new church build-

ing was erected in 1651. This church stood until 1707, when a third structure was erected, which was occupied by the congregation until 1845, when it was replaced by a more commodious structure."

Mr. Fordham continued to act as minister until his death, in 1674, and long before that he enjoyed the reputation of being the wealthiest man in Southampton. Yet his stipend never seems to have exceeded £80, so he must have largely engaged in mercantile affairs and been a good business man. In 1716 the church, then under the care of the Rev. Samuel Gelston, came under Presbyterian government.

Southampton was in favor of the movement for freedom in 1776 almost to a man. Three or four companies of militia and minutemen were raised in the township, in addition to two companies which guarded the great herd of cattle on Montauk Peninsula. It is supposed the Southampton company in Col. Smith's regiment took part in the battle of Brooklyn, but, unfortunately, there is nothing on record about that. But we do know that the smoke had hardly cleared away from Gowanus Heights before Gen. Erskine's proclamation was circulated, calling on all to submit to royal authority. Many of the best and wealthiest of the townspeople, rather than comply, crossed over into Connecticut, but Governor Tryon's oath had to be taken by all who remained. The British troops made their headquarters at Southampton and Sag Harbor in 1778, and then followed the same story of wrong and robbery, requisitions without stint but generally without payment, the diversion of everything to the use of the military, the abandonment of work on the farms, the wanton destruction of property, growing crops, fences and buildings, which has followed us all over the island in our story of the townships. As soon as the troops left, industry again set in, but it was many a year before the damage done during that military saturation was fully repaired.

The modern story of Southampton village

is one of quiet progress. In 1844 the first Methodist Church was organized, and a large congregation has since been built up. In 1879 the Episcopal body made a beginning with their quaint little church, St. Andrew's-in-the-Dunes, but it is only used during the summer season. The Roman Catholic Church only began its work in 1886. The Civil War naturally created much excitement, but the demands of the Federal authorities were met. A bounty of \$750 was paid to each man drafted and \$500 for recruits. The local hero of the war, Col. Edwin Rose, died at Jamaica, L. I., where he was acting as Provost Marshal, in 1864.

Southampton is now one of the most select of the summer resort towns on Long Island. It is famous for its clubs, its social life, its artistic "atmosphere." It has many of the finest suburban homes in America, and during the season its "functions" are many and select. It has now a population of nearly 2,000.

Many Indian legends concerning Suffolk county have been unearthed by Dr. William Wallace Tooker, of Sag Harbor and concerning the aboriginal inhabitants of his home town, and the memorials they left behind in the way of place names, he writes as follows:

In a former time, under primitive conditions, on the rolling ground and plain, to the northward of the range of hills that extend west and east across the eastern portion of the present village of Sag Harbor, were located the picturesque wigwams, corn fields and other accessories of the village of Wegwagonock. A large portion of the elevation, on the southern slopes of which the most compact part of the village had been situated, was leveled about fifty years ago and its contents distributed over the adjoining meadow in order to increase the area and stability of the ship and oil yards of Mulford and Sleight. The writer was informed by the late William R. Sleight that human bones, supposed to have been those of Indians, very friable and decayed, were unearthed during the excavating; but, if any objects aboriginal were deposited with them at the time of burial, they were overlooked in the haste and carelessness of the digging.

The situation of this summer dwelling place

of the red men, which it must undoubtedly have been, for in the winter they lived back in the forests where it was less exposed and more sheltered, was highly favored naturally for their purposes and their primitive mode of living. From evidences, surface or otherwise, that have been discovered from time to time, this village extended, with the wigwams in scattered order, along the edge of the meadows where the late E. M. Cooper and Charles L. Phillips' houses stand, skirting the base of the hills as far as the Fahys Watch Case Factory. At the present day a large portion of this area has been obliterated of its aboriginal marks by the march of improvements until but a small part of the site indicates what it must have been at the period of which I write, that portion in close proximity to the depression which has been known from my childhood as the "Frog Pond" is about the only part remaining that may still be studied by the student of prehistoric anthropology with much interest and satisfaction.

The conditions which give rise to this village in aboriginal times were these: First, its nearness to the tidal waters in front made their food quest an easy one, for fish abounded here. Second, the sand-flats, bare at low water, bordering the shore in every direction, undoubtedly teemed, as it does to-day, with shell-fish of various kinds. The abundance of the univalve, commonly called the periwinkle, in the various coves and bays hereabouts, gave the name Mehtanawack, "country of the ear-shell" to this part of Long Island, thus making it a place of note to the natives on the neighboring main. There can be no doubt whatever but that the manufacture of wampum was carried on to a great extent at this Indian village, and that it was frequently visited by the Dutch for the purposes of trading in this commodity. All the facts disclosed by excavating on this village site proves it; the numerous columella or stock of periwinkle scattered about this village site bears mute testimony of this manufacture. The writer, in digging here, discovered a cache of these shells which had evidently been stored for future use. He has discovered like deposits in other places which bears out Roger Williams' observation in 1643, viz.: "Most on the sea-side make Money, and store up shells in Summer against Winter whereof to make their money." Again, at the mouths of the tidal creeks could be found in abundance the round clam which Roger Williams said "the Indians wade deepe and dive for, and

after they have eaten the meat there (in those which are good) they break out of the shell, about halfe an inch of a blacke part of it, of which they make their suckau hock, or black money which is to them pretious." It is very rare we find a whole valve of the round clam (*venus mercenaria*), but fragments exist in great quantity, showing breakage of the shell in order to obtain the "blue eye" so highly desired for beads. The debris which marks the settlement is composed of shells, ashes, charcoal, burnt stones which were probably the hearths of the wigwams, pottery sherds, both ornamented and plain, arrow points, hammer stones, celts, stone axes and other objects that carry the age of the village back to a past, previous to the dawn of settlement by the English, and the layers of which prove that the occupation of the site by the Indians was not continuous but was revisited time and time again. Again in the top layer has been found a few gun flints, glass beads and brass buttons, indicating occupation within historic times. On the surface it was the writer's fortune to find a brass arrow-point identical with that figured by Dr. Abbott on page 421 of his *Primitive Industry*, which also belongs to the writer. There is something peculiar about these two points in the fact that when placed one on the other it is indicated seemingly that they were both cut by a die, for the perforations and outlines are exact in both specimens. There is no question but what careful examination on the site of this village would bring to light many objects of aboriginal use and workmanship. It is only a few years ago that my friend, Dr. C. S. Stilwell, who owns the hill and land adjoining, was digging to reset a post on the lowest part of this village site, when he drew out at the depth of about three feet, a perfect grooved stone axe. It was quite large and very nicely finished, and its accidental discovery indicates to some extent what may lie buried underneath the soil in this vicinity.

The neighboring meadows and the marshy pools of water where the rushes grew and where the cat-tail flourished in abundance, were frequent places of resort in order to gather flags for making mats, baskets and coverings for their wigwams. The adjoining hills, then all wooded, were roamed over in search of game, and the occasional arrow-point picked up on the surface or overturned by the plow is a reminder of the arrows' flight either in time of war or peaceful pursuits. The notched or grooved sinker is also a token of the foot-

steps of the Indian fisherman and indicates where his nets sometime were left to dry on the upland bordering the shore. Thus on every hand hereabouts may be met some token of the dweller in the village of Wegwaggonock. Across the bay could be seen the island of Ahaquatuwamuck, "the sheltered fishing-place," now known as Shelter Island, of which its southern end directly opposite Wegwaggonock, still retains its aboriginal appellation of Meshomack, a term denoting "where there is going by boat," indicating the ferry between that point and Three Mile Harbor or to Wegwaggonock. Further northward, also within sight where now we see the residence of Dr. S. B. Nicoll, was the wigwam of the Sachem Ambusco in the seventeenth century, which gives the name "Sachem's Neck" to the locality. The trail or path from Wegwaggonock led to Ashawagh at Three Mile Harbor, to Weckatuck at the north side, with branches in various directions wherever the footsteps of the Indian might lead him.

The name Wegwaggonock or Wigwaggonuck, as designating the locality, was retained in the early records of East Hampton and probably in the speech of our first settlers until the year 1731, when it disappears from the written page and from the memory of our oldest inhabitant until it was brought again to light by the publishing of the records. Among other notices we find one dated April 30th, 1718, when "It was agreed * * * that all the land lying to the westward of Joseph Strettons' meadow at Wigwaggonock shall lie * * * as common land forever * * * all the land lying between the bound line and the north side to the utmost limits of East Hampton bounds." This record identifies the locality beyond a shadow of doubt, for the "bound line," "north side," "utmost limits of the bounds of East Hampton," could not have applied to any other locality than that north of the site of where I place the village of Wegwaggonock. By the inroads of the sea and other causes, much of the meadow hereabouts has disappeared and it is impossible to locate any of the tracts of meadow first allotted to the inhabitants of East Hampton; although in 1728 Ananias Conkling, Jr., entereth his land joining his land at Wigwaggonock—near the bound line, which was probably what is now the residence of Mrs. William R. Sleight and of the others in the rear, extending back to the bay, including the site of Wegwaggonock and meadow to the eastward, and terminating in

Conkling's Point, so named after its first owner.

Indian place-names are invariably descriptive of the place to which they are applied, and were therefore topographical, and not mere marks to distinguish one place from the other like all our names. Wegwaggonock belongs to the same class and denotes "land or place at the end of the hill," which fully describes the location at the foot of what has been known for many years as "Sleight's Hill." John Eliot, the eminent Indian Missionary, would probably have written it in the Massachusetts dialect as Wequae-adn-ohke, from Wequae, "at the end of," "as far as," limit, etc., adn, "a hill," use in compound words only,—ock, "land or place." The name being descriptive is found in varying forms in other parts of New England. It was also the name of an Indian village in Sharon, Conn., as written by the Moravian missionaries, Wequadrach. Once I asked a Chippeway Indian what Wegwaggonock meant, giving the sounds as represented here: he was unable, however, to translate it, but just as soon as I told him that it was the same as Waiekwadnach in his own language, he recognized its identity and translated it as given above without my assistance. The same name is found in Columbia and Dutchess Counties New York, applied to a tribe of Indians who were called the Wayaughtanocks or Wawyachtonocks, from the facts that they dwelt "at the end of a hill or mountain."

Sag Harbor is now the business city of the township, and its most populous centre, having a population of 4,000. It had its origin, seemingly, about 1707, but little is known of its early modern history. A good deal of its traditions centre in a tavern, erected in 1745, on a site now covered by the railroad station. It was a noted resort for a long time and in it, it is said, Fenimore Cooper, whose knowledge of the entire Long Island Sound coast was most intimate, wrote his novel, "Precaution." The need of the location of a landing place for vessels at Sag Harbor seems to have arisen about the time whaling began to be an industry. In 1742 an effort was made to build a wharf, but it was unsuccessful, and it was not until 1770 that such a necessary feature for a seaport was constructed. Another was built

in 1794. During the Revolution and in the War of 1812 Sag Harbor acquired considerable prominence on account of its tactical situation, but its story in these two emergencies has already been told. Its commercial history really begins with the close of the Revolution. By 1806 quite a crowd of shipbuilders had yards in which they turned out vessels suitable for whaling, and it has been estimated by Mr. Pelletreau that in 1845 no fewer than 70 vessels engaged in that industry, but it gradually declined, and about 1862 ceased to be a factor. It was thought that the ruin of this industry meant the end of Sag Harbor's prominence. But it had been slowly acquiring prominence as a manufacturing centre, and in that respect its success has been most marked, especially since the introduction of the railroad in 1870. Nowadays some of its manufacturing establishments have a national fame, and it is a progressive, wide-awake community. It has had a Presbyterian congregation since 1766, when the first meeting house was erected, and the services of the Methodist Church commenced in 1807, two years before that body built a place of worship in the village. Christ Protestant Episcopal Church dates from 1845. In 1784 its first school was erected, and by 1815 it boasted an "academy" in addition.

An interesting sketch of "Sag Harbor in the older times" was written in 1896 by Judge Henry P. Hedges, the veteran leader of the bar of Suffolk county, which will be read with interest as a contribution to local story by one whose name is honored throughout Suffolk county and whose knowledge of its legends, its history, its people is justly regarded as "second to none."

The social and economic life of Sag Harbor in its early days differed little from that of the adjoining Hamptons. Settled later, it was settled chiefly from them, and was appropriately their child. The Fordhams, Halseys, Piersons, Fosters, Coopers, Howells, Sayres, Rogers and others came from Southampton, the Conklings, Edwards, Hedges, Osborns, Mulfords and others from East Hampton. At

first the dwellings were small one-story single houses and so continued until after the Revolution. Within a few years thereafter the rewards of commerce, trade and the industrial arts so increased as to warrant the construction of larger dwellings. About 1790, two-story double houses were first built. Merchants kept store below, and with their families resided above. As late as the fire of 1845 Thomas P. Ripley, merchant, so lived. The dwelling of Albert G. Hedges, then burned, was so used by his father. In that fire these and other like houses vanished. The dwelling of Miss Mary Rose Rogers and the old Latham house next north, late the residence of George B. Brown, remain as specimens of the post-Revolutionary order of architecture. After 1825 few double houses were built. After 1830 generally they were two-story, end to the street, after the pattern of that at the junction of Main and Madison streets, built by Captain David Hand, son of Captain David and grandson of Captain David. The dwelling in the rear of the residence of R. J. Power is a pattern of ante-Revolutionary order. The dwelling next north of that, formerly of George B. Brown, deceased, once owned by Captain Selah Youngs, dates just after the Revolution. The house of John De-Castro is the style of single houses in vogue from 1790 to 1825, or thereabouts. The development and improvement of sailing craft excelled that in the architecture of dwellings. The small sloop of fifteen to fifty tons of 1640 had more than doubled in size in 1740, and after 1712 when the first schooner was built in the United States, those vessels grew in favor. When this first schooner was launched, a spectator said, "See how she scoons or skims," and the owner replied, "A schooner let her be." This is said to be the origin of the word schooner. The Custom House records of Sag Harbor show these figures:

- In 1794, 472 tons registered; 473 tons enrolled and licensed vessels.
- In 1800, 805 tons registered; 1449 tons enrolled and licensed vessels.
- In 1805, 1916 tons registered; 2228 tons enrolled and licensed vessels.
- In 1810, 1185 tons registered; 3223 tons enrolled and licensed vessels.
- In 1815, *808 tons registered; 2719 tons enrolled and licensed vessels.
- In 1820, 2263 tons registered; 3416 tons enrolled and licensed vessels.

* A decline caused by the War.

From the early days of Sag Harbor, agriculture received some attention, and horticulture still more. While the mercantile and mechanic arts were the chief reliance of its citizens, the culture of the soil was not neglected. Barns were built and used in connection with houses, and in many cases horses were kept for agricultural purposes. Wood was the only fuel used, and that had to be cut and hauled to the dwelling. North Haven bridge was not constructed. For a supply of milk most families were obliged to keep their own cows. The food of the community was chiefly salt beef, pork and fish; oftener rye than wheat bread. For breakfast a Johnny-cake with fried pork, sometimes fresh, while the supply held out, and then salt while that lasted; sometimes neither could be had. For supper, bread, samp, hominy or pudding with milk. Dinner then as now was the larger meal. A farmer's dinner was a chunk of salt pork, an Indian pudding with a lot of potatoes boiled together in an iron pot, and hence the common expression of having "a boiled pot for dinner." Eels, clams and fish were plenty. Game abounded, and these relieved the monotony of salted food. In my early days trenchers or wooden plates were sometimes used, before they were superseded by pewter, and they in time by tin and crockery. Hence the saying of a large eater, "He is a good trencherman." The old brick oven, indispensable and inimitable in excellence, of the olden time, like "the old oaken bucket that hung in the well," exists but in story and in song.

After my day began, little fresh meat was sold in the market. Many families bought beef and pork of the farmers and salted them for the year's supply of meat. In truth, it was a cold, narrow frugal life.

Hard necessity compelled the use of the cheapest food and clothing. Indeed, the clothing was mostly of home manufacture, spun in the house and often there woven. Hosiery was wholly a domestic product. The leather used for harness, for saddles, for boots and shoes was all tanned here and made up here. To a considerable extent boots and shoes were exported for sale elsewhere. Yet in all this round of untiring industry, exacting from young and old the daily task, social life was brightened by frequent intercourse. In the afternoon the women, taking on their shoulders the small, light spinning wheel visited their

neighbors, and the simultaneous hum of the wheel and of converse went gaily on.

Captain Vail remembers when a boy taking his mother's wheel to Robert Fordham's Inn, where the ladies gathered of an afternoon, until in the large ball-room forty spinning-wheels were counted. In reading this paper to a friend, inadvertently I omitted the word spinning before wheel, when he interrupted me, suggesting the adjective, and saying at first he thought I meant the bicycle wheel! How widely the past and present differ, and what could be more suggestive?

In the long evenings by the winter's fire-side many a yarn relieved the monotony of the hour. The friendly, bright, social life of Sag Harbor was formerly far-famed. In the olden time newspapers were rare. Knowledge and news were orally conveyed. Conversational practice perfected the art. The charm of modern conversation does not exceed that of former days. Necessity compelled industrious toil. Exercise developed a hardy race. Rowing trained the muscle of the men; the spinning-wheel brought out the activities and grace of the women. Young ladies at the large wheel spun woolen rolls in yarn. It required skill and dexterity to draw out the thread and roll it on the spindle. But the symmetry, the grace of motion, the harmony of proportion, the lithesome activity of the feminine form, and the undefinable charm of woman never shone more winningly than when operating that wheel. The settlement at Sag Harbor was compact and facilitated and invited the enjoyment of social life. The embarkation and return of voyagers on the great deep were events of interest to the little community, and as the port increased in population and enlarged enterprise, these events were of frequent occurrence. Strangers visited the taverns, mechanics and artisans came to render aid as the seasons requiring their labors returned. With the cargoes of lumber, fish and other imports, strangers made a temporary or permanent stay in the place. Farmers from the Hamptons came often.

Thus the pulsations of the outer world, its politics, its business, its modes of thought, its inventions, its discoveries, its manners, its news were conveyed by its visitors, and Sag Harbor throbbed and glowed with the Nation's life. This old telephone wrought slowly but surely and incessantly, and the message kept

the standard of progression in the village abreast of the advancement of the age.

Bridgehampton, which now has a population of 850 and is a farming, fishing and railroad centre, dates from about 1712. It is part of the district once known as Mecox and seems to have eclipsed the old village of that name, which was settled in 1660, and had a church for the use of its people about the close of that

BRIDGEHAMPTON.

century. The first church in Bridgehampton was erected in 1737—a Presbyterian congregation which is still active and vigorous, and it was able to support another church in 1820, when the Methodist body began its local history. Mention is also made of yet another church, the result of a schism in the Presbyterian ranks in 1748, but it only lasted a few years. Its people called themselves the "New Lights," and were followers of the Rev. Mr. Davenport of Southold, to whose strange career reference has been made in an earlier chapter of this work. Bridgehampton is a pleasant retired village, "quiet and comfortable," a recent visitor described it, and is ap-

parently just beginning to acquire some prominence among summer visitors who care more for rest than frivolities.

North Sea, the oldest settlement in the township next to Southampton, dates from 1647, and is said to have been the spot where the settlers first landed. It used to be a place with some commercial pretensions, but Sag Harbor long since stripped it of what little trade it had, and its present population of 75 is made up mainly of farmers. Speonk, or, as it is now called, Remsenburg, is a village which of late years has come into prominence on account of the successful effort to change its name. The regular settlers call it Speonk, as it has been called since it first became settled, about 1750, and the summer folks call it Remsenburg, and, as the postal authorities have accepted the change, it seems likely to prevail. It has a population of some 200, but in the summer season it has about four times as many, and its Presbyterian Church is one of the handsomest structures of its kind to be seen in any Long Island village. Quogue, however, seems to be even more of a favorite with the dwellers from the city who love to spend their holidays at a watering place pure and simple. Quogue was first settled in 1748, but it now presents few evidences of its age, being mainly made up of modern villas. The old Indian tract, generally spoken of as Shinnecock, is more famous for its golfing grounds than for anything else. It claims a resident population of 125, and the Indian reservation at Shinnecock Neck 200. Canoe Place has a population of 150, but in the summer months there are generally several hundred visitors roaming along its neighboring roads, hunting for relics of the fast disappearing red man, or for botanical curiosities, or simply enjoying the sunshine, pure air and natural beauty of one of the most primitive spots to be met with on the island.

The rest of the settlements in the township present little to occupy our attention. With the possible exception of Sag Harbor, they are

all of them laying plans for attracting to their confines a large share of that summer trade which has done so much within the past quarter of a century to build up the outlying districts of Long Island, and which seems certain to increase in volume and importance and to

steadily open new centres as time glides on. In it will be found Long Island's greatest source of wealth, and every agency—good hotels, splendid roads, rapid transit, liberal and honest dealing—should be used to accelerate its development and quicken its progress.

CHAPTER LXXIII.

EAST HAMPTON.

JOHAN LION GARDINER, the seventh proprietor of Gardiner's Island, was the antiquary of the family. He compiled a vocabulary of the language of the Mohawk Indians, which, brief as it is, really preserves all that is known now of that ancient tongue. He was a careful student of local history, and his "Observations on the Town of East Hampton," written in 1798, is a valuable little monograph which should really be the basis of all the histories of the township. In accordance with that view it is here reproduced in full:

The Town of East Hampton is bounded South-Easterly by the Atlantic Ocean, on which side the shore is a sand beach free from rocks. The sea gains on the shore, and it has been said by aged people that, in some places, the sea now washes the shore where Indian Corn has been planted by their Fathers. The sand near the shore is blown into hills on which nothing grows but a grass called "Beach Grass," and a shrub bearing the Beach plum. By this grass & the Bushes, the sand is, in some measure, prevented being blown over the adjacent pasture & mowing fields.

Easterly, the town terminates at Montauk's Point around which the Tide runs very rapidly. Gardiners Island, or the Isle of Wight, lies on the North East side of Gardiner's Bay, and contains about 3,000 acres of good land. Its greatest length is from N. W. to S. E. and is about $7\frac{1}{2}$ miles. There

is, besides, an Island called Rom (or Rum) Island, which belongs to it, and lies on the South part. The shape of the Island is irregular. From its first settlement in 1639, it was a plantation by itself. As the Legislature in 1788 thought proper to annex it to the town of East Hampton, it will, in those Notes, be considered as a part of that Township. This Island is distant from the town 10 miles; and from Long Island shore about 3. It is assessed for about one sixth of the value of the Township. The shore on the North side of East Hampton is rocky and indented with bays, coves, and creeks, which lead into Ponds abounding with shell and scale fish, and are harbours for small vessels.

Westerly, the town is bounded by South Hampton.

The line between these two towns was in contention from the first settlement till 1695, when it was, finally, fixed where it now is, by persons mutually chosen by the two Towns. It begins at the sea shore on the south side, and crosses the eastern branch of the Island, to the North side & leaves but a small part of the houses, at Sag Harbor on the East Hampton side. This line is about — miles in length, & was fenced about the year 1664 in order to keep the Southampton horses &c. from crossing over the bounds. This line is now much farther to the Eastward than where it was fixed by the General Assembly of Connecticut about 1660 to whose decision it was then referred.

The settlement of Sag Harbor is mostly

in Southampton Township, and is a thriving place. It is exceedingly well calculated for the Whale and Cod Fishery.

By the Records, it appears that East Hampton was at first called *Maidstone*. This name does not appear after the year 1664, when they came under the Duke of York, and soon after received a Patent from Col. Richard Nicolls. By this Patent the Town is called East Hampton, though the records of the Town prior to the year 1664, mention that as the name of the place. It was probably called East, on account of its situation to the East of Southampton.

Some of the First Settlers appear, by the Records, to have come from Stansted in the county of Kent in England. Probably some of them might have come from Maidstone in the same County. It is very evident from the Records, that some of the original 35 settlers and purchasers of the Town removed from Lynn in Massachusetts; and tradition informs us that they came from several of the towns on the Sea coast to the Eastward of Boston. These were, probably, natives of England, as New England had not been settled so long as to produce Native Immigrants when E. Hampton was first settled. Those who were received by the Original Settler as "accepted Inhabitants," might have been born in America. None were received into the Town as Inhabitants but by a vote, and some were forbid settling on account of their principle and laziness.

There were, at first 35 purchasers. The names of 13 of these are now entirely extinct in the Town. The Christian & Surnames of many of the original settlers are now found to the 4th 5th & 6th degree, counting the first as one. Lands that were at first allotted, have descended in the family, and are, after a space of 150 years, occupied by one of the same family and name.

When the town was first settled only a home-lot at the South end of the Town, containing from 11 to 13 acres, was laid out.

This was done on both sides of the Pond, called the "Town Pond." This was probably on account of the convenience of getting water for themselves and cattle before they dug wells. It is probable a brook might have discharged itself into the Pond, which, since the land is cleared, has disappeared.

The next lands that was laid out to the Owners, were the Salt Marshes in the various parts of the Town. The last of the Woodland was allotted to the owners about 60 years ago.

Excepting the Indian Deed for the Township, there is nothing of an earlier date on Record than the following:

"At a General Court holden at East Hampton, March 7th 1650 [o. s.] It is ordered that Ralph Dayton is to go to Keneticut for to procure the Evidence of our Lands, and for an acquaintance for the payment of our lands, and for a boddie of laws.

"It was alsoe ordered that any man have libertie to sett gunns for to kill wolves, but not within half a mile of the town" &c &c. "No man shall sett any gun, but he shall look to it while the stars appear, and take the gunn up by the sunrising, and no man shall sell any dog or bitch, young or ould, to any Indian upon the penaltie of paying of 30s."

Various town laws, similar to the above are on Record. They are styled "Orders." Many of them are relative to laying out vacant lands, making roads, destroying noxious animals &c. in short, laws that were necessary in a new settlement.

The Indian Deed for the land is on Record. It is from the four Indian Sachems, *Paggatacut*, of Manhansett: *Wayandanch* of Miantacutt: *Momoweta* of Corchaki: *Nowedonah* of Shinacock.

It is dated April 29th, 1648, and conveys the land, to the "Eastward of Southampton bounds, to the Worshipful Theophilus Eaton Esquire, Governour of the Colony of New Haven and the Worshipful Edward Hopkins Governour of the Colony of Conecticut and

their associates . . . for and in consideration of 20 coats, 24 Looking Glasses, 24 hose, 24 Hatchets, 24 Knives, and one hundred Muxs, already received by US, and reserve unto ourselves free Liberty to fish in all the cricks & ponds, and hunt up and down in the Woods without molestation, giving the English Inhabitants noe just cause of offence: likewise are to have the fynns & tails of all Whales cast up, and desire they may be friendly dealt with in the other part alsoe to fish for shells to make Wampum of, and if the Indiyans, in hunting deer shall chase them into the water and the English shall kill them, the English shall have the bodie and the Sachem the skin." The witnesses were, Richard Woodhull, Thomas Stanton, Robert Bond, Job Sayre and Chectanoo (by his mark) the Interpreter.

There is recorded a receipt from Edward Hopkins to "Robert Bond—inhabitant of East Hampton for £34. 4. 8. being the amount of monies paid for the purchase of the Lands," and a certificate of the delivering of said Bond the writings of the said purchase and all the Interest that was thereby purchased dated 16th April 1651. On a blank leaf of one of the old Books of Records are seen these words "Robert Bond delivered unto the Govr for the purchase of our Lands, for the towns use the sum of £1. 3. 10. Robert Bond for his expenses, going to the Mayne land in the Town's service the sum is £1. 3s. 6d." It appears that the purchase was made by these two Governors in trust & in behalf of the Original Settlers of the Town.

The English & Natives appear to have lived on good terms. The lands on the East end of Long Island as well as the neighbouring Islands—Shelter Island, Gardiners Island, Plum Island & Fishers Island—were purchased of the Natives. Some French writer, I think Raynal, speaks in praise of the Great William Penn for having sett an uncommon Example in purchasing the Soil of Pennsylvania of the Native Indians, and which if it

had been followed by the Settlers of New England and Virginia would have prevented some wars that took place. This Frenchman, like many European writers who have never been in the country, did not understand himself sufficiently on the subject. The fact was that the Settlers of Virginia & New England purchased their lands of the Natives before Geo: Fōx the Founder of the Quaker's Sect published their principles in England in Oliver Cromwell's time, and a long time before the celebrated William Penn settled in Pennsylvania. There is no doubt but the regular purchase & the warrantie deed from the four abovementioned Sachems, in 1648, prevented difficulties between the Natives & English. Some Indian writings on record in East Hampton speak of the friendship & amity of their neighbours the English about 1660.

Gov. Winthrop in his Journal, page — and Gov. Hutchinson in his History of Massachusetts p. 88, mentions that in 1640, a number of families removed from Lynn to the West end of Long Island, and bought land there of James Farret Agent to the Earl of Sterling: but getting into some quarrel with the Dutch, they removed to the East end, and settled at Southampton & chose one Pierson for their Minister. Probably Southampton was settled before East Hampton. Tradition informs us that before East Hampton people built their first grist mill (which went with cattle), they went to Southampton to mill, and carried their grain on the back of a bull that belonged to the Town for the use of their cows. If this is true, no doubt Southampton was settled first.

Govr Hutchinson says that in 1644 Southampton by an act of the Commissioners of the United Colonies was annex to the Jurisdiction of Connecticut. One might suppose that E. Hampton was settled from Southampton, but the method of pronounciation is quite different, although the Towns join. An East Hampton man may be known from a Southampton man as well as a native of Kent in

England may be distinguished from a Yorkshire man. The original settlers of these Towns probably came from different parts of England. Besides the names that prevail in one town are not to be met with in the other. The names of Pierson, Halsey, Howell, Toppin, Sanford, Cooper, White, Post &c and common in Southampton & confined there, as are the names of Mulford, Osborn, Conkling, Baker, Parsons, Miller, Gardiner, Dayton, &c. to East Hampton. The names of Hedges &

presented to Gov. Dongan about 1683, mentions his father as the first Englishman that had settled in the Colony of New York. Southampton put itself under the Jurisdiction of Connecticut in 1644, as Southold did under New Haven in 1648. According to President Stiles' History of the three Judges of Charles I., East Hampton was a Plantation or Commonwealth as it is styled, in the Record—that was, Independent of any other Government from the first settlement till about 1657.

EAST HAMPTON.

Hand, are met in the Eastern part of Southampton but originally [they were] from E. Hampton. Very little intercourse took place between the two towns before the Revolutionary war. Since that, visits and intermarriages are more frequent.

What time East Hampton was first settled is not certainly known. Probably soon after Southampton. Neither of the Towns was settled as early as Gardiners Island which was settled by Lion Gardner in March 1639. David, son of Lion Gardiner, in a petition

The magistrates frequently asked advice in difficult cases "of the neighbour Towns of Southampton & Southold" and sometimes of "the Gentlemen at Hartford."

The three Towns on the East are styled the "Three Plantations." The government of the Town of E. Hampton was purely Republican. Their laws were enacted by all the citizens assembled in town meeting; this was stiled "the General Court" and a fine inflicted on such as did not attend.

In Decr 1653 by a vote of the General

Court, "the Capital laws, and the laws and Orders that are notic'd in the bodie of laws that came from Connecticut shall stand in force among us."

Their public officers were few; three magistrates who were called Townsmen, were chosen annually. Their oath of office points out their duty; it was as follows:—

"You being chosen by the Court for the careful and comfortable carrying on of the affairs of this Town, do here swear by the name of the Great & Everliving God, that you will faithfully, and without respect of persons, execute all such laws and orders as are or shall be made & established by this Court, according to God, according to the trust committed to you during this year for which you are chosen & until new ones be chosen, if you remain among us, so help you God."

A Recorder and Constable were the only other public officers chosen; their oath points out their duty, and is *mutatis mutandis*, similar to the above. The Constable was always a reputable citizen and of great authority. He, by law, moderated the General Court. The Recorder, or Secretary, not only recorded all orders of the General Court, but the decisions of the Magistrates, and by a vote passed in 1656, the depositions of witnesses in trials at Law, for which he was allowed a stated price, as were also the magistrates and constable. Their trials were sometimes, with a Jury, but mostly without. From 1650 to 1664, about the time they came under Gov. Nicoll, there are about 50 or 60 cases at law on record. They were mostly for small debts & for defamation. By law, no one could recover more than £5 for defamation. In 165— Geo: Lee attorney to — prosecuted "Lieut. Lion Gardiner of the Isle of Wight in behalf of himself and the States of England for five hundred pounds Stg" before the Magistrates in E. Hampton. It appears from the very lengthy depositions "that a Southampton man had hired a Dutchman to bring a freight (cargo) to that place from Manhadoes, & that

the vessel was taken from the Dutchman & brought to the Isle of Wight to the Lieftenant who retook her for the Dutch owner" and was prosecuted by the original captors.

This affair was referred to the General Court at Hartford by the East Hampton Magistrates & both parties were bound to appear there. Lee obliged himself, if he did not prosecute the case there, it should be dropped. This was likely the result. This is the most important case on record where property was concerned.

"The three men were to meet the first second day of every month for the tryall of any cause according to an Order and to consider of those things that may concern the publick good of the place & whosoever of those Three men do not attend the day at 8 o'clock in the morning shall be liable to pay 5s."

"John Mulford, Robert Bone & Thos Baker chosen by this Court for the execution of those Orders, complied with their trust for this year. Ralph Dayton, Constable and Benjn Price, Recorder." Done at a General Court holden October 7, 1651.

The first General Court was in March 1650.

It was decreed October 1652 that "if any man be aggrieved with any thing that is done by the men that are in authoritie, that he shall have liberty to make his appeal to the next General Court, or when the freemen are assembled together for their publique occasions."

Their town Meetings were frequent and became burdensome on the people, but being their own law makers they made a multiplicity of laws for regulating the fences of fields pastured in common; for division of lands; making highways; building a mill or meeting house & this took up much of their time. The business of killing whales was regulated by law, and every one [was] obliged to take his turn to look out for them on the shore." Their houses were thatched and liable to take fire. Every man was obliged by law to provide himself with a ladder that should reach to the

top of his house, and a man was appointed to see that the chimneys were well plaistered and swept. Severe laws were made against selling any Indians, guns, swords, powder, lead, flints, or any more than two drams of strong water at one time." Many of the laws appear curious, but in general they are mild, and the penalties not very severe. There are only three or four cases of corporal punishment and none of capital.

In the year 1653 the Indians were somewhat troublesome. Powder & shot were sent for to the mouth of the Connecticut River, and a watch by night of two, and a ward by day of one man was ordered to be kept by the Inhabitants in town. "April 26, 1653, It is ordered that no Indians shall come to the town unless it be upon special occasion, & none come armed, because that the Dutch hath hired Indians against the English, & we not knowing Indians by face cannot distinguish freinds from enemies: &, because the Indians hath cast off their Sachem &c orders were given to shoot any Indian on third call or if they ran away." "Every man was obliged to go armed to the meeting house every Lords day, under penaltie of 12 pence," and four assistants were added to the three Townsmen. It does not appear by the Records that any battle was fought. Probably the Indians who were then numerous had not learned the use of Fire Arms. This was at the time Oliver Cromwell was at war with the Dutch Nation and an opinion prevailed through this country that the Dutch at Manhadoes supplied the Indians with arms, and urged them to destroy the English settlements. From the histories of those times, it is evident something was designed against the English by the Dutch & Indians. Oliver Cromwell about this time called on all the Colonies to assist in an expedition against the Dutch at Manhadoes, particularly New Haven and Connecticut, who were nighest the Dutch. Major Sedgewick of Massachusetts was to have the command of the men that were to be sent from each

Colony in a certain proportion. The following extract from the E. Hampton records probably refers to this:—

"June 29 1654. Having considered the letters that come from Connecticut wherein men are required to assist the power of England against the Dutch, we do think ourselves called to assist the said power."

The expedition did not take place, probably on account of Peace having been made soon after between the two Nations. Very little more is said about the Indians till the Great Indian war which threatened all this country in 1675, when the people were again on their guard. But it does not appear that any lives were lost.

This was the most formidable combination of Indians that ever happened. Gov: Andross sent an armed Sloop to Gardiner's Island to protect it against the Indians. The English & the Indians were probably both on their guard against a surprise, but by 1675 the East end of Long Island had so many English settled that there was no great danger. The Five Nations joined this confederacy.

"Oct. 3, 1654. It is ordered that there shall be a copie of the Connecticut combination drawn forth as [soon as] is convenient for us and all men shall sett to their hands."

This combination was signed Oct. 24, 1654, by about 40 and is now on Record by each on the Book. All excepting 3 or 4 write a plain legible hand for those days. These sign by making their mark.

"This Combination is to maintain & preserve the libertie and puritie of the Gospel of our Lord Jesus which we now profess as alsoe the Discipline of the Church which according to the said Gospell is now practised among U.S. As alsoe in our civill affaires to be guided & governed according to such laws and orders as shall be made according to God and which by vote of the Major Part shall be of force among U's &c &c."

This Combination is similar to the one entered into in 163— by the 3 Towns of Hart-

ford, Windsor & Wethersfield, and is a copy preamble of that as recorded in Hazards Coll: of State papers, p. —.

March 19, 1657. It is ordered and by a Major vote of the Inhabitants of this Towne agreed upon, that Thomas Baker & John Hand is to go into Keniticut for to bring us under their government according to the terms as Southampton is, and alsoe to carry Goodwife Garlick that she may be delivered up unto the authorities there for the triall of the cause of Witchcraft which she is suspected for." It was afterwards agreed upon by the town "that Mr. Gardiner shall be intrusted with the same power with Ths Baker and John Hand for coming under Government."

In the Records the word is "interested." It doubtless should be intrusted.

It is evident from the Record that soon after this they were under the jurisdiction of that Colony, or rather composed a part of it, altho' nothing is said of their men's returning. Probably the General Court at Hartford did not pay any attention to the latter part of the business on which Baker & Hand were sent. This poor woman had a trial in E. Hampton for Witchcraft, but nothing was done. It was referred to the Genl Court at Hartford.

At this day it appears surprising that not only those who settled in the American Wilderness should be so infatuated about Witches and Witchcraft but that King James I, Lord Justice Holt and some of the first characters in the English Nation should also be so carried away with notions of this kind. If the affair of witches has made more noises in this country than it has in some Countries of Europe, it is not owing to their having been more executed for that supposed crime here: for I have no doubt there has been, during the same time, as many executed in England only, as there have been in all New England & Virginia, for it was not confined to New England but prevailed also in other parts. In Europe, the execution of a few individuals would be effaced from the page of History by more im-

portant events that were continually taking place during the last century. But in this country it was a singular affair, & has been handed down by our own writers, and dwelt upon, with wonder, by European writers who have endeavoured to account for it from the enthusiastic ideas of the Inhabitants here, not considering that they acquired these ideas in Europe from books published by men of character & information. It is to be hoped this infatuation is done away among the Citizens of both sides of the Atlantic but it is not justice for one side to suppose that this infatuation prevailed only on the other. If King James, Lord Holt and others of information, who believed in witchcraft, are excusable, certainly those persecuted exiles who fled to a savage wilderness are equally clear of blame. Perhaps the law of Moses by which in many cases the first settlers were governed, was a Mean of urging them on in the belief of Witchcraft and its evils.

November 29, 1662. It is jointly & fully agreed that Mr. T. Baker, Mr Thos James, & Mr Lion Gardiner, Mr Robert Bond, Mr John Mulford, Thos Tomson and Thos Chatfield shall go to Southampton the next second day to compound a difference between Us & Capt. John Scott Esqr and Mr. John Odgen about Meantaquit, and do hereby engage to ratifie and confirm what our committee shall conclude upon: & also we do empower this our Committee to joyne with Southampton and Southold about a Patten grant."

To whom they proposed to apply for a Patent I don't know. New York was then in the hands of the Dutch. It was either to King Charles 2nd or to the Government of Connecticut.

"Novemb: 23 1663. A committee was appointed to Join Southampton & Southold Committees and if they see cause, to establish laws for settling government among us, And what our Committee or a Major part of them shall doe herein we engage ourselves to stand unto."

It was, doubtless in contemplation to have the three towns join in one government as other towns on this continent have done.

February 23, 1663. [o. s.] It was agreed that Muntauk shall pay Fifty pounds of the 150 that is to purchase the pattent right."

March 25. At a Town Meeting, after long debate, it was agreed to that the Purchase of Pattent right should be borne by all the Inhabitants according to the land every Man Possesses.

"April 26, 1664. At a Town Meeting the Town doth desire those men, that doe goe to Hartford, to debate together with the Neighbouring Plantation for the things of Mutual Government bewteen Hartford & Us for our future Settlement, but to conclude of nothing, as understanding that the Governour will come over, or a Committee from the General Court."

Dec. 21, 1664. The inhabitants of this Town—understanding that we are off from Connecticut, and the magistrates not willing to act further on that account, that we may not be without laws & Government, it is agreed the former laws shall stand in force till we have further order. from York. It is agreed that the Constable of the Town shall be secured by the Town for not gathering the Rates."

The "rates" referred to in this Resolve probably refers to the adjudication that was made at New York Dec. 1, 1664 by Gov. Nicoll & others on one part, and Gov. Winthrop and others, on the other, that Long Island should not be under the Government of Connecticut, but under His Highness the Duke of York &c. There appears from this time to have been some alteration in their Government. In April 1664 the Constable & Town Overseers were chosen; no mention is made of Townsmen.

Copy of James Farrett's Grant to Lion Gardiner.

Know all whom this present Writing may concern, that I, James Farrett of Long Island,

Gent. Deputy to the Right Hon'ble the Earll of Starling Secretary for the Kingdom of Scotland, doe by these presents, in the name and behalf of the said Earll of Starling and in my own name also, as his Deputy, as it doth or may concern myself, Give & Grant free leave and liberty to Lion Gardiner his heirs, executors and assigns to enjoy that Island which he hath now in possession called by the Indians Manchonack, by the English the Isle of Wight; I say to enjoy both now & for ever, which Island hath been purchased, before my coming, from the ancient Inhabitants, the Indians; Nevertheless though the said Lion Gardiner had his possession first from the Indians before my coming, yet is he now contented to hold the tenor & title of the possession of the aforesaid Island from the Earll of Starling or his successors whomsoever, who hath a Grant from the King of England, under the Great Seal of the aforesaid Kingdom. Bee it known, therefore, that I, the said James Farret doe give & hath given free liberty & power to the said Lion Gardiner, his Heirs, Exe's and Assigns and their Successors for ever to enjoy the possession of the aforesaid Island, to build & plant thereon as best liketh them, and to dispose thereof as they think fit, and also to make, execute & put in practice such laws for Church and Civil Government as are according to God, the Kings and the practise of the Country, without giving any account thereof to any whomsoever and the aforesaid Right & Title, both of land and Government to remayne with, and to them and their successors for ever, without any trouble or molestation from the said Earll or any of his successors, for now & forever. And as much as it hath pleased Our Royal King to give the Patten of Long Island to the aforesaid Earle of Starling in consideration whereof it is agreed upon that the trade with the Indians shall remayne with the said Earle and his successors, to dispose upon from time to time and at all times as best liketh him. Notwithstanding [allowing] the said Lion Gardiner to trade with the Indyans for Come or any Kinde of victuals for the use of the Plantation and no farther: and if the said Lion Gardiner shall trade in Wampum from the Indyans hee shall pay for every fadome twenty shillings and also the said Lion Gardiner and his successors shall pay to the said Earle or his deputies a yearly acknowledgment being the sum of Five Pounds, (being

lawfully demanded) of lawfull money of Eng-land, or such commodities as at that time shall pass for money in the country; and the first payment to begin on the last of Oct. 1643, the three former years being advanced for the use of the said James Farrett. In witness where-of the party has put his hands and seal the tenth day of March 1639. [o. s.]

(Signed) JAMES FARRETT (seal.)

Sealed and delivered in the presence of
 ffulk Davis
 Benjn Price.

Much of East Hampton still remains as nature has made it, wild, desolate and barren—a plaything for the storms and for the wintry waves which seem to gather strength as they roll across the Atlantic and break with wild impetuosity on its shore, lifting up miles of sand bar as if they were driftwood, and even battering down the rocky bulwark that for ages has carried on a ceaseless warfare with the elements but has gradually got the worst of it. The cliff at the extreme point is slowly but surely being ground to powder by the remorseless action of the ocean, and while many of the boulders and pebbles and gravel we see all over the township are the results of glacial movement, still much of the debris is part of the volcanic rocks. The sea, in fact, is steadily encroaching upon the land and winning back to its depths that which had been raised high above its level in some primeval struggle. But the sea at one time at least returned a little of what it had won. There is no doubt that the district we call Montauk was once an island, perhaps two—one from Napeague Harbor to Fort Pond, and one from there to the lighthouse on that historic point

“Against whose breast the everlasting surge
 Long traveling on and ominous of wrath
 Forever beats.”

From Amagansett to Montauk Point is a region of desolation and gloom. Sand everywhere, sand in all the shapes which nature can twist it, dunes and hills and wide rolling expanse. It is said that this territory was once fairly well wooded in spots, but we find no

signs of the forests now and the spots appear to have vanished. Sand, sand everywhere, and long stretches of solitude, the Montauk peninsula looks as if it were intended by nature to be left alone by man. Yet the railroad runs through it now almost to the point, and it does not need much of prophetic power to say that within a quarter of a century this will rank among the favorite resorts along the Atlantic coast, and that it will be one gorgeous parterre—for three months in each year at least. The western division of the township presents different characteristics. Facing Gardiner's Bay, its coast line is rocky, but except on the coast there is no elevation of the land, and it descends by an easy gradient to the Atlantic which fringes it with a sandy bulwark. In the west and north are quite extensive ranges of forests. The farming lands, which extend to where the Montauk peninsula begins, are fairly productive, and though the holdings, as a general rule, are small, they support a thrifty and settled population.

The first section of the township to be actually settled by white men was Gardiner's Island, which, in 1639, as we have seen, became the property and the home of Lion Gardiner. The settlement of East Hampton, in 1648, seems to have been simply a part of the extension movement of Connecticut, and from the first the colony recognized itself as an integral part of that commonwealth. The general opinion of its early settlement is that expressed by Professor Johnston in his monograph on “Connecticut,” that it was a party of pioneers from Lynn for whom the land composing the township was originally secured, and in French's Gazetteer, a most valuable work which seems now forgotten, we read: “Settlement in the western part of the town was commenced in 1648 by a company of English families from Lynn, Mass. The trustees named in the patent were John Mulford, Thomas Baker, Thomas Chatfield, Jeremiah Concklyn, Stephen Hedges, Thomas Osborne, sen., and John Osborne.” But Mr. Pelletreau

seems to incline to the opinion that it was really an overflow colony from Southampton. He says: "The first settlers of this town, the men for whom Governors Eaton and Hopkins purchased the territory, were John Hand, Thomas Talmadge, Daniel Howe, Thomas Thompson, John Stratton, Robert Bond, Robert Rose, Joshua Barnes and John Mulford. Of the above all were originally settlers in Southampton," and their names appear in the

The truth of the early settlement of East Hampton appears to be that its foundation was a part of the colonizing policy of Connecticut, based, as Professor Johnston remarks, upon "a provident determination on the part of the people to give their commonwealth respectable limits and to turn to account every favoring circumstance in that direction." The reports from Southampton, probably made by its representatives in 1644, showed that there was

CLINTON ACADEMY, EAST HAMPTON.

early records of that township. With the exception of Daniel How, not one had any previous residential connection with Lynn. The first name given to the settlement was Maidstone, and this has given rise to a tradition that many of the early settlers were from that Kentish village, but this tradition has not been verified, and in reality seems to have no foundation. Probably it was the name of a trading ship. At all events it was never formally adopted, although long used in local documents.

room for another settlement on its eastern side, and a beginning was made to secure the territory and hold it for future development. Many of the New England colonies were founded with the view of giving vent to religious ideas or to afford an escape from religious views, or to put in practice ideas regarding church and state which could best be carried to a practical conclusion by the working out of a distinct community, but this was not the case, so far as we can judge, with either of the Hamptons.

It was simply an early development of the principle of territorial acquisition, which has been a prime factor in American history from the earliest time until the present day.

The utmost care was taken in securing the land from the red men to prevent any trouble as to title, and so the first step of the representatives of the Connecticut Governors was to secure the joint assent of the Indian chiefs interested to the deed of transfer, which deed reads as follows:

This present Writing testifieth an agreement between the Worshipful Theophilus Eaton, Esquire, Governor of the Colony of New Haven, And the Worshipful Edward Hopkins, Esquire, Governor of the Colony Connecticut, and their associates, on the one part, And Pogatacut, Sachem of Manhanset, Wyandanch, Sachem of Meantauket, Momowoton, Sachem of Corchawk, Nowedonah, Sachem of Shineeckock, and their assyoyates, the other Part. The said Sachems having sould unto the foresayed Mr. Eaton and Mr. Hopkins with their assyoyates all the land lying from the bounds of the Inhabitants of Southampton unto the East side of Napeak, next unto Meantacut highland, with the whole breadth from sea to sea, not intrenching upon any in length or breadth which the Inhabitants of Southampton have and do possess, as they by Lawfull right shall make appear; for and in Consideration of twentie coats, twenty-four looking glasses, twenty-four hoes, twenty-four hatchets, twenty-four knives, one hundred muxes, already received by us the forenamed Sachems, for ourselves and assoyates, and in consideration thereof wee doe give up unto the said Purchasers all our right and Interest in the said land to them and their heyres for ever.

Allsoe wee doe bind ourselves to secure their right from any claims of any others, whether Indians or other nations whatsoever, that doe or may hereafter challenge Interest therein. Allsoe wee the said Sachems have Covenanted to have Liberty to fish in any or all the creeks and ponds, and to hunt up and downe in the woods without Molestation, they giving the English Inhabitants noe just offence or Injurie to their goods or cattle. Lykewise they are to have the fyns and tayles of all such whales as shall be cast up, to their proper right, and desire they may be friendly dealt

with in ye other part. Allsoe they reserve liberty to fish in all convenient places for shells to make wampum. Allsoe if the Indyans hunting of any deer they should chase them into ye water and the English should kill them, the English shall have the body and the Sachem the skin. And in Testimony of our well performance hereof we have set to our hands the Day and yeare above written.

The mark of X POGGATACUT, Manhanset Sachem.

The mark of X WYANDANCH, Meantacut Sachem.

The mark of X MOMOWETA, Corchake Sachem.

The mark of X NOWEDONAH, Shineeckock Sachem.

Witnesses to this: Richard Woodhull, Tho. Stanton, Robert Bond, Job Sayre, Chec-tanoe X his mark, their Interpreter.

Whereas, by direction from Theophilus Eaton, Esq., and Mr. Edward Hopkins, a purchase was made by Thomas Stanton and others of a part of the Eastern part of Long Island, of the Indian Sachems, the true proprietors thereof, in the name of Theophilus Eaton, Esq., aforesaid and myself with our associates, as by the said agreement dated the 20th of April 1648 may more fully appear, which said purchase was paid by me Edward Hopkins, and amounted to the sum of thirty pounds four shillings eight pence, as may appear by a note of particulars under the hand of Thomas Stanton, to whom the said sum was paid, now delivered to Robert Bond of East Hampton; this writing witnesseth that I have received the fore-mentioned sum of thirty pounds four shillings eight pence, of the Inhabitants of East Hampton, and have delivered unto them the writings of the said purchase, and all the interest that thereby was purchased. In witness whereof I have hereunto subscribed, the 16th of April 1651. I say received £30 4s 8d per me,
EDWARD HOPKINS.

This purchase only included the lands, roughly speaking, westward from Amagansett. From there to the Point was reserved by the Indians, and probably when the wide stretch of sand was seen by the first settlers it excited no desire in their hearts. But it was not for long. In 1660 a deed for the whole of the Montauk Peninsula was given by the Indians, somewhat provisional in its nature and

evidently inspired by fear that their old enemies, the Narragansetts, would come over and claim the territory. In 1661 "Sunk Squaw, widow of Wyandanch," and her son, Wiankombone, and others, transferred to Thomas Baker, Robert Bond, Thomas James, Lion Gardiner, John Mulford, John Hand, Benjamin Price, "together with their associates, the inhabitants of East Hampton," the lands on the peninsula. In 1670 another slice—between Fort Point and Great Pond—was given up, and in 1687 a final deed transferred the remainder of the peninsula—and thereafter the red man's connection with the lands of the royal race was simply one of sufferance. Thus the power of expansion ceased, but it was not until the middle of the nineteenth century that East Hampton really began to extend much beyond the clearances effected during the first fifty years after her settlement as a township.

As usual, the town meeting managed everything excepting grave cases—and these were few, the queer case of Goody "Garlick" being the gravest as well as the most noted of any. The "court of three men" tried all other cases, and the edicts of the courts, of the town meeting and—after a while—of the commonwealth across the Sound, were carried into effect by the constable. That official was quite a personage in all the townships. "In the little town republics," writes Prof. Johnson, "the ancient and honorable office of constable was the connecting link between the commonwealth and town. The constable published the commonwealth laws of his town, kept the 'publike peace' of the town and commonwealth, levied the town's share of the commonwealth taxation, and went 'from howse to howse' to notify the freemen of meetings of the General Court, and of the time and place of elections of deputies thereto. 'The parish,' says [John] Selden, 'makes the constable, and when the constable is made he governs the parish.'" But in the case of East Hampton the constable was not left entirely to his own devices. He was the actual representative and embodiment of the

law, its executive, but he does not seem to have had the power to "govern the parish at any time, even between the dates of the town meeting. The local court was always in session, or ready to be called in session, and it, under the town meeting, was the real "ruler of the parish," rather than the constable, whose doings and dictums could be overruled by it on short notice, should occasion arise. But it is fair to say that the records of East Hampton do not show that any such "clash of authority" ever developed in its early history.

On entering upon his office the constable took an oath to carry on his work "without respect of persons * * * according to God, according to the trust committed to you." In 1650 we read "there were chosen 4 men with the constable for ye orderinge of ye affairs of ye town, and it is ordered that any two of them shall have power to grant a warrant for ye bringing of any delinquent before them in any case; also ye said 5 men shall have power to try any case under ye sum of 40 shillings; but if any case or action be to be tryed that is above, then it is to be tryed by a jury of seven men." Thus the constable had not full power to make arrests, the warrant had to be signed by two, but it would seem that he could even sit in judgment in the "cases" which by his office he was the means of bringing to the bar of justice. But this court was not omnipotent, for we find an entry in 1652 that "if any man be aggrieved by anything that is done by the men in authority he shall have libertie to make his appeal to the next General Court, or when the men are assembled together on public occasions." But, although its powers were thus subject to review, the dignity of the court was carefully upheld. In 1655 one William Simons was fined 5s., "which is to be disposed of to make a paire of stocks," "for his provoking speeches to the three men in authoritie being a disturbance to them in their proceedings." Then the men in authoritie had ample means of making their court a "terror to evil doers." As early as 1650 a house was set aside as a

lock-up, and, by way of emphasis, it was not long thereafter until the village stocks stood outside as a visible exponent of the terrors of the law and the righteousness and certainty of judgment.

From the beginning of the settlement religious services were maintained, at first in the house of Thomas Baker, which seems to have been the village inn, and for which accommodation he received 18d. each week. In 1652 a meeting house was erected, on the east side of the burying ground. It was a small structure, 36 feet long and 20 feet wide, and it was enlarged in 1673 and again in 1698. In 1717 it was abandoned and a second church erected on another site in 1717. This edifice continued in use until 1864, when the existing structure was erected.

The first pastor was the Rev. Thomas James. He was the son of a minister in Lincolnshire, England, and came to America in 1632, settling for a time at Charleston and at New Haven. It is not clear whether he was one of the very earliest settlers at East Hampton, but his coming was not long delayed, for on April 22, 1651, an entry in the town records shows that he was then owner of a town lot. The lot, according to Mr. Pelletreau's map, was opposite the site assigned even then evidently for the church, and was in his possession since 1650, which was probably the date of his arrival. It seems likely, too, that he received a gift of the lot, so that he may be said to have virtually ministered to the people from the beginning. So he continued until the end of his long career, June 16, 1696, when he was laid to rest in the little churchyard, and at his particular request, with his face to the east, as "he wished to arise in the morning of the Resurrection with his face to the people." He seems to have been a man of singular piety, and possessed of many characteristics which those associated with him deemed singularities, but he was a zealous, active and thorough-going minister, eminently fitted to be the spiritual leader and guide and comforter of the

people among whom his lot was cast, and he aspired apparently to be nothing more. Whatever the nature of his eccentricities they were harmless, and they did not abate the respect his people evidently had for him, or weakened his reputation as a shrewd, sound business man. Of the respect of the people there is no doubt, for they voted him many privileges, such as giving his corn precedence at the mill, presenting him with another town lot and half of the dead whales that drifted on shore. He was keenly interested in the religious welfare of the Montauk Indians; studied their language, compiled a catechism for their use in their own tongue, and was the first paid instructor of the Long Island Indians, receiving an allowance for that service for several years from the Society for Propagating the Gospel in New England. The good minister seems to have gathered considerable property and to have passed through life quietly and peaceably, except in one memorable crisis which will be told later. He disposed of all his real estate in 1695 to Mr. John Gardiner, "Lord of the Isle of Wight," for £500, one-half in cash and one-half to be paid to his assigns within 30 days after his death, but during his lifetime Mr. Janies was not to be disturbed in the actual possession of the property thus disposed of. He was then feeling the approach of the end, and, apparently, putting his house in order. It was not until June 5, 1696, however, eleven days before his death, that he completed his arrangements by signing his will, a document which Mr. Pelletreau prints as follows:

The last will and Testament of me Thomas James, Preacher of ye Gospel & minister of East Hampton, in ye County of Suffolk, upon ye Isle of Nassau alias Long Island, within ye Province of New York, as followeth: * * * To my eldest daughter, Sarah, wife of Peregrine Stanborough (having already given her more than any of the rest of my children), * * * four score pounds, in cash current of this Province, also an equal part with my other children of my personal goods, * * * also ye small part I have in ye ship called ye "Speed-

well" (being half a quarter), also ye feather bed I lye upon & ye green rug with it. To my second daughter, Mary, wife of John Stratton, an hundred pounds in cash. * * * To my daughter Hannah, wife of James Diamant, one hundred pounds. I, having very lately delivered to my son-in-law Thomas Harris in behalf of his wife, my 4th daughter, Ruth, one hundred pounds upon some conditions, doe confirm it absolutely to her; I also give her my feather bed in ye large chamber, with ye furniture to it. * * * I give to my grandchildren Mary Stanborough and Mary Stratton £50 a piece, and a feather bed and two pairs of sheets, * * * also to each of them a cow and six sheep, and an iron pot of ye bigger sort, * * * two pewter platters, a silver spoon. * * * To my daughter Anne Howell, now wife of Mr. Abraham Howell of Southampton, £20, provided she bring in noe after reckoning on account of her first husband, my son Nathaniel, deceased. * * * To my eldest grandson, John Stanborough, £10. To my two daughters-in-law [step daughters?] Mary, wife of Mr. John Mulford, and Elisebeth, wife of Joseph Osborn, £10. * * * I appoint Peregrine Stanborough, John Stratton and James Diamant executors. As for what debts is owing to me from this Towne of East Hampton, either former arrears or for last year, amounting to above four score pounds, I give to all my grandchildren excepting those mentioned in this will. Only this—that if ye Towne freely and readily will take ye best and speediest way they can for ye discharge of ye debts afore said, then I give to ye town £20 towards ye maintaining of a good school-master in this town; otherwise not. * * * I give to my son-in-law John Stratton what time I have in my man Charles Jones, my executors to make good his indenture and allow him 40s. in pay more. * * * To my son-in-law James Diamant my share in ye horse mill. * * * Dated June 5 1696. THOMAS JAMES.

Mr. James was succeeded by the Rev. Nathaniel Huntting, a graduate of Harvard, who was the progenitor of the numerous families of that name in Suffolk county. He ministered for half a century—until his death Sept. 21, 1753. His successor, the Rev. Samuel Buell, is locally celebrated as the founder of Clinton Academy. Under him the church formally

united with the Suffolk Presbytery and he continued in the pastorate for nearly 52 years—dying in harness July 19, 1798. "The day he was 80 years old," writes Dr. Prime, "he rode 14 miles, preached, and returned home at evening." Although a zealous Christian, an eloquent preacher and a man of considerable education, Dr. Prime tells us that Dr. Buell had his weaknesses and as one of them quotes the fact that when in his seventieth year he married (for the third time) a girl of seventeen. The Rev. Lyman Beecher, father of the famous Brooklyn preacher, succeeded Dr. Buell. He labored among them until 1810, when he removed to Litchfield, Conn., making the change simply and frankly because his stipend, eked out as it was by his wife's earnings as a teacher, were not sufficient to supply his wants and keep him out of debt. With his dismissal came the first vacancy in the pastorate of the church, except by the death of the pastor. Four pastors covering 160 years is a rare record. Although it is commonly spoken of as a Christian community, and such it undoubtedly was, the need of special revival occasions, those "seasons of refreshment" as they were called, which form such a prominent feature in the early religious history of East Hampton, would seem to have been unnecessary, yet all agree as to their importance and to the amount of good they accomplished.

East Hampton has long been noted for its splendid educational facilities. The fame of Clinton Academy had, of course, much to do with this, but even when few in numbers and engaged in their first struggle with the soil, the pioneers were mindful of the needs of the children and a school was established as soon as the church. Mr. Pelletreau writes on this point:

"A school was established within a year after the settlement, and the first schoolmaster was Charles Barnes, a son of William Barnes, one of the original founders. He received at first £30 a year, and to insure a regular attendance a small part only of the amount was

charged upon the scholars and the rest raised by tax. Jonas Holdsworth succeeded him in 1673, and after him the rod of correction was wielded by Peter Benson, whose pay was £50 a year. In 1682 the school consisted of 29 scholars. About all required of a teacher in those days was that he should be a good penman, and have a fair knowledge of arithmetic. If 'Solomon's rule' was his guide and practice it was considered an additional merit. Grammar, geography, and other branches now thought essential were not taught at all. It was not considered necessary for girls to know much except reading, and hence we find in old deeds a large proportion of women signing their names with a 'mark;' and to most of the boy pupils the 'rule of three' was the boundary of mathematical knowledge. Still the general desire for learning was much greater in this than in the neighboring town, a fact which we can hardly account for unless by supposing that the early ministers, who were all-powerful in their social influence, must have taken a deep interest in the cause. It was the zealous efforts of Rev. Samuel Buell that builded Clinton Academy.

"The salary of the schoolmaster and minister in early times was partly paid in productions of sea and land, and to fix a uniform price of these things it was ordered in 1656, by 'the three men,' that for the payment of town rates wheat should be 4s. 6d. a bushel, and Indian corn 3s. 6d. It was ordered at a subsequent meeting that dry merchantable hides should be 6d. a pound, and whalebone three feet long 8d. a pound. At the time Jonas Holdsworth was schoolmaster it was agreed that one-half his salary should 'bee payd in beef or oyle, and the other half in oyle, pork, hides, or tallow, or whalebone.' Holdsworth had previous to this been teacher in Southampton and Huntington."

Much against their wishes the people of East Hampton had to acquiesce in the change introduced by the advent of Gov. Nicolls in 1664, and receive a patent from his hands. Gov. Dongan, who assumed control of things

after Gov. Andros had wiped out the effects of the Dutch interregnum under Colve, forced another charter on the township in 1686. The movement which culminated in the latter charter brought not only East Hampton but its venerable minister into open conflict with Dongan and his Council, and led to the preacher's arrest. The official papers tell the story, but the underlying cause of the trouble was the disinclination to be mulcted on the part of the people to the extent of the new charter, with its loopholes for litigation and its renewed surrender to a Provincial government with which they had no sympathy. The papers follow:

COMPLAINT AGAINST THE TOWN OF EASTHAMPTON.

Att a Council held att Ffort James in New York July the 29th, 1686

Present. The Governor &c.

Robert Cady, John Parsons, Jacob Dayton, John fields, Samuell Sherry, Oliver Norris William Hamilton, Daniell Kieff, Simon Hill- yer, John Richardson making their complaints that the town of Easthampton will lay them out no land, as they were ordered in Council to doe; & it appearing that the said Inhabitants have for more yn the space of four yeares payed all duties in the aforesaid towne, and are become Associates in the same, Ordered that Capt Josiah Hobart high Sherriffe of the County of Suffolk see that a Surveyor lay out for each person of the aforementioned Inhabitants thirty acres of Arable land within the bounds of Easthampton, that is not yet fenced or entered and appropriated by any person, they paying the charges wch the sd Sherriffe & Surveyor shall be at in the performance of the same; & giving security not to dispose or sell any of the said land vntill it shall be improved by them.

PETITION OF THE REV. MR. JAMES.

To the Right Honorable THOMAS DONGAN
Governour and Captaine Generall of all his
Majesties Territories belonging to the
Province of New Yorke, The Humble Peti-
tion of mee Thomas James Minister of
Easthampton as followeth.

Whereas yor Excellencies Supplicant was
Informed that you were offended with me, in
Respect of some expressions of mine in a Ser-
mon preached Octob. 17.—86. I thought my
selfe bound in duty, & from the High Re-
spects I haue of your Excellencies Dignity &
vpon good Advice, voluntarily to make my
Appearance before yor Excellency in New
Yorke & haue waited yor pleasure to this Day
in order to yor Excellencies satisfaction, &
haue submitted my selfe to yor Excellencies
Censure, and knowing yor Excellencies Clem-
ency am emboldened humbly to Craue yor
Pardon, of what through any Error in my Ap-
prehension I haue giuen occasion of offence
to yor Excellency my Intentions being Right
in whatever proceeded from me att that tyme;
and that yor Excellency be graciously pleased
to remitt the Penalty imposed, & what fees
may be exacted vpon me before the tyme of
my being sumoned to appeare before you & ye
Honble Councill, considering the great charge
I haue beene att for about 3 weeks time since
my coming from home this being the first
tyme (for almost fourty years of my being a
minister of the Gospel) that I haue beene
called to account by any Authority I haue
liued vnder, or giuen any cause for the same,
nor needed at this tyme had there beene yt
faourable construction of my words as they
deserued. So hoping as God hath got you as
a father over this Comonwealth, so you will
exercise a fatherly compassion towards yor
humble Petitioner, who hath & shall continue
yor Excellencies humble Orator att the Throne
of Grace, & stand euer obliged to yor Excel-
lency in all hearty affection, & duetifull *

* * [Here a word or two are illegible in the
original copy.]

As might be supposed of such citizens,
discontented and expressive of their discontent

even when the royal regime was so firmly es-
tablished that even the possibility of change
was undreamed of, from the first, although
isolated from the centre of events, they eagerly
watched every movement in the impending
struggle, and when the crisis came the people
were unanimous in favor of a change, and even
Dr. Buell at one time threw off his gown and
shouldered a musket to do battle for the lib-
erties of his country. The feeling in East
Hampton is clearly shown by the fact that
when the Provincial Congress, with the view
of fully estimating the sentiments of the peo-
ple, sent out what were called articles of as-
sociation to the various communities, every
adult male signed the copy received in East
Hampton, the only instance of such unanimity
on the island.

The document is well worthy of a place in
the annals of the township, not only for its
value as indicating the patriotic sentiment of
the people, but as furnishing a list, practically,
of its active male inhabitants at the time. It
is, in effect, as follows:

Persuaded that the salvation of the rights
and liberties of America depends, under God,
on the firm union of its inhabitants in a vig-
orous prosecution of the measures necessary
for its safety, and convinced of the necessity
of preventing anarchy and confusion, which
attend the dissolution of the powers of Gov-
ernment, we the freemen, freeholders and in-
habitants of East Hampton * * * do as-
sociate, under all the ties of religion, honour,
and love to our country, to adopt and en-
deavour to carry into execution whatever
measures may be recommended by the Con-
tinental Congress or resolved upon by our
Provincial Convention, for the purpose of pre-
serving our constitution and opposing the ex-
ecution of the several arbitrary and oppressive
acts of the British Parliament, until a recon-
ciliation between Great Britain and America
on constitutional principles (which we most
ardently desire) can be obtained; and that we
will in all things follow the advice of our
general committee respecting the purposes
aforesaid, the preservation of peace and good
order and the safety of individuals and private
property.

John Chatfield, Abraham Gardiner, Burnet Miller, David Mulford, Thomas Wickham, Stephen Hedges, John Gardiner, Samuel Buel, John Hudson, Nathaniel Huntting, Eleazar Miller, Jeremiah Dayton, Thomas Dibble, Noah Barnes, Lemuel Mulford, Jeremiah Gardiner, Aaron Isaacs, Daniel Conkling, Elisha Davis, John Davis, Jacob Wickham, William Conkling, Nathan Conkling, John F. Chatelain, Thomas Hedges, John Parsons 3d, William Huntting, John Mulford, Jeremiah Bennet, Samuel Hunt, Selah Pike, Elias Conkling, Abraham Mulford, Jeremiah Conkling, John How, Samuel Parsons, Benjamin Stratton, David Osborne, Elisha Mulford, Daniel Hand, David Mulford, Matthew Mulford, John Miller, John Dayton, Joseph Osborne jr., Ebenezer Conkling, Henry Chatfield, John Miller jr., Abraham Barnes, Patrick Goold, David Talmadge, Seth Barnes, Jasen Miller, Simon Dibble, William Mulford, Jeremiah Sherrill, Gurdon Miller, Aaron Isaacs jr., Elisha Jones, Lewis Chatfield, Enos Talmadge, Thomas Jones, Hunting Miller, Samuel Stratton, Abraham Sherill, Recompense Sherill, John Stratton, Stephen Hand, John Dayton, Daniel Hedges, Jonathan Barnby, William Conkling jr., David Dayton, David Miller, Henry Hopping, Josiah Osborne, Joseph Hopping, John Strong, Nathaniel Talmadge, Jeremiah Miller jr., Abraham Dimon, Isaac Dimon, Cornelius Osborne, William Hedges, Elisha Talmadge, George Gladden, Abraham Hand, Stephen Stratton, Thomas Osborne, Jeremiah Osborne jr., Jonathan Mulford, Isaac M. Hunting, James Hand, Jeremiah Talmadge, Jeremiah Miller, George Strong, Lewis Osborne, Joseph Osborne, William Hedges jr., Recompense Sherill, David Edwards, Ezekiel Mulford, Cornelius Payne, David Fithian, Samuel Conkling, Thomas Baker, Isaac Van Scoy, Isaac Van Scoy jr., Nathaniel Hand, Mathew Barnes, Philetus Osborne, Merry Parsons, William Parsons, Henry Downing, John Parsons, Jonathan Osborne, Joseph Osborne, Jeremiah Conkling, Samuel Conkling, John Mulford, Jonathan Tuthill, Jesse Dayton, Jacob Dayton, Jeremiah Parsons, Mulford Conkling, Mathew Stratton, Joseph Miller, Abraham Edwards, Samuel Parsons, Samuel Sherill jr., Eleazer Hedges, Abraham Mulford jr., David Loper, Nathaniel Doming, Isaac Payne, Benjamin Parsons, Jacob Conkling, Jacob Conkling jr., Christ. Dibble, Samuel Gardiner, David Leek, Abra-

ham Leek, Samuel Dayton, Uriah Miller, Nathan Miller, Abraham Schellenger, Jeremiah Conkling, Nathaniel Baker, Jeremiah Conkling, Zebulon Conkling, Isaac Conkling, Jonathan Edwards, Abraham Loper, Philip Hedges, George Miller, Thomas Edwards jr., Elias Mulford, Edward Conkling, Jedediah Conkling, Joseph Hicks, Zachariah Hicks, Jeremiah Dayton, Daniel Baker, Isaac Schellenger, Abraham Baker, Nathan Mulford, Jacob Hedges, Jeremiah Barnes, John Gardiner jr., Aaron Fithian, David Talmadge jr., Jeremiah Sherrill, Nathan Conkling 3d, Elanthen Parsons, Cornelius Basset, David Miller, Peleg Miller, Elisha Miller, Daniel King, Daniel Edwards, Nathan Miller, Stephen Burnett, James Field, Samuel Mulford, Benjamin Conkling, Gamaliel Bennett, Seth Parsons, Richard King, Mulford Conkling, William Basset, Ezekiel Miller, John Huntting, Abraham Quaw, David Loper, John King, Ichabod Raynor, Smith Osborne, Abraham Miller, Jonathan Miller, Samuel Mulford, Ezekiel Jones, Ezekiel Jones jr., Nathan Conkling, Daniel Loper, Jeremiah Loper, David Edwards jr., Edward Bennett, Ludlam Parsons, John Parsons, Josiah Mulford, Elisha Mulford jr., Stephen Russell, Jeremiah Hedges, Thomas Talmadge, Jeremiah Osborne, John Hedges, Samuel Hutchinson, Jacob Miller, Henry Miller, Ezekiel Hand, Abraham Conkling, Elisha Conkling, Elisha Osborne, Matthew Osborne, Jedediah Osborne, Jacob Osborne, Benjamin Hopping, Jonathan Squier, Jeremiah Hand, John Talmadge, Abraham Osborne, Henry Hopping, Elias Hand, Henry Dayton, Zebedee Osborne, John Parsons, John Stratton, Jacob Sherrill, Samuel Baker, Micah Hart, Benjamin Leek, Abraham Hedges, Jacob Osborne, Jonathan Schellenger, Thomas Edwards, David Baker, Sineus Conkling, James Loper, Stephen Cooper jr., Benjamin Eyres, Benjamin Hedges, John Parsons 4th, Nathaniel Doming, Edward Wick, Jeremiah Terry, William Barnes, Ananias Miller, Thomas Filer, John Hoos.

These may certify that every male in the town of East Hampton have signed the above association that are capable of bearing arms. By order of the committee.

JOHN CHATFIELD, Chairman.

The war itself added little to the sum of local history. The vessels of the British fleet were seen from the heights of Montauk at

various times, and the Continental authorities duly apprised, and to the various military companies East Hampton contributed fully its share. During the occupation of the island British troops were stationed at Sag Harbor and repeatedly overrun East Hampton, leaving behind them the usual tales of spoliation, disorder and crime, even going as far as Montauk Point in search of deserters from their own forces or of "contumacious rebels." Many of the leading people sacrificed their property and went to Connecticut, including Colonel David Mulford, Nathaniel Gardiner, Abraham Hand, Jesse Dayton, John Mulford, Aaron Isaacs, Jr., Elisha Osborn, Jeremiah Miller and Burnet Miller. Those who remained were forced, in 1778, to take the oath of allegiance under the direct supervision of Governor Tryon, who declared himself satisfied with the thoroughness of his work, in East Hampton as well as elsewhere throughout the county.

From the termination of the war until a comparatively recent date the story of East Hampton might be summarized in the words of Channing's "Needy Knife Grinder,"—

"Story? Lord bless you, sir,
I have none to tell you."

A change now and again of a pastor, the removal of an old family, the stranding of a whale, or the arrival or departure of a whaling ship might be regarded as the sum total outside of the doings of the farm or the gossip of the village. In 1854, through the instrumentality of John Wallace, a Scotchman, who, somehow, had wandered to East Hampton, a Church of England congregation was founded in that village, out of which has developed St. Luke's church, consecrated in 1859 by the late Bishop Potter. In 1860 a new Presbyterian church was constituted at Amagansett, of which the Rev. J. B. Finch has been pastor since 1879. Long pastorates seem to have again become the rule in East Hampton, for we find the old church of the village—the church of James and Buell and Beecher, presided over by the Rev. John D. Stokes, who

was installed into the pastorate in 1867. In the Civil War East Hampton bore its full share in the patriotic work of upholding the Government at Washington, and contracted in its efforts a war debt of nearly \$35,000.

The old North District school house at the Hook, about seventy-five years old, was sold in 1895 to the congregation of the M. E. church and has been raised slightly, remodeled and used for church services. It is sixty feet long. The first school house was built on the site 150 years ago. The original building was erected upon town land and the property was deeded by the town to the school trustees in 1875. About the same time the old-fashioned desks arranged around the four sides of the room, at which the pupils sat in rows facing the wall, were changed for those of a newer pattern, at which the pupils were seated by twos. The belfry and school house bell were added fifteen years ago. Before that the children were summoned by a hand bell. Over half of the inhabitants of East Hampton received their education at the old Hook school. Thirty-five years ago, before the session house was built, the regular prayer meetings of the Presbyterian church were held in the old school house, as well as in the old town house, where Dr. DeWitt C. Talmage preached his first sermon.

In 1893 the railroad system was extended through the township to Fort Pond Bay, and with that event may be said to commence its rise as a summer resort, or township of summer resorts, for that seems to be its inevitable destiny, all hope of making an international port at Fort Pond having been seemingly abandoned at least until the new schemes introduced by the Long Island Railroad looking to close connection with the entire railroad system of the country approach fruition. The published reports of these schemes seem to indicate a trans-Atlantic port at Fort Pond or in its vicinity, but on that particular detail not much has been made public.

Yet in the way of commercial greatness East Hampton still has hopes, hopes inherited

apparently from the old whaleboat days. It has many splendid harbors, which only need the application of a slight expense to make them serviceable for even large fleets. As an instance of this, as an evidence of the hope still entertained, the following record of a speech in Congress by the Hon. Townsend Scudder, the late representative of Suffolk and Nassau in the National legislature, will be interesting. It is taken from "The Congress-

Montauk Point lighthouse and five miles east of Sag Harbor. East Hampton is the nearest village to the harbor, and is distant about two miles from its head. There is situated the nearest railroad station.

The harbor proper is about two miles long and one mile wide; of a general triangular shape, with the base toward Gardiner's Bay, from which the harbor is separated by a sand beach, with an entrance channel at the east of the same. According to chart, the harbor has a maximum depth of thirteen feet, with a

MONTAUK POINT.

sional Record." In the debate on the River and Harbor bill, January 16, 1901, Mr. Scudder moved an amendment to the effect that a channel should be constructed through the entrance into Three-mile Harbor not less than ten feet in depth at mean low water and 200 feet in width. In supporting this amendment, Mr. Scudder said:

Three-mile Harbor is a land-locked bay on the north shore of the south fork of Long Island, situated some eighteen miles west of

depth of six feet or more over an area of three-quarters of a square mile. At the present time the entrance channel is narrow and quite crooked. The depth of the channel inside the beach is about six feet, except where reduced by a couple of sand spits.

This harbor once accommodated quite a coasting trade, but for many years its entrance has been gradually filling with sand. The washing away in recent years of the north point of Gardiner's Island has allowed the ocean swell, as well as that from the east entrance of Long Island Sound across Gardiner's

Bay, to wash up sand and choke up the mouth of the harbor, diminishing its usefulness.

The purpose of my amendment is to authorize a survey with a view to constructing a channel through the inlet from Gardiner's Bay into the harbor, not less than ten feet in depth at mean low water and 200 feet in width.

It is estimated that the present freightage interests of the locality immediately surrounding this harbor aggregate 10,000 tons a year. There are large tracts of hard-wood lands and considerable timber which would be convenient for shipping from this harbor if the same were accessible. Its shores are capable of development.

By the improvement suggested by this amendment a large area of country now of comparatively little value would be opened up. The population which would derive benefits from the improvements is not less than 2,000 souls. The residents of the towns of East Hampton and Amagansett are unanimous, so far as I have been able to learn, in favor of this improvement. The shores of this harbor are generally highlands, bespeaking a healthful locality.

I have no desire to conceal any facts in connection with this proposed project. Were I so inclined, which I am not, the chairman of the River and Harbor Committee would supply them. I frankly state them. A survey of this harbor was made in 1899. The local engineers reported at that time adversely to the improvement of the harbor. The project, however, which I have in view differs from the project which was then turned down. Moreover, a careful reading of the engineer's report will satisfy any person familiar with the conditions existing in this section of the country that the work of the local engineers was hardly as thorough as we believe the importance of the question should have warranted; therefore do I renew the request that a survey again be made to the end that if error was committed the first time justice to the people of this section of my constituency may be done, and the first error righted.

Mr. Chairman, this work will not be expensive. The local engineers are employed continuously. They have to inspect all improvements now in course of construction or maintenance on Long Island. A day or two of careful work and investigation of Three-mile Harbor, when they are engaged near

there, will entail little cost and will convince them, I feel confident that a mistake was made by the engineers who first looked the ground over. Of course, under our rules and the law, an appropriation can not be secured from Congress for such an improvement as I desire to have made here excepting the report of the local engineers be indorsed favorably by the Chief of Engineers and approved by the Secretary of War. Therefore it becomes necessary for me to try this case *de novo* and to endeavor to secure a favorable report at the bottom of the scale, namely, from the local board of engineers.

In closing my remarks I will make mention of certain advantages which will follow the improvement of this harbor.

First. The United States Government has constructed fortifications on Gull Island and on Plum Island in Long Island Sound. Three-mile Harbor would be a safe and convenient harbor for torpedo boats operating with these fortifications in the event of war.

Second. It would be a safe harbor of refuge to vessels engaged in the coasting trade, and in fishing, which pass through Long Island Sound and Gardiner's Bay.

Third. It would enable vessels to enter the bay for the purpose of taking aboard their cargoes of wood and merchandise which, at the present time, are obliged to load by means of scows, lighters, and small boats while lying off at some distance from the mainland.

Fourth. It would open up for development a large section of country, would foster commerce, and consequently give needed employment to a large population, besides affording an excellent harbor for steamboats and other vessels.

East Hampton to the present day retains many of its ancient characteristics. The old windmills with their wide extended arms look as if they belonged to another clime and carry the spectator's mind at once back to the "days of old," and the memorial tomb of Lion Gardiner, with its knightly figure in full armor, fits into its quaint surroundings—a mediaeval monument in a village, which until a few years ago hardly understood what modern progress meant. The relics of the past seem to be more carefully conserved than in most American towns; the ancient in-

formal name has been revived in the Maidstone Club, whose splendid building was destroyed by fire in 1901 and is being rebuilt, at a cost of \$50,000; the old building of Clinton Academy still greets the visitor and he can render homage to genius at one of its veritable shrines—the home in which John Howard Payne, the author of “Home, Sweet Home,”

main attraction of East Hampton at present. The ancient and royal game of golf claims first honors, and nowhere in America are to be found better grounds for the practice of that magnificent sport than from Wainscott to Fort Pond.

Wainscott is a small village, some four miles from East Hampton, which was first set-

THE BOYHOOD HOME OF JOHN HOWARD PAYNE. THE AUTHOR OF THE WORDS OF
“HOME, SWEET HOME.”

(Another view is given on page 271.)

spent his earliest years, and the memories of which may have unconsciously framed the thoughts and inspired the words of what has become one of the “world’s songs.” The grand old trees which line the main street were planted, some of them, a century ago, and succeeded others which marked out the line of the roadway in the early settlement. There is splendid bathing on the beach, but sea-bathing is not the

tled about 1670, and is the home of a farming and fishing population. It is little known except to golfers and anglers, and its pond, famous for its pickerel, is one of the most beautiful bits of inland water on the island. In 1830 it had a population of 100; at present it claims 170, so that its modern progress is not very rapid. Neither is Amagansett progressing very rapidly, for in 1880 its figures were 548,

and the latest computation only added two to that total, while Gardiner's Island, which in 1880 had a population of 40, has now only 25. Northwest, which had once high commercial hopes and in 1880 a population of 78, now has only 60, although if it could only be again discovered it would show wonderful advantages for the development of a summer resort. But the township in many places shows substantial increases. The Springs, which in 1880 had 339, now rejoice in 529, while East Hampton village in 1880 had 807, in 1890, 1,014 and now has 1,600. Then there are several new communities which have been started within the past few years, which promise to become places of importance within a decade, while Montauk Point, thanks mainly to the importance it acquired in the Spanish-American War, now claims a residential population of 200. Had the census been taken when Camp Wickoff occupied the Point it would have swelled the figure for the district and the township considerably. But the splendid advantages of the section for healthfulness and fun became the theme in the camp days of national interest and discussion, and it would not be surprising ere many years pass to see the Montauk region inhabited by a population far surpassing in extent the numbers which made Camp Wickoff so busy for several memorable months.

Meanwhile the old Royal demesne is practically deserted and the following exceedingly beautiful description penned early in the past century still accurately describes it:

The place is almost one extended region of solitude. Over its elevated surface, the eye seldom rests upon other than natural objects.

The large forest, which once covered its face, has fallen before the axe of the husbandman, and the winds of heaven; and the vision has no interruption, over the greater part of the land, to an illimitable expanse of ocean. The extensive swamps, where the warrior waited in ambush the passing of his foe, have most of them become dry, and free of wood. The grounds, where often the battle raged, in the strife for life and victory, are noted only by the many arrow-heads, which the tread of animals and the crumbling of the soil expose to view. The lofty and symmetrical stature of the red man no longer crowns the cliffs and headlands of the shore; but over the summits, the sea-bird and the eagle may still be seen hovering in the air, or soaring aloft, in beautiful gyrations. All the magnificent features of nature still present, to the visitor, the same sublime and majestic appearance which they presented to former successive generations; but the red man sleeps in his grave. The band of sparkling foam, produced by the waves of the ocean, rolling and dashing on the shore in endless succession, still embraces the land; but he, who whilom watched the pulsations of the mighty deep, is no longer there. On the bold headland of Wamponomon, where, in the clear dark night, the signal fire was kindled, to give notice to the friendly tribes, on the opposite shore, of the approach of some mutual foe, or of readiness to proceed upon some enterprise of danger or revenge, the Sentinel no longer holds his midnight vigil. The calm moon, whose bright and soft light was reflected from the undulating surface of the gently rising wave, where the canoe was launched upon its bosom for distant adventure, still sheds its monthly brightness upon the troubled sea, but it no longer guides the bark of the red man. The agitations and tumults that gave activity and excitement to savage life, and filled the forest with the echoes of the war-hoop, are buried in the grave of the warrior; and the almost painful stillness of the region is disturbed only by the everlasting murmur of the ocean.

APPENDIX.

LONG ISLAND TROOPS IN THE REVOLUTION.

(From Fernow's "New York in the Revolution," Albany, 1887.)

The people of Long Island responded to the call of the Provincial Congress, asking them to organize in military bodies as early as the inhabitants of the other counties, and below are given the earlier organizations. The fortunes of war severing the connection between the island and the main land, these organizations could not be kept up, hence the list of Long Island officers is necessarily small. The Council of Appointments made no appointments for Long Island until 1784.

KINGS COUNTY.

Col. Richard Van Brunt.
Lieut. Col. Nich's Covenhoven.

	<i>Captains.</i>	<i>1st Lieuts.</i>	<i>2d Lieuts.</i>	<i>Ensigns.</i>	<i>Quarter Masters</i>
Light Horse,	Adolph Waldron,	Wm. Boerum,	Thos. Everett,	Jacob Sebring,	Jun. Isaac Sebring.
Troop of Horse,	Lambert Suydam,	Dan'l Rapyle,	Jacob Bloom,	Peter V. D. Voort.	Peter Wyckoff.
Flatlands,	Jere'h V. D. Bilt,	Ab't. Stothoff,	Thos. Elsworth,	Peter V. D. Bilt.	
Gravesend,	Rem. Williamson,	Saml. Hubbard,	Garrett Williamson,	John Lane,	
Half of Brooklin,	Barent Johnson,	Barent Lefferts,	Joost D. B. Vooise,	Martin Schenck.	
do do	Ferd's Suydam,	Simon Bergen,	Wm. Brower,	Ja'b Stillenwert.	
Flatbush,	Corn's V. D. Veer,	Peter Lefferts,	John Van Dуйn,	John Bennem.	
Bushwick,	John Titus,	Abr. Van Ranst,	Peter Colyer,	John Skillman.	
New Utrecht,	Abr. Van Brunt,	Ad'n Hegeman,	Harm's Barkulo,	Wm. Barre,	

Rem. A. Remsen, 1st Lieut. of Waldron's Light Horse, had been elected, but declined, whereupon the company was officered as above.

QUEENS COUNTY.

No record of any regimental organization has been found. The following names are of company officers of an early period of the war:

Great Neck and Cow Neck Company.

Capt. John Sands, appointed October 12, 1775.

1st Major Joh's Tittus.
2d Major John Van Debilt.
Adj. George Carpenter.
Q. M. Nich's Covenhoven.
All commissioned March 11, 1776.

Captains.

Joh's Vanderbilt.
Lambert Suydam.
B. Johnson.
John Titus.
Corn's V. D. Veer.
Rem. Williamson.
Barnard Suydam.
Adrian Van Brunt.

A return of the officers chosen by the different companies in Kings county who have signed the Declaration and taken their commissions, 1776:

1st Lieut. Henry Allen, declined.
2d Lieut. Thos. Mitchell, promoted 1st Lieut. March 8, 1776, vice Allen.
Ensign Aspinwall Cornwell (Cornell) promoted 2d Lieut. vice Mitchell.
Ensign Andrew Onderdonk, appointed April 15, 1776.

New Town District, Southernmost Beat.

Capt. Abr'm Remsen.
1st Lieut Benj'n Coe, promoted Captain June 17, 1776.

! & His ...
father, my mother's ...
Vanderbilt-

2d Lieut. Robt. Furman, promoted 1st Lieut.

Ensign Benj. North, promoted 2d Lieut.

Ensign Jonah Hallett, appointed June 18, 1776.

New Town District, North Beat.

Capt. John Lawrence, promoted Brig. Major.

1st Lieut. William Sackett.

2d Lieut. Wm. Lawrence, promoted Captain August 14, 1776.

Ensign Jesse Warner.

Light Horse Company.

Capt. Rich'd Lawrence, resigned on account of ill health.

1st Lieut. Dan'l Lawrence, promoted Captain, etc.

2d Lieut. Samuel Riker, promoted 1st Lieut.

Cornet, John Coe, superseded by Jon'n Lawrence.

Q. M. Peter Rapelje.

Original commissions issued May 10, 1776.

Flushing Company.

Capt. Nath'l Tom.

1st Lieut. Mathias Van Dyck.

2d Lieut. Jeffry Hicks.

Ensign Nich's Van Dyck.

Commissioned June 8, 1776.

Jamaica Company.

Capt. Ephraim Baylies.

1st Lieut. Increase Carpenter.

2d Lieut. Abr'm Vanausdale.

Ensign Othniel Smith.

Commissioned March 27, 1776.

SUFFOLK COUNTY.

First Regiment.

Col. Wm. Floyd, of St. George's Manor, vice Platt Conkling, who declined.

Lieut. Col. Dr. Gilbert Potter, of Huntington.

1st Major Nathan Woodhull, of Brookhaven.

Huntington and Smithtown Companies.

Capt. John Wickes.

1st Lieut. Epenetus Conkling.

2d Lieut. Jonah Wood.

Ensign Ebenezer Prime Wood.

Capt. Jesse Brush.

1st Lieut. Jon'n Titus.

2d Lieut. Phillipp Conkling.

Ensign Joseph Titus.

Capt. Timothy Carll.

1st Lieut. Gilbert Fleet.

2d Lieut. Joel Scudder.

Ensign Nath'l Buffet, Jun'r.

First Brookhaven Company.

Capt. Samuel Thompson.

1st Lieut. Ab'm Woodhull.

2d Lieut. Isaac Davis.

Ensign Daniel Satterly.

Commissioned September 13, 1775.

Second Brookhaven Company.

Capt. Enen'r Miller.

1st Lieut. Caleb Woodhull.

2d Lieut. James Davis.

Ensign Davis Davis.

2d Major Edmund Smith, Jun'r., of Smithtown.

Adjutant Philipp Roe, of Brookhaven.

Q. M. James Roe, of Brookhaven.

Third Brookhaven Company.

Capt. Wm. Brewster.

1st Lieut. Isaac Davis.

2d Lieut. Uriah Smith.

Ensign Benj'n Woodhull.

Commissioned September 13, 1776.

Smithtown Company.

Capt. Philetus Smith.

1st Lieut. Edmund Smith, Jun'r.

2d Lieut. Daniel Tillotson.

Ensign Richard Smith.

Commissioned September 13, 1775.

Islip Company, formed from east part of Smithtown and west part of Southampton.

Capt. Benijah Strong.

1st Lieut. Jeremiah Terry.

2d Lieut. Samuel Oakley.

Ensign Annen Mowbrey.

Commissioned February 13, 1776.

Southold Company.

Capt. Nathan Rose.

1st Lieut. Hugh Smith.

2d Lieut. David Fanning.

Ensign John Smith.

Commissioned September 13, 1775.

CHANGES IN THE REGIMENT.

December 12, 1775—Joh'n Titus, Capt. 2d Comp., vice Jesse Brush, promoted Major; Joshua Rogers, 1st Lieut.; Thos. Brush, 2d Lieut.

February 7 and 8, 1776—Platt Neal (Vail), Capt., Cow Harbour, or Fifth Huntington Company; Michael Hart, 1st Lieut.; Isaac Dennis, 2d Lieut.; Jacob Conckling, Ensign; John Buffet, Capt. South or Fourth Huntington Company; Isaac Thompson, 1st Lieut.; Zebulon Ketcham, 2d Lieut.; Joseph Ketchum, Ensign.

A return of this Regiment, dated April 5, 1776, gives the following changes: Majors Jesse Brush and Jeffry Smith; Q. M. John Roe; Captains Samuel Tomson, Eben'r Miller, Nathan Rose, Wm. Brewster, Philetus Smith, Joshua Rogers, Epenetus Conckling, Joel Scudder, John Buffet, Plat Vail, Gilbert Carle and Benjah Strong.

Second Regiment.

Col. David Mulford.

Lieut. Col. Jon'n Hedges.

1st Major Uriah Rogers.

2d Major George Herrick.

Adjutant John Gelston.

Q. M. Phineas Howell.

Sergt. Major Lemuel Peirson.

Drum Major Elias Matthews.

These officers were so returned February 10, 1776.

A return of the names of the persons for the officers of the Second Battalion in Suffolk county, taken according to the Directions of the Provincial Congress by the Committees of Easthampton and Southampton:

First Company.

Capt. David Howell.

1st Lieut. Jeremiah Post.

2d Lieut. Paul Jones.

Ensign Zephaniah Rogers.

Second Company.

Capt. John Dayton.

1st Lieut. Isaac Mulford Hunting.

2d Lieut. John Miller, Jun'r.

Ensign Wm. Heges.

Third Company.

Capt. David Peirson.

1st Lieut. Daniel Heges.

2d Lieut. David Sayre.

Ensign Theophilus Peirson.

Fourth Company.

Capt. David Fithen.

1st Lieut. Sam'l Conckling.

2d Lieut. Thomas Baker.

Ensign Daniel Conckling.

Fifth Company.

Capt. Stephen Howell.

1st Lieut. John White, Jun'r.

2d Lieut. Lemuel Wick.

Ensign Isaac Hallsey.

Sixth Company.

Capt. Wm. Rogers.

1st Lieut. Jesse Halsey.

2d Lieut. Henry Halsey.

Ensign Nath'l Rogers.

Seventh Company.

Capt. Josiah Howell.

1st Lieut. Nathaniel Howell.

2d Lieut. Mathew Howell.

Ensign Wm. Stephens.

Eighth Company.

Capt. Sam'l L'Hommedieu.

1st Lieut. Silas Jessup.

2d Lieut. Edw. Conckling.

Ensign Daniel Fordham.

Ninth Company.

Capt. John Sandford.

1st Lieut. Edw. Topping.

2d Lieut. Phillip Howell.

Ensign John Hildreth.

Commissions issued September 13, 1775.

THIRD REGIMENT.

A "Third Regiment" of Suffolk county is mentioned and commissions were issued to officers of the same, but no record of its roster has been found.

Capt. Israel Scudder.

1st Lieut. Nath'l Buffet.

2d Lieut. Epenetus Smith.

Ensign John Hart.

Commissioned December 12, 1775, for Third Company, Third Regiment.

1st Lieut. Edmund Howell.

2d Lieut. Selah Reeve.

Ensign James Wells.

Commissioned June 29, 1776, for Second Company, Third Regiment.

REGIMENT OF MINUTE MEN.

Col. Josiah Smith.
Lieut. Col. John Hulbert.
1st Major Isaac Reeve.
2d Major Jon'n Baker.

Easthampton Company.

Capt. Ezekiel Mulford.
1st Lieut. John Miller.
2d Lieut. Nath'l Hand.
Commissioned February 23, 1776.

First Southampton Company.

Capt. Zephaniah Rogers.
1st Lieut. Nath'l Howell, Jun'r.
2d Lieut. Matthew Sayer.
Commissioned February 23, 1776.

Second Southampton Company.

Capt. David Pierson.
1st Lieut. John Foster, Jun'r.
2d Lieut. Abr. Rose.
Ensign Edward Topping.
Commissioned February 23, 1776.

The return of this Regiment, of May 30, 1776, gives:

Isaac Overton, 2d Major, vice Baker; and Captains Nath'l Platt and Thos. Wicks, in addition to the above; Adjutant, Ephraim Marvin, April 4, 1776, vice Isaac Overton, declined; Q. M. Eben'r Dayton.

First Southold Company.

Capt. John Bayley.
1st Lieut. Joshua Youngs.
2d Lieut. John Tuthill.
Ensign James Reeves.
Commissioned May 3, 1776.

Second Southold Company.

Capt. Paul Reeves.
1st Lieut. John Corwin.
2d Lieut. David Horton.
Ensign Nath'l Hodson.
Commissioned May 3, 1776.

Brookhaven, Smithtown, Manor of St. George and Moriches Companies.

Capt. Selah Strong.
1st Lieut. Wm. Clark.
2d Lieut. Caleb Brewster.
Ensign Nath'l Brewster.
Commissioned April 4, 1776.

Benjamin Coe, Capt., mentioned October 9, 1776.

Capt. Wm. Ludlum and 2d Lieut. Ephraim Marston, mentioned December 2, 1776.

Artillery Company.

(Belonging to Col. Smith's Minute Regiment.)

Capt. Wm. Rogers.
Capt. Lieut. John Franks.
1st Lieut. Jeremiah Rogers.
2d Lieut. Thos. Baker.
Lieut. Fireworker John Tuthill.
Commissioned February 20, 1776.

(From "New York in the Revolution," by James A. Roberts, Comptroller, Albany, 1898.)

SUFFOLK COUNTY MILITIA.
