OF THE

OREGON HISTORICAL SOCIETY.

THE GENESIS OF POLITICAL AUTHORITY AND OF A COMMON-
WEALTH GOVERNMENT IN OREGON.

[Printed by the author for private distribution, August, 1899.]

At the present time, when interest is becoming more generally centered upon the Pacific Coast and the future which seems to be lying before it during the next century of our national life, any contribution to a knowledge of its history can hardly be out of place. It is quite clear that from now on through the future it must more and more pass out from the sphere of purely local interest and assume a larger place in the current of our national history. Although the southern half of the coast may be more familiar to the greater number of people, yet the northern half has a history which is fully as rich and well repays most careful study. Of the many interesting phases which have presented themselves, none has had so great an attraction for the writer as the

development of civil institutions. It is interesting to review the gradual evolution of a locality from primitive conditions of wildness to that perfect form of social life where individuals act under the privileges and restrictions of a civil government, voluntarily imposed and perfectly integrated with the larger scheme of national government. It is a stimulating process to try to make any correct estimate of the various agencies which have taken part in the complex process of growth, and to place an accurate valuation upon the services of leading personalities, the influence of aggregates of less prominent individuals, and general determining influences which may not at first be seen at all. It is a test of judgment to put oneself at the different points of view, so often conflicting, to be fair to all and to be firm in drawing conclusions where the weight of evidence seems to lie; and a knowledge of the slowness of this process of growth, with the careful thought and heroic action by which it has come about, creates a respect for government and prepares for a wiser use of the privileges enjoyed under its beneficent rule. In following out the theme set before us it is to be remembered that by Oregon is meant that piece of territory whose boundaries have been gradually shrinking to their present compass from an area extending from the Spanish possessions at the forty-second degree of latitude to the Russian possessions at the fifty-fifth degree, and between the Rocky Mountains and the Pacific Ocean.

In many respects this history resembles that of the other states of our Union. In common with them there has been a gradual growth from those fragmentary germs of civic life out of which civil government grows, which fragmentary forms begin to operate as soon as individuals come together in social relation, often long before localities are entitled to take their places as parts of a

nation. As in the case of other states, there was the acquisition of territory, in this case preceded by a partial acquisition. Like the other states, it has passed through the various steps prescribed by congress for the transition from newly acquired territory to perfect statehood; but, as other states have passed through this common process with a great variety of interesting and unique experiences, so Oregon has had its own history, peculiar to itself, and in some respects different from that of any other state. It is the purpose of this paper to set forth briefly the leading facts, so far as they may be gained from the sources at present available, and to present them, so far as possible, in historical perspective, and as a part of the growth of our national life.

In the examination of a subject connected with local history it is easy to be carried away by local circumstances, and to fail to grasp those larger features which connect it with the history of the nation and to some extent with that of the world. Our truest knowledge of the subject, however, will come from this broader approach and a search first for those general conditions which underlay the more detailed history and were instrumental in determining its drift.

In order that we may see the wider scope of our subject we need only to remember that during the early centuries of exploration the territory whose civil life we are to study was at stake in the great struggle between those countries which were striving for the mastery of the world, and many a stroke of policy that seemed to affect these remote regions had its only significance as it bore upon the conflict of England and Spain. And then, when the Russian Empire, through the impetus received from Peter the Great and Catherine II, continued its process of expansion eastward, its outer wave reached the western shores of America and they became an import-

ant factor in the larger stream of world history. And finally when the thirteen colonies separated from England, this new and vigorous nation found an interest in those regions, and they became an important factor in the relations of England and the United States.

In the study of the development of civil government in Oregon, since the region has had any interest to our nation, we need first to note those general conditions which have to a large extent been responsible for the detailed history. The one which is perhaps most apparent and whose effect has been greatest, is the geographical location of the territory as compared with the rest of the United States. Separated from the older sections of the country by long stretches of prairie, and by two large mountain systems, accessible by water only after a long and tedious journey around Cape Horn, its position was one of extreme isolation. This peculiar isolation explains very much that is characteristic of the early history of our civil government. It explains the ignorance that prevailed so long in the older sections regarding the value of the country, and the consequent apathy against which the champions of the west in congress had so long to contend ; it explains, likewise, that voluntary and heroic action by which the colonists, stung by the delays and impelled by their needs and desires for a democratic type of government, took the initiative and brought into being a pioneer provisional state to bridge over the period of delay, and to hold the country in trust until the slow movings of the national consciousness should awaken to its interests.

Another and equally important factor in determining the drift of events was the joint claim and occupancy of the country with England. The history of civil government under such circumstances must necessarily be different from that of territory fully acquired by the

national government. It is clear that it must connect, indissolubly, the question of a government with that of the boundary, and render any satisfactory solution of the former impossible until the settlement of the latter. The framing of any kind of a plan of government that would really be efficient without giving cause for offense to the partner to the title of the land must be a problem of the most difficult nature, as it was found to be. And the problem was still further complicated by reason of the fact that the question of boundary belonged to the executive part of the government, while that of the formation of a civil government belonged to the legislative. And then, too, by virtue of its being thrown into the realm of international affairs, the formation of a civil government was delayed because of its connection with that complicated balancing of interests which always characterizes diplomatic procedure, where settlement of questions is slow and oftentimes accompanied by national friction.

To joint occupancy also must be attributed the throwing into close relationship of two different and antagonistic types of life. There was in the first place the difference of nationality, which, in view of the feelings engendered in the struggle for independence and the war of 1812, did not promise cordiality; there was the difference of industrial systems which brought into sharpest and most bitter conflict the ably managed monopoly of the English company and the independent American trader or trapper with his idea of free competition and equal right to operation in the region jointly held. And lastly, there was the difference in regard to the treatment of the native races. The English found it mostly to their interest to leave things as they were, and to keep the country a wilderness, suitable for a trapping ground for many years to come, while the Americans aspired to better

the life of the savage, and to build up a condition of civilized life. The difference was all the more marked because of the entrance of the missionaries and the important part played by these leaders, who exercised an influence perhaps second only to that of the early religious leaders of New England, and whose energies were untiring in the interests of good government and a moral population. That two such diverse types of life could exist side by side during the twenty-eight years of joint occupancy without influencing the course of civil government is not to be conceived. That the relation was harmonious at first is true, but that irritations arose as time went on was inevitable.

In any analysis of the influences affecting the course of civil government in Oregon a prominent place should be given to that slow yet powerful westward movement of population. It consisted of a people aggressive and assertive of their own desires, patriotic, and upright in the main, with a consciousness of their own wants and their ability to get them, and possessing but little knowledge of, or reverence for, the intricacies of international usage, or the restrictions of a conservative legislative body. Being a part of the people, they were the sovereign power, and if they determined upon having the west, it must finally be had. This was a movement which led thousands of intrepid immigrants to anticipate the government in going to remote regions. Those who remained behind had now a greater interest in the country, and ere long it was to be the impulse from this movement which aroused the national consciousness to the importance of the Oregon question, gave it a place among the problems of the nation, put it upon the platform of a political party as a prominent issue, and forced a settlement of the boundary, and finally secured a civil government.

After all other difficulties were overcome, after the barrier of distance was removed, after the stormy season of threatened war over the boundary line had passed away, civil government in Oregon became inevitably connected with another question which was to affect its destiny. The deepening bitterness between the north and the south was drawing everything into the maelstrom of slavery discussion, and particularly was this true in the case of every piece of newly acquired territory whose destiny was inseparably connected with the defeat or justification of the system of slavery.

With this brief survey of the general conditions which have operated to determine the course of events, the narrative of the more important details in the growth of civil government in Oregon may be better understood. We find that in the days of the discoverer, explorer, and fur trader there was no civil government at all, except such as was exercised by the native races for the regulation of their primitive life. Every one was dependent upon his own resources for the protection of life and property. From the time that the first Spanish ship, under the command of Ferrelo, touched the southern shore of Oregon, in the middle of the sixteenth century, until the beginning of the nineteenth, there was as much freedom from the restraints of social order as any anarchist could wish. There was nothing to check the conflicts that might arise between the crews of vessels, from the same or different nations, in their eagerness for the glories of discovery or the profits of trade with the Indians. There was nothing to shield from the danger of massacres from tribes, hostile by nature, or by contact with the whites. The explorer or trader who penetrated the interior must trust to his own ability for safety, and to his judgment in making friends with the Indians. There was nothing to regulate men in the struggle to

reap the natural advantages of the region. They had little interest in the Indians, except as they could use them to their profit; they had small regard for the rights of others, as they were outside the pale of rights and laws; they cared nothing for the conditions that they made for the future, as it was not to be their home. It was a period for romantic adventures, to pass away before the quieter but more beneficent regime of social order.

When, however, the scattered fur trading interests began to centralize by the formation of fur trading companies, some of the functions which belong to a civil government began to arise. The Pacific Fur Company, established by John Jacob Astor at the mouth of the Columbia River in 1811, with its little fort, exercised a greater authority in the protection of life and property than had existed before. It aimed to produce a condition of things more in harmony with a normal and peaceable trade. Its English successor, the Northwest Fur Company, established in control of the region after the war of 1812, was still more powerful. After consolidation with its rival, the Hudson's Bay Company, its charter rights were extended, and, although only a trading company, the necessities of its position led it to the exercise of many of the functions of a civil government. Its control of its large number of employees was complete; its power over the native races was absolute; by judicious methods and quick retribution for offenses, it succeeded in rendering the wilderness a safe place for traders, explorers, and missionaries. Moreover, the possibilities for trouble which arose from the coming of American trappers and traders led to an additional step in the development of civil government, and one which more properly falls under that head.

In 1821 the English Parliament passed a bill by the

terms of which the laws of Canada were extended over English subjects operating in the country to the south. Provision was made for justices of the peace, before whom cases were brought, and, if sufficiently important, were sent to the courts of Canada.¹ In this way, then, did the English government follow its subjects, and become the first real civil government exercised in the country, although it was exercised in the interests of only part of the inhabitants. England had found a way to look after her subjects without violating the strict terms of the treaty of joint occupancy.

The office of justice was held by officers of the fur trading company, whose power and prestige was thus increased. The history of government for about twenty years is summed up in the person of one man, Dr. John McLoughlin. The exercise of authority by that masterful character of early times still lives in the minds of the oldest pioneers, and has found expression in many of the records which constitute the sources of Oregon's history. Although the official agent of the English company, a Scotchman by nationality, a Catholic in religion, and loyal to all the interests he represented, he was a man of too large a mold to be anything other than the instrument of justice and good order for all classes of people who might come within the bounds where his jurisdiction was exercised. "From 1823 to 1845 he was the controlling power in the country, and did more than any one else to preserve order, peace and good will among the conflicting and sometimes lawless elements of the population."² Autocratic in his methods and strict in the enforcement of justice, he was yet kindly and merciful. His tours about the country to settle any

¹Act of Parliament in appendix to Greenhow's History of Oregon.

²Matthew P. Deady.

difficulties that might have arisen in any of the trading posts, or agricultural settlements of ex-employees, were regular features of the early days, and were very effective.³

The inability of the independent fur trader to compete with the English company, and the comparative advantage that the English subject had in the protection by his country's laws, naturally led to a feeling of dissatisfaction on the part of the American trader, and a belief that under the cover of a business enterprise the English civil government was gradually settling itself over the country to the exclusion of the American, whose interests and rights were equal according to the treaty of joint occupancy. That John Jacob Astor had not renewed his enterprise after the restoration of the fort at Astoria at the close of the war of 1812, was due to the refusal of the government, during Madison's administration, to guarantee his company the protection of the United States in case of trouble.⁴ Had that been done, company would have been in competition with company, and the conditions would have been more equal. As it was, however, the United States' interests were represented and her hold maintained only by such independent traders and trappers as ventured into the country, and usually failed of maintaining themselves for any great length of time.

It was such a condition of affairs that came to the knowledge of the people, and finally reached those channels where it gained entrance into our national policy. It was a significant circumstance in the history of civil government in Oregon, that, in the winter of 1820 and 1821, four men were thrown together at a hotel in the

³Conversation with Dr. Wm. Geiger, pioneer of 1842.

⁴Benton's Thirty Years in the Senate.

City of Washington.⁵ Two of them, Ramsey Crooks of New York and Russell Farnham of Massachusetts, were traders who had been connected with the unsuccessful enterprise of Mr. Astor. The other two were members of congress, John Floyd of Virginia and Thomas H. Benton of Missouri. Mr. Benton had for some time been interested in the question, and had been pondering upon a method of procedure. During this period of acquaintance they talked much together and became convinced of the advisability of an aggressive campaign for the protection of American trappers and traders, and the maintenance of the full American rights in the joint territory.

There were probably no better men to take the leadership in a movement of this kind than Floyd and Benton. Both were western in their training and in their sympathies, and both were enthusiastic in any movement pertaining to a westward extension of the country. Western men were already beginning to have weight in the national councils, and were exerting a distinct influence upon national policy. Although rough and unskilled in many of the essentials of good government, their influence tended toward a true American life and a broader idea of American national destiny.

The course upon which they entered, though carefully considered, was a bold one. The Oregon country was very far off and few knew very much about it. It seemed a land so far away that the American people, as a whole, had nothing to do with it. Perhaps they had heard of the Oregon river, and it had a place in their imagination along with the ideal beauty of Bryant's poetic country; perhaps they had learned of the part performed by Captain Robert Gray and his ship *Columbia* in crossing the

⁵Irving's Astoria.

bar at the mouth, and revealing to the knowledge of his country and the world another great river; perhaps they knew of Jefferson's romantic interest in the country and the expedition which he sent under Lewis and Clark; they probably knew that fur traders had gone there, and that an American fur company, at the time of the war of 1812, had been forced to sell out and its place taken by an English one; they knew that there was an American claim, which was felt to be quite strong, and that a treaty had been made with England providing for a joint occupancy; but there was no consciousness that the question was one of practical importance to the existing generation, except on the part of the more far-seeing. The people's representatives in congress were more conservative than the people themselves, and a conception of the larger United States had taken possession of but a few.

The executive department was in advance of the legislative, for James Monroe was President and John Quincy Adams, Secretary of State—two men who were at the front in the breadth of their political ideas, as shown by the Monroe doctrine, originated by Adams, endorsed and declared by Monroe. In the clause that refused to European powers the right longer to colonize on American territory, it was the Oregon country that was thus protected against the aggressions of Russia at the same time that a hint was given to England. No executive had been more courageous in asserting the intention of the United States to maintain her larger interests, and none had been more disposed to follow with national protection, so far as conformed with treaty relation, her citizens who were leading in the westward expansion of the country.

Under such conditions what might the champions of an aggressive campaign expect to accomplish? Minds

were filled with many questions. What was it right to do, and what was expedient; could a military post be established in the country as the President and Secretary wanted; could lands be granted to settlers as prospective emigrants wanted; could settlements be made and a civil government established as Floyd and Benton wanted? If it was right to do these things, was it expedient to do them, with the possibility of jeopardizing other interests less remote; was the nation ready to commit itself to an expansion of territory which might bring about many changes, and perhaps many dangers?

It was the work of these men, by patient, persistent and continued effort to arouse a sentiment favorable to American interests, to gather and disseminate such information as would help to make a public opinion, and to keep the subject before congress and the people all the time. Confident themselves in the value of the country to the United States, and of the right of title to the country, they were anxious for a movement looking toward permanent occupation.

It was a memorable day in the history of civil government in Oregon, when, in December of 1820, Floyd initiated his policy in the house, by a motion for the appointment of a committee to inquire into the situation of the settlements on the Pacific, and the expediency of occupying the Columbia River.⁶ It did not attract much attention at the time, but was referred to a committee, of which Floyd was chairman. In a carefully prepared report, containing all the information that could be secured, the plan was pronounced expedient and a bill proposed to carry it into effect. This bill provided for the military occupation of the Oregon Territory, the extinguishment of the Indian title to the land, and the

⁶Annals of Congress and Congressional Debates are authorities used upon discussions in the legislature.

establishment of a civil government. It was nearly two years, however, before it could be brought to a discussion, on account of the dilatory tactics of the opposition, or because of its apparent unimportance. After it was debated it failed of passage by a vote of one hundred to sixty-one, which was not a bad defeat considering the character of the bill.

The same process was gone through again, another committee appointed, and another bill reported, which was similar to the first one, except in the greater inducement to settlers in the granting of lands, and in the greater stress laid upon the necessity for some plan of civil government in the territory. This bill, after discussion, was passed by a vote of one hundred and thirteen to fifty-seven, and Floyd had the satisfaction of seeing such a flattering result from his four years of hard work. He had done all that he could do and now it must be submitted to the tender mercies of the senate. Mr. Benton had already introduced a resolution "instructing the committee on military affairs to inquire into the expediency of making an appropriation to enable the President of the United States to take and retain possession of the Territories of the United States on the Northwest Coast of America;" and he had made a strong speech in advocacy of the movement. Although the resolution was adopted, no report ever came from the committee. When the bill came from the house, after several times being laid on the table and taken up again for discussion, it received a final defeat by a vote of twenty-five to fourteen.

For three years nothing was done. Then Floyd, with a tenacity worthy of the cause, proposed another bill. It resembled the others, but during the process of discussion was stripped of one feature after another until the only provisions left for government were the establish-

ment of military posts, and the right of American citizens to trial in American courts, and under the laws of the states into which they might be brought. It will thus be seen that all previous propositions had gradually been reduced, by a process of elimination, to a provision exactly similar to the one which the English already had in operation, except the additional feature of military posts, and although this was the most moderate bill yet offered it was defeated by a vote of ninety-nine to seventy-five.

As Floyd's term of office expired and he was not returned, the first campaign for the extension of American civil government over Oregon was ended. Both Floyd and Benton had done nobly. In the face of opposition, and even ridicule, they had persistently held their course until they had seen their measure pass one house, and though defeated, get a respectable vote in the other. In their work they had valuable assistance. Several strong supporters appeared in the house and in the senate, particularly among the younger men; President Monroe by his messages to congress urged the importance of establishing a military post at the mouth of the Columbia, and along the route across the country; John Quincy Adams, by his assertions in regard to the validity of the American title to the country, and later on by his messages, strengthened their case; the War Department, then under John C. Calhoun, made a report through one of its most trusted authorities, General Thomas S. Jesup, who strongly advocated military occupation; while at least three associations of citizens from Massachusetts, Louisiana, and Ohio presented memorials to the house, asking for grants of land and the protection of the American government. The Massachusetts memorial was the result of the zealous work of Hall J. Kelley, a school teacher of Massachusetts, who was an enthusiast upon

the settlement of Oregon, and who had been agitating the question both in his own state and in the City of Washington for several years before it was taken up in congress.

While great credit is to be given the far-sighted and courageous advocates of the bill, it is not fair in a historical paper to minimize the efforts of the opposition. To characterize the opponents as ultra-conservative or self-interested would not be just to the many weighty arguments which they brought forward, and which, looked at from the standpoint of their day, were weightier than they seem now, when conditions have so changed. For a new nation, with a new national machinery, hardly yet in smoothly running order, to attempt expansion into regions separated by natural barriers, and inaccessible before the application of steam to travel, might well require careful thought.

This first attempt, though it had failed of accomplishing its immediate end, was highly creditable to all who were engaged in it, and its results were not small. Interest had been awakened, not alone among the members of congress, but more particularly among the people throughout the country. Circulars containing all the information available, were prepared and sent to the constituents of congressmen, and the nation began to be committed to a policy which it would take time fully to realize. The people had gained the impression that the United States' title was perfectly clear to the whole valley of the Columbia; that the English were there only by sufferance until the formal settlement of a boundary at a more convenient time; and that the government was willing that American immigrants should occupy it, and would protect them as well as it could.

The debates which occurred at various times in connection with these early bills are interesting, not alone

because they mark the beginning of a large and important national movement, but also because of the light they throw upon the times, because of the discussion of important principles which always come to the surface in large national questions, and the fine examples of courage and far-sighted aggressiveness on one side, and cautious conservatism on the other. Almost every point of view which it would seem possible to conceive of found expression in some form or other in the course of the debate; and almost every motive for or against the policy was voiced.

In this first debate the question of the claim does not figure largely, as it was quite generally assumed by all that the American title was valid, and was so pronounced by those in whom the people had confidence. There had been, however, no critical examination of the subject as yet on either side, but the American government felt so confident that it did not realize any necessity for haste.

In the first place it was incumbent upon the advocates of this measure to show the expediency of their proposal. They had been called visionary and fanciful. That it was only the continuation of a growth that had characterized all our past history, was well expressed by Floyd in the words: "At most it is only acting upon precisely the same principle which has directed the progress of population from the moment the English first landed in Virginia." In the various reports and debates much emphasis was placed upon the material benefit which would follow. By statistics, the value of the fur trade was exhibited as well as that of the whale fisheries, the returns from which two industries alone would many times repay all expenses incurred; while the possible resources in the line of agricultural wealth, though scarcely known, were boldly prophesied.

While some regarded the measure as visionary, others opposed it because it seemed too practical, would draw capital and labor from the older sections, where they were still needed, and would beget a trade with the Orient which would detract from that of the Atlantic Coast. No friend of the measure could have painted a bolder and more prophetic picture than that of the opponent who said: "The trade of the Pacific will naturally be with China, Japan, and the Philippines. They will not only be invited to this by their local position, but by the circumstances of their situation. Commerce is never so profitable as when it is carried on between a newly settled country, in which land is fresh and easily obtained, and one in which a dense population has made manufactures cheap and abundant." Considerable importance was attached to the establishment of a waterway connection by the river systems of the Missouri and Columbia, between the east and the west, "when distance and time will be conquered, and the ends of the earth be brought together." Should this prove feasible, and statistics were not wanting to demonstrate it, the United States would have the proud distinction of establishing that waterway for which the nations had been so many centuries in search.

Attention was called to the value to the nation there would be in the encouragement of the fisheries, for the training of seamen, and the advantages of a naval station at the mouth of the Columbia in case of war with Great Britain. General Jesup suggested that troops stationed there could be used in removing the British from the territory when the time came to settle the boundary. Such propositions were not palatable to the English, nor were they especially calculated to hasten a friendly settlement of such diplomatic proceedings as were necessary at a later time. They rather served the purpose

of strengthening whatever purpose the English had of looking out for their own interests. But they were clearer and more forcible announcements of the view of the American people than England could get through the diplomatic service.

In the history of civil government in Oregon there are two distinct movements, that of the regularly organized government, and that of the people themselves. They serve as the complement of each other, and act and react upon one another in a multitude of ways. Every time that the question was before congress it reacted upon the people, and the impetus thus set in motion again reacted upon a slower moving congress. In the westward expansion of our territory the movement of people has always preceded that of the national government. In the case of Oregon, through remoteness of the territory, and the difficulties arising from the joint claim and occupancy, the quicker movement of the people was more marked and the corresponding slowness of the government more irritating. This feeling of restriction is expressed by Floyd in the words: "All governments, republican as well as royal, take upon themselves the exclusive privilege of thinking for the people, of checking the progress of population in one direction or fixing the boundaries to it in another, beyond which they are not permitted to pass."

It had often been stated in the debate that a superior power had set the Rocky Mountains as the western boundary of the United States, and it is interesting to know that the following reply came from a representative of Massachusetts: "As we reach the Rocky Mountains, we would be unwise did we not pass the narrow space which separates the mountains from the ocean, to secure advantages far greater than the existing advantages of all the country between the Mississippi and the

mountains. Sir, our national boundary is the Pacific Ocean. The swelling tide of our population must and will roll on until that mighty ocean limits our territorial empire. Then, with two oceans washing our shores, the commercial wealth of the world is ours, and imagination can hardly conceive the greatness, the grandeur, and the power that await us.”⁷

There were other objections which seemed far more weighty than those of material inexpediency. The principle of colonization which would be forced upon the United States was regarded as a menace. “Should this principle now be recognized, it may hereafter be quoted as a precedent for measures which will change the condition and nature of the government, an event to be intimately associated with its destruction, or at least with the prostration of that liberty for the protection of which alone we can wish the government to exist.” Although it was shown that the probabilities were that the territory would become an integral part of the United States, yet the champions of the west were undaunted in defending colonization if it should come to that. Again it was the representative from Massachusetts who replied: “Was Great Britain more powerful, wealthy and happy before she began to colonize than now? Notwithstanding all her exhausting wars, all the drain of her colonial emigration, she was never more populous, more wealthy or more powerful than she is at this present day. Colonization does not impair the strength or diminish the wealth of nations. Some now within these walls may in after times cherish delightful recollections of this day when America, almost shrinking from the shadow of coming events, first placed her feet upon untrodden ground, scarcely daring to anticipate the grandeur which awaited her.”⁷

⁷Hon. Francis Baylies.

Equally great was the fear of entanglements with foreign nations, and particularly war with England because of a violation of the treaty, an objection which, perhaps, weighed most heavily in defeating the bill. Nor was this objection ungrounded considering the newness of the nation and the necessity of a period of peace for knitting together the internal fibres of strength. For this there was, of course, no demonstration, nor could it be opposed by proof, and yet there was courage in the answer: "Arguments founded on what may happen would go equally to prove the futility of establishing a navy which may be captured by an adversary. If a measure is right in itself it is unwise to reject it because its beneficial effects may be defeated by a war."

As might be expected in those days, every question must be tested by its effect upon the Union. The desire to perpetuate the Union, so dearly purchased, has laid at the foundation of many a policy. For its sake many things, desirable in themselves, have been given up or long delayed. That the national government could operate over a territory so vast, and regions so remote, with barriers separating them geographically from other sections, was questionable in the day before railroads and telegraphs. Yet, with a confidence inspired by their belief in the right of their position and in the final adjustment of national affairs to this action, the advocates of the measure argued that it would rather strengthen than weaken the Union: "The danger of separation would be less in a confederacy of twenty or thirty states with diverse interests than in one of smaller number," because the multiplication of interests would neutralize divisions which grow strong where the number is small.

Lastly, it was held that there was no need for present action, that no request had been made by the business public; it was a question to be settled not by the present

generation, but by the one to follow, and that no harm, either to the American title or interests, could result.

In the senate the discussion was briefer, but covered essentially the same ground. Benton took the leading part in favor of the bill, but received help from one of the senators from Virginia. The opposition cast much ridicule upon the idea of a senator going to and from Washington in less than a year, either by land or by water, around Cape Horn.

It is not possible in the compass of this paper to give a full account of this interesting debate, but only so much as will characterize the first movement toward governmental control by the United States. As we retrace the discussions, in the light of subsequent events, we cannot refrain from admiration of those who optimistically trusted that the measure, if right in itself, need cause no fear of danger in the future.

After the retirement of Mr. Floyd no leader appeared to continue the work begun, and consequently the subject dropped out of legislative discussion for about ten years, with the exception of an occasional resolution and a brief discussion. The interval of rest, however, was not such as follows the defeat of a measure, but was, rather, a period of preparation for another and greater effort. Many influences were set in motion which showed that the national consciousness was beginning to work. It was during this interval that Captain Bonneville and Capt. Nathaniel J. Wyeth made such heroic attempts to establish a trade west of the Rocky Mountains, with experiences equalling anything in romance. In a letter to his brother, Captain Wyeth says:⁸ "The formation of a trading company on a similar plan to the Hudson Bay and the Northwest is the ultimate

⁸The Correspondence and Journals of Capt. Nathaniel J. Wyeth, edited by F. G. Young.

object of my going to that country.” Before starting he offered his services to the government for the purpose of gaining information for them, and without “other compensation than the respectability attached to all those who serve their country.” Whether his offer was accepted or not does not appear from the correspondence, but the entrance into the country of such a man, with his companions, must mean a great deal in the clearing up of obscure questions. It was at this time, also, that Hall J. Kelley, who had been such a persistent and patriotic advocate of settlement, reached the country. Disappointed in not being able to secure grants of land and the protection of the government, he reached Oregon, after many hardships, with a few companions, and began the nucleus of a little settlement. Equally important was the impulse which missionary activity in the East had received from a fuller knowledge of this new and attractive field. Thus the religious motive was added to the patriotic, and both were added to the zeal for trade and adventure, in drawing attention to the new country.

Although the United States Government would give no guarantee of protection, yet the new arrivals met in those regions a condition of safety rarely found in so wild and remote a locality, and, for the time being, at least, were glad to avail themselves of the security offered by the Hudson’s Bay Company. Nor is it to be supposed that the colonists were entirely neglected by the Government of the United States. Though unable to grant fully the wishes for a civil government, or even for military posts, yet every executive took measures to gain such information as would keep the government well advised, and enable it to see that the brave forerunners of settlement suffered no personal injury. The interval of rest fell within the administrations of Presi-

dent Jackson, and his policy seems to have been one simply of watchfulness and the gaining of knowledge. To this end William A. Slacum, of the United States Navy, was appointed as a special agent, to visit Oregon and examine the conditions. This is important, as marking the policy the government intended to pursue while things were in process of transition. If the protection given was not adequate, it at least dispels the suspicion of utter heartlessness which would attach to a government which would let its citizens go, in support of its own interests, into this wilderness, without a single thought for their safety.

When the question, therefore, next came up for discussion, conditions had considerably changed. Traders had ventured into the country, missionary stations had been established, more knowledge of the country had been gained, a more careful examination of the title had been made by the conference which met in 1827, and the cause had enlisted the interest of some of the strongest men in political life.

In the second campaign the initiative was transferred from the house to the senate, and an able leader was found in the senator from Missouri, Dr. Lewis F. Linn. He was the colleague of Benton, and a man commanding the highest esteem of his associates. The attack began by a bill of February, 1838, for the occupation of the Columbia and the establishment of a civil government similar to previous bills. Meeting with failure, it was followed, as in the previous campaign, by several others, and, in spite of the assembling of the conference for the settlement of the northeastern boundary, in 1842, the discussions were carried on with a nearness to that event which seemed dangerous to Mr. Linn's associates. Shortly after the adjournment of the conference the discussions were renewed. As in the case of Floyd's bills,

there was a gradual toning down of the provisions, in the successive sessions of congress, so that the movement which started by advocating the establishment of a territory to be called the Oregon Territory, erection of a fort on the Columbia, occupation of the country by a military force, the establishment of a port of entry subject to the revenue laws of the United States, ended by advocating a line of forts along the route to Oregon, a post near its mouth, a grant of six hundred and forty acres of land to every male settler cultivating the land for five years, appointment of Indian agents to regulate affairs with the native races, and extension of the jurisdiction of the courts of Iowa over the territory west of the Rockies. The bill provided an increase of judges, justices, and constables, to meet the increase of business, and English subjects charged with criminal offenses were to be given up to the English courts. This bill passed the senate by a vote of twenty-four to twenty-two, in February of 1843, but failed of passage in the house. Thus Linn, like Floyd, was rewarded for his service by seeing his measure pass the house of which he was a member, but any further hopes were cut off by his death before the next session of congress.

The discussions bring out little that had not been said before. The question of the claims, which had figured so little in the previous debate, was an all important theme of discussion at this time. The language used shows a growing feeling of bitterness toward the English, and anxiety to secure such an arrangement as would encourage emigration. The large grants of land were especially for that purpose. It was in the course of this debate that Mr. Benton used these words: "I now go for vindicating our rights on the Columbia, and as the first step toward it, the passing of this bill, and

making these grants of land, which will soon place thirty or forty thousand rifles beyond the Rocky Mountains.'"⁹

In the course of the discussion, Linn's policy had received many reinforcements from without. It was about this time that the naval officer whom President Jackson had appointed, made a report which showed the need of action. In the beginning of the new agitation of the question, the Rev. Jason Lee, head of the Methodist missionary movement in the Willamette Valley, appeared in Washington. He had performed the long and dangerous journey across the plains, partly in the interests of his mission and partly in the interests of settlement and a civil government. Although a Canadian by birth, he early identified himself with American interests as best adapted to the successful accomplishment of his missionary enterprise. Although he had gone into the country in the interests of the natives, he was soon convinced that their interests would be served not alone by laboring with them, but by building up a moral and religious community. He was the bearer of a petition to congress from the colonists. It was signed not alone by those connected with the mission, but by some of the French and Canadian ex-employees of the Hudson's Bay Company, who had started an agricultural settlement on a beautiful tract of land called the French Prairie, in the Willamette Valley. This document set forth the history of the mission settlement, the prosperity which had attended it, the resources of the country for agricultural purposes, the advantage of its position for trade with China, and urged upon the United States the extension over it of a civil government, both in the interests of the colonists and of the country at large. It

⁹Thirty Years in the Senate.

showed how the nucleus of a settlement was started; it dwelt upon the previous dependence upon the Hudson's Bay Company, a relation which could not be expected to continue long in the changing conditions. While in the east, Mr. Lee delivered lectures at various points, and exhibited two Indian lads whom he had brought with him. In reply to inquiries from Hon. Caleb Cushing, who led the debate in the house, and who had been appointed upon a committee to make inquiries, he wrote a letter containing these significant phrases. "The country will be settled, and that speedily from some quarter, and it depends very much upon the action of congress what that population shall be, and what shall be the fate of the Indian tribes in that territory. It may be thought that Oregon is of little importance, but rely upon it, there is the germ of a great state. We are resolved to do what we can to benefit the country, but we are constrained to throw ourselves upon you for protection."

Other petitions were also received from the colonists which were stronger in their wording, exaggerating some things, and even making representations which, because of too hasty conclusions, were misrepresentations of the facts. They were, however, well adapted to be of service in the struggle for results. Petitions were likewise received from bodies of prospective emigrants, who asked for action by the legislature in granting lands and in furnishing the protection of the government. Memorials from Nathaniel J. Wyeth and Hall J. Kelley also were presented to the house by Mr. Cushing, and gave information concerning the physical and social conditions west of the Rockies. In this second campaign the executive support was more conservative than had been given by Monroe and Adams. It was the recommendation of President Van Buren to congress, that garrisoned

forts be established along the route for the protection of emigrants, for he thought that the gradual settling of this country would so far prepare the way for an adjustment favorable to American interests, that the possession of the country and the establishment of a civil government would be effected without danger. The failure, likewise, of the conference of 1842 to conclude the settlement of the northwestern boundary at the same time that it fixed that in the northeast, was a great disappointment to the people, who had been expecting some action. President Tyler felt it necessary to offer an explanation in his message to congress in which he referred to the fear of a protracted discussion, and the obstructions that might have been put in the way of settling the northeastern boundary by connecting it with a discussion of the northwestern.

This debate, like the previous one, was fraught with significant results, and the gain was substantial. Although it had failed of its immediate purpose, although it had been defeated in that body of congress in which it might most naturally look for success, and although the leader of the cause in the house, Hon. Caleb Cushing, counseled delay, because of the danger of complications with England, the effects, nevertheless, became apparent even before the debate was ended. Through the suggestion of Mr. Lee, an immediate step in advance was taken. It was decided that the government could, without violating the terms or the spirit of the existing treaty, send some one who should act as an agent of the government in dealing with the Indians, whose duty it should be to make treaties with them and establish such relations as would insure safety during the period of transition. This officer was to bear only the title of sub-Indian agent, but it was suggested to the colonists that his usefulness to them might be increased by entrusting him with such

additional authority as they thought fit to grant voluntarily ; that he might, if they so wished, act as a virtual governor of the colony. It will readily be seen that this office, by virtue of its indefiniteness, was one of peculiar difficulty. The effectiveness of the plan was also considerably diminished by the appointment of a man, Dr. Elijah White, who had previously been in the country and incurred some enmities. He was, however, cordially received, and entered upon his duties with hopefulness. The growing hostility of the Indians made immediate and almost continuous exercise of his authority necessary, and many treaties were made pledging the natives to respect the life and property of Americans. The previous authority of the English company had now to be shared with the American government, so far at least as Indian affairs were concerned. Thus a step in advance had been taken toward the realization of an American civil government, but it is questionable whether divided authority in dealing with Indians tended to security of life and property, especially where there was no means of enforcing the obligations of treaty agreements. In the exercise of authority along other lines, less success was experienced.

Another result was the sending of Lieutenant Charles Wilkes, Commander of the Pacific squadron, upon a cruise along the coast, with instructions to make investigations, and General John C. Fremont, to examine the overland routes. Both of these men were officers in whom confidence was reposed and whose opinions would have weight. The government did not recognize the need of such urgency of action as the people desired. It seems to have felt that its duty was discharged by commissioning officers to investigate the condition of things, by ordering an occasional vessel of war into the neighborhood, and by sending a sub-Indian agent to

prevent any depredations that the Indians might be disposed to commit. It seems to have felt that the few colonists already there were in no immediate danger of suffering injury, if they used good judgment, while the natural barriers to emigration would render additions to the population very slow.

Viewed from the standpoint of the colonists, however, everything was different. The Indian agent, without military aid, could not render effective service; Lieutenant Wilkes, because he was on friendly terms with the officers of the English company, was thought to be too much under their influence; session after session of congress was passing away without any action for the establishment of military posts, or the extension of civil government over the territory. It is but natural, under the circumstances, that the colonists should take the matter into their own hands, and do what the exigencies of the situation demanded. The formation of the pioneer provisional government may be regarded, therefore, as an example of the true American spirit, exhibiting a resourcefulness equal to every emergency.

The origin of institutions is complex, and doubtless many motives combined to bring this one into existence. Its purpose as expressed in the organic laws, drawn up as the constitution of the state, was declared to be: "Mutual protection, and to secure peace and prosperity among ourselves."¹⁰ This general statement, however, probably sums up a number of motives not specified. Most prominent among these were the feeling of nationality, the love of a democratic type of government, the desire for power to control the character of population that should come in, anxiety to secure permanent titles to the lands taken up, equal rights in the pursuit

¹⁰Oregon Archives, by Grover, are the authority used on the provisional government.

of the fur trade, protection from the Indians, prevention of lawlessness among a mixed population, facilities for the conduct of such business as growing numbers made necessary, and, perhaps, in some cases, personal ambition to exercise authority.

The idea seems to have had its origin among the missionaries and settlers in and about the Methodist mission station in the Willamette Valley. Although the subject had been under consideration before, the first effective step taken was in February, 1841, at the funeral of a settler, who died without heirs, and for the administering of whose estate there was no authority then in existence. A resolution was passed, expressing the need of a civil government, and a call was given for a general meeting to be held at the mission. At this meeting a committee was appointed, consisting of the various elements into which the community, though small, was divided, and was instructed to draw up a plan of government and report at a specified time. A judicial officer with probate powers, together with a sheriff and two constables to meet immediate wants, were also appointed. Although an attempt had been made, in the choice of the committee, to secure harmony, yet it never met to fulfill its task. When the general meeting, therefore, assembled at St. Paul's church, the Catholic mission station, there was nothing to report. The committee was reconstructed and a resolution passed to submit the matter to Dr. McLoughlin and Lieutenant Wilkes before further action was taken. As both of these men advised delay the matter was dropped for two years.

The idea, however, was kept alive, and was the subject of discussion at the meetings of a debating society at Willamette Falls, now Oregon City. The subject was again formally suggested at a meeting held at the house

of one of the settlers, for the purpose of taking measures to protect the cattle from wild animals. At the close of a series of resolutions dealing with wolves, bears and panthers, was one calling attention to the need of a civil government, and providing for a general meeting for discussion and decision. The meeting was held as provided May 2, 1843, at Champooick, between the present sites of Salem and Oregon City, and was an occasion of great interest and excitement. Opinion had been shaping itself on both sides, and the opposing views were fully represented.

The principal cause for anxiety was the body of Hudson Bay ex-employees, who were located in the valley. Most of them were French or Canadians, Catholics, and largely under the influence of the English Company. Although some of them were favorable to a government, the majority were not, and their views are quaintly summed up in an address prepared for presentation at a later public meeting. They objected to a provisional government as too "self-interested and full of degrees, useless to our power, overloading the colony instead of improving it." They proposed in its place a council, composed of men from all parts of the country "to judge the difficulties, punish the crimes and make regulations suitable for the people." They regarded a militia as useless and "a danger of bad suspicion to the Indians." The country was considered as "free at present, to all nations, till government shall have decided; open to every individual wishing to settle, without distinction of origin, and without asking him anything, either to become an English, Spanish or American citizen." There were also some general reflections to the effect that, "The more laws there are, the more opportunity for roguery for those who make a practice of it;" and "in

a new country, the more men employed and paid by the public, the less remains for industry."

It was known that the vote was to be close. The Canadians had been drilled to vote "no" on every proposition, and their strength was determined in an amusing way, by moving a question to which they would naturally have voted "yes." When the question of having a government was put to a vote the result was so close, that the chairman was in doubt. A division of the house was called for, and at this critical point, Joseph Meek, a typical frontier character, strode forward with the words: "Who's for a divide? all in favor of the report and of an organization, follow me." When the vote was counted, it was found to be in favor of a government.

After this decision had been made there was still a difference of opinion concerning the kind of government to be established. Some were in favor of complete independence, while others wanted a provisional government that should last until that of the United States should be extended over the country. The English interests, unable longer to prevent some action, now directed their influence toward securing an independent government, under the protectorate of England, if possible, and independent of the United States at any rate. The decision favored a provisional government, and a committee of nine was appointed to draft a plan to be submitted to the people at a meeting to be held at Champooick on the fifth of July, 1843. This committee is of great importance in the history of civil government in Oregon, because of the responsibility which rested upon it, and because of the excellence of its work. Its members were neither learned nor acquainted with the law, but they possessed good judgment and common sense. Their meeting place was an old barn belonging to the Methodist mission.

In the drawing up of their organ of government they very wisely adopted the ordinance of 1787, making such changes as the peculiar local conditions rendered necessary. There was, first, a bill of rights, providing for freedom of religious belief and worship, the right of *habeas corpus* and trial by a jury of peers, proportionate representation, judicial procedure according to common law, moderate fines and reasonable punishment, encouragement of morality and knowledge, maintenance of schools, good faith toward the Indian, and the prohibition of slavery. There was, also, provision for the necessary organs of government, a legislative branch, to consist of nine members, elected annually; an executive branch, to consist of a committee of three; and a judicial department, to consist of supreme and associate judges, a probate judge, and justice of the peace. Provision was made for subordinate officials, a battalion of soldiers, and grants of land to settlers. On the appointed day the meeting convened at Champooick to receive the report. It came, opportunely, on the day following our national holiday. Although the general sentiment seems to have been friendly to the movement, yet there was enough variety of opinion to lend spice to the occasion. When the plan drawn up had been reported to the people, its provisions were readily passed. The principal discussion took place in regard to the executive. It had not been the purpose to have any executive at all, on account of the rivalry for the governorship, which unfortunately existed at a time when united action was desirable. The committee, upon their own responsibility, had recommended as a compromise an executive committee of three. Although it was characterized by the opposition as a "hydra-headed monster," and a "repetition of the Roman Triumvirate," it was finally accepted.

After the adoption of the organic laws, and the elec-

tion of the necessary officers, the government went into operation. It had no provision for taxation, and its expenses had to be met by voluntary subscription. It had no public buildings, and for a time had to meet at private houses. It soon became apparent that there were defects in the plan of government as at first adopted. It was found to be unfitted for governing a community of any large number, or for any long period of time. It had been prepared only for a temporary purpose, and only for a short time. Its very imperfections, however, were virtues to those who feared that a more perfect government would lead to independence from the United States, which was an all-absorbing question among the colonists and the basis of their party distinctions. As time passed, however, and the United States took no action toward extending her government over the colony, it became apparent that something must be done to make the provisional government stronger and better fit to endure a longer delay, and to govern more effectively the larger numbers which were coming into the country. The first message of the executive committee, therefore, contained the following words: "At the time of our organization it was expected that the United States would have taken possession of the country before this time, but a year has rolled around, and there appears little or no prospect of aid from that quarter, consequently we are yet left to our own resources for protection. In view of the present state of affairs, we would recommend to your consideration the adoption of some measures for a more thorough organization."¹¹

The changes recommended were: Creation of a single executive in place of a committee of three; increase in the number of representatives in the legislative department; change in the judicial system, together with

¹¹Oregon Archives.

changes in certain specific subjects more of the nature of statute than fundamental law. The recommendation was followed and the changes were made. This first session of the governmental body, indeed, was prolific in legislation. Not only did it make these changes, but an act was passed more exactly defining the jurisdiction of the government. In the original plan it had been vague, and was by this act confined to the region south of the Columbia River. Provision was likewise made for the raising of revenue sufficient to carry on a more effective government, and all who refused to pay their taxes were denied the right of suffrage and the benefits which the government conferred. This was an effective mode of winning the support of some who had stood aloof. Acts were passed prohibiting the manufacture and sale of intoxicating liquors, and negroes and mulattoes were excluded from the territory upon penalty of whipping. It was the desire of the members of this first legislature to call a constitutional convention for making the organ of government more perfect and putting the changes already made into permanent shape. It met with opposition, however, because of the fear that it might drift into an independent government, toward which there was in many directions a strong tendency.

The session of 1845 was made up largely of the American party, and these men soon began the work of making what they refused to call a "constitution," but called a revised "compact," to be submitted directly to the people. The compact secured most of the changes already made, drew a distinction between statute and fundamental law, was well worded, and removed the vagueness of previous provisions. This was in accordance with the sentiment which existed in the colony, and was, therefore, adopted by vote of the people at a special election, July 26, 1845. These changes were made possible

by the greater legal talent which came with the migrations of 1843 and 1844, and were made necessary by the increase in population and the delays of the national government. For three years longer the provisional government was in force, exercising all the sovereign functions of government; and, before superseded, it carried on a war with the Indians.

Thus came into existence that government which has been characterized by one who was in a position to know as, "strong without an army or navy, and rich without a treasury;" so effective "that property was safe, schools established and supported, contracts enforced, debts collected, and the majesty of the law vindicated."¹² This is a judgment quite generally endorsed by the oldest of the pioneers who look back to it with pride and affection.¹³

The formation of the provisional government met with no opposition from congress or the President. In fact, there is nothing to show that it received any formal attention at all. It was, however, whether so recognized or not, a long step in advance. All that the United States government could wish to accomplish in securing an equal foothold in the territory, was brought about without action on its part and without complications that might have accompanied an extension of a United States territorial government over the country, as provided by the various bills. Every issue which the government itself could have forced, was forced by the pioneers themselves. A permanent break was made in the old order of things; the fur trading regime was forced to give place to an agricultural civilization. The way was prepared for a distinctly American government. The final settlement of the Oregon question was made easier than it

¹²J. Quinn Thornton. ¹³Conversation with A. Hinman, pioneer of 1844.

otherwise would have been ; and a splendid demonstration was given of the fact so often seen in the history of nations, that crises are settled most effectually by the people of the nation themselves. The English made an effort to adjust themselves to the new conditions and preserve their old authority. But their autocratic social machinery, which probably had been best fitted for the period of the fur trade, was unable to cope with the democratic provisional government in meeting the needs of an agricultural settlement. It was the passing away of one type of social order as the conditions themselves changed, a fact well verified by the cordial support the new order of things received from many who had opposed its formation.

The effect of the change upon the Indian people was more serious. The passing away of the old was fraught with great significance to them. The entrance of the new meant the gradual loss of their lands and the changing of their habits of wilderness existence. It was not long ere the new government found itself involved in difficulties growing out of these conditions, with which it was not able to grapple alone. When the time of greatest need drew near, however, it was possible to take another step in the gradual development of civil government, as it was necessary for the national government to take some steps in the protection of its citizens against the Indians. The events which led up to, and which made possible this result, so long struggled for, are as romantic and stirring as anything that has ever occurred in our history.

In tracing the influences which were at work to bring about the further steps in the development of civil government, we need, first, to note the effect produced by the treaty of 1842, which settled the northeastern boundary. That annoying question, which had been under dispute so long, had, by virtue of the anxious desire to

reach a conclusion, done much to retard the settlement of other questions of difference, particularly that of the northwestern boundary. But, now that the settlement had been reached, the way was clear for attention to this question by itself, and freed from its bearing upon other issues. Such a condition of affairs is surely a significant one in the development of our subject. Its immediate importance was, of course, connected with the boundary question; but the extension of a civil government was waiting upon that, and its fate inseparably connected with it. In his message of December, 1842, while explaining the omission of a settlement from the treaty just concluded, Tyler manifests something of the freedom gained, in a bolder statement than had appeared from the executive department for many years: "The territory of the United States, commonly called the Oregon Territory, lying on the Pacific Ocean, north of the forty-second degree of latitude, to a portion of which Great Britain lays claim, begins to attract the attention of our fellow citizens, and the tide of population, which has reclaimed what was so lately an unbroken wilderness, in more contiguous regions, is preparing to flow over those vast districts which stretch from the Rocky Mountains to the Pacific Ocean. In advance of the acquirement of individual rights to those lands, sound policy dictates that every effort should be resorted to by the two governments to settle their respective claims."

While the colonists were urging on the formation of the provisional government, and the national policy was pervaded by the greater freedom shown in Tyler's message, another influence was brought to bear toward the accomplishment of the result. It was in the spring of 1843 that Dr. Marcus Whitman, head of the Presbyterian and Congregational mission at Waiilatpu, near the present site of Walla Walla, appeared in Washington. He

had made the long and dangerous journey in the winter season, when hardy mountain trappers would scarcely dare to try it. Almost frozen by the cold, and nearly lost in the blinding snow storms, he finally reached his destination. This heroic journey was made partly in the interests of his mission work, and partly to awaken such interest in the country that immigrants would come, and that the government would protect them in their coming. Although, before this time, he had been attentive to his work among the Indians, and, by reason of the location of his mission, had been compelled to exercise caution and reserve, yet he was always an ardent admirer of American institutions and looked forward to their final extension over the country. He was a quiet yet earnest advocate of the provisional government, and was fully aware of the means by which further results were to be secured. The gradual settlement of the country by industrious and moral people, a strict and friendly observance of the terms of the treaty, a self-imposed system of government suited to existing needs, a final settlement of the boundary that would preserve the territory that rightly belonged to the United States, and a final incorporation into the nation when possible, would seem to express his position.

Both among the colonists and in the east the feeling was prevalent that in settlement rather than in congressional action lay the issue of the Oregon question. Heroic work had been done in congress, and heroic work was being done by the colonists themselves. There were indications, also, that the English were awake to the importance of settlement. Already they had a number of Canadian and French ex-employees of the company in the valley of the Willamette; a body of emigrants had just come to the country around Puget Sound, and various rumors were afloat of settlement on a larger

scale. As the success of the Americans' hopes rested now on settlement, this was, indeed, a critical moment for the advocates of provisional government and the final extension of the institutions of their native land. It was a time for heroic action, and the journey of Marcus Whitman will always be named as one of the most significant, as well as romantic events in the history of civil government in Oregon.

Such an ambassador could not fail of a hearing, and conferences were held both with the President, John Tyler, and the Secretary of State, Daniel Webster. Dr. Whitman emphasized the value of the country, and what was more significant, the possibility of reaching it by wagon. Any abandonment, however, of the Oregon cause beyond a reasonable compromise, seems scarcely possible to one who has traced the government's relation to the question from the beginning. And even such a compromise would seem uncalled for, when the northwestern boundary question stood by itself freed from other objects. Some of the friends and associates of Dr. Whitman, however, are authority for the statement that some such sacrifice was in contemplation and had practically been made before his appearance in Washington. If the evidence that comes to light confirms the advocacy of such a policy by Mr. Webster, it would have been a surprise to every one, and would have met a storm of opposition when made public, and could hardly have been ratified, in view of the fact that popular interest had never been greater, presidential support never more hopeful, and the records and traditions regarding the boundary line had never considered seriously any settlement below the forty-ninth degree of latitude.

Upon his return west in 1843, Mr. Whitman wrote to the Secretary of War an account of his journey, and the

emigration that had gone west that year. It was the first large emigration, numbering about one thousand people, and had been guided through the mountains by Mr. Whitman, making the entire journey by wagon. Accompanying this letter was the draft of a bill providing for the establishment of forts at various points along the route for the protection of further emigration. This seems to have been done in accordance with an understanding, reached during his stay at Washington, and marks the policy of the government until the end was reached.

The succeeding messages of President Tyler are firmer in their tone and give more space to the subject. In the message of December, 1843, he said: "After the most rigid, and, as far as practicable, unbiased examination of the subject, the United States have always contended that their rights appertain to the entire region between forty-two degrees of latitude and fifty-four degrees and forty minutes. * * * In the meantime it is proper to remark that many of our citizens are either already established in the territory, or are on their way thither for the purpose of forming permanent settlements, while others are preparing to follow; and, in view of these facts, I must repeat the recommendations, contained in previous messages for the establishment of military posts at such places along the line of travel as will furnish security and protection to our hardy adventurers, against hostile tribes of Indians, inhabiting those regions. Our laws should also follow them, so modified as the circumstances may seem to require. Under the influence of our free system of government new republics are destined to spring up, at no distant day, on the shores of the Pacific, similar to those existing on this side of the Rocky Mountains, and giving a wider and more extensive spread to the principles of civil and religious liberty."

Still stronger is the language of the message of December, 1844, when the notification of another conference is accompanied by the words: "The establishment of military forts along the route at suitable points upon the extended line of land travel would enable our citizens to emigrate in comparative safety to the fertile regions below the Falls of the Columbia, and make the provision of the existing convention for joint occupation of the territory more available than hitherto, to the latter. * * * Legislative enactment should also be made which should spread the ægis over him of our laws, so as to afford protection to his person and property, when he shall have reached his distant home. In the latter respect the British Government has been much more careful of the interests of such of her people as are to be found in that country, than the United States. Whatever may be the result of the pending negotiations, such measures are necessary. It will afford me the greatest pleasure to witness a happy and favorable termination to the existing negotiations upon terms compatible with the public honor, and the best efforts of the government will continue to be directed to this end."¹⁴

But other influences were at work to bring about these changes. Then, as now, the scent of politicians for issues to place in their platforms for winning votes, were keen. And here was a question well fitted to their purpose. The southern wing of the democratic party was anxious to annex Texas in the interests of slavery, and an annexation of Oregon to satisfy the northern wing was a shrewd move to gain votes and place James K. Polk in the presidential chair.¹⁵ It was a bold stroke, and might easily bring on war with England. But now

¹⁴Messages of the Presidents, by Richardson, is authority for statements of Presidents.

¹⁵Blaine's Twenty Years in Congress.

all the fears of entanglement, which had furnished the theme of many an eloquent discourse were thrown aside, and the country entered upon an exciting campaign, in which the rallying cry was "Fifty-four, Forty or Fight." In spite of angry threats of war on the part of England, Mr. Polk was elected, and the administration was committed to a settlement of the question.

In his inaugural address, Mr. Polk referred to the subject as follows: "It will become my duty to assert and maintain by all constitutional means the right of the United States to that portion of our territory which lies beyond the Rocky Mountains. Our title is 'clear and unquestionable,' and already our people are preparing to perfect that title by occupying it with their wives and children. But eighty years ago our population was confined on the west by the ridge of the Alleghanies. Within that period our people, increasing to many millions, have filled the eastern valley of the Mississippi, adventurously ascended the Missouri to its head springs, are already engaged in establishing the blessing of self-government in the valley of which the rivers flow to the Pacific. The world beholds the peaceful triumphs of the industry of our emigrants. To us belongs the duty of protecting them wherever they may be upon our soil. The jurisdiction of our laws and the benefits of our republican institutions should be extended over them in the distant regions which they have selected for their homes. The increasing facilities of intercourse will easily bring the states, of which the formation in that part of our territory cannot long be delayed, within the sphere of our federative Union. In the meantime every obligation imposed by treaty or conventional stipulation should be sacredly respected." In the message of December, 1845, he said: "Beyond all question the protection of our laws and our jurisdiction, civil and criminal, ought to be im-

mediately extended over our citizens in Oregon. They have had just cause to complain of our long neglect in this particular, and have in consequence been compelled, for their own safety and protection, to establish a provisional government for themselves. Strong in their allegiance and ardent in their attachment to the United States, they have been thus cast upon their own resources. They are anxious that our laws should be extended over them, and I recommend that this be done by congress with as little delay as possible to the full extent to which the British parliament have proceeded in regard to British subjects in that territory. * * *

The British proposition of compromise, which would make the Columbia River the line, south of the forty-ninth degree, with a trifling addition of detached territory north of that river, can never for a moment be entertained by the United States.' Considerable space in the message was given to this subject, and recommendations were made for Indian agencies, custom houses, postoffices, and post roads, a surveyor of lands, liberal grants to settlers, the jurisdiction of the United States laws, and the required year's notice to England of the expiration of the treaty of joint occupancy.

With considerable of the jingo spirit in the house, and with commendable moderation in the senate, a notice was finally prepared which would accomplish the result without giving offense. England, realizing that longer delay might only injure her cause, finally took the initiative and proposed the conference which met in 1846, and settled the boundary by a compromise at the forty-ninth degree of latitude.

The settlement of the boundary line was the result that had been looked for so many years, and it would seem that nothing longer stood in the way of a realization of the hopes of all who favored the extension

of the national government as far as the Pacific Ocean. One after another the obstacles had been falling away. The knowledge and facilities of travel which enabled yearly trains of emigrants to cross the plains were eliminating the element of distance. The advance of a sturdy population carrying westward breadth of views and force of character was deciding the national policy, and the settlement of the boundary line removed a multitude of difficulties which filled the whole period of joint occupancy. Why then should there be longer delay? Action was expected by the people, the needs were growing greater every day.

It is easily explained. The very cause which had gained for the nation the territory, now operated to retard the passage of a bill which would make it a territory in government. The question in the last phase of its existence had gained entrance into the party politics of the country, which at that time were identified with the question of slavery and its extension into new territory. Though every barrier was removed, though Dr. Whitman with thirteen others had been murdered by Indians, though an urgent petition was received from the provisional government pleading for action, though two special messengers were sent to Washington to hasten legislation, though the democratic party was pledged to complete the work begun, though the President sent a special and urgent message to congress, though the territory in question was wholly outside of the belt where slavery might reasonably be expected to exist, yet an obstinate desire to maintain the abstract doctrine, and prevent any reflections upon the unholy institution of slavery, was responsible for this delay.

The President in his message of December, 1847, said : "Besides the want of legal authority for continuing their provisional government, it is wholly inadequate to pro-

tect them in their rights of person and property, or to secure to them the enjoyment of the privileges of other citizens to which they are entitled under the Constitution of the United States. They should have the right of suffrage, be represented in a territorial legislature by a delegate in congress, and possess all the rights and privileges which citizens of other portions of the United States have hitherto enjoyed, or may now enjoy.”

While the executive department was strongly urging the question, it was receiving attention likewise in congress. After the death of Senator Linn, new advocates of the subject came forward, both in the house and in the senate. Bills and resolutions were before the legislature continually. Memorials came in from bodies of prospective settlers, from city councils, and even from state legislatures. The provisional government sent petitions in behalf of the colonists, which were well worded statements of the situation. Atchison and Hughes, both of Missouri, introduced bills, in which the boundary line at fifty-four degrees, forty minutes, was asserted. The notice of the termination of the treaty of joint occupancy was given which led to the conference of 1846, and the settlement of the boundary. After the treaty, various bills were introduced for the establishment of a territorial government. For two years obstructions and delays prevented action, and the last session under Polk's administration arrived. There were at this time two bills before congress, both practically framed by Stephen A. Douglas, of Illinois. The interest manifested by Mr. Douglas in this matter again illustrates how much the development of civil government in Oregon is connected with other questions. He seems to have been largely interested in the creation of new territories out of the possessions west of the Mississippi. In a conversation before his death he stated to a friend, who has reported it in a

treatise, that this interest was caused by a conviction that there was a settled policy in the east to prevent the westward growth of the nation by settling the Indian tribes, as they were gradually being moved upon the public lands west of the Mississippi. Not only would this prevent a large part of that valley from being settled and becoming a part of the nation, but would completely cut off the line of emigration to Oregon, retarding its growth, or destroying it altogether.¹⁶

An unfortunate amendment touching the question of slavery was made to Mr. Douglas' bill, and from that time on the main issue was buried out of sight in the discussion of the slavery question. The representatives from the south would not sanction a denial of their right to take their slaves with them into any of the new territories. Various attempts were made to sidetrack the question by joining its destiny with that of California and New Mexico, and various efforts at compromise were made. As the last day of session came, the anxiety was intense. The bill was before the senate for decision. The subject occupied the greater part of the day, and was continued into the night. Many of the leading men took part in the discussion. It was the policy of the opposition to delay action until the expiration of congress. Mr. Benton called attention to the urgent need for immediate action in somewhat exaggerated language: "A few years ago we were ready to fight all the world to get possession; and now we are just as willing to throw her away as we were then to risk everything for her possession. She is left without a government, without laws, while at this moment she is engaged in a war with the Indians. There are twelve or fifteen thousand persons settled there who have claims on our protection. She is three thou-

¹⁶Brief Treatise on Constitutional and Party Questions by S. A. Douglas. Reported by J. M. Cutts.

sand miles from the metropolitan seat of government. And yet, although she has set up a provisional government for herself, and that provisional government has taken on itself the enactment of laws, it is left to the will of every individual to determine for himself whether he will obey those laws or not. She has now reached a point beyond which she can exist no longer?"¹⁷ The opposition spirit is illustrated in the equally exaggerated remarks of John C. Calhoun: "The separation of the north and south is now completed. The south has now a solemn obligation to perform to herself, to the Constitution, to the Union. She is bound to come to a decision not to permit this to go on any further, but to show that, dearly as she prizes the Union, there are questions which she regards as of greater importance. She is bound to fulfill her obligations as she may best understand them. This is not a question of territorial government, but a question involving the Union." It is interesting to hear Mr. Webster's views as summed up in the Congressional Globe: "His objection to slavery was irrespective of lines, and points of latitude. He was opposed to it in every shape, and in every qualification. He was against any compromise of the question." At the close of the day a motion to lay the bill on the table was defeated. The evening was given to discussion, and a motion to adjourn was lost. As the night passed away, the friends of the bill reclined in the ante-rooms ready to vote if an opportunity came, while a few kept guard in the senate chamber. A motion at midnight to adjourn was lost. A senator from Mississippi arose for the purpose of killing time. Until 9 o'clock the following morning, which was Sunday, he gave a rambling history of the world, beginning with the story of the creation. Exhausted, either

¹⁷Congressional Globe is authority used for remaining discussions in congress.

in strength, material, or obstinacy, he finally sat down. Senator Benton, ever on the alert, immediately moved the passage of the bill. It was carried in a short time, and taken to the President for his signature so that it might become a part of his administration. Thus Oregon became a territory August 14, 1848. It was a very fitting thing that Senator Benton, who had from the first championed the cause, should have the satisfaction of seeing it finished.

The provisions of the bill making Oregon a territory resembled those of other bills of a similar kind in most particulars. The special messengers, J. Quinn Thornton and Stephen L. Meek, had been able to make suggestions which fitted the bill to the peculiar needs of the new territory. It was notable in being the first bill to set aside two townships of land, instead of one, for the purpose of supporting schools. It recognized the machinery of government already in existence, and endorsed the provisions of the ordinance of 1787, which had already been adopted, in regard to slavery. The transition from the provisional government to the territorial was easily made, and Oregon started out on a new era of existence. The first Governor appointed, Gen. Joseph Lane, referring later in congress to the experience of this time said: "When I arrived there, in the winter of 1848, I found the provisional government working beautifully. Peace and plenty blessed the hills and vales, and harmony and quiet, under the benign influence of that government, reigned supreme throughout her borders. I thought it was almost a pity to disturb the existing relations, to put that government down and another up. Yet they came out to meet me, their first Governor, under the laws of the United States. They told me how proud they were to be under the laws of the United States, and how glad they were to welcome

me as holding the commission of the general government.''

The period of territorial government was one of growth along all lines. Trouble with the Indians, increase of population, development of industrial life, and the various needs of a growing community, made many drafts upon the new government. It was not long before the largeness of the territory made a division desirable. The people north of the Columbia, separated from those to the south by geographical boundaries, and possessing interests of their own, voted to request the formation of the Washington Territory. This was granted by congress in 1853.

It was not long before forces began to bring about the last step in the development of civil government. There were many things which led to a desire for statehood. The people, in their provisional government, had become accustomed to the complete management of their local affairs, without the supervision of any power above them. While they valued the strength that was derived from connection with the United States, there were many restrictions which troubled them. Then, too, there were other delays incident to ratification of legislation, which was vexatious, particularly to a people who had hitherto enjoyed the quick application of their own laws. The difference between the local and national policy regarding the Indian problem was another influence at work. The people, annoyed by troubles with the Indians, which were breaking out at intervals, were inclined to a policy that would remove the Indians entirely, while the general government sought to pursue a policy that was more conservative. Nor was the local pride, which the rapid progress of California into statehood had aroused, entirely without its effect. A desire was likewise manifested for the advantage that was thought to lie in the

larger representation that a state would have in congress, by the addition of two senators. Nor were ambitious politicians wanting to keep alive this belief and to accept the positions created. There were influences pulling toward the creation of a state government, with its senatorial representation, outside of the community most directly interested. There are always interests to be found in the general drift of political affairs that seek re-enforcement through the admission of new states.

So great, however, was the opposition among the people of the territory, that the calling of a constitutional convention was three times submitted to the people before it was sanctioned. There was opposition from the southern part of the territory where a plan was in contemplation for union with Northern California in the formation of a new state; there was opposition from the whig party which was growing in power and had a vigorous organ to represent it in the *Oregonian*, and there was a feeling of conservatism which felt that things were not yet ripe for statehood, expressed later so well by Matthew P. Deady, the President of the Convention, in his closing address to that body: "I have not regretted the delay that has occurred, by the country refusing to authorize a convention before this time; but on the contrary, think it has been for the best. As to mere numbers and wealth, we have doubtless sufficient of both to maintain a state government; but a people in my opinion, require age and maturity, as well as wealth and numbers to make them competent to carry on a government successfully. As in the growth of the child and the oak so with a people. Thrown together as we have been, upon this coast, it requires time to knit together in one harmonious whole our diversified elements of population."¹⁸

¹⁸Journal of the Constitutional Convention.

The Constitutional Convention met in August of 1857, at Salem, and was in session for four weeks. It consisted of sixty delegates. It was early agreed to leave the question of slavery to be decided by the people themselves, at the same time that they acted upon the constitution, and thus the greatest danger of obstruction and delay was removed. The discussions, as reported in the newspapers of the time, indicate considerable party spirit, but, for the most part, they were harmonious and marked by fairness and deliberation. Little difficulty was experienced in framing the main features of the constitution, providing for the organs of government. A general disposition favorable to economy was manifested throughout. That it sometimes went to extremes would be indicated by the dry humor of the suggestion that the chief executive of the state be requested to board around, in the good old schoolmaster fashion.

Many of the most important subjects passed with little or no discussion, but enough questions to excite differences of opinion arose to occupy the time. One of the earliest discussions was upon the boundary of the state. The sentiment was nearly all in favor of a large state; yet a proposal was made to bound it on the east by the Cascade Mountains, which were held to be the natural boundary. This, it was thought, would leave room for the creation of more states and a larger representation in the United States Senate from the west. The speeches in opposition were interesting. One of the delegates in advocating a large state expressed himself in the following words: "I am in favor of extending the area of this state as far east as we can go, go to the Missouri, if possible. I would like to take in Utah, if we could do them any good."¹⁹ Another said: "I like a large state; I was

¹⁹Reported in the Oregonian, 1857.

born and raised in one—the Empire state. Although the people of Rhode Island and Delaware may be very good people, yet I rejoice to know that I was not born in either. I do not like little states; they may have votes in the senate, but they have no political influence. Mr. Seward, black republican as he is, when he speaks in the name of the great state of New York, speaks with an authority and a weight that a Webster could not command speaking from Rhode Island.” Another discussion pertained to the introduction of a clause prohibiting the manufacture and sale of intoxicating liquors, a proposal which was finally rejected. Perhaps the longest discussion arose upon a clause rendering the stockholders of a corporation liable for its debts and obligations. It drifted into a consideration of the subject of corporations in general. The opinions expressed ranged all the way from a desire to protect the farmer against “smart gentlemen representing to them glittering schemes” to “that broader question, whether the resources of the country shall be developed or not, whether we shall have the means and facilities for creating a market here, at home, for our surplus products, and whether the capital that shall come into the country shall receive such protection as will cause it to be productive.”

In most particulars the constitution resembled, both in form and substance, those of other states of the Union. There were some distinguishing features, however. The question of slavery had been decided in the negative by vote of the people, and a clause excluding slavery introduced. There was a feeling, quite common throughout the west, against free negroes, and clauses were introduced to keep them out, by a denial of the right of suffrage, of holding real estate, and the maintenance of any suit in the courts. A somewhat similar policy was pursued toward the Chinese. The assembly was given the

right to restrain and regulate immigration, although the conditions of suffrage were made easy for the foreigner. The state was saved the experience of a wildcat medium of exchange, by denial of the right to charter any institution to issue such money. The state was prohibited from being a stockholder in a corporation, and such enterprises could only be established under general laws. The danger of extravagance in the development of the state was prevented by denying the right to incur an indebtedness beyond \$50,000.

This constitution, upon being submitted to the people, was adopted by a majority, and application was made to congress for admission, under its provisions. The constitution, though conservative in the main, provided well for existing needs, and for a safe and steady growth. There was nothing in it to encourage a hasty development or a speculative and harmful condition of industrial life. There is every reason to appreciate the good judgment of those who framed it and did much to mold the character of the commonwealth, as conservative, as sound in its social and industrial policy, and to be depended on for sober and considerate action. Located, as the State of Oregon is, upon the Pacific Coast, where much of the history of the next century must be made, itself the product of an enlarged national life, it must, of necessity, exercise a greater influence in the national policies of the future than it has in those of the past. Some of the provisions of the constitution have, of course, been made of no effect by the amendments to the National Constitution. No sufficient cause has yet arisen to make imperative its own amendment, but the growth of the state may render necessary some changes in the near future.

When the question came before congress the bill was passed without great delay in the senate and submitted

to the house. It became the occasion of discussion, but was finally passed and received the President's signature February 14, 1859. The principal objection made to its passage was the denial of a requisite population. No census had been taken since 1855, and approximations had to be made. The delegate from the territory, Joseph Lane, gave it as his opinion that there were from ninety thousand to one hundred thousand people, and his authority was finally accepted. An effort was made by some to join it with the Kansas question, and refuse it admission because that state, with a larger population, had been refused. Some opposed it because it prohibited slavery, and some because it prohibited free negroes; some opposed one specific clause of the constitution and some another, while some opposed it on party grounds and would not vote for a measure introduced by the democratic party. The final sentiment, and the one most generally prevailing, was well expressed by the representative from Massachusetts. "There are provisions in her constitution which, were I to vote upon them, could never receive my sanction. But I do not consider myself as responsible, in the vote which I give for her admission, for each and every item in her constitution. I vote for her admission on general principles. Her constitution is republican in form, and slavery is excluded from her territory forever. I regret with sadness that the people have deemed it expedient to adopt the article they have relative to free negroes, but I must regard it as but temporary and inoperative. I find no state west of New York ready to grant full rights and privileges of citizenship to free blacks; therefore it would be inconsistent to reject Oregon for this clause in her constitution. Oregon, at no remote day must be admitted as a state. If we delay her admission, no man

can foresee what intervening circumstances may occur to embarrass and embitter future proceedings."

As we have followed, one after another, the steps in the genesis of political authority and of a commonwealth government in Oregon, we have seen the heroic efforts made by some who have stood out conspicuous as leaders; we have seen the no less heroic efforts of many whose names have received no mention, but whose part in the result has been as great; we have seen the influence of forces which were powerfully working with or against the efforts to achieve the result. We have seen a locality well fitted for the home of man pass out from the condition of a wilderness, through all the stages of development, to that high state of civilization where every individual enjoys the privilege of citizenship in a great nation, as well as all the liberties of local freedom. And although we have been engaged upon a theme of local history, in its unfolding we have beheld at the same time a gradual enlargement of national life, and a steady progress toward greater things.

JAMES ROOD ROBERTSON.

THE PROCESS OF SELECTION IN OREGON PIONEER SETTLEMENT.

In the days of the early Oregon pioneers the narrative of Lewis and Clark's explorations to the Pacific Coast had become little more than a tradition to the frontier people of the West. The wild stories of mountain trappers, told by camp fires, and colored by vivid recollections of real privations among mountain defiles—these formed the picture in the popular mind along the frontier of the difficulties to be overcome in a journey across the Rockies. As long as these reiterated stories took their measure of endurance from the wanderings of missionaries and mountain trappers, the problem of their influence might be a simple one; but when the question of taking women and children over the dreary wastes of wide deserts and pathless steeps of mountain cliffs was raised, other considerations were at once added; for how could these trusts be transported over bridgeless and fordless streams? How insured against hunger and thirst, and how kept out of reach of the danger of attack by hostile tribes of Indians?

The object of this brief paper is to outline a conviction of the writer that the difficulties in the way of a migration to Oregon—as these difficulties were seen by the people of the frontier states—formed a selecting test of the kind of people who alone could go to Oregon across the mountains in those days—a real and practical natural selection of a new people for a new community.

Without entering into the hackneyed question of the agency of Doctor Whitman in securing Oregon for the United States, we may say Doctor Whitman was no

mythical character. He was a real man; a missionary of the American Board. In 1842 he found the Indians around him so dissatisfied, that he called a synodical meeting of the neighboring missions, and submitted to them the question "Shall we give up the mission of Waiilatpu?" The synod decided in the negative. The doctor then said to his co-laborers, "Then you must vote me leave of absence, for I must go home to confer with the board on the situation." In fact Doctor Whitman seems to have had a mild kind of monomania on the subject of ox teams drawing plain Missouri wagons from Fort Independence to the Columbia at Wallula. Anyway, his brethren of that synod all knew that he carried that conviction with him to the states. They knew, too, that he wanted an opportunity to publish it along the frontiers to the restless multitude who were asking the question, "Was it safe to attempt to take a family to Oregon in an ox wagon?" Doctor Whitman said he knew this could be done; said he himself would guide a train of wagons to Wallula, on the Columbia, and reach there before the fall storms should hinder their progress.

Let us now turn to the restless people of the frontier who wanted to go to Oregon, and inquire what their mental picture of the great barriers of the journey was. At this time, 1842, these restless people might be found from Eastern Tennessee to Western Missouri. In their view the Rocky Mountain barrier was not a single line of mountains, but a complex system of ranges, like the one that separated Eastern Virginia and the Carolinas from the valley of the Ohio, with whose character they were familiar. They clearly apprehended the difficulties of such mountain travel, without roads or bridges, without shops for repairs, or towns for repurchase of supplies run short. They saw plainly the necessity of starting with wagons loaded for the whole journey, and of getting

through before winter. They knew, too, that having passed the Rocky Mountain barrier, a vast desert plain hundreds of miles across extended from the western slope of the Rockies, only to bring them to another mountain barrier—the Cascade Range, which, if not higher, was at least steeper in its approaches. And, inasmuch as this second barrier would be reached late in the season, oxen and horses would be so weak and worn by their long journey as to add fearfully to dangers which they of all people knew how to appreciate. Let it be remembered, too, that all this fearful risk was to be borne by women and children. We have called the routes of travel bridgeless (and often fordless), look as to how much this implies: Suppose our train to have reached what was at their route a fordless stream. The ferry was soon prepared by selecting one of the best of their wagon boxes, caulking its chinks and joints as best they could, and using this as a boat. A rope fastened to it was passed over the river, and this extemporized ferry was ready for its work.

In naming over the principal forms of danger that went to make up the outlook of the road to Oregon in the early forties, one must be named—one more dreaded than all the rest—the continued exposure to Indian attack. For, if after a long toilsome climbing over rocky declivities a pleasanter part of the way is reached, and the weary toilers are led to hope for easier travel, just here, at any turn in the road, the dreadful savage might suddenly make his appearance. Such was the dark picture the journey overland to Oregon presented to the men and women of the frontier, who yet restlessly waited for their own chance to try it. Now, in spite of all these dangers of the way, the wagon trains were organized; were loaded with their precious burden of life and hope; did cross these mountain ranges and the long stretches

of desert between them ; did reach and people Oregon. There remains the inquiry : What manner of people were they who dared to do this ? For surely it was the coming of the women and children of these pioneer wagon trains that won Oregon for the Stars and Stripes.

First of all, then, these pioneers were all frontier people. In 1842 the only people who cared about the question of a migration to Oregon were frontier people of these Western States ; people already familiar with the modes and the dangers of travel beyond the safeguards of civilization. And this fact gives us our first test in the classification of our pioneers—they were all frontier people. This limitation was not intended, was not the result of any choice or purpose of those concerned. As an applied test it developed itself from the very nature of the case ; for nobody but frontiersmen thought of going, or cared to go.

Another important limitation developed itself in well-defined outlines from the beginning of the movement and lasted throughout the real pioneer period. It was the practical exclusion of capital from the forces that originated its companies, purchased their supplies, or paid for the help they needed on the journey. No people knew better than the border Americans the power of money ; but here again its absence was not planned, was not desired. Its absence resulted from the nature of the case ; and the forces that moved those trains of farm wagons moved without the stimulus of sustaining capital. The simple fact was that capital saw in the migration of these pioneers no return of any appreciable per centum of the funds to be expended. And thus it came to pass that the wealthy were effectually excluded from the ranks of our Oregon pioneers.

Frontier life has in it ordinarily less of poverty than any other condition of society ; a fact, doubtless due to

the continual effort necessary there to keep at all abreast of the incessant struggle against the savagery of its surroundings. The long frontier line west of the Mississippi in the early forties was aglow with a restless people pressing westward, and but recently come there. The usual causes of extreme poverty had not settled there; and so it came that few indeed along this border line could be classed as dependent poor. And, perhaps, none too poor to own a team and a good serviceable farm wagon, with means sufficient to provision it with good wholesome food and clothing for a journey to Oregon. But, if such there happened to be, we can easily imagine the dismay it must have caused to have the name of such a man proposed as a member of one of these companies. The fact, doubtless, was that the unfitness of such a proposal prevented its occurrence.

The poor—the dependent poor—were not in the movement to Oregon. These organized wagon companies, however well meaning, however generous they might be as individuals, had no place in their organizations for the dependent poor man. Yet one more of these causes of unfitness for such a journey as the one we have been trying to picture, was that of chronic feeble health. To start on such a difficult and dangerous expedition as this unquestionably was during the proper pioneer family movement, from 1842 to 1852, would have seemed to all concerned too much like suicide of the sick or the chronically feeble.

The expedition to Oregon, as they looked upon it, called for a power of endurance that might be found only in the soundest. So by common consent poor health ruled its possessor from the ranks of the pioneers. One can readily see what must have been the result of this exclusion upon the health condition of

Oregon during the early period of its history, if not through more remote chapters of its development.

We have thus forced upon us the conviction that the pioneer migration across the plains to Oregon consisted almost wholly of frontier people. That from their organized trains the rich excluded themselves; the dependent poor were kept aloof, and those subject to chronic sickness or feeble health at once accepted their inevitable exclusion. Now, with these intelligible groups cancelled, we may well ask: Who were left to go to Oregon.

Well, the proposed migration thus shorn of elements that did not fit the heart of the movement, there remained scattered along the frontier several thousands of the very material for pioneering. Men in the prime of life with small families who were themselves accustomed to the management of teams; were familiar with the dangers of desert travel and mountain climbing; were accustomed to Indian alarms, many of them to Indian fighting; and all of them accustomed from childhood to the use of the rifle—these were restlessly waiting the time for movement. Doctor Whitman was informed of this. And it was to take the message of readiness to these that he decided on a winter journey. He may have done other important things. He may have failed to do some things over zealously ascribed to him. This herald work he did. He announced to his synod in Oregon that he regarded this service as the work needing to be done. He did this work, and the Missouri ox-wagons followed. For the restless waiters on destiny along the frontier saw that their time had come.

THOMAS CONDON.

NATHANIEL J. WYETH.

His Adventures in the far West recalled in association with the family home near Boston. "In Historic Mansions and Highways Around Boston," by Samuel Adams Drake, published by Little, Brown & Co., there is a sketch of the family home of Nathaniel J. Wyeth, the early explorer of Oregon. "Emerging from Mount Auburn," the author writes, "we take counsel of the swinging sign pointing to the lane leading to Fresh Pond, which is found to be the natural source of numerous underground streams, which are found wherever the earth is penetrated to any depth between it and Charleston." The writer continues:

Time out of mind the shores of the pond belonged to the Wyeths, and one of this family deserves our notice in passing. Nathaniel J. Wyeth was bred and born near at hand. Of an enterprising and courageous disposition, he conceived the idea of organizing a party with which to cross the continent and engage in trade with the Indian tribes of Oregon. He enlisted one and twenty adventurous spirits, who made him their leader, and with whom he set out from Boston on the first of March, 1832, first encamping his party on one of the harbor islands, in order to inure them to field life. The organizers provided themselves with a novel means of transportation—no other than a number of boats, built at the village smithy, and mounted on wheels. With these boats they expected to pass the rivers they might encounter, while at other times they were to serve as wagons. The idea was not without ingenuity, but was founded on a false estimate of the character of the streams, and of the mountain roads they were sure to meet with.

Wyeth and his followers pursued their route via Baltimore and the railway, which then left them at the base of the Alleghánies, onward to Pittsburg, at which point they took steamboat to Saint Louis, arriving there on the eighteenth of April. Hitherto they had met with only a

few disagreeable adventures. They were now to face the real difficulties of their undertaking. They soon discovered that their complicated wagons were useless, and they were forced to part with them. The warlike tribes, whose hunting-grounds they were to traverse, began to give them uneasiness; and, to crown their misfortunes, they now ascertained how ignorantly they had calculated upon the trade with the savages.

Saint Louis was then the great depot of the Indian traders, who made their annual expeditions across the plains, prepared to fight or barter, as the temper of the Indians might dictate. The old trappers who had made their abode in the mountain regions met the traders at a given rendezvous, receiving powder, lead, tobacco, and a few accessories in exchange for their furs. To one of these parties Wyeth attached himself, and it was well that he did so.

Before reaching the Platte, five of Wyeth's men deserted their companions, either from dissatisfaction with their leader, or because they had just begun to realize the hazard of the enterprise. Nat Wyeth, however, was of that stuff we so expressly name clear grit. There was no flinching about him, the Pacific was his objective, and he determined to arrive at his destination even if he marched alone. William Sublette's party, which Wyeth had joined, encountered the vicissitudes common to a trip across the plains in that day; the only difference being that the New England men now faced these difficulties for the first time, whereas Sublette's party was largely composed of experienced plainsmen. They followed the course of the Platte, seeing great herds of buffalo roaming at large, while they experienced the gnawings of hunger for want of fuel to cook the delicious humps, sirloins and joints, constantly paraded like

the fruit of Tantalus before their greedy eyes. They found the streams turbulent and swift; the Black Hills, which the iron horse now so easily ascends, were infested with bears and rattlesnakes. Many of the party fell ill from the effects of drinking the brackish water of the Platte, Dr. Jacob Wyeth, brother of the captain and surgeon of the party, being unluckily of this number.

Sublette, a French creole, and one of the pioneers that have preceded pony-express, telegraph, stagecoach and locomotive, in their onward march, had no fears of the rivalry of the New England men, and readily took them under his protection. Besides, they swelled his numbers by the addition of a score of good rifles, no inconsiderable acquisition when his valuable caravan entered the country of the treacherous Blackfeet, the thieving Crows, or warlike Nez Perces. The united bands arrived at Pierre's Hole, the trading rendezvous, in July, where they embraced the first opportunity for repose since leaving the white settlements.

At this place there was a further secession from Wyeth's company, by which he was left with only eleven men, the remainder preferring to return home with Sublette. Petty grievances, a somewhat too arrogant demeanor on the part of the leader, and the conviction that the trip would prove a failure, caused these men to desert their companions when only a few hundred miles distant from the mouth of the Columbia. Before a final separation occurred, a severe battle took place between the whites and their Indian allies and the Blackfeet, by which Sublette lost seven of his own men killed and thirteen wounded. None of Wyeth's men were injured in this fight, but a little later one of those who had separated from him was ambushed and killed by Blackfeet.

Wyeth now joined Milton Sublette, the brother of

William, under whose guidance he proceeded towards Salmon River. The Bostons, as the Northwest Coast Indians formerly styled all white men, arrived at Vancouver on the twenty-ninth of October, having occupied seven months in a journey which may now be made in as many days. The expedition was a failure, indeed, so far as gain was concerned, and Wyeth's men all left him at the Hudson's Bay Company's Fort. The captain, nothing daunted, and determined to make use of his dearly bought experience, returned to the States the ensuing season. His adventures may be followed by the curious in the pleasant pages of Irving's Captain Bonneville. Arriving at the headwaters of the Missouri, he built what is known as a bull-boat, made of buffalo skins stitched together and stretched over a slight frame, in which, with two or three half-breeds, he consigned himself to the treacherous currents and quicksands of the Big Horn. Down this stream he floated to its confluence with the Yellowstone. At Fort Union he exchanged his leather bark for a dug-out, with which he sailed, floated, or paddled down the turbid Missouri to Camp (now Fort) Leavenworth. He returned to Boston, and, having secured the means, again repaired to St. Louis, where he enlisted a second company of sixty men, with which he once more sought the old Oregon trail.

This was sixty years ago. Since then the Great American Desert, as it was called, has undergone a magical transformation. Cities of twenty thousand inhabitants exist today where Wyeth found only a dreary wilderness; from the Big Muddy to the Pacific you are scarcely ever out of sight of the smoke of the settler's cabin. In looking at the dangers and trials to which Wyeth found himself opposed, it must be admitted that he exhibited rare traits of courage and perseverance, allied with the natural capacity of a leader. His misfortunes arose through

ignorance, and, perhaps to no small extent also, from that vanity which inclines your full-blooded Yankee to believe himself capable of everything, because the word "impossible" is expunged from his vocabulary.

NOTES.

[These notes were intended to be material for the closing pages of the Quarterly, but were misplaced by the printer in the make-up.]

By the death of Elliott Coues last Christmas the history of exploration of the region west of the Mississippi lost a most active and wonderfully proficient worker. After nearly a lifetime spent in prodigious activity in scientific lines he turned his energies to collecting, annotating and editing the original records of explorers and traders of the northwest and southwest. When Doctor Coues first took up the work of editing the narratives of explorers he had attained great eminence as a writer in ornithology. His reputation for thorough scholarship in the whole field of biology was such that he was assigned the subjects of general zoology, comparative anatomy and biology in the preparation of the Century Dictionary. "His scientific writings number about one thousand titles."

He had spent some sixteen years either as a surgeon at different army posts in the west, as far apart as Arizona and North Dakota, or as naturalist connected with different surveys. Thus he brought a unique preparation to the crowning work of his life in history. His annotations, elucidating points of geography, zoology, and ethnology, are copious and minute to a degree that quite bewilders the average reader. The first fruits of his labors in the field of history were the four volumes of his edition of Lewis and Clark in 1893, Zebulon Pike's Expeditions followed in 1895; Henry and Thompson's Journals in 1897; and Fowler's Journal and Larpen-teur's Narratives—distinct works—have appeared since.

He was engaged on the Diary of Francisco Garces, when he broke down last September, in Santa Fe, at the age of fifty-seven. The issue of the *New York Times* of March 3, speaks of the recent great increase in value of all these works. The first two are particularly scarce, and have commanded treble their original value.

Through Mrs. Frances Fuller Victor it is learned that he had expressed a warm interest in the work of the Oregon Historical Society. He would have been pleased with an honorary membership in the Society. To acknowledge in some fitting way the great service he has done the history of the Northwest would do the Society graceful credit.

A two-volume life of Gen. Isaac Ingalls Stevens by his son, Gen. Hazard Stevens, is announced to appear in May. The history of the Pacific Northwest during the eight eventful years from 1853 to 1861, cannot be understood without a knowledge of the striking personality of General Stevens. As Governor of Washington Territory, in command of the exploration and survey of the northern route for the Pacific Railroad, in authority during the terrible Yakima war, 1855-56, and as author and executor of the summary proceedings for the settlement of the difficulties arising out of that war, Governor Stevens had a most conspicuous part in making that history. Gen. Hazard Stevens has been at work on this life since 1877, and during the last two years has given almost his whole time to it. He says that he found his father's reports in the Indian Department, and others in Washington very full and complete, especially those relating to his Indian councils and treaties. "The proceedings at the Walla Walla council," he remarks, "are especially interesting, particularly the speeches of the Indian chiefs." He believes that the life will have especial historical value in setting the origin of the Indian

war of 1855-56, the policy pursued towards the Indians, and the prosecution of the Indian war in a correct light. General Stevens recognizes that the Oregon Historical Society is the rightful heir to the rich collection of historical material from which this part of this work was written.

The Oregon Historical Society, as a perusal of the reports of its activities during the first year of its existence reveals, has entered upon its work under most favorable auspices. The legislature appreciated the importance of the functions undertaken, and the expense attending a successful fulfillment of them. The membership roll indicates a hearty and strong response to the idea that Oregon shall be true to her makers. The Society had at the date of the first annual report of the Secretary seventy-six life members and two hundred and ninety-four annual members.

The primal mission of the Society is to bring together in the most complete measure possible the data for the history of the commonwealth, and to stimulate the widest and highest use of them. Every member should avail himself of his first opportunity to visit the rooms of the Society in the City Hall at Portland. The Directors believe that he will be assured that there has been commendable zeal in the prosecution of the Society's work. They are concerned, however, that every member shall realize that the trust devolving upon the Society is such that it cannot be adequately or gloriously fulfilled unless each is alert in discovering material, and concerned that it shall reach the collections of the Society. In this line of our commonwealth's interests everything as to serviceability and value depends upon the concentration of the material.

REMINISCENCES OF F. X. MATTHIEU.

By H. S. LYMAN.

Francis Xavier Matthieu, a pioneer of French Prairie, near the old town of Champoeg, of the year 1842, and a participant in the movement for the Oregon provisional government of May, 1843, was a French-Canadian by birth. His native town was Terrebonne, twelve miles from Montreal, and his father and mother were of pure French descent—the father's family being from Normandy, and the mother's from Brittany; and both branches were very early immigrants to Canada. They belonged to the working class, and the parents of F. X. were only in the moderate circumstances of the independent farmer. Owing to this circumstance, young Matthieu was obliged at an early age to begin life on his own account. He went to Montreal when quite young, and engaged as a clerk in a mercantile house. There was, however, still earlier, while he was yet a schoolboy in his native town, a very powerful formative influence that moulded all his ideas, and though somewhat blindly as it first seemed, finally, with wonderful selective affinity, turned his course westward, and made him almost the deciding factor of free government in Oregon.

The date of his birth, 1818, brought his early life and schoolboy days into the very critical time of the patriot movement in Canada. With that disregard of political obligations for which the British government was formerly noted, such as had caused the rupture with her greatest American colonies, the royal authority had failed to keep the promises made to the Canadian provinces; and, now restive under a rule that seemed both tyrannical

nous and faithless, the leaders of those Canadians were demanding their covenanted rights as they understood them. Louis J. Papineau, an orator of the character of Laurier of the present day, was leading the movement. He had drawn up the famous memorial, or bill of grievances, to the British crown. Though not a successful military leader, and, indeed, discountenancing the use of force, he was a thrilling orator, and had fired the heart of the French-Canadians with the hope of equal rights; and created the determination to acquire these, if not by agitation, then by revolution.

It happened that in the town of Terrebonne, where the little F. X. Matthieu was living, there was a highly educated civil officer, a notary public—the office of notary then being a profession that required special legal, and classical education. The name of this notary was Velade; and, besides his official duties, he was schoolmaster, receiving a small stipend from the government, and nominal fees from his pupils. Velade was a student of government, and a great admirer of the United States. American liberty and law as developed in this country, he taught in his school almost to the entire neglect of the Canadian system. This he not only taught, but actually instituted. Every term his school held an election after the American plan. Some of the boys also regularly celebrated the Fourth of July, carrying American flags. This was in connection with some young men from the United States who had come to Terrebonne, and started a nail factory. With this extreme Americanism, however, the townspeople were not altogether pleased, and sometimes broke up their demonstrations.

While still a mere boy, Matthieu went to Montreal, where he was engaged in clerking, and there acquired a certain impress and manner that distinguishes him even yet from the farmer. Being already imbued with ideas

of free government, it was easy for him to find and join the Sons of Liberty—a secret organization auxiliary to the party called “Democrats,” who opposed the “Bureaucrats.”

The Sons of Liberty, or patriots, carried their movement to the point of armed resistance. They drilled regularly in secret, using sticks for guns; and at night met in secluded places to make cartridges and mould bullets. Mr. Matthieu has preserved to this day his old bullet mould, used at that time, which he has now presented to the Oregon Historical Society. He was himself a very useful member of the Sons of Liberty, since, being a store clerk, he could procure lead and powder more easily than some others. One of the services of this company was to guard the house of Papineau, whose appeals he heard in public, and whose boldness was bringing on the threatened crisis.

As is well known, however, the movement collapsed. Before a blow was struck, many of the Sons of Liberty were placed under arrest and executed. Mr. Matthieu recalls the hanging of sixteen patriots in one market place, tied in pairs, back to back. Though then a youth of not twenty years old, he was himself in danger of the same fate and sought safety at Terrebonne. While here, almost in hiding, he was approached by a certain Doctor Frasier, a Scotchman, holding some government position, and who, as it happened, was an uncle of Dr. John McLoughlin, then Hudson's Bay chief factor at Fort Vancouver, Oregon Territory. Matthieu was asked why he did not leave Canada.

“I have no pass,” he replied.

“I will give you one,” said the old doctor; and immediately provided the necessary paper.

With this passport, Matthieu at once started for the American border. He would become a citizen of the

United States. At the line, however, where it was necessary to present his pass, the officer looked at him sharply; "You do not correspond with the description;" he said, "this calls for black eyes, yours are blue"—this inadvertence probably being due to the fact that his eyes were of that changeable color that turns dark under excitement.

"Can't help the description," replied the young refugee, "that is not my fault."

The officer then eyed his red and black diamond squared plaid, which was the patriot uniform, and which Matthieu had not thought of as unsafe while he had his passport. But instead of detaining him, the officer said, "Well, get along with you; the sooner the country is rid of you fellows, the better"—probably little dreaming that the blue-eyed patriot was to turn up a few years later in Oregon to confront the British authority and help that important section of North America over to liberty as defined in the American Constitution.

Coming to Albany, New York, (1838), he soon found employment as clerk in a store. To him, his patron was honorable; but not altogether so to his creditors, as he left the city suddenly and secretly. Matthieu was entrusted with the care of his family, and was instructed to bring them to the new scene of operations, being Milwaukee, Wisconsin. This, in course of time, led the young man to that then far western land (May, 1839). From Milwaukee he went to St. Louis, being attracted toward that old French city (August, 1839). There he found service very soon with the American Fur Company—then officered almost exclusively by Frenchmen. His first outing was to Fort Pierre (October, 1839), on the Missouri River, among the Sioux and Dakotas—the Sioux Indians being the finest wild men that he has ever

seen, whom he describes as “a great nation, fine, noble fellows.” During this period he encountered many hardships, and also much to interest a light-hearted Gallic youth. He remembers one expedition on which provisions became reduced, the daily allowance being two biscuits to the man and two ounces of dried Buffalo beef to two comrades. This lean fare was eked out, as they marched, by eating the frosted rosebuds of the Missouri meadows. As an incident of a trader’s life among the Sioux, he recalls with much *gusto* the solemn feasts of the chiefs, which it would have been the height of impropriety not to attend, and which must be observed with all *punctillio*, or spoil all the bargaining. These were dog feasts, and consisted principally in eating a plateful of soup of tender dog meat boiled to a paste, into which red buffalo berries were sprinkled. To leave any of this delicacy uneaten would be a breach of etiquette too serious to allow; and the higher the trader was held in estimation, the more liberal the share placed upon his plate. Not only to a refined palate was the dog paste rather objectionable, but it often included much of the hair of the dog as well as other portions. The sharp French trader, however, avoided the difficulty. He hired an Indian chief of unquestioned appetite to clean up his plate. Thus the feast had been eaten; and etiquette was fully satisfied.

A limited amount of alcohol was also used by the traders in connection with driving bargains, and Mr. Matthieu recalls one instance in which one gallon of the article judiciously diluted procured ten buffalo robes, worth \$10 each—besides other trumpery. However, the better class of the traders seldom indulged the Indians beyond moderation, or only at long intervals. So great was their fondness for the stuff that even the smell of liquor often seemed to set them wild.

After a year's service in the country of the Sioux, the return to Saint Louis was made, and at that point he outfitted as a free trapper, going out on to the Arkansas to Bent's Fort (1840). George Bent, the notable trapper-captain, whom he met there, he describes as "a little bit of a man, but sharp as lightning." On this jaunt he also met Kit Carson, who is almost as well known in the annals of the frontier as Daniel Boone of Kentucky. Carson he describes as "a terror"—not as a desperado, however, but as a hunter. He was an unerring shot, and dropped many a buffalo. He was stocky and nervy in build, and had something of the Southwestern bluster of manner, yet not so offensively so as many others.

Mr. Matthieu recalls serious hardships on this expedition, passing one stretch of five days without food. But such experiences were little thought of, the trapper always relying upon his rifle without fear. In those days the Indians were very friendly.

Returning eastward the next season, he spent the winter and spring trapping in the Black Hills (1841). However, it seems that this life of a trapper, nomadic and free, and dependent only upon the unlimited bounty of nature, and the friendly offices of the generally tractable Indians, although amusing in many ways to a light-hearted Frenchman, did not wholly satisfy young Matthieu. The desire for settled society, and progressive individual life and home frequently took possession of him; and the opportunity to gratify this was apparently fortuitously afforded at Fort Laramie, early in the summer of 1842.

With his party of trappers he found there the Oregon immigrants of that season. This was the first regular immigration to Oregon across the plains, and aside from the ladies of the mission parties that had crossed in

1836-38, it was the first appearance of white women in the Rocky Mountains.

This was the party of Captain Hastings, in which was Dr. Elijah White, who had first come to Oregon with the large mission party on the bark *Lausanne*, in 1839-40; but had returned east, and was now coming to Oregon again, crossing the plains, holding the appointment to the position of sub-Indian agent for Oregon, and was accompanied by a party of over one hundred immigrants. Doctor White is recalled by Mr. Matthieu as "a sleek looking gentleman," and "a quick talker."

A well known member of the party was Amos L. Lovejoy, described as very light sandy-complexioned, and "more quick tempered than any man I ever knew;" Captain Hastings was of heavy build and swarthy complexion. The pioneer, Medorem Crawford, then in his young prime, was also in the company. Sydney Moss, now living as a nonegenarian at Oregon City; Thomas Sladden and —— Robb were also quickly made acquaintances. Among the women of the party Mr. Matthieu especially recalls an elderly widow, Mrs. Brown, and her daughter, who were said to have been held, previous to this time, as captives among the Comanches. There were a number of families in the train, among them being that of Mr. Smith.

The pilot of the company was Fitzpatrick, the famous guide of Wyeth's party, whom Matthieu describes as tall and spare with abundant gray hair; an Irishman of good common education, and even gentlemanly bearing; perfectly at home anywhere on the boundless prairies, or within the mountain ranges. Unlike the most of his race, however, he was very taciturn.

While this company was waiting at Laramie, provisioning, Matthieu and his comrades quickly decided to go along with them to Oregon. They had their rifles and

their horses; what more was required? The very first night, however, they discovered that more was needed. They went supperless, game having failed during the day; and they could not but look on with a little envy and self-commiseration at the various campfires where the immigrants were despatching fried bacon and mountain biscuit and drinking coffee. Mr. Matthieu says, however, that the immigrants could not be blamed or called inhospitable for neglecting to entertain them, as they knew as yet nothing of the trappers who had joined their caravan, and every head of a family felt obliged to guard his little store of provisions, scant at the best.

The incidents of the journey are vividly recalled by Mr. Matthieu, though now after a lapse of fifty-eight years. These should be mentioned here, some being serious and some being laughable, whether recorded elsewhere or not, as they afford light upon the individuality of this important member of the group of Oregon pioneers, of the era of the provisional government.

One of the first serious affairs after leaving Laramie occurred at Independence Rock. This was the incident of the capture of Hastings and Lovejoy by the Sioux Indians. At this point, a noted rock, or high ledge, with a perpendicular front, about the space of a mile (F. X. M.) from the Sweetwater River, the immigrant train was delayed in order to bury a man, one of a company of Germans, who, in drawing his gun from a wagon accidentally caused the discharge of the piece with the result that he was fatally shot in the groin.

Taking advantage of this delay, Matthieu and his comrades went buffalo hunting. From the actions of the buffaloes that were at length discovered, he was suspicious that there were Indians in the neighborhood. The buffalo herds were constantly in motion, as was the

case when the Indians were stalking them. This, however, caused him no uneasiness, and it was not until two o'clock next morning that he returned to the train.

The journey was resumed about daybreak, but sometime in the forenoon it began to be passed around that Lovejoy and Captain Hastings were missing; and this caused anxiety. Matthieu suspected Indians and scanned the plains, now ablaze to the distant horizon in the summer sunshine. At length he caught far in the distance, a distinct glance of light. This was thrown, as he surmised, from one of the little zinc-framed looking-glasses that the Indian braves frequently wore attached around their necks. Waiting for no further sign, he hastened to the train, telling the immigrants to halt and get ready, as the Indians would soon be upon them. To them this was rather mystifying, as the young Frenchman took no trouble to explain how he knew this. But upon his advice the wagons were halted, and everything was placed in readiness to receive the Indians, who might be hostile. In the course of a few hours a great band of Sioux appeared in sight, developing out of the prairie, and galloping in wild fashion upon their ponies—or in large part running on foot. They numbered about five hundred and were in full war dress and paint. Lovejoy and Hastings were among them, being held as captives and looking very much crestfallen. They had delayed, as it seems, in boyish spirit, to inscribe their names among others on the face of Independence Rock; and having just completed their task, had turned to go only to find themselves in the embrace of some very large Indians.

Matthieu, however, who knew personally some of the chiefs, soon saw that they were good natured, as they now moved around the train, and were only wishing to drive a good bargain to let their captives go. They were

a war party and wanted ammunition. When this was made known, the men of the train exclaimed "What! shall we give them ammunition to shoot us with?" Matthieu, however, advised giving it. "They have enough ammunition already," he said, "to shoot us. They do not wish to fight us, but only desire supplies for fighting other Indians." Accordingly, the ammunition was given them, along with other things, and the captives were released. This, however, was not the last of Indians. The next day a band, or rather a host, of about five or six thousand (F. X. M.) of the Blackfoot Sioux, under a great war chief, appeared. By this immense multitude, the train was compelled to halt, and to be inspected by band after band of the curious savages. The Indians being in such overwhelming force, were very free in their ways. They were especially curious to look at the women of the train. Mr. Matthieu relates the following amusing incident: "The family of Mr. Smith was especially annoyed by the curious braves, who came continually to their tent, and pulling the flaps apart, gazed in silent admiration upon his wife and daughters, or spoke to one another in their own language." By this behavior Mr. Smith, who was of a very irascible temper, was so much annoyed that he came at length to Matthieu, asking him to send them off, as he could do nothing with them. When Matthieu arrived and discovered what it was the Indians wanted, and the thoroughly irate Mr. Smith desired to know, the Frenchman said: "You must be very quiet; you must make no commotion." Mr. Smith agreed. "I am almost afraid to tell you," continued Matthieu, "you will not like it." Mr. Smith insisted. "They wish to buy one of your daughters to present to their great chief," said Mr. Matthieu. At this Mr. Smith sprang to his feet in great excitement, ready to drive the intruders away by force. "Softly, softly," said Mat-

thieu. "You will have the whole band down upon us." Then to the Indians he explained how their white brother regretted his inability to meet their wishes; but according to the customs of his people, it was impossible to sell her. When satisfied entirely with this information, the braves retired. However, the fondness of the Indians to see and even possess the white women, was a real source of danger, with which the immigrant parties had to reckon. It was not simply an annoyance. It was apprehended by some that American families could never cross the plains safely. The Indians, it was said, would seize their women at all hazards. That they did not do so, but respected the white man's customs, even when, as in this case, they were in greatly superior numbers, shows they had a certain native morality, often not found among the whites.

This great band of Indians also could hardly be made to believe that the immigrant train had no liquors, and begged insistently for the firewater. Fitzpatrick, the pilot, both with this band and that at Independence Rock, refused to be made known, not wishing to implicate himself as a leader of white people through their country; and remarked that all the prairie was home to him, and he could drop off anywhere. Matthieu, therefore, having learned the custom of the Sioux, and knowing some of them personally, was able to help the immigrants, and to greatly reduce the liability of trouble. "I actually believe," he says, "that they might not have got through without me." These Sioux, being of the Blackfoot division of the nation, were at this juncture on a great expedition to cross the Rocky Mountains and attack the Snake Indians.

At Fort Hall, the exact date of reaching which is not remembered by Mr. Matthieu, the immigrants delayed,

some for a shorter, others a longer time. The object was to change from their wagons to pack saddles. Mr. Matthieu does not recollect that the Hudson's Bay commandant there offered to purchase any wagons, and thinks this improbable. "The Hudson's Bay Company had no use for any wagons," he observes.

The commandant, Grant, is well remembered as very large and fine looking "as big a man as Dr. John McLoughlin"—which is as grand a comparison as could be made by a McLoughlin admirer. Grant assured the immigrants that it was impossible for wagons to cross the Blue Mountains into Oregon. This, Mr. Matthieu believes, was said because he thought it true, and he was simply representing what was generally understood as the fact. Mr. Matthieu remarks, however, "we all know very well that the Hudson's Bay Company was not favorable to immigration to Oregon;" and, though only a young man at the time, he understood that the British expected to hold the Columbia River as their boundary line. As to bringing the wagons on to the Columbia River, he says that this could have been done, as wood and water and the grass were in most places abundant, and though in some places the trail was very difficult, it was not impossible to American teamsters.

He and his comrades remained about eight days at Fort Hall, and then came on with the Hudson's Bay express by the horse trail, crossing the Blue Mountains, and descending upon the valley of the Umatilla, and then going by Whitman's farm at Waiilatpu to old Fort Walla Walla. At Waiilatpu he remained fifteen days waiting for the other immigrants to come in; as the trip from Fort Hall to Whitman's was made in small parties, or even by families, as they were able, the later ones following the tracks of the earlier. There was here

no danger of Indians, and the semi-military organization with which they started was entirely abandoned.

With Doctor Whitman and his place, Mr. Matthieu was very favorably impressed. The farm was neat and well cultivated, having a large garden, a field of grain and a small grist mill. Doctor Whitman himself he describes as "a very nice man," of unbounded hospitality. "His garden and grist mill he threw open" to their use, and for what they had need of "he would not take a cent." In person he recalls Whitman as not very tall, rather slender in build, and of strongly Yankee style. His hair was then dark. Though very favorably impressed, however, with Whitman, the Yankee missionary bore, in Matthieu's estimation, no comparison with Doctor McLoughlin, who was his beau ideal of the natural-born leader of men.

In this connection Mr. Matthieu states that he had the following incident directly from some employees of the Hudson's Bay Company at Vancouver, which illustrates Doctor McLoughlin's disposition toward Whitman. In 1841 the Cayuse Indians formed the intention of killing Doctor Whitman. But they feared the punishment that Doctor McLoughlin would visit upon them, if he disapproved the act. They devised the plan, therefore, of discovering his feeling, as if by accident. A number of the leaders were sent to Fort Vancouver, and there stationing themselves by the bank of the river, they began to talk to one another of destroying Whitman. Doctor McLoughlin was passing and they were purposely overheard by him. Instantly confronting the Cayuses the old Doctor raised his great cane and cried out in a terrific voice, "Who says you shall kill Whitman?" and threatened condign punishment if such a massacre should take place. The Indians scattered and immediately gave up their evil plan.

Before leaving Mr. Matthieu's account of his experiences on the plains, perhaps the following story may be told as throwing a side light upon the character and ways of some of the people who crossed. It is in regard to an Irishman called Pat, who was with the party but had no outfit and no money, and was little better than a camp follower. He obtained his day's provisions by going from camp to camp, or mess to mess, asking for anything that might be put into his pot, which he then boiled over the fire making a sort of soup. Once while he was thus cooking he had the misfortune to drop his pipe into the savory mess, which turned it so much against his stomach that he would not eat it. "Give it to B.," suggested a bystander, "he will eat anything." B. was another camp-follower, less-liked than Pat. B. enjoyed his meal, but afterwards regretted his precipitancy. Pat always endeavored to return the courtesies of his patrons by doing little favors around the camps, especially in helping the women about their wood and fires, and became rather a favorite. Reaching Oregon, and finally going to California, he prospered and became a wealthy man.

The trip over the Cascade Mountains was the most difficult of any part of the journey, and involved the most suffering. The route was by the old Indian trail at the base of Mount Hood, on the north side. A snow-storm was encountered here, and by this fourteen of the horses were stampeded and took the back trail for The Dalles, where there was an abundance of grass. Matthieu, however, managed to keep himself comfortable during the storm by kindling an immense fire in the timber, and retained his horses by tying them. On this part of the trip he was accompanied by Hugh Burns, a well-known Irishman, who made himself useful as cook.

At Oregon City, which he reached about the twenty-

fifth of September (F. X. M) the first man that he met was Father Waller, the well-known member of the Methodist Society. By this kindly gentleman, Matthieu was at once and very pressingly invited home to supper. "He wanted to hear all about my journey." Matthieu, however, felt rather delicate about accepting his hospitality. After his hard journey over the last range of mountains he felt outrageously hungry; but, for this very reason, was timid about partaking a "company dinner," so he began apologizing: "I am looking rough and very dirty," he said, "Had you not better excuse me?"

"No, no," said Father Waller, "you must come."

The neat house, the supper table with its snowy cloth and shining dishes, and the care of the lady, Mrs. Waller, to have a nice repast, greatly impressed the hungry immigrant. But particularly was his appetite whetted, if that were possible, by the sight and smell of potatoes—an article of food he had not seen for months. When seated at the table he was hardly able to restrain himself; he was taken not a little aback, however, when, instead of proceeding to the meal at once, the good missionary began by asking a blessing, which he extended into quite lengthy devotions. "It was the longest prayer I ever heard," says Mr. Matthieu.

Learning at Oregon City that there were French Canadians on the prairie fifteen miles up the Willamette, he proceeded to Champoeg. Arriving there he found that the settlers in that region numbered nearly three hundred all told. Stopping off at the old landing, he found near this point, about a mile and a half up the river, living upon the river bank, Etienne Lucier, and remained with him during the winter. French Prairie is the borderland between the originally heavily timbered country of the lower Willamette and the more open

lands of Marion County and the big prairies of the upper valley. Matthieu found the country of the French settlers even more beautifully diversified than at the present, the practice of the Indians, then but recently discontinued, of burning the prairies over, having brought the whole country for miles together to the condition of a park. Stately groves of fir and oak, or belts of deciduous timber along the water courses, broke the monotony of the grassy levels, while from almost any point of view the panorama of distant mountain scenery was uninterrupted. The Butte, as it was called, which escarped upon the Willamette just below the landing, and from which Butteville takes its name, formed a slightly highland and became a well-known landmark to the voyager of the early day. The name Champoeg, says Mr. Matthieu, is simply a corruption of the French term, *Chamment Sable*—the camp of the sands.

With this Willamette country, however, Matthieu was not at first thoroughly pleased. The deep moss that gathered on the trees and buildings, and the general mildness and moisture of the winter weather, suggested disease, such as fever and ague. He anticipated a hot, sickly summer—which, however, he afterwards found was not the characteristic of Oregon.

Life in this region was entirely Arcadian. The Hudson's Bay servants had been encouraged to settle upon the rich prairie lands and raise wheat. Doctor McLoughlin, a most shrewd business man, foresaw (F. X. M.) that the Willamette and Columbia valleys would ultimately cease to be fur-bearing country, and sought privileges to the north. His agreements with the Russians of New Archangel, allowing him to trade with the Indians of Alaska, provided, also, that he should supply that post with fifteen thousand bushels of wheat per year. To meet this requirement, the old Hudson's Bay

servants who had served out their time, and by their articles of agreement were to be returned to their native land, were retained as employees of the company, and they were provided, also, with an outfit to begin farming. This consisted of a two-wheeled cart, oxen, plows, a cow, and necessary household furniture, which was to be paid for in wheat—the ordinary currency of the country. The cattle were to be returned; the increase kept. A double outfit was allowed to those who would settle north of the Columbia River. This, as Mr. Matthieu understands, was for political reasons; the British wishing to secure that section by actual settlement and occupation. The convenience, the beauty, and the fertility of the Willamette Valley, however, outweighed in the minds of the farmers the greater liberality of the offer on the north, and most of the Hudson's Bay people came to French Prairie.

Lucier, Matthieu found, was one of the oldest of the Oregonians, having preceded him by about thirty years. He was one of the old trappers that came with Hunt's party, of the Astor expedition. In person, this now old man was short and stocky, and of a dark complexion. He was about sixty, and was living with his second wife. The first family of three children were then grown. His second family consisted of two boys, both of whom are now living on French Prairie, one having a family of several children. Among the subjects of conversation with Lucier were the laws and customs of the United States. The old Hudson's Bay trapper was quite suspicious, and had been told that our government imposed very heavy duties—such as placing a tax upon windows. Matthieu, however, was able to tell him that this was entirely a mistake. The laws of the United States were just and liberal, and under them all men were equal; there was no tyranny. Lucier, who was a very saving

and industrious man, and at the end of his service with the company had to his credit the respectable sum of £400, was finally well satisfied with these representations. All the settlers of the Prairie he found to be hospitable in the extreme; they were willing to share with the stranger anything they had. The most of them had native wives, or at least of mixed blood; a number of whom were from Clatsop or Chinook. They were an industrious people and entirely honest. The incident is related that by some mistake as to ownership three sacks of potatoes were once left on the river bank at the portage at Oregon City. There they remained three months, no one disturbing them. The following story also is told of McLoughlin and his wheat buyer: It was the custom of the agent who bought wheat to strike the measure—the wheat not being very well cleaned requiring to be settled in order to give full weight. Seeing him give the measure a number of slow, gentle taps, McLoughlin exclaimed, “Tut, tut,” and gave it one heavy blow; but to his chagrin, and the vast enjoyment of the bystanders, the doctor’s heavy stroke instead of *settling* the grain only shook it up, and he instantly admitted that the buyer’s way was the best, and with that the farmers were all well pleased, because thereby they *sold the best weight*—which illustrates not only their simplicity, but their desire to act on the square with the great chief factor.

Names of French-Canadians on French Prairie when Mr. Matthieu first went there, and who all, as he remembers, took part in the provisional government meeting—they are collected from his ledger of the business carried on by him with George Le Roque, at Butteville, beginning in 1850:

XAVIER LADEROUTE	JOSEPH BERNABE
ANTOINE BONANFANT	BAPTISTE DEGUIRE
ANDRE LA CHAPELLE	ADOLPHE CHAMBERLAIN
PIERRE PAPIN	JEAN LINGRAS
LOUIS B. VANDALLE	ALEXIS AUBICHON
JEAN B. DU CHARME	JEAN SERVANS
FABIEN MALOIN	MICHELLE LAFERTE
LUC PAGNON	JEAN B. DALCOURSE
ETIENNE GREGOIRE	LOUIS OSANT
AMABLE ARCOUETTE	JEAN B. AUBICHON
PIERRE DE LORD	ANTOINE FELICE
LOUIS A. VANDALLE	MICHAEL LAFROMBOISE
JOHN SANDERS	JOSEPH GERVAIS
PIERRE PARISEAU	JEAN B. PANPIN
CHARLES RONDEAU	OLIVIER BRISCBOIS
DAVID DONPIERRE	THOMAS ROA
ANDRE DU BOIS	LOUIS BOIVERS
PIERRE DEPOT	ANDRE LANGTAIN
MOYSE LOR	ETIENNE LUCIER
PIERRE LE COURSE	ALEXIS LAPRATTE
	PIERRE BELAQUE.

The following were Frenchmen who came to Oregon in the spring of 1842, except Matthieu, who came in the fall. They were at the meeting at Champoeg. This list has, perhaps, never been published :

GEDEREAU SENCALLE	AUGUSTIN REMON
THOMAS MOISON	JOSEPH MATTE
PIERRE GANTHIER	FRANCIS BERNIER
	F. X. MATTHIEU.

During the first months of the year 1843, the question of organizing an independent or provisional government, until the United States should extend its authority over Oregon, was much discussed. Debates were held at Oregon City, and the project was the matter of ordinary conversations at Salem and Tualatin Plains. The leaders of the movement, as is well known, saw the necessity of the whole community participating, and devised a plan that would interest all. The French Canadians could not be interested in the general question of a new government; being quite contented as they were, and having unlimited faith in McLoughlin, with whom they did all their business, and from whom they obtained all the counsel and protection they felt needed.

“The idea of organizing a provisional government was then,” says Mr. Matthieu, “to give the United States a reason for taking possession of Oregon.”

The device of the “Wolf Meetings,” however, for providing protection against the wild animals, brought them out and the greater question of forming a government was gradually from this brought to a focus. With this preliminary work, however, Matthieu had nothing to do, and his sentiments were not known to the Americans, or even to the Canadians, except Lucier. He was not at the meetings of February and March. He attended the meeting at Champoeg. This was held, according to his recollection, in a Hudson’s Bay building, just over the bluff, at the landing; the embankment of the river here being high and steep. The meeting, however, was very informal, being called to order in the house, but the final vote being taken out of doors.

The details of this important meeting need not be here entered into, except so far as concerns the recollection of Mr. Matthieu. The ability of the common people to organize and maintain a sufficient government, in a remote corner of the world, in the midst of numerous and even in some cases of powerful and cunning bands of Indians; and in opposition to the interests and business policy of a great corporation—was to be tested. The character and calibre of the men who constituted the “people” is a matter of the highest and most lasting interest. What items Mr. Matthieu recollects of them are worthy of the most careful preservation. He remembers W. H. Gray as one of the most active and strenuous of the Americans at the meeting. “Gray took part,” he says. “He wanted to organize the worst way—he would not give up to any other notion.” G. W. Le Breton, whom he describes as very popular, both with the French and with the Americans, and who acted as secretary, was not less alert. He

remembers Le Breton as a young man, short in person, but very active. "He never stood still a minute." He recollects Rev. J. S. Griffin of Tualatin Plains as present, but not as taking a very active part. Robert Shortess, with his tall, slim figure and strongly Roman profile, was also among the number. Sydney Smith, from Cheshalem, was there too. Mr. Matthieu recalls of Smith that he once hired him to assist in filling out a bill of logs, contracted to be delivered at Oregon City. To Matthieu's dismay—he was inexperienced as a lumberman—the first cut, which was from a white fir, that he had rolled into the river, sank out of sight in the water. Smith used a strong expression implying lack of sense on the part of the person to whom it was applied, and then exclaimed—"I will show you." Then he bored a hole in a log to be rafted and inserted a large cedar plug, or chunk, which just floated the white fir. Thomas Hubbard was also at the meeting. Others whom he recalls were Amos Cook and Francis Fletcher of the Yamhill Fords, near La Fayette; and George Gay, who was formerly an English sailor, but took leave of his ship at Monterey, California, and came to Oregon in the well known party with Doctor Bailey, and became a large landholder near Dayton, building the first brick house in the valley, and becoming famous for his hospitality to travelers. Others were G. W. Ebbert, Wilkins, Doctor Newell and Joseph L. Meek, of the Tualatin Plains, and Messrs. Babcock, Hines, Doctor Wilson, Alanson Beers, and J. L. Parrish of the Methodist Society.

Matthieu understood that there were three parties in reference to organizing a government. These were the strongly American for it, led by Gray and others, and the Canadian settlers who opposed, or at least did not favor it; and Dr. McLoughlin and his near friends, who really favored an independent government and expected

to become citizens of it, but who thought the movement at that time premature. Mr. Matthieu does not recall that Bishop Blanchet was present at the meeting. A memorial had been prepared by the Bishop, on the part of the Canadians, to show that organization was unnecessary and inadvisable. At the critical juncture, however, after there had been some discussion and the meeting was becoming confused, and, indeed, was in danger of breaking up without action, he remembers well how old Joe Meek strode forth, and by the simple power of voice and example gained control after parliamentary tactics had failed. He cried out, as he would to a company of militiamen: "All in favor of organization, come to the right." One hundred and two men were present. Fifty of these quickly went over to the right, in favor of independence. The other fifty-two, all Canadians, remained as they were, or withdrew in the other direction.

Now came out Matthieu's republican training, which he had received in his schoolboy days, under Velade, at Terrebonne. His "mind was made up," he says, "ever since I left Canada. I knew what it was to live and die a slave under British rule." And he was still carrying the picture of Papineau, the liberator.

Now that a time for action had come, he was not wanting. He said, therefore, to the Canadians that he was going with the Americans. He knew what he was doing, and was fully decided which was the right side.

Old Lucier, the trapper of 1811, followed him, and now the vote stood fifty-two for, and fifty against organization. Then went up the shout, led by Joe Meek and his mountain men.

The Canadians, though defeated, were entirely satisfied with the result, and had not favored the movement principally because they did not understand it, and, like

Lucier, had obtained incorrect ideas. But when the vote prevailed, they acquiesced cheerfully, and became among the best citizens of the little republic—the smallest, probably, since the days of the Pilgrim fathers, who organized their government in the cabin of the Mayflower.

After organization was effected, and a body of laws was framed, Matthieu was called upon to take part in affairs, and was elected justice of the peace for Champoege County, an office which he says he filled to “the satisfaction of everybody.” He settled disputes by inviting the complaining parties to sit down with him to a good dinner, and after an hour’s cheer and pleasant chat, he sent them away well contented with his findings.

He had some trouble with distillers, who sometimes set up little stills in out of the way places, and made liquor to intoxicate the Indians. He recalls one case in which he and Doctor Wilson, the judge, traced a distiller out into the woods, back of French Prairie, at DePot’s, and found him over a teakettle, which he used as his still, manufacturing what was called “blue ruin”—a liquor made out of Sandwich Island molasses, and was an article so destructive as to almost relieve the authorities of the necessity of estopping the manufacture—the juice being the executioner of its producer.

Of all the characters of the early day, McLoughlin stands out foremost, and overtops all others, in Mr. Matthieu’s recollection. The old chief factor had some of the elements of greatness: “He was the finest man I ever knew,” says Mr. Matthieu, “and there will never be another like him. He did what no other man would do.” With Doctor McLoughlin, Doctor Whitman, whom he greatly respected, he says, “bore no comparison.” McLoughlin had the immense physique, the great voice, and the commanding manner, and also the positive and decisive mind that carried all before him.

Many are the incidents that Mr. Matthieu relates illustrating his qualities. Once, he says, an Indian was brought to him charged with committing a gross offense. "Is he guilty?" asked the doctor. "Yes," they replied, and presented the proof. "Tie him to that cannon," he replied, pointing to one of the two pieces of artillery that commanded the entrance to the fort. When this was done, he said, "Give him fifteen lashes." Soon after a white man was brought, charged with the same offense. Doctor McLoughlin made the same inquiries, and finding him guilty administered the same punishment. This illustrates why his authority was so absolute among the Indians. His administration exactly filled their conception of justice.

The services of McLoughlin to the immigrants of the year '42, and later, until he resigned his position as chief factor, are fully vouched for by Mr. Matthieu. The doctor advanced everything needed, and furnished the use of bateaux to any in distress. The concluding portion of the immigrants' journey, that from The Dalles to Oregon City, was often virtually provided for by McLoughlin. For all these advances, he was held to the last penny by his company, and as Mr. Matthieu learned, he was obliged to render every cent not paid by the immigrants—a sum so large as to very nearly bankrupt the man.

Upon the return of Mr. Matthieu, in 1858, for a visit to his home in Canada, he took the pains to visit some of Doctor McLoughlin's relatives at their place of business in Quebec, whom he found to be men of much the same magnificent physical mould as the chief factor. He inquired of them as particularly as he dared as to Doctor McLoughlin's fortune, venturing to remark that he supposed he was very rich. "He was wealthy at one

time," was the reply, "but his company required the payment of large sums that he advanced on credit, and that left him with little."

Mr. Matthieu understands that besides his salary of £2,500 per year, he held two shares in the stock of the company, the largest allowed to one individual outside the chartered corporation. His business also included, besides the fur trade of Oregon, extensive operations in British Columbia and Alaska, salmon export to the Sandwich Islands, and milling at Oregon City. At one time he made a proposition to build the canal and locks at the Willamette Falls, at his own expense; but was refused the charter. (F. X. M.)

Returning to Mr. Matthieu's first years in Oregon: He remained with Lucier until 1844. For two years afterwards he lived on French Prairie proper, which is some six miles back from the river. He was engaged in labor during this time, building houses, and making wagons for the settlers. Life he found carried on here in simple style, log cabins being the rule, furnished with big fireplaces, made of sticks, plastered over with the tough black clay found underneath the prairie sod. Few had stoves, and the cooking was done mainly over the coals, or in kettles swung on a crane.

In 1846 he was married, and took a square mile of land a mile from the river, back of the Butte, upon which he has lived now for fifty-four years. It is a noble old place, having both prairie and woodland, and abundant water, and commands beautiful prospects in every direction. His wife was Rose, a daughter of Louis Osant, a Hudson's Bay employee and trapper. The earliest recollections of Mrs. Matthieu are of journeyings on horseback with the parties of her father or of Michel La Framboise, one of the most trusted leaders of the Hudson's Bay trappers. She recalls how, on one of these

jaunts when she was a mere tot of three years, and she had for a comrade a little daughter of La Framboise, they were delighted as they passed under the expansive oaks of the Sacramento Valley to hear the dry leaves rustle under their horses' hoofs. It was a Gypsy life that the trappers led, and those that made the trip to California, like La Framboise and Osant, had the pleasantest road to travel of all the parties.

The mother of Rose having died, the girl was brought up in the family of Pierre Belaque, who occupied a house near Lucier's. A patriarchal family, fourteen in number, were born to these pioneers, ten of whom are now living:

PHILEMON GEER
CLARA OUIMETTE
*PRISCILLA
*EDWARD
ALFRED
LESTER
MAMIE
RANDALL

CHARLES
ROSE
ARSINOE BURTON
*HENRY
ERNEST
*WILLIAM
*VIOLET

Mr. Matthieu has lived as a farmer of Oregon, having been able to provide his family with life's advantages, and himself performing the duties of the good citizen. Besides filling the office of Justice of the Peace in the Provisional Government, he was in 1874 and again in 1878, elected to the Oregon Legislature from Marion County. In 1849 he made the trip to the California gold mines, but was so virulently attacked by fever there as to be compelled to return without making a fortune. In 1858 he took a trip to Canada, by way of Panama, and in 1883, went with the pioneer excursion on the Northern Pacific Railroad. He is now at the age of eighty-two, in good health, of unimpaired memory, good hearing, and unchanged voice; though, having suffered in early life from snow-blindness in the Rocky

Mountains, has somewhat lost the use of his sight. He is a member of the Masonic fraternity, of high degree. He was in the mercantile business for many years, after 1850, at Butteville, with George Le Roque, and in all business relations and in public affairs has maintained a reputation for unquestioned honesty.

NOTES.

IN REGARD TO INDIAN TRIBES, THEIR ANTIPATHIES, ETC.

Mr. Matthieu says: "I have forgot a great deal. Of the Sioux, where I was, there were the Blackfeet—a large nation; then there were the Ogalallahs. Their chief, when I was there, was called Yellow Hair. His hair was not yellow, but lighter than some others. He was a big fellow, and you could hear him grunt like a grizzly. Then there was a little tribe, the Broken Arrows. They were the meanest set—they would get liquor, and kill each other. I do not suppose there were twenty of them when I left. The Crow nation lived west of Fort Pierre, about one hundred or two hundred miles, and one division of them was the Gros Ventres. The Pawnees were the terror of the Sioux; there were many halfbreeds among them. The Sioux did not all have horses. The poorer ones went on foot. But all had buffalo meat. Those that had horses would surprise a herd, and drive them to the Bad Lands, and force many of them over a precipice or into a crevice. Buffalo, when they are stampeded, do not stop at anything, but go over a bluff or into a river. When a crevice is filled full of their bodies the main herd passes on as over a bridge; then the poorer Indians came and helped themselves to the meat.

"West of the Rocky Mountains the Indians were

entirely different. It was a new creation. The Snakes, Piutes and Bannocks seemed very much alike—a poor set. The Cayuses were the most powerful, and the meanest. They were strapping big fellows, and rich. I was told by Hudson's Bay men that they frequently had three or four packs of beaver skins to a tent. That was money. Each pack weighed ninety or one hundred pounds, and the skins were worth \$4 or \$5 a pound. Some of them had five hundred horses apiece—part work horses; part riding or running horses. When I was among the Snakes I bought a white horse for a buffalo skin and a shirt. But in Grande Ronde I was stopped by a Cayuse chief, who said that the horse was his. I told him I bought it. He said it had been stolen. There was a man traveling with me; his name was Russell. Russell said I had better pay the Cayuse something. So I put down a buffalo robe, a shirt and a handkerchief, and said: 'You can take whichever you please—these or the horse.' He took the things, and I took the horse.

“The Cayuses often came into the Willamette Valley to trade horses for cattle. They had some race horses that they would not sell for \$500. They were not a large tribe, not able to muster over two hundred or three hundred fighting men at the farthest. They were well armed with guns, but even with bows and arrows could shoot a man through the heart at fifty yards. They were proud and cruel, and showed it in their faces. The Nez Perces had much better faces than the Cayuses. The Sioux did business on honor. If any of their tribe was mean or dissipated he was regarded as a clown; he was not respected.

AS TO SLAVERY AMONG THE INDIANS.

Among the Sioux, where I was, all captives were regarded as slaves ; so I was told by a chief. I saw but one slave—a woman. Men were not often taken alive.

NEGRO SLAVERY IN OREGON.

This question did not make much stir on French Prairie. The idea was this : Indians were much cheaper and better labor than negroes. For a blanket that cost \$3 you could hire an Indian a month—or perhaps two months ; and many of the Indians were good workers. They could handle an axe like a white man ; and on the river they were the best boatmen. They would paddle all day in a canoe, or on a bateau, and want only a little meat and a salmon skin.

Some Southern people who brought their negroes with them wanted to keep them as slaves ; but the people of Oregon opposed this and made the law that no negro should come to Oregon. It was never enforced.

AS TO PROHIBITION.

“All were in favor of this. It was no trouble. The Catholic missionaries as well as the Methodists favored it. The Hudson’s Bay Company had liquors stored, but never kept them for public sale. The distiller on French Prairie did not hold out long. Some of the Canadians went to his place to drink, or trade for it ; but there was no money in the country, and they could only trade with little articles and there was no profit. A man at Milwaukee Bluff held out about two years, but gave it up—there was no money, and trade did not amount to anything in an illegal business.

AS TO MONEY, ETC.

“There was no coin. If it was brought to the country it was not received at Vancouver. Furs, at a fixed valuation, were the first currency. Wheat was next.

“Wheat had to be delivered at the Hudson’s Bay warehouse at Champoeg. For this a receipt was given by the H. B. clerk. The receipt passed current as money, and was worth its face in goods at Vancouver.”

To illustrate the *modus* of doing business, Mr. Matthieu tells the following incident: “I was barefoot and nearly naked, and wanted some clothes. I took an order of Lucier’s, and went down to Fort Vancouver; but, as I had just come across the country, and was not long from Canada, I was met by so many Frenchmen at the fort, who wanted to hear all about my journey, and Canada, which some of them had not seen for twenty years, that I did not get my order in at once. When at last I presented it, the clerk said that I would have to see Douglas, as Lucier’s account was all drawn; so many others had been bringing his paper.”

“Douglas told me to go to McLoughlin. Each had an office in the building. When McLoughlin looked at my order he said he was sorry, but the account was drawn. I said, ‘It will come rather hard on me. I am barefoot, and almost naked, and I supposed Lucier’s credit was good anyhow.’ Then the doctor began to ask me where I was from. I told him ‘Terrebonne, in Canada.’

“‘I am from near that part,’ he said. Then he asked me about the place and people, and of old Doctor Frasier; and kept me about an hour talking. At last he said, ‘You look honest; go to the office and get this filled.’ And gave me an order for about \$18 worth of goods.

“At the office there was a little entrance, about eight feet square, and a little window into the store, where the

goods were passed out. The clerk there was Doctor McLoughlin's son, whom I had seen in Montreal. He knew me, and at once opened the door inside and asked me in. 'Take all you need,' he said, 'and never mind the old man.'

"But I took only the amount of the order. But all the clothes were made for big fellows—a great deal too big for me. So I took cloth, and got it made up the best I could."

AS TO EFFECT OF MINES ON BUSINESS, ETC.

"Gold dust was like dirt. Many believed it would never have any value. I have seen the Hudson's Bay store at Oregon City take in a four-quart pan of dust in one day. They allowed \$16 an ounce; but much of it was the fine Yuba and American River dust, worth \$22 to \$22.50 an ounce in London.

"But it was not the men who went to the mines, so much as those that stayed on their farms and raised produce, that got the dust.

"I remember when I was in San Francisco in '49, I went into a French restaurant. I was sick, and only called for tea and toast and an egg. For the tea and toast I paid \$1.25, and for the egg \$2. The egg had come around the Horn, packed in salt, and was a chunk of salt. I could not eat it.

"But prices for Oregon stuff did not hold out many years. Great shipments were made from the East. Habits of living among the farmers were not much changed. We always had enough to live on, both before and after the mines broke out."

Mr. Matthieu was well acquainted with Governor Abernethy, the first Governor of the Provisional Government, succeeding the executive committee. He describes Abernethy as "a fine looking man, of medium size; easy

in manner and ways, and very light complexion." He built the first brick store in Oregon City, with mud for mortar. In the great flood of '62 it collapsed. He kept a large stock of goods, trading by three vessels with San Francisco. He was in partnership with Clark, and for a time with Robb, who invested his gold mine profits in the store.

The mason who built the store was — McAdam, who also built the brick Catholic church at Saint Paul.

Mr. Matthieu was also acquainted with Joseph Lane, the first Territorial Governor. He describes the old general as "a very nice man;" quick in his movements, military in manner and bearing; not tall, and "dry and thin," and all nerves.

AS TO TOWNS.

The flat at Oregon City was still, when he first saw it, thickly covered with tall timber. Waller's house stood near the present site of the woolen mills. The Hudson's Bay store was on the edge of the lowest bluff, over the water, about where the warehouse now stands.

Portland was nowhere—a dense forest and a tangled shore; but there was a grassy place among the trees near the mouth of the big gulch at the south part of town, where the boating parties up the river sometimes stopped to lunch or camp.

Etienne Lucier's old place was on the bluff, on the east side, and Johnson's place on the hill at the south end, west side.

Salem was just starting, the people at the old mission moving up to start the institute, etc.

I have examined the above manuscript of Mr. Lyman's, and find it correct. Nobody can contradict that; it could not be written more correctly.

F. X. MATTHIEU.

DOCUMENTS.

[In this department of the *Quarterly* there will appear material of the nature of primary sources for the history of the Pacific Northwest. The more extended documents, however, and collections having a unity will be reserved for the series, "Sources of the History of Oregon."']

Correspondence of John McLoughlin, Nathaniel J. Wyeth, S. R. Thurston, and R. C. Winthrop, pertaining to claim of Doctor McLoughlin at the Falls of the Willamette—the site of Oregon City.

The following correspondence was published in the *Milwaukie Star*, April 10, 1850. The files of this paper are exceedingly scarce. The original copies of the letters were probably destroyed. A knowledge of their contents is essential to an understanding of very important, though not creditable, transactions in Oregon's history. These letters also are an addition to the Wyeth material that the society has been making accessible to students of American history.

CHICOPEE, Mass., Nov. 16, 1850.

Capt. Nath. J. Wyeth:

MY DEAR SIR—You will excuse me, I am sure, when I assure you I am from Oregon, and her delegate to the Congress of the United States, for addressing you for a purpose of interest to the country which I belong.

I desire you to give me as correct a description as you can at this late period, of the manner in which you and your party, and your enterprise in Oregon, were treated by the Hudson's Bay Company, and particularly by Doc. John McLaughlin, then its Chief Factor. This Dr. McLaughlin has, since you left the country, rendered his name odious among the people of Oregon, by his endeavors to prevent the settlement of the country, and to cripple its growth.

Now that he wants a few favors of our Government, he pretends that he has been the long tried friend of Americans and American enterprise west of the mountains. Your early reply will be highly appreciated, both for its information, and your relation to my country.

I am, sir, yours very truly,

S. R. THURSTON.

CAMBRIDGE, Nov. 21, 1850.

Hon. Sam'l R. Thurston:

DEAR SIR—Your favor of the 16th inst., was received on the 19th. The first time I visited the Columbia, in the autumn of 1832, I reached Vancouver with a disorganized party of ten persons, the remnant of twenty-four who left the States. Wholly worn out and disheartened, we were received cordially, and liberally supplied, and there the party broke up. I returned to the States in the Spring of 1833 with one man. One of the party, Mr. John Ball, remained and planted wheat on the Willamette a little above Camp du Sable, having been supplied with seed and implements from Vancouver, then under the charge of John McLaughlin, Esq., and this gentleman I believe to have been the first American who planted wheat in Oregon. I returned to the country in the autumn of 1834, with a large party and more means, having on the way built Fort Hall, and there met a brig which I sent round the Horn. In the winter and spring of 1835, I planted wheat on the Willamette and on Wappatoo Island.

The suffering and distressed of the early American visitors and settlers on the Columbia were always treated by Hudson's Bay Company's agents, and particularly so by John McLaughlin, Esq., with consideration and kindness, more particularly the Methodist Missionaries, whom I brought out in the autumn of 1834. He supplied them with the means of transportation, seeds, implements of agriculture and building, cattle and food for a long time.

I sincerely regret that the gentleman, *as you state*, has become odious to his neighbors in his old age.

I am your ob't serv't,

NATH. J. WYETH.

CAMBRIDGE, Nov. 28, 1850.

Hon. Robert C. Winthrop:

DEAR SIR—I have received a letter from Sam'l R. Thurston, Esq., of which the following is a portion:

"I desire you to give me as correct a description as you can at this late period, of the manner in which you and your party, and your enterprise in Oregon, were treated by the Hudson's Bay Company west of the Rocky mountains, and particularly by Dr. John McLaughlin, then its Chief Factor. This Dr. McLaughlin has since you left the country, rendered his name odious among the people of Oregon, by his endeavors to prevent the settlement of the country and cripple its growth. Now that he wants a few favors of our Government, he pretends that he has been the long-tried friend of Americans and American enterprise west of the mountains."

I have written Mr. Thurston, in reply to the above extract, that myself and parties were kindly recieved, and were treated well in all respects by J. McLaughlin, Esq., and the officers of the Hudson's Bay Co.; but from the tenor of his letter, I have no confidence that my testimony will be presented before any committee to whom may be referred any subjects touching the interests of said John McLaughlin, Esq.

The very honorable treatment received by me from Mr. McLaughlin during the years inclusive from 1832 to 1836, during which time there were no other Americans on the Lower Columbia, except myself and parties, calls on me to state the facts.

The purpose of this letter is to ask the favor of you to inform me what matter is pending, in which Mr. McLaughlin's interests are involved, and before whom, and if you will present a memorial from me on the matters stated in Mr. Thurston's letter as above.

Respectfully and truly your ob't servant,

NATH. J. WYETH.

WASHINGTON, Dec. 28, 1850.

DEAR SIR—I took the earliest opportunity to enquire of Mr. Thurston what there was pending before Congress or the Executive, in which Mr. McLaughlin's character or interest were concerned. He would tell me nothing, nor am I aware of anything.

Respectfully your ob't serv't,

R. C. WINTHROP.

To N. J. WYETH, Esq.

John McLaughlin, Esq.:

DEAR SIR—On the 19th of December, 1850, I received a letter from Sam'l R. Thurston, delegate from Oregon, of which see copy No. 1, and by same mail an Oregon newspaper containing a communication over your signature, the letter [latter], I think, addressed in your handwriting.

From the tenor of Mr. Thurston's letter, I presumed he wanted my testimony for some purpose not friendly to yourself. I answered his letter as per copy No. 2, but doubting if my testimony, except it suited his views, would be presented, and being ignorant of his intentions, I wrote the Hon. R. C. Winthrop, late Speaker of the House of Representatives, and at present a member of the Senate of the United States, as per copy, (No. 3) and received from him a reply as per copy (No. 4).

Should you wish such services as I can render in this part of the United States, I shall be pleased to give them in return for the many good things you did years since, and if my testimony as regards your efficient and friendly actions towards me and the other earliest Americans who settled in Oregon, will be of use in placing you before the Oregon people in the dignified position of a benefactor, it will be cheerfully rendered.

I am, with much respect, yours truly,

NATH. J. WYETH.

Mr. Thurston writes to Mr. Wyeth, "That Dr. McLaughlin has, since you left the country, rendered his name odious to the people of Oregon." (That I have rendered my name odious to the people of Oregon, is what I do not know.) And "By his endeavors to prevent the settlement of the country, and to cripple its growth." I say I never endeavored to prevent the settlement of the country, or to cripple its growth, but the reverse. If the whole country had been my own private property, I could not have exerted myself more strenuously than I did to introduce civilization, and promote its settlement. "Now that he wants a few favors of our Government, he pretends that he has been the long tried friend of Americans and American enterprise west of the mountains." Mr. Wyeth states how I acted towards him and his companions, the first Americans that I saw on this side of the mountains. Those that came since, know if Mr. Thurston represents my conduct correctly or not. As to my wanting a few favors, I am not aware that I asked for any favors. I was invited by the promises held out in Linn's bill, to become an American citizen of this territory. I accepted the invitation and fulfilled the obligations in good faith, and after doing more, as I believe will be admitted, to

settle the country and relieve the immigrants in their distresses, than any other man in it, part of my claim, which had been jumped, Mr. Thurston, the delegate from this territory, persuades Congress to donate Judge Bryant, and the remainder is reserved. I make no comment—the act speaks for itself, but merely observe, if I had no claim to Abernethy Island, why did Mr. Thurston get Congress to interfere, and what had Judge Bryant done for the territory to entitle him to the favor of our delegate. Mr. Thurston is exerting the influence of his official situation to get Congress to depart from its usual course, and to interfere on a point in dispute, and donate that island to Abernethy, his heirs and assigns, alias Judge Bryant, his heirs and assigns.

Yours respectfully,

JNO. MCLOUGHLIN.

THE QUARTERLY

OF THE

OREGON HISTORICAL SOCIETY.

THE OREGON QUESTION.

I.

Ascending the Columbia River to the junction of its two main branches, and each of these branches in turn to its source, a point is reached to the north well toward the fifty-fifth degree of latitude, and another point to the south not far from the forty-first degree. Lines drawn through these two points directly west to the Pacific Ocean would divide the Pacific Coast of North America approximately into three great historic divisions. Previous to the year 1792, the coast north of the fifty-fifth degree had been explored and in some sort settled by Russia, and the sovereignty of Russia over it recognized; the part south of the forty-first degree had been explored and settled by Spain, and the sovereignty of it had been conceded to Spain; the middle part of the coast having been explored by both Spain and Britain, but settled by neither, the sovereignty of this was yet in abeyance. If the lines supposed to be drawn from the utmost north and south sources of the Columbia to the Pacific now

be extended eastward to the crest of the Rocky Mountains, the territory included between these two lines, the Pacific Ocean and the crest-line of the Rocky Mountains, will embrace the states of Oregon, Washington, Idaho, with a considerable part of the states of California, Wyoming, and Montana, together with the greater part of British Columbia. It is the settlement of the question of sovereignty over the region thus roughly defined that is the subject of this paper.

During almost the whole period when its sovereignty was in question this region was commonly known in this country and in Europe as Oregon, the Oregon Country, or the Oregon Territory, and the question of its sovereignty as the Oregon Question. The country took its name from a legendary name of the river that defines it, a name given the river even before it had been seen by any white man. For many years previous to 1792 the existence of such a river in this region had been conjectured by explorers along the coast from signs they had observed in an indentation in the coast line, and by explorers in the interior from reports of such a river that reached them through native tribes supposed to dwell near its sources. It is to Jonathan Carver, a native of Connecticut, that we owe, as it is still thought, the name Oregon. In his journal of travels in the regions of the Upper Mississippi he speaks of four great rivers, flowing in as many directions, which took their rise, as he had heard from native tribes, somewhere in the mountains to the west. One of these was, as Carver writes in his journal, "the river Oregon, or the River of the West, which falls into the Pacific Ocean." Already, in Carver's day, and before the time of his travels, maps had appeared with a river marked in the region of what is now the Columbia, which bore the name, among others, of the River of the West, or the Great River of

the West. Whether Carver thought of this river as the river of his tradition cannot now be known, but it is certain that the name which he heard or invented came before long to be attached to this river for a time at least, and for all time to the region defined by the river.

At the beginning of the year 1792, the United States had no claim to the region of the Oregon, but by an event of this year they were destined to become one of the chief parties to the question of its sovereignty. This year Capt. Robert Gray, of Boston, was for the second time on the coast, trading and exploring, under sanction of congress. At some time during his previous voyage, or in the earlier part of his second voyage, while sailing close in shore, Gray had discovered in a bay or indentation of the coast in latitude $46^{\circ} 10'$ what seemed to him to be the mouth of a large river. Under this impression, he had remained in the neighborhood nine days, making repeated attempts to cross the bar and effect an entrance. But every attempt had been without avail, on account of the violence of the breakers which reached across the opening; he had been obliged to relinquish the attempt and sail away, unable at this time to verify his discovery.

Captain Gray had spent the winter of 1791-92 in Clioquot Sound, on the west coast of Vancouver Island, with his ship Columbia. Resuming his voyage in the spring, and sailing southward, on the morning of April 28, in latitude $47^{\circ} 37'$, he fell in with Captain Vancouver, at anchor off Destruction Island. In answer to Vancouver's inquiries as to what discoveries he had made, Gray reported to him his discovery in latitude $46^{\circ} 10'$ of what he took to be the mouth of a large river. This Vancouver recognized as the Deception Bay of Captain Meares, which he had himself passed and examined on the morning of Friday, April 27, scarcely twenty-four hours before. Of his observations in this bay Vancouver

had at this time made this record: "The sea now changed from its natural to river-colored water; the probable consequence of some streams falling into the bay, or into the ocean to the north of it through the low land. Not considering this opening worthy of more attention, I continued our pursuits to the northwest, being desirous to embrace the advantages of the now favorable breeze and pleasant weather, so favorable to our examination of the coast." Vancouver's estimate as here given of the importance of this opening is confirmed by an entry in his journal Monday, April 30, two days after meeting with Gray. After parting from Vancouver, who continued his course to the north, Gray sailed on along shore southward, stopping here and there to examine the coast or trade with the natives, but evidently keeping in mind the bay which he had taken to be the mouth of a river. In the log-book of the *Columbia*, for May 11, there is this entry: "At 4 A. M., saw the entrance of our desired port bearing east-south-east, distance six leagues; in steering sails, and hauled our wind in shore. At 8 A. M., being a little to windward of the entrance to the harbor, bore away, and run in east-north-east, between the breakers. * * * When we were over the bar we found this to be a large river of fresh water, up which we steered."

Captain Gray remained in this river for nine days, during which time he explored it to a distance of thirty miles from the mouth. After filling the ship's casks with fresh water from the river, on May 20 he sailed out over the bar, having first given to the river his ship's name, the *Columbia*, which name the river has since borne.

From the mouth of the *Columbia* Gray sailed northward, and a few days later, having suffered some injury to his ship, put into Nootka Bay for repairs. Here he found Quadra, the Spanish commandant, to whom he

communicated his discovery, and gave a chart of the mouth of the river. This title of Gray to be regarded as the discoverer of the Columbia River was then, by this immediate publication of the discovery, made secure, and it has never been successfully questioned. The existence of such a river had long before been conjectured; others, before Gray, sailing along the coast had remarked the same indentation, had noted its latitude, and observed signs of fresh water issuing from it; but it remained for Gray to surmount the obstacles to entrance and actually to sail in and cast anchor in the river.

It was this discovery of the Columbia River by Robert Gray, a citizen of the United States, sailing under the American flag, and with the sanction of congress, that first gave the United States a claim to the Oregon region. It was not, however, to be the only ground of that claim. Some years before the discovery of the Columbia by Gray, an exploration of the Oregon region had been projected by Americans. The project seems to have originated with Jefferson, and may be regarded as a fitting prelude to the later achievement by his administration of the Louisiana Purchase. In the year 1786, six years before Gray's discovery, while Minister to France, Jefferson became acquainted with John Ledyard, of Connecticut, who had been with Captain Cook in his last voyage in the Pacific, and who as corporal of marines had gained some reputation for enterprise and daring. Ledyard had come to Paris in search of an opportunity to engage in the fur trade of the Pacific, and, failing in this, was ready to enlist in almost any other enterprise of daring. Jefferson suggested to him the exploration of the northwest region of America. The plan was, as Jefferson himself gives it, that Ledyard "go by land to Kamchatka, cross in Russian vessels to Nootka Sound, fall down into the latitude of the Missouri, and penetrate to and through

that to the United States." Jefferson's proposal was accepted by Ledyard, and steps were at once taken to secure from the Empress of Russia permission for him to cross her dominions. Failing to secure permission of the Empress, she being absent from her capital in a distant part of her dominions, Ledyard, impatient of longer delay, set out on his own responsibility, and got to within two hundred miles of Kamchatka, when he was arrested by an order of the Empress and taken back to Poland, where he was released. "Thus failed," writes Jefferson, "the first attempt to explore the western part of our Northern Continent."

The attempt failed, but Jefferson's interest in the exploration of this region did not die with it. Of a second attempt some years later he writes: "In 1792, I proposed to the American Philosophical Society that we should set on foot a subscription to engage some competent person to explore that region in an opposite direction—that is, by ascending the Missouri, crossing the Stony Mountains, and descending the nearest river to the Pacific." This plan too was attempted, but the seriousness of the projector's purpose was severely tried by the delay of years in raising the necessary funds. When at last, under the leadership of Captain Meriwether Lewis, later of the Lewis and Clark expedition, the explorers were well started on the way, the expedition failed through an order of the French minister recalling the botanist of the expedition, who was a citizen of France. "Thus failed," writes Jefferson again, "the second attempt to explore the Northern Pacific region."

Jefferson's interest in the exploration of the Northwest did not die with the failure of this second attempt. Delay in raising the necessary funds for the expedition had brought the setting out of the explorers down to the eve of an event that placed Jefferson in a position to further

such an enterprise to a successful issue, and of another event which was to furnish a new motive to its undertaking. Early in the year 1801, when Jefferson had but just taken his seat as President, Rufus King, Minister of the United States to England, wrote to Madison, Secretary of State, that the opinion at that time prevailed both at Paris and at London that Spain had ceded Louisiana and the Floridas to France. Immediately on receipt of this information Madison wrote to Pinckney, American Minister to Spain, advising him of the rumor, and of the President's urgent wish that he make the whole subject the object of early and vigilant inquiries. Instructions to the same effect were given later to Robert R. Livingston on his departure as Minister to France. After more than a year of persistent inquiry on the part of both ministers it was ascertained that Louisiana had been transferred to France, and that the transfer probably included the Floridas. Uncertainty on the latter point, as we now know, arose from the uncertainty of the governments of France and Spain as to the limits of Louisiana. Meanwhile the government at Washington pressed its ministers at both courts to use every effort to secure to the United States the Floridas and New Orleans, with the Mississippi as our western boundary, and the free navigation of the river to its mouth. Events of the latter part of the year 1802, and especially the Spanish intendant's order excluding the United States from New Orleans as a place of deposit, together with France's open preparations for the occupation and colonization of New Orleans and Lower Louisiana, made the President yet more urgent in pressing for this end. So far, Jefferson's thought seems not to have gone beyond the limits of Madison's dispatch to Pinckney of May 11 of that year, "that every effort and address be employed to obtain the arrangement by which the territory on the east side of

the Mississippi, including New Orleans, may be ceded to the United States, and the Mississippi be made a common boundary." The sentiment of the Atlantic States was at this time strongly averse to the extension of our territory west of the Mississippi River, and there is nothing in the government's dispatches up to the close of the year 1802 to indicate that Jefferson did not share in this sentiment. But there is that in Jefferson's action shortly after this that shows him to have been singularly open-minded to the suggestion of events, and to have been prompt to prepare to avail himself of whatever the rapid movement of events might offer of advantage to his government.

In October of this year, 1802, in a conversation with Livingston concerning Louisiana and the Floridas, Joseph Bonaparte put the question to Livingston pointedly whether the United States preferred the Floridas to Louisiana. Coming from this source, the question was felt by Livingston to have significance. Though he shrank from the thought of such an extension of our territory as the purchase of Louisiana would involve, he promptly communicated the substance of the conversation to the government at home, in a letter addressed to the President in person. This letter dated Paris, October 28, was due in Washington about the first of January. On the eleventh of January Jefferson sent a message to the Senate nominating "Robert R. Livingston to be Minister Plenipotentiary, and James Monroe to be Minister Extraordinary and Plenipotentiary, with full powers to both jointly, or to either on the death of the other, to enter into a treaty or convention with the First Consul of France for the purpose of enlarging and more effectually securing our rights and interests in the River Mississippi and the territories eastward thereof." Since the possession of these territories was understood to be still

in Spain, Pinckney and Monroe were nominated with like powers to enter into a treaty with Spain to the same end. The words with which Jefferson prefaced this nomination of Monroe as Minister Extraordinary are worthy of note in this connection, and in view of what presently emerged in the negotiations in Paris. "While my confidence," writes Jefferson, "in our Minister Plenipotentiary at Paris is entire and undiminished, I still think that these objects might be promoted by joining with him a person sent from hence directly carrying with him the feelings and sentiments of the nation excited on the late occurrence, impressed by full communications of all the views we entertain on this interesting subject, and thus prepared to meet and to improve to an useful result the counter propositions of the other contracting party, whatsoever form their interests may give to them, and to secure to us the ultimate accomplishment of our object."

Whether Jefferson had in mind when he wrote these words any such "counter proposition" as was afterward actually made, we do not certainly know, but if he had had such in mind he could hardly have better provided for its prompt improvement to a useful result. Meanwhile events in Europe were shaping the suggestion of Joseph Bonaparte into a formal proposition from the First Consul. The renewal of hostilities between France and England was now imminent. In the event of war it was manifest to Napoleon that he would be unable to hold Louisiana against the sea power of England. Rather than that this valuable possession should fall into the hands of his enemy he resolved to sell it, if possible, to the United States, and thus win back the nation which his policy of colonization had well-nigh alienated, and at the same time recruit his depleted treasury. Negotiations to this end were already begun when Monroe arrived in Paris, and were continued after his arrival with

scarcely a halt to their successful and memorable issue.

A third scheme of Jefferson's for the exploration of the northwestern region of the continent was coincident with these latter steps that led to the purchase of Louisiana. The message nominating Monroe as Minister Extraordinary was sent to the senate, January 11, 1803. January 18, Jefferson, taking occasion of the expiration of the term of an act establishing trading houses with the Indian tribes, writes to the senate on the subject of its renewal. In the course of the message, having touched upon the fact that the maintenance of such trading houses by the government deprived certain of our citizens of a lucrative trade, he suggests for the senate's consideration whether the government might not rightly do something to encourage such persons to extend their trade in the regions beyond the Mississippi, then proceeds to outline a plan for the exploration of a trade-route up the waters of the Missouri and through to the Western Ocean. "The interests of commerce," he urges, "place the principal object within the constitutional powers and care of congress, and that it should incidentally advance the geographical knowledge of our own continent cannot but be an additional gratification. The nation claiming the territory, regarding this as a literary pursuit, which it is in the habit of permitting within its dominions, would not be disposed to view it with jealousy, even if the expiring state of its interests there did not render it a matter of indifference. The appropriation of \$2,500 'for the purpose of extending the external commerce of the United States,' while understood and considered by the executive as giving the legislative sanction, would cover the undertaking from notice and prevent the obstructions which interested individuals might otherwise previously prepare in its way."

Thus skillfully did Jefferson in a confidential message,

as a matter incidental to the main purpose of the message, put before the senate a well reasoned scheme for the exploration of the territory for the purchase of which ministers already appointed were soon to negotiate. One can hardly read this message and weigh its carefully worded terms in the light of what was already in the knowledge of the President, without its awakening more than a suspicion that the possibility of the purchase of Louisiana by the United States was distinctly present to Jefferson's mind as he wrote, if it did not indeed lend urgency to his argument. It is worthy of note, at any rate, that the measures for the carrying out of this proposed scheme of exploration of the territory kept pace with the progress of the negotiations for its purchase, and quite outran the business of its transfer; for while the transfer of Louisiana was not consummated until December of that year, the commander of the expedition had been selected and commissioned, and the expedition organized as early as midsummer. Thus closely joined in time, if not otherwise intimately connected, were these two measures of Jefferson's earlier administration, the Louisiana purchase and the Lewis and Clark exploration. The promptness, energy, and efficiency with which the exploration was carried out under the able and courageous leadership of the man placed in charge, were altogether worthy of its distinguished projector. The two stand together, the purchase and the exploration, as worthy counterparts in what must forever be regarded as one of the most daring yet at the same time farsighted projects of statesmanship in American history.

These two measures have been dwelt upon thus at length because of their material importance to the ultimate settlement of the Oregon Question. The purchase of Louisiana brought the territory of the United States at the crest of the Rocky Mountains in contiguity with

the Oregon region through seven degrees of latitude, while the Lewis and Clark expedition explored a continuous route from the Mississippi River to the Pacific Ocean, through the very center and by the central artery of the region in question. These two events together made the second ground of our claim to the region of the Oregon. Furthermore, they made possible for the first time that movement of population across our border into this adjacent and unoccupied territory which by the law of nations was essential to the validity of our title,—that immigration of American families upon which, in spite of every earlier attempt at settlement, the final settlement of the question of sovereignty was destined to wait.

Louisiana had been purchased by the United States from France, or, rather, from the First Consul, who at the time embodied in himself the government of France. Spain, however, though by a convention three years before the sale having agreed to retrocede the territory to France, had remained in possession almost to the day of its transfer to our government, so that possession of the territory virtually passed to the United States immediately from Spain. The transfer left Spain still with possessions within the present boundaries of the United States of vast extent and of immense value. East of the Mississippi were the Floridas, and west of that river was a great region extending from the ill-defined western boundary of Louisiana westward to the Pacific. These were conceded possessions of Spain. Besides, Spain was a claimant, on the grounds of discovery and exploration, of the Oregon country.

Spain had long claimed exclusive sovereignty over this region, with the right to forbid the encroachment of other nations, on the ground that it belonged to that region allotted to her by the bull of Pope Alexander VI.

England had never recognized Spain's claim to exclusive sovereignty based upon papal authority, but had asserted her right to settle upon any lands included within the limits prescribed by the papal bull, even if discovered by Spain, if, after a reasonable time allowed for settlement had passed, such lands remained unoccupied. This attitude of England's appeared in her policy as early as the reign of Elizabeth; it appears in the Queen's reply to the Spanish ambassador on occasion of his remonstrance against the expedition of Drake, "that she did not understand why either her subjects, or those of any other European prince, should be debarred from traffic in the Indies; that as she did not acknowledge the Spaniards to have any title by donation of the Bishop of Rome, so she knew no right they had to any places other than those they were in actual possession of; for that their having touched only here and there upon a coast, and given names to a few rivers or capes, were such insignificant things as could in no way entitle them to a propriety further than in the parts where they actually settled, and continued to inhabit." This principle, thus early enunciated, of actual settlement as essential to ultimate validity of title, is important to note, not only for its bearing against Spanish pretensions at this time, but because of its ultimate and decisive effect as against England herself in the settlement of the Oregon question. The same principle emerged again in 1770, in the affair of the Falkland Islands, and again still more distinctly ten years later in the Nootka Convention. The point at issue in each of these cases was that Britain claimed the right to make settlement upon a part of the American coast claimed by Spain but remaining unoccupied by her, while Spain denied this right and asserted her exclusive sovereignty over all such places. In order to give effect to this claim of exclusive sovereignty over

the Northwest Coast of America, Spain had, within a few years previous to the Nootka Convention, given orders that the coasts of Spanish America should be more frequently navigated and explored, and, in view of the recent encroachment of navigators and traders of other nations in those parts, her "general orders and instructions were, not to permit any settlements to be made by other nations on the continent of Spanish America." It was in carrying out these orders that the Spanish Commandant Martinez, in the summer of 1789, finding two British vessels in Nootka Sound, attempting a settlement there, captured the vessels and broke up the settlement.

In the course of the negotiations that followed on this act of Spain's, the full extent of the Spanish claims appeared. As given by Count Nunyez, Spanish Ambassador at Paris, to M. de Montmorin, Secretary of the Foreign Department of France, June 1, 1790, it was claimed, "that, by treaties, demarkations, taking of possessions, and the most decided acts of sovereignty exercised by the Spaniards in those stations from the reign of Charles II, and authorized by that monarch in 1692, all the coast to the north of Western America, on the side of the South Sea, as far as beyond what is called Prince William's Sound, which is in the sixty-first degree, is acknowledged to belong exclusively to Spain." Not feeling sufficiently strong in herself to enforce this claim, and unable to secure the support of allies, Spain yielded this pretension so far as to make, July 24, 1790, a declaration to Great Britain in which the King of Spain engaged to make full restitution of all British vessels which were captured at Nootka, and to indemnify the parties interested in those vessels for the losses which they should be found to have sustained. "It being understood," the declaration con-

cluded, "that this declaration is not to preclude or prejudice the ulterior discussion of any right which His Majesty may claim to form an exclusive establishment at the port of Nootka." The same day the British Minister at Madrid presented a counter declaration accepting the declaration of the Spanish King as offering "full and entire satisfaction" for the injury complained of, in which counter declaration, however, it was added at the same time "that it is to be understood that neither the said declaration, nor the acceptance thereof in the name of the King, is to preclude or prejudice, in any respect, the rights which His Majesty may claim to any establishment which his subjects may have formed, or should be desirous of forming in the future, at the said Bay of Nootka." The exchange of this declaration and counter declaration in July was followed in October of the same year by the conclusion of the Nootka Convention between Spain and Great Britain. The third article of this convention is: "And in order to strengthen the bonds of friendship, and to preserve in future a perfect harmony and good understanding between the two contracting parties, it is agreed that their respective subjects shall not be disturbed or molested, either in navigating or carrying on their fisheries in the Pacific Ocean, or in the South Seas, or in landing on the coast of those seas, in places not already occupied, for the purpose of carrying on their commerce with the natives of the country, or of making settlements there; the whole subject, nevertheless, to the restrictions and provisions specified in the following articles."

After all the restrictions of the later articles of this treaty are taken into view Britain may be regarded as having maintained her main contention: That she had a right to any establishment which her subjects might have formed, or shall be desirous of forming in future,

in any unoccupied places on the islands or the coasts of the Pacific Ocean. The restrictions still left this clear, at least in respect to the Oregon region. In so far as Britain succeeded in maintaining in this convention this claim to the right of settlement, in so far was Spain's claim to absolute sovereignty to this region practically modified and limited. Unless Spain speedily made good her reserved right of sovereignty by actual occupation of the region in question, she must consent henceforth to hold her right of settlement as limited by a similar right now conceded to Britain. It is at this point in history, at the Nootka Convention, that the Oregon Question takes definite form : Whose shall the territory be? Shall it be Spain's? or shall it be Britain's? or shall it be divided between the two?

The story has already been told of the entrance of the United States into the question as a third claimant, through Gray's discovery, the Louisiana Purchase, and the Lewis and Clark expedition. The story of how the United States succeeded to the modified claim of Spain to the Oregon region belongs to the sequel of the Louisiana Purchase. The purchase of Louisiana left the United States with a group of intricate and delicate questions to settle with Spain, and with Spain in no mood for a speedy and amicable settlement. The transfer of Louisiana had not carried with it a clear definition of its boundaries. This was in part true of its boundary on the east, and especially true of its western boundary. Almost immediately on the transfer of the territory negotiations were begun with Spain on questions arising out of the transfer, or intimately connected with it. Two main objects of the negotiations on the part of the United States were, to secure from Spain, by purchase or otherwise, the cession of her remaining possessions east of the Mississippi, and the settlement of the boundary of Louisiana to the

west. Any question in respect to the Oregon country seems not at first to have been present to the thought of either party. Negotiations were begun in 1804, and were continued, with intervals of interruption, until February 22, 1819, when, by a convention of that date, the Floridas were ceded by Spain to the United States, and a boundary line west of the Mississippi agreed upon. This western boundary line, after striking latitude 42° near the supposed source of the Arkansas River, was to run west on this parallel to the Pacific Ocean. Article III of this convention, after particularly describing this line, concludes: "The two high contracting parties agree to cede and renounce all their rights, claims, and pretensions to the territories described by said line: That is to say, the United States hereby cede to his Catholic Majesty, and renounce forever all their rights, claims, and pretensions to the territories lying west and south of the above described line; and, in like manner, his Catholic Majesty cedes to the United States all his rights, claims, and pretensions to any territories east and north of the said line; and for himself, his heirs, and successors renounces all claim to the said territories forever." Thus the Florida treaty, though making no mention of the Oregon Territory, incidentally carried with it the final delimitation of that territory on the south, and the transfer to the United States of the Spanish claim to Oregon. By this treaty the earliest claimant to the Oregon Territory ceased longer to be a party to the question of its sovereignty.

The question of sovereignty was not left to Great Britain and the United States alone, on the withdrawal of Spain. More than two decades before, Russia had entered this region with an assertion of her right to make settlement on unoccupied territory, and recently had

grown somewhat imperious in the tone of her assertion of that right. This intrusion of Russia followed close upon the Nootka Convention, and was the logical consequence of the principle for which Great Britain had secured recognition in that convention. It will be remembered that Great Britain did not base her right to make, and to have restored to her, the Nootka settlement so much on priority in discovery of the region in which the settlement was made, as on the broader principle of her right to settle in any place by whomsoever discovered, which after a reasonable time she might find unoccupied. This principle could not be valid for England alone, and Russia was not long in discovering its wider validity. After England's previous assertion of this principle, in the affair of the Falkland Islands, Spain had taken alarm, and had sent explorers along the Northwest Coast with the intention of making good her claim to it by the northward extension of her settlements. In like manner Russia now began to extend her claim into new territory by availing herself of this same principle. The grant of Emperor Paul I to the Russian American Company in 1799 gave the company exclusive possession from latitude 55° northward to the Arctic Sea, with the right to extend their settlements south of 55° , if they did not thereby encroach on territories occupied by other powers. In the spring of 1808 the Russian government opened a correspondence with the government of the United States in relation to what Russia was pleased to term the illicit traffic of American traders with the natives inhabiting Russian territories. It appeared in the course of this correspondence that Russia claimed the coast at this time as far south as the Columbia River. The right to make settlements, or at least to establish trading posts, it seems she did not confine to this southern limit, for in 1816, a Russian trading post was estab-

lished as far south as latitude 38° , in Northern California.

In this later and more aggressive policy of extending her claims southward, Russia is thought to have been influenced by the publication in Paris in 1808 of Humboldt's Political Essay on New Spain, in which such a destiny for Russia had been hinted at. However this may have been, it is certain that the accounts of Humboldt's travels were eagerly read by the Russian Emperor, and an increased boldness and aggressiveness are observable in Russian policy after the publication of this work.

The extreme of Russia's pretensions in the matter of extension of territory was reached in 1810, when the subject of the encroachment of American traders was brought again to the attention of our government. Mr. Adams, American Minister at St. Petersburg, in reply to the Russian Minister, suggested that, since it did not appear how far the Russians stretched their claim southward along the coast, it was desirable that some latitude be fixed as the limit, and that it should be advanced as little southward as might be. The answer of Russia was, that the Russian-American Company claimed the whole coast of America on the Pacific, and the adjacent islands, from Bering's Strait southward toward and beyond the mouth of the Columbia River. With this declaration of Russia's claim negotiations were broken off, and were not resumed until September, 1821, when Emperor Alexander issued a ukase, in which he declared all the Northwest Coast of America north of latitude 51° exclusively Russian, and warned all other nations against intrusion within those limits. The extent of the territory claimed in this imperial ukase was less than that of the territory claimed by Russia in 1810, and in particular the extent of the claim was not so great southward. Several events had occurred since 1810 to limit the extent of Russia's

claim, though scarcely to modify the imperiousness of her tone. To this intervening period belong the settlement at Astoria of the Pacific Fur Company in 1811, the exploration of the Upper Columbia the same year by David Thompson, an agent of the Northwest Company, with a view to the extension of the posts of his company far to the westward; the purchase two years later by the Northwest Company of the establishment of the Pacific Fur Company at Astoria, and its transfer a few days later to the British flag with the change of name to Fort George; the surrender of the fort in 1818 in accordance with the terms of the treaty of Ghent; the extension westward of the Hudson's Bay Company into this region, and its union in 1821 with its rival, the Northwest Company; and finally the extension over the settlements of the united companies, by an act of parliament in the same year, of the jurisdiction of the courts of Upper Canada.

These events had so changed the aspect of affairs on the Columbia at the time of the Russian Emperor's decree in 1821 as to leave him no alternative but to resort to the middle line, and drawing a line midway between the Anglo-American settlement at the mouth of the Columbia and the southernmost Russian settlement to the north of that river, to stand for a southern boundary for his possessions at the fifty-first parallel.

This decree, though it withdrew the line of territory claimed thus far northward, was yet offensive in tone and arbitrary in many of the regulations it sought to enforce against the citizens of other nations. Besides, it still encroached upon territory claimed by both Britain and the United States. Both England and America protested, and opened, each in her own behalf, negotiations with Russia which resulted in establishing in 1824 the line of $54^{\circ} 40'$ as the boundary between the territories

claimed by Russia and those claimed by America, and in the following year the same line, with modifications to the east, as the boundary between the claims of Russia and those of Britain. These two conventions may be regarded as the final acts in the delimitation of the Oregon Territory.

JOSEPH R. WILSON.

[To be continued.]

OUR PUBLIC LAND SYSTEM AND ITS RELATION TO EDUCATION IN THE UNITED STATES.

Local historians seem inclined to overlook some of the most interesting subjects included under the general term of history. One of these is the origin of land titles. I do not propose in this article, limited as to space, to do more than indicate by slight touches the growth of land titles on the earth, and the steps by which we as a nation became endowed with the ownership of land in parcels large or small. Further, the object of this brief review is to fix in the mind of the student of history, and especially of Oregon history, the connection between land and educational privileges in his state.

By way of introduction I would put forth the proposition, by no means original, that God-made things are eternal, and belong to the children of men equally and forever. Such is man himself. There can be no human ownership of men except that of brotherhood. The dominion of man over all other life is for his use only. He cannot claim collective ownership of any particular genus or species, but only individual ownership by conquest. Of the great divisions of inanimate nature, earth, air, and water, individual man cannot own more than he uses, because they belong equally to all men, and to all living things. For the needs of these they were created, without preference for races or single representatives of races.

Men in their primordial condition blindly recognized this principle as to the earth, and for thousands of years

did not become owners of land in severalty. Divided into tribes they contended with each other for the possession of certain countries because they were born there, or because it held the graves of their fathers. To "sleep with their fathers," or to continue to breathe the air which had borne abroad over the land the sacred ashes of their ancestors was with them a religion. The same earth furnished pasturage for the animals upon whose milk and flesh they subsisted, and nourished the fruits they found most agreeable. Hence they contended for its use against the covetousness of other tribes. The long and persistent war carried on by the descendants of Abraham to regain the land which held his burial place is an example of the ancient sentiment of ownership in land, a sentiment which we honor most highly under the name of patriotism. Metes and bounds could not be closely observed in a pastoral country, neither could they in a wooded one where game furnished the chief subsistence of the inhabitants. Everything depended upon the strength and valor of the predatory and the resisting tribes, and the division of lands acquired in war was settled, as in this world most things still are settled, by the most active securing to themselves the most desirable places.

The common desire to save from invasion the country of their birth, and the necessity of captains in war, led to chieftainship, and chieftainship led to the accumulation of such wealth as the conquered lands afforded, whether in flocks and herds, in other subsistence, or in such personal property as the subjugated nation possessed. War makes a people nomadic in their habits. The young and the strong were trained to fight, the feebler remained in such homes as they were able to maintain in a state of continual dread of the enemy. The cultivation of the ground at this stage of civilization

was as uncertain as it was unscientific. To the majority the land could have only a sentimental value; to the higher classes it was a source of income through the enforced labor of the enslaved class by whose toil they were enabled to pay their military taxes to petty Kings.

Continental Europe was at this stage of development centuries after the Christian era, and England long after the crusades. It was in the eleventh century that the Norman conqueror, William, having fixed himself upon the English throne, in order to secure the military tax in its entirety, caused the lands held by the feudal lords to be surveyed, and a description of them recorded in his Domesday Book. Hitherto lands were held under grants from barons or lords; but the Conqueror claimed that, as the representative of the people, he, and he only, could give a legal title to land, thus indirectly recognizing its ownership by the people. Under William, all land owners, great and small, were known as "the King's men," a policy which made the feudal lords his supporters. In return for their support he gave them offices. An office presupposed property, and property insured office. The first social effect of this was to lower men hitherto free, although in time it tended to raise the condition of the slave class to that of freemen by removing the distinction between these two classes. But it left a peasantry attached to the soil with no voice in its disposal. A law of primogeniture prevented the division of the great estates conferred upon "the King's men," who could neither sell nor give away their landed property.

How much of the colonizing spirit of Englishmen is due to this exclusive occupation of England by a class, we might very naturally inquire. But that is aside from the subject under consideration. It was my intention to point out that the land system of the United States is

directly descended from the practice of William the Conqueror, whose policy of binding the most active and influential men of the Kingdom to his throne by gifts of land was imitated by his successors down to the period when English subjects began to colonize America.¹

At the time when Englishmen made this important movement, Spain and France had already laid claim to extensive tracts of country lying upon the great rivers debouching into the Gulf of Mexico in a southern latitude, and into the Gulf of Saint Lawrence in a northern latitude, which ultimately became possessions of the United States, either by purchase or treaty, after our war of independence. Between these two indefinite boundaries the English colonies were located. Wherever the Englishman went he carried his loyalty to his King and his country's laws. His presence on the soil of Virginia made it English soil, conveying to it the sovereignty of England, and the King's right to confirm to him whatever he had already taken, provided both of them together could hold it against the native occupants. ²The grants from James and Charles I were described in terms more imaginative than accurate, the "South Sea," or Pacific Ocean, being the western limit of some of the earliest charters. But when the thirteen commonwealths on the Atlantic Coast asserted their right and ability to govern themselves, proving it by the arbitrament of the sword, and securing a treaty of peace with the mother country,

¹The lands not held as private estates in Great Britain were known as the "Crown lands," the revenue from which was the income of the sovereign. This continued down to the accession of George III. This custom continued down to Victoria, who, renouncing the crown lands, accepted for herself and her children a fixed sum annually, but this annuity does not descend to her grandchildren.

²The history of the early voyages, and of the immigration to America of different nationalities, including the Dutch, is too familiar to be repeated here, and a period of nearly three hundred years, from 1497 to 1783, is passed over. With independence, the American states received an inheritance of which they hardly understood the value at the time, except for its political importance.

such discoveries had been made, and so many remained to be made, that it was thought expedient to adopt the apparently natural boundaries of the United States, namely, the Saint Lawrence and Great Lakes on the north, the Mississippi on the west, the Spanish possessions in Florida on the south, and the Atlantic Ocean on the east.

In 1779, three years after the declaration of independence, and four years before the treaty of peace, the American Congress recommended to the several states in the union to make liberal cessions of their respective claims for the common benefit of the union, including the state making the cession. Thus early did our government assert the principle that the lands not held by occupancy belonged to the people for their use. The people on their side were quite willing to assist the union, burdened as it was with the debt of the revolutionary war, and other claims. But the unsettled boundaries of the several states made it a matter of some difficulty to convey land to the government in definite measure, some of the older grants, like Massachusetts and Connecticut, extending "from sea to sea." Disputes had arisen between the colonies over their boundaries, as when the Dutch had established New Netherlands on the Hudson River, cutting in two the grant of Connecticut. It was not until 1733 that the boundary of New York (formerly New Netherlands), was settled, and Connecticut still claimed the lands west of New York. From Maine to Georgia there were boundaries to be settled.

New York was the first to respond to the suggestion of congress, in 1781, by ceding all her title to lands west of a line drawn north and south twenty miles west of Niagara River, without conditions. Virginia followed, and on March 1, 1784, conveyed her territory west of the Ohio River to the United States. Massachusetts, in 1785,

also renounced her claim, unconditionally, to any lands west of the Hudson River. Connecticut, in 1786, ceded to the United States all the lands claimed by her west of a north and south line drawn one hundred and twenty-five miles west of the western boundary of Pennsylvania.

Virginia's first charter having been withdrawn, the second, dated in 1609, gave this colony all the territory for two hundred miles north and south of Point Comfort, on the Atlantic Coast, and westward to the "South Sea," or Pacific Ocean, with all islands lying within one hundred miles of either coast. The extension westward only to the Mississippi of the northern line of Virginia, by the Treaty of Peace, left nearly half of that state on the northwest side of the Ohio River. This territory Virginia, in 1783, offered to cede to the United States, upon condition that it should be divided into states of not less than one hundred nor more than one hundred and fifty miles square, "or as near thereto as circumstances will admit, and that the states so formed shall be distinct republican states, and admitted members of the federal union, having the same rights of sovereignty, freedom, and independence as the other states."³ The expenses incurred by Virginia "in subduing British posts, or in maintaining forts and garrisons within or for the defense, or in acquiring any part of the territory so ceded or relinquished" should be fully reimbursed by the United States. The French and Canadian inhabitants, and other settlers who had professed themselves to be citizens of Virginia, were to have their possessions confirmed to them, and be protected in the enjoyment of their rights and liberties. A quantity of land, not ex-

³It would seem from this demand of Virginia that this state assumed to lay claim to all the Northwest Territory. However, it could make no difference, since the other states had ceded whatever rights they had, except to strengthen the title of the general government.

ceeding one hundred and fifty thousand acres, was required to be granted "to General George Rogers Clarke and the officers and soldiers of his regiment, who marched with him when the post of Kaskaskia and Saint Vincent were reduced, and to the officers and soldiers that have been since incorporated into the said regiment," to be laid off in one tract in such shape as the officers should choose. Also, in case the land reserved by law on the southeast side of the Ohio River for the bounties of the Virginia troops should prove insufficient or of poor quality, then the deficiency should be made up from the lands on the northwest side of that river. All the land within the ceded territory, not reserved or appropriated to the purposes named, was to be a common fund for the use and benefit of such of the United States as had become, or should become, members of the confederation, "according to their respective proportions, in the general charge and expenditure."

In July, 1786, congress recommended to Virginia to revise her act of cession so far as to empower the United States to divide the territory northwest of the Ohio River into not more than five nor less than three states, as the situation of that country and the circumstances might require, which states were to become in the future members of the federal union.

In September of the same year, Connecticut ceded to the union the lands she still claimed west of the State of New York, known as the Western Reserve, extending one hundred and twenty miles west of the western boundary of Pennsylvania. In accepting the gift congress required a deed relinquishing the jurisdictional claim of Connecticut to the Western Reserve to be deposited with the deed of cession in the office of the Department of State of the United States; and provided that nothing contained in the deed of cession should involve the

government in the dispute between Pennsylvania and Connecticut which had been settled in the federal court. Neither should anything contained in the deed pledge the United States to extinguish the Indian title to the ceded lands. All of this being agreed to, the Western Reserve was added to the Northwest Territory. On the other hand the "military tract" was reserved, and even added to, but did not become United States donation lands. They were considered as Virginia's bounty to the men who had defended and preserved the country. The jurisdiction, however, was in the general government.

In 1787 South Carolina ceded unconditionally such land as she laid claim to between the mountain range by which her territory was traversed, and the Mississippi River. In 1790 North Carolina made her cession similarly, except that neither the lands nor the inhabitants west of the mountains should be "estimated" for the expenses of the Revolutionary War; that soldiers should receive the bounty lands promised them; that certain entries already made might be changed; that the ceded territory should be formed into a state or states, with all the privileges set forth in the ordinance of the late congress for the government of the Western Territory of the United States; *provided*, always, that no regulations made, or to be made, by congress should tend to emancipate slaves. The inhabitants of the ceded territory were to be liable to pay their proportion of the United States debt, and the arrears of the debt of North Carolina to the Union. The laws of this state should be in force in the territory until repealed or altered, and nonresident proprietors should not be taxed higher than residents.⁴

⁴There is much that is confusing and contradictory in the act of North Carolina, as in the reference to the ordinance of 1787, and the clause forbidding the passage by congress of an act tending to emancipate slaves.

For various reasons Georgia was not ready to renounce any territory claimed by her before 1798, and the deed of cession was not made until 1802. Georgia, like North Carolina, desired to have the state formed from her territory enjoy the privileges granted to the Northwest Territory by the ordinance of 1787. Out of the lands relinquished to the general government by the states south of the Ohio, and the territory subsequently acquired by treaty and purchase from France and Spain, were formed, in the early part of the nineteenth century, the several territories afterwards admitted as states with the rights and privileges guaranteed in the compact between the United States and the people of the Northwest Territory.

Hitherto I have sketched the political history of the lands of the United States with the object only of pointing out the change that had occurred in men's ideas of natural rights in the soil. They had also progressed greatly in their understanding of political rights. The struggle of the American colonies to achieve independence had served as an object lesson of immense importance even to the colonies themselves, and they were prepared to guard their new-found freedom with a jealous care. Next to the Declaration of Independence in justice and dignity stands the compact entered into between the people and congress in giving and accepting the territory first ceded by the original states to the United States, and known as the Ordinance of Seventeen Eighty-Seven. By this ordinance the people of the Northwest Territory were assured that no person demeaning himself in a peaceable and orderly manner, should ever be molested on account of his mode of worship, or religious sentiments. The people should always be entitled to the benefits of the writ of *habeas corpus*, and trial by jury; of proportionate representation in the legislature, and

of judicial proceedings according to the course of common law. All persons should be bailable, except for capital offenses, the proof of which was evident, or the presumption great. All fines should be moderate, and no cruel or unusual punishments inflicted. No man should be deprived of his liberty but by the judgment of his peers, or the law of the land. No man's property should be taken for the public service without full compensation. Religion, morality and knowledge, being necessary to good government, and the public happiness, schools and the means of education should be forever encouraged. The utmost good faith should always be observed towards the Indians. Their lands and property should never be taken away from them without their consent, nor their rights and liberty invaded except in lawful war, but laws for their protection should be enacted. There should be neither slavery nor involuntary servitude in the territory, otherwise than for the punishment of crimes whereof the person should have been duly convicted.⁵

Comparing this noble framework of the new state with the laws and the restrictions imposed upon the colonies from their beginning, our admiration cannot be withheld. But it is to its effect in furnishing the means of education to the whole people that attention is here directed. Schools and education were "forever to be encouraged." It is true that under the colonial system a few colleges had been established. Six years after the settlement of Massachusetts, Harvard College was

⁵The Constitution of the Provisional Government of Oregon was formed on the ordinance of 1787, and the above extract is taken, somewhat abbreviated, from Articles I, II, III and IV of that document. When the organic act of Oregon Territory was framed by congress, it was agreed that the laws already in operation in Oregon should be recognized as the laws of the territory. The adoption of the ordinance of 1787 as their Constitution by the pioneers of the state, was due to the statesmanship of Jesse Applegate, one of the "men of 1843." Its author was Nathan Dane, LL. D., of Massachusetts, member of congress in 1787.

founded. Virginia and Connecticut were equally in haste to provide educational advantages for their young men; but it was only the sons of clergymen and the best families who in those early days found admittance. Humble people had to be content if they could read, write, and cipher; and rules of grammar, with the sciences, were beyond their ambition.

In 1785, two years only after our independence was secured, and six years after the congress of the states had suggested to the several commonwealths the propriety of contracting their boundaries in order to enable the United States to clear themselves of debt, and to be possessed of a public domain, when only New York, Massachusetts, and Virginia had ceded any territory, an ordinance was passed providing for the survey of these lands, and the uses to which they should be put. One seventh part was to be drafted for "the late Continental army," and the remainder allotted among the states. The only reservations made were for the officers and soldiers entitled to bounties from the lands of Virginia; four lots in each township for the United States, and "lot No. 16 of every township for the maintenance of public schools within the said township; also one-third part of all gold, silver, lead, and copper mines to be sold or otherwise disposed of as congress shall hereafter direct."⁶

As the other states made their contributions to the public domain, changes were made in the appropriation of land for educational purposes, but without affecting the reservation first determined upon of one thirty-sixth

⁶Subsequently the reservation of gold, silver, and copper mines was discontinued, and lead mines and salt springs substituted. The income from these sources at that period would have been greater than from other mines. But no change was ever made from 1785 to the present date in the grant of the sixteenth section for school purposes.

part of all the government lands for school purposes. As our land system developed, and states were parceled off one after another, the propositions offered to them more and more contained large donations for schools of different grades. The proposition to the State of Ohio, and the appropriations actually made in 1803, named the sixteenth section in every township in that part of the territory purchased of the Indians; the thirty-sixth part of the United States Military Tract; fourteen townships in the Connecticut Reserve; one thirty-sixth part in the Virginia Military Tract, and also one thirty-sixth part of all the United States lands in the State of Ohio to which the Indian title had not yet been extinguished, to be purchased of the Indians, to consist of the sixteenth section in each township. One entire township in the District of Cincinnati was offered for the establishment of an academy. John Cleve Symmes and his associates, who had purchased a tract in Ohio supposed to contain one million acres, received from congress, in addition, one entire township "for the purpose of establishing an academy and other public schools and seminaries of learning."

When the public lands in Louisiana were offered for sale there was excepted "section number 16 in every township, and a tract reserved for a seminary of learning." When Tennessee relinquished her claims to certain lands, the state was required to appropriate one hundred thousand acres in one tract for the use of two colleges, one to be located in East and one in West Tennessee. Another hundred thousand acres was to be appropriated for the use of an academy in each county in the state, the land not to be sold for less than \$2 per acre; and the state should, in issuing grants and perfecting titles, locate one section in every township for

the use of schools for the instruction of children forever. Mississippi was required to reserve section 16 in each township for the support of schools within the same, "with the exception of thirty-six sections, to be located in one body by the Secretary of the Treasury, for the use of Jefferson College." Other grants were made for religious purposes, and for military services. Lewis and Clark, for their services in exploring the continent to the Pacific, received land warrants calling for one thousand six hundred acres of land each, and the men who accompanied them three hundred and twenty each, to be located on any of the public lands offered for sale west of the Mississippi. None of these donations could be made except by the consent of the representatives of the people in congress assembled. Thus our government set out with the highest ideal then possible of community rights in land. If since then we have gambled away our common heritage, or sold it to non-resident speculators, we have in so far departed from that ideal.

The largeness of the subject prohibits any attempt to furnish a history of the land laws of the United States in a single article. It is in fact the history of this nation. Our land system settled the country from the Atlantic to the Pacific. It drew to us all the nations of the earth; it gave them homes, and educated their children; it was "Liberty enlightening the world." But just because the government was so rich in lands, it grew careless, speculative, even profligate. It lavished soil enough to make several states upon corporations without honor, forgetting that it was only the trustee of the people, whose consent had never directly been asked. It sold to adventurers, who never intended to make homes, immense tracts contiguous to watercourses, from which the buyers excluded citizens of the United States. It winked at the wrongful acts of its agents in selecting swamp and over-

flowed lands, and mineral lands. One thing it never did, however; it never permitted the school lands to deteriorate in value, but when the legal sections fell upon worthless ground, lieu lands were permitted to be selected from any unappropriated good land most contiguous.⁷

* * * * *

In the first quarter century of the republic there was added to its public lands, by treaty and purchase, the Floridas and all the vast region known as the Louisiana Territory, reaching north to the British Possessions and west to the Rocky Mountains. One of our navigators had discovered the mouth of the mythical Oregon River, and a party of our explorers had discovered the headwaters of the same, following its course to the sea. An American fur company had erected a fort near the mouth of the river, which it lost, first through the treachery of the British members of the company and a second time by the fortunes of war, and finally recovered through the victory of our arms on the high seas. These were wonderful achievements for a nation in its infancy. But the people were prosperous and satisfied, pressing undauntedly forward, and filling up the new states. The

⁷A great deal of unwise criticism has been declaimed and written upon the government's dealings with the Indians in the matter of their reservations. But human wisdom has seldom been able, however sincere the endeavor, to bridge over with peace the gulf between savagery and civilization. The United States began by binding the government in the ordinance of 1787 to "observe the utmost good faith towards the Indians." During the first ten years of its existence, treaties were made with half a hundred tribes. It was declared a misdemeanor, punishable by fine and imprisonment, for any persons, not acting for the government, to treat with, or purchase lands from an Indian nation—an inhibition meant to prevent trouble with the natives, as well as frauds against the government. But Indian wars were not prevented, and continue to this day. The United States has supported an army to defend its citizens against savage outbreaks. Every congress appropriates large sums for the support of its Indian wards, and for their education. According to recent reports, the Indians of New Mexico cost the government, in 1897, for each pupil in the Indian schools, \$167, or a lump sum of \$41,750, over and above the pay of the superintendent, and other expenses. The Indian school at Salem, Oregon, for the same year, cost the treas-

secret of the prosperity and content was the equal distribution of land, at a price within the reach of any, and the reservation in all the townships for common schools.

We claimed by right of discovery and first occupation, the Oregon Territory. Great Britain disputed our claim with enough show of rights to furnish some ground for the contention. Neither government was prepared to go to war over it, and for nearly thirty years after the convention of 1818 by which a joint occupancy was agreed upon, a perpetual irritation was kept up between the two countries through the determination of the western pioneers to stretch their boundaries to the Pacific, taking the land surveyor along with them. In 1846 the question was finally settled, and not unjustly.

The pioneers who for several years had been toilsomely journeying across two thousand miles of wilderness to reach the Land of Promise, now looked for immediate congressional action to be taken which should give them formally the territorial rights and privileges conferred by the Ordinance of 1787. But in this they were disappointed. That same ordinance, it was, which delayed the organization of a territorial government, the people of Oregon having expressly petitioned to be organized

ury \$50,100, and the support of the establishment, \$71,700. The Indian reservations, including Indian Territory, comprise four and forty-three hundredths per cent. of our public lands, exclusive of Alaska. The whole Indian population of the United States is officially stated at two hundred and ninety-seven thousand. Of these forty-two thousand five hundred and ninety-seven can read; over fifty-three thousand can converse in English. The government has built for them twenty-six thousand three hundred and eighty-nine dwelling houses, besides schoolhouses, and there are three hundred and forty-eight churches on the reservations. Religious and other societies have contributed large amounts for school and church purposes. The money collected in 1899 for the instruction and advancement of "the nation's wards" was \$261,515; for general church work, \$119,407. New York this year contributed for an Indian school in that state \$16,016. The senate bill this present year for an Indian school at Riverside, California, proposed to appropriate \$75,000. Another Indian school at Perris, California, gets \$167 per pupil for one hundred and fifty pupils. The whole appropriation for the support and education of Indians in 1900 is \$8,414,000. At this rate is the nation still paying for its public lands.

under it in the same manner as the Northwestern States. The opposition to their petition came from the representatives and senators of the slave states, who saw in the rapid increase of northern free states a loss of the balance of power in congress, and the threatened destruction of slavery, or of the Union. The struggle had been begun a quarter of a century earlier, when by a compromise between the north and south, Missouri had been admitted as a slave state under a compact that no more slave states should be organized north of the parallel of $36^{\circ} 30'$.

The prospect of a large body of free states being formed above that line, extending even to the Pacific, was one to which southern senators opposed their most skilled diplomacy, their object being to gain time, by statecraft or otherwise, to extend slave territory westward at an equal rate. But the friends of Oregon in congress, who cared not overmuch about the question of slavery or of free soil, were touched by the fidelity to the government of the United States of the Oregon settlers, and anxious to have them rewarded as congress had, year after year, proposed to do—by liberal donations of land. The Linn bill had done its work in populating the Wallamet Valley, and the population of this valley had determined the title to the country. So much was granted. Thomas H. Benton had written his congratulations on the settlement of the boundary, and promised the early organization of the territory under the most favorable conditions. President Polk had spoken most flatteringly of the loyalty and patriotism of the pioneers. Stephen A. Douglas had drawn up a bill containing everything for which the pioneers had ever asked, and something more. That something more was the thirty-sixth section of land in every township for school purposes, in addition to the sixteenth.

I am aware that there are some writers who represent that this addition to school land was a special favor to Oregon; and at least one Oregon man who claimed to have secured it by his personal efforts.⁸ But the records of congress disprove such pretensions. It was sometimes objected in congress that the new states were receiving too much land gratuitously.⁹ In a speech on this subject by Woodbridge, of Michigan, delivered April

⁸Mr. J. Quinn Thornton, who came to Oregon late in 1846, was appointed a judge under the provisional government by Governor Abernethy, and was sent as a delegate to Washington late in 1847, arriving there May 11, 1848, several times during his lifetime publicly asserted, in written articles and in addresses delivered before the Pioneer Association, that he was the author of the Douglas Bill. By comparing dates it will be seen that he could have had nothing to do with the bill, which was introduced in the house December 23, 1846, soon after the boundary treaty. It passed the house January 16, 1847, was sent to the senate, amended, and laid upon the table March 3, 1847. In 1848 Douglas was a senator, and chairman of the Committee on Territories. On the tenth of January the Oregon bill came up, was referred to Douglas' committee, and reported, without amendments, February 7. This was the identical bill over which senators wrangled in so dramatic a fashion until the last hour of the session, in August, 1848. A compromise bill was devised by the southern members, by which Oregon could come in in company with New Mexico and California, but congress would have none of it. There was no opportunity during Thornton's stay in Washington to alter or amend the Oregon bill, which, when it passed the senate, was in all essential features, including school lands, the same bill which was published in the *Oregon Spectator* of September 16, 1847, more than a month before Thornton set sail for his destination. As the *Spectator* was the only newspaper in Oregon at that time, and owned and controlled by the Governor, it is fair to presume that it was read by the Governor's appointee. Notwithstanding these adverse circumstances and conclusions, Mr. Thornton never ceased to claim the authorship of the organic act of Oregon, nor to congratulate himself upon having bestowed upon this and other new states the priceless benefit of school lands. "I will frankly admit," he says in his autobiography, "that when to this section (the sixteenth) of the public lands, the thirty-sixth was added by the passage of this bill, the thought that Providence had made me the instrument by which so great a boon was bestowed upon posterity filled my heart with emotions as pure and deep as can be experienced by man;" and goes on to anticipate being recognized as a benefactor of his race when his toils and responsibilities should be over. See Transactions of the Oregon Pioneer Association for 1874, and some later numbers, for these false claims. Also the *Portland Oregonian* of May 15, 1885, in which he distinctly denies the facts of history, and relates incredible occurrences with such minuteness of detail and loftiness of expression as to deceive any but the well informed in public affairs. The ordinary reader could not conceive such mendacity and dissembling.

⁹The older states made such provision as they could for education. Connecticut reserved some of her lands for popular education, and any state had the same right, but the "land states," as they were called, offered lands for seminaries of learning, and universities, two entire townships being the usual amount granted for this purpose, besides the thirty-sixth part set aside by compact.

29, 1846, that gentleman said: "Now, a very great error prevails on this subject. It is a common opinion, I believe, that the school lands, amounting, as the gentleman from Connecticut says, in some instances, to an enormous amount, are gratuitously conveyed to the new states. Sir, I do not so read my books at all. There is no gratuity about it! This appropriation of section sixteen was made in order to secure an accelerated sale of your wild lands. I do not say that there were not other and higher motives, but this was one, and an efficient one.

* * * You published to the world your terms of sale. You pledged your faith to all who should buy land of you in any surveyed township, that one thirty-sixth part of it, namely, section number sixteen, should forever afterwards be applied toward the support of schools.

* * * It is true that you afterwards affected to transfer these school lands to the states; but what passed by that transfer? Nothing, sir, but the naked title only, subject always to the use, and I am not prepared to admit the competency of your doing even that." So there were in congress, in 1846, men who contended that the western people, and not the government which had solemnly renounced it, held the right to the educational reservations in the public lands from the beginning.

In August, 1846, a bill being before congress to enable Wisconsin to form a state government, it passed through the usual routine, and was reported from the territorial committee by Douglas, February 9, 1847. On the fifteenth, the question of engrossing the bill was about being put, when John A. Rockwell of Connecticut, moved to amend by adding the following: "And be it further enacted, That in addition to section numbered sixteen, section numbered thirty-six, in each township of the public lands of the United States in said state, not heretofore otherwise disposed of, be, and the same is hereby

appropriated to the support of education in the said state." Certain conditions were attached, which need not be here quoted, as the amendment failed.¹⁰

That it failed was not owing to any strong opposition so much as to the fact of its not being incorporated in the original bill. Congressmen and senators have to be urged somewhat to make changes by which their districts gain nothing. Rockwell's amendment was crowded out by other business concerning the disposition of the public lands then claiming attention.

Nothing in the circumstances of the case goes to show that Mr. Rockwell was the first to propose the additional school section. The Wisconsin and the Oregon bills were in the hands of the same committee of the house, and at the same time. Yet the Douglas bill contained the two school sections in every township, and the Wisconsin bill did not. The Douglas bill passed in the house and was sent to the senate in January, 1847, whereas the Wisconsin bill was not reported until February, which gives Mr. Douglas precedence in proposing the change to congress. The question might arise why, since he was chairman of the committee which presented both bills, he withheld the additional section from one and gave it to the other. Did he wish to show favor, or seem to do so, to Oregon, as a reward for her long and loyal waiting? It might well be so, and probably was so.

But Oregon was not receiving a special gift in the appropriation of her school lands, as some suppose. In November, 1846, James H. Piper, Acting Commissioner of the General Land Office, made a report to Robert J.

¹⁰Rockwell had given notice of this amendment on the tenth of May, one day before the arrival of Thornton in Washington. See his "Oregon and California," vol. 2, p. 248. Therefore Mr. Rockwell's idea did not originate with Mr. Thornton. In his article in the "Transactions," for 1883, he makes Mr. Rockwell prophesy that he "will not get the Oregon bill so amended as to set apart two sections in each township, instead of one, as already provided for in the Oregon bill"—forgetting in this instance to claim paternity to both.

Walker, Secretary of the Treasury, "on the expediency of making further provision for the support of common schools in the land states."¹¹ The Secretary, in his report to the house of representatives, referring to the proposed donations of land to settlers in and immigrants to Oregon, recommended, also, "the grant of a school section in the center of every quarter of a township, which would bring the school house within a point not exceeding a mile and a half in distance from the most remote inhabitant of such quarter township."¹² In his report for 1847-48 the Secretary of the Treasury again referred to this subject as follows: "Congress to some extent adopted this recommendation, by granting two school sections instead of one, for education in Oregon ;¹³ but it

¹¹Says the commissioner: "The expediency of making further provision for the support of common schools in the land states has attracted much attention, and certainly is worthy of the most favorable consideration. Those states are sparsely settled by an active, industrious and enterprising people, who, however, may not have sufficient means independent of their support, to endow or maintain public schools. To aid in this important matter, congress at the commencement of our land system, and when the reins of government were held by the sages of the revolution, set apart one section out of every township of thirty-six square miles. At that early day this provision doubtless appeared munificent, but experience has proved it to be inadequate. It is obviously necessary that at least one school should be established in each of those townships, and to do this they have only the section of land above mentioned, worth about \$800. To invest this sum safely it cannot be made to yield more than \$48 per annum, which will not pay the salary of a teacher for a single month; and the whole of the principal would not enable a township to erect a suitable common school edifice, and employ a teacher for one year. It is evident therefore, that this provision does not go far to accomplish the original design, and that without the aid of other means the citizens of those growing states cannot obtain the advantages of a general system of education. I would therefore recommend that further grants of land be made for that object, and wherever the lands reserved for the use of schools are found to be valueless, that the proper officer of the state be authorized to select others in lieu of them. * * *

With great respect, your obedient servant,

HON. ROBERT J. WALKER,
Secretary of the Treasury.

JAMES H. PIPER,
Acting Commissioner.

House Ex. Doc. 9, Vol. II, Twenty-ninth Congress, Second Session.

¹²Ex. Doc., First Session, Thirtieth Congress, Vol. I, 1847-48.

¹³This statement that congress "granted Oregon two school sections" calls for explanation. It was only in the Northwest Territory, subject to the ordinance of 1787 by compact, that these sixteen sections belonged, as Woodbridge of Michigan contended, to the states formed out of that territory. Where other states received them it was by grant of congress.

is respectfully suggested that even thus extended the grant is still inadequate in amount, while the location is inconvenient.''¹⁴

William M. Gwin, Senator from California, remarking on the transfer of the public lands from the Treasury Department to the Department of the Interior in 1849, says: "When a territorial government was established over Oregon, some able men contended for four sections for each township, and they succeeded in getting two," and quotes from Walker's report.¹⁵ He also referred, in a speech before the State Convention of California in 1850, to Piper and Walker as authors of the movement to increase the amount of school land in the new states. Although not important in themselves, these facts are interesting. It is a pleasure to the properly constituted mind to know to whom to give credits. It is also a satisfaction to remove from history falsehoods, whether

¹⁴The Secretary urged other reasons for the additional grants. "Even as a question of revenue," he says, "such grants would more than refund their value to the government, as each quarter township is composed of nine sections, of which the central section would be granted for schools, and each of the remaining eight sections would be adjacent to that granted. Those eight sections thus located and each adjoining a school section, would be of greater value than when separated by many miles from such opportunities, and the thirty-two sections of one entire township, with these benefits, would bring a larger price to the government than thirty-five sections out of thirty-six, where one section only, so remote from the rest, was granted for such a purpose. The public domain would thus be settled at an earlier period, and yielding larger products, thus soon augment our exports and our imports, with a corresponding increase of revenue from duties. The greater diffusion of education would increase the power of mind and knowledge, applied to our industrial pursuits, and augment in this way also the products and wealth of the nation. Each state is deeply interested in the welfare of every other, for the representatives of the whole regulate by their votes the measures of the union, which must be more happy and progressive in proportion as its councils are guided by more enlightened views, resulting from more universal diffusion of light and knowledge and education."—Ex. Doc., Second Session, Thirtieth Congress, Vol. II, 1848-49.

¹⁵Gwin's Autobiography, Mr. Bancroft's Hist. Cal. VI, 298.

deliberate or accidental, which blind our vision as to the verity of so-called history.¹⁶

As a matter of fact, from 1803 to 1848, in each of the twelve territories organized from the public lands, the sixteenth section in every township was reserved for school purposes, Oregon being the first to receive the addition of the thirty-sixth. There has been no fixed rule of appropriation, much depending upon the people and their representatives. In 1812, and again in 1824 congress ordered a survey of certain towns and villages in Missouri, reserving for the use of schools one-twentieth part of the whole survey. When sold these town reservations produced large sums, as in the case of St. Louis. Down to 1880 seven states and eight territories had received the thirty-sixth section in each township. Twenty-four states had received two townships each for the use of universities. Ohio, Wisconsin, Minnesota and Florida had taken more. Previous to 1882 the appropriation of land for common schools in the land states aggregated sixty-seven million eight hundred and ninety-three thou-

¹⁶I must be pardoned if I once more call attention to the willful perversion of truth by the talented but unscrupulous J. Quinn Thornton. In the transactions of the Pioneer Association for 1874, speaking of the Oregon bill and the school-land grants: "Up to the time of the passage of this bill, congress had never appropriated more than the sixteenth section for the support of common schools; and the *late* Nathan Dane, LL. D., had labored long before he succeeded in inducing the government to appropriate *that* portion of the public lands." The italics are mine: the word "*late*," to call attention to the fact that Doctor Dane had been dead for thirty-nine years, having passed to his reward in 1835, after a useful and honorable life; the word "*that*," because in another place Thornton claims himself to have induced the government to make this appropriation. It is difficult to deal with such constant shuffling with the intention to deceive. A different unintentional error occurred in the course of my investigations, when, in 1882, I wrote to the Department of the Interior for information as to the first act of congress reserving the thirty-sixth section in each township for school purposes, and was informed by the commissioner that "the act was approved March 3, 1849 (U. S. Statutes, Vol I, page 154), entitled an act to establish the Territorial Government of Minnesota." He had overlooked the fact that the organic act of Oregon, which passed on the fourteenth of August, 1848, contained the same appropriation. This was probably because it was in 1849 that the affairs of the land office were turned over to the interior department, and he had not searched the previous records.

sand nine hundred and nineteen acres; for university purposes, one million six hundred and fifty thousand five hundred and twenty acres; for agricultural and mechanical colleges, nine million six hundred thousand acres—a total of seventy-nine million one hundred and forty-four thousand four hundred and thirty-nine acres devoted to the support of education in the United States.

From time to time it has been necessary to make changes in the land laws, as when the discovery of mineral lands, reserved by congress called for the substitution of lieu lands, but there has been no diminution in quantity or value.

Oregon has less vacant or public land than from its area might be expected. The bounty of government in donating to the pioneer settlers six hundred and forty acres to a family—three hundred and twenty to the husband, and the same amount to the wife—and to single men and women three hundred and twenty each, provided they lived upon or improved their claims, disposed of most of the cultivable area west of the Cascade Range. The school lands which passed with the territorial act occupied two thirty-sixths of every township. The act of admission passed to the state the usual endowment of five hundred thousand acres for its public uses,¹⁷ with twelve salt springs and six sections adjoining each; ninety thousand acres for the endowment of an agricultural college, and seventy-two sections for the use and support of a state university. Subsequent grants to railroads and public highways, with military and Indian reservations, absorbed large bodies of land, both in the valleys and the mountains. The state devoted the net proceeds, with the accruing interest of the five hundred thousand acres, as an irreducible fund for the support of common schools, and for the purchase of libraries and

¹⁷Act of Congress of September 4, 1841.

apparatus.¹⁸ It also added to this fund all gifts to the state whose purpose was not named.

The actual quantity of land allowed by congress to Oregon for common school purposes is three million two hundred and fifty thousand acres, at a minimum price per acre of \$1.25, the management of the income being left to a board, of which the Governor is one. I am informed by the clerk of this board that the fund now amounts to \$3,000,000, which is securely invested at ten per cent.

In 1850 congress passed a swamp land act, the intention of which was to enable the states subject to overflow by the Mississippi, to construct levees, and drain overflowed lands. The law was subsequently extended to other states. Oregon, however, had no rivers requiring levees, nor any swamp lands. This fact did not prevent beaver-dam lands, the most valuable in the state, from being taken up as swamp lands. The scandal attached also the meadow lands about lakes in the interior, and even to lands included in Indian reservation lands. Nor is congress quite guiltless in this respect, since it has recklessly granted principalities in the public soil to aid enterprises designed by private companies for their own benefit, these grants being obtained by representations, wholly unfounded, of the public utility in the undertaking.¹⁹ The hand of the lobbyist is visible in these matters, while suspicion attaches to both state and national

¹⁸The canal and locks at Oregon City were built out of the first proceeds of the five hundred thousand acres, when it was converted to the school fund to prevent its appropriation to local schemes of minor importance.

¹⁹By act of July, 1864, congress granted to the State of Oregon, to aid in the construction of a military wagon road from Eugene to the eastern boundary of the state, alternate sections of the public lands designated by odd numbers, for three sections in width on each side of the road, the United States to share in it as a military post road. The land was to be sold in quantities at one time of thirty sections on the completion of ten miles, and within five years, failing which, the

legislators, who too frequently have other than the people's interest at heart.

The vacant public lands of the United States are still nine hundred and eighty thousand three hundred and thirty-seven square miles in extent, or one-third of our total area, exclusive of Alaska. Indian reservations and forest reservations together occupy five and forty-three hundredths per cent. The State of Texas comprises eight and eighty-three hundredths per cent. of the area of the United States, and owns all the public lands within its borders. Thus there remains open to settlement the vacant one-third, exclusive of Alaska, Texas, and the Islands. Almost all of the vacant lands are west of the Missouri River, and include much that is of but little present value to the agriculturist from its aridity. Yet not one rod of it is valueless in the eyes of the political economist. Forests and mines are as necessary to advanced civilization as grain fields and orchards. But even were this not true, the earth needs waste places where pure air and pure water are generated to be furnished to the lower plains. Men will gradually accustom themselves to deserts, and will cause them to blossom like the rose. Wherever they go, the foundation of a home is awaiting them, and the common school is provided for their children. It is thus we are educating the nations.

It can hardly be superfluous to revert to the obligation of the general government and the individual state to remember and guard the people's rights in the public

land reverted to the United States. The grant amounted to one thousand nine hundred and twenty acres per mile for a distance of four hundred and twenty miles—or more than all given to the state on its admission by one hundred and fifty thousand acres. The company was allowed a primary sale of thirty sections with which to begin surveying. A road was opened from Eugene to and over the mountains in 1867, which was little used or useful. In 1873 the land grant was sold to a San Francisco company, and this immense government gift passed to private ownership in another state.

domain. A wastefulness which tends to contract free acreage beyond the convenient demands of settlement and use, is to deprive the nation of strength and elasticity. When we have no longer anything to offer the coming generations, it will be a pity if they come. The power of the great land owner over the man who has inherited nothing, and is too poor to purchase at the landlords' prices, will be, to all intents and purposes, the same which the landlords of Europe exercise over the peasant classes there. The ladder by which our people have climbed to happy heights of prosperity will be withdrawn, and the poor man will have become the slave of the rich man. It is doubtful if the universal intelligence which we are at so much pains to cultivate will be, in such circumstances, an unmixed blessing, since the enlightened mind has requirements which are not felt by the ignorant, the absence of which inflicts pain, and frequently leads to crime.

FRANCES F. VICTOR.

GLIMPSES OF LIFE IN EARLY OREGON.

As we travel through the Willamette Valley with the dispatch and comfort of a well-equipped railway service, we are quickly forgetting how our fathers and grandfathers journeyed. Pioneer experiences and hardships are memories of long ago ; another century is dawning, and we say that "the new is better than the old."

In the early days of the settlement of this state the horse was the only means of travel, unless one's course lay along the Willamette, and then it was the canoe with paddles that carried trappers, explorers, and occasional Hudson's Bay officials on their journeys. The native grasses were luxuriant and abundant, the climate mild, and every settler's door stood hospitably ajar. Journeying was by easy stages and not irksome. It is pleasant to remember that there was a time when one had time to be leisurely and greet one's friends in a kindly, simple fashion. Civilization was gathered within the four walls of Fort Vancouver, on the Columbia River. Our greatest friend, John McLoughlin, was the chief factor of all the Hudson's Bay Company's establishments west of the Rocky Mountains, and children who have been born in the original Oregon Territory may well "rise up and call him blessed."

The good "old doctor," as he was respectfully and affectionately called, cheered the hearts of thousands of immigrants by his deeds of gracious humanity. With a generous hand he furnished provisions, clothing, cattle, grain, and farming implements, taking in return the immigrant's word that he would ever be repaid ; the

word was sometimes kept and oftentimes broken. Doctor McLoughlin conducted life at Fort Vancouver as feudal lords of old, and that, too, with strict military discipline; the coming and going regulated by the ringing of the great bell. The members of this large household breakfasted and supped by their own firesides, but dinner was served in the hall for gentlemen and visitors. All stood while the doctor said grace, and men of humble birth "sat below the salt." Distinguished men gathered at this board. Foremost among them we reckon Douglas, the botanist, to whom the doctor furnished escort and transportation. As he took his way through the Willamette Valley, and on to the Rogue River, it became a journey of months. His investigations covered a wide stretch—the lowly flower by the trail, the myriads of brilliant blooms on the breeze-swept prairies, the shrubs and vines of hillside and canyon, and towering evergreens on lofty mountain heights. In order to study plant life he watched it from the bursting bud in April showers, through sunny summer weather, to the autumn maturing of the seed. Be it remembered that Douglas first made the world acquainted with the three kingliest products of our forests—the giant spruce of the Oregon wilderness, the solemn fir of the cloud-drift region, and the sugar pine of the Sierras. This clever man met with a tragic death in the Sandwich Islands, for he fell into a pit dug for wild cattle and was gored to death by a bull.

Geologists searching the distant field, and titled gentlemen traveling for pleasure, shared the doctor's hospitality, and were given escort through the beautiful pastoral country. With the ingress of the Americans Oregon City became the place of importance next to Fort Vancouver, and when Doctor McLoughlin was called there on business, he set out in a bateau, manned by

French-Canadian voyageurs, who, clad in their gay national dress, sang gay Canadian boating songs to the rhythm of the paddles. The doctor sat aloft in the stern, erect and dignified, dressed in a long blue-cloth coat, with brass buttons, buff waistcoat and dark trousers, and a gray beaver hat. The garments were fashioned in London, and the making of beaver hats has been a lost art these many years. When the doctor reached Oregon City he clambered up the rocky path and paced the single street, carrying a gold-headed cane, and with his brilliant blue eyes and flowing white locks, his was a face and figure never to be forgotten. This great-hearted man and friend of the pioneers lies by the side of his wife in consecrated ground, within sound of the Falls of the Willamette.

We can understand what a sore deprivation the absence of books and papers was to the pioneers of the "forties." One man in the Yoncalla Valley, who had accumulated several hundred dollars, called his children about him and asked if he should build a house to replace the log cabin, or buy "Harper's Complete Library," consisting of many volumes bound in "12-mo." Be it to their lasting credit, the books were purchased, carefully read and remembered, and preserved for succeeding generations.

Another man, troubled lest his children be cut off from civilizing influences in their frontier life, built and furnished a house at great expense and in a style that was not equaled for many years nor within many miles. He lived to see his lands and house swept from him, through the dishonesty of another, but not before the attractive home surroundings had served their purpose. This brave man spent the declining years of trouble and sorrow on the mountain-side overlooking the fair valley, where once

lay his own broad acres, and no man had ever been turned from his door. The letters written through all the years of this man's life in Oregon are marvels of style and composition, and greatly treasured by their fortunate owners. Especially so are those of his later years, when riper experience and a keener insight into men and events lent greater force to his pen, so that a man of great culture and polish once said: "They sound as if written from a baronial castle, whereas they come from a log cabin."

On the western slope of the Willamette there was another where all books and papers were most carefully preserved, so that the third generation of descendants is now able to read a file of the *Oregon Spectator*, published in 1846 and 1847. The paper was placed over a string stretched across the cabin, until they were all carefully laid by. An English gentleman, accompanied by a guide and traveling in pursuit of game and pleasure, once craved food and shelter at the cabin door. He was cheerfully bidden to enter and partake of the unvarying fare of boiled wheat and possibly beef, and the earthen floor and a buffalo robe served as a bed. The gentleman met his host and hostess in Washington afterward, and when the latter spoke of the meager entertainment in Oregon, he said: "Ha, but you gave me the best you had; the Prince of Wales could do no better." A roomy, comfortable house replaced the log cabin, and its door, too, stood ajar, and all were welcomed to the kind and simple hospitality. Young officers from West Point, on first frontier duty, passing to remote mountain garrisons and out again for brief glimpses of civilization, had cordial greeting. Some of these died like brave soldiers on the battle-fields of the civil war. Others attained rank and distinction in the service, and two at least won the highest honors ever conferred by an appreciative country.

Every governor and senator of Oregon has claimed the welcome extended, unless it be the present incumbents, and though the master and his gentle wife have passed out for the last time, those, too, would be kindly greeted beneath the old roof. Preacher and circuit-rider, humbly following in the footsteps of their divine Lord, students and distinguished statesmen gathered about this fireside. Best of all were the times when the earliest pioneers honored it with their presence, and the quaint telling of tales of adventure, privation and Indian warfare lasted far into the night, and the logs burned low on the hearth.

The lack of schools was deeply deplored by many of these hardy pioneers, men and women, though some were more fortunate. Many remember with affection and respect one who came from her New England home and most conscientiously taught the fortunate children entrusted to her care. School days under her wise and kind guidance, and oftentimes in most picturesque spots, are bright and happy memories of many men and women today. One family spent years of happiness and contentment on a lonely sea shore, and were taught by a governess, while the play-time was spent among the beautiful groves and watching the waves so full of interest and mystery. A peaceful happy life, but in their longing for companionship they fed sugar to two house flies on the window-sill in stormy weather,—for house flies were not then a pest.

Sometimes the housewife was of another nationality, and claimed a prior right to this beautiful valley. A judge once traveling across Tualatin Plains in the winter was belated by a storm and asked shelter at a trapper's door. He was given a place by the blazing hearth, and the dusky housewife, busy about the evening meal, placed before them potatoes, deliciously roasted in the

ashes, venison, bread, butter, milk and tea, while the host interestingly told of having known Captain Bonneville and his party on the plains, as well as members of the Rocky Mountain Fur Company. In his journeys he knew the watershed of the Columbia and Missouri by heart, and in one night had set traps in both rivers.

One of Oregon's most polished and charming of her earlier pioneers, was entertained at a frugal board, and in graceful acknowledgment sent the hostess some soup plates from the Hudson's Bay store, and a daughter of the house exhibited them to him forty years afterward. Although he returned to New England to spend many of the last years of his life, his interest in Oregon never waned, and during his visits here his reminiscences of early days were a delight to those who were so fortunate as to hear them.

The first school opened in the original Oregon country for American children was by Doctor Whitman at the Waiilatpu Mission, on the Walla Walla River. The school was attended by the children of missionaries, those who were left orphans, and the children of immigrants who were belated by winter storms and kept from entering the Willamette Valley.

Eliza Spalding was born at Lapwai Mission in 1837, and at ten years of age was sent to Whitman's station in charge of a trusty Nez Perce woman. These two journeyed alone on horseback three days, and camped as many nights by the trail. The air was cold on the table land adjacent to the Snake River, but the child was tenderly cared for by this faithful woman. Eliza was interpreter, owing to her thorough knowledge of Nez Perce, but her school-time at the mission was brief. Fifty years afterward she told of the awful tragedy that ended the life-work of a great and good man and his wife, and those others who shared their fate. Half a century had not

obliterated the traces and impression of the horrible crime from the sensitive mind of her who was a child at the time of the massacre.

A little school established in Polk County, early in the forties laid claim to the ambitious title of institute. Whether in the spirit of true democracy, or as a deserving tribute to the great mind that conceived the possibilities of this western land, and with marvelous foresight planned the Lewis and Clark expedition, this little log school house bore the name of the Jefferson Institute. The man who presided there remembered the lore of earlier years, and equally well had he treasured the books of that more fortunate time.

Men and women are living who owe a debt of gratitude to John E. Lyle, and remember with deep affection and respect that he first pointed out the narrow path that led far afield in the great world of study and literature of today.

The theme is endless, when we begin to recall the men and events of other days; much has been written and preserved, and much lost to the world because the demands of later times were great, and those who might have recorded faithfully and well went out into the great beyond without having benefited Oregon's story by handing down such a record.

MRS. WILLIAM MARKLAND MOLSON.

NOT MARJORAM.

THE SPANISH WORD "OREGANO" NOT THE ORIGINAL OF OREGON.

The textbooks in the hands of our children in the public schools continue to furnish them with the erroneous information that the name of the State of Oregon was derived from the word "oregano," the Spanish name for the plant that we call marjoram. This is mere conjecture, absolutely without support. More than this, it is completely disproved by all that is known of the history of the name. There is nothing in the records of the Spanish navigators, nothing in the history of Spanish exploration or discovery, that indicates even in the faintest way that this was the origin of the name, or that the Spaniards called this country or any portion of it by that name. There is marjoram here, indeed; and at a time long after the Spaniards had discontinued their northern coast voyages it was suggested that the presence of marjoram (oregano) here had led the Spaniards to call the country "Oregon."

From the year 1535 the Spaniards, from Mexico, made frequent voyages of exploration along the Pacific Coast towards the north. The main object was the discovery of a passage connecting the Pacific and Atlantic oceans. Consequently the explorers paid little attention to the country itself. After a time, finding the effort to discover a passage fruitless, they desisted for a long period. But after the lapse of two centuries they began to establish settlements on the coast of California; and then voyages towards the north were resumed by some of their navigators. In 1775 the mouth of the Columbia River was seen by Heceta, but, owing to the force of the current, he

was unable to enter. The fact here to be noted is that the Spaniards of that day did not call the country Oregon, or, if they did, they have left no record of it.

But even before the discovery of the Columbia River by Heceta the name of Oregon appeared in another quarter. Jonathan Carver, of Connecticut, who had served as a captain in the colonial war against the French, set out from Boston in 1766 and proceeded by way of the Great Lakes to the region of the Upper Mississippi, now forming the States of Wisconsin, Minnesota and Iowa. He returned to Boston in October, 1768, and then went over to England, where his "Travels" were published. From that journey to the Upper Mississippi region he brought back the name of Oregon, which he says he obtained from the Indians there. "From these nations," he says, "together with my own observations, I have learned that the four most capital rivers of the Continent of North America, viz., the St. Lawrence, the Mississippi, the Bourbon (flowing into Hudson's Bay), and the Oregon, or River of the West, have their sources in the same neighborhood. The waters of the three former are within thirty miles of each other; the latter, however, is rather farther west."

Carver, of course, had a geographical theory, and was seeking to verify it. This is the first mention of the name of Oregon that has yet been discovered. Carver either invented the word, or produced it from imitation of some word spoken by the Indians. There certainly was no "oregano," or marjoram, about it.

The word "oregano," it may be noted, has curious usage in Spanish authors. One of Sancho's proverbs, literally translated, runs thus: "Pray God, it may prove marjoram, and not turn out caraway for us." It is said to be unexplainable why marjoram and caraway in Spain should have been taken as types of the desirable and

undesirable. In another place Sancho says: "I would not have him marjoram (oregano), for covetousness bursts the bag, and the covetous governor does ungoverned justice." Here the word is used in the sense of "eager for gain."

Others have professed or proposed to derive the name of Oregon from the Spanish word "oreja," the ear—supposing that the Spaniards noted the big ears of the native Indians and named the country from the circumstance. But the Spaniards themselves have left no record of the kind; nor has it been noted, so far as we are aware, that the ears of our Indians were remarkably large. The word "orejon" is nearer our form; it signifies "slice of dried apple," we may suppose from its resemblance to the form of the ear. Many years ago Archbishop Blanchet, of Oregon, while in Peru, noted a peculiar use of this word "orejon" in that country, which he ingeniously conjectured might throw some light on the origin of the name of Oregon.

But it is unnecessary to formulate any fanciful theory. The name of Oregon first appears in Carver's book of "Travels" in the Upper Mississippi region in 1766-67. Did he invent the name? Probably. Did he get it from the Indians? Possibly something like it. But it never has been discovered among the Indians of that country since Carver's time, nor anything like it. There remains a possible supposition that French travelers who had passed through that country some years before, and had proceeded on their westward journey far toward the Rocky Mountains, and then returned, had been making inquiries among the Indians as to the great western river that all geographers had postulated, and had spoken a word that the Indians had tried to imitate—possibly "Aragon"—knowing that the Spaniards had explored the western coasts, and intimating that the country by

discovery might belong to Spain. But all these are fruitless conjectures.²⁰ We know where we find the name of Oregon first written, when it was written, and by whom; and the circumstances completely disprove the "oregano" and the "orejon" theories. A notable fact it is that a slight incident of Carver's career, so slight that he thought nothing about it—the creation of a name, or the casual use of a name hitherto unknown—has immortalized his own name upon the tongues of men dwelling in the region of his "River of the West." But Minnesota has not neglected him. She does justice to him in her records and historical transactions, and has not forgotten to name a county for him. He died in poverty and misery in London, January 31, 1780.

H. W. SCOTT.

²⁰Professor John Fiske, in his "History of the United States," says that Oregon "may perhaps be the Algonquin *Wau-re-gan*, 'beautiful water.'"

REMINISCENCES OF LOUIS LABONTE.

By H. S. LYMAN.

Louis Labonte (or Le Bonte), son of Louis Labonte of the Astor expedition, who accompanied Hunt across the continent in 1811-12, is still living at Saint Paul, Marion County, Oregon. He is now eighty-two years old, and is in good health. His remembrance of earlier experiences and life is still fresh and his mind seems very vigorous for one of his age. He says, however, that his recollection of the Indian languages that he once knew has now largely slipped away. These were the Clatsop or Chinook, the Tillamook, Tualatin and Calapooya, of which he says he knew a few words, and the Spokane which he understood almost perfectly. Besides these, he talked fluently in the Indian jargon and in French and English.

He was born at Astoria in 1818, his mother being a daughter of Chief Kobayway, and an older sister of Celiast, or Mrs. Helen Smith. Three years of his early life, about 1824 to 1827, were spent at Spokane Falls, and the three years succeeding at Fort Colville. Then two years, probably 1830 to 1833, were spent on French Prairie. His father had removed to that place and was engaged in raising wheat on a piece of land owned by Joseph Gervais, whose wife was a sister of his mother. From this place he accompanied the family to the farm of Thomas McKay on Scappoose Creek near Sauvie's Island, where he spent three years. In 1836 he removed with the family to a location on the Yamhill River near Dayton. In 1849, being then a well matured man, he accompanied a party headed by William McKay to the

gold mines of California, returning the same year. During the Indian war of 1855-56 he was a member of the Oregon Volunteers in the company of Robert Newell, which was stationed at Fort Vancouver to hold in check the Cascade Indians and the Klickitats to the north.

His reminiscences are important on the following: *First*, as to his father, Louis Labonte; *second*, earliest French Prairie; *third*, experiences at Scappoose; *fourth*, Spokane Indians and Indian myths; *fifth*, the names of Indian places and persons; *sixth*, the primitive Indian articles of food; *seventh*, on some of the Indian tribes and customs and traditions; and *eighth*, of the original white men.

I.

LOUIS LABONTE SENIOR.

Concerning his father, he says that this member of the Astor expedition was born in Montreal, and was about eighteen years old when he came out to Saint Louis, and was there engaged as an employee of the American Fur Company for four years; at the age of twenty-two he was engaged by Wilson P. Hunt of the Pacific Fur Company to come to Oregon, and arrived in the following winter. Upon the disruption of that company in 1814, Labonte took service with the Northwestern Fur Company, which was in 1818 absorbed into the Hudson's Bay Company. He had in the meantime become acquainted with and married at Astoria the daughter of Chief Kobayway of the Clatsop Indians, and it was in the year 1818 that the son was born. Labonte Sr. took six years for the Hudson's Bay Company, and spent three years at Spokane and three at Colville. He then returned to Fort Vancouver and his service terminated some time near 1828, when he asked to be dismissed and allowed to remain in Oregon. This was directly against

the policy of the Hudson's Bay Company, who wished none of their trappers to become settlers or free laborers in their territory, and it was the rule that all of their servants must be dismissed at the place where they were enlisted. But Labonte was an astute Frenchman and contended that as he had enlisted in Oregon and was not brought here by the Hudson's Bay Company, it was no infraction of this rule, but rather in compliance with it that he should be dismissed here. Notwithstanding, his request was refused and no dismissal was allowed unless he returned to Montreal. Accordingly, he made the trip to Canada, starting in March, and receiving his regular papers certifying to the ending of his term of service. But he immediately began the journey back and arrived here again in November of the same year—which may have been 1830. This shows him to have been an independent and determined man, and a good husband and father. It may also have had much more bearing than has yet been credited as to the settlement of Oregon.

II.

EARLIEST FRENCH PRAIRIE.

After having terminated his service with the Hudson's Bay Company, Labonte evidently made up his mind to become a settler in Oregon, the country of his wife, and with which he was undoubtedly well pleased as a home. Several of his comrades who belonged to the old Hunt party were already contemplating this step, and some had actually begun settlement. Etienne Lucier had first taken a place at the site of East Portland, but, as Labonte remembers, having been informed by McLoughlin that he himself wished to occupy this location, was now removing to French Prairie. Joseph Gervais, however, was already at French Prairie, having laid a claim

at Chemaway, a point on the bank of the Willamette River about two and a half miles south from Fairfield at present. Labonte Sr. moved to the place of Gervais and engaged with him in raising wheat, and, among other improvements, built a barn ; but did not complete a location of his own.

Louis, the son, remembers more particularly the boyish occupations of the region, of which hunting was the most important. He describes a method of hunting the deer (jargon, Mowich ; Calapooya, Ahawa-ia) which, perhaps, has never been placed in print. The deer were very abundant in primitive times, and during the breeding season the bucks were pugnacious. In order to come near to them the Indians would take the head of a deer, including also the hide of the neck, properly prepared, which was placed over the head of the hunter ; and he then, stooping over so as to keep the mouth of the deer head off the ground, as if grazing, would creep up on the lee side of the herd. He would also, so as to more closely imitate the action of a deer, occasionally jerk the head from side to side, as if nabbing flies.

Presently a buck from the herd, observing the suspicious stranger, would begin to stamp and snuff, and bridle with anger ; or, possibly, shaking with excitement, would edge nearer, challenging the supposed intruder for a fight, browsing and approaching, or maneuvering for a position. The hunter, in the meantime, would keep up his own maneuvers until the victim was near, and then let fly the fatal arrow ; though Labonte says that before the use of guns, the Indian himself, if he chanced to miss his mark, was sometimes so viciously attacked by the deer as to be badly gored or trampled, or possibly killed. Young Labonte always used a gun at this sport.

He recalls also seeing two grizzly bears on French

Prairie, one of which was in connection with a hunting party one foggy morning. Grizzlies were not unknown in the Willamette Valley, though they were not abundant. The Chinook jargon name for the grizzly was eshayum, quite distinct from the name of the common black bear, itch-hoot. Both these words are evidently primitive Indian terms (S. B. Smith) and thus show that the grizzlies were a well recognized species in the Willamette Valley during the period of Indian occupation.

Labonte Jr. has recollections of earliest French Prairie which are very valuable, and give a new, or at least a clearer understanding of settlement here, than ever seems to have been published, and shows Chemaway on the Willamette River about twelve miles above Champoeg to have been the first nucleus of settlement. According to these recollections, which should of course be subjected to close examination before being used as the basis of a final conclusion, it was Joseph Gervais and the remnants of the Astor company, or Hunt's part of it, who were the original pioneers of French Prairie, and thus of Oregon. These were Joseph Gervais, Etienne Lucier, Louis Labonte, Wm. Cannon, Alexander Carson, (Alex. Essen) and Dubruy. Whether the fact that they had been with an American company made them any more independent and more disposed to settle for themselves, may be questioned; but at any rate, they formed a little company of comrades and became the first group of independent Oregon people.

Joseph Gervais was the first, and when the Labontes arrived in about 1831, he had been upon his place at Chemaway at least three years, and had made considerable improvements. Chemaway is situated on the bank of the Willamette River at a somewhat abrupt point over the water and became afterwards the location of Jason Lee, and the Methodist Mission. It is not to be

confounded with Chemawa, the location of the United States Indian Training School on the line of the Southern Pacific Railroad,—though this is a mispronunciation of the old name, in which both a's are long, with a strong tendency toward long e, making the name Chemaewae.

Gervais had substantial buildings, and Labonte's description of his house and barn is very interesting. The house was about 18 x 24, on the ground, and was constructed of square hewed logs, of rather large size. There were two floors, one below and one above, both of which were laid with long planks or puncheons of white fir, and probably adzed off to a proper level. The roof was made of poles as rafters, and the shingling was of carefully laid strips or sheets of ash bark, imbricated. Upon these were cross planks to hold them in place. There were three windows on the lower floor of about 30 x 36 inches in dimensions, and for lights were covered with fine thinly dressed deer skins. There was also a large fireplace, built of sticks tied together with buckskin thongs, and covered with a stiff plaster made of clay and grass. The barn was of good size, being about 40 x 50 feet on the ground, and was of the peculiar construction of a number of buildings on early French Prairie. There were posts set up at the corners and at the requisite intervals between, in which tenon grooves had been run by use of an auger and chisel, and into these were let white fir split planks about three inches thick to compose the walls. The roof was shingled in the same manner as the house, with pieces of ash bark. There was a young orchard upon the place of small apple trees obtained from Fort Vancouver.

At the time that the Labontes came to Chemaway, Etienne Lucier had not yet taken his own place, about three miles above Champoeg, at Chewewa, but was living, or camping, upon the place of Gervais, probably

looking around the country and making arrangements for a permanent home. Lucier, therefore, was not the first settler upon French Prairie, but this honor belongs to Joseph Gervais, who must have gone there, according to Labonte's recollections, about 1828.

William Cannon was a millwright, being an American by birth, from Pennsylvania, and at the time the Labontes came to French Prairie, was at Vancouver, building the gristmill. He afterwards built the Champoeg gristmill, as stated by Willard H. Rees.

Dubruy settled subsequently about two and one-half miles south of Champoeg.

Alexander Carson (Alex Essen, as pronounced by Labonte), was a trapper, and spent much of his time in the Yamhill country. He seems to have been a very independent man, but finally lost his life at a certain butte on the North Yamhill River (still called Alec's Butte) by the Twhatie (Tualatin) Indians, probably with the simple object of possessing themselves of his rifle and trappings.

As to Champoeg, the historic point in Oregon history, this was originally a camping and council ground of the Indians. It was near the north boundary of the Calapooyas, and here various tribes came to trade, to play games of chance and skill, and not infrequently to intermarry.

One great sport was diving. The water of the Willamette River off the bluff was very deep, and it became a great contest for the young men to see who could dive deepest and remain under water longest. Some of the bolder ones even not rising until the blood began to burst from their noses or mouths.

Labonte recalls with great vividness the wedding ceremonies which he often witnessed, and that were fre-

quently celebrated here between contracting parties of the different tribes. It was quite an intricate ceremony. The tribe of the groom would assemble on one side and that of the bride on the other. The groom, placed in the forefront of his people, was dressed in his best, and seated upon the ground. He was then approached by members of his own tribe, who began removing his outer garments, article by article. After this was done, members of the bride's tribe came and reclothed him with different garments and placed him in readiness to receive his wife. The bride, in the meantime, was placed in the forefront of her people, but was covered entirely, face and all, with a blanket. When ready to be presented, she was carried by women of her tribe, and brought within a short distance of the groom, but here her bearers halted to rest. Then, probably indicating the desire of both peoples that the ceremony should proceed, and that all were friendly, a shout or hallo was raised by all parties, which is given as follows: "Awatch-a-he-lay-ee. Awatch-a-he-lay-ee." After which she was taken the rest of the way and presented, while the same cry of applause and approbation was again raised.

A bride was purchased, and the presents were numerous and valuable. In case that the groom and bride were descendants of chiefs, presents were made between the whole tribes. These presents were of all sorts, and consisted of horses (cuiton), blankets (passissie), guns (mosket), slaves (eliatie), haiqua shells, or, as the small haiqua shells were called, cope-cope, which is a kind of turritella, kettles (moos-moos), tobacco (ekainoos), powder (poolallie), bullets (kah-lai-ton), knives (eop-taths), or other articles.

The name Champoeg, says Labonte, is not derived from Le Campment Sable, the French name, but is purely Indian. "Cham," the hard *ch*, not *sh*, is of the same

character as the universal *Che* prefix of the Calapooyas ; as Chehalem, Chewewa, Chemaway, Chamhokuc, or Che-meketa ; and the latter part, "poeg," or poek, was for a certain plant or root found there by the Indians, and called po-wet-sie. That this is the true derivation, and it is not from the French term, meaning the sandy camp, is evidenced by its similarity to the other Indian names just given above.

III.

AT SCAPPOOSE.

When young Labonte was about sixteen, and after spending about two years at Chemaway, the family was employed by Thomas McKay to take charge of his farm on Scappoose Plains, across the Willamette Slough, or Multnomah, from Sauvie's Island—McKay being one of the most energetic and intrepid captains of the Hudson's Bay Company, and being at that time detailed for special service in the Snake River country, where competition with American companies was setting in with much vigor. On this farm the Labontes raised wheat, oats, peas, potatoes, and various garden products, and had cattle and hogs, but no sheep. On the farm with the Labontes there was a Frenchman named Antoine Plasier.

It was during this period that Wyeth—whom Labonte recalls as White, from a mixture of the English aspirate and the French non-aspiration of th—made his second visit to the Columbia. It was, however, more with the trim brig *May Dacre* that the lad had to do. He remembers that he was at that time just as tall as a musket, which he indicates would reach about to his chin as a man. On this craft, which lay anchored in the stream not far from the farm, he was often invited to go visiting, particularly Sundays, and was well treated by the sailors and Captain Lambert. He remembers once being

asked by the captain whether he could climb a mast, and he immediately proceeded to show that he could, and ascended to the topmast on the bare pole, climbing hand over hand. It happened to be a windy day, and the brig was rolling somewhat in the swell, and when the boy looked down from his lofty elevation, he was made almost dizzy by observing how small the vessel below him looked in the wide stream. But upon reaching deck again, he was complimented by both sailors and captain as being made of stuff fit for a sailor.

Indeed, Lambert seems to have been very well pleased with him, and offered him a passage on his ship to Boston, and a return, either by land or sea, and to this his parents were almost persuaded to give their consent, but at the last moment could not quite bring themselves to do this. Sometimes he was invited by the captain to take dinner, and amused the officers by his sturdy refusal to take anything to drink—perhaps as much from suspicion as from set conviction—though the better class of men on the Columbia at that time greatly deprecated the use of intoxicants and were largely temperate, and the boy very likely had imbibed these ideas.

He remembers Lambert as large and powerful, and full bodied; of dark hair and complexion, and “a good man.” Nathaniel Wyeth, whom he also saw, was florid, light-haired and blue-eyed, but also large, and perhaps even finer looking than Lambert.

Game at Scappoose and on the ponds of Sauvie’s Island was very abundant, consisting of deer, elk and bear, and panthers and wildcats; and beaver were still plentiful; but the waterfowl of the most magnificent kind, at their season of passage, and, indeed, during much of the year, almost forbade the hunter to sleep. Labonte remembers one winter season in particular when there was a snowfall of about sixteen inches, and in the

early morning he went forth to hunt swan. These splendid birds of the white species, like the innumerable ducks and geese, assembled at the island ponds to feast upon the abundant wapatoes. On this particular morning the youth soon discovered his flock of swans upon the surface of a shallow lake, eating the roots, and being such an immense flock that they were not to be disturbed even by the immediate presence of the hunter. Then, disrobing to his shoulders,—for the water was too deep to reach the flock otherwise,—he simply waded in, bringing down two or three birds to a shot, until he soon had as many as he could carry. Indeed, the lake was so covered by the flock as almost to conceal the water. However, upon reaching home he was rather chided for his performance by his father, who told him that by such cold bathing he would be likely to get the “rheumatism,” which was his first acquaintance with that term.

IV.

SPOKANE INDIANS AND INDIAN MYTHS.

When taken to Spokane Falls, Labonte was a small boy of about six years. His parents made their residence there from about 1824 to 1827.

He was much with the Indians, and learned their language like a native, and was often present at their religious services, and heard them tell their myths. One of their meetings he describes as follows: At the lodge of the greatest chief there was a picture, from whom obtained he does not know, but in all probability from some member of the Hudson's Bay Company. When worship was held, this picture was spread out on the floor, and, kneeling before it, the chief began a prayer to the Great Spirit, or the Hyas Ilmihum, who was addressed also by the name of Creator; the expression

“Quilen-tsatmen,” meaning Creator, or, more exactly, “He made us.” The prayer was a petition to be made pleasing to God, to be kept under His care, to be taken to Him at last, and to be kept from the “Black fellow.” After the chief had finished, others also followed, kneeling down and uttering a shorter petition until all at last took their place and followed along in an orderly manner. Those who had any offerings left them before the picture. Then they began a hymn or chant, and after that was finished, all joined in a dance.

Labonte recollects the names of some the Spokane chiefs: Ilmicum Spokaneee, or the chief of the moon; Ilmicum Takullhalth, the chief of the day; and Kahwakim, a broken shoulder. He also recollects a Colville chief, whose name was Snohomich, a white-headed old man.

The Spokane Indians had the legends of the coyote, or Tallapus, but his name was Sincheleep. In his breast he carried certain knowing creatures, which were his spirits, or wits, and when he wished to take council with himself, he would call them forth. They gave him the answers he needed, and then went back into his breast. Sincheleep, the coyote, was quite different from the fox, Whawhaoolee, though the fox was also a knowing beast. The big gray wolf was Cheaitsin; the grizzly bear, Tsimhiatsin, and the black bear, N'salmbe.

A story of Tallapus, or Sincheleep, that Labonte remembers was the same in substance as that of Tallapus and the cedar tree; although Spokane is almost a thousand miles from the region of the story of Tallapus. This illustrates to what a wide extent the folklore of the primitive Indians extended. Sincheleep was once traveling and was not entirely certain how he should obtain his meals upon the way. However, in order to look as well as possible he decided to dress up nicely; to comb

his hair, and paint his face becomingly. In the course of time he was met by two women who carried baskets in which they had some camas bread and other Indian dainties. He came forward and addressed them and said very pleasantly, "Sit down, sisters; sit down. I will sing to you and tell you stories." So they sat down while he sang and told them stories, and they enjoyed his society so much that when at length he remarked casually, "What have you in your baskets, sisters?" they very kindly opened their stores and treated him; which, of course, he enjoyed, and began at once to contrive for another treat. He bade them good-bye and went on, but when out of sight took a circle about and coming to a stream washed himself and painted another way, and also combed his hair differently, and met the two women again. He addressed them as before, saying, "Sit down, sisters; sit down, and I will sing and tell you stories." This they did, and were again so charmed that they opened their baskets and treated him as before. He then went on, but circled about again so as to meet them once more, being now combed and painted still differently. He sang and told stories and was again treated. But about the fifth or sixth time that this happened, the women began to suspect that the cunning creature was no other than Tallapus, and when he saw that he was discovered, he bade them a final good-bye, and went off to the wooded hills. Then began the story of the tree, which as told by Labonte, runs as follows: "He saw a tree with a crotched root, leading to a hollow within, and thinking this a fine resting place, went inside. He then asked the tree to close, and it did so obediently. This was some time along in the fall. After it was closed, he asked it to open, and it did this also. Then he asked it to close and it was closed. It opened or shut whenever he asked it to, but by and by when he

asked it to open, it would not. Then he was very sorry and sat down inside the tree and cried. But he was compelled to remain there all winter.

Some time along in the early spring the birds came at his request to peck him out; but the first, the second, and many others that tried only broke their bills and were unable to make even a small hole, until this was done by a woodpecker; and through the opening Tal-lap-us was able to gaze abroad and see the blooming flowers and the green grass.

But still he could not go through the opening, and finally concluded that the only way was to take himself to pieces and put himself out, piece by piece. His eyes were the first parts that he thus placed on the outside, but they were seized upon by a raven who carried them away. Finally the various sections of his body were all out and collected and put together properly, except that his eyes were gone and he was blind. But he smelled the scent of flowers and felt around until he found some of the flowers, which he placed in each eye. Then, feeling his way along laboriously, and staring about as if seeing everything, was at length directed by smelling smoke. Following this odor, he was led to a lodge where there were some women. By these his misfortune was ridiculed, and they engaged in laughter as he felt for the door; but he answered, "I am only measuring your house." He was moving around in the meantime and trying to find a place to sit down, which only increased their merriment; but he answered, "I see; I see; but I am only measuring the ground."

Then one of the women said, "Can you indeed see?"

Then he, staring off, replied, "Do you see that fire?"

"Where?" they asked.

"Far off," he answered, and described the distance as far away, beyond the limit of their vision.

“No,” they confessed, “that is too far for us.”

Then he answered, “I can see what you do not.” By which one of the women was so impressed with the strength of his sight that she immediately wished to swap eyes, and he promptly accepted the proposition; as a result of which he could see even better than before, while she became blind. He then transformed her, for her folly, into a snail, which even to this day feels its way along the ground.

The following are some of the Tallapus stories, which Labonte remembers, found in the Willamette Valley :

According to the Calapooyas, who occupied this valley from near the Pudding River southward, Tallapus came originally from the Rocky Mountain country and went down the Columbia River, and thence southward along the coast and finally over the coast mountains into the Willamette Valley ; though his exact birthplace or origin is still a matter of doubt.

Arriving by the Willamette River, he found the tribes of that region in very unhappy circumstances ; chiefly from the absence of any good place for catching fish, and also, owing to the depredations of certain gigantic skookums. In order to remedy the first evil, he determined to make a fall in the Willamette River where the salmon would collect and be easily captured. He found a place at the mouth of Pudding River, the Indian name of which is Hanteuc, and here he began erecting the barrier, but finding it not suitable, went further down, leaving only a small riffle. At Rock Island, he began in earnest, but upon further investigation found this also unsuitable, and leaving here a strong rapid, went down to the present site of the Willamette Falls, where he completed his task and made the magnificent cataract

which is not only a scene of beauty, but a model fishing place.

After having provided the fishery, he decided to invent a remarkable trap which would obviate the labor of fishing. He succeeded and produced a marvelous machine which not only caught the fish, but also had the power to talk, and would cry out, "Noseepsk, noseepsk," when it was full.

Determining to try his invention for himself, Tallapus set the trap and went immediately to his camping place to build a fire in order to cook the fish. But scarcely had he begun when the trap cried out, "Noseepsk! Noseepsk!" and going down he found it full of fish sure enough. Then, returning, he began once more to prepare his fire; but the trap called out again, "Noseepsk! Noseepsk!" He obeyed its summons and found it full, and went back once more to start his fire; but the trap called for him again, and now, out of patience with its promptness, he said to it crossly, "Wait until I build a fire, and do not keep calling for me forever." But by this sternness the trap was so much offended that it instantly ceased to work, and the wonderful invention was never used by men, who were obliged as before to catch the salmon with spears or nets.

THE STORY OF THE SKOOKUM'S TONGUE.

However, in the course of time the Indians became very prosperous, and a large village was built on the west side of the river. But while they were thus prospering, a gigantic skookum that lived upon the Tualatin River began to commit fearful depredations. His abode was on a little flat about two miles from the Indian village, but so long was his tongue that he was in the habit of reaching it forth and catching the people as he chose.

By this, of course, the village was almost depopulated, and when, after a time, Tallapus returned, he was very angry to see that the benefits of his fishery had gone, not to the people, but to the wicked skookum. He therefore went forth to the monster and cried out to it, "O, wicked skookum; long enough have you been eating these people." And with one blow of his tomahawk cut off the offending tongue, and buried it under the rocks upon the west side of the falls; after which the people flourished. But so persistent is Indian superstition that even yet some of the old Indians say that when the canal was cut around the falls, that this was nothing more than laying bare the channel made for the tongue of the skookum.

THE SKOOKUM AND THE WONDERFUL BOY.

On the east side of the falls at about the site of Oregon City the Indians also made a large village, being nourished by the fishery, and had among them a great chief. But from the mountains on the east there came a frightful skookum, who destroyed the entire village and even the old chieftain and all the people, except the chief's wife and her unborn son.

The woman desiring that her son should be great and strong, took him after his birth to the various streams or lakes that were haunted by Tomaniwus spirits, and bathed him in the waters. From these he absorbed the strength of the water and of the spirits, and in consequence, grew prodigiously. In the course of time, he returned to the old village where he found his mother, and looking about the lodge, he began to ask her what were the various articles that he saw. She replied: "This is the spear with which your father used to catch the salmon; and this is the tomahawk with which he

used to kill his enemies or to cleave wood ; and this is the bow with which he used to shoot arrows." Taking the tomahawk in his hand, the boy went out to look abroad but was almost immediately met by the skookum returning. Thereupon driving his tomahawk into a gnarly log of wood so as to make a crack, he cried out to the giant, "If you are so strong, hold this crack open while I take another stroke ;" and into the opening the witless skookum placed his fingers, but the tomahawk being instantly withdrawn and the crack closing, was held fast, after which he was easily killed by the boy. Then taking his father's bow, the youngster went forth and shot an arrow into the sky, calling out at the same time, "As the arrow falls let those who died come to life ;" and this also was done. Scarcely had the arrow fallen before the old chief and all his people were seen coming up the river in their canoes ; and landing at the rocks, they began fishing as if nothing had happened. The wonderful boy being rejoiced to see his father, whom he had never looked upon before, went down among the fishermen ; but when he was seen by the old chief, was accosted rudely with the question "Who are you? I am chief here." And the old chief not knowing his son, accompanied his rough language with an even rougher blow.

By this the wonderful boy was greatly affected, and thinking that he could benefit his tribe no more, retired to the rocks above the falls, and began weeping ; and, indeed, wept so copiously that his tears falling on each side of the falls wore two great holes in the solid rock, which may be seen there to this day. Finally deciding that he would no longer live as a man, the boy changed himself into a fish in order that he might rest in the quiet waters. But he was disturbed by the roaring of the river to such an extent that he swam upward as far as the

Tualatin. But neither here could he rest on account of the roaring of the water. He proceeded thence to the mouth of the Molalla, and of the Pudding River, and of the Yamhill, successively, but had no resting place, until finally he reached the clear Santiam. Here he found what he desired, and went to sleep in a still pool; but being discovered by Tallapus, was changed into a rock, having the form of a salmon. And this accounts, say the Indians, for the fact that no salmon that ascend the falls at Oregon City ever turn aside into any of the streams until they reach the Santiam; but there seeing the rock, they take a circle and swim near, and then saluting it with a flip of their tail proceed up the crystal clear river until they reach the pebbly bars suitable for their spawning grounds.

THE HAUNTED LAKE.

In addition to the above, Labonte tells an Indian story of a haunted lake in the hills to the northward of Newburg. The waters of this lake are exceedingly deep and still, and it has the name of the skookum water.

Long ago, said the Indians, there was one man who, although he knew that this was a tomaniwus water, determined recklessly to reach it in his canoe, and disturb its placid surface with the strokes of his paddle. Making his way thither, in his little craft in which he also had his dog as his sole companion, he at length came to the shadowy lake. He directed his strokes toward the center, which he had scarcely reached before the water grew darker and became greatly disturbed. Finally, it began revolving round and round, and the man with his canoe and dog were whirled along in the stream until a vortex was developed and opened, into which all sank. Then the lake was pacified, and again became serene. But

even at the present time, upon a foggy morning, if one gazes over the rocks upon Skookum Lake, he will see a white object whirling round and round on the surface of the water, and may, perhaps, hear whines and cries; this is the spirit of the dog, which thus returns.

DR. ELLIOTT COUES.

The untimely passing of Dr. Elliott Coues, scientist and historian, has deprived the Historical Society of Oregon of the pleasure of making acknowledgments to the living man of its appreciation of the invaluable work he has done, touching the history of the Northwest, and particularly of Oregon, in the latter part of the eighteenth and early part of the nineteenth centuries. Doctor Coues' personal bias was towards the natural sciences, in which he was distinguished, both as to the quantity and quality of the matter produced, on ornithology, mammalogy, herpetology, comparative anatomy, natural philosophy, psychical research, etc.²¹ Incidentally, through his researches in natural history, which led him to explore wilderness regions, he became a historian of more than ordinary value, for he was never satisfied with his work until he had gone to the very bottom of his subject. The books and manuscripts which he edited became original histories in his hands, from his almost incredible industry in bringing to light facts to verify or disprove the author's statements. With all the care of a genealogist he followed a clue leading to the identity

²¹Principal Works: "Key to North American Birds," '72; "Field Ornithology," '74; "Birds of the Northwest," '74; "Fur-Bearing Animals," '77; "Monographs of North America Rodentia (with Allen)," '77; "Birds of the Colorado Valley," '78; "Ornithological Bibliography," '78-'80; "New England Bird Life (with Stearns)," '81; "Check List and Dictionary of North American Birds," '82; "Avifauna Columbiana (with Prentiss)," '83; "Biogen, a Speculation on the Origin and Nature of Life," '84; "New Key to North American Birds," '84; "The Dæmon of Darwin," '84; "Code of Nomenclature and Check List of North American Birds (with Allen, Ridgway, Brewster, and Henshaw)," '86; "A Woman in the Case," '87; "Neuro-Myology (with Shute)," '87; "Signs of the Times," '88. Also author of several hundred monographs and minor papers in scientific periodicals, and editor or associate editor for some years of the Bulletin of the United States Geological Survey, Bulletin of the Nuttall Ornithological Club, American Naturalist, American Journal of Otology, Encyclopædia Americana, Standard Natural History, The Auk, The Biogen Series, Die Sphinx (Liepsig), The Century Dictionary of the English Language (in General Biology, Comparative Anatomy and all departments of Zoölogy), The Travels of Lewis and Clark, &c.

of the persons mentioned in the writings before him, or the places named. His insight into, and industry in exploiting the fading records of the past was extraordinary, amounting to genius. His editorial revision of the journal of Lewis and Clark, has added immensely to the value of that work, so interesting to Oregonians, and should revive our zeal for the study of early history.²²

But of all the work done by Doctor Coues none has interested me more than his abridgment of and notes upon the journal of Alexander Henry and David Thompson, two of the leaders of the Northwest Fur Company, almost a century ago, extending over a period of fourteen years, and covering the ground from Lake Superior to the mouth of the Columbia, whose ruthless waters at the last swallowed up Henry, May 22, 1814.

This journal was at Astoria at that date, and we hear in it of the carpenter making an oak chest for it, or "for my papers," as Henry writes it. Covering so long a period, it was very voluminous. It was carried to Hudson's Bay, but perhaps because of this, and because its author was dead, it was never made public. When Doctor Coues found it the paper was much worn, and the writing in places illegible; but that did not deter him from entering upon the task of preparing it for publication. Not only is the journal itself of great interest, but the notes and explanations attached to almost every page are wonderfully complete. The enormous bulk of Henry's matter is reduced by its editor, together with his notes, to 916 pages, in two volumes, without the sacrifice of facts, giving us a clear account of the country's history not obtainable in any, or all other, writers.

A little more personal notice may not be out of place here as significant of the man. In January, 1898, I re-

²²See the "American Explorers Series," published by Francis P. Harper, for Coues' work in this line. His last was "On the Trail of a Spanish Pioneer."

ceived a letter from Doctor Coues desiring me to send him a copy of the *River of the West*, "with any erroneous passages it may possibly contain corrected in your (my) own hand," and asking me to give him information on some subjects which he named, and among them, the origin of the name "Lawyer," as applied to a Nez Perce chief; also asking the meaning of the word "Lo-Lo," whether it was a personal name, etc.²³ He understood that an author is pretty sure to find "erroneous passages" in books that an honest writer must be willing to correct; besides, he wished to avoid quoting others' errors.

From that date to his death we were in frequent correspondence, and when the Oregon Historical Society was formed, he was made acquainted with the fact, on which he expressed a desire to be made a member. It is not too late to thus honor the man who has given the state a chapter of its history hitherto unrevealed.

Mrs. Coues, in a letter replying to one of mine, says: "His home life and ways would hardly interest the public, they were so simple and quiet, with a wonderful appreciation of any little thing that was done for his comfort. I think the one characteristic that stands out the most prominently was, 'Now, I have finished that piece of writing. I have begun another.'" To finish a work was not an occasion for rest, but to put forth fresh energy for other effort. Francis P. Harper, his publisher, says: "He had a capacity for work that was almost beyond belief, and was always prompt and business-like. He was a firm and trustworthy friend, and an ideal author for a publisher to have business rela-

²³I have since learned that Lolo is not an Indian word, but is the Indian pronunciation of the word Lawrence—the letter *r* not being sounded in the native tongue. A mingling of the French sound of the other letters in the word produces the word as pronounced by the Indians.

tions with.” His printer (in the Osprey office, Washington), adds: “I have had years of experience with various authors and editors, and can truthfully say his genial friendship and appreciation stands out markedly beyond all others.” “He never neglected a letter,” says Mrs. Coues, “although from a total stranger, asking for assistance. He gave it if he could, most generously, and if unable, gave a courteous answer, and a reason. I myself have counted sixty letters he had written in about six hours—not merely a reply of a few lines. His one great desire in life was a search after truth, and kept his mind receptive to all that could give him a clue.”

Doctor Coues spent the summer of 1899 in New Mexico, making researches in his usual energetic fashion—“forgetful of his fifty-seven years” as he wrote me after returning home ill. It was not years, however, that bore so heavily upon him; but the crowding of five years’ work into one. This it was that deprived the world of his incomparable services in the very fullness of his intellectual powers.

Doctor Coues was the son of Samuel Elliott Coues and Charlotte Haven Ladd Coues, born at Portsmouth, New Hampshire, September 9, 1842. His literary tastes were inherited from his father, who was a writer on scientific subjects. He was educated at Ganzaga College and Columbia University, Washington, D. C., from which he graduated in 1861. He continued to reside at the capital, and his life was spent in contact with all that was strongest and best in a nation which his talents helped to make conspicuous in the fields of science and literature. His death occurred at Johns Hopkin’s Hospital, Baltimore, December 25, 1899. The State of Oregon cannot fail to place his name high among the fathers of her early history.

FRANCES F. VICTOR.

DOCUMENT.

THE ORIGINAL OF THE FOLLOWING DOCUMENT IS IN THE POSSESSION OF
MRS. FRANCES FULLER VICTOR, PORTLAND, OREGON. IT WAS SECURED
FROM MR. HARVEY, A SON-IN-LAW OF DOCTOR McLOUGHLIN,
AND SEEMS TO BE A DEFENCE BY DOCTOR McLOUGHLIN
OF HIMSELF, ADDRESSED TO PARTIES IN LONDON.

The first Americans since 1814 who crossed to the west side of the Rocky Mountains was (at least to our knowledge) Mr. Jedidiah Smith with five trappers, who, having met some of the Hudson's Bay Company on the headwaters of Snake River came with them to the Hudson's Bay post at the Flat Heads, where they passed the winter.

In 1825 he returned to join his people, and in 1826 he brought a large party of his countrymen to hunt in the Snake country, where they have been ever since. In 1826 and up to 1828, there were constantly five or six hundred. But now, that beaver are scarce, there are only about fifty. In 1827, Mr. Smith pushed his trapping parties to the Bay of San Francisco, in California, and, in endeavoring to make his way here from California in 1828, fifteen of his men were murdered by the Umpqua Indians when he with only three of his men reached Vancouver from whence, spring 1829, he proceeded to join his countrymen in the Snake country.

The first American vessel that entered the Columbia River to trade since 1814 was the Oahee, Captain Dominus, in February, 1829. The Convoy, Captain Thompson, came a while after. These two vessels belonged to the same party, a merchant in Boston. In summer, they went up to the coast. Returned in the fall. The Oahee wintered in the Columbia River, but the Convoy proceeded to Oahoo. Returned spring 1830, and in the summer both vessels left and never returned.

In 1832 a Mr. Wyeth came across by land from Boston with eleven men, with the intention of establishing a salmon fishery and expected to have met a vessel which he had sent from Boston, but he learned afterwards she had been wrecked on an island in the Pacific, and the nonarrival of his vessel obliged Mr. Wyeth to return to the United States, but his men remained in the Wallamette.

In 1834 Mr. Wyeth returned with a large number of men whom he left in the Snake Country to trap beaver, where he built the present Fort Hall, and brought about twenty men with him to prosecute the object of his first voyage in 1832, for which purpose he had despatched the *May Dacre*, Captain Lambert, from Boston in 1833, and which entered the river a few days after Mr. Wyeth arrived at Vancouver, who built on Wapattoo Island. Collected in 1835 about a half cargo of salmon when the *May Dacre* sailed in 1835, and in 1836 Mr. Wyeth broke up his establishment on Wapattoo Island. Returned to the states, offered the remains of his property in the country for sale to the Directors of the Hudson's Bay Company in London, but they referred him to their officers in the country at Vancouver, who bought Mr. Wyeth's property and his establishment of Fort Hall in 1837 from Mr. Wyeth's agent, and he left in one of the Hudson's Bay Company's vessels for Oahoo in 1838. But his labouring men dispersed in the country. The Rev. Jason and Daniel Lee of the Methodist Episcopal Church, with three laymen came overland from the states in company with Mr. Wyeth in 1834. They brought horses and cattle with them, but their supplies came by sea in the *May Dacre*. Messrs. Lee left the states with the intention of settling in the Flat Head Country as missionaries to those Indians but changed their minds and settled in the Wallamette Country, and as they had left

their cattle at Walla Walla and they were rather weak after their long journey, they asked and obtained the loan of cattle from me.

In 1834 one Kelley came from Boston by way of California, accompanied by Ewing Young and eight English and American sailors. Kelley left the states with a party intending to come here by way of Mexico, but the party broke up on the way and Kelley alone reached California, and with one man overtook our California trappers on their return about two hundred miles from San Francisco, and Young, a few days after, with the rest of them; but as Gen. Figueroa, Governor of California, had written me that Ewing Young and Kelley had stolen horses from the settlers of that place I would have no dealings with them, and told them my reasons. Young maintained he stole no horses, but admitted the others had. I told him that might be the case, but as the charge was made I could have no dealings with him till he cleared it up. But he maintained to his countrymen and they believed it, that as he was a leader among them, I acted as I did from a desire to oppose American interests. I treated all of the party in the same manner as Young, except Kelly, who was very sick. Out of humanity I placed him in a house, attended on him and had his victuals sent him at every meal till he left in 1836, when I gave him a passage to Oahoo. On his return to the states, he published a narrative of his voyage in which, instead of being grateful for the kindness shown him, he abased me and falsely stated I had been so alarmed with the dread that he would destroy the Hudson's Bay Company's trade, that I had kept a constant watch over him, and which was published in the Report of the United States Congress. In 1835 five English and American deserters having lost two of their companions murdered by Indians made their way from

California to the Wallamette. The same year the Revd. Samuel Parker of the Presbyterian Church, was sent by the Missionary Society of Boston to examine and find proper places to establish missions. He came with the American Fur-Traders to their rendezvous in the Snake Country, from whence he sent his companion, Dr. Whitman, to the states for missionaries and came alone to Vancouver. The Rev. Mr. Parker appears to me to be a man of piety and zeal, but is very unpopular with the other protestant missionaries in the country, for which I see no cause except that acting differently from them, he has published to the world the manner some of their countrymen act toward Indians, and the very different manner we treat them as may be seen by reference to his work. He left in 1836 by way of Oahoo.

In 1836 Dr. Whitman with his wife, and accompanied by the Rev. Mr. Spalding and his wife, and laymne, returned to the country. Dr. Whitman established himself in the vicinity of Walla Walla. The Rev. Mr. Spalding in the Nes Perces Country. In the fall Mr. Slocum [Slacum] came in a vessel from Oahoo, which he hired for the purpose. On arriving, he pretended that he was a private gentleman, and that he came to meet Messrs. Murray and companions who had left the states to visit the country. But this did not deceive me, as I perceived who he was and his object, and by his report of his mission published in the proceedings of the Congress of the United States, I found my surmises were correct. This year the people in the Wallamette formed a party and went by sea with Mr. Slacum to California for cattle, and returned in 1837 with 250 head. In 1836 the Rev. Mr. Leslie and family, accompanied by the Rev. Mr. Perkins and another single [man], and a single woman, came by sea to reinforce the Methodist Mission. In 1837 a bachelor and five single women came by sea to rein-

force the Methodist Mission, and three Presbyterian ministers came across land with their families, while their supplies came by sea. Two of these missionaries settled in the vicinity of Colville, the other in the Nes Perces Country. In 1838 two Roman Catholic Missionaries came from Canada. This year the Rev. Mr. Griffin of the Presbyterian Church, with his wife, came across land from the states by way of the Snake Country. There came with him also a layman of the name of Munger, and his wife. They came on what they called the self supporting system, that is, they expected the Indians would work to support them in return for their teachings, but their plan failed. Mr. Griffin is now settled in the Wallamette as a farmer, and Mr. Munger joined the Methodist Mission, where he became deranged, threw himself on a large fire, saying it would not hurt him, but was so seriously burned that in a few days he died. In 1839 a party left the State of Illinois, headed by Mr. Farnham, with the intention of exploring the country and reporting to their countrymen who had sent them. But four only reached this place. Three remained, but Mr. Farnham returned to the states by sea and published an account of his travels. Messrs. Geiger and Johnson came this year, sent as they said by people in the states to examine the country and report to them. Johnson left by sea and never returned. Geiger went as far as California and returned here by land. He is settled in the Wallamette. In 1840, the Rev. Mr. Clarke of the Presbyterian Church with his wife, and two laymen with their wives, came across land on the self supporting system, but, as their predecessors, they failed and are now settled in the Wallamette. In 1840 the Rev. Mr. Jason Lee, who had gone in 1838 across land to the United States, returned by sea in the Lausanne, Capt. Spalding, with a reinforcement of fifty-two persons, ministers and

laymen, men, women and children, for the Methodist Mission, and a large supply of goods with which the Methodist Mission opened a sale shop. In 1841 the American exploring squadron, under Capt. Wilkes, surveyed the Columbia River from the entrance to the Cascades, and sent a party across land from Puget Sound to Colville and Walla Walla, and another from Vancouver to California. At same time the Thomas Perkins, Capt. Varney, of Boston, entered Columbia River for the purpose of trade. She was the second vessel that came for that object since the May Dacre in 1834. The first was the Maryland in 1840, Capt. Couch, of Boston, who came to endeavor to establish a salmon fishery, but did not succeed. The Thomas Perkins had a quantity of liquor, and as this was an article which, after a great deal of difficulty, we had been able to suppress in the trade, to prevent its being again introduced, I bought up Varney's goods and liquor, and it was still, spring 1846, in store at Vancouver. Spring 1842 the Americans invited the Canadians to unite with them and organize a temporary government, but the Canadians, apprehensive it might interfere with their allegiance, declined, and the project, which originated with the mission, failed. This spring the Chenamus, Capt. Couch, came from Boston. Capt. Couch opened a store at Oregon City and left a Mr. Wilson to do his business when he sailed in the fall for Boston. The —, Capt. Chapman, of Boston, came also, who traded for a cargo of salmon, sailed in the fall, but never returned. In the spring the Rev. Father Desmit of the Society of Jesus came to Vancouver from the Flat Head Country where the year before he had established a mission from St. Louis. He came for supplies, which he purchased, and with which he returned to his mission. In August, the Rev. Messrs. Langlois and Bolduc [?] came by sea. The month of September 137 men, women

and children arrived from the states. They came with their wagons to Fort Hall, and from thence packed their effects on horses and drove their cattle. They passed, without visiting Vancouver, from The Dalles to the Wallamette over the Cascades by the road which the Methodist Mission had opened to drive cattle from the Wallamette to that place. Dr. White who had formerly been a member of the Methodist Mission, but disagreeing with them had left them in 1840, came with these immigrants. He gave himself out, at a meeting which he called for the purpose, as being appointed Sub-Indian Agent by the American government for Oregon Territory. But of course the officers of the Hudson's Bay Company did not acknowledge his authority, and the immigrants brought the printed copy of a bill brought into the Senate of the United States by Dr. Linn, in which it was proposed to donate 640 acres of land to every white male inhabitant, the same to a male descendant of a white man, 320 to a wife, and 160 to a child under 18 years old. This year my difficulties began with the Methodist Mission, but as I have already given a full detail of it, I will not repeat it here. In 1843 the Americans again proposed to the Canadians to join and form a temporary government, but the Canadians declined for the same reason as before.

In the summer a number of the immigrants of last year, headed by Mr. Hastings, not being satisfied with the country, left for California. As they were destitute of means, I made them advances, which they were to pay to the late Mr. Rae, at San Francisco, but few did so. But in the fall, 875 men, women, and children came from the states by the same route as those of last year, and brought 1,300 head of cattle. These came to The Dalles, on the Columbia River, with their wagons, drove their cattle over the Cascades by the same route as those of last year to the Wallamette, and when the road was

blocked up by snow, along the north bank of the Columbia to Vancouver, where they crossed the river and proceeded to the Wallamette, and brought down their wives and children and property on rafts, in canoes which they hired from the Indians, and in boats belonging to the Hudson's Bay Company, lent them by me. Yet with the assistance I lent them, they still suffered a great deal of misery, and spent a great deal of time, and the last passed Vancouver only at Christmas, and if, as some years is the case, the Columbia had frozen on the beginning of December, these immigrants were so destitute of provisions, and so poorly clad, many of them would have perished.

The Rev. Father Deros, [Demers] of the Society of Jesus, came this year with two other fathers of the same society and three laymen and established a mission in Colville District. Lieut. Fremont, of the United States service, came with a party to examine the country. After purchasing supplies from the Hudson's Bay Company, he rejoined his party at The Dalles, and proceeded across land to California.

In 1844 the immigrants amounted to 1,475 men, women, and children. They came by the same route, and were assisted by me with the loan of boats, as their predecessors of last year.

The Americans applied this year again to the Canadians in the Wallamette (who were about settlers) to join them and form a temporary government, to which they acceded, as they saw from the influx of immigrants it was absolutely necessary to do so to maintain peace and order in the country. We had the pleasure to see her Majesty's ship, *Modeste*, Capt. Baillie. She anchored opposite Vancouver. The Belgian brig, *Indefatigable*, also anchored there. She was the only vessel that hitherto came under that flag, and brought the Rev. Father

Desmit, with four fathers of the Society of Jesus, and five Belgian nuns of the Society of Sisters of our Lady. The fathers came to reinforce their mission in the interior in the Flat Head Country, and to establish others, and the nuns to build a convent and open a school for young females in the Wallamette. Spring, 1845, an American of the name of Williamson built a hut half a mile from Vancouver, on a piece of ground occupied by the Hudson's Bay Company. As soon as I was informed of it, I ordered the hut to be pulled down. A few days after, Williamson returned with a surveyor to survey the place, and finding his hut pulled down, and on inquiring, found it was pulled down by my orders, he called on me and asked the reason of my doing so. I told him it was because it was built on premises occupied by the Hudson's Bay Company, who were carrying on business in the country under a license from the British Government according to a treaty between the British and American Governments, which implies a right to occupy as much ground as they require for their business. But this was disputed, and he said he would persist and build. One of his companions went so far as to say if he was disturbed, he would burn the finest building in Oregon. Not wishing to enter into an altercation with this fellow, I told him in the presence of Chief Factor Douglas, and several of the Hudson's Bay Company's officers, and several Americans, and of Dr. White, who happened to be present at the time, that if he persisted in building, he would place me under the disagreeable necessity of using force to prevent him. He went away saying he would build. Although none of the Hudson's Bay Company's people, or any from the north side of the Columbia, had joined the organization, yet as Williamson was an American citizen, as a matter of courtesy to them, the accompanying letter of the 11th of March was addressed to the members

of the Executive Committee of Oregon Organization with an address to the people, which on receipt was to be posted up for public perusal in Oregon City.

I also addressed them on the 12th, informing them that Williamson had desisted from his design of building on the premises in question.

In the summer a meeting of the people in the Walamette was called in which the organization was new-modeled, and a clause put in by which it was provided that no man could be called to do any act contrary to his allegiance. It struck me this was done to enable us to join the organization and I mentioned this to my colleague Chief Factor Douglas, who thought, as I did, that in our present situation and the state of the country it would be advisable to do so, and I was not surprised to find a few days after on my visit to Oregon City that my surmises were correct, as the originator of the clause who was a member of the legislature then in session, called on me and proposed to me to enter the organization on the part of the Hudson's Bay Company. After conversing on the subject and being aware the organization could afford assistance to none but its own members, I told him I would proceed to Vancouver, consult with my colleague, Chief Factor Douglas, and the other officers of the Hudson's Bay Company at that place, which I did, and Chief Factor Douglas coincided with me in the expediency of our doing so. I returned to Oregon City and on the legislature writing me a letter inviting me to join the organization on the part of the Hudson's Bay Company, in a written reply I informed them I did so; and on my way back to Vancouver, I was informed of the arrival of Chief Factor Ogden with dispatches from Sir George Simpson, Governor in Chief of Rupert's Land, in which I was happy to see that my proceeding in the case of Williamson had been approved. I have stated

that Chief Factor Douglas coincided in opinion with me that in our situation, and in the present state of the country, it was evident for us (since none of us could be called to do any act contrary to our allegiance), to join the organization, as it resolved itself by this clause merely into an association of the people of the country to maintain peace and order among themselves, and in the present state it was not only necessary, but absolutely our duty, as in 1843, seeing the large number of immigrants of that season, and seeing from the public papers it was expected the numbers would be greater next year, and as they came from that part of the United States most hostile in feeling to British interest which was greatly excited by the perusal of Irving's *Astoria*. Kelley and Spalding's letters, several copies of which were among them, in which our conduct and proceedings were represented in the blackest and falsest colors, had worked so much on the minds of these immigrants that I found out they supposed we would have set the Indians on them, and that they had frequently talked among themselves that they ought to take Vancouver. They now knew these reports were false, but as prejudice takes a strong hold of people's minds, and of which others might avail themselves to form a party to make an attack on the Hudson's Bay Company's property—of which it may be said they were encouraged by the public papers stating that British subjects ought not to be allowed to be in the country, by the expectation held out by Linn's bill that every male above eighteen years of age would have a donation 640 acres of land, a wife 320, and all under 18 would have 160 acres in any part of the country—I wrote, fall 1843, to the Directors of the Hudson's Bay Company that it was necessary to get protection from the government for the security of the Hudson Bay Company's property, and to which in June 1845 I received

their answer stating that in the present state of affairs the company could not obtain protection from the government, and that I must protect it the best way I could, and as I had sent an account of Williamson's attempt to build on the premises of the Hudson's Bay Company, and of my proceedings on the occasion to her Majesty's Consul, Gen. Millar, at Oahoo, calling on him for protection for the Hudson's Bay Company's property, and to which he did not even reply, though he could have done so by the vessel which conveyed my letter. Therefore,—[seeing our situation, and that an incendiary in the dry weather in the summer and fall might easily destroy Vancouver and fly to the Wallamette where we could not touch him. Indeed at that very time, there was a man at Vancouver on his way with Dr. White to the states whom we knew had repeatedly said among his countrymen that his only object for coming to this country was to try a change of air for the benefit of his health, and to burn Vancouver, and I heard afterwards on his way back he had expressed his great regret at not having perpetrated his atrocious intention, and wanted to return from Fort Hall to endeavor to carry it into effect, but his countrymen and Dr. White persuaded him to continue his journey to the states with them; and there are plenty such characters in the country. One Chapman got up at a Methodist Camp Meeting and confessed publicly that he had belonged to a celebrated band of robbers in the State of Arkansas headed by the notorious ——— whom the United States Government had a great deal of trouble to catch and break up his band, and Chapman declared there were several of his former associates in this country, and if they reformed he would not expose them, but if they persisted in their former evil course, he certainly would. Even in 1844 a man agreed at this place to erect a building on the opposite side of the river.

After it was erected, they differed about the payment. It was referred to arbitration, and the builder lost his case. A few days after, the building was burnt in the night, and though every person about the place is convinced who did it, yet there is no evidence to convict, and if there was, it would afford no indemnification to the owner of the property that was destroyed. I also had been informed that an American had proposed to form a party to take Vancouver by surprise. To deprive evil-doers of a place of refuge, as the organization could only assist its own members]—I considered it our duty to join the organization, as already mentioned. It may be said why not place sentries? It is because I know from experience that common men cannot be depended on for such a purpose beyond a few nights, and there were so few officers at the fort, to have employed them on that duty we must have put a stop to the business of the place which would derange the whole business of the department, and I therefore considered it best to act as I did. I was much surprised a few days after the arrival of Chief Factor Ogden, by the arrival of Lieut. Peel and Capt. Parks, who handed me a letter from Capt. Gorden of Her Majesty's Ship *America*, from Nisqually, and stating he was sent by Admiral Seymour, who wrote me to the same purport to assure her Majesty's subjects in the country of firm protection, and which was most unexpected after what the Directors of the Hudson's Bay Company had written me. But more particularly from the silence of Her Majesty's Consul, Gen. Millar, at Oahoo, which led me to suppose at the time, though I was mistaken, that the British Government had cast us off and we must take care of ourselves the "best way we could." I do not mention this to find fault with others, but merely to state my feelings, and the responsibility I felt for the property under my charge. I was

still more surprised on the return of Chief Factor Douglas from Nisqually, where he had been in company with Mr. Peel, to see Capt. Gorden, to receive a letter from Capt. Baillie of Her Majesty's Ship *Modeste*, informing me he was sent by Admiral Seymour to afford protection to her Majesty's subjects in the Columbia River if they required it. At first I thought we would not, as we had joined the organization, but on the suggestion of Chief Factor Douglas I thought it well to accept Capt. Baillie's important offer, and I am now happy I did so, as I am convinced it was owing to the *Modeste* being at Vancouver, and the gentlemen-like conduct of Capt. Baillie and his officers, and the good discipline and behavior of the crew, that the officers of the Hudson's Bay Company at Vancouver have had less trouble than they would have had, and which (though they have had a great deal more than I expected) certainly they have done nothing to incur, but the reverse. They have done everything they could to avoid it, but after all of which I am not surprised when I am certain there are many ill-disposed persons among these immigrants who think they are doing a meritorious act by giving trouble to British subjects.

The immigrants in 1845 amounted to 3,000 persons, men, women and children.

REVIEWS OF BOOKS.

McLoughlin and Old Oregon. By EVA EMERY DYE.
(Chicago: A. C. McClung and Company, 1900. Pp. VIII, 381.)

The incidents, personalities, color, and sequence of events in the growth of Oregon from 1832 to 1849 were never before portrayed as they are in Mrs. Dye's "*McLoughlin and Old Oregon.*" Had the present day kinetograph and phonograph been at hand and in operation for recording the dramatic scenes and sayings of that period of wonderful changes in the Valley of the Columbia, we should have had more of the foibles, limitations, and obliquities of human nature, but Mrs. Dye's minute study, sympathetic assimilation, and unique strength in constructive imagination have given us an exceedingly interesting series of pictures almost as vivid as real life.

The book opens at Fort Vancouver, on the Columbia, the center of the Hudson's Bay Company's widely extended operations west of the Rocky Mountains, and the home of its chief factor, Dr. John McLoughlin. The time, 1832, marks the revival of the movement of American enterprise for the occupation of Oregon in the person of Nathaniel J. Wyeth. Nineteen years had passed since the Astor venture had suffered dismal discomfiture in that region. From 1832 on, however, the United States was to have representatives, in one capacity or another, of its interests in Oregon. Slender was its hold during the first half of this period, but its preponderance was overwhelming in the latter half. Wyeth failed with his commercial venture. Physical obstacles taxed his resources, and he had to meet the determined monopoly

of the Hudson's Bay Company under its competent and benignant chief factor, Dr. John McLoughlin, backed by the millions of the company, and a disciplined host in possession of the good-will and salutary respect of the Indians. But the American missionaries remained on the ground, established stations, accumulated stores, formed nuclei of settlements through their lay helpers, and correctly conceived policies of inuring the Indians through example and precept to a status of settled agricultural life. Then come strong mountain men, who had had their fill of experience as solitary trappers in the wilds of the Rocky Mountains. Beginning with a band of one hundred and thirty-seven in 1842, and rising immediately to eight hundred and seventy-five in 1843 there rolled in the mighty tide of pioneer home-builders.

In such an entourage of events the author correctly conceives of the motive that is primary in this culminating course of events. A lower race is to be dispossessed by a higher, though Wyeth's plans contemplated advantage from the Indians' retaining their native employments, and the missionaries vainly hoped by a summary procedure to elevate them from lowest barbarism to civilization. Doctor McLoughlin holds the key to the situation, at least as to the immediate outcome. As representative of the fur trading monopoly, his interests are linked with the interests of the Indians in remaining in undisturbed possession of their imperial domains. It would have been so easy to have hustled back home the first forerunners of the great immigrations, and, if this had not deterred others from coming on in larger numbers, these in turn, utterly without resources after their long marches, could easily have been thrown into consternation and wrought havoc with by the chief factor of the Hudson's Bay Company.

The issues in this great drama of the Pacific North-

west turn then, first, upon the qualities of heart and character of the Indians that came under the influence of Lee, Whitman, and Spalding. Will they have the faith and fortitude to sacrifice a world in which they are the leaders for a possibly better world in which leadership is with the white man? Secondly, the outcome of this second movement of the Americans on to Oregon lies with Doctor McLoughlin. Will the depth of his humanity suffice to rescue, shelter, nourish and shield year after year those who would have perished but for his intervention and whose survival is bound to result in the appearance of invading hosts who will wrest the sceptre from him? Mrs. Dye has thrilling issues and two real heroes, Whitman and McLoughlin, in this epoch of Oregon history, and she makes the most of them.

The secret of her remarkable success in making the characters and conditions of that time live again lay in her getting the confidence of the principal surviving actors of that period and securing from them the fullest impress of the traditions of stirring times, with all the halo that half-a-century would naturally invest them with. Through these sources she attained an understanding of the actors and spirit of the times so intimate that her pretension to supply the words used on all important occasions does not become a mockery, but through this dramatizing the author attains the unique element in her success. In this role her inimitable power of vivid representation, through successions of pictures, has its best application.

The stock of reminiscences that Mrs. Dye exploited with such rare skill and energy needed corroboration from contemporary documents. As the material for Oregon history is brought together, many lapses, more or less important, in matters of fact will no doubt be disclosed. As an instance: The magnitude of Wyeth's

second expedition is stated in figures at least four times too large, both for the number of men and the amount of money.

The author has, however, kept herself remarkably well poised between the partisan bickerings that have characterized so much of the writing in Oregon history. The search of the author for indubitable evidence has been rewarded in the finding of some valuable material, notably the Whitman papers; and clues that she came upon have yielded treasures for others.

Towards the closing chapters the author swerves farthest from history towards romance. Instead of bringing the vigorous young Oregon community into the foreground, she leaves the stage empty. "Old Oregon," with its life had, of course, departed, but it was crowded out by the thronging of the new.

This book is by far the best that the general reader can select for an introduction to the life of early Oregon.

Missionary History of the Pacific Northwest. By H. K. HINES, D. D. (Portland: H. K. Hines, San Francisco: J. D. Hammond, 1899. Pp. 510.)

As the sub-title indicates, this is rather the "Story of Jason Lee" than a missionary history of the Pacific Northwest. There would have been no impropriety in giving it the title of "Jason Lee and the Methodist Missionary Effort in the Pacific Northwest." The title is positively misleading as it stands, for forty pages only are devoted to an account of the work of the missionaries under the "American Board," while some four hundred and fifty are taken up with the story of the Methodist Missions. The Methodist denomination was first in this field with wisely chosen representatives. It

sustained and reinforced its movement to christianize the Indians of Oregon most munificently, considering the conditions of the times. As a memorial of these efforts conceived with such grand and consecrated spirit, nothing would have been more fitting than a volume by Doctor Hines.

No one could have been so unfair as to demand of Doctor Hines a cold and critical account of these missionaries and their work. A panegyric on Jason Lee and his co-laborers was becoming from him. He was the man prepared through life-long schooling and natural inclination to do this, and Jason Lee's work deserved it. But for the title and an invidious comparison that crops out all too frequently, Doctor Hines has done in this book just what God had prepared him to do.

It is a pity that a work of so high general character, the best product of such fine literary ability as Doctor Hines possesses, could not have been one of some famous series by a strong publishing house of the East that would have pushed it into the markets of the world.

The fact that the critical historian will take issue with the conclusions of this book almost from the beginning constitutes no disparagement of the real worth of the author's work. It was a labor of love for a character and for a denomination. This, however, may be said: The Methodist missionary project in the Pacific Northwest was, soon after its inception, at all but one or two points, not distinctively a missionary station at all. But it was a colony with a strong secular spirit and exercised a most salutary influence upon the affairs of the Oregon community. This fact the work of Doctor Hines unwittingly proves.

NOTE—A CORRECTION.

To the Editor Oregon Historical Quarterly :

In the article upon F. X. Matthieu in the March Quarterly there appears one inadvertence which should be corrected: Doctor White is mentioned as having first come to Oregon on the Lausanne. He came in 1837 *via* Honolulu, leaving Boston on the ship Hamilton, and reaching the Columbia in May, on the brig Diana.

THE OREGON QUESTION.

II.

The conventions of 1824 and 1825 marked the formal and final withdrawal of Russia as claimant to the sovereignty of the Oregon country, or of any part of it. The convention of the former year pledged her withdrawal as claimant against the United States, that of the latter year as claimant against Great Britain. The boundaries of the territories in question were thus finally determined, and the parties to the dispute were reduced to the two nations by whom the question at issue was ultimately to be decided.

It was a great step taken toward settlement when the claims of all nations but Great Britain and the United States were eliminated from the question. But elimination of claims was not the only respect in which progress towards settlement had been made during the period which closed with the convention between Great Britain and Russia. The ten years between the treaty of Ghent and this convention show a substantial approach to agreement between Great Britain and America. The events of the year 1818 in particular mark this approach. This

year, so important in the history of the relations between Great Britain and America, opened with the issue of the order of January 26 by the British government for the restitution of Fort George, the post at the mouth of the Columbia, which, under the name of Astoria, had been taken possession of by the British early in the late war. This order, which was formally carried out in October of that year, gains in significance the more closely the whole history of the case is examined. Astoria, it will be remembered, was the name of the trading post established in 1811 by the Pacific Fur Company, of which John Jacob Astor, of New York, was founder and chief stockholder. It was nominally an American company, and was established under the American flag; but of the party of thirty-three that landed April 12, 1811, to form the settlement, all except three are said to have been British subjects. On the twelfth day of November, 1813, in the absence of Mr. Astor's agent, who was an American, Mr. McDougall, his sub-agent, a British subject, representing himself and the other partners present, likewise British subjects, signed the bills of sale, and delivered up Astoria to the Northwest Company, a British company. One month later, Captain Black, of the British navy, in the sloop-of-war, *Raccoon*, arrived in the Columbia, and took possession of Astoria in the name of his sovereign; and in honor of his sovereign changed the name to Fort George. He seems to have been chagrined not a little to find that, instead of the glory of battering down an American fort, nothing awaited him but to take peaceful possession in the name of his king of a British settlement.

By the first article of the treaty of Ghent, "all territory, places, and possessions whatsoever, taken by either party from the other during the war" should be restored. In view of the history just given, it is not strange that the British government, when called upon by the United

States to make restitution of Astoria in accordance with this article of the treaty, objected, on the ground that the place was already a British settlement when taken possession of by a British officer. And yet, in the course of the negotiations that followed, Great Britain yielded this point, and through her representative, Lord Castlereagh, "admitted, in the most ample extent, our right to be reinstated, and to be the party in possession while treating of the title." Accordingly, October, 1818, the order first issued January 26 preceding, was executed, and Fort George was formally handed over to an American officer specially sent to the Columbia to receive it, and once more the American flag floated over this British settlement.

This act of restitution, under these circumstances, can hardly be regarded as less than a concession on the part of Great Britain, a concession the full significance of which appears only when the act of restitution is taken in connection with the convention of joint occupation entered into by the two governments that year, and with certain intimations made by the British Plenipotentiaries in the conferences which led up to that convention. It was in this convention that the boundary between the two countries west from Lake of the Woods to the Rocky Mountains on the forty-ninth parallel was agreed upon. In the preliminary conferences the representatives of Great Britain insisted that the boundary west of the Rocky Mountains should be settled at the same time with the boundary eastward; that the two should stand or fall together. In response to this wish, the American representatives proposed that the same line of the forty-ninth parallel be extended westward to the Pacific. This the representatives of Great Britain refused to accept, nor would they themselves propose a line; but they did intimate that the Columbia River itself was the most convenient boundary that could be adopted, and that they

would not agree to any boundary that did not give to Great Britain a harbor at the mouth of the Columbia River in common with the United States. The American representatives not consenting to this, after further proposals and counter proposals, none of which were acceptable to both governments, it was finally agreed to adopt the now celebrated plan of joint occupation as that plan is embodied in the third article of the convention of that year.

Thus it is that the order of the British government for the restitution of Astoria at the opening of the year 1818, taken in connection with all the circumstances of the case, and the convention of joint occupation made by the two governments at the close of the year, taken in connection with concessions in conferences made by both parties, make this year an era in the history of the Oregon Question. In particular, two important lines had been proposed and discussed, each proposal showing an important concession on the part of the party making it, and each line proposed practically setting a limit for the future, in its direction, to the territory that remained in question. For it may safely be said that from this time the extreme limits of the claims of the several parties were fixed ; that henceforth the United States would not press their claim to territory north of latitude 49° , nor would Great Britain press hers to territory south of the Columbia. The territory longer in question lay between these two lines, and it is doubtful if ever after this year there was a time when the question might not have been settled by Great Britain's consenting to the line of the forty-ninth parallel, or by the United States' consenting to that of the Columbia. With these limits to their several claims practically agreed upon by Great Britain and the United States, and a plan of joint occupation adopted at the close of the year 1818, it remained only to eliminate claims of other na-

tions to the territory in order to reduce the question to its simplest terms. This elimination, as we have seen, was effected by the conventions of 1819, of 1824, and of 1825, the last of which left Britain and America free to settle the question of sovereignty between themselves.

The conditions of the Oregon Question at the close of the period ending 1825 were, upon the whole, not unfavorable to America. It is true Great Britain was the party in possession at this time through the settlements of the Hudson's Bay Company, but when it is remembered that these settlements were made even before the more important concessions of the conventions were made, these concessions are only the more strongly significant of the disposition of the government of Great Britain to treat fairly, at least, the claims of America. It is especially significant of this disposition that the settlement at Fort George was abandoned in the spring of 1825 by the British company in the expectation that the Americans would speedily occupy it, and, though the Americans failed at once to occupy it, it was left by the British unoccupied for five years, as if they were waiting for the Americans to come and claim their own. When we remember Britain's well known doctrine, of occupation within a reasonable time as necessary to establish full title to lands claimed on the ground of prior discovery and exploration, this can hardly be regarded as else than an invitation on the part of Britain to the United States to come and make good their title to at least that part of Oregon that lay south of the Columbia.

Occupation had been attempted, it will be remembered, in the case of the establishments of the Pacific Fur Company at Astoria and other points on the south and east of the Columbia. The whole conduct of England in regard to these establishments, made for the purposes of trade, goes to show that she regarded them as belonging to a

legitimate mode of occupation, the right of which she not only assumed to herself, but was ready to allow to America. The failure of the settlements and their ultimate abandonment as a mode of American occupation were due to the accidents of war, not to the interference of diplomacy. The convention of 1818, of joint occupation, was the embodiment of no new principle, but simply the formal assent of both parties to a principle of occupation assumed by America in the Astoria settlements, and by Great Britain in those in the valley of the Columbia, and by each tacitly allowed to the other.

In 1821, however, three years after the convention of joint occupation, a movement was begun in the Congress of the United States toward an occupation of the territory in dispute, of a very different character, which, if it had actually been adopted as a measure enjoined upon the executive, and once been attempted to be carried out, would have met from Great Britain a very different response. In the house of representatives, December 10, 1821, on motion of Mr. Floyd, of Virginia, a committee was appointed to inquire into the expediency of occupying the Columbia River and the country adjacent thereto; and the committee had leave to report by bill or otherwise. Later in the same session this committee reported a bill providing for the occupation of the mouth of the Columbia. The occupation contemplated by this bill was to be, first of all, military occupation, or, as one of the advocates of the bill wished to make it by amendment, "an occupation by military force only, with some encouragement to settlers." The view of the territorial rights of the United States in that region on which the bill was based was briefly and clearly put by another of its advocates: "The bill under consideration does not attempt a colonial settlement. The territory proposed to be occupied is already a part of the United States." The

convention of joint occupation of 1818 left the question of sovereignty of the entire territory westward of the Rocky Mountains in abeyance. All occupation, therefore, of any part of this territory, to be lawful under this convention, must be of such a nature as to leave the question of sovereignty to be settled by agreement of the powers participant in the convention. Whatever rights either of the two parties to the convention had, or conceived that it had, by the act of entering into the convention it agreed, so long as the convention was in force, neither to assert sovereignty, nor to do any act in the territory covered by the convention that could be justly construed as an act of sovereignty. What acts the two powers might lawfully do under the convention were not clear at first, but it is difficult at this day to understand how anyone who looked carefully into the question could have failed to see that the acts contemplated in this first bill providing for occupation were not such as could lawfully be done under the convention. The same may be said of all the measures proposed in congress in regard to the occupation of the territory during the earlier period of the convention. There were men in congress who saw the unlawful character of each measure as it was proposed, and opposed it on this ground. Others joined these actively, on the ground that the Oregon Territory, if settled, because of its distance and the barriers which separated it from the United States, never could become a part of the union. To these were added enough who based their opposition on other grounds to defeat every such measure, either in the senate or in the house, or, as was the case in the early history of congressional agitation, in both houses of congress.

This early discussion in congress of our interests in Oregon, though it failed to reach any practicable plan of occupation, was not without valuable results. It served

to clarify the minds of men in congress, and out of it, on the nature of the question involved, and through the information brought out and published in the course of the debates and reports went far toward enlightening the public mind on the character and resources of the territory in dispute. In the course of the negotiations that preceded the convention of 1818, and led up to it, Mr. Adams, as Secretary of State, in a letter of instructions to the American Plenipotentiaries, had expressed his government's low estimate of the interests involved in the Oregon Question. "It may be proper," he then wrote, "to remark the minuteness of the present interests, either to Great Britain or to the United States, involved in this concern, and the unwillingness, for this reason, of this government to include it among the objects of serious discussion with them."

Such words, written on the eve of the first congressional agitation of the question, could hardly have been written at the close of that discussion. For at that time the Oregon Question had become a matter of widespread interest, and both government and people were disposed to include it among objects of serious discussion. Agitation of the question in congress had the further effect of bringing the two governments to make another attempt to effect a settlement by convention. In 1824, when measures providing for occupation had been discussed in congress for three years, Mr. Adams, Secretary of State, wrote that though the government was aware that the convention of 1818 between the United States and Great Britain had four years to run, the President was of the opinion that the present was not an unsuitable moment for attempting a new and more definite adjustment of the claims of the two powers in question; that the Oregon Territory was a country daily assuming an aspect political, commercial, and territorial of more and more interest to the United

States. Negotiations were at this time renewed between the two governments, but failed to issue in any agreement. Two years later they were resumed, on motion of the British government, but the two governments adhering substantially to their several positions of 1818, no settlement was reached. The third article of the convention of 1818 was, however, renewed for an indefinite period. In the communications of Mr. Clay to Mr. Gallatin during this period of negotiation, there is manifested an increase of interest in the question on the part of the American government, even over that of two years before.

The depth of this interest and the source of its inspiration appear from various expressions of these official communications. "The President," Mr. Clay writes, "is anxious for a settlement on just principles. Such a settlement alone would be satisfactory to the people of the United States, or would command the concurrence of the senate." "Much better," he continues, "that matters of difference should remain unadjusted than be settled on terms disadvantageous to the United States, and which, therefore, would be unsatisfactory to the people and to other departments of government."

From these words, and words of like tenor, it is evident that from this out an interested people and an alert congress will have part in shaping the policy of the government on the Oregon Question. It is to be noted, too, that the government of the United States did not advance its demands beyond the terms proposed at first, nor longer minimized the interest of the question to itself, and that it took a firmer stand on the boundary proposed. The Secretary of State now wrote of the line of latitude 49° as a concession on the part of his government, and boldly declared that as such it was an ultimatum.

After the renewal, in 1827, of the third article of the convention of 1818, with a provision for its indefinite con-

tinuance, or its abrogation by either power on due notice, the subject drops out of congress for a period of ten years, but only to return at the end of that time on the demand of that voice which, as we have just observed, the administration of Mr. Adams had already heard and attended to. This interval is an important period in the history of the Oregon Territory. The two governments stand stubbornly each on the boundary line of its own proposal, the United States for the line of latitude 49° , Great Britain for the line of the Columbia, seemingly making no approach to an agreement. Other influences, however, were at work preparing the way for final settlement, and determining the lines on which that settlement should be made.

The ten years between the renewal, in 1827, of the convention of 1818, and the resumption of the discussion of the subject in congress in the year 1837, present a new phase of the Oregon Question, and may be termed the period of early American settlement. In thus designating this period, the settlement of Astoria in 1811 has not been forgotten. It has already been shown that, though projected and supported by an American capitalist, and made under letters from the American government and the protection of the American flag, that settlement was scarcely entitled to be called an American settlement; that whatever of American character it had in its inception it lost two years later in its transfer to a British company and to the protection of the British flag. The settlement of Astoria, even as a British settlement, was not of a permanent character. It contributed, it is true, a few settlers to later communities as they were established, but by far its greatest contributions to the settlement of the Oregon Question was in the diplomatic transfer which it was the occasion of under the terms of the treaty of Ghent. It did serve under the provisions of that treaty to secure to the United States the valuable concession

from Great Britain of their right to be in possession of this position on the south bank of the Columbia, pending the final settlement of the question of sovereignty over the territory. As a permanent American settlement, however, it has no place in the history of Oregon.

There is reason, therefore, in making the period of early American settlement begin with the period mentioned. No actual settlement, it is true, was made at the very first of this period, but about this time the question of colonizing the region of the Columbia River began to be seriously agitated in various parts of the United States. A company having this end in view was organized about this time in Boston, and another in New Orleans, while in various parts of the country the propriety of forming such organizations was seriously discussed. Every effort was made by these societies, and by individuals whose interest in the subject had been awakened, to obtain and disseminate such information as should awaken popular interest in the territory and further the ends of its colonization.

The first enterprise that followed from this agitation, was that of Nathaniel J. Wyeth, of Boston, for the establishment of a settlement for trade and agriculture on the Lower Columbia. After the failure of a first attempt in 1832, Wyeth succeeded in the year 1834 in planting a small settlement on Wapato Island, at the junction of the Willamette with the Columbia. Untoward circumstances and disaffection among his followers defeated his first attempt, and sent him back to the east, after two years of gallant struggle, feeling that his second was far from successful. His settlement, while it has had in some sense an unbroken continuity, and has contributed of its members to the subsequent settlements in Oregon, can hardly be said to have had the character of a permanent colony. The largest results of Wyeth's enterprise are rather to be

looked for in the contribution he made in various ways to the furtherance of other enterprises than his own.

Substantially the same may be said of the enterprise of Hall J. Kelley, the leading promoter of one or more of the emigration societies already mentioned. He contributed materially to the ultimate settlement of the territory by his persistent and widespread agitation in the east, and later in some measure by bringing into the Willamette Valley a small band of men, some of whose number became permanent settlers. No colony, however, was planted in this region under his leadership, and he did not himself finally make Oregon his home.

The American settlements in Oregon that have thus far been mentioned, were organized primarily for the purpose of trade, and that, too, trade of a character that was not likely to bring into the country and permanently establish there colonists that should become rooted to the soil. Traders and trappers might in time abandon their pursuits as such, and, attaching themselves as individuals to a settled community, become useful members of that community, as more than one such did in the early history of Oregon, but no aggregation of such men, brought together for their own peculiar purposes, was likely to become an organic society, with powers of life and growth.

The American settlements in Oregon thus far lacked the first essential to the planting even of the germs of a state. In no one of them was there so much as one American home, nor were there the elements of one. An American white woman had not yet set foot on Oregon soil, nor any woman, save the native and her offspring. It was now more than a score of years since that first settlement at Astoria, but Oregon still waited the coming of that institution that lies at the foundation of every American state, the American family.

About the time of Wyeth's first expedition, there ap-

peared in Saint Louis what had somewhat of the character of a delegation from the native tribes west of the Rocky Mountains. It consisted, as the story runs, of four or five men from the Nez Perce tribe, who, having heard of the White Man's God and his Book, were come to ask that men be sent to teach their people of these. The story of this strange and interesting mission was taken up by the press and spread throughout the country. It gave a new impulse and a new direction to the efforts of missionary societies for the evangelization of the native tribes. One of the first fruits of this new interest in missions was the organization by the Mission Board of the Methodist Episcopal Church of a mission to the Oregon Indians. This mission, as finally constituted, consisted of the Reverend Jason Lee, as leader, and his nephew, Daniel Lee, and three lay members, Cyrus Shepard, Philipp L. Edwards, and Courtney M. Walker, five in all, a mission of men only. Sending their goods and supplies by sea to the Columbia, they joined Wyeth in the spring of 1834, and traveled with him overland, reaching Vancouver about the middle of September of that year. After personal examination of the field by the leader, it was determined that the mission should settle in the Willamette Valley, and a spot was fixed upon not far from the site of the present town of Salem, and within easy reach of a settlement already made by some retired employees of the Hudson's Bay Company. The object of the mission was the evangelization of the Indian tribes of the valley, seemingly with little thought at first of contributing to the colonization of the country. This mission, indeed, the first among the Oregon Indians, like the trading settlements that preceded it, lacked as first constituted one essential to permanence. It did not include the family. The mistake was doubtless early seen by the missionaries themselves, but was not remedied until the arrival of the first

reinforcement to the mission, more than two years later. From the coming of the first reinforcement in the spring of 1837, and the constitution thereupon of several families, the mission began to take on somewhat of the character of a permanent settlement, and with still further reinforcements a year or two later, became the nucleus of the first permanent American colony in the Willamette Valley.

In the meantime a second mission had been established east of the Cascade Mountains. In the summer of 1836, Dr. Marcus Whitman and Mrs. Whitman, the Rev. Henry H. Spaulding and Mrs. Spaulding, and William H. Gray, under commission from the American Board of Commissioners for Foreign Missions, crossed the Rocky Mountains, and settled among the native tribes of the Upper Columbia. The primary object of this mission, as was that of the mission to the tribes of the Willamette Valley, was the evangelization of the Indians. But this mission, unlike that, was based from the first on the family, and thus brought with it this first condition of permanence. Within its limited number were the two first American white families to settle in Oregon, and were included for a period of six months or more the only American white women dwelling west of the Rocky Mountains. From its original number, and more largely from its later reinforcements, the mission made valuable contributions to the body of permanent settlers, but perhaps its greatest contribution to the history of Oregon was one incidental to its primary work as a mission, in its showing to America and the world by its own first treading of the same, that there was an open pathway for American families through the Rocky Mountains into the valley of the Columbia. This mission thus demonstrated for the first the practical contiguity of the Oregon Territory to the United States. It was this contiguity as it was subsequently made patent

that was, almost more than all else, to influence the Oregon Question to an issue favorable to the United States. Whitman seems to have seen this from the first. The settlement of the Oregon Question came to appear to him simply a matter of prior settlement of the territory from contiguous states, and such prior settlement was a question only of an open pathway through the intervening mountains. To his mind, therefore, the first duty of the American government was not in military occupation of the region in question, nor in the extension over it of civil jurisdiction, but in making the pathway thither already pointed out, a plain and safe highway for American settlers. This done, the people would do the rest.

In the year 1837, after a silence of nearly ten years, the Oregon Question was again moved in congress. Many things had happened in the interval since its last appearance there to make it certain that with its reappearance the question had come to abide until settled. The settlements already mentioned, small as they were, were not inconsiderable in their influence at the east. They were the centers of ties that reached back into various influential communities in the states of the union ; nor were the men who composed the settlements slow to avail themselves of every such tie to make and influence public sentiment at home. The same energy and indomitable spirit which they manifested in reaching the new land were shown again in their efforts to enlighten the country in regard to the land they had come to possess, and to persuade others to join them in their efforts to take and keep possession of it. Never was a new country so much talked of, nor its excellencies so enthusiastically set forth, when those who could do so from experience were so few. From the time the first real American colony was founded in Oregon, and there had been time for word from it to reach the states from which its members had come, nei-

ther the government nor the country was ever allowed for long at a time to forget the existence of Oregon, of the Oregon colony, or of the Oregon Question.

In the late summer of 1835, President Jackson, through certain letters, as it appears, of William N. Slacum, a paymaster in the navy, who at that time was spending some months in Alexandria, Virginia, on sick leave, became strongly of the mind that the bay of San Francisco should be in the possession of the United States. He almost immediately, on receipt of these letters, directed Mr. Forsythe, Secretary of State, to write to Anthony Butler, then in Mexico for the purpose of negotiating the purchase of Texas, enlarging his instructions so as to include the purchase of so much of the possessions of Mexico on the coast as would embrace the bay of San Francisco. A little later the same year President Jackson commissioned Slacum to visit the North Pacific Coast, directing him at the earliest opportunity after arriving in the Pacific, "to proceed to and up the Oregon, to obtain specific and authentic information in regard to the inhabitants of the country, the relative number of whites and Indians; the jurisdiction which the whites acknowledged; the sentiments entertained by all in respect to the United States and the two European powers having possessions in that region; and finally all information, political, statistical, and geographical, that might prove useful and interesting to the government." The commission thus specifically and somewhat peremptorily given was fulfilled with promptness and energy, and, though the chief by whom the commission had been given had retired from office before Mr. Slacum's return, the country was not deprived of the results of the investigation. In December, 1837, through a memorial presented by Mr. Slacum to congress, and by congress ordered to be published, coincident with the recurrence of the discussion

in congress of the Oregon Question, congress and the country had the detailed results of this first official inquiry into the condition and prospects of the settlements in the region of the Columbia.

Throughout this period when the question was in abeyance, individual explorers, American and British, had from time to time visited this region and had returned to write for eager readers of what they saw and learned in the strange new land, until a piqued interest on two continents was alert for the next news from Oregon. The publication at the close of this period of Irving's *Astoria* in 1836, and of his *Adventures of Captain Bonneville* in 1837, books which were themselves the offspring of the widespread and romantic interest already felt, served in turn to make that interest still more keen, and to awaken it in minds where else it had never been felt.

But greatest among all the forces that had been at work during this period toward the solution of this question was one that had worked silently and unobserved, but persistently and effectively, and withal wholly in the American interest. In the ten years that followed the extension of the convention of 1818, more than three hundred thousand people, immigrants from foreign lands and emigrants from older states, had crossed the Mississippi and settled in the two states of Arkansas and Missouri, and the territory of Iowa. At the close of this period, when congress again took up the question more than half a million of people were settled between the Mississippi River and the Rocky Mountains, and of these more than three hundred thousand were in Missouri alone, the state which stood upon the highway to the new country, and nearest to the gate of entrance. The fact of this great array of American families fast moving toward the intervening barrier, and all but pressing upon it, with myriads

of other families in the older states following after, taken together with the door open no farther than it had been proved to be open by the few American families that had passed through, should have been enough to assure any calm observer of what the issue was to be. There were such observers whom it did so assure, and their calm faith and clear forecast stood the nation in good stead in the exciting debates that were to follow.

The second period of the discussion of the Oregon Question in congress began late in the year 1837, near the close of the first session of the twenty-fifth congress. It was opened a few days before adjournment by each house calling upon the President "to furnish at an early period of the next session any correspondence that may have taken place between the government and foreign powers in relation to our territory west of the Rocky Mountains." To both these resolutions the President, promptly on the opening of the next congress, replied that no correspondence whatever had passed between the government of the United States and any other government in relation to that subject since the renewal in 1827 of the convention of joint occupancy. It thus appeared that while the subject had been in abeyance in congress it had been equally so in the executive department of the government, and it was not destined to reappear in this department for a further period of more than four years. Meanwhile the subject in one form or another was seldom absent for long at a time from the discussions of congress. This was especially true of the senate, where, in the person of Dr. Lewis F. Linn, senator from Missouri, the title of the United States to Oregon and the cause of the citizens of the United States who had settled there found an earnest advocate and a zealous and indefatigable friend. Measures were introduced in both houses of congress, by Doctor Linn in the senate, and by Mr. Cushing in the house, look-

ing to the occupation and settlement of Oregon. These first measures elicited but little debate, and failed of reaching action. They did, however, by bringing out reports from the executive and committees, get before congress and the country a large amount of information on the subject. In the house, after a year of unavailing effort to reach action on the measures introduced, the subject remained again in abeyance for two or three years. In the senate, however, chiefly through the active interest of Doctor Linn, new measures were introduced each session which, though failing in every case of reaching the point of action, gained more and more the ear of the senate and a wider attention in the country. In each of the measures as thus far proposed there was some vitiating clause or provision which to the calmer and clearer minds in the senate made it inconsistent with the terms of the existing convention. It was open to congress to abrogate that convention by giving due notice to Great Britain, and so to open the way for a larger action on the part of the government, and resolutions to this effect were introduced, but neither congress nor the country as yet was ready for this step. Not yet clear as to what action should next be adopted, congress was not prepared to remove this bar to hasty or ill-advised measures. Thus far the convention had certainly been in the interests of peace, and had not seriously interfered with the progress of settlement.

The year 1842 was an important one in the history of the Oregon Question. Early that year Doctor Linn had returned to the contest in the senate with new zeal and determination, and other friends in congress and out of it came to his support. His bill, as heretofore, was a bill for the adoption of means for the occupation and settlement of the Oregon Territory, and the extension of the jurisdiction of our courts over our citizens settled there,

with a provision promising a large grant of land to actual settlers. This and previous bills had been prefaced by a declaration that the United States held its title to the Oregon country valid, and would not abandon it. The year opened with better promise of favorable action than heretofore; the preamble, while its adoption was strongly opposed by the majority in the senate, had brought from even those who opposed its adoption the declaration that it was a just expression of the sentiment of the country, while the provision for the land grant to settlers, though opposed for the present on the ground that it was not consistent with the convention, was acknowledged by all to contemplate but a just compensation, which should be made in due time, to pioneers who had taken the hardships and risks of early colonization. The bill at this session had been presented under most favorable auspices; the select committee to which it had been referred was of great influence in the senate, and had unanimously instructed their chairman to report the bill with the recommendation that it pass. And yet, though thus auspiciously introduced, for some reason as the months of the session went on it failed of being vigorously pressed. We have the explanation of this in Senator Linn's own words, spoken in the senate on the last day of August, the closing day of the session. After speaking of the favorable circumstances attending the introduction of the bill, Senator Linn continued: "It was thus placed in its order upon the calendar, but upon its coming up for consideration as a special order Lord Ashburton arrived from England, to enter upon a negotiation touching all points of dispute between the two countries, boundaries as well as others, Oregon as well as Maine. In this posture of affairs it was considered indelicate, not to say unwise, to press the bill to a decision while these negotiations were pending. They are now over, and a treaty is published

to the world between the United States and Great Britain, in which it seems that the question of the Oregon Territory has been deferred to some more remote or auspicious period, for an ultimate decision." In conclusion Mr. Linn said that he was confident that there were majorities in both houses for this bill; and he felt equally certain that it would have passed at this session but for the arrival of Lord Ashburton, and the pendency of the negotiations. He gave notice that he would deem it "his imperative duty" to bring in at an early day of the coming session this same bill, and press it to a final decision. That the decision would be favorable he did not entertain the slightest doubt, and he took pleasure in making that opinion public "for the satisfaction of all those who might take an interest in this beautiful country, the germ of future states to be settled by the Anglo-American race, which will extend our limits from the Atlantic to the Pacific Ocean."

There is a tone of confidence in the words with which Senator Linn dismissed the bill of 1842 that was not wholly unwarranted. As he spoke he was aware that the largest colony of American settlers that had ever set out for Oregon, a colony of staunch men and women, who had been encouraged to set out by the assurances which his bill had given, were then steadily nearing their destination. He was aware, too, that in the brief time since the publication of the Ashburton treaty, in which no mention was made of the Oregon boundary, congress and the country had shown a temper that promised well for his measure when next it should be introduced.

The interval between the publication of the treaty, August 9, and the reassembling of congress in December, was one of earnest and often heated discussion, not only of the provisions of the treaty, but of its one noted omission. No satisfactory reason had yet been given why the

Oregon boundary had not been included with that of Maine. This omission, taken together with intimations that soon reached the public that the two governments were again engaged in negotiations on this subject, began to awaken, in some quarters, at least, fears for the result. The nature and ground of these fears, as far as they were capable of being defined, may be seen in the declaration of the legislature of Illinois, prefixed to resolutions on the Oregon Question presented to congress early the next session. That declaration was, that "the safety of the title of the United States [to Oregon] was greatly endangered by the concessions made in the late treaty in relation to the boundary of Maine, by her rights not being persisted in and made part of said treaty, and will be more endangered by longer delay."

In his annual message to congress, December 6, 1842, President Tyler, after giving as the reason for the omission of the Oregon boundary from the late treaty the fear that its discussion might imperil the treaty as a whole, went on to express the purpose of the administration to urge upon the government of Great Britain the importance of an early settlement of this question. A few days later, the senate passed a resolution calling upon the President to communicate to the senate the nature of any "informal communications" that might have passed between the Secretary of State and the Special Minister of the British Government on the question of the Oregon boundary. To this resolution the President, in his message of December 23, answered that measures had been already taken in pursuance of the purpose expressed in his annual message, and, under these circumstances, he did not deem it consistent with the public interest to make any communication on the subject. But neither the President's expressed purpose, nor his subsequent decla-

ration that measures in pursuance of that purpose had already been taken, stayed the progress of measures in congress.

On the nineteenth of December, in accordance with his promise made at the close of the last session of congress, Mr. Linn introduced a bill of like import with that of the former session. This bill was referred to a select committee, of which Mr. Linn was chairman, and was soon reported back to the house, when it was made a regular order for immediate discussion. The discussion was continuous and earnest for more than a month, when by a vote of twenty-four to twenty-two it passed the senate. A vote of reconsideration failing to pass, the bill went to the house, and was referred to the Committee on Foreign Relations, of which John Quincy Adams was chairman, by whom, a few days later, it was reported to the house with the recommendation that it should not pass. Thus the bill failed of finally becoming a law, and doubtless many who advocated it in the senate, on cooler reflection, felt that it was well that it did fail. In a wider view, however, the measure was not a failure, for it served its object well, though not in the way its supporters intended. Few bills ever have called out from the senate a more earnest or an abler discussion. The best talent of the body was enlisted in the discussion, the spirit in which the debate was carried on was broad and patriotic, and for the progressive illumination of the subject under discussion the debate has never been surpassed. When it closed there remained little to be said. The future course of congress in the matter was practically settled in this debate and the action which followed; while in the course of the discussion, the pathway by which the question was ultimately to reach its solution was again and again pointed out. This was done by no one more clearly than by Calhoun, who spoke twice at length in opposition to

the measure. He opposed the bill with the whole force of his power of keen analysis and convincing logic, but he opposed it because he saw in its adoption certain defeat of the very object which he in common with the promoters of the bill desired to reach. He counseled patience, and a strict abiding by the terms of the convention, at the same time assuring his countrymen that time and the sure movement of population toward and into the region in question were certain to bring the solution desired. So accurately did he foresee and describe the course by which the question would advance to its final settlement, that his words at this day read rather like an epitome of history than what they were, a forecast of events.

American colonists in Oregon at that moment were not indeed sufficiently numerous to promise a speedy fulfillment of this prophesy. All told, they scarcely numbered five hundred, men, women, and children, and included not more than two score American families. They were enough, however, to test the excellence of the land, and enough of them had entered through the gateway of the mountains to prove that the country was accessible to men and women who were serious in their purpose of reaching it. Then, too, at the moment when Mr. Calhoun was speaking, at various centers throughout the union and on the frontiers of Missouri, a colony was organizing of men and women of the best stuff of which new states are made, setting their faces toward the new land with the full purpose of making it their home. This colony, nearly double in its numbers the total American population then in Oregon, before the year ended, successfully passed the barrier of the mountains, and with its whole great caravan safely reached the valley of the Columbia. Thus, sooner perhaps, and with a stronger and

bolder movement than Mr. Calhoun himself had expected when he spoke, the onward movement of population began to make good the words of his prophesy.

When, in February, 1843, the senate bill failed in the house, it was understood that the two governments were in communication on the subject of the Oregon Territory. It was this understanding more than anything else that led to the suppression of the Oregon bill in the Committee on Foreign Relations. No proposal had as yet been made in official form, but it is now known that the President and his secretary had a definite policy in mind, and that while desirous of checking any measures in congress which might hinder the negotiations which they aimed to bring about, they felt obliged to conceal the nature of their policy with the utmost care, for fear of arousing opposition in congress and the country. As it was, there was no little dissatisfaction in congress with the treaty which had just been negotiated by Webster and Lord Ashburton. Like most treaties on boundary lines, this treaty was a settlement by compromise. Many citizens from the section affected by the new boundary line, and enemies of the administration from all sections, were prompt to say that the secretary had yielded too much—that he had allowed the United States to be overreached in the negotiations. The friends of Oregon took alarm. They thought they saw in the omission of the Oregon boundary from the treaty an occasion for another compromise, in which there should be a surrender of territory justly claimed by the United States. That this fear was widespread in the states of the Mississippi Valley appears from the resolutions of state legislatures presented to congress early in the following session. In more than one set of these resolutions it was manifest, through plain statement or through implication, that apprehensions for Oregon had been awakened by the terms of settlement of

the boundary line of Maine. There was reason for uneasiness in the well known leaning of Mr. Webster toward certain commercial advantages to be got by treaty from Great Britain, and his low estimate of the value of the Oregon Territory to the United States. We now know that for this and for other reasons the prevalent apprehensions of the time in regard to the Oregon Territory were not groundless. The evidence is now at hand that the President and his secretary did contemplate a treaty with England which would involve a surrender of territory on the North Pacific Coast such as no administration hitherto had been willing for a moment to consider. The compensation, however, for the territory surrendered was not, as was then surmised, to be found wholly, if at all, on the Atlantic Coast.

It will be remembered that the Oregon Question was not the only question that agitated the country at this time. There was the Texas question, well nigh as old as that of Oregon, lately become pressing through events in Texas itself, and through the growing importunity of the Southern States. Then, too, there was the California question,—not a question of as widespread and popular interest as either of the others, but one which for a decade or more had been of growing interest to a narrow but intelligent circle. There was a popular demand for the assertion and maintenance of our rights in Oregon; there had come to be a popular demand for the annexation to the union, or the reannexation, as some chose to put it, of Texas; while as far back as the second administration of President Jackson there had been a desire on the part of farseeing statesmen to secure from Mexico the cession to the United States of so much of California as to include the bay of San Francisco. England was interested in Texas, was even thought by many in the United States to be contemplating making it a colony; England had

influence with Mexico, her capitalists having loaned the Mexican government to the amount of \$50,000,000 on security of lands in New Mexico, California, and other of her possessions; and England was urgent in all negotiations on the Oregon boundary that she be allowed free navigation of the Columbia, if not that that river be her southern boundary. In the United States, the slave states were desirous of Texas; the Western States pressed for the Oregon Territory at least to the forty-ninth parallel, while there was a growing desire in commercial centers in the North Atlantic States to have in American possession what was then regarded as the only ample and safe harbor on the North Pacific Coast south of the Straits of Fuca. Out of these various interests in England and America, President Tyler and Mr. Webster, his Secretary of State, shaped the policy of the administration. It is not likely that the President and his secretary were in entire accord on the details of the policy; but both alike were desirous that the administration should be signalized by a settlement through negotiation of the questions then pressing upon the country. In its earlier and more comprehensive form, the policy of the administration included all the questions that have been mentioned. These it sought to settle by a comprehension of them all in a tripartite treaty between the United States, Mexico and Great Britain, whereby it was hoped to secure from Mexico the recognition of the independence of Texas, and the cession to the United States of her possessions on the Pacific down to the thirty-sixth parallel. In compensation for her good offices in these matters, the United States was to yield to Great Britain all claim to the Oregon Territory down to the line of the Columbia River. It was thought that the large acquisition thus secured of territory south of the forty-second parallel would compensate for the loss of Oregon north of the Columbia,

while the northern and southern sections would be reconciled to the treaty by the large acquisition it secured north and south, respectively, of parallel thirty-six.

The plan of the administration included a special mission to England, on which it was expected Mr. Webster should be sent, that he might be the better able to negotiate the treaty ; and, failing this, a mission to China, to which Mr. Everett, then Minister to England, should be transferred, thus still accomplishing the desired end by allowing Mr. Webster to take his place in London. The mission to England failed in committee ; the mission to China passed in congress, but failed to carry Mr. Webster to England, through Mr. Everett's unwillingness to accept the China mission. With his failure to reach England at this time, Mr. Webster's hope of being able to effect a settlement of the questions pending between the two governments died ; this having been his main reason for remaining in President Tyler's cabinet, his resignation shortly followed. And thus, with Mr. Webster's resignation from the cabinet, passed forever all danger of a settlement of the Oregon boundary on a line below the forty-ninth parallel.

There were causes operating to produce this result which do not appear in this narrative. Even if the mission to England had succeeded, and Mr. Webster had effected the tripartite treaty as he desired, it is doubtful if it would have been accepted by the senate. Events were occurring contemporaneously with the movement of these measures that rendered it probable that the treaty, if made, would have failed of confirmation. Certain it is that the early spring of that year found the President less disposed to press for the settlement of the Oregon boundary contemplated in this scheme, and with less reason to expect the approval of congress or the country in any such settlement. Events had been rapidly mak-

ing such a settlement impossible. A notable one, the great emigration of 1843, has already been mentioned. There were others precedent to this.

Some years previous, the Rev. Jason Lee, while on a visit to the United States, had visited Washington, and made a strong representation of the need of a representative of the United States in Oregon. As a late response to this plea, in the spring of 1842, the government had sent a sub-agent to look after the interests of the Indians in Oregon. The appointment fell upon Dr. Elijah White, who himself had been a member of the Willamette mission. Doctor White had at once set out for Oregon, in May of that year, and was accompanied by a colony of more than one hundred persons, assembled largely through his influence, the first real colony of American families, aside from the missions, to enter the Oregon Territory. By the end of the winter of 1843, the government was in possession of Doctor White's report of the safe arrival in Oregon of himself, and this colony; of the satisfaction of the colonists with what they found there; and of the favorable condition and prospects of the settlers already there. Some of the colonists themselves had written to newspapers at their old homes giving good accounts of the new land, and urging their friends to join them there. And these letters, wherever found, were copied by all the great newspapers, north and south, because, as their editors sometimes apologetically added, "every one was eager to hear the latest news from the Oregon country." About the same time with the arrival of the report of the government's own agent, there appeared in Washington, fresh from his winter ride from Oregon, Dr. Marcus Whitman, of the Walla Walla mission. In repeated interviews with the President, and members of his cabinet, as well as with members of congress, Doctor Whitman presented earnestly the practicability of large companies of emi-

grants with their cattle and wagons reaching Oregon through the mountains, and urged the government to encourage such caravans by making the way thither as easy and safe as possible. What was thus said in the ears of government, and through the public press, was talked by many voices in crowded assemblies, at village stores, and at firesides throughout the country, from the frontiers of Missouri to the coast of Massachusetts, and from Portland, Maine, to New Orleans. The people were thus already aroused, even before the failure in congress of the administration's plans for the settlement of the boundary question. The country of the Oregon had been made to appear inviting for seekers for new homes in all parts of the land, and colonization of it by the direct route through the Rocky Mountains practicable to the nation at large, so that the state of the public mind at this time boded ill to any plan of settlement that proposed a surrender of any part of the territory to which the United States was believed to have a well grounded claim. The time for bargaining away any part of the Oregon Territory, south of the forty-ninth parallel and the Straits of Fuca, had now fully passed. No one was quicker to see and appreciate the changed conditions of the question, than was the President himself. Naturally desirous that his administration should have the honor of settling this long pending question, he continued, through his succeeding secretaries, to endeavor to bring the negotiations to a successful conclusion ; but henceforth his proposals were based upon a return to the former position of the government on the line of the forty-ninth parallel. After a proposal of the line of the Columbia our government was at a disadvantage in renewing proposals based upon the more northern line, while the changed temper of congress and the country obliged to a firmer standing to the old position, once it was resumed. The President's best

efforts, however, to bring negotiations to a happy issue failed, and his administration closed with the question still pending. The negotiations of this time show a zealous purpose on the part of the President to effect a settlement, but show no real progress toward that end. The same may be said of the measures in congress of this period. Discussion of the question had been resumed in the house, and went on in the senate, but since negotiations on the part of the government with a view to a speedy settlement were almost continuously pending, congress was induced to refrain from any action that might thwart or trammel the government in its efforts.

It has already been pointed out in this paper that the correspondence between the two governments precedent to the convention of 1818, pointed to the line of the forty-ninth parallel as the final position of our government in this question. In subsequent negotiations between the United States and Great Britain, this line came to be regarded as in some sort traditional with our government, and as such became increasingly influential in shaping the proposals of succeeding administrations. We have just seen how under pressure of considerations external to the Oregon Question the administration of Mr. Tyler had been momentarily in danger of yielding this our traditional line for one to the south, on the Columbia. We have now to see how under pressure of another sort the government under the administration of Mr. Polk came near abandoning this traditional position for a line farther to the north.

In 1824, in a treaty between the United States and Russia, the line of 54° and $40'$ was fixed as the limit of the claim of the United States northward as against Russia, and of Russia's claim southward as against the United States. This line was thenceforth considered as the northern limit of the Oregon Territory. In the course of ne-

gotiations with Great Britain it had been mentioned as the northern limit of our claim, but the claim of the United States to this line had never been pressed by the government. In the same paragraph in which the claim had been mentioned by our government, it had been abandoned for the lower line of the forty-ninth parallel. In the year 1842, however, after the treaty of that year had been concluded and made public, in the reaction caused by what was regarded as a surrender of rights and just claims on the part of our government, a disposition was manifested in some sections of the country, particularly in the west, to recur to the extreme northern line, and to press our claim to the Oregon Territory fully up to that limit. This disposition found expression in some of the resolutions of the state legislatures which were presented to congress at its next session. Later, it found more distinct and emphatic expression in resolutions adopted by public meetings and local conventions in various parts of the country held for the purpose of promoting the occupation and settlement of the Oregon Territory. The agitation thus carried on in the latter part of 1842, and the earlier months of 1843, culminated in a convention held in Cincinnati in July of the latter year. This convention from its size and representative character had somewhat of national importance. The circular calling the convention issued from Cincinnati under date of May 23, was sent to representative men far and wide over the union, and was given publicity by the leading journals of the day. In this circular the object of the convention was formally stated to be, "to urge upon congress the immediate occupation of the Oregon Territory by the arms and laws of the republic, and to adopt such measures as may seem most conducive to its immediate and effective occupation, whether the government acts or not in the matter." It will be proposed, the circular continues, "to

base the action of the convention on Mr. Monroe's declaration of 1823, 'that the American continents are not to be considered subject to colonization by any European powers.' " The convention in a session of three days discussed thoroughly the various aspects of the subject on which it came together, and concluded by adopting a declaration of principles which was signed by the chairman, Col. R. M. Johnson, and ninety other delegates, representing six states of the Mississippi Valley. The first of the principles adopted defined clearly what the convention understood by the Oregon Territory which it was sought to occupy and settle, asserting, as it did, the right of the United States from the line of latitude 42° to that of 54° and $40'$. Among letters read in the convention from prominent men unable to be present was one from Mr. Cass, in which he declared that no one would be present who would concur more heartily with the convention in the measures that might be adopted than should he; he would take and hold possession of the territory of the Pacific Coast, come what might. It is not difficult to see in the utterance of the Cincinnati convention, when taken in connection with the political weight of the convention itself, the origin of that party war-cry which was to make the presidential campaign of the following year so celebrated in our history. Here was a constituency united in a solemn pledge, which could not well be ignored in the estimate of political forces. It was an influence to be bid for, and what more natural than that it should be bid for, as it was bid for, by the party seeking a means of reconciling northern and western voters to its more distinctly southern policy of the annexation of Texas?

On becoming President, Mr. Polk seems not to have felt himself bound by the extreme statement of his party's

position on the Oregon Question. The tone of his inaugural is rather more conservative upon this subject than might have been expected from the circumstances of his election. His position, as stated in this paper, was sufficiently advanced, however, to alarm the British government. In a letter of April 3, addressed to Pakenham, British Minister at Washington, Lord Aberdeen said: "The inaugural speech of President Polk has impressed a very serious character on our actual relations with the United States, and the manner in which he has referred to the Oregon Question, so different from the language of his predecessor, leaves little reason to hope for any favorable result of the existing negotiation." And yet Mr. Polk, shortly after entering upon office, took up the negotiation as he found it then pending, and made an honest effort to effect a settlement upon the compromise line of his predecessors. In explanation of his course, in his annual message to congress, December following, he said: "Though entertaining the settled conviction that the British pretensions of title could not be maintained to any portion of the Oregon Territory, upon any principle of public law recognized by nations, yet, in deference to what had been done by my predecessors, and especially in consideration that propositions of compromise had been thrice made by two preceding administrations to adjust the question on the parallel of the forty-ninth degree of latitude, and in two of them yielding the free navigation of the Columbia, and that the pending negotiations had been commenced on the basis of compromise, I deemed it my duty not abruptly to break it off. In consideration, too, that under the conventions of 1818 and 1827 the citizens and subjects of the two powers held a joint occupancy of the country, I was induced to make another effort to settle this long pending controversy in the spirit of moderation which had given birth to the renewed discussion."

In the letter above referred to, Lord Aberdeen, notwithstanding his fears, directed Mr. Packenham to submit again to the new Secretary of State the proposal for arbitration which he had submitted to his predecessor, if conditions for such a proposal seemed favorable. On Mr. Packenham's informing Mr. Buchanan, the new Secretary of State, of his instructions to this effect, Mr. Buchanan expressed the hope that a satisfactory settlement of the question might yet be effected through negotiation. In accordance with this expressed hope, Mr. Buchanan, a few days later, submitted a proposal of the line of the forty-ninth parallel extended through to the Pacific, offering to Great Britain any port or ports on Vancouver's Island she might choose. This proposal was rejected by Mr. Packenham, without first submitting it to his government, in a paper in which, after declaring the proposal offered less than was offered by the United States in 1826, he concluded: "The undersigned trusts that the American Plenipotentiary will be prepared to offer some other proposal for the settlement of the Oregon Question more consistent with fairness and equity, and with the reasonable expectations of the British government." This paper was presented on July 29; on August 30 Mr. Buchanan presented to Mr. Packenham a carefully prepared paper, in which, after reviewing the position in which the President found himself in reference to the question on coming into office, and setting forth the motives which had actuated him in making the present proposal in spite of his personal views on the subject, he called the British Minister's attention to the fact that the President's proposal had been rejected by him in terms not over courteous, without even a reference of it to his government, and concluded: "Under such circumstances, I am instructed by the President to say that he owes it to his own country, and to a just appreciation of her title to the Oregon Terri-

tory, to withdraw this proposition to the British government, which was made under his direction ; and it is hereby accordingly withdrawn.”

We have it on the authority of Mr. Polk's diary that the concluding paragraph is of the President's own wording ; that Mr. Buchanan urged the President so to couch his answer as to encourage the British government to make an offer on their part ; that this the President positively declined to do, saying that if the British government wished to make an offer they must do so on their own responsibility. It was a matter of regret on the part of Lord Aberdeen, on hearing of the matter, that this proposition of our government had not been referred by Mr. Packenham to his government. Later, Mr. Packenham, on receipt of a communication from Lord Aberdeen, approached Mr. Buchanan with a view of getting from the President encouragement to present another proposition on behalf of Great Britain. This, though repeatedly urged to do so by Mr. Buchanan, the President firmly refused to give. And thus the question stood at the convening of congress in December.

The President's message had, on the question of the Oregon Territory, been prepared with special care. The several paragraphs bearing on this subject were read and discussed in cabinet, and amended, until they embodied the President's policy in its maturest form. Again Mr. Polk was besought by the Secretary of State to soften the tone of his message on this point, but he refused, preferring, as he said, “his own bold stand.” After reviewing briefly the history of negotiations on the question under his predecessors, and noting that these had uniformly been maintained on the part of the United States on the compromise line of the forty-ninth parallel ; and after stating somewhat particularly the reasons that had induced him to take up the negotiations as he found them

pending on his entrance to office, and to continue them on the same line in spite of his own personal convictions that the United States had a just claim to the whole of the Oregon Territory, the President proceeded to recommend to the favorable consideration of congress five measures, all of which he thought clearly within the right of the United States under the terms of the convention of joint occupancy. The first and capital one of these recommendations was, that congress authorize the President to terminate the convention of joint occupancy by giving the British government the required notice. In accordance with this recommendation a resolution to that effect was promptly introduced in congress, and thereupon the Oregon Question was thought by all to have assumed a grave aspect. Many men within congress, and without, some of them Mr. Polk's best friends and advisors, felt that while the measure was clearly within the terms of the convention it was neither wise nor safe at that time to adopt it. To every representation, however, of this view of the case made to the President, he returned the uniform answer that in his judgment the notice should be given.

The Secretary of State was not alone in his alarm at the President's bold stand on this question. He, with others, finding themselves unable to induce the President to change his attitude on this point, and finding that in the present mood of congress the resolution of notice was likely to pass, used every endeavor to induce him to consent to a renewal of the proposition for compromise on the line of the forty-ninth parallel, or to invite such a proposal from the British government.

On the twenty-fifth of February, Mr. Calhoun, now returned to the senate, called upon the President and met there Senator Colquitt, of Georgia. Mr. Calhoun urged upon Mr. Polk that it was important that some action of

pacific character should go to England upon the next steamer, and asked the President's opinion of the policy of the senate's passing a resolution in executive session, advising the President to reopen negotiations on the basis of the forty-ninth parallel. Mr. Polk was unwilling to advise such a course; he did, however, finally tell Mr. Calhoun and Mr. Colquitt, in confidence, as members of the senate, that if Great Britain should see fit to submit a proposition for compromise on that line, he should feel it his duty, following the example of Washington on important occasions, to submit the proposition to the senate confidentially for their previous advice. This course had already been considered in cabinet two days before, on the reading of a dispatch from Mr. McLane, our Minister in London, and had met with the almost unanimous approval of the members.

The house had already, on the ninth of February, passed the resolution of notice; the senate yet delayed and debated. But from the time when the President consented to encourage a further proposition of compromise from the British government by promising to submit the same to the senate for advice, events moved rapidly to a favorable conclusion. April 17 the resolution of notice passed the senate. Formal notice was addressed by our President to the Minister in London on the twenty-eighth of April, was received by him in London on the fifteenth of May, and on the twentieth of May was by him presented to Lord Aberdeen. Two days before receiving the notice, however, on the eighteenth of May, Lord Aberdeen had addressed a note to Mr. Packenham, at Washington, instructing him to offer a compromise on the basis of such a modification of the line of the forty-ninth degree of north latitude as would give to Great Britain Vancouver's Island, and allow her the free navigation of the Columbia for a limited term of years. On the tenth of June,

in a message to the senate, the President submitted this proposal, and asked the senate's previous advice. This was formally given in a resolution adopted June 12, by a vote of thirty-eight to ten, in which the senate advised the President to accept the proposal of the British government. A treaty based upon this proposal was concluded and signed on the fifteenth day of June by the representatives of the two powers. This treaty, on the following day, was laid before the senate by the President, for its approval, and three days later was confirmed without amendment. This convention provided for the extension of a line on the forty-ninth degree of north latitude, westward from the Rocky Mountains, to the middle of the channel which separates the continent from Vancouver's Island, and thence southerly, through the middle of said channel, and of Fuca Straits, to the Pacific Ocean.

It was found by the commissioners appointed to determine a line in accordance with this convention that in one part of the strait there were two recognized channels, an easterly one, by the Straits of Rosario, and a westerly one, by the Canal De Haro. The commissioners failing to agree as to which of the channels was the channel contemplated by the treaty, the determination of this portion of the line was left in abeyance. It remained so until the year 1871, when the joint high commission appointed to adjust sundry differences between the two governments, met in Washington. By certain articles of a convention, concluded at this time it was agreed by the representatives of the two powers, to submit to the Emperor of Germany the question as to which of the two channels was the more in accordance with the treaty of June 15, 1846, the commissioners pledging their respective governments to accept his award as final. The Emperor of Germany submitted the question to three experts, Doctor Grimm, Doctor Goldschmidt, and Doctor Kiepert. In ac-

cordance with the report of these distinguished scholars, the Emperor of Germany, on the twenty-first of October, 1872, rendered his decision, that the line by way of the Canal De Haro was the one most in accordance with the treaty. This decision was accepted by the two governments, and the unsettled portion of the boundary line determined in accordance with it.

Thus, after the vicissitudes of more than three-quarters of a century of debate and negotiations, with the determination of this last detail, the Oregon Question reached its full and final decision.

JOSEPH R. WILSON.

REMINISCENCES OF HUGH COSGROVE

By H. S. LYMAN.

Hugh Cosgrove, an Oregon pioneer of 1847, and a representative of the men of some means, who established the business interests of the state, is of Irish birth, having been born in County Cavan, North Ireland, in 1811. Although now in his ninetieth year, he is still of clear mind and memory, and recalls with perfect distinctness the many scenes of his active life. He is still living on the place which he purchased, in 1850, on French Prairie, near Saint Paul. He is a man of fine physical proportion, being in his prime, five feet, eleven inches tall, and full chested, broad shouldered, and erect, and weighing about one hundred and eighty pounds. He has the finely moulded Celtic features, and genial expression of the land of Ulster, and enjoys the fine wit and humor for which his race is famous. His father was a farmer, but learning much of the opportunities in Canada, concluded to cross the ocean to improve the conditions of himself and his family. It was about that period when assisted emigration from East Britain was in vogue, and mechanics of Glasgow, Scotland, were loaned 10£ sterling for each member of the family, to take up free homes in Canada; the loan to be returned after a certain time. The Cosgroves not being from that city, did not enjoy this loan, but determined to take advantage of the other opportunities offered all the immigrants, which were a concession of one hundred acres of land free, and an outfit of goods necessary to setting up a home in the new land.

Taking passage on a lumber ship, the *Eliza*, of Dublin, at a rate of 3£ each, and furnishing their own victualing, they made a speedy and prosperous voyage, some considerable glimpses of which remain in the memory of Mr.

Cosgrove, after the lapse of eighty years. He remembers well, also, the breaking up of the old home, the auction of the family belongings, and the general sense of hope and abandon with which they cut loose from the shores of the old world. None of the family, probably, had any considerable appreciation of the vast race movement to which they as units of society were answering, but felt keenly the bracing effect of increased energy and enthusiasm which that movement imparted.

In Canada they hastened to secure their possessions, locating the one hundred-acre lot of their own, in the hard timber woods out on the boulder-sprinkled soil of lower Canada, in the Dalhousie township, within five miles of Lanark, and obtaining a free government outfit at the government store at Lanark. Here young Hugh spent the most of his boyhood, helping to clear the farm, becoming an expert axeman, burning the hard wood, from the ashes of which was leached the potash that paid for the clearing; and also getting his education at the free school. He recalls these as very happy years, and the pride and joy that all the family took in owning their own home did very much to form his character on a more liberal and progressive plan than could have been had in old world conditions. At the age of twenty-one he was married to Mary, a daughter of Richard Rositer,—“a glorious good man,” of Perth. Learning at length that land of a better quality, less stony, was vacant “out west,” a move was made to Chatham, in Canada West, as then known. Having a “birth-right claim,” as it was called, to one hundred acres, and finding that he could make a purchase adjoining of one hundred acres of “clerical land,” the young farmer laid out his two hundred-acre farm, and made buildings to improve it. But learning that land was still better the farther west one went, he proceeded as far as the Detroit River.

But just at this juncture all things were thrown in confusion by the uprising of the "Patriots," the extent of whose organization was not known. There was great alarm felt, and the Canadian militia were likely to be called out. Now the Cosgroves had been duly taught that "the Yankees" were terrible people, almost ready to eat innocent people from the old country. But now that the Canadian side looked warlike, Mrs. Cosgrove said to her husband: "Very likely now you will be called out with the militia, and I will be left alone; why not cross over into the United States, and begin there?" She was acquainted, moreover, with a family in Detroit. Mr. Cosgrove acted upon the suggestion, and this led into a very much larger field of operations.

They found life on the American side much more intense and extensive, and discovered that the Yankees, instead of being a species of man-eaters, were royal good fellows.

Having saved some money for a new start, he prudently looked about how to invest it so as to make increase as he crossed the line. He found at the custom house that duty on cattle was low. He bought cows, selling at \$10 each in Canada, which he disposed of in Michigan at as much as \$40 each,—his first "good luck." This gave him some ready money to begin business.

Fortunately in disposing of his cattle he made the acquaintance of a Mr. Saxon, a business man of very high character, recently from New Jersey. He was, indeed, not only a strict business man, but strictly religious, and a crank in habits of morality, taking pains to advise young men against bad habits. By this Mr. Saxon, Cosgrove was interested in taking work, just being begun on the railway line from Detroit to Chicago, Illinois, then a landing place on the marshy shores of Lake Michigan. "Why not take a contract?" asked Mr. Saxon, who had

himself the work of locating a twenty-mile section of the road; and offered all assistance necessary in making bids, and was willing to guarantee Cosgrove's responsibility. By this great service a paying contract was secured of grading a section of road. The contract was profitable, and the ins and outs of business were learned—especially the art of how to employ and work other men profitably,—Mr. Saxon, the ever ready friend, frequently giving the young immigrant helpful advice.

Having saved something like \$5,000 from his operations, he was next visited by a coterie of eastern men who were coming west to mend their fortunes—to go to Chicago, and take a contract of excavating and filling on the great projected canal from Chicago to the Mississippi—a work only just completed at this day. It was then begun under state control. He soon discovered that he was the only capitalist in the number, and in order to save the job, bought out the main man, a Mr. Smith, who had a contract of \$80,000. This was finished to advantage, although the state suspended operations. Prices were excellent, some of the rock excavating being done at fifty to seventy-five cents, and rock filling at \$1.25 per square yard. Further contracts were taken, but in the course of time prices were forced down. In following up the railway development, a residence was made at Joliet, where he bought one hundred and sixty acres of land, on which much of the city now stands. But two things acted as a motive to make him look elsewhere. One was the malaria of the Illinois prairie; the other was the report of Oregon.

A newspaper man by the name of Hudson, of the *Joliet Courier*, who had come to Oregon, wrote back very favorable accounts of that then territory, especially praising the equable climate. A number of Joliet men, among whom were Lot Whitcomb and James McKay, read these

articles with interest, and finally made up their minds to cross the country to Oregon, a name that was to the old west about what the new world was to the old. Lot Whitcomb, a man of affairs, who afterwards made himself famous in Oregon as a steamboat man, thought Oregon would be a great place for contractors and men able to carry on large undertakings, as he heard that there were few such there.

In April, 1847, accordingly, a party of thirteen families were ready to start. Cosgrove had been trading during the winter, to get suitable wagons and ox teams. He preferred to make the eventful journey comfortably and safely, and lack nothing that forethought could provide. He did not belong to the poorer class, who had to make the trip partly on faith. Three well made, well built wagons, drawn each by three yoke of oxen—*young oxen*—and a band of fifteen cows constituted his outfit. He had young men as drivers, and his family was comfortably housed under the big canvas tops.

He now recalls the journey that followed as one of the pleasantest incidents of his life. It was a long picnic, the changing scenes of the journey, the animals of the prairie, the Indians, the traders and trappers of the mountain country; the progress of the season, which was exceptionally mild, just about sufficed to keep up the interest, and formed a sort of mental culture that the world has rarely offered. Almost all migration has been carried on in circumstances of danger and distress, but this was, although daring in the extreme, a summer jaunt, with nothing to vitiate the effect of the great changes in making out the American type.

The following particulars of the journey have the interest of being recalled by a pioneer now in his ninetieth year, showing what sharp lines the original experiences had drawn on the mind, and also being in themselves

worthy of preservation. However much alike may have been the journeyings across the plains in general features, in each particular case, it was different from all others, and no true comprehension of the whole journey, the movement of civilization across the American continent, can be gained without all the details; the memory of one supplying one thing, and that of another supplying another. The experiences of the Cosgroves were those of the pleasantest kinds, the better-to-do way of doing it, without danger, sickness, great fatigue, or worry, and with no distress.

After making the drive across Iowa and Missouri, in the springtime, when the grass was starting and growing, the Missouri River was crossed, waiting almost a week for their turn at Saint Joe, and then they were west of the Mississippi, with the plains and the Indian country before them. An "organization" was duly effected. Nothing showed the American character more distinctly than the impulse to "organize," whenever two or three were gathered together. It was the social spirit. There was no lack of materials, as besides this party of thirteen families, there were hundreds of others gathering at Saint Joe, the immigration of that year amounting to almost two thousand persons. A train of one hundred and fourteen wagons was soon made up, and Lot Whitcomb was elected captain. Mr. Cosgrove says, "I was elected something. I have forgotten what it was"—but some duty was assigned to each and all, and the big train moved.

Almost immediately upon starting, however, they were met by some trappers coming out of the mountains, who said, "You will never get through that way; but break up in small parties of not over fifteen wagons each."

It soon proved as the trappers said. The fondness of organization, and having officers, is only exceeded among Americans by the fondness of "going it on one's own

hook ;'' and this, coupled with the delays of the train, broke up Lot Whitcomb's company in two days. In a company, as large as that, a close organization was next to impossible. A trifling break down or accident to one hindered all, and the progress of the whole body was determined by the slowest ox. When Mr. Cosgrove separated his three fine wagons, and active young oxen, and drove out on the prairie, Captain Whitcomb said, "that settles it. If Cosgrove won't stay by me, there is no use trying to keep the company together." With thirteen wagons, and oxen well matched, all went well.

Indians of many tribes were gathered or camped at Saint Joe, and followed the train along the now well traveled road. They were polite as Frenchmen, bowing or tipping their hats, which were worn by some, as they rode along. They expected some little present, usually, but were well satisfied with any article that might be given ; and the immigrants expected to pass out a little tobacco or sugar, or some trifle.

There was but one affair with Indians that had any serious side. This occurred at Castle Rock, an eminence out on the prairie, some hundreds of miles from the Mississippi. Here the train was visited, after making the afternoon encampment, by a party of about forty mounted Pawnees, clothed only in buffalo robes. They seemed friendly, asking for sugar and tobacco, as usual. But as they rode off, they disclosed their purpose—making a sudden swoop, to stampede the cattle and the horses of the train. The young men of the train, however, instantly ran for the trail ropes of their horses, and began discharging their pieces at the Indians, who, perhaps, were more in sport than in earnest, or, at least, simply "saucing" the immigrants ; and wheeled off to the hills, letting the stock go.

But this was not all of it, as the Pawnees soon overtook

two men of the train who were out hunting, and, quickly surrounding them, began making sport, passing jokes, and pointing at the men and laughing to one another; and ended by commanding the alarmed and mystified hunters to take off their clothes, article by article, beginning with their boots. When it came to giving up their shirts, one of the white men hesitated, but was speedily brought to time by a smart stroke across the shoulders by the Indian chief's bow. When the two white men were entirely disrobed, the Pawnees again made remarks, and then commanded them to run for camp; but considerately threw their boots after them, saying they did not want them. Much crestfallen, the two forlorn hunters came out of the hills, "clipping it as fast as they could go" to the train, which was already excited, and thought at first that this was a fresh onslaught of the savages. The men of the train, however, were not very sorry for the young fellows, as they were notorious boasters, and from the first had been declaring that they would shoot, first or last, one Indian a piece before they reached Oregon.

The animal life, as it gradually was encountered, was a source of great interest. The gentle and fleet, but curious, antelopes were the first game. Mr. Cosgrove had two very large and swift greyhounds, which were able to overtake the antelopes. But the meat of these animals was not very greatly relished, being rather dry.

The wolves were the most constant attendants of the train, appearing daily, and howling nightly. These were the large gray wolves, much like our forest species; also, a handsome cream-colored animal, and the black kind, and most curious of all, the variety that was marked with a dark stripe down the back, crossed by another over the shoulders. Then the coyotes were innumerable, and yelped at almost every camp fire. Shooting at the

wolves, however, was nothing more than a waste of ammunition, and these animals were at length disregarded. Even the greyhounds learned to let them severely alone, for though at first giving chase ferociously, they soon found a pack of fierce wolves no fun, and were chased back even more ferociously than they started out.

The cities of the prairie dogs were interesting places, and the tiny chirp, a yelp, of the guardian of the door, became a familiar sound. Mr. Cosgrove recalls shooting one of these, finding it much like a chipmunk, only of larger size.

But the great animal of the prairie was the buffalo. The vast herds of these grand animals impressed the travelers of the plains quite differently, almost always giving a shock of strange surprise. One immigrant recalls that his first thought at seeing distant buffaloes, but few in number, in the sparkling distance, was that they were rabbits. With Mr. Cosgrove's party there were indications enough of the animals. Indeed, the plains were strewn with the buffalo chips, and it was the regular thing, noon and evening, as they came to camp, for each man to take his sack and gather enough of them for the camp fire; and coming to the Platte Valley they found the region strewn with the dead bodies of the thousands of the animals, which had probably come north too soon, and were caught in the last blizzard of the winter; but no live buffaloes were seen. But at length, as the train crested a slope, and a vast expanse of prairie opened in view, Mr. Cosgrove looked over, and seeing what seemed brown, shaggy tufts thickly studding the distance as far as eye could reach, he exclaimed, "We shall have plenty of firewood now! No need of gathering chips tonight!" He thought the vast Platte Valley was covered with stunted clumps of brush-wood. One of the girls was

near, however, and after looking, cried out, "See, they are moving!" Then first he realized it was a herd of buffaloes. Nor were they simply grazing; they were on the run and bearing down on the train. The cry of "buffaloes!" was passed back. It was not altogether safe to be in the path of such an immense herd, and the train was quickly halted, the wagon pins drawn, and a band of hunters quickly went out on horseback to meet the host, and also to get buffalo meat. The herd divided, leaving the train clear and the oxen standing their ground. One part went off to the hills; the other took the fords of the Platte, making the water boil as they dashed through. Enough were shot to stock the train; yet the herd was so vast that at least four hours elapsed before the last flying columns had galloped by—like the last shags of a thundercloud. What a picture—thirteen families with their oxen and wagons, sitting quietly in the midday blaze, while a buffalo troop, perhaps one hundred thousand strong, or even more, dashed past on either side. The best method of preparing the buffalo meat was by jerking it, over a slow fire of sagebrush sticks; the meat being sliced thin, and dried in the smoke in one night. At a later time, when buffalo had become as familiar as cattle, however, the train was stopped by one single monarch. It was just at evening, and the man detailed to go ahead to find a good camping place was out of sight. A shot was heard, however, and the startled train was halted, and the king-pins were drawn, all ready for any emergency; for it might be Indians ahead.

The picket soon was seen, riding at top speed, and crying as he came, "Don't shoot, don't shoot!" and just behind him was an enormous buffalo, charging the whole train. The animal did not stop until within a few rods, and then only with lowered head, and huge square shoulders. The difficulty of shooting him without inducing

him to make a charge, if not dropped, was at once apparent. But at length, at a signal, about fifteen rifle balls were poured into his front ; and after a moment he began to reel from side to side, and then fell over. Even then no one dared to go and cut the throat, to bleed him ; but after a time one cried, "I'll do it !" and the deed was done. It required several yoke of oxen to make a team strong enough to drag him to camp, and his estimated weight was twenty-two hundred pounds.

The last buffalo meat was from an animal that had just been killed by a party of trappers near the divide of the Rocky Mountains. As for deer and elk, none of these were seen on the plains. Birds of the prairie were abundant, especially the sage hens, as the more arid regions were crossed ; but the flavor of this fowl was too high for the ordinary appetite. Rattlesnakes were innumerable, but no one of the train suffered from these reptiles except a girl. This occurred at Independence Rock. As the young lady was clambering among the crevices, she incidentally placed her hand upon a snake, which struck. Large doses of whiskey, however, soon neutralized the venom.

After crossing the divide of the Rocky Mountains to the headwaters of the Snake River, the numberless salmon of the streams become the wild food in place of the buffalo meat of the plains. At Salmon Falls there were many Indians of different western tribes taking the fish as they ascended the rapids. In consequence, the royal Chinook was sold very cheap ; for a brass button one could buy all that he could carry away. Here occurred a laughable incident. The whole camp was almost stampeded by one wild Indian. He was a venerable fellow, dressed in a tall old silk hat, and a vest, and walked pompously as if conscious of his finery ; his clothing, however, being nothing except the hat and vest. At his approach, the camp was

alarmed. The more modest hastily retreated to their tents; and some of the men, angry that their wives should be insulted, were for shooting the inconsiderate visitor. A young married man, whose bride was particularly scandalized, was greatly exasperated. But the object of the old Indian was merely peaceable barter. He carried in each hand an immense fish; and Mr. Cosgrove, seeing his inoffensive purpose, bade the boys be moderate, and going out to meet him, hastily sawed a button from his coat, with which he purchased the fish, and sent the old fellow off thoroughly satisfied.

On the Umatilla, after crossing the Blue Mountains, with all their wonders of peak and valley, as they were camped beside the river, the immigrants were visited by Doctor Whitman and his wife, and Mr. and Mrs. Spaulding. Mr. Cosgrove remembers them all very distinctly. Doctor Whitman he describes as tall and well proportioned, of easy bearing, and hair perhaps a little tinged with gray; and very affable. Mrs. Whitman was remarkably fine looking, and much more noticeable than Mrs. Spaulding. Mr. Cosgrove has especial reason to remember the missionaries, because, himself not being well, and this circumstance being discovered by them, he was the recipient of various little delicacies, of fruit, etc., not to be had in the train. A trade was also made between himself and Whitman, of a young cow that had become footsore, and could go no further, for a very good horse. Doctor Whitman, says Mr. Cosgrove, "was a glorious good man;" and the news of his massacre by the Indians a few months later, went over Oregon with a shock like the loss of a personal friend.

Mr. Spaulding gave notice of a preaching service to be held about six miles distant from the camp, and some of the immigrants attended. The coming of the Catholic

priests to that region was alluded to in the sermon, and they were spoken of as intruders.

At The Dalles there was a division of opinion among the immigrants as to the best route to follow into the Willamette Valley ; whether over the mountains or down the Columbia by bateaux to Vancouver. However, this was easily settled for Mr. Cosgrove's family. Word having reached Vancouver that there were immigrants arriving, bateaux were sent up and in readiness. The price asked for the service was moderate, and the voyage was made quickly and comfortably. The wagons were taken to pieces and loaded upon the boats, and the teamsters had no difficulty in driving the oxen by the old trail, swimming them across the Columbia.

James McKay, a traveling companion, not being able then — though afterwards a wealthy man — to employ a bateaux, built a raft, which brought him through safely. Others went over the mountains.

On arrival at Vancouver, Mr. Cosgrove found a small house, with a big fireplace, which he rented, and housed his family, feeling as happy as a king to be under a roof once more. Here he could leave his family safely while he looked over the country.

By the time that he reached the Cascades, the early autumn rains were falling gently, and at Vancouver they were continuing ; but they seemed so light and warm as to cause little discomfort ; and the Indians were noticed going around in it unconcernedly barefooted.

At one time Mr. Cosgrove was eagerly advised by Daniel Lownsdale to locate a claim immediately back of his own, on what is now included in a part of the Portland townsite. But the timber here was so dense, and the hills so abrupt that he saw no possible chance to make a living there, and decided to look further.

Valuable advice was given by Peter Speen Ogden, then

governor of the fort. Mr. Cosgrove was quite for going down the river to Clatsop, so as to be by the ocean. Mr. Ogden said, however, "It depends on what you are able to do. If you want to go into the timber, go to Puget Sound; if you want to farm, go up the Willamette Valley."

Mr. Cosgrove decided that as he knew nothing of lumbering, but did know something of farming, that he had better proceed to the farming country.

Coming on up the Willamette Valley, he was met everywhere in the most friendly fashion; especially so by Mr. Hudson, the newspaper man of the *Joliet Courier*, who constrained him, "right or wrong," to turn his cattle into a fine field of young wheat to pasture over night. Hudson was living a few miles above Oregon City, opposite Rock Island, and was a flourishing farmer. He went to the California mines, and was very fortunate, discovering a pocket in the American River bed, in a crease in the rocks, so rich that he dared not leave it, but worked without cessation a number of days, ordering his meals brought to him, at an ounce of gold dust each, and took over \$22,000 from his claim.

Meeting Baptiste Dorio, of Saint Louis, on French Prairie, he proceeded with him to look up farm lands. At Dorio's a somewhat laughable incident occurred. It was, at that early day, the custom for all to carry knife and fork with them, and these were the only individual articles of table furniture. The meal, usually beef and potatoes, was placed on an immense trencher, hewed out of an oak log, and around this all sat, and each helped himself at his side of the trencher.

Mr. Cosgrove ate heartily of the fine beef, which, however, he noticed looked rather white. At the conclusion of the meal Dorio asked suddenly, "Which do you like best, ox beef or horse beef?" "I do not know that I

could answer that," said the fresh arrival, "as I have never yet eaten horse beef?" "Yes, you have," said the Frenchman imperturbably; "that was horse beef that you have just eaten,"—a piece of information that nearly ruined Mr. Cosgrove's digestion for the rest of the day.

He found the Canadian farmers ready to dispose of their places, and was besieged by many who had square mile claims to sell for \$100, or less, each; and with the fertile prairie, its deep sod, tall grass, and expanse diversified with strips of forest trees, or lordly old groves, he was very much pleased. Coming to Saint Paul he found entertainment at the Catholic mission, and by a Mr. Jones, who was employed then as foreman, he was furnished much valuable information. By the brusqueness of Father Baldu, in charge of the establishment, he was, however, rather taken aback. When he was ready to go, and went to the father to tell him so, with the idea of offering pay for his entertainment, the reverend gentleman simply remarked, "Well, the road is ready for you." Nevertheless, with St. Paul he was well pleased. There was a church and a school, and a good place to sell his produce. He therefore purchased the section adjoining the mission, paying \$800,—two oxen and two cows, and included in the bargain was the use of a fairly good house.

He had some stout sod plows of much better make than those of the Canadians, and at once, as the winter was open, began to break the prairie, and sowed forty acres to wheat. His family were comfortably established, but met rather a severe shock as they went to meeting for the first time. With feminine interest and delight his wife and daughters brought out their best dresses and bonnets, as they would at Chicago or Joliet. Mr. Cosgrove himself selected his best suit for the occasion—he had three with him, a blue, and a gray frock, and a swallowtail coat. The swallowtail and a rather high silk hat, and the other

accompaniments of full dress, was the suit that he chose. At the meeting, however, where the appearance of the strangers caused minute observation, the men all sitting on one side and the women on the other, there were no bonnets,—the women wore only a red handkerchief tied over the head; and the latest style bonnets from the east created not only admiration, but much suppressed—though not very well suppressed—merriment in the congregation.

On returning home Mrs. Cosgrove was very much dispirited, and exclaimed, “To think that I have brought my family here to raise them in such a place as this!” However, taking up the difficulty in a truly womanly way, she soon had the women of the neighborhood making sun-bonnets, and then instructed them how to weave wheat straw and make chip hats; and in course of time they even put on bonnets. Not so, however, with Mr. Cosgrove’s swallowtail coat and silk hat. These were such a mark for ridicule that he never tried them again, at least in that circle; but found his blue frock good enough. Indeed, even to this day, swell dress is much despised among Oregon men.

However, the placid life of the Oregon farmer was not to be long continued. The California mines broke out, and Mr. Cosgrove was contrained to go along with the rest of the settlers. He made two trips, returning the first time after a month’s mining to spend the winter. The second time, which was prolonged to a stay of about twenty months in the mines, he made very successful, but occasion arising to sell his store in the mines for \$15,000, he finally decided to do so, and taking his dust, went down to San Francisco to look for a ship for the Columbia.

While at the bustling town he was induced to invest \$15,000 in a stock of goods, which he brought to Oregon,

and set up a store at Saint Paul. Here he continued in business for a number of years, but says that he discovered he was not cut out for a merchant, and so in course of time fell back upon the farm.

The place upon which he is now living, which is part prairie and part wood land, of fine quality, is immediately adjoining his original square mile, which he sold, as under the donation act, but one square mile could be claimed.

REMINISCENCES OF WM. M. CASE.

By H. S. LYMAN.

William M. Case, a pioneer of 1844, who is still living on the donation claim taken by him in 1845 on French Prairie, was born in Wayne County, Indiana, not far from the Ohio line, in 1820. He is consequently now eighty years of age, but is still vigorous, of unimpaired memory, firm voice, and still master of affairs on his large farm of over one thousand acres. He is six feet tall, of wiry build, and rather nervous temperament, and very distinctively an American. In mind he is intensely positive of the most definite views and opinions, and has the peculiarly American qualities of fondness for concrete affairs. His hair and beard are now nearly snow white, and worn long; and his face is almost as venerable as that of the poet Bryant, which it somewhat resembles.

His life covers almost numberless interesting experiences, but is perhaps most intimately connected with the part played by the Oregonians in the California mines. This sketch will be confined more particularly to the peculiar facts of his life not common to all the pioneers. Mr. Case is particularly the man who can tell of the effects

of the gold mining and California life upon Oregon and Oregonians, and he can explain a number of facts, quite apparent in their effects, but seldom or never given in their causes, of the feeling that has arisen between Californians and Oregonians.

It was an interesting incident that first directed his attention to Oregon. By William Henry Harrison, while serving as delegate to congress from the then territory of Indiana, public documents were forwarded freely to his constituents. To William M.'s father, who was an acquaintance of Harrison's, there came, among other volumes, a journal of the Lewis and Clark Expedition to the Columbia River. Over this the boy used to pore, even while still young, and out of the crabbed volume, whose matter (certainly not the literary style) interested the whole nation, a most vivid picture was constructed of Oregon scenery, with the big trees, and the mild climate, and grass green all the winter. He made up his mind to come to Oregon when he was old enough. Before he was twenty he told his father of his intention, and was met with no opposition, the father being both considerate and intelligent; but with his consent, was given this advice: "Don't go, William, before you are married; take a wife with you." This wise and not at all unpleasant counsel young Case put into execution; hating, like all born men of action, to keep an idea long which he did not carry out in performance. By his young wife, who was from New Jersey, he was encouraged, rather than otherwise, to make the journey. She said, "My father used to dip me in the surf of the Atlantic on the New Jersey shore, and I would like to go and dip in the surf of the Pacific Ocean."

Proceedings in congress in regard to Oregon were carefully watched by Mr. Case, especial note being taken of the Linn bill, by whose provisions there were to be given

a square mile of land to each man, another to his wife, and a quarter section to each child. It was well understood that the United States government could not give title to land in Oregon; but this bill was introduced as a promise of what it would do; and was in reality a test of the American spirit. Would the American people settle Oregon? If so, the United States would claim the territory.

Men like Case were found, who had a broad outlook, who understood the value of land in the Columbia or Willamette Valley, and who saw that the United States must front the Pacific as well as the Atlantic. These ideas were largely formed by the broad spirit of the west, the Ohio and Mississippi Valley, whose chief representatives were men like Doctor Linn and Colonel Benton in congress. Such men wished to live their lives on a more liberal scale than was possible even in the old west. Mr. Case, like his father, was an old line whig, and later an uncompromising republican. He says: "The United States Bank helped the country a great deal. But when, upon the expiration of its charter, the bill to grant a second charter was vetoed by President Jackson, there followed a crash such as can never be described. The country never fully recovered from the depression until the discovery of gold in 1848." Wages, he says, were twenty-five cents a day in Indiana, or \$6 a month, or \$100 a year, in special cases. Under such circumstances, a young man saw no chance for accumulating a competence, but in Oregon he might begin with a better outlook.

During the year of 1841, when he was married at the age of twenty-one, Case was making his preparations, and on April 1, 1842, started out for Platte City, Missouri, which he reached June 10. However, he was too late to catch the Oregon train, which had left the first of the month. Going to Northern Missouri, he remained

until 1844, but was on time to catch the first train of that season. The crossing of the Missouri River was made at a point about ten miles below the present City of Omaha, at a place now called Bellevue. The train of sixty wagons was organized under Captain Tharp; and a regular line of march was established, the train moving in two divisions, on parallel lines, and about a quarter to half a mile apart, to be in easy supporting distance in case of an attack by Indians. The whole train was brought together at nighttime, the wagons being driven in such a way as to form a perfect corral, inside of which the tents for the night were placed; although frequently no tents were set, especially after Nebraska was passed, where the season of 1844 was very late and stormy. With the company of General Gilliam of that year, traveling with which were R. W. Morrison, John Minto, W. R. Rees, and other well-known pioneers, the company of Captain Tharp and Mr. Case had no connection, and were in advance all the way. John Marshall, however, who went to California in 1846, and discovered gold in 1848, was a member of the train.

The three following incidents on the plains may be mentioned as presenting something new. One was a charge, or stampede, of about one thousand buffaloes. This occurred in the Platte Valley. As the two divisions were moving along deliberately, at ox-speed, in the usual parallel columns, the drivers were startled by a low sound to the north as of distant thunder. There was no appearance of a storm, however, in that or any other direction, and the noise grew louder and louder, and was steady and uninterrupted. It soon became clear that there was a herd of buffaloes approaching and on the run. Scouring anxiously the line of hills rimming the edge of the valley, the dark brown outline of the herd was at length descried, and was distinctly made out with a telescope, as buffaloes

in violent motion and making directly for the train. The front of the line was perhaps half a mile long and the animals were several columns deep, and coming like a tornado. They had probably been stampeded by hunters and would now stop at nothing. The only apparent chance of safety was to drive ahead and get out of the range of the herd. The oxen were consequently urged into a run and the train itself had the appearance of a stampede. Neither were they too quick; for the flying herds of the buffaloes passed but a few yards to the rear of the last wagons, and were going at such a rate that to be struck by them would have been like the shock of rolling boulders of a ton's weight. Mr. Case recalls measuring one buffalo that was six feet, two inches, from hoof to hump, and was over four feet from dewlap across the body.

Another most important occurrence was near Fort Platte, where a Frenchman by the name of Bisnette was in command, and in which another Frenchman, Joe Batonne, was also an important actor; something, perhaps, that has never been related, but which probably prevented the destruction of the train. It happened that at Bellevue Mr. Case found and employed a young Frenchman by the name of Berdreau, and about two hundred miles out from Omaha he was asked by this Berdreau to take in another young Frenchman, Joe Batonne, who had started with a Doctor Townsend of the train, but had fallen out with him and now was seeking another position. Batonne was therefore traveling with Case. As they were approaching Fort Platte, however, word was received from the commandant, Bisnette, to come forward no further; but if they had anyone in the train who knew the Sioux language to send him. "There is a war party of Sioux Indians here," was his information, "and I cannot understand why they should be here. The

place for them at this time of the year is on the Blackfoot or Crow border, while this is in the very center of their territory. I fear they mean some mischief to the train." Batonne was the only one in the train who understood Sioux. He was accordingly sent forward, being inconspicuously dressed, along with some others, all riding their horses. The party reached Fort Platte and passed freely among the Sioux Indians. These formed an immense host, being a full party of six men to a tent, and five hundred tents, which, although crowded together irregularly, still covered a considerable space.

Batonne kept his ears open as his party rode here and there, but said nothing. Finally, as they were passing a certain tent, a young Sioux was heard to exclaim, "It always makes me itch to see an American horse; I want to ride it so bad." A chief answered him in a low voice, "Wait a few days, until the immigrants come up, and we shall have all their horses." This was soon reported by Batonne to Bisnette, who at once sent word back to the train to wait until he had contrived some plan to send the Indians off. The plan he hit upon was this—and he told it afterwards only to Mr. Case and Joe Batonne, under strict promises of secrecy:

He called all the chiefs together with the message that he had very important news for them. They accordingly assembled and sat in solemn council. After the pipe was passed and smoked, the first whiff, as usual, being directed to the Great Spirit, Bisnette began:

"I have lived with you now many years and have always dealt honorably."

"Yes," answered the Sioux.

"I have never told you a lie."

"Never," said the chiefs.

"And have been as a brother."

"You have been our white brother," they said.

“Well,” he continued, “I have just heard news that is of utmost importance to you. The immigrants who come from the sunrise and will soon be here have been delayed; a man died; they buried him; he had the smallpox. I advise you, therefore, to leave this place as soon as possible, and to go to your northern border and not return for over a month.”

No news could have been more alarming to the Indians, who understood only too well what the smallpox was; not many years before infected blankets having been distributed among them through the agency of white trappers whom they had been allowed to rob, as a sort of punishment for having robbed lone trappers heretofore; and by this the whole tribe had been decimated by the scourge, very many dying, and some even of those who recovered, but were badly marked, had killed themselves. They had been told by the trappers that the smallpox pits were the mark of the devil. “The devil will get you sure now” they told them. As soon as Bisnette told these Indians that there was smallpox in the train the chiefs slid out to their tents, and within fifteen minutes the whole army was on the move, going to the north, and not returning while the immigrants of that season were passing.

The other point was the cause of the breaking up of the organization. After passing the Sioux country, fear of the Indians wore off, and the necessity of rapid travel became more and more apparent, but among the one hundred and twenty men of the train—as many at least as two to the wagon—at least one hundred, says Mr. Case, were “worthless,” or dangerously near that line. The daily labor of the march was devolved more and more upon the twenty men or so that felt the necessity of pushing on. The majority, however, often spent their evenings playing cards to a late hour, or dancing and fiddling with

the young folks around the fire, and slept the next morning until called for breakfast by the women. Various ways were devised to equalize these matters; the women, among other devices, being put up to taking and burning the packs of cards, unbeknown to the men. But it finally became old—getting up 2 o'clock of a morning to hunt the cattle, which, in grazing, always attempted to go ahead of one another, and thus sometimes were spread out for several miles on the prairie. Doing this again and again, for men who would not take their turn, but were sleeping at the camp, was finally too much to be borne. Case and some others, accordingly made ready, and one morning struck out with their wagons, and before night the whole train was resolved into two sections; the jolly boys who danced and fiddled being left behind.

Arriving in Oregon, Mr. Case first stopped at Linnton, but soon went over to Tualatin Plains, and settled first near Mr. Hill's place, now Hillsboro. In 1845, he recalls that he was employed in building the first frame barn in Oregon (W. M. C.), on the Wilkins place; and he here made the acquaintance of the old mountain men, Wilkins, Ebberts, Newell, Meek, and Walker. He was not well satisfied, however, with the locality. It was a long way over the hills and through the deep woods to the Willamette River at Linnton, or at Oregon City—Portland then being a mere camping station on the Willamette. Case wished to locate on the river, and accordingly, in 1846, moved to French Prairie, and acquired, partly by donation claim, and afterwards by purchase, two sections of land, being about one-half prairie, and the other half timber. It was three miles from Champoeg, where Newell acquired the Donald Manson place, and became town proprietor. Here he has remained, engaged in farming, saw milling, and running a tile factory, performing his duties as a citizen, being known during the war period

as an unyielding union man, and occupying the responsible place during that time and later of County Judge of Marion County. He has had a family of thirteen children, eight of whom are now living. He has twenty-three grand-children. His life has been one of intense activity, and he has performed almost no end of hard physical work, and has borne heavy responsibilities.

He says, however, that the most intense and thrilling experiences of his life were during the season that he spent in California, and going to and returning from the mines. This was 1849. It is worthy of the most careful record, being remembered to the most minute details by Mr. Case, and affording a chapter in human experience seldom equalled. It also shows the moulding influences brought to bear upon Oregon men, who showed themselves as perhaps of the firmest fibre to be found on the Pacific slope in 1849; which is saying a great deal. It deserves to be told in the language of Mr. Case himself, and perhaps it will be. But for some reasons it will be proper to give these recollections in a somewhat condensed form, as in their entirety, as told by himself, they would compose a volume. Indeed, in his rapid and energetic conversation, with which only the most experienced stenographer could keep pace, it required him four hours to tell the whole thing—even omitting many of the details that he remembers. However, it is only an idle thought or wish to imagine that what men were years in living in the fastest period of Pacific Coast history, can ever be told in full or the life itself be reproduced. There are distinct parts to his narrative. The Voyage; the Oregon Miner's Vengeance; and The Return Overland.

THE VOYAGE.

News of the discovery of gold in 1848 was first brought to Oregon by an Oregonian by the name of Barnard. Marshall was building a mill, as is well known, for Sutter, on the American River, and after allowing the water to run through the tail ditch to sluice it out, examined the bed, as the water was again shut off, and found at the bottom of the ditch many little yellow rocks, which were highly polished and very heavy. Not being acquainted with gold, which he had an idea occurred in native form only as dust, not as nuggets, he tried pounding out one of the little yellow rocks—which instead of crumbling under the hammer, was flattened finally to the size of a saucer, and of course was made very thin. Even then, however, the true nature of the rock was not suspected; and it was not known that it was gold until Marshall had word from the United States' Assay Office at San Francisco to which he had sent a small collection of nuggets to the value, however, of \$1,000.

By this news, Barnard, the Oregonian, was incited to return home and tell his neighbors. But at San Francisco he was detained two months, being positively refused passage on the ships for the Columbia. He believed that he was purposely hindered by parties who wished to go to Oregon and buy up all the provisions, tools, etc., to be had here, at low prices, and to sell them at San Francisco at a great advance. Finally he got a ship, and reaching Oregon late in August, the news was published, and the Oregonians, many of them just returning from the Cayuse war, formed a company, and that season broke and completed the first wagon road to California, taking the high table-land route by way of Klamath Lake, Lost Lake, the lava beds, and across the Pitt River Valley far to the eastward of Mount Shasta—or Shasta Butte, as called by the old pioneers. Mr. Case was not ready to

go with the overland party, but found passage on the bark Anita, which sailed from the Columbia the middle of February. There was a large crowd of men on board, considering the size of the ship, being sixty-six in number, and the quarters were very narrow, 12 x 20 feet, and the ceiling being only 5 feet high, with two tiers of berths arranged around the sides of the apartment. The voyage, moreover, was long and tedious. As the crossing of the Columbia bar was made, with a stiff wind, Mr. Case was reminded by the breakers as they ran and tossed and finally broke upon the rocks of Cape Disappointment, of the herds of buffaloes that thundered over the plains—the movement of the waves seeming about equally swift and tumultuous. But the wind soon stiffened to a gale, the bark put to sea, and land was lost to sight; and the storm did not at last abate until they were far off the coast to the west of Vancouver Island. Then, however, with a west or north wind, that was bitterly cold, the voyage was made down to the latitude of San Francisco, but in constant storms of snow, frequently sufficient to leave as much as a foot of the article on deck over one night. When at last the clouds dispersed and a fair west wind blew, and the skies were again clear, the entire sweep of the horizon appeared as one world of water, except that far to the northeast, the very tip of Shasta, white and glittering, just jutted out of the sea. It was then seventeen hours sailing before the shore appeared in sight. Then the Golden Gate was reached and passed, and the voyage was over. It occupied a month. Sailing to Sacramento and proceeding thence to Coloma, Mr. Case, being a mechanic, found employment at such good prices as to detain him from the mines. But the season proved to be one of excitement during which even bloodshed occurred; and Mr. Case was forced to play an important part in the program.

THE COLUMBIA RIVER MEN'S VENGEANCE.

Very soon after reaching Coloma, Mr. Case found that the community was in a broil. No open troubles had yet occurred, but there were causes of exasperation which were working rapidly to a climax. It was due primarily to a difference in system and ideas between the various elements of the people then in California. It was in fact a part of the final clash between the old Spanish system and the American; the beneficiaries of the Spanish system, or *Grandeos*, being on one side, and on the other the Oregonians, representing the American idea. It was proved in the event that men who could establish an independent government in Oregon, and were able to compel the obedience of the Cayuse Indians, were able also to make in California a deep impression for their idea of liberty. The disturbed, or rather the entirely unorganized condition of government in California, made possible the following course of events. The military government of this territory, just taken from Mexico, had not given place to a civil organization, and it was not thoroughly known what authorities were in power. Sutter had received a large grant of land, and with this was coupled certain power to enforce justice among the Indians, and he was recognized as a sort of justice of the peace; but this was of very limited extent, and there was no central authority in the whole state, unless military.

California was occupied originally by men who had received great land grants, some of which were as much as six leagues square. These men were at first Spanish-Americans, who were thus rewarded for government services. They formed a sort of nobility or aristocracy, and held their places like the baronies or counties of the old world, and their possessions were frequently of the dimensions of a county. Their ranches were on an average

about twenty-five miles apart, and the ranges between were stocked with great bands of cattle. The Indians, a mild and inoffensive people, were employed as laborers and cattle drivers by the Spanish-Americans, and a genuine European feudal system was in force. The first Americans (or Germans, or English) who went to California acquired some of these ranches, and continued the Mexican system. Only they employed it with characteristic American energy, and pushed it to a much greater extreme. With the discovery of gold and the opening of the mines, a prospect of vast profits appeared to the early Californians, who were English, or American, or German; and their first intention was to work the mines in the same manner that they worked their ranches—by the labor of the native Indian, or by importation of Mexican debtors, who could be procured very cheap. It was still the law in Mexico to put debtors in prison on the complaint of their creditors, and they could be held until the debt was paid, and the debtor himself failing in this, his son could be held. Many of these debtors were imprisoned for but trifling sums, and upon settlement with the creditors, could be practically bought by other parties almost like slaves, the purchase of the debt giving the right to hold the debtor. Hundreds of Mexicans were thus procured and sent to the mines, at a cost in some cases of but a few dollars to the purchasers, and contracted to work for some trifling sum, often not over twenty-five cents a day, in washing gold. Contract labor from Chili (W. M. C.) was also obtained, and it was estimated that by the mid-summer of 1849 as many as five thousand such laborers were at work on the California placers.

But the original traders were making even more profit by trade with the contract laborers, or with the Indians who were employed to wash gold, the Indian women doing such work along with the men. When they had a

little dust their natural fondness for finery was stimulated, and cheap and gaudy articles, such as shawls and shirts, were sold for dust. But the dust that was brought by the Indians was balanced by the shrewd trader with a weight which was the Mexican silver dollar, weighing just an ounce, with whose value the Indians were well acquainted. By this method of reckoning, the gold was valued the same as the silver. A shirt, for instance, which was marked to begin with at the regular price of \$3, was bought with a balance of three silver dollars in gold dust, making \$48 in actual value. Indeed the amount of dust obtained of the Indians for some of the articles was truly "fabulous." Mr. Case recalls that a certain shawl of unusually magnificent pattern and blinding colors, which cost the trader but \$1.50, was bought by an Indian chief for his favorite daughter for \$1,500 worth of dust.

Into this flourishing condition of things the Oregonians, or Columbia River men, as they were called, entered in 1849. The most of them went into the mines, but there were some who quickly saw that there was more profit in trading with the Indians than in digging the gold. Consequently they began setting up stores, and bought and sold goods. Competition thus began. The price of a shirt, a standard article, was forced down to \$2, that is, to two ounces of dust; and then to one ounce, and even lower. By this operation the old traders, such as Weimer and Besters, of Coloma, and Marshall, and even Sutter, were offended, as it soon became apparent to those who were intending to operate the mines on the medieval Spanish system, and by the employment of Indians and contract labor, that their whole system of trade and business was in danger of collapsing. Mr. Case is confident that the Indians were then incited against the Columbia River men, that they were told that the people from Oregon

were intruders and had no business there, and were taking gold that belonged to themselves. At all events, mysterious murders began to take place in the mountains and along the mining streams. This was not greatly noticed at first, but as one after another fell and it began to be asked who was killed, it became plain that in every case the victim was a Columbia River man. The authorities, such as they were, gave the subject no attention. Sutter himself, acting as a justice of the district under his old concession, showed no concern; and the Californians, among whom were such traders as Weimer and Besters, Winters, Marshall and others, when asked for their explanation, replied that these murders were evidently committed by the Oregonians themselves; they were old trappers and mountain men of the most desperate character, and they were undoubtedly murdering and robbing one another. This the Oregonians knew to be false, and that it should be said created a presumption in their minds that the California traders were inciting the Indians to cut off the Columbia River men. This suspicion led them to talk quietly to one another and to consider what should be done. Finally a little band of about thirteen in number was organized quite secretly, and of this Mr. Case, as one of the most intelligent, was chosen virtual leader. In this band of Oregonians was Fleming Hill (usually called Flem), and Greenwood, a half-breed Crow Indian.

Affairs were brought to a crisis at last by the murder of six Oregonians, all on one bar. The first that Case heard of the affair was at the house of Besters, where he was boarding while he was working upon a building. Besters, coming in late to supper, was in great glee, saying that he had taken in \$2,500 that afternoon from the Indians. The news of the murder of the six Columbia River men was soon abroad, and it seemed impossible but that the murderers were the Indians who had brought

the dust. This was the conclusion at which the Oregonians arrived, but they would not proceed until full evidence had been procured. Meeting Hill, as if casually, on the streets of Coloma, Case told him to take the thirteen men and find and follow the trail of the murderers, whom he felt certain were the Indians of the tribe in the vicinity, belonging to that very valley, and not a distant tribe from the mountains. A circumstance favoring such a conclusion was the fact that the tribe in the valley numbered over a hundred; but those who had come in to trade at Weimer and Bester's store were only about twenty-five. The rest of the tribe, it was apparent to those acquainted with the Indians, had struck off in a body to make a trail to the mountains, to lead off suspicion, and would return, singly or in small groups, to their homes.

Case himself continued working as usual at Coloma, as it was very necessary that some one be at that point to watch the progress of affairs. He soon discovered, however, that there was a spy on him, an Indian employed at the sawmill of a Californian, Mr. Winters.

At the end of several days Hill appeared again in town. Seeing him while he was working upon the roof, Mr. Case contrived to meet him as soon as possible, and inquired what had been discovered. Hill replied, "We found various tracks from the pit where the six miners who had been killed and stripped were buried. These, taking across the river, then made one plain, broad trail out to the mountains. We followed this for two days, when it suddenly disappeared, scattering in all directions, and could be followed no longer." "Then they are not mountain Indians," said Case; "they belong right here in this valley."

This brought the Oregonians decisively to what was to be done; whether to tell their discoveries to the Califor-

nians, or Sutter, or to take vengeance into their own hands. The former course seemed entirely useless, as they felt sure that the Californians knew enough of the affair already, and had decided to let the Oregonians take care of themselves. Confirmation of the guilt of the Indians, if any were needed, was found in the report of an American who kept a horse ranch at some distance from town. He had, shortly before, seen a large number of Indians coming down the mountain side on foot, and dispersed in separate groups, and not in single file, as he had always observed them before. They were evidently that part of the band who had led a trail off to the mountains, returning home. The Oregonians concluded, therefore, that the only way to put an end to the murders was to proceed precisely as they would out on the plains; that is, make war on the Indians irrespective of the California authorities and wipe out the tribe, if that was necessary. This was accordingly done. The tribe was found and surprised by the band of thirteen armed Oregonians. Twenty-six of the Indians were killed on the instant. No women were shot, however, though they fought the same as the men. They and six men surrendered. Greenwood shouted as the blow was struck, "Now, this is what you get for killing Columbia River men."

After the surrender, the Indian women began weeping and wailing in a manner truly heart-rending over the bodies of their dead husbands and fathers; but they acknowledged that the punishment was just, as they had killed the Columbia River men. But they pleaded that they were told to do it, which, if true, cannot but create a feeling of sympathy for them, the unfortunate dupes. After the slaughter and surrender, Hill mounted his horse and rode to Coloma, and the six Indian men were hurried after under a guard, and the women and children were

driven after these by the rest of the thirteen Oregonians. It was 4 o'clock when Hill arrived. The six Indians were but a short distance behind, and hardly had been placed in prison, together with the Indian spy, at Winter's mill, who was owned as a leading partner in the crime, when the remnant of the tribe, on the run, with the Oregonians galloping behind them, came into town. It was a burning day, the mercury standing at 106° in the shade, but the distance from the scene of the slaughter, forty miles, had been covered since 11 o'clock that forenoon. The town was excited beyond measure. Men and boys to the number of hundreds gathered in a circle about the Oregonians, who drove the tribe to the shelter of a spreading pine tree, in whose shade they lay stretched on the ground. There was great complaint and deep mutterings on the part of the Californians, who said, "See what you have done! We can stay here no longer. There are eighty thousand Indians in California, and now they will drive every white man from the mines." So great indeed was the terror, that many new arrivals just up the river from San Francisco, coming to the mines from the east, turned around immediately and left. Others were scarcely dissuaded by the Oregonians themselves, or those who took their part, who declared that the trouble was now ended, if all stood together. However, it required great firmness on the part of the Columbia River men. Sutter, to whom word was sent asking if he would try the seven Indians in prison, replied that he had better not, as he could do nothing but release the men who had been captured by the murderers from Oregon. With this message from the civil authority, such as it was, the Oregonians proceeded to try the Indians themselves, disregarding Sutter entirely. But just as the Indians were being taken from prison, and were in the midst of a thick crowd of spectators, the one known as the spy made a sudden shout,

and all the seven droppod on the instant to the ground and began wriggling on all fours between the legs of the astonished bystanders; the Oregon guard instantly attempted to shoot them—which created a scene of strange and almost ludicrous excitement. Two were shot at once; two were shot after they left the crowd; the other two reached the river and began swimming away, and one of these was shot as he rose on the opposite side of the stream. What became of the seventh was not known.

The women and children were of course released, but with the warning that no Indian should again work on the bars. But this did not end the trouble. Another Oregonian was killed. The Oregonians again took the warpath, with the intention of killing all the savages they saw. One was soon found and dispatched. Eleven were next found and pursued to the cabin of an English rancher named Goff, who at first made no response to their summons at his door. But as the boys began picking the mud chinking out of the logs, and threatened to fire into the room, he opened the house and delivered the Indians, who were then immediately hanged. The tribe was then traced, and although taking refuge in the tules of a swamp of a marshy lake, were attacked by the guards on horseback, and all the men, and one woman, who was fighting with the men, were killed—making in all seventy-six of the tribe that fell, the Oregonians having lost by secret murder thirty-three. The women and children were again brought back by the Oregonians to Coloma, and were furnished by them with provisions and pans, and were allowed to wash gold and support themselves. But they secretly took their leave, and were found at length in a distant canyon of the high mountains, at the limit of snow, nearly starved, but subsisting on pine nuts and the roots of wild clover, gathered by a few old men in a lower valley. It was a man named Smith who traced

them, as among the tribe were his Indian wife and child. They were again induced to return to Coloma, and now in a pitiable condition, Californians injudiciously sent them a large supply of beef and flour—a sort of food to which they were unaccustomed, and of which they ate so greedily as to induce a virulent disease, of which fifty-two died, practically exterminating the tribe.

This was Rocky Mountain men's justice that was thus dealt out in the California mines, and of the same piece as that of the Cayuse war, or that of the general Indian war of 1855-56.

It was rough and terrible, and the Indians were the victims ; but the old California system was the real cause. The attempt was made to work the mines upon a system of inequality—of proprietors and peons. The Oregonians, accustomed to a system of equality, finding themselves exposed to outlawry, and not protected from the poor savagery of the Indians, struck as they could. It is to be remembered, too, that the secret murder of thirty-two men, without any attempt at meting out justice, was an enormity that no community should brook. But that it was not mere personal vengeance, but the purpose to establish the system of free labor, and to root out the contract system, or rather the peon system, was shown by the following :

At length Case decided to go up into the mines when affairs were at last settled, and the men were working without trouble or danger ; he had fallen in with a certain Major Whiting, an American by birth, who had, however, been living in Mexico, and had even served in the Mexican army against the United States. This Mexican officer was now bringing up from that region a long mule train of provisions and a company of peons whom he had taken from prison at a cost to himself on the average of but \$2 each, and had contracted with them to work for him at

eighteen cents a day. Case reached the mines before him. When Whiting arrived he called upon Case first of all to ask what was the intention of the Oregon miners about allowing his debtors to work upon the bars. Case replied, "I speak only for myself ; but I am opposed to it." Whiting then asked him to call a meeting to determine the opinion of the miners. Case complied. Mr. Finley of Oregon City happened to be chosen chairman of this meeting, and a young man named ———, secretary. The call had been made most literally by Case's getting up upon a high rock and shouting so as to be heard all over the canyon, and then those that came first raised such a cry that it could be heard for a distance of two miles up and down, and a pistol was also fired. At such a summons, of course, the miners came to the camp in great numbers, and upon the object of the meeting being announced, resolutions were passed unanimously to allow no working of the mines except by those who were American citizens and intended to remain in the United States ; thus forbidding those who were not citizens or who came simply to work and then return to foreign homes. In the face of this decision, Whiting, of course, was obliged to leave, having no inclination to meet the Oregon riflemen ; and took his Mexican debtors along with him. When Case came to inform him of the action of the meeting he showed the utmost coldness, refusing to speak except to say that he knew their action already, having been present. This resolution of the miners, backed by their reputation acquired as dead-shots and no let-up, not only decided Major Whiting to leave, but those very same resolutions forwarded to the military governor, Smith, were issued by him as a proclamation. He believed that this was the only way to restore and maintain order in the mines, the will of the mountain men not being safely disregarded. A national spirit and a certain primary justice also re-

quired that American mines and privileges for which many millions of dollars had been paid to Mexico should be preserved to American citizens and worked for the benefit of this country, and not be turned over to the speculators and contractors of the whole world.

By this proclamation the Mexican and Chelano peons were required to return to their own country. The system of equality which the Oregonians rudely, but rightly represented, was established. Thousands of miners in California who never heard of this little contest which was worked out principally by a few rugged young mountain men from Oregon, began to enjoy thenceforth the free and equal opportunity of the California mines, and California thus became Americanized, and in the end a great free state. The influence of Oregon, therefore, cannot be disregarded—although the actions of the Oregon men at the time created intense feeling against themselves, and Mr. Case considers this the source of the still persistent dislike of Oregon shown by Californians; which has hardened into a sort of tradition.

RETURN HOME.

The journey overland from the Sacramento up to the Willamette was, in 1849, one long adventure; and, on three hundred miles of the distance, that of no peaceful kind. Case had had enough of sea voyaging in going to California, and when, in the early fall, he counted over his earnings, amounting to about \$2,800, he said that he would go home by land. The Indians of Northern California and Southern Oregon were hostile, being declared enemies to the whites. The Oregon men had, during the previous autumn, built a road through, making a long detour from the Rogue River Valley to the borders of Klamath Lake by the old Applegate route, and thence by

Lost River and Lake, the Lava Beds, and the long plateau east of Mount Shasta, to Pitt River, and then two hundred miles across the chain of the Sierra Nevada Mountains to the Sacramento. The Indians of this region had ever been of the wildest and most warlike character, regarding white men as natural enemies. The famous Modocs were a remnant of one of these tribes. The large party of the Oregonians who had passed through the previous year had, to quite an extent, overawed the natives, especially in the Pitt River Valley. The party of Case consisted of only eight men, himself being chosen captain, and they carried some \$28,000 worth of dust.

Over the mountains, from the Sacramento to the Pitt River Valley, a distance of some two hundred miles, and through the Pitt River Valley, they proceeded in a leisurely manner, allowing their horses to graze at will upon the wild pea vines that grew luxuriously, and thus kept them thriving. A large number of travelers were met on the way, going to the mines, among whom was a party of strict Presbyterians from Springfield, Illinois, who always rested on the Sabbaths. It was almost universally taken by new travelers of that road that the Pitt River Valley was the main Sacramento, and they were loth to strike over the mountains as the way required.

Later upon the journey, Major Warner was fallen in with, having a party of one hundred soldiers, mostly Irishmen. With this officer pleasant conversations were held. He expressed his surprise that Case should try to go through the Indian country with but eight men, while he felt unsafe with his one hundred. But Case replied that his party was the best. They all knew the Indians were like snapping dogs, that would snap and run, while Warner's men knew nothing of Indians. The event proved only too truly Case's estimate. Warner with his one hundred men were subsequently attacked and all

were destroyed (W. M. C.). Warner also had imbibed the California idea of Oregon. He once remarked to Case, "I understand that Oregon can never be an agricultural section." "Why?" asked Case. "The valleys are too narrow. I am told that there are few over a thousand yards wide—that gives no room for ranches." "The Willamette Valley" said Case, "where I live is forty miles across, not counting the foothills. That gives room for ranches."

Emerging finally out of the Pitt River Valley and entering upon the great plateau east of Shasta Butte, Case's little party traveled so near the snow of the mountain region, and it was now late September, that the snowbanks seemed no higher above them than the tops of the trees. They were coming to the Modoc country, and the lava beds. These last were a great curiosity; the natural forts made by boiling and finally subsiding little craters of not over an acre in area, and looking so much like fortifications that many took them for the work of Indians, especially attracted attention. Here began the forced marches. For three nights and four days Case slept not a wink, and the distance covered during that time was about three hundred miles. Skirting the marshy shores of Lost Lake, where Lost River disappears, and the water is so stained with ochre as to be a deep red; and finally crossing the natural bridge, or causeway, and coming to the Klamath Basin; and crossing the Klamath River where there is a series of three low falls of about two feet high each, over some flat tabular rock formations—they finally reached the dangerous Indian country of the Rogue River. Here occurred one of the strangest Indian fights. Mr. Case's party was not concerned in this, but was a few hours behind; yet enjoyed the results of the victory. The road at a certain point skirted along a bluff where there were many crevices and natural hiding places, and

below the road ran the river. The wagon-way here was only just about wide enough for one vehicle to pass. This was a natural place for the Indians to ambush a passing party, and Case and his comrades would no doubt have suffered and probably have been cut off entirely, if it had not been that just before they reached this place, two other parties were passing, one on the way to California and the other but a few hours ahead of Case going to Oregon. The Oregon party was that of Robert Newell, consisting of thirty men, for California. As he came to this dangerous point, about four or five o'clock in the afternoon, Newell discovered that there were Indians in the crevices of the rock ready to attack him. With the capacity of a general, he divided his force so as to command the situation. Five of his men he sent forward so as to attract the Indians' attention along the road and to draw their fire, but still to keep out of reach. A reserve of seven he stationed under cover; and in the meantime he detailed the eighteen others to pass under the shelter of the wild plum bushes that skirted the river and faced the bluff, and under this shelter to creep up into the very midst of the Indians, select their men and shoot them down instantly—which would surprise and stampede the savages, and is the true way, so says Mr. Case, to fight the Indians.

This manouvre was executed with perfect success. The eighteen men that crept up through the brush succeeded in falling upon the Indians in the rocks, and were shooting them down before their presence was discovered; and the Indians, surprised and confused, seeing white men in front and in their midst, rushed out of their hiding places and began retreating along the face of the bluff. But just at this time the party from California, under Weston and Howard, arrived from the other direction, and hearing

the firing, hurried forward, and seeing the Indians pouring out of the rocks, began discharging their rifles upon them. By this the savages were entirely demoralized. The only space left was the river itself, and into its tumultuous current they began to precipitate themselves, the miners still firing upon them as they struggled in the water, until the river ran red. The slaughter must have been very great. Yet of all this, though but a few miles away, Case knew nothing. He placed his camp for the night in a sink, so that any Indians creeping up must be seen, and kept guard himself, with his ear to the ground, so as to hear any stealthy steps approaching. He saw or heard nothing. Nevertheless, the next morning, when one of his men went to the river for water, he reported upon his return that there were the footprints of as many as five hundred Indians upon the sand bar of the river, where the night before there were none to be seen. This, Case found to be about so, and with hands on the trigger, and hearts ready for anything, the little company started out, expecting an ambushade at any moment. Case's advice to his men was, "If we are attacked, keep close together. If you divide up, we are lost." But they had not gone far before they heard a shot, and soon were greeted by the advance of Newell's men; and the next moment were met by Newell himself, who told them of the fight, and that the country was full of hostile Indians; but Weston and Howard were not far ahead, and the best thing for them was to shove forward and overtake them. Accordingly, Case shoved forward, passing hour after hour in the depths of the canyons, and hearing almost continually the Indians calling to one another from the mountains—now on this side and now on that. But still they were not attacked. They were often upon the trail of the white men, but they, too, were shoving ahead, and not until the Rogue River Valley was passed and the

Umpqua reached, was Weston's party overtaken. The junction was made early in the morning. The night before, Mr. Case, although for the third night without sleep, kept guard, and at about 2 o'clock A. M. heard a dog baying not over a quarter of a mile away. He knew this indicated the white men's camp, and in fact recognized the dog. Very cautiously approaching the camp, for fear of being mistaken for Indians, and being fired upon, the little party advanced and were recognized. Then the peril was over. The rest of the journey was made more deliberately, but though now relieved of guard duty, Mr. Case felt sleepless, and scarcely rested until some days had passed.

THE NUMBER AND CONDITION OF THE NATIVE RACE IN OREGON WHEN FIRST SEEN BY WHITE MEN.

The first estimates we have of the number of the native race in the valley of the Columbia were by Lewis and Clark, who gained their information while exploring the river from its sources in the Rocky Mountains to the Pacific Ocean. Based upon information derived from the natives, their estimate was forty thousand. This was in 1805-6.

Forty years later, Rev. C. G. Nicolay, of King's College, Oxford, and member of the Royal Geographical Society of London, writing in support of England's right to the country created by the assumed moral benefits to the natives effected by the trade influences of the Hudson's Bay Company—and, doubtless, with all the information that company could furnish—estimated the number at thirty thousand, including all the country from the California line north to $54^{\circ} 40'$. Noting that the second estimate is for the wider bounds, and yet twenty-five per cent. less, the numbers seem strongly to indicate that the native race was rapidly decreasing between the dates mentioned.

In looking for the causes of this decrease of population of the native race, we find at the outset diseases common to, but not very destructive to civilized life, are, nevertheless, terrible in their effects on people living so near the plane of mere animal life as were the natives of Oregon—especially those of them in the largest valleys, and near the sea,—when first seen by white men. The first American explorers received information from the

Clatsop tribe of Indians during their stay near them in the winter of 1805-6, that some time previous to that a malady had been brought to them from the sea, which caused the death of many of their people. As they reached the Lower Willamette Valley, on their return eastward, they found living evidence that the malady had been smallpox, and the remains of capacious houses within the district—now covered, or being rapidly covered, by the white race,—which indicated that the disease had swept out of existence, or caused to flee the locality, large numbers of the natives. A woman was seen by Captain Clark in the company of an old man, presumably her father, sole occupants of a building two hundred and twenty-five feet long and thirty feet wide, under one roof, and divided by narrow alleys or partitions into rooms thirty feet square. Other buildings, empty or in ruins, were found near this. This woman was badly marked with smallpox; and from her apparent age, and information the old man endeavored to convey, this disease had killed many people and frightened others away about thirty years previously.

Information received from natives by signs cannot be deemed reliable; but no writing can be plainer than the human face marked by smallpox. We have, then, from the journal of Lewis and Clark, traditional information from the Clatsop natives, and in the appearance of this woman—presumably of the Multnomah tribe—evidence of the presence of smallpox one hundred miles in the interior; and fifty years later we have from the Yakima chieftain, Kamiakin, at the Walla Walla council held by Gov. I. I. Stevens, intimations that the suffering of his people from smallpox in former times was one reason for his objection to whites' settling in his country.

Whatever truth there may be in these earlier traditions of the natives, the rapid decrease of the tribes on the

Lower Columbia and in the Willamette Valley, between 1805 and 1845, and the decaying condition of those found here at the latter date, are facts which cannot be called in question. Those writers who are predisposed to blame the white man for all the results of the commercial and social contact between the races will see only the fearful and repulsive effects upon the ignorant native—supposed to be innocent—of drunkenness and debauchery, which the white man's avaricious trade and licentiousness ministered to. While, beyond question, these were destructive agencies, they, in my judgment, never were but a small moiety of the cause of the general decay of the race west of the Cascade and Sierra Nevada ranges, from Alaska to Lower California. As to the licentious intercourse between the sexes, the natives were ready and sought opportunity to participate in the destructive commerce. And their customs, which were their only laws, left womanhood—especially widowhood—an outcast, where she was not held as a slave. It was a fact well known to pioneers yet living that a woman of bright, kindly disposition, of natural intelligence, which made her a natural leader of her sex, who was in 1840 the honored wife of the chief of one of the strongest coast tribes, and as such styled a queen by some writers, was in 1845 a leader and guide of native prostitutes, who watched and followed ships entering the Columbia from the time they crossed the bar in until they crossed out. And between opportunities of this kind, she went from camp to camp of white settlers on the Lower Columbia, thus seeking trade without the least sign of shame. The customs and usages of the race, for which the leading men were responsible, debar us of any just right to hold native womanhood responsible for a social system which deemed a female child the best trading property—valued high or low according to the status of the male portion

of her family. The husband bought his wife, and might, where she did not suit, send her back to her people and claim a return of the property given for her, ostensibly as presents.¹ This, if her family had any pride or courage, would probably lead to trouble. A native husband could dispose of an unsatisfactory wife. He could kill her by personal ill-usage,² or keep her to labor for means to purchase and support another wife, or as many more as his means and desires induced him to buy.³

¹ This custom of purchasing wives seems to have extended through many of the interior tribes, and amongst some the privilege seems not to have been confined to the men. It is related of a large war party of Sioux who, near Independence Rock, in 1842, found Messrs. Hastings and Lovejoy, and good humoredly gave them up to their fellow travelers, taking a small present of tobacco as ransom; that, seeing a grown daughter of one of the few white families of the Oregon immigrants, they came repeatedly in increased numbers to look at her, until her father was annoyed and indignant at their visits, and wrathful and threatening when he learned that the brawny braves desired to purchase the girl to give her as a present to their war chief. These grown up children of nature went off like gentlemen when informed by one who knew their customs that it was not a custom of white fathers, or the white people, to sell their daughters. [Matthieu's *Reminiscences*, Vol. I, No. 1, Quarterly of the Ore. Hist. Soc.] In 1844, while William's train lay over one day at Fort Laramie, for trade purposes, in close neighborhood to the tepees of a considerable camp of Sioux, three female members of the tribe visited the camp of R. W. Morrison, captain of one of the companies into which the train of eighty-four wagons was divided. The captain had two assistants, and the Sioux women seemed to conclude that Mrs. Morrison was blessed with three husbands. Their proposition, made by signs by the two elder women, was that the third, apparently a widow, though young, was willing to give six horses for one of the younger men. It took Mrs. Morrison and the choice of the young widow some time to convince her two friends that they had made a mistake, and they departed with all outward signs of sadness over the failure of their mission. These proposals to secure connubial happiness by purchase were made, one four and the other two years, before Francis Parkman, Jr., arrived at Laramie to join a Sioux camp in order to get material for his Oregon and California Trail.

² Late in 1844, Katata, Chief of the Clatsop Tribe, murdered his youngest wife, then but recently espoused from a leading family of the Chinooks. The latter made war upon him for the act. J. L. Parrish, in charge of the Methodist mission at the time, refused Katata his hand after learning of his deed. The brutal chief made an effort to be revenged for what he deemed an insult, but failed in his attempt.

³ The kind of chivalry the system bred was illustrated by Chief Chenowith, supposed instigator of the Cascades massacre in 1855, who was tried and condemned for fighting with the Klickitats and Yakimas. "He offered ten horses, two squaws, and a little something to every tyee, of (for) his life, boasting that he was not afraid of death, but was afraid of the grave in the ground."—[L. W. Coe in *Native Son Magazine* for February, 1900. Mr. Coe acted as interpreter at the execution].

The general relations between the husband and wife among the native races in Western Oregon were that the husband should kill the game or catch the fish, as the subsistence was from game or fish. The dressing of skins for clothing, the weaving of rush mats for camp covers or for beds, the preparation of cedar bark for clothing, nets and ropes, and the digging of roots, gathering of berries, etc., were all left to the wife and the slaves at her command, if there were any. The husband and wife seemed to have separate property rights as to themselves, and on the death of either the most valuable of it, and often all of it, was sacrificed to the manes of the dead. Sometimes living slaves were bound and placed near the dead body of a person of importance in the tribe.⁴

Under this custom, when a leading man like Chenamus, Chief of the Chinooks, died, the body was carefully swathed in cedar bark wrappings; his war canoe or barge of state was used as his coffin, and his second best canoe, if he had two, was inverted and placed over the body as a defense against the weather or wild beasts; a small hole was made in the lower canoe and it was placed in a slanting position to facilitate complete drainage. No money reward would induce an Indian of the Lower Columbia to enter and labor in a canoe that had been thus used for the dead. Thus the best and generally all the property worth notice was rendered useless to the living. The wife in such a case might be owner of slaves in her own right, or of a *business canoe*, and in

⁴In 1844 the Chief of the Wascopams died at The Dalles, and was succeeded by his brother, who was somewhat under the influence of Rev. Alvan Waller, of the Methodist Episcopal mission there. A young slave boy was bound and secured in the dead house with the body of the dead chief, in accordance with the customs of the tribe. Mr. Waller continued pleading for the release of the boy for three days and got the new chief's consent to take the boy out of his horrible situation on condition that it be done secretly and the boy taken away, so that the people of the tribe would never see him. He was taken to Mr. J. L. Parrish, at Clatsop mission, and remained a member of his family till, in 1849, he went to the California gold mines.

some cases of a small canoe used on the Lower Columbia root gathering, or by the husband or sons in hunting water fowl. Such a wife becoming a widow—supposing her dead husband a chief, succeeded by a son by another of his wives, or by a brother, unfriendly and jealous of her influence,—would not be a totally helpless outcast. She would have the means of gathering her own subsistence. This, however, was above the common lot of native widows. The same custom of destroying the property of the dead prevailed amongst natives of the Willamette Valley when the American home builders first came; and it was a common sight to come upon a recently made grave and scare the buzzards or coyotes from feasting on carcasses of horses slain to the departed, the grave itself being indicated by the cooking utensils and tawdry personal adornments of the deceased. Under this custom there was no property left for distribution by the average native. A chief, living with thrifty care for his family, might leave slaves to be divided among his sons or daughters, as some few did, but often when the heirs were sons or daughters of different mothers bitter family feuds were a natural result, and the law of might decided. There was no marriage record, no law to distribute fairly what might justly belong to the widow and the fatherless, no individual ownership of land, no definite boundaries to districts claimed by tribes. Thus the whole polity of the native race here limited the exertions of the people to seeking a present subsistence, or, at the most, enough to tide them over from one season to another. Diversity of seasons has a much more intimate relation to the food supply of the wild life than to a people who have arrived at the agricultural stage of evolution. Many wild animals and feathered game have sufficient of the instinct of the passenger pigeon and squirrel of the Atlantic seaboard to induce them to migrate from districts in which

their food fails as a result of untoward seasons and go to others where there is plenty.⁵ The native tribes west of the Cascade Range could not do that, and therefore must have often been reduced in numbers by bad seasons, before they were known to the white race.

The condition of the natives as to surplus food and the scarcity of large game in the Columbia Valley, as found by Lewis and Clark, shows that the normal season left the then population little they could spare. The party may be said to have run a gauntlet against starvation in their journey from the Rocky Mountains to the mouth of the Columbia. They saw few deer, and no antelope or elk. Salmon and dogs were their chief purchases from the Indians, and they ate of the latter till some of the men got to prefer dog flesh to venison. The salmon grew rancid and mouldy under the influence of the warm wet winter, and made the men sick. Their hunters, in what was forty years later the best elk range in Oregon, often failed to meet their daily wants, and sometimes killed their game so far from camp that it spoiled in the woods. So that when they learned that a whale had been thrown on the beach, at the mouth of the Nehalem, they went thirty miles, and with difficulty succeeded in the purchase of three hundred pounds of whale blubber.

They stayed at their winter camp until the latter part of March, 1806. The game had left their vicinity; they exhausted the surplus of the Indians near them, so they started on their return journey in order to reach the Cho-pannish "Nation," with whom they had left their horses,

⁵The writer has observed this instinct manifested one season by wild ducks. The oak trees in the vicinity of his residence south of Salem, of which there were considerable areas, bore a heavy crop of acorns. The wild ducks by some means found it out, and must have by some means informed each other, as the flocks of them passing over my farm from a large beaver dam pond, where they rested at night, to their feeding grounds daily rapidly increased from day to day, and as rapidly decreased when the supply of acorns was consumed.

before the natives would leave for their spring hunt for buffalo east of the Rockies.

Under date of March 31, their journal reads: "Several parties were met descending the river in quest of food. They told us that they lived at the great rapids (the cascades), but the scarcity of provisions had induced them to come down in hopes of finding subsistence in the more fertile valley. All living at the rapids, as well as nations above, were in much distress for want of food, having consumed their winter's store of dried fish, and not expecting the return of the salmon before the next full moon—which would be on the second of May. This information was not a little embarrassing. From the falls (The Dalles) to the Chopannish Nation, the plains afforded neither deer, elk, nor antelope, for our subsistence. The horses were very poor at this season, and the dogs must be in the same condition, if their food, the dried fish, had failed." These considerations compelled the party to go into camp, and send out their hunters on both sides of the Columbia; from its north bank, opposite the quick sand (Sandy) river. Their purpose being to obtain meat enough to last them to where they had left their horses, and this they did, with the addition of some dogs and wapatos they were able to secure from the natives by hard bargaining. The eight days they thus delayed they used to good purpose. Captain Clark, acting on information by an Indian of the existence of a large river making in from the south, which they had passed and repassed without having seen it, because of a diamond shaped island lying across its mouth, hired an Indian guide, and returning down the south shore, penetrated the Multnomah (Lower Willamette), to near the present location of Linnton, and saw evidences in ruined buildings of a much denser population than then existed there, and in the two hundred and twenty-five foot building already men-

tioned, saw the woman marked by smallpox. Here, also, were met Clackamas and other Indians from the falls of the Willamette.

Elk, deer, and black bear were the large game their hunters killed. Some of the deer were extremely poor. They do not mention having seen flesh of any kind in the hands or camps of natives, much less a successful native hunter of such game.⁶ Neither do they mention seeing a horse west of the Cascade Range. The receiving of one sturgeon from a native is mentioned, and some dried anchovies (smelt). But the chief wealth of this richest part of the district—the most inviting to settlers in their estimation of any they had seen west of the Rocky Mountains, is the wapato—"the product of the numerous ponds in the interior of Wapato" (Sauvie's) Island. This was almost the sole staple article of commerce on the Columbia.

This bulb, the root of the arrowhead lily (*sagittaria variabilis*) is described by Lewis and Clark as "never out of season," and as being "gathered chiefly by the women, who employ for the purpose canoes from ten to fifteen feet long, about two feet wide, nine inches deep, and tapering from the middle. They are sufficient to contain a single person and several bushels of roots, yet so very light that a woman can carry them with ease. She takes it into a pond where the water is sometimes as high as the breast, and by means of her toes separates this bulb from the root, which, on being freed from the mud, immediately rises to the surface of the water and is thrown into the canoe. In this manner these patient

⁶The writer has had his home fifty-five years in the Willamette Valley, and has never seen or known of a native to kill a deer. He has known one spend a day hunting to kill five wood rats.

females will remain in the water for several hours, even in the dead of winter.''⁷

This first party of the white race, thirty-six in number, were thus detained eight days gathering a sufficiency of food to make it prudent to risk a journey of ten days through the heart of the great and fertile Columbia Valley, then so devoid of large game as to make it reasonable to assume that at some period not very remote from the time of their visit the population had slaughtered the elk, deer, and antelope, and driven the buffalo to the east side of the Rockies. The practice of large parties of the strongest tribes passing that backbone of the continent every summer to hunt this noblest of North American game is good presumptive evidence that it had at no remote period ranged in the valley of the Columbia. In 1806, then, we have the fact of a population, roughly estimated at forty thousand, ekeing out a hand-to-mouth living, from salmon chiefly, with the additions of woka kouse (wapato and camas),—the latter much the more generally distributed from the Pacific Ocean to the summit flats of the Rocky Mountains—by going across those mountains annually for game. They had, of course, to go in parties sufficiently strong for defense against the hated, dreaded and destructive Blackfeet. The taking of such journeys proves their necessity. The tribes unable through weakness or situation to make such expeditions, as were all those of Western and Southwestern Oregon, had to gather their precarious living from the plants mentioned, grass seeds, the small native fruits, of crab apple, haw, huckleberries, cranberries, etc. Looking over a recent report of the Division of Botany, United

⁷ This extract illustrates the condition of womanhood. Lewis and Clark write of the production of wapato in this locality as though it grew nowhere else; but it grew—yet grows—on the margins of ponds and bayous of most of the streams flowing into the Columbia west of the Cascades.

States Department of Agriculture—a contribution from the United States Herbarium, Vol. V, No. 2, by Frederick V. Coville—I find one hundred plants described as used by the Klamath Indians, forty-six of which—as seeds, fruits or roots—were used as food by that tribe. No effort has yet been made to enumerate all the kinds of flesh, fish, and insect life used by the native race for sustenance. Lewis and Clark found evidence that the coast native sometimes resorted to searching the beach for fish cast up by the tide. The tribes on the south bank of the Snake River, and southward, used to fire the high, arid plains, where possible, and collect the crickets and grasshoppers thus killed. As late as 1844 these insects were dried and made into a kind of pemmican by pestle and mortar. The Rogue River natives used the grasshopper meal as a delectable food as late as 1848, and as late as 1878 the writer saw the chief medicine man of the Calipooyas collecting in a large mining pan the tent caterpillars from the ash trees within four miles of Salem. He asserted most emphatically that they were “close muckamuck” (good food).

For years before and after the last mentioned date the writer knew Joseph Hudson (Pa-pe-a, his native name), the lineal chief of the Calipooyas, who signed the treaty of cession of the east side of the Willamette Valley to the United States. He was the only native of Western Oregon the writer ever talked with who seemed to comprehend, or care for, the consequences to the natives of the appropriation of ownership of the soil by the white race. He had judgment to perceive that the latter had agencies of power and of progress with which his people could not have coped, even at their best estate—which family tradition had handed down to him. This pointed to a time when his people had numbered eight thousand, as he estimated, at which time and later, to the time of his grandfather,

Chief San-de-am, *his people used the circle hunt*, driving the deer to a center agreed upon, by young men as runners, the point to drive to being selected as good cover to enable the bowmen to get close to the quarry. From him the information was gained as a family tradition that about 1818 eight men, carrying packs on their backs and coming from the north, reached his grandfather's village, near where the town of Jefferson now is. They were set across, and, going southward, they conveyed to other natives that they had crossed San-de-am's river. The whites shortened the name to Santiam, as they did Yam-il to Yamhill. These eight men returned after several months and brought the first horses the Calipooyas ever saw. They sold a mare and colt for forty-five beaver skins. Joe, as he was familiarly called, a man of truth and honor, could not but mourn the fate of his people. Being in a small way his banker for small loans (he working for me) I know he was kept poor by the general worthlessness of his tribe, as it was one of the functions of a Calipooya chief to help the weak and good for nothing members of his tribe. This man honestly performed any rough and common contract labor (he would never work for day wages), carrying his burden of sorrow for his people's condition to where the wicked and low can no longer trouble. The writer received from him many hints and plain statements as to the mental capacity or mode of reasoning of the native race. Custom led them to appeal to him in troubles resulting from drunken rows. A young dandy of the tribe, getting into the power of the law for knifing a woman in a camp fray, would appeal to Joe, as chief, for financial help, with no more sense of shame than an Irish landlord who had wasted his property in riotous living would have in spunging off his former tenants to a green old age. There are many people of the white race who cannot help being partici-

pants in the results of the change of racial dominion which has taken place on the North Pacific Slope within the past century. They feel they are participants in a gigantic act of robbery. A lady whose writings on any subject it is a delight to read, in the June number of the Quarterly of the Oregon Historical Society, shows the origin of land titles so far as the English race of men have made them. It would be an instructive addition to her able paper if some one, well read on the effects of guarded land titles in sufficient area to support family life on each allotment, would describe their influences upon a community so blessed.

Already enough has been said to indicate that prior to the visit of Lewis and Clark, the native race was in a condition of decline; that in a normal or average season a body of forty men, or less, found it difficult to avoid starvation while moving from place to place in a country estimated to contain forty thousand.

It may be admitted, because it is true though shameful, that the licentiousness of trade had sown the seeds accelerating the decay of the native race in Western Oregon, from the Columbia River to the Umpqua, and from its mouth to Fort Hall. Within these bounds, but especially near the chief lines of commerce, the missionary even had as much need of a medical book as he had of his bible, as far as the people he had come to guide in the way of life was concerned.

Abundant reason had Dr. John McLoughlin (that living copy of the great heart of Bunyan's matchless fancy) for giving welcome to the American missionaries. He knew the value of a clean mind or soul in keeping a clean and healthy body; though with a wise physican's care he kept the hospital at Vancouver open to any white sick, whom the resident doctor the Hudson's Bay Company maintained there recommended to it.

Doctor McLoughlin instituted the first hospital in Oregon for white people here prior to the overland immigration of family life from the Missouri border in 1843. The native race then were being removed rapidly by a disease they themselves called the "cold sick," which had raged among them from 1832. Some of the symptoms indicated a malarial cause, but quinine and other ague remedies had no effect upon the Indian sick. Like the plague now raging in India, it was confined, seemingly, entirely to the natives; also, almost entirely to the fishing villages on the large rivers. I have long had a theory which I confess being unable to give an intelligent reason for; that that plague had its origin in eating filth. The natives themselves found that to thrust their arrow points through the putrid liver of a deer or elk would enable them to kill their enemies by a slight wound by blood poison. Is it not, then, possible that eating putrid flesh, or fish—the garbage cast up by the tide,—the spent salmon from the river shore, or those wallowing in death throes on its surface, could not be done with impunity?

In times of famine the natives, on the sea coast and on the rivers, did eat such food; as the inland tribes, like the Klamaths, sometimes sustained life by eating black moss, and the bark of certain trees. These latter foods, however, were not putrid.

To support the theory that this cold sick plague, which began on the Lower Columbia in 1832, and which kept the wail for the dead sounding along its banks till 1844, may have originated in poisoned food, we have the statement of Lewis and Clark's journal that salmon pemmican which they purchased in quantity at The Dalles moulded, and made the men sick, in the damp and warm winter camp, near the sea. But, whatever the cause, the effect was to depopulate, or cause the abandonment of once populous villages.

In 1805, the central seat of the Multnomahs, near the east end of Wapato (Sauvie's) Island, had a population of "eight hundred souls" noted, "as the remains of a large nation," surrounded by kindred near-by tribes, aggregating two thousand two hundred and sixty souls. In 1845 the site was without human habitation. "The dead were there," in large numbers, swathed in cedar bark, and laid tier above tier on constructions of cedar slabs about four inches thick, and often four feet wide,—causing the observer to wonder how the native, with such agencies as he possessed, could fell and split such timber. At this time so many as two hundred natives, could not be seen on the banks of the Lower Columbia, between the mouth of the Willamette and Clatsop Point, without special effort at counting the few living in the scattered villages, often separated by several sites once inhabited by large numbers apparently. This was particularly noticed on the south bank, at Coffin Rock, and the main shore, between that and Rainier. "The dead were there," in abundance, but no life but the eagle, the fish hawk, the black loon, and the glistening head of the salmon-devouring seal, then very numerous. There was a village of the Cowlitz tribe on the south bank, below where Rainier now stands. The people looked poor, ill fed, and worse clothed. The chief had come to us in the stream to invite us to camp near, exhibiting a single fresh hen's egg as inducement. We did so, and visiting their camp had the first sight of life in a native fishing village. Some of the children were nearly naked. Though it was midwinter, the adult females, with one exception, were dressed in the native petticoat, or kilt, as second garment, the other being a chemise of what had been white cotton; one was engaged in the manufacture of cedar bark strings used in the formation of the kind of kilt she wore. The exception in the camp was a young woman of extraordinary personal

beauty, a daughter of the chief family of the Cathelametts. She had recently been purchased, or espoused, by the heir-apparent of the Cowlitz chief. She seemed to be indifferent to the life around her, and shortly after was, presumably, the cause of tribal war. She was permitted a few weeks later to pay a visit to her own tribe, accompanied by an old woman of her husband's. They both joined a party of the women of her tribe in a wapato gathering expedition. The old duenna did not return,—her body was found next day near the wapato beds, horribly mutilated by a knife murder. The natural fruit of the Chinooks' polity of marriage. A short tribal war resulted.

In order to show the measure of manhood this system produced in a different phase from that of Chiefs Kalata's and Chenowith's, I will relate from memory a short visit at the lodge of the Cathelamett chief:

As one of a party of the employees of Hunt's mill, making our way from Astoria to the mill, we were approaching Cathelamett Point, the village of the tribe, on the south shore. We were hailed from the shore and found ourselves near the women and girls of the tribe, having a good time gathering the newly risen stems of the common fern and preparing it for food in earth ovens over heated rocks. They voluntarily told us they had no prepared food, but pressed us to go on to their village, and "Lemiyey" (old mother) (pronounced in a tone that conveyed love and respect) would gladly entertain us. They made no mistake in this. The old lady seemed proud of the opportunity to act as hostess, and without ostentation put her help to work and gave us a bountiful meal of fresh salmon and wapatos, and afterward put on what had evidently been often used as a robe of state, and passed back and forward in illustration of scenes she had been part of. Her son, apparently utterly

oblivious to the spirit of his mother's eye and movement, continued repeating the offers to sell to us his tribal claim to the lands lying between Tongue Point and Cathlamett, that he had begun on our arrival. He was but a youth, not so tall as his stately old mother appeared in her robe (of what I afterwards concluded was badger skins, but may have been mistaken), and he seemed mentally incapable of appreciating the influences then forming around him and his people, which appropriated their lands, while not one of them had the spirit to assert a right or raise the question of justice against the action of the white race. This was, with perhaps one exception, the cleanest, most self-respecting body of natives left on the Lower Columbia in 1845, where Lewis and Clark had, only forty years before, enumerated, by information from the natives, thirteen thousand eight hundred and thirty below the cascades and between that and the ocean. I do not believe that thirteen hundred could be found within the same limits at the latter date. There was not in all that distance, to my knowledge, a single man of the race who had the intelligence and public spirit combined to appear before the authorized agents of the United States ten years later and plead for the rights of their people in the treaties made south of the Columbia. It is questionable whether there was one in all the country north of Rogue River who would have done so of his own motion, had not the humane General Palmer and J. L. Parrish, as agents, advised the Indians to act. It is not to be understood from this that all good and all beauty had departed from the native life. When J. L. Parrish was in charge of Methodist mission property, in 1845, a white man from Oregon City appeared temporarily at Solomon S. Smith's to solicit the hand of a young woman named Oneiclam in marriage. The young woman civilly and modestly declined the honor, saying such a

marriage could not secure the respect of either the man's people or the woman's, and would fail in conferring happiness. She was clean enough and good enough to secure the personal friendship and advice of Mrs. J. L. Parrish, which proved her a rare exception to her class. Such marriages soon ceased after the American home-builder assumed dominion over Oregon, the white mother thus arriving being strongly against inter-racial contracts. Doubtless the hopelessness of the struggle against race prejudice has borne heavily on the heart of many a man and woman on both sides of the race question, but the fight is over now and many a heart broken in the struggle (as I think was that of my friend Joseph Hudson, last Chief of the Calipooyas) is at rest. The responsibility for the red race is now the white man's burden. He carries it well, while already the light of a brighter day than the red man of fifty years ago could forecast is piercing the prejudices and hates of that time. The white man brought the surveying compass, the book in which to record titles to land, another for the record of marriages, still another to record the rights of property to the results of wedlock. Schools are open to the native race and every generous mind wishes it well. But, while our sympathies may go out toward the ignorant or incompetent race in a conflict of power, we should not fail to note the services to all races rendered by the victor.

A glance at the changed conditions of life within the bounds of old Oregon: Instead of forty thousand persons ill-fed, ill-clad, living from hand to mouth, often bordering on famine, unable to support forty interesting visitors passing through their country, we have now, perhaps, fully one million, and the surplus of foodstuffs and clothing material they send out to the markets of the world, would feed well four millions. And, it is not ex-

travagant to say that the territory to which the Oregon trail was made fifty-eight years ago will some day be made to support forty millions in comfort.

This paper, it will be observed, has dealt entirely with the native race in Northwestern Oregon, because this was the field of the race contest. The point to which the guiding minds of the white race looked as most desirable. Jefferson said, and Benton repeated: "Plant thirty thousand rifles at the mouth of the Columbia." The first exploring party sent out by the former selected as the most interesting region in which to make excursions, the district now containing the first and second chosen commercial centers,—Vancouver and Portland.

The native race amid whom these were planted were described in their average manhood as mean, cowardly and thievish. Forty years later, to this description might be added ignorant, superstitious, and utterly without public spirit. The tribes east and south from this district were, excepting those located at the great fishing centers on the Columbia, less thievish, and much more bold and spirited in self-defense.

To the recent and valuable historical description of those tribes, including the natives in what is now Western Washington, I am indebted to the life of Isaac Ingalls Stevens, by his son, Hazard Stevens, for the number of natives west, as well as east, of the Cascades treated with by Governor Stevens in 1855, just before the natural leaders of the native race made their only united effort to stem the tide of inflow of the white race.

{ Total number found west of the Cascades	9,712
{ Total number with whom treaties were made	8,597
{ Total number east of the Cascade Mountains	12,000
{ Total number treated with	8,900
{ Total number found in Washington Territory	21,000
{ Total number treated with	17,497

For Governor Stevens' success in getting the eastern section of the native race into treaty relations he was indebted solely to the steadiness and good faith of the Nez Percés, the tribe which was always conspicuous for its care of its womanhood.

JOHN MINTO.

INDIAN NAMES.

Indian names and Indian words in general of the tribes of the region of the Columbia have many peculiarities, and amply repay time spent in trying to study them out. The following pretends to be only the merest beginning, and the writer has advanced only to the edges of the subject. It comprises only those names, and those meagerly and superficially, of the Lower Columbia and Willamette rivers, and these have been obtained from but two or three original sources. Those sources, however, are as reliable and intelligent as are to be found, being the recollections of Silas B. Smith, of Clatsop, and Louis Labonte, of Saint Paul, Oregon. That others may present anything they may have on the subject, and thus the stock of information be increased before those who have the original information shall have passed away, and the later investigators be left only to conjecture, is my idea in preparing this paper.

In the first place we must bear in mind a remark of Mr. Smith's, and that is that the most of the Indian names we have incorporated into our own nomenclature are more or less altered. He says that white men always like to change the original Indian somewhat. This is no doubt true. Such a disposition arises partly from the white man's egotism, which rejoices in showing that he can make a thing wrong if he pleases, and especially that an Indian name has no rights which he is bound to respect; and it arises in part from the white man's ignorance. This ignorance is shown partly in the lack of training of our ears in hearing, so that we frequently are unable to distinguish between allied letters, or sounds, such as "p" and "b," or "m," for the consonants, or between a simple

vowel sound, or a compound, or diphthong. Moreover, our English language is almost hopelessly mixed up between the open, or broad continental pronunciation of the vowels, and the narrow, or closed sound; so that no one is sure that an "a" stands for "ay," as in "day," or for "ah," as in "hurrah." The Yankee peculiarity, also, of leaving off the sound of "r" where it belongs, and putting it on where it does not belong, like saying "wo'k" for "work," or "Mariar" for "Mariah," has very materially changed the original pronunciation. With us, too, the pronunciation of the vowels follows a fashion, and varies from time to time according to what particular "phobia" or "mania" we may happen to be cultivating. At present the prevailing Anglomania is probably affecting our speech as well as our fashions and politics. An Indian name, therefore, that might have been rendered into very good English fifty years ago, may now, having become subject to the mutations of our fads of pronunciation, be spoken quite differently from the original tongue.

But, after making all these allowances, due to our white man's egotism, ignorance and change of fashions, the main difficulty is in the strangeness, and, it might be said, the rudimentariness of the Indian sounds. Many, perhaps the most, of the aboriginal tones have no exact phonetic equivalent in English. We must remember that their names were originated away back in their own history, and were not affected by contact with Europeans, and have therefore a primitive quality not found even in the Jargon. This makes them more difficult, but certainly not less interesting.

In general it will be found, I think, that the aboriginal languages have the following peculiarities of pronunciation :

1. Almost all the sounds are pronounced farther back

in the throat than we pronounce them. This brings into use an almost entirely different set of tones, or more exactly, it brings the various vocal sounds produced by the vocal chords to a point at a different, and to us an unused position of the throat or mouth—at a point where we can scarcely catch and arrest the sound. This makes the vowel sounds in general pectoral or ventral, and the consonant sounds guttural or palatal. As to the consonants, also, it often gives them a clucking or rasping sound not found in our language, unless in certain exclamations.

2. As a consequence of the above, the vowel sounds are not very fully distinguished from the subvowels. There is no “r” sound; if that is ever seen in an Indian name it has been interpolated there by some white mal-transliterator. “L” easily runs into “a,” and “m” into “b.” Names that upon first pronunciation seem to have an “l” turn out upon clearer sound to have a short Italian “a,” or those having an “m” to be more exactly represented by “b.” Probably the fact as to “r” is that it is identical in the aboriginal throat with long Italian “a,” or the ah sound, as it still is with Easterners and Southerners.

3. Many of the most common aboriginal consonants, or atonic sounds, while simple to them, can be represented in English only by compounds. Such are the almost universal “ch” which can be as accurately rendered “ts,” (?) and the very common final syllable “lth.” “T” is also produced so far back in the throat as to be almost indistinguishable from “k.” It seems to be a principle to slip a short “e” sound before an initial “k,” and many names begin with a short introductory “n” sound, which is nearly a pure vowel. Of the vowels, “a” pronounced as ah is the most common, though long “a,” properly a diphthong, and long “i” a diphthong, and long “e” are very frequent. While it is true that the sounds as a rule

are *in*, rather than *out*, still the pure vowels, especially "a," and this used as a call, or cry, is often very open and pure.

4. It will probably be found, also, that the sounds are varied more or less according to meaning. With us tones are a matter of expression. With the aborigines they were probably a matter primarily of meaning. This would arise from the fact that their language was not written, but spoken, and their terms were not descriptive, but imitative. We know, for instance, that the Jargon word indicating pastime, which is "ahncuttie," means a shorter or longer period, according as the length the first vowel is drawn out—a very long time ago admitting also of imitative gesticulation. This principle would modify the pronunciation of words, lengthening or shortening the vowels, or opening or closing them, or perhaps drawing semi-vowels out into pure vowels, and softening or sharpening the consonants.

While any expression of opinion must be very modest, still this much may be ventured: That our language has lost many valuable elements in its evolution from the spoken to the written form, especially in the matter of picturesqueness. We have, of course, gained immeasurably in directness and objective accuracy, but true evolution does not abolish any former element, but retains and subordinates it, and thereby is able to advance to new utilities. By study of a pure aboriginal language on the imitative principle, expressed only in tones, not only may the advantages of our own tongue be understood, but its deficiencies may be remedied, and a more complete language at length be developed. I am by no means of the opinion that all that is human, or of value to civilization, is to be found in the Anglo-Saxon race, or even in the white race; but that the slow and painful struggles and ponderings of the other races are also to be wrought into

the final perfect expression of humanity in society, art, literature and religion.

After the above, which is perhaps too much in the way of introduction, I will proceed with the names that I have been favored with—only wishing, if that were possible, that our aboriginal languages might be reconstructed in their entirety.

Water, says Mr. Smith, unless enclosed by land, was never named. The Columbia or the Willamette had no names. Water was to the native mind, like air, a spiritual element, and just the same in one place as another; and the circumstance that it was bounded by land made it no other than simply “chuck”—the Jargon word. If Indians ever seemed to give a name to a river, all that was meant was some locality on the shore. The idea of giving an appellation to a body of water from source to outlet never occurred to them.

The following are some of the more common Indian names of places, as given by Mr. Smith :

Chinook, or *Tsinook*—The headland at Baker's Bay.

Clatsop, or, more properly, *Tlahtsops*—About the same as Point Adams at mouth of the Columbia.

Wal-lamt, accented on last syllable, and but two syllables—A place on the west shore of the Willamette River, near Oregon City, and the name from which Willamette is taken.

E-multh-a-no-mah—On east side of Sauvie's Island; from which the name Multnomah is derived.

Chemukata—Chemekata, site of Salem.

Chemayway—A point on the Willamette River about two and one-half miles southward from Fairfield, where Joseph Gervais, who came to Oregon with Wilson G. Hunt in 1811, settled in 1827-28. The name Chemawa, the Indian school, is derived from this.

Champoek—Champoeg, an Indian name signifying the place of a certain edible root. The name is not the French term *le campment sable*, as naturally supposed by some, and stated by Bancroft.

Ne-ay-lem—The name from which Nehalem is derived.

Acona—Yaquina.

To these might be added, perhaps, Sealh, the name of the Indian chief after whom the City of Seattle is

called. The name is of two syllables, accented on the first. This well illustrates the tendency of the whites to transpose letters, here making an "lth" into a "tle" in imitation of the French, or, perhaps, the Mexican names. Bancroft learnedly discusses the similarity between the Washington and Mexican "tl," apparently not knowing that the Washington termination was not "tl," but "lth."

I will now give, in more detail, names of places, chiefs, and of some primitive articles of food, and utensils, etc. :

NAMES OF PLACES AND CHIEFS IN CLATSOP COUNTY.

Tle-las-qua—Knappa.

Se-co-mee-tsiuc—Tongue Point.

O-wa-pun-pun—Smith's Point.

Kay-ke-ma-que-a—On John Day's River.

Kil-how-a-nak-kle—A point on Young's River.

Nee-tul—A point on Lewis and Clark River.

Ne-ahk-al-toun-al-the—A point on west side of Young's Bay, near Sunnymead.

Skip-p-er-nawin—A point at mouth of Skipanon Creek.

Ko-na-pee—A village near Hotel Flavel, where the first white man in Oregon, Konapee, lived.

Ne-ahk-stow—A large Indian village near Hammond.

Ne-ah-keluc—A large Indian village at Point Adam's, name signifying "Place of Okeluc," or, where the *Okeluc* is made; "*Okeluc*" being salmon pemmican.

E-will-tsil-hulth—A high sand hill, or broken end of a sea ridge, facing the sea beach about west of the "Carnahan" place, meaning steep hill.

E-wil-nes-culp—A flat-topped hill against the beach about west of the "West" place, meaning "Hill cut off."

Ne-ah-ko-win—Village on the beach about west of the "Morrison" place, where the Ohanna Creek once discharged into the ocean.

Ne-ah-coxie—Village at the mouth of Neacoxie Creek.

Ne-co-tat—Village at Seaside.

Ne-hay-ne-hum—Indian lodge up the Necanicum Creek.

Ne-ahk-li-paltli—A place near Elk Creek where an edible plant, the *Eckutlipatli*, was found.

Ne-kah-ni—A precipice overlooking the ocean, meaning the abode of *Ekahni*, the supreme god; called "Carnie Mountain" by the whites.

Ne-tarts—Netarts.

Nestucca.

Tlats-kani—A point in Nehalem Valley reached either by way of Young's River, or the Clatskanie; and hence the name "Claskanine" for the branch of Young's River, and "Clatskanie" for the stream above Westport. In saying "*tlastani*," the Indians meant neither of those streams, but merely the place where they were going to or coming from; but with usual carelessness the whites applied it to both.

There were two lakes on Clatsop plains, one of which was called *O-mo-pah*, Smith's Lake; and the other, much larger, *Ya-se-ya-ma-na-la-tslas-tie*, which now goes by the name of an Indian, *Oua-i-cul-li-by*, or simply *Culliby*.

The name of Cape Hancock was *Wa-kee-tle-he-igh*; *Ilwaco*, *Comcomley*, *Chenamas*, *Skamokoway*, *Kobaiway*, *Tostam*, and *Totilhum*, were chiefs.

These chiefs' names illustrate some of the peculiarities of Indian pronunciation. *Kobaiway*, who was the Clatsop chief when Lewis and Clark came, was called by them *Comowool*; *Tostam* was sometimes called *Tostab*; and *Totilhum*, "a powerful man of the people," had the Columbia River called after him by some whites. Seeing some Indians coming down the great stream with camas, etc., they asked where they obtained this: "From *Totilhum*," was the reply; meaning that they had been on a visit to the chief. Then thinking they had made a great discovery, the whites announced that the Columbia was called *Totilhum*. *Totilhum* was chief of the Cathlamets, who originally had their village on the Oregon side, near Clifton.

INDIAN NAMES OF PLACES IN THE WILLAMETTE VALLEY—SOME CHIEFS.

Ni-a-kow-kow—St. Helens. A noted Indian chief here was *Ke-as-no*. He was made a friend by the Hudson's Bay Company, was given fine presents, and entrusted with the duty of firing a salute to the company's vessels as they came in sight up the river.

Nah-poo-itle—A village just across the river from *Niahkowkow*. The name of the chief was *Sha-al*, who was very large sized.

Nah-moo-itk—A point on Sauvie's Island.

Emulthnomah—A point a little above.

Wa-kan-a-shee-shee—A point across the river from *Emulthnomah*; meant “white-headed duck,” or diver.

Na-quoith—On mainland, old Fort William.

Na-ka-poulth—A pond a little above Portland, on the east side, where the Indians dug wapatoes.

E-kee-sa-ti—The Willamette Falls. The name of the tribe here was *Tla-we-wul-lo*. The name of a chief was *Wah-nach-ski*; he had a nephew, *Wah-shah-ams*.

Han-te-uc—Point at mouth of Pudding River.

Champo-ek—Champoeg, meaning the place of a certain edible root. “Ch” pronounced hard, as in “chant.”

Che-sque-a—Ray’s Landing.

Cham-ho-kuc—A point near the mouth of Chehalem Creek; Chehalem Village, in Chehalem Valley. A Chehalem chief was *Wow-na-pa*.

Chemayway—*Chemayway* was also a name given to Wapato Lake.

Cham-hal-lach—A village on French Prairie.

It will be noticed that the names above the Willamette Falls frequently begin with “Che” or “Cham,” as the coast names often begin with “Ne.” The name for Clackamas was *Ne-ka-mas*, and for Molalla, *Mo-lay-less*. The name Tualatin was *Twah-la-ti*. At Forest Grove, near the old A. T. Smith place, was an Indian village, *Koot-pahl*. The bare hill northwest, now called David’s Hill, was *Tahm-yahn*, and an open spot up Gales’ Creek Valley was *Pa-ach-ti*. A Tillamook chief was *Tae-sahlx*. The name of a chief at The Dalles was *Wah-tis-con*. Labonte remembers several chiefs at Spokane, one of whom was *Ilmicum Spokaneee*, or the Chief of the Moon; another, *Ilmicum Takullhalth*, or the Chief of the Day, and another, *Kah-wah-kim*, or Broken Shoulder. A chief of the Colville tribe was *Skohomich*, a very old, white headed man when Labonte saw him in about 1827. A tribe at the Cascades were the *Wah-ral-lah*.

NAMES OF ANIMALS.

- Coyote—Chinook, *Tallapus*; Klikitat, *Speeleyi*; Spokane, *Sinchelepp*.
 Fox—Spokane, *Whawhaoolee*.
 Gray wolf—*Cheaitsin*.
 Grizzly bear—Spokane, *Tsim-hi-at-sin*; Chinook, *E-shai-um*.
 Black bear—Spokane, *N'salmbe*; Chinook, *Itch-hoot*.
 Deer—Spokane, *Ah-wa-ia*; Doe, *Poo-may-ia*, or *Poom-a-wa-ia*. (?)
 Calapooia, "A big buck," *Awaia umpaia*.
 Black bear—Clackamas, *Skint-wha*.
 Beaver—*Wa-ca-no*.
 Deer—Chinook, *Mowitch*; Calapooia, *A-mo-quee*.
 Elk—Calapooia, *An-ti-kah*.
 Elk—Clatsop, *Moo-luk*.
 Duck—Clatsop, *Que'ka-que'kh* (*onamapoeia*).
 Geese—Clatsop, *Kah-lak-ka-lah-ma* (*ono.*).
 Yellow legged goose—*Hi-hi*.
 Columbia Sucker—*Kaht-a-quay*.
 Smelt—Clatsop, *O-tla-hum*.
 Hake—Clatsop, *Sca-nah*.
 Silverside salmon—*O-o-wun*.
 Blue back salmon—Clatsop, *Oo-chooi-haj*.
 Large black salmon of August run—Clatsop, *Ec-ul-ba*.
 Steelhead—Clatsop, *Qua-ne-ah*,
 Dog salmon—Clatsop, *O-le-ahch*.
 Cinook salmon (Royal Chinook)—Clatsop, *E-quin-na*, from which
 "Quinnat," the name of the Pacific Coast salmon species has been
 taken.
 Trout—*O-tole- whee*.
 Whale—Clatsop, *E-co-lay*.
 Horse—Clatsop, *E-cu-i-ton*.
 Cow—Clatsop, *Moos-moos* (*ono.*).
 Sheep—*Ne-mooi-too*.
 Wildcat—Clatsop, *E-cup-poo*.
 [Mr. Smith conjectures that the name of wildcat was given from the alarm
 call of the squirrel, which was hunted by the wildcats, and whose cry indicated
 the presence of these animals.]
 Beaver—Clatsop, *E-nah*.
 Seal—Clatsop, *Ool-hi-you*.
 Sea lion—Clatsop, *Ec-kee-pee-tlea*.
 Sea otter—Clatsop, *E-lah-kee*.
 Coon—Clatsop, *Twa-las-key*.

EDIBLE ROOTS, ETC.

Wapato—Clatsop, *Kah-nat-sin*,

Camas—Calapooia, *Ah-mees*.

Loaf of Camas—*Um-punga*.

Foxtail tuber—Clatsop, *Che-hup*; Calapooia, same.

[The *che-hup* was quite an article of commerce, being prepared by the Calapooias and traded with the coast tribes. It was black, and sweet tasting.]

Thistle root—Clatsop, *Sh-nat-a-whee*.

Blue lupine root—Clatsop, *Cul-whay-ma*.

[This was a root as large as one's finger, a foot long, and roasted, tasted like sweet potato.]

Wild tulip, or brown lily—Clatsop, *Eck-ut-le-pat-le*.

Cranberry—Clatsop, *Solh-meh*.

Strawberry—Clatsop, *Ah-moo-tee*.

Service berry—Clatsop, *Tip-to-ich*.

Blue huckleberry—Same as service berry.

Buffalo berry—Clatsop, *Smee-ugh-tul*.

Sallal—Clatsop, *Sal-lal*.

Hazel nuts—Calapoolia, *To-que-la*.

Wasps' nest—Calapooia, *An-te-alth*.

[The nest of the "yellow jackets" was dug out of the ground, the insects being first well smoked so as not to sting; and the combs, with the honey and larvæ, were considered a great delicacy. The expression (Calapooia) "*msoah quasinafoe antealth*," means "yellow jacket's nests are good eating."]

Tar weed seed—Calapooia, *Sah-wahl*.

The tar weed seeds were small and dark, ripening late. One of the objects of burning the prairie over in the fall was to ripen and partially cook these seed, which, after the fire had passed, were left dry and easily gathered. They were ground like camas root in a mortar and then resembled pepper in appearance, but were sweet tasting.

CHINOOK AND SPOKANE NUMERALS.

One—Chinook, *ikt*; Spokane, *nekoo*.

Two—Chinook, *mox*; Spokane, *es-sel*.

Three—Chinook, *clone*; Spokane, *tsye-sees*.

Four—Chinook, *lack-et*; Spokane, *moos*.

Five—Chinook, *quin-am* or *quun-un*; Spokane, *chyilks*.

Six—Chinook, *tahum*; Spokane, *e-tecken*.

Seven—Chinook, *sinomox*; Spokane, *sees-pul*.

Eight—Chinook, *sto-ken*; Spokane, *ha-en-um*.

Nine—Chinook, *quoist*; Spokane, *h'noot*.

Ten—Chinook, *tat-ta-lum*; Spokane, *oo-pen*.

Twenty—Chinook, *tattalum-tattalum*; Spokane, *es-sel oo-pen*.

One hundred—Spokane, *en-kay-kin*.

HOUSEHOLD ARTICLES, IMPLEMENTS, ETC.

Blankets—Calapooia, *Pas-sis-si*.

Kettle—Calapooia, *Moos-moos*.

Slaves—Calapooia, *El-ai-tai*.

Haiqua shells, used for money, a small turritella, found on the northern coast.

Small *haiqua*—Calapooia, *Cope-cope*.

Tobacco—Calapooia, *E-kai-noss*.

Knives—Calapooia, *Eoptstsh*.

Powder—Calapooia, *Poo-lal-lie*.

Buffalo robe—Clatsop, *Too-i-hee*.

Wagon—Clatsop, *Chick-chick* (ono-).

High-bow Chinook canoe—Clatsop, *Esquai-ah*.

Big tub Chinook canoe—Clatsop, *Ska-moolsk*.

Small duck canoe—*Kah-see-tic(h)*.

Clackamas canoe—Clackamas, *Tse-quah-min*.

Even from the above meager list a number of interesting inquiries might be begun, but my object at present is only to make a small contribution along what I be-

lieve will prove a profitable line of investigation, hoping that others will add theirs. In this way something will be accomplished toward reconstructing the simple life of our natives, doing them a justice, and discovering, I am sure, what will be a delight and benefit both to the present and to the coming generations of our own people.

H. S. LYMAN.

DOCUMENTS.

All of the following newspaper articles were taken from a single year of the New York *Tribune*. They serve well to indicate the interest with which Oregon Territory was regarded throughout the country in 1842 :

[From the *Tribune* (New York), January 18, 1842.]

FROM OREGON.

EXTRACT OF A LETTER DATED WILHAMET, FEBRUARY 19, 1842.

I will now tell you something of the people of this country. There are about seventy-five to eighty French Canadians settled in this country, principally discharged from the service of the Hudson Bay Company ; there are also about fifty Americans settled in and about this country, making, perhaps, one hundred and twenty-five to one hundred and thirty male inhabitants, who are married to Indian women. They raise from their farms, on an average, from three to five hundred, and some from ten to twelve hundred bushels of wheat, besides great quantities of pease, potatoes, oats, barley, corn, etc. The Hudson Bay Company have in their employ at Fort Vancouver about one hundred and twenty-five persons, and many in several other forts both sides of the Rocky Mountains.

These people, as I said before, are married to Indian women, and live very much the same, in all respects, as our farmers at home, with the exception of not being obliged to labor half as much. They generally have from fifty to one hundred head of horses, half as many cows, and about the same number of hogs; these all take care of themselves. The people here cut no hay and make no pastures ; they do not give their hogs any feed, excepting about a month before they kill them. There is one church here, and the people have contracted for a brick church and other buildings necessary, such as a school house for the French and one for the Americans. The French have one priest here and one at Fort Vancouver.

The Americans generally attend at the mission, and, as far as I can see, the people here are as well behaved and moral as in our town.

We have now a committee at work drafting a constitution and code of laws; have in nomination a governor, an attorney-general, three justices of the peace, etc.; overseers of the poor, road commissioners, etc. We have already chosen a supreme judge with probate powers, a clerk of the court and recorder, a high sheriff, and three constables; so that you see we are in a fair way of starting a rival republic on this side of the mountains, especially as we are constantly receiving recruits—those people whose time has expired with the Hudson Bay Company, and from mountain hunters coming down to settle.—*National Intelligencer*.

[From the *Tribune* (New York), Friday morning, March 24, 1842.]

Oregon is now the theme of general interest at the west. Large meetings to discuss the policy of taking formal possession of and colonizing it have been held at Columbus, Ohio, and several other places. Many are preparing to emigrate. A band of hardy settlers will rendezvous at Fort Leavenworth, and set out thence for Oregon early in May, under the command of Major Fitzpatrick.

[From the *Tribune* (New York), April 26, 1842].

FROM OAHU.

The ship William Gray brings to Salem, Massachusetts, date from Honolulu, November 27. * * * Late intelligence from Oregon confirms previous accounts with regard to missionary operations. From the fewness of the Indians and their migratory habits it is feared that little good can be effected among them. Many of the missionaries have become farmers and others are preparing to leave.

[From the *Tribune* (New York), March 13, 1842.]

OREGON.

The following letter is from an intelligent sea captain just returned from the Pacific Ocean. It gives information of the progress of the British appropriation of the trade and all the accessible regions of the Northern Pacific, which should be impressed upon the American public.—*Globe*.

BOSTON, May 1, 1842.

SIR: Thinking it may be interesting or important to know some of the late operations and present plans of the Hudson's Bay Company in

the North Pacific Ocean, I beg leave to present to your notice some facts in relation to the same, and which have come to my knowledge from personal observation, or from sources entitled to the fullest credit.

All that extensive line of coast comprehending the Russian possessions on the Northwest Coast of America, from Mount Saint Elias south to the latitude $54^{\circ} 40'$ north (the last being the boundary line between the Russian and American territories), together with the sole and exclusive right or privilege of frequenting all ports, bays, sounds, rivers, etc., within said territory, and establishing forts and trading with the Indians, has been leased or granted by the Russian-American Fur Company to the British Hudson's Bay Company, for the term of ten years from January, 1842; and for which the latter are to pay, *annually*, four thousand seal skins, or the value thereof in money, at the rate of thirty-two shillings each, say £6,400 sterling, or \$30,720.

In the above-named lease the Russians have, however, reserved to themselves the Island of Sitka, or New Archangel; in which place, you probably are aware, the Russians have a large settlement—the depot and headquarters of their fur trade with the Fox Islands, Aleutian Islands, and the continental shore westward of Mount Saint Elias. All the trading establishments of the Russians lately at Tumgass, Stickene, and other places within said territory, leased to the Hudson's Bay Company, have of consequence been broken up. Thus the Hudson's Bay Company not content with monopolizing the heretofore profitable trade of the Americans, of supplying the Russian settlements on the Northwest Coast, have now cut them off also from all trade with the most valuable fur regions in the world.

Whether the arrangements made between the Russians and English, above alluded to, are conformable to the treaties existing between the United States on the one part, and those nations respectively on the other, I leave to your better knowledge to determine.

With the doings of the Hudson's Bay Company at Puget Sound and the Columbia River you are doubtless fully informed; those, however, lately commenced by them in California will admit of my saying a few words.

At San Francisco they purchased a large house as a trading establishment and depot for merchandise; and they intend this year to have a place of the same kind at each of the principal ports in Upper California. Two vessels are building in London, intended for the same trade—that is, for the coasting trade; and after completing their cargoes, to carry them to England. These things, with others, give every indication that it is the purpose of the Hudson's Bay Company to monopolize the whole hide and tallow trade of California, a trade which now employs more than half a million of American capital. At the Sandwich Islands the company have a large trading establishment, and have commenced engaging the commerce of the country, with ev-

ident designs to monopolize it, if possible, and to drive off the Americans, who have heretofore been its chief creators and conductors.

I have been informed, by one of the agents of the Hudson's Bay Company, that the agricultural and commercial operations of the English at Puget Sound, Columbia River, California, and Sandwich Islands, are carried on, not actually by the Hudson's Bay Company, but by what may be termed a branch of it—by gentlemen who are the chief members and stockholders of said company, and who have associated themselves under the firm Pelly, Simpson & Co., in London, and with a capital of more than \$15,000,000!

Seeing these companies, then, marching with iron footsteps to the possession of the most valuable portion of country in the Northern Pacific, and considering, too, the immense amount of their capital, the number, enterprise, and energy of their agents, and the policy pursued by them, great reason is there to fear that American commerce in that part of the world must soon lower its flag. But, sir, it is to be hoped that our government will soon do something to break up the British settlements in the Oregon Territory, and thereby destroy the source from which now emanates the dire evils to American interests in the western world. In the endeavor to bring about that desirable object, you have done much ; and every friend to his country, every person interested in the commerce of the Pacific, must feel grateful for the valuable services rendered them by you.

With great respect, your obedient servant,

HENRY A. PRICE.

HON. LEWIS F. LINN,

Senator of the United States, Washington.

[From the *Tribune* (New York), July 4, 1842.]

SCIENTIFIC EXPEDITION.

The Missouri *Reporter* of the fourteenth instant contains a notice of the expedition of Lieutenant Fremont, of the United States Topographical Engineers, to the base of the Rocky Mountains, in the latitude of the Platte and Kansas rivers, with a view to ascertain positions and localities, to explore the face of the country, and to make the government fully acquainted with that remote and important point of our extended territory now becoming of so much greater interest from the extension of our trade to the northern parts of Mexico and California, and the settlement growing up in the valley of the Columbia River.

The line of communication now followed by immigrants, traders and travelers to the Columbia and California, is upon this route, and through the famous South Pass—a depression in the Rocky Mountains at the head of the River Platte, which makes a gate in that elevated ridge, passable in a state of nature, for loaded wagons, of which many have passed through. This examination of the country on this side of the Rocky Mountains comes at a very auspicious moment to complete our researches in that direction, and to give more value to the surveys and examinations of the Columbia River, its estuary, and the surrounding country, made by Lieutenant Wilkes in his recent voyage, and of which a full report has been made to the government. These two examinations will give us an authentic and interesting view of the important country belonging to the United States on each side of the Rocky Mountains; and taken in connection with the great scientific survey of Mr. Nicollet, commencing at the mouth of the Missouri River, and extending north to the head of the Mississippi, and to latitude 49°, and covering all the country in the forks of these two rivers, over an extent of ten degrees of latitude, will shed immense light upon the geography and natural history of the vast region west of the Mississippi River.—*Globe*.

The following is the article from the *Missouri Reporter*:

Lieutenant Fremont, of the corps of the topographical engineers, left here under orders from the war department, about ten days ago, with a party of twenty men on a tour to the Rocky Mountains. The object of the expedition is an examination of the country between the mouth of the Kansas and the headwaters of the great River Platte, including the navigable parts of both these rivers, and what is called the Southern Pass in the Rocky Mountains, and intermediate country, with the view to the establishment of a line of military posts from the frontiers of Missouri to the mouth of the Columbia River. This expedition is connected with the proposition now before congress to occupy the territory about the Columbia River as proposed by Dr. Linn's bill.

The great River Platte is the most direct line of communication between this country and the mouth of the Columbia, and that route is known to be practicable and easy. It therefore becomes important to ascertain the general character of that river and the adjacent country, and the facilities it will be likely to afford in prosecuting contemplated settlements in Oregon. This Southern Pass, or depression in the Rocky Mountains, is near the source of the extreme branch of the River Platte, and affords an easy passage for wagons and other wheel

carriages, which have frequently passed over the mountains on that route without difficulty or delay; and it is important that the latitude of this point should be ascertained, as it is thought that it will not vary much from the line established between the United States and Mexico by treaty with Spain, 1819. If this pass should fall south of that line (the forty-second degree of north latitude) it may become necessary to examine the country north of it, the line of the Yellowstone and south branch of the Columbia would, it is thought, afford the next best route.

Lieutenant Fremont, though young, has had much experience in surveys of this kind, having made the topographical survey of the Des Moines River, and having assisted the scientific Mr. Nicollet in his great survey of the Upper Mississippi. He is well supplied with instruments for making astronomical observations; for fixing the longitude and latitude of important points; and a daguerrotype apparatus for taking views of important points and scenes along the route; and, if not obstructed in his operations by large bands of wild, wandering Indians, which sometimes trouble small parties passing through that region, may be expected to impart much valuable information to the government and to the country.

Since the attention of the country has been directed to the settlement of the Oregon Territory by our able senator (Doctor Linn), and by the reports of those who have visited that region in person, the importance of providing ample security for settlers there, and of opening a safe and easy communication from the western boundary of Missouri to the Columbia River has been universally admitted.

The day is not far distant when, if the general government shall do its duty in the matter, Oregon will be inhabited by a hardy, industrious, and intelligent population, and the enterprise of our citizens find a new channel of trade with the islands of the Pacific, the western coast of this whole continent, and perhaps with Eastern Asia. Notwithstanding the many obstacles at present in the way of the settlement of this territory, emigrants are rapidly pouring into it, and only demand of government that protection which is due to all our citizens, wherever they may choose to reside. While negotiations are pending at Washington to adjust all existing difficulties between this country and Great Britain, our right to this territory should not be forgotten. At present, it may seem a small matter to the negotiations; but they should remember that every year's delay will only render the final adjustment of the disputed northwestern boundary more difficult.

We are pleased to learn that the proper authorities at Washington evince a disposition to do something toward encouraging the early occupation of Oregon by permanent American settlers. It is known that many of the islands in the Pacific have already been settled by

Americans, and trading houses established, by which a large and profitable business is carried on with the Indian tribes on the north-western coast of America, and with the East Indies and China. There is nothing to prevent trading establishments in Oregon from ultimately securing a large share of this trade, and adding much to the wealth and prosperity of the whole union.

But, regardless of these ultimate advantages, the prospect of immediate success is so great that many of our hardy pioneers are already turning their attention to the settlement of Oregon, and many years will not elapse before that territory contains a large population. Doctor Linn has done much to urge a speedy occupation of it by permanent American residents. If Lieutenant Fremont shall be successful in his contemplated exploration of the route, and if the government shall furnish proper protection to those who shall seek a home in that distant region, the English may not only be completely dislodged from the foothold they have already acquired there, but prevented from making further inroads upon our western territory, and long monopolizing the greater part of the trade at present carried on with the Indian tribes at the Northwest and West.

[From the *Tribune* (New York) July 15, 1842.]

THE EXPLORING EXPEDITION.

The Washington correspondent of the *Journal of Commerce* writes as follows of the results of the exploring expedition:

The universal opinion here on the subject of the conduct and results of the exploring expedition is highly favorable to the officers who had charge of it. It has certainly given to Lieutenant Wilkes a reputation as an accomplished seaman and an energetic and scientific officer.

He delivered before the national institute a course of lectures, at the request of that body, on the subject of the expedition, which gave satisfaction and instruction to a numerous and enlightened auditory—among whom were Mr. J. Q. Adams, Mr. Poinsett, Mr. Woodbury, the members of the cabinet, and many scientific gentlemen from every portion of the union.

At the close of his last lecture the honorable Secretary of the Navy (Mr. Upshur) rose and addressed the assembly in the warmest terms of commendation of the successful labors and efforts of Captain Wilkes, and the officers and scientific corps under his command. He adverted to one fact which of itself spoke strongly of the skill with which the expedition had been conducted—that it had visited the remotest quar-

ters of the globe, traversed the most dangerous seas, surveyed the most impenetrable coasts, and encountered the vicissitudes of every climate with so little difficulty or loss.

The secretary also remarked on the immense treasures in natural science which the officers of the expedition had collected and transmitted to the government in such admirable order, and which now formed the basis of the museum of the national institute.

He commented, also, on Captain Wilkes' report upon the Oregon Territory, and declared that this report was alone an ample compensation to the country for the whole cost of the expedition. He expressed the opinion, in fine, that the results of the expedition were highly valuable and honorable, not to this country alone, but to the cause of civilization in the world.

[From the *Tribune* (New York), August 10, 1842.]

Correspondence from Washington.

Points of the treaty. * * * The boundary line agreed upon runs to the Rocky Mountains, and leaves unsettled the question of the Oregon Territory. There is nothing lost by this, for our emigrants are daily settling this question. We grow stronger there by time, and become *nearer*, too.

In the same paper of the same date as the above :

THE OREGON FUR TRADE.

This valuable traffic, which is at once the instrument of exploration and the nursery of seamen, was by the convention of 1818 suffered to be pursued promiscuously by British and Americans, and in consequence of that suicidal provision is fast being diverted from the latter to the former. Our exports of furs to Canton amounted in 1821, to \$480,000; in 1832, to about \$200,000, and in 1839, to \$56,000, showing a gradual decrease between the years 1821 and 1839 of more than seven-eighths, in the amount and value of this trade. A better practical commentary is not needed upon the effect of our legislation, and while Americans are thus annually withdrawing from this trade, Great

Britain is extending her facilities for commanding it every day. Her hunters and trappers are scattered over the whole extent of the territory; nor are they content with the legitimate profits of the business. While within the British Territory the strictest provisions are made to prevent the destruction of game unnecessarily, no such precautions are enforced here, but on the contrary the Indians and others are encouraged to hunt at all seasons of the year without regard to the preservation of game. The result of this will be the extermination of the beaver and other animals killed for their fur within a few years unless the United States interferes.

[From the *Tribune* (New York), December 14, 1842.]

THE NORTHWEST COAST.

Some apprehension exists that a settled design is entertained by Great Britain of disputing our claim to the territory beyond the Rocky Mountains and the whole Pacific Coast in that quarter. A letter to the editor of the *Globe* from an officer of the United States ship Dale, belonging to the Pacific Squadron, dated " Bay of Panama, September 23, 1842," contains the following paragraph :

We sailed from Callao seventh instant in company with the frigate United States (Commodore Jones' flagship), and sloop-of-war Cyane, but we separated from them and bore up for this port on the seventh day out. Just previously to our departure two British ships-of-war (the razee Dublin, and sloop-of-war Champion) sailed thence on *secret service*! Of course this mysterious movement of Admiral Thomas elicited a thousand conjectures as to his destination, the most probable of which seemed to be that he was bound for the Northwest Coast of Mexico, where, it is surmised, a *British station* is to be located in accordance with a secret convention between the Mexican and English governments! And it is among the *on dits* in the squadron that the frigate, the Cyane, and the Dale, are to rendezvous as soon as practicable at Monterey to keep an eye upon John Bull's movements in that quarter.

The following document is a letter by William Plumer, then United States Senator from New Hampshire. The original is in the possession of Dr. Jay Tuttle, of Astoria. Bradbury Cilley, Esqr., to whom the letter is addressed, was an ancestor of Doctor Tuttle. The copy was secured by George H. Himes, Assistant Secretary of the Oregon Historical Society.

WASHINGTON, Feby 25, 1806.

MY DEAR FRIEND: A few days since I received your kind letter of the 27th January. It had a long passage. Your letters need no apology. They always afford me pleasure, and I regret that I so seldom receive them.

The papers of the day inform you that we are doing little, except meeting, talking, and adjourning. Indeed we have little business to do that is of importance. The great, astonishing changes that so rapidly succeed one another in Europe admonishes us to deliberate much and act little in relation to our connection with them. We ought, in my opinion, to reserve ourselves for events.

I do not believe there is any fear of an invasion from any nation. I am, therefore, opposed to expending millions in fortifying our seaports. I consider the money to be thus expended worse than lost. Those works, if erected, will compel us to an annual expenditure, to a considerable amount, to support them. The revenues of the United States, for years, might be expended in erecting fortifications. This kind of a defense is in its nature unavailing. Witness the great but useless fortifications at Copenhagen in 1801; witness a single British frigate in 1776, with the tide and a gentle breeze, passing unhurt down the Hudson, by all our forts at New York. If, instead of raising money to fortify against enemies that are distant as the moon, a reasonable sum was annually and prudently applied to building a permanent navy, we should then exert our energies to a useful purpose. We should then find increasing commerce would not in every sea depend, for protection, on the capricious whims of nations whose interests it is to capture and condemn it. But I presume we shall do nothing this session that will be permanent. In a popular government there are too many whose constant inquiries are directed rather to please, than serve, the people.

The senate to gratify France has interdicted the trade to Saint Domingo, and to restrain the President from warring against Great Britain, they have resolved that he must resort to negotiation. The fact is, the President knew Jay's rendered a former administration unpopular, and to remove the responsibility from the President to the

Senate, his friends induced them in their legislative capacity to assume and exercise their executive powers and request him to negotiate,—the very measure he had adopted. I was apprised of the fact, opposed and voted against it, much against the will of my friends. I am unwilling to remove the responsibility which the constitution has imposed on him—'tis dangerous.

Yesterday I dined with the President. I felt in high glee, and enjoyed myself; but I thought the President discovered an unusual weight of care. The times, indeed, require all his vigilance.

Mr. Burr is here—but is not yet Minister to Great Britain—nor I hope never will [be].

Our weather is remarkably warm. The grass is verdant, and the birds of spring are come. I enjoy good health and spirits—but wish to return to my friends and family—though I fear I shall not for many weeks.

Make my compliments agreeable to Mrs. Cilley, and be assured that I am with much esteem yours sincerely,

WILLIAM PLUMER.

THE QUARTERLY

OF THE

OREGON HISTORICAL SOCIETY.

THE OREGON TRAIL.

The early Oregon pioneers not only gained the first secure foothold for the American people on the Pacific Coast, but their movement opened the way to American occupation and in itself counted as an occupation of that realm for American civilization. They moved across the continent at an auspicious time, and so were able to influence, if not to shape, the course of great events touching the widening of the American dominion on the Pacific. It was all done so quietly, so efficiently, at so comparatively small cost and without any shock of harrowing disaster, that the world has yet to connect the momentous results with a cause seemingly so inadequate.

As the American people come to realize that their distinctively national achievement so far, next to that of maintaining a national integrity, has been that of pre-empting and subduing an adequate dominion and home for a civilization they will revere the services of those

who made the transcontinental migrations in the thirties, forties and fifties. The glory that belongs to the participants in those migrations is the peculiar birthright of the patriotic Oregonian. The passage from the Atlantic slope to the Pacific of these first American households bearing the best embers of western civilization must ever stand as a momentous event in the annals of time.

For twenty-eight years, now, surviving participants in this world event have annually assembled to recount the incidents of their coming to Oregon, to live over that trying but hallowed time, to rekindle old flames of friendship and form new ties on the basis of their common experiences. At these meetings of the Oregon pioneers there was always an "occasional address" in which the reminiscences of the immigration of some particular year were given. As the journal of the association puts it, the object of the association "should be to collect reminiscences relating to pioneers and the early history of the territory; to promote social intercourse, and cultivate the life-enduring friendships that in many instances had been formed while making the long, perilous journey of the wide, wild plains, which separated the western boundary of civilization thirty years ago from the land which they had resolved to reclaim." The biographical notices contained in the transactions of their association all mark this coming to Oregon as a dividing event in the lives of their subjects. That generation of Oregonians suffered something like a transfiguration through this movement, which also widened the nation's outlook—in making it face a greater sea. These transforming influences wrought their effects during the summer season that each successive immigration spent on the Oregon trail, while journeying in canvas-topped oxen-drawn wagons from the banks of the Missouri to those of the Willamette. The greatest epochal expansion of the nation was insured

1.—Near the site of Fort Kearney on the Platte. (Part of pontoon bridge is used as road fence.)

through these migrations at the same time that the participants were translating their lives to a new sphere.

For engaging and vivid detail of experiences in this movement, recourse must be had to the transactions of the Oregon Pioneer Association, and to journals kept on the way across the plains. These will ever have an interest for the heart of man as they show life under heroic impulse and in trying conditions long sustained. The whole movement Oregonward has an epic unity, and when its significance has become fully manifest will challenge the powers of the national poet.

But the movement has not yet, even in its outward aspects, been viewed as a whole. To mark off its limits in time, in routes taken, in numbers and population elements involved; to note the main motives, the forms of characteristic experiences; in a word to make, as it were, a composite view with relation to national history as a background,—would seem to be the first step for realizing the due appreciation of the significance of the work of the Oregon pioneers. A sketch of the outlines of the movement in its more salient features, then, is what is attempted here, with the hope that such setting forth of the movement as a whole, with outlines more or less closely defined, will lead to its being brought fully into relation with the general course of events of American history. Until the story of the Oregon movement is thus set forth, the historians of our national life cannot weave it into its proper conspicuous relations in their narratives. It has no doubt been largely due to this lack if the story of this pioneer achievement in available form that a somewhat undue estimate of Doctor Whitman's services and the acceptance of mythical accretions to them have come about. The Whitman story was early available and was made to do service in accounting for a larger outcome than facts warranted.

The Oregon migrations effected at one sweep a two thousand-mile extension of the Aryan movement westward in the occupation of the north temperate zone—"a far-flung" outpost of occupation and settlement. To appreciate the boldness, intrepidity and consummate effectiveness of such pioneering we have but to note that no previous extension had compassed one-fourth this distance. Nor were the conditions in this instance easy. One continuous stretch of Indian country infested with most formidable predatory tribes had to be passed through. Conditions approximating those of a desert had to be faced during a large part of the migration. There were swift rivers to ford or ferry, and three mountain ranges to scale. Only one form of the usual difficulties of pioneer road-making did not appear. There were no extensive forests to penetrate except on the ridges of the Blue and the Cascade Mountains.

The settlements of the blue grass region of Kentucky, and the Nashville district, in Western Tennessee, were, when first made, the most isolated from the main body of the American people. Yet, these had less than a four-hundred mile stretch between them and the settled region of the Atlantic slope. No other outward movement of Aryan people ever covered anything like the distance made by the Oregon pioneers on the Oregon trail. Measured by the sea voyage, the Oregon settlements were a leap of seventeen thousand miles.

Though the Oregon pioneers traced the first trail across the continent, adapting for sections of it the lines of travel of fur trading expeditions; yet, were it not for the title of Francis Parkman's narrative (which, however, has only the slightest references to anything pertaining to its title), I am not sure but that the very name would have been lost to all except Oregonians. The meagerness of Parkman's presentation of the transconti-

3rd 2¹

2.—“LONE OR COURT HOUSE ROCK.”

mental movement is easily accounted for. He did not take his trip of roughing it to Fort Laramie and the Black Hills, in 1846, to see the Oregon pioneers. His plans to write the history of the new France in America tended to narrow his interest strictly to aspects of Indian life as they were with the Indian in his original state. He was concerned solely during his life on the plains to get that insight into Indian character and customs that he might interpret the records of the relations of the French with them, and give his narrative in his great life work truth, life, and color. Had he been inclined to associate himself with the westward moving trains, and to enter into their life and thought, his "Oregon Trail" would naturally have been a final characterization of the migrations up to the stage they had assumed at that time. There are, however, indications in some of his references to the pioneers that their necessarily *deshabille* condition while en route, and the astounding and almost reckless character of their undertaking were by him set in contrast with the steady comfortable ways of the New England folk from which he hailed and the Oregonians correspondingly disparaged. In this he would be bringing a pioneer phase of civilization into comparison with a more finished form. The wayfaring pioneers were still marking out wider and more natural limits for the national home, while the New Englanders were advancing the arts of life on the original nucleus of national territory. But who can say to which the nation in its destiny owes the more?

Two years ago there appeared a book of five hundred and twenty-nine pages written by Colonels Henry Inman and William F. Cody, bearing the title, "The Great Salt Lake Trail." In its preface there is to be found the following comment on its title: "Over this historical highway the Mormons made their lonely hegira. * * *

Over this route, also, were made those world renowned expeditions by Fremont, Stansbury, Lander, and others of lesser fame, to the heart of the Rocky Mountains, and beyond, to the blue shores of the Pacific Ocean. Over the same trackless waste the pony express executed those marvelous feats in annihilating distance, and the once famous overland stage lumbered along through the seemingly interminable desert of sage brush and alkali dust—*avant-courieres* of the telegraph and the railroad.”

The body of the book touches upon topics ranging in time from Jonathan Carver’s explorations in 1766-’68 to the building of the Union Pacific Railroad. Its map lays “The Old Salt Lake Trail” exactly on the route of the Oregon trail as far as Fort Bridger, in Southwestern Wyoming. But the Oregon migrations are not hinted at by a single word in the body of the book. The authors’ account of them could not have been crowded out by more weighty matters, as all the disjointed fragments of Indian hunting and fighting and drunken carousal, whether happening on the line of the trail or not, are crowded in. Either the story of the Oregon movement during the thirties, forties and fifties was absolutely unknown to Colonels Inman and Cody, or, if known, thought worthy of relegation to oblivion by them.

In interviews last summer with people living along the line of the trail, only those whose experiences extended back to the time of the Oregon migrations recognized the trail as the Oregon trail. It was always the “California trail” or the “Mormon trail.”

It is, of course, to be conceded that more people traveled this road to California than to Oregon. But the Oregon movement was first in time. By it the feasibility of the route was demonstrated, and people susceptible to the western fever were accustomed to think of

3.—The North Fork of Platte—its sandy bottom exposed.

the trip across the plains in a way that brought them when the cry of California gold was raised, or when as Mormon converts they were longing for a refuge from molestation. Then, too, the Oregon pioneers not only led the way; they decided our destiny Pacificward. It is time that history was conferring its award of justice to them. The highway they opened to the greater sea, and which their march made glorious, should take its name from them and thus help to commemorate unto coming generations the momentous import of their achievement for all the future of mankind.

The transcontinental movement as a march of civilization to the west shore of the continent was in its incipency a missionary enterprise. There is hardly any doubt, however, but that the home-seeking pioneer would have been on the way just as soon without the initiative of the missionary heroes and heroines. It is, nevertheless, the lasting glory of the Presbyterian and Congregational denominations that under the auspices of their missionary board the first American families successfully made the passage that was to sweep such a marvelous movement into its train. The Methodist Episcopal missionary enterprise antedated all others and played a conspicuous role in the political organization of the Oregon community, but it was not first in setting up the American home. So long as it lacked that it could not bear an American civilization, which was the crucial matter. It was Whitman who demonstrated the possibility of taking households across the plains, and this achievement, too, was a decisive initiative.

But how did the impulse to make this dangerous and arduous journey to the then far-off wilderness of Oregon originate with the missionary and the home-seeking pioneers? The inception of the Oregon move-

ment in both its missionary and its pioneering aspects is best understood when viewed as outbursts of missionary zeal and energy and pioneer daring and restlessness from vast stores of potential missionary and pioneer spirit existing in this country in the thirties. Missionary activity in the direction of Oregon was liberated by something like a spark, or, to change the metaphor, by a "long-distance" "Macedonian cry." A delegation of four Nez Perces Indians from the upper waters of the Columbia arrived in St. Louis in 1832 in search of "the white man's Book of Heaven." An account of this singularly unique mission was published in the newspapers of the time. The story was made all the more effective and thrilling, with those of deep religious sensibilities, through its including what purported to be a verbatim report of a most pathetic farewell address made in General Clark's office by one of the two surviving members of this mission.

The closing passage of the speech, as it has been handed down, is as follows :

"We are going back the long, sad trail to our people. When we tell them, after one more snow, in the big council that we did not bring the Book, no word will be spoken by our old men, nor by our young braves. One by one they will rise up and go out in silence. Our people will die in darkness, and they will go on the long path to other hunting grounds. No white man will go with them, and no Book of Heaven to make the way plain. We have no more words."

The missionary boards of several protestant denominations were already establishing foreign missions in Africa, India, and among the western North American Indians. Hall J. Kelley had been agitating the cause of the Oregon Indians for half-a-generation. An appeal for missionary help so pathetic, so unheard of, and withal

346¹

4.—“CHIMNEY ROCK.”

shedding such luster on those from whom it came, as was that of the Nez Perces delegation to St. Louis, could not fail to bring forth a missionary movement towards Oregon.

The spirit that materialized in the Oregon pioneer movement was not kindled by any special spark like that which called forth the missionary enterprises. Nor was it aroused by anything like the cry of gold that brought on the mad rush to California in '49 and the early fifties. The Oregon migrations were the outcome of cool, calm, reasoned determination. This characterized the movement collectively as well as individually.

In a sense, the Oregon movement was in preparation from the time when in 1636 Puritan congregations were led by Hooker and others from the vicinity of Boston westward through the forests to the banks of the Connecticut. This initial western movement was communicated along the Atlantic coast settlements by the Scotch-Irish crossing the Blue Ridge Mountains in Pennsylvania, and by the Virginians penetrating to the Shenandoah Valley. Some would say that an instinct to move west has been growing in strength among civilized peoples since about 1000 B. C., when the Phœnicians moved west on the Medeterranean to found Carthage, and the Greeks to plant colonies in southern Italy and at Marseilles.

So largely had pioneering been the mode of life of those who were living in the western zone of settlement in the United States in 1840 that it was almost a cult with them. The traditions of each family led through the Cumberland Gap or west to Pittsburg and down the Ohio, or along the line of the Great Lakes. Hon. W. Lair Hill, in his "Annual Address" before the Pioneer Association in 1883, fitly characterizes the people among whom the Oregon movement took its rise. "The

greater number of them were pioneers by nature and occupation, as their fathers had been before them. In childhood the story of their ancestors' migrations from the east to the west, and then to the newer west was their handbook of history. Homer or Virgil, of whom few of them had ever heard, could have rehearsed no epic half so thrilling to their ears as the narratives of daring adventure and hairbreadth escapes, which, half true and half false, ever form the thread of frontier history. They knew nothing of Hector and Achilles, but they knew of Daniel Boone, who, Lord Byron said, 'was happiest among mortals anywhere,' whom civilization drove out of Pennsylvania by destroying the red deer and black bear, and who, after some years of solid comfort in his log cabin amid the wilds of Kentucky, was again pursued and overtaken by the same relentless enemy and compelled to retire into the Missouri wilderness, beyond the Mississippi; and who, even in that distant retreat, was soon forced to say to his friend and companion, according to current anecdote, 'I was compelled to leave Kentucky because people came and settled so close around me I had no room to breathe. I thought when I came out here I should be allowed to live in peace; but this is all over now. A man has taken up a farm right over there, within twenty-five miles of my door.' Of Boone, and such as Boone, most of them who founded the commonwealth of Oregon, knew much more than of the great names of literature, statesmanship, or arms, and their minds dwelt fondly on the exploits of the frontiersman, whether in the contests with the savages or the chase. More familiar with the log cabin than with the palace, with the rifle than with the spindle and loom, with saddle than with the railway, they felt cramped when the progress of empire in its westward way put

348

5.—“CASTLE AND STEAMBOAT ROCKS.”

restraint upon those habits of life to which they were accustomed.”

Knowledge of a “new country” was sure to create in them an almost irrepressible longing to move on. Such natures as these furnished the best culture conditions in which to develop an Oregon movement with the reports explorers and travelers brought from the far Pacific Coast region. Such Oregon-material had early been disseminated among these susceptible people. The journal of the Lewis and Clark expedition was published in 1814 and distributed far and wide as a government document. Pioneers speak of reading it as boys and of becoming permanently interested in the Oregon Country. The journal of Patrick Gass, a sergeant in the company of Lewis and Clark, fell into the hands of others and stirred their imaginations. From 1817 on until 1832 Hall J. Kelley, a Boston schoolmaster, was compiling and distributing information designed to awaken a desire to join in a movement to establish a civilized community in Oregon. His society is said to have had thirty-seven agents scattered through the union. An Oregon question became a subject of negotiation between Great Britain and the United States in 1818. These negotiations were renewed in 1824, 1827 and 1842. The occupation of Oregon was proposed in congress in 1821. The subject was kept before congress almost continuously until 1827, and again from 1837 on. The proposed legislation elicited exhaustive reports and warm discussions, which were published in the newspapers of the land. The bill of Dr. Lewis F. Linn, senator from Missouri, introduced in 1842, with its provision for a grant of six hundred and forty acres of land to every actual male settler, was naturally a most potent cause of resolutions to go to Oregon. The fact that during all these years Great Britain disputed our

right to claim the whole of the Oregon Country only added to the ardor of some who thought of going thither.

Soon sources of fresh information brought direct from Oregon became available. St. Louis was the winter rendezvous of representatives of fur companies and independent trappers who were operating in the Rocky Mountains. These came in contact with officers and employees of the Hudson's Bay Company, and from them secured much information about Oregon. Nathaniel J. Wyeth conducted two expeditions overland to the Lower Columbia between 1832 and 1836. Mr. William N. Slacum, who had been commissioned by President Jackson to visit the North Pacific Coast to conduct explorations and investigations among the inhabitants of that region, reported in 1837. Irving's Astoria was brought out in 1836, and his *Adventures of Captain Bonneville* in 1837. In 1838 Jason Lee, the Methodist missionary, returned to the States, and talked Oregon wherever he went. His lecture on Oregon in Peoria, Illinois, that year netted an expedition of thirteen or fourteen persons for Oregon the next. The leader of this party, Thomas J. Farnham, returned to the East, and in 1841 published a book of travels, which had a wide circulation. Dr. Elijah White, for several years associated with the Methodist mission enterprise, but who had returned to his home in New York, received an appointment in 1842 as sub-Indian agent for Oregon. He immediately began a canvass for immigrants to Oregon. His party, made up mainly of those found on the Missouri border ready to start, added one hundred and twenty-seven to the American population in Oregon. During this same year Commodore Wilkes' naval exploring expedition to Oregon returned and reported. Early in this year, too, Fremont's overland party was organized, and was on the trail a short distance in the rear of Doctor White's

250

6. —SCOTT'S BLUFF."

pioneer party. On February 1, 1843, the Linn bill passed the senate. All the missionaries were sending back letters giving glowing accounts of the attractions of Oregon. The famous winter ride of Doctor Whitman from Oregon to Missouri was made in the winter of 1842-3. He did go to Washington and he urged the importance of American interests in Oregon upon President Tyler and some of the members of his cabinet. Returning west in the spring of 1843, he was at the Shawnee mission school, near Westport, Missouri, while the great migration of 1843 was forming and filing by. The sight reassured him that Oregon was to be occupied by American citizens. His thought seemed no longer mainly concerned with the pioneers getting to Oregon. There would be no trouble about that. His plans reached forward to include the conditions of a stable and progressive civilization there. His letters at this time, after mentioning the number of emigrants, turn to matters that would determine their condition as proposed settlers. He says: "A great many cattle are going, but no sheep, from a mistake of what I said in passing." And again: "Sheep and cattle, but especially sheep, are indispensable for Oregon. * * * I mean to impress the Secretary of War that sheep are more to Oregon's interests than soldiers." Doctor Whitman's influence had probably not been decisive with many of the pioneers, possibly not with any, in getting them started, but all the leaders of that great immigration testify that his services as pilot and counsellor were most valuable in getting them through.

The facts so far marshalled on the origin of the pioneer movement to Oregon disclose the existence of a people in the Mississippi Valley competent for the undertaking, and on general principles not disinclined towards it, whose thought, moreover, had been arrested by some

unique advantages claimed for the Oregon country. But the Oregon movement, like most migrations, has most light thrown on its origin and motive by an inquiry into the conditions that made the old home undesirable, and in some cases even unbearable.

Not a few came from Missouri, Kentucky and other border slave states because they were not in sympathy with the institution of slavery. Their aversion to slave owning placed them at a great disadvantage in those states. Their families were not recognized as socially the equals of the more influential portion of society. They were accustomed to labor, and slavery brought a stigma upon labor. In the cultivation of tobacco and hemp, the main articles of export, the owner of slave labor had a decided advantage. The employer of free labor found it exceedingly difficult to make ends meet. Snubbed in a social way, worsted in industrial competition, in individual cases they were even mobbed when they tried to express their anti-slavery sentiments at the polls. Some of the more nervous of the slave-owning population, too, were impelled to seek relief in the same movement from the constant dread of a negro insurrection.

The "fever and ague" was a dread visitant to very many engaged in turning over the virgin soil of the Mississippi Valley. In Oregon they would be free from this curse, so the "fever and ague," with not a few, brought on the "Oregon fever." The frequent recurrence of the awful scourge of the cholera in the towns of the middle west in the late forties and early fifties made many, in the hope of safety, more than willing to brave the dangers and hardships of the journey to Oregon. The warning signals of approaching old age no doubt were the deciding influence with some who set out as modern

35-2

7.—“OLD BEDLAM,”—SITE OF FORT LARAMIE.

Ponce de Leons in search of fountains of renewed youth in Oregon.

Monetary disturbances had made business stagnant all over the country from 1837 to 1841. Many had gone to the wall, and had been compelled to see their homes turned over to others. The hard times were felt keenest in the then farthest west. They were so far inland that commercial intercourse with the rest of the world was almost totally cut off. What traffic they had was carried on by slow, laborious and expensive processes. Railroad building had not progressed so as to give a hope, hardly even an intimation, of its wonderful solution of the problem of maintaining a high civilization far inland. By going to Oregon they would, as they thought of it, again be on the open shores of the greater sea, within easy reach of the highway of the civilizations of the world. Not often, perhaps, were their motives formulated. These were allowed to rest in their minds in the most naive form of impulse. Col. Geo. B. Currey, in his "Occasional Address" before the Pioneer Association, in 1887, endorses the following as the best reason he ever got. It was, as he says, "from a genuine westerner," who said he came "because the thing wasn't fenced in, and nobody dared to keep him out."

The western border of Missouri was the natural jumping off place for the plunge into the wilderness. The settlements there had extended out like a plank beyond the line of the border elsewhere. The Ohio and the Missouri, with a short stretch of the Mississippi, had furnished the line of least resistance to the westward movement.

Each recurring spring tide from 1842 on witnessed the gathering of hosts at points on the Missouri, from Independence, near the confluence of the Kansas with the Missouri, north to what is now Council Bluffs. They

were enamored with one idea, that of making homes in far away Oregon. This part of the border was also the starting line for the California and the Mormon migrations. The California movement was only sporadic until 1849. This was seven years after the Oregon movement had become regular. The Mormons first struck across the continent in 1847.

Independence and Westport, just south of the Missouri's great bend to the east, were the gateway of the earliest regular travel and traffic across the plains. These towns are now the suburbs of Kansas City. The Oregon migrations of 1842 and 1843 were formed exclusively in this vicinity. The old Santa Fe trail led by these settlements. From these points, too, the fur trading companies conducted expeditions annually to the upper waters of the Green River beyond the Rocky Mountains. The route was up the south side of the Kansas River some fifty miles, then turning to the right, the river was forded or ferried and a general northwest course adhered to, more direct for Oregon.

Beginning in 1844 Saint Joseph, then a thriving border town, situated on the river some fifty miles to the north of the first jumping off places, became an important fitting out place. Those who took steamboat passage to the border would naturally wish to make as much of the distance to Oregon in that way as possible. The vicinity of Saint Joseph seemed to furnish excellent facilities for securing the necessary ox teams and other needs for the trip. The Saint Joseph route, too, was a more direct one for those coming across the country from Iowa, Illinois and Indiana. After 1850 the Council Bluffs' route had the largest transcontinental travel. Weston and old Fort Kearney, the present Nebraska City, both on the Missouri, the former between Independence and Saint Joseph and the latter between Saint Joseph and

8.—The Trail leading down to bottom lands of the Sweetwater.

Council Bluffs were minor points of departure. Smaller companies would cross the river wherever there was a ferry.

Steamboating on the treacherous Missouri during those spring seasons while the tide of emigration was strongly westward set is given a lurid hue in the journals of the emigrants. The river route was the natural one for all coming from Ohio and the states to the east, also for many coming from Indiana.

One entry made during this part of the trip in 1852 reads as follows: "We have a bar on our boat, too, and that is visited about as often as any other place I know of. A son of temperance is a strange animal on this river, I can assure you. I think there are three or four sons on the boat, and the rest, about five hundred people, like a dram as often as I would like to drink a little water."

* * * We get a little scared sometimes, for we hear of so many boats blowing up. There was another boat blown up at Lexington last Saturday and killed one hundred and fifty persons, the most of which were emigrants for California and Oregon. These things make us feel pretty squally, I can assure you, but it is not the way to be scared beforehand. So we boost our spirits up and push on. * * * Got to Lexington at 12 o'clock. There we found the wrecks of the boat that blew up five days ago. There were about two hundred people aboard, and the nearest we could learn about forty persons escaped unhurt, about forty were wounded and the balance were killed."

The man who kept this journal fitted out with a company at Saint Joseph. The company planned to drive up the east side of the Missouri and cross at old Fort Kearney. But, finding the roads too bad on that route, they made for a ferry ten miles north of Saint Joseph.

I quote from his account of their experiences in getting across the river: "Went up to the ferry. Mr. H—'s and Mr. S—'s wagons went over safe. Then Mr. S—'s family wagon and five yoke of cattle and all of Mr. S—'s family except two boys went on the ferry boat, and when they were about one-half way across the boat began to sink. They tried to drive the cattle off, but could not in time to save the boat from sinking. My family are still on the east side and I—S— with his teams. We witnessed the scene and could do nothing. Mrs. S— and the baby and next youngest were all under water, but the men of the boat got into the river and took them out, and the rest of the family got upon the wagon cover and saved themselves from drowning. A Mr. R— jumped overboard and thought he could swim to shore, but was drowned. He was one of Mr. S—'s hired hands. By the assistance of one of the other boats the rest were saved, but we thought from where we were that it was impossible that they could all be saved. Well, I paid a man fifteen cents for taking my wife and little children across in a skiff. They have no skiff at the ferry, but they have three good ferryboats that they work by hand. But the people here are as near heathens as they can be, and they go for shaving the emigrants, and then they spend it for whiskey and get drunk and roll in it. But we are all over on the west shore of the Missouri and in Indian territory."

For those congregated hosts, encamped each early spring at different points along the banks of the Missouri, and intent as soon as grass had grown to be sufficient for their stock to sally forth on a two thousand mile passage to the Valley of the Willamette, the natural features of the continent pointed out just one general route to travel. This road, so clearly marked out by the configuration of the country for all using their mode of conveyance, lay up the Valley of the Platte; its tributary, the Sweet-

9.—“INDEPENDENCE ROCK.”

water; through South Pass; across to the Valley of the Snake, the tributary of the Columbia; following down the course of the Snake to its great bend to the north; across to the Columbia; down the Columbia to their destination.

Those sections of the trail which constitute connecting links, as it were, to the grander portions, can be accounted for almost as clearly as the main sections can. Forage and water must be regularly available to those traveling with horses, mules or oxen. These must be found in great abundance by those who are driving considerable droves over long stretches of arid wastes. In summer months, on the unsettled parched plains, these resources were insured only along river or creek bottoms. So in striking out from Independence or Saint Joseph for the Valley of the Platte to the north, to economize in the distance traveled to the Oregon goal, and insure supplies of the prime requisites—good water and grass—their course would be such as to bring them to nightly camps on the banks of one of the numerous streams flowing into the Kansas. Passing one they would make for a higher point on the next to the west so as to keep in a more direct line for Oregon. Fuel, so necessary for preparing their meals, was in that region found only on the banks of these streams. Along the Platte, the North Fork, and the Sweetwater “buffalo chips” sufficed fairly well the need of fuel, except the night was wet. In moving from the South Pass to the basin of the Columbia, mountainous country made a direct route impracticable. In the detour to the southwest the valleys of the tributaries of the Upper Green were utilized, and particularly the most convenient northwest course of the Bear River. The details of the course in this detour were determined by the stepping stones, as it were, of water, grass and wood. These were found in that desert

region, too, only in the river and creek bottoms. On issuing from the South Pass, then, the valleys of the Little Sandy, Big Sandy, and the Green itself, had to be followed, with such crossings from one to the other as were feasible, and were in the interests of economy in distance, until they struck a tributary coming in from the west, up which a passage could be made and the divide crossed, bringing them into the Valley of the Bear, a part of the Great Salt Lake Basin. The Valley of the Bear has a general northwest direction of some seventy-five miles from where they usually entered it. It was in every way a natural road to them to the point where it makes its bend to the south. At this bend was the first fork made in early times by the California trail's turning off to the south. The divide at this point between the Basin of the Great Salt Lake and the Valley of the Snake was comparatively easy. The Snake River Valley, with its barren wastes, deep precipitous canyons, sharp lava rocks, made a trying portion of the route. There were several optional routes. None so acceptable as the Platte Valley had furnished. To follow the Snake in its long bend to the north would have led them far out of their way, so they took the available valleys of the Burnt and Powder rivers that led them farthest on their way towards the westerly flowing Umatilla, a tributary of the Columbia. They thus not only kept on in a comparatively direct line towards the Valley of the Willamette, but were also afforded water, grass and wood so necessary for further endurance of the now well fagged transcontinental wayfarers. But the Blue Mountains lay across this short cut and gave them their first real experience in climbing steep mountain sides. From the crest of these mountains the way to their goal lay down hill, except they chose a road across the Cascade Mountains. But whether they took the Barlow Road or

35b

10.—WEST END OF INDEPENDENCE ROCK.

dared the dangers of the gorge of the Columbia, the darkest, sternest trials were yet to be faced by the now weak and famished pioneers. They were, however, veterans now, and if succored with fresh supplies from settlers in the Willamette Valley and the strength of their cattle sufficed, no difficulties, however stupendous, could daunt them.

On the whole, those home-seeking pioneers, as they lay encamped on the banks of the Missouri, could congratulate themselves that no specially stupendous natural obstacles had been interposed in that immense stretch that lay between them and their destination. There was only the interminableness of it, and the facts that it was to be entered upon while the fierce pelting spring storms of wind, rain and hail were liable to be of daily and nightly occurrence; that muddy sloughs would cause breakdowns, and freshet-swollen streams would be fraught with danger; that there would then be four months in which the fierce burning, blistering sun would have them at its mercy, and a dense, stifling dust would enhance their misery during the midday hours to the point of wretchedness, and no bathroom in the evening in which to find relief; that in the later and almost final days of the journey they would probably be exposed in approximate nakedness to the searching blasts of the oncoming winter, fortunate if they were not caught and held fast in mountain snows. Withal, they knew it would be a lumbering trudge with ox teams that would take them all summer and far into the autumn.

Each recurring spring season family or neighborhood groups who had determined to try their fortunes in Oregon would move out to one of the points of departure on the Missouri border. They would soon find themselves a part of a larger aggregation. Generally there was no more prearrangement for this meeting than there is

among birds that flock for a migration. All who constituted the company from any one point had simply selected the same jumping off place.

When the grass had grown abundant enough to furnish subsistence for their stock and draft animals, those who were ready with their outfit would begin to file out on the prairie trails converging upon the main Oregon road. After having traveled a day or two a halt was called by those in advance to await the coming up of others who proposed to undertake the same trip with themselves. The American instinct for organization would then assert itself, and there was occasion for its activity. They were in an Indian country. It was not wise to tempt the predatory propensities of the savages by too much straggling in their traveling or by too much unwariness in guarding their cattle and horses. In order to avoid molestation by prowling bands of Pawnees, Otoes, Cheyennes and Sioux, through whose ranges the trail east of the Rockies passed, it was necessary to travel in companies of some size and with such discipline as to be able to establish an effective guard at night and to make some demonstration of force when encountering considerable bands of Indian warriors.

There was much economy, too, in bunching their several droves of loose stock into a single herd, in having a single lookout for selecting camping places, in the help that each would receive in case of accidents that all were liable to. Very essential, too, were organization and discipline when they came to a bank of a large stream across which their trail led. With the earlier migrations before printed guide books were available, organization was necessary to secure the services of a pilot.

The first large migrations—those of 1843 and 1844, and even of 1845—erred in attempting to go as one compact body. The difficulty of securing adequate

360!

11.—“DEVIL’S GATE,”
Showing dam for leading out an irrigating ditch.

grazing was much enhanced as the company increased in size. From this fact and the further fact that in case of a hitch or accident of any kind in a large company, many would be delayed who could be of no service in getting things fixed up for a fresh start, it resulted that twenty or thirty wagons were the maximum limit to the size of companies that did not chafe under their organization. In later years six or eight wagons were a normal number for a company. Even in the earlier migrations, when the Upper Sweetwater was reached and the danger from the Indians was measurably past, the large companies would divide up into sections. The earlier migrations, too, took precautions that no person attached himself to the train unless he was furnished with such resources as to rations and transportation that he would not likely become a common burden.

The records of the migrations give ample corroboration to the truth of the adage, "Uneasy lies the head, etc.," and yet these privately penned diaries disclose comparatively little bickering or unwholesome feeling, notwithstanding the severe strain human nature was under in the conditions of this four, five, and sometimes six months' passage. Whenever conditions developed making advisable a division of the body into two or more, the division was made, and all was smooth again. The documentary material printed in this number of the Quarterly throws light on this phase of their experience and depicts the unique proceedings of the pioneers of 1843 in effecting an organization.

The type of the transcontinental pioneer changed materially after the gold-seeker was in the majority. From 1849 on the diarist's account is not devoid of the tragical. "These plains try and tell all the dark spots in men," says Rev. Jesse Moreland in his journal of the trip from Tennessee to Oregon in 1852. He describes

evidence of three executions for murder by hanging. He says: "As they had nothing to make a gallows out of, they took two wagon tongues, put them point to point and set a chair in the middle, and the man stood on the chair till the rope was tied, and then the chair was taken from under him. This is the third we have heard of being hanged."

Before 1849, while the Oregon movement still constituted the great part of the transcontinental travel, and a fierce commercial spirit was not yet dominant, the humanity of the pioneers seemed to stand remarkably well the strain incident to the experiences on the plains. Their journals do not reveal half the irritation and demoralization that the accounts of Parkman and of Coke do in companies that had vastly better outfits and were passing over the same routes.

The average company of immigrants in pulling through the miry sloughs of the Missouri bottom lands in early spring, with only partly broken ox teams, would break a wagon tongue, an axle tree, or a wheel, and suffer more or less exasperating delay. The fierce spring storms of rain and hail would play havoc with their tent coverings, and drench and pelt all who must stand outside to prevent the teams and stock from stampeding. These freshets would make impassable, for the time being, the numerous streams of the Kansas and Nebraska prairies. With the feeling that they must not over-exert their teams mere trifles even were allowed to delay them during the first four or five hundred miles of the journey.

Except they had some one like a Doctor Whitman with them to persistently urge them to "travel, travel," as the only condition of getting through, there would be too much loitering in the early stages of the journey. Those who entered upon the trip in later years had more nearly an adequate sense of the vastness of the distance

12.—Gap just south of Devil's Gate—used for the Trail.

they must cover, and wasted no time in the initial stages.

Especially the migration of 1849, and to some degree those of 1850 and 1852, were in deepest dismay over the presence among them of the dreadful scourge of cholera. The trail was lined in places along the south side of the Platte through the width of rods with mounds of freshly made graves after these migrations had passed.

The Hon. F. A. Chenoweth, in his "Occasional Address" before the Oregon Pioneer Association, in 1882, gives the following account of the ravages of the cholera among the trains of 1849:

"But the incidents of hardship which I have noticed were the merest trifles compared to the terrible calamity that marked with sadness and trailed in deep desolation over that ill-fated emigration. Very soon after the assembled throng took up its march over the plains the terrible wave of cholera struck them in a way to carry utmost terror and dismay into all parts of the moving mass.

The number of fatally stricken, after the smoke and dust were cleared away, was not numerically so frightful as appeared to those who were in the midst of it. But the name "cholera" in a multitude unorganized and unnumbered is like a leak in the bottom of a ship whose decks are thronged with passengers. The disturbed waters of the ocean, the angry elements of nature, when aroused to fury, are but faint illustrations of the terror-stricken mass of humanity, when in their midst are falling with great rapidity their comrades—the strong, the young and the old—the strength and vigor of youth melting away before an unseen foe. All this filled our ranks with the utmost terror and gloom. This terrible malady seemed to spend its most deadly force on the flat prairie east of and about Fort Laramie.

One of the appalling effects of this disease was to

cause the most devoted friends to desert, in case of attack, the fallen one. Many a stout and powerful man fought the last battle alone on the prairie. When the rough hand of the cholera was laid upon families they rarely had either the assistance or the sympathy of their neighbors or traveling companions.

There was one feature mixed with all this terror that afforded some degree of relief, and that was that there was no case of lingering suffering. When attacked, a single day ordinarily ended the strife in death or recovery. A vast amount of wagons, with beds and blankets, were left by the roadside, which no man, not even an Indian, would approach or touch through fear of the unknown, unseen destroyer.

While there were sad instances of comrades deserting comrades in this hour of extreme trial, I can not pass this point of my story without stating that there were many instances of heroic devotion to the sick, when such attention was regarded as almost equivalent to the offering up of the well and healthy for the mere hope of saving the sick and dying."

Not a few who had purposed to go to California that year turned off on the Oregon road to escape the contagion which the dense crowd seemed to afford this disease. Excepting in these cholera years and in 1847 there were only infrequent cases of mountain fever and forms of dysentery that were developed in the alkali regions of the mountains.

A train of pioneers with sensible outfit emerging into the valley of the Platte in a season free from the cholera affliction could almost make it for a time a grand pleasure excursion. The heat was not yet oppressive, the roads good, the air exhilarating, the boundless expanse of green undulating prairie under crystal skies filled them with a sense of freedom. The exciting buffalo hunt was soon

13.—“DEVIL’S GATE,” AS SEEN FROM ABOVE.

on and afforded them a welcome addition to a diet exceedingly unvaried at best. After the usual trudge during the day amid a panorama not yet monotonous the wagons would be driven to form approximately a circle—the end of the tongue or the front wheel of one lapping the hind wheel of the wagon in front, according as a more or less spacious corral was desired. The oxen would be unyoked and taken to water and then to the selected grazing spot. Fires would be kindled alongside each wagon outside of the corral for preparing the evening meal. After it was partaken of there would be an hour or two before darkness settled down upon them. Then the cattle would be brought within the corral, if there was the least apprehension of danger, and all except the guards for the first watch and possibly the matrons with multitudinous family cares would quickly surrender themselves to sleep. But congenial groups of young people would generally have a social hour or two. A blanket or extra wagon covering was thrown on the ground beside the wagon, and, when rain threatened, spread under the wagon. (Most were probably without tents other than the canvas tops of their wagons.) This with something for a covering sufficed for the beds of the young men and boys. In the morning at a given signal all were astir—and, if the cattle had not strayed during the night or been stampeded by Indians, breakfast over, everything was soon in readiness for falling in, each in his appointed place, and taking up the march that should bring them a day nearer to their Oregon home. But this idyllic succession of days very soon developed a very seamy side.

The sun's rays became more and more scorching in their fierceness, the plains assumed a dull, leaden grayish aspect. The sagebrush and cactus took the place of the waving grass. The burning sand and stifling dust became deeper. These the west wind would raise into

a cloud continuous from morning until night. This cloud of sand and dust particles beating against them at a terrific velocity they had to face all day. Soon eyes and lips were sore. To relieve the uncomfortable feeling that the parching air gave the lips they would unwisely be moistened and the soreness thus extended and deepened. Soon everything was obdurately begrimed. Rags then were in evidence. Shoes worn so as to no longer protect the feet. In the dry, scorching air the wagons would develop loose joints and lose their tires.

The monotony was relieved by lying by a day now and then during which the women would wash and mend the clothes and the men repair wagons and hunt buffalo, the meat of which would be jerked to furnish a supply after they had passed beyond the limits of the buffalo country. The buffalo did not commonly range west of the Lower Sweetwater.

The experiences which the buffalo gave them were not limited to the fine sport of hunting him and the delicious feasts his steaks afforded. His presence seemed to kindle into life the old ancestral wildness of the ox and the horse. Without the least warning some sedate member of a team would raise his head and give the old racial snort of freedom. This would kindle the same spark in every animal of the train, and away they would stampede with wagons, inmates and all, and not to be stopped until utterly exhausted. In these stampedes people would be run over, bones would be broken, oxen dehorned, their legs broken, and things demolished generally. The simple-minded pioneer with any tendency to personify could not help but believe that the devil had gotten into his hitherto always tractable animals. I quote a pioneer's account of a stampede, though he does not ascribe it to the presence or influence of the buffalo, as is almost always done: "After passing

366

14,—“DEVIL’S GATE,” FROM SOME DISTANCE ABOVE,

Devil's Gate, a beautiful stretch of road lay before us. All at once the teams broke into a run—something started them, no one seemed to know what. It was a regular stampede as to our team. Father and mother were walking; I was walking also, and some of the children were in the wagon. Away the team went, the hardest and the wildest running I ever saw. When they stopped and we caught up with them, we found the children were not hurt, but the two wheelers were down and one of them dead. It took our team a long time to get over the scare."

There was still another condition in which the spirit of the buffalo made the pioneer show deference to it. This happened when a great horde of buffalo was on a stampede bearing down upon an emigrant train that happened to be passing across its trail. The moment was almost enough to bring dismay to the pioneer. Either the teams of the train were urged into something of a stampede to get out of line of the horde's advance, or a corral was formed and volleys fired into the impending mass to divide it so as to leave the corral a safe island between a destructive flood rolling by on either hand.

Distressing accidents must almost of necessity befall them from their carrying their loaded guns commingled with household goods on their wagons. It is not strange that at least half of the journals should have records of fatalities thus caused. Under the law of mathematical probabilities, with the frequent occasion there was to remove gun or blanket thus intermixed, while the members of the family were standing around the wagon, accidents must occur. The small boy of the family during this four or five months' trip had very many occasions to clamber out of and into the wagon while it was in motion. He, too, would come to grief

with a broken leg. Any ordinary fracture, however, even though there were no surgeon at hand, would be attended to, so that no deformity resulted. If the case was one seeming to require an amputation "a butcher knife and an old dull hand saw" were improvised as surgical instruments. But I have not found that a patient survived such an operation and got well. The other great epochal events of family life, marriages and births, were not infrequent on the trail, and seemed to cause little distraction.

The experiences of the pioneers in crossing the rivers in the line of the trail were very diverse. It is reported of one of the migrations that they were not compelled to ferry until they reached the Des Chutes in Oregon. But the migration of 1844 had a serious time even with the Black Vermillion and Big Blue, tributaries of the Kansas. Where logs were available they were hollowed out and catamaran rafts made so as to fit the wheels of a wagon. Sometimes the best wagon boxes would be selected and caulked and used as flatboats. Where buffalo skins were plentiful they would be stretched around the wagon box to make it water-tight. In later stages of the journey, after their teams were more reliable, it was a common practice to raise the wagon beds several inches above the bolsters, if the depth of the stream required it, couple several teams into a train with the most reliable in front on a lead-rope, and drivers along the down-stream side of the other teams. They would then ford as trains. After the rush in 1849 ferries were established at the more important crossings, whose owners reaped rich harvests.

Their route had no rich diversity of scenic grandeur. There are most impressive natural features along the line of it, but with their slow mode of travel one phase became exceedingly monotonous before another was

15.—The deeply worn Trail along the Sweetwater.

reached. There were the vastness and solitude of the prairies and plains, the transparency of the atmosphere that gave magnificent sweep of view. Along the North Fork of the Platte stood great sentinel rocks with interesting sculptured proportions. Among these are the Lone or Court House Rock, Chimney Rock, Castle Rock, Steamboat Rock, and Scott's Bluff. Farther along on their journey they come to Independence Rock and Devil's Gate on the Sweetwater, one a huge basaltic mound upon which with tar or with iron chisels they would register their names; the other a most unique breach in a granitic range with sides two hundred feet high, through which the Sweetwater flows. A week or two later they would have the exhilarating sense of standing on the backbone of the continent in South Pass, with the towering Wind River Mountains to their right and the Oregon buttes to their left. A few miles on they would drink from the Pacific springs and know they were in what was then called Oregon. Scenery most unique was still before them on their way. Some of it, like the panorama from the divide between the Green and the Bear rivers and the Soda Springs, they would enjoy. But their march from the South Pass on was a retreat. Oxen would fall helpless in their yokes, wagons would become rickety beyond repair. The trail was strewn with wreckage, and the stench from the dead cattle was appalling. The watering places along the Snake were contaminated by the stock that had perished. As soon as they reached the Blue Mountains their stock was safe from starvation, but the exertion required of their way-worn and weak oxen on the steep grades now before them was the last straw often that these creatures now could not bear. They could not let them recruit; the season was far advanced towards winter; they must press on.

Data for determining the numbers that came across the plains to Oregon during the successive years are as yet very unsatisfactory. The estimates given below for 1842 and 1843 are well founded, but the others, especially from 1847 on, are from no very tangible basis.

At the close of 1841 the Americans in Oregon numbered possibly four hundred.

The immigration of 1842 estimated from-----	105 to 137
The immigration of 1843 estimated from-----	875 to 1,000
The immigration of 1844 estimated about-----	700
The immigration of 1845 estimated about-----	3,000
The immigration of 1846 estimated about-----	1,350

The above figures are taken quite closely from those given by Elwood Evans in his address before the Pioneer Association in 1877. I make the immigration of 1844, however, seven hundred, instead of four hundred and seventy-five, as he gives it.

The immigration of 1847 between-----	4,000 and 5,000
The immigration of 1848 about-----	700
The immigration of 1849 about-----	400
The immigration of 1850 about-----	2,000
The immigration of 1851 about-----	1,500
The immigration of 1852 about-----	2,500

No doubt this one summer on the plains was an ordeal under which some sensitive natures were strained and weakened for life. It may be, too, that living for five or six months, as families, on the simplest, barest necessities of life, fixed standards of living lower than they otherwise would have been. The effect, however, on strong, resourceful natures of these months on the plains could not have been other than salutary. The pioneers, when they started, were most distinctively American in their characteristics. As such they needed to be socialized. No better school could have been devised than the organization and regimen of the trip across the plains for socializing their natures.

F. G. YOUNG.

16,—The “Three Crossings” of the Sweetwater.

A DAY WITH THE COW COLUMN IN 1843.

BY JESSE APPLGATE.

(Read before the Oregon Pioneer Association in 1876; reprinted from transactions of that society.)

The migration of a large body of men, women and children across the continent to Oregon was, in the year 1843, strictly an experiment; not only in respect to the members, but to the outfit of the migrating party. Before that date, two or three missionaries had performed the journey on horseback, driving a few cows with them, Three or four wagons drawn by oxen had reached Fort Hall, on Snake River, but it was the honest opinion of the most of those who had traveled the route down Snake River, that no large number of cattle could be subsisted on its scanty pasturage, or wagons taken over a country so rugged and mountainous.

The emigrants were also assured that the Sioux would be much opposed to the passage of so large a body through their country, and would probably resist it on account of the emigrants' destroying and frightening away the buffaloes, which were then diminishing in numbers.

The migrating body numbered over one thousand souls, with about one hundred and twenty wagons, drawn by six-ox teams, averaging about six yokes to the team, and several thousand loose horses and cattle.

The emigrants first organized and attempted to travel in one body, but it was soon found that no progress could be made with a body so cumbrous, and as yet so

averse to all discipline. And at the crossing of the "Big Blue" it divided into two columns, which traveled in supporting distance of each other as far as Independence Rock on the Sweetwater.

From this point, all danger from Indians being over, the emigrants separated into small parties better suited to the narrow mountain paths and small pastures in their front.

Before the division on the Blue River there was some just cause for discontent in respect to loose cattle. Some of the emigrants had only their teams, while others had large herds in addition, which must share the pasture and be guarded and driven by the whole body. This discontent had its effect in the division on the Blue. Those not encumbered with or having but few loose cattle attached themselves to the light column; those having more than four or five cows had of necessity to join the heavy or cow column. Hence the cow column, being much larger than the other and much encumbered with its large herds, had to use greater exertion and observe a more rigid discipline to keep pace with the more agile consort. It is with the cow column that I propose to journey with the reader for a single day.

It is four o'clock A. M.; the sentinels on duty have discharged their rifles—the signal that the hours of sleep are over—and every wagon and tent is pouring forth its night tenants, and slow-kindling smokes begin largely to rise and float away in the morning air. Sixty men start from the corral, spreading as they make through the vast herd of cattle and horses that make a semicircle around the encampment, the most distant perhaps two miles away.

The herders pass to the extreme verge and carefully examine for trails beyond, to see that none of the animals have strayed or been stolen during the night. This

17.—“Oregon Buttes,”—taken from South Pass.

morning no trails led beyond the outside animals in sight, and by 5 o'clock the herders begin to contract the great, moving circle, and the well-trained animals move slowly towards camp, clipping here and there a thistle or a tempting bunch of grass on the way. In about an hour five thousand animals are close up to the encampment, and the teamsters are busy selecting their teams and driving them inside the corral to be yoked. The corral is a circle one hundred yards deep, formed with wagons connected strongly with each other; the wagon in the rear being connected with the wagon in front by its tongue and ox chains. It is a strong barrier that the most vicious ox cannot break, and in case of an attack of the Sioux would be no contemptible intrenchment.

From 6 to 7 o'clock is a busy time; breakfast is to be eaten, the tents struck, the wagons loaded and the teams yoked and brought up in readiness to be attached to their respective wagons. All know when, at 7 o'clock, the signal to march sounds, that those not ready to take their proper places in the line of march must fall into the dusty rear for the day.

There are sixty wagons. They have been divided into fifteen divisions or platoons of four wagons each, and each platoon is entitled to lead in its turn. The leading platoon today will be the rear one tomorrow, and will bring up the rear unless some teamster, through indolence or negligence, has lost his place in the line, and is condemned to that uncomfortable post. It is within ten minutes of seven; the corral but now a strong barricade is everywhere broken, the teams being attached to the wagons. The women and children have taken their places in them. The pilot (a borderer who has passed his life on the verge of civilization and has been chosen to the post of leader from his knowledge of the savage and his experience in travel through roadless wastes),

stands ready, in the midst of his pioneers and aids, to mount and lead the way. Ten or fifteen young men, not today on duty, form another cluster. They are ready to start on a buffalo hunt, are well mounted and well armed, as they need be, for the unfriendly Sioux have driven the buffalo out of the Platte, and the hunters must ride fifteen or twenty miles to reach them. The cow drivers are hastening, as they get ready, to the rear of their charge, to collect and prepare them for the day's march.

It is on the stroke of seven ; the rush to and fro, the cracking of whips, the loud command to oxen, and what seemed to be the inextricable confusion of the last ten minutes has ceased. Fortunately every one has been found and every teamster is at his post. The clear notes of a trumpet sound in the front ; the pilot and his guards mount their horses ; the leading divisions of the wagons move out of the encampment, and take up the line of march ; the rest fall into their places with the precision of clock work, until the spot so lately full of life sinks back into that solitude that seems to reign over the broad plain and rushing river as the caravan draws its lazy length towards the distant El Dorado. It is with the hunters we shall briskly canter towards the bold but smooth and grassy bluffs that bound the broad valley, for we are not yet in sight of the grander but less beautiful scenery (of Chimney Rock, Court House and other bluffs, so nearly resembling giant castles and palaces), made by the passage of the Platte through the highlands near Laramie. We have been traveling briskly for more than an hour. We have reached the top of the bluff, and now have turned to view the wonderful panorama spread before us. To those who have not been on the Platte, my powers of description are wholly inadequate to convey an idea of the vast extent and grandeur of the picture, and the rare beauty and distinctness of the detail. No

18.—“STEAMBOAT SPRING” ON THE BANKS OF THE BEAR RIVER.

haze or fog obscures objects in the pure and transparent atmosphere of this lofty region. To those accustomed only to the murky air of the seaboard, no correct judgment of distance can be formed by sight, and objects which they think they can reach in a two hours' walk may be a day's travel away; and though the evening air is a better conductor of sound, on the high plain during the day the report of the loudest rifle sounds little louder than the bursting of a cap; and while the report can be heard but a few hundred yards, the smoke of the discharge may be seen for miles. So extended is the view from the bluff on which the hunters stand, that the broad river glowing under the morning sun like a sheet of silver, and the broader emerald valley that borders it, stretch away in the distance until they narrow at almost two points in the horizon, and when first seen, the vast pile of the Wind River Mountains though hundreds of miles away, looks clear and distinct as a white cottage on the plain.

We are full six miles away from the line of march; though everything is dwarfed by distance, it is seen distinctly. The caravan has been about two hours in motion and is now as widely extended as a prudent regard for safety will permit. First, near the bank of the shining river is a company of horsemen; they seem to have found an obstruction, for the main body has halted while three or four ride rapidly along the bank of the creek or slough. They are hunting a favorable crossing for the wagons; while we look they have succeeded; it has apparently required no work to make it passable, for all but one of the party have passed on, and he has raised a flag, no doubt a signal to the wagons to steer their course to where he stands. The leading teamster sees him, though he is yet two miles off, and steers his course directly towards him, all the wagons following in his

track. They (the wagons) form a line three-quarters of a mile in length ; some of the teamsters ride upon the front of their wagons, some march beside their teams ; scattered along the line companies of women are taking exercise on foot ; they gather bouquets of rare and beautiful flowers that line the way ; near them stalks a stately greyhound, or an Irish wolf dog, apparently proud of keeping watch and ward over his master's wife and children. Next comes a band of horses ; two or three men or boys follow them, the docile and sagacious animals scarce needing this attention, for they have learned to follow in the rear of the wagons, and know that at noon they will be allowed to graze and rest. Their knowledge of time seems as accurate as of the place they are to occupy in the line, and even a full-blown thistle will scarce tempt them to straggle or halt until the dinner hour has arrived. Not so with the large herd of horned beasts that bring up the rear ; lazy, selfish and unsocial, it has been a task to get them in motion, the strong always ready to domineer over the weak, halt in the front and forbid the weak to pass them. They seem to move only in the fear of the driver's whip ; though in the morning, full to repletion, they have not been driven an hour before their hunger and thirst seem to indicate a fast of days' duration. Through all the long day their greed is never satisfied, nor their thirst quenched, nor is there a moment of relaxation of the tedious and vexatious labors of their drivers, although to all others the march furnishes some season of relaxation or enjoyment. For the cow-drivers there is none.

But from the standpoint of the hunters, the vexations are not apparent ; the crack of whips and loud objurgations are lost in the distance. Nothing of the moving panorama, smooth and orderly as it appears, has more

19.—“AMERICAN FALLS.”
 Railroad bridge of the “Oregon Short Line.”

attractions for the eye than that vast square column in which all colors are mingled, moving here slowly and there briskly, as impelled by horsemen riding furiously in front and rear.

But the picture in its grandeur, its wonderful mingling of colors and distinctness of detail, is forgotten in contemplation of the singular people who give it life and animation. No other race of men with the means at their command would undertake so great a journey, none save these could successfully perform it, with no previous preparation, relying only on the fertility of their own invention to devise the means to overcome each danger and difficulty as it arose. They have undertaken to perform with slow-moving oxen a journey of two thousand miles. The way lies over trackless wastes, wide and deep rivers, ragged and lofty mountains, and is beset with hostile savages. Yet, whether it were a deep river with no tree upon its banks, a rugged defile where even a loose horse could not pass, a hill too steep for him to climb, or a threatened attack of an enemy, they are always found ready and equal to the occasion, and always conquerors. May we not call them men of destiny? They are people changed in no essential particulars from their ancestors, who have followed closely on the footsteps of the receding savage, from the Atlantic seaboard to the great Valley of the Mississippi.

But while we have been gazing at the picture in the valley, the hunters have been examining the high plain in the other direction. Some dark moving objects have been discovered in the distance, and all are closely watching them to discover what they are, for in the atmosphere of the plains a flock of crows marching miles away, or a band of buffaloes or Indians at ten times the distance look alike, and many ludicrous mistakes occur. But these are buffaloes, for two have struck their heads to-

gether and are, alternately, pushing each other back. The hunters mount and away in pursuit, and I, a poor cow-driver, must hurry back to my daily toil, and take a scolding from my fellow herders for so long playing truant.

The pilot, by measuring the ground and timing the speed of the wagons and the walk of his horses, has determined the rate of each, so as to enable him to select the nooning place, as nearly as the requisite grass and water can be had at the end of five hours' travel of the wagons. Today, the ground being favorable, little time has been lost in preparing the road, so that he and his pioneers are at the nooning place an hour in advance of the wagons, which time is spent in preparing convenient watering places for the animals, and digging little wells near the bank of the Platte, as the teams are not unyoked, but simply turned loose from the wagons, a corral is not formed at noon, but the wagons are drawn up in columns, four abreast, the leading wagon of each platoon on the left, the platoons being formed with that in view. This brings friends together at noon as well as at night.

Today an extra session of the council is being held, to settle a dispute that does not admit of delay, between a proprietor and a young man who has undertaken to do a man's service on the journey for bed and board. Many such engagements exist, and much interest is taken in the manner in which this high court, from which there is no appeal, will define the rights of each party in such engagements. The council was a high court in the most exalted sense. It was a senate composed of the ablest and most respected fathers of the emigration. It exercised both legislative and judicial powers, and its laws and decisions proved it equal and worthy of the high trust reposed in it. Its sessions were usually held on days when the caravan was not moving. It first took the

20.—Near summit of Blue Mountains—Meacham Station of O. R. & N. R. R.
on the Trail, and site of “Lee Encampment.”

state of the little commonwealth into consideration ; revised or repealed rules defective or obsolete, and enacted such others as the exigencies seemed to require. The common weal being cared for, it next resolved itself into a court to hear and settle private disputes and grievances. The offender and the aggrieved appeared before it ; witnesses were examined, and the parties were heard by themselves and sometimes by counsel. The judges being thus made fully acquainted with the case, and being in no way influenced or cramped by technicalities, decided all cases according to their merits. There was but little use for lawyers before this court, for no plea was entertained which was calculated to hinder or defeat the ends of justice. Many of these judges have since won honors in higher spheres. They have aided to establish on the broad basis of right and universal liberty two pillars of our great Republic in the Occident. Some of the young men who appeared before them as advocates have themselves sat upon the highest judicial tribunals, commanded armies, been governors of states and taken high position in the senate of the nation.

It is now one o'clock ; the bugle has sounded and the caravan has resumed its westward journey. It is in the same order, but the evening is far less animated than the morning march ; a drowsiness has fallen apparently on man and beast ; teamsters drop asleep on their perches and even when walking by their teams, and the words of command are now addressed to the slowly creeping oxen in the soft tenor of women or the piping treble of children, while the snores of the teamsters make a droning accompaniment. But a little incident breaks the monotony of the march. An emigrant's wife, whose state of health has caused Doctor Whitman to travel near the wagon for the day, is now taken with violent illness. The Doctor has had the wagon driven

out of the line, a tent pitched and a fire kindled. Many conjectures are hazarded in regard to this mysterious proceeding, and as to why this lone wagon is to be left behind. And we too must leave it, hasten to the front and note the proceedings, for the sun is now getting low in the west and at length the painstaking pilot is standing ready to conduct the train in the circle which he has previously measured and marked out, which is to form the invariable fortification for the night. The leading wagons follow him so nearly around the circle that but a wagon length separates them. Each wagon follows in its track, the rear closing on the front, until its tongue and ox-chains will perfectly reach from one to the other, and so accurate the measure and perfect the practice, that the hindmost wagon of the train always precisely closes the gateway, as each wagon is brought into position. It is dropped from its team (the teams being inside the circle), the team unyoked and the yokes and chains are used to connect the wagon strongly with that in its front. Within ten minutes from the time the leading wagon halted, the barricade is formed, the teams unyoked and driven out to pasture. Every one is busy preparing fires of buffalo chips to cook the evening meal, pitching tents and otherwise preparing for the night. There are anxious watchers for the absent wagon, for there are many matrons who may be afflicted like its inmate before the journey is over; and they fear the strange and startling practice of this Oregon doctor will be dangerous. But as the sun goes down the absent wagon rolls into camp, the bright, speaking face and cheery look of the doctor, who rides in advance, declare without words that all is well, and both mother and child are comfortable. I would fain now and here pay a passing tribute to that noble and devoted man, Doctor Whitman. I will obtrude no other name upon

21.—Falls of the Willamette—the objective point of the pioneers.

the reader, nor would I his were he of our party or even living, but his stay with us was transient, though the good he did was permanent, and he has long since died at his post.

From the time he joined us on the Platte until he left us at Fort Hall, his great experience and indomitable energy were of priceless value to the migrating column. His constant advice, which we knew was based upon a knowledge of the road before us, was, "*Travel, travel, TRAVEL*; nothing else will take you to the end of your journey; nothing is wise that does not help you along; nothing is good for you that causes a moment's delay." His great authority as a physician and complete success in the case above referred to, saved us many prolonged and perhaps ruinous delays from similar causes, and it is no disparagement to others to say that to no other individual are the emigrants of 1843 so much indebted for the successful conclusion of their journey as to Dr. Marcus Whitman.

All able to bear arms in the party have been formed into three companies, and each of these into four watches; every third night it is the duty of one of these companies to keep watch and ward over the camp, and it is so arranged that each watch takes its turn of guard duty through the different watches of the night. Those forming the first watch tonight will be second on duty, then third and fourth, which brings them through all the watches of the night. They begin at 8 o'clock P. M., and end at 4 o'clock A. M.

It is not yet 8 o'clock when the first watch is to be set; the evening meal is just over, and the corral now free from the intrusion of cattle or horses, groups of children are scattered over it. The larger are taking a game of romps; "the wee toddling things" are being taught that great achievement that distinguishes man

from the lower animals. Before a tent near the river a violin makes lively music, and some youths and maidens have improvised a dance upon the green; in another quarter a flute gives its mellow and melancholy notes to the still night air, which, as they float away over the quiet river, seem a lament for the past rather than a hope for the future. It has been a prosperous day; more than twenty miles have been accomplished of the great journey. The encampment is a good one; one of the causes that threatened much future delay has just been removed by the skill and energy of that "good angel" of the emigrants, Doctor Whitman, and it has lifted a load from the hearts of the elders. Many of these are assembled around the good doctor at the tent of the pilot (which is his home for the time being), and are giving grave attention to his wise and energetic counsel. The care-worn pilot sits aloof, quietly smoking his pipe, for he knows the brave doctor is "strengthening his hands."

But time passes; the watch is set for the night; the council of old men has been broken up, and each has returned to his own quarter; the flute has whispered its last lament to the deepening night; the violin is silent, and the dancers have dispersed; enamored youth have whispered a tender "good night" in the ear of blushing maidens, or stolen a kiss from the lips of some future bride—for Cupid here, as elsewhere, has been busy bringing together congenial hearts, and among these simple people he alone is consulted in forming the marriage tie. Even the doctor and the pilot have finished their confidential interview and have separated for the night. All is hushed and repose from the fatigues of the day, save the vigilant guard and the wakeful leader, who still has cares upon his mind that forbid sleep. He hears the 10 o'clock relief taking post and the "all well" report of the

22.—The Union Pacific Building, Omaha,—site of one of the “jumping off” points for Oregon.

returned guard ; the night deepens, yet he seeks not the needed repose. At length a sentinel hurries to him with the welcome report that a party is approaching—as yet too far away for its character to be determined, and he instantly hurries out in the direction in which it was seen. This he does both from inclination and duty, for in times past the camp had been unnecessarily alarmed by timid or inexperienced sentinels, causing much confusion and fright amongst women and children, and it had been a rule that all extraordinary incidents of the night should be reported directly to the pilot, who alone had the authority to call out the military strength of the column, or of so much of it as was in his judgment necessary to prevent a stampede or repel an enemy. Tonight he is at no loss to determine that the approaching party are our missing hunters, and that they have met with success, and he only waits until by some further signal he can know that no ill has happened to them. This is not long wanting. He does not even await their arrival, but the last care of the day being removed, and the last duty performed, he too seeks the rest that will enable him to go through the same routine tomorrow. But here I leave him, for my task is also done, and unlike his, it is to be repeated no more.

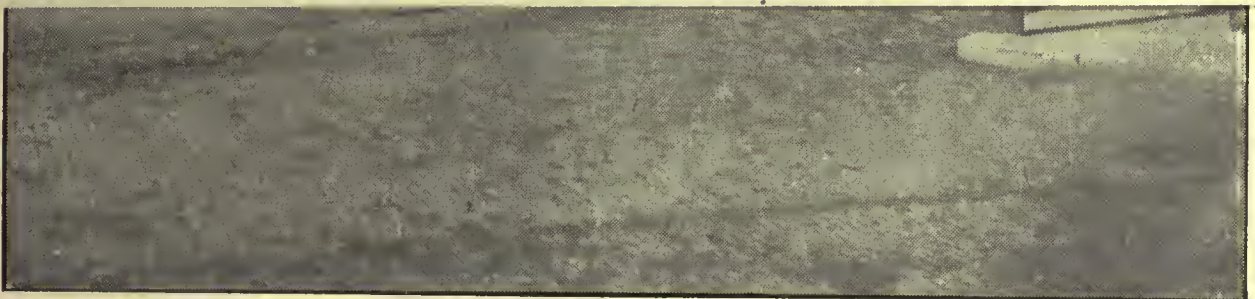

COL. GEORGE L. CURRY'S TRIBUTE TO THE OX WHIP.

(Reprinted from Transactions of the Oregon Pioneer Association.)

My task is to call from dust and dark forgetfulness that advance banner of Americanism and progress—the ox whip. Its crack was the command “Forward to the nation.” Its sharp, keen accent proclaimed that obstacles to prayers must be overcome. It waved aloft on the prairies of the “Old West,” and pointing to the new, a vast throng took up the westward march, which, keeping step to the music of destiny, dashed across the broad Missouri, rolled a living tide up the grassy slope of the Platte, scaled the imperial heights of the Rocky Mountains, and with “the tread of a giant and shout of a conquerer” defied the heat, dust, thirst and hunger, the desert heart of the continent, leaped the Blue Mountains, paused but quailed not on the banks of the deep, wide Columbia, where again the potential crack is heard and the mighty, “rock-ribbed” walls of the Cascades are stormed, and as the line rolls bravely over the giddy summit the exultant driver gives a grand triumphant crack into the stolid face of grand old Hood, the storm-clad sentinel of the mountain fastness. The people have reached their goal. The spell is broken. The errand has lost its magic, its mission has been accomplished. A state, with freedom’s diadem effulgent on its brow salutes the eye, and dipping its young hand in the Pacific completes the baptism of human liberty and proclaims an “ocean-bound republic.” All hail and honor to the ox whip, the symbol of the grand, achieving force of its age.

THE CAMP FIRES OF THE PIONEERS.

VINCERE EST VIVERE!

BY SAM L. SIMPSON.

[Reprinted from Transactions of Pioneer Association.]

Striking at ease his epic lyre,
The laureled Mantuan has sung
Beleagured Troy's illustrious pyre—
The daring sail Æneas flung
To wayward gales, the voyage long
That tracks the silver wave of song ;
Until the worn and weary oar
Has kissed the far Lavinian shore ;
The Argo's classic pennon streams
Along sweet horizons of dreams,—
The Mayflower has furled her wings,
And restfully at anchor swings—
Columbia chants to columned seas
The triumph of the Genoese,
And yet, stout hearts, no fitting meed
Of panegyric crowns your deed
From which a stately empire springs.

The minions of a perfumed age
Already crowd upon the stage,—
The massive manhood of the past
In many a graceful mould is cast ;
And yet with calm and kindly eyes
You view the feast for others spread,
And hail the blue benignant skies
Resigned and grandly comforted.
It was for this you broke the way
Before the sunset gates of day—
For this, with godlike faith endued,
You scaled the misty crags of fate,
And, with resounding labors, hewed
The Doric pillars of the state.

There is no task for you to do—
Your tents are furled, the bugle blown—
But yet another day, and you
Will live in clustered fame alone.
The fir will chant a song of rue,
The pine will drop a wreath, may be,
And o'er the dim Cascades the stars
Will nightly roll the gleaming cars
You followed well from sea to sea.
Before your scarred battalion's wheel
Into the mystic realm of shade,
And on your grizzled brows the seal
Of mystery is softly laid,

Once more around your old campfires,
 That smoulder like fulfilled desires,
 Rehearse the story of your toils .
 Display the hero crowned with spoils—
 The glimmer of triumphant steel,
 Beneath the garland and the braid.

O, further than the legions bore
 The eagles of Imperial Rome—
 Three thousand miles, a weary march,
 You followed Hesper's golden torch,
 Until it stooped on this green shore,
 And lit the rosy fires of home.
 It was a solemn morn you turned
 And quenched the sacred flames that burned
 On hearths endeared for years and years;
 It seemed your very souls grew dark
 With those sweet fires—the latest spark
 Was drowned in bitter, bitter tears.

A softer, sweeter sunlight wrapt
 The forms of all familiar things,
 And as each cord of feeling snapt
 Another angel furled its wings:
 The lights and shadows in the lane,
 The oak beside the foot-worn stile
 Whose wheeling shades a weary while
 Had told the hours of joy and pain—
 The vine that clambered o'er the door
 And many a purple cluster bore—
 The vestal flowers of household love—
 The sloping roof that wore the stain
 Of summer sun and winter rain,
 And smoky chimney tops above—
 The beauty of the orchard trees,
 Bedecked with blossoms, glad with bees—
 The brook that all the livelong day
 Had many things to sing and say—
 All these upon your vision dwell
 And weave the sorrow of farewell.

And now the last good-bye is said—
 Good-bye! the living and the dead
 In those sad words together speak,
 And all your chosen ways are bleak!
 Forward! The cracking lashes send
 A thrill of action down the train,—
 Their brawny necks the oxen bend
 With creaking yoke and clanking chain;
 The horsemen gallop down the line,
 And swerve around the lowing kine
 That straggle loosely on the plain—
 And lift glad hands to babes that laugh
 And dash the buttercups like chaff.
 Hurrah! the skies are jewel blue—
 In tasseled green and braided gold
 The robes of April are enrolled,

And hopes are high and hearts are true !
Hurrah ! hurrah ! the bold, the free—

The sudden sweep of ecstasy
That lifts the soul on wings of fire,
When fears consume and doubts expire,
And life, in one red torrent, leaps
To join the march of boundless deeps !

And now the sun is dropping down
And lights and shadows, red and brown.

Are weaving sunset's purple spell :
The teams are freed, the fires are made,
Like scarlet night flow'rs in the shade,
And pleasant groups before, between,
Are thronging in the fitful sheen—

The day is done, and "all is well."

So pass the days, so fall the nights ;
A banquet of renewed delights ;

The old horizons lift and pass
In magic changes like a dream,
And in the heavens' azure glass
Tomorrow's jasper arches gleam—
With many a vale and mountain mass,
And many a singing, shining stream.

The past is dead and daisied now—
In shadow fades from heart and brow—
The air is incense, and the breeze
Is sweet with siren melodies,
And all the castled hills before
In blooming vistas sweep and soar
Like silver lace, the clouds are strewn
Along the distant, dreamy zone ;
It is a happy, happy time,
As wayward as a poet's rhyme,

And ever as the sun goes down
The west is shut with rosy bars,
And Night puts on her golden crown
And fills the vases of the stars.

* * * * *

A hundred nights, a hundred days,
Nor folded cloud nor silken haze
Mellow the sun's midsummer blaze.

Along a brown and barren plain
In silence drags the wasted train ;
The dust starts up beneath your tread,
Like angry ashes of the dead,
To blind you with a choking cloud
And wrap you in a yellow shroud.

There are no birds to sing your joy,
You have no joy for birds to sing,—
A hundred fangs your hearts destroy—
A thousand troubles fret and sting.

The desert mocks you all the while
With that dry shimmer of a smile
That dazzles on a bleaching skull,—

The bloom is withered on your cheek
You slowly move and lowly speak,
 And every eye is dim and dull.
Alas, it is a lonesome land
Of bitter sage and barren sand
 Under a bitter, barren sky
That never heard the robin sing,
Nor kissed the larks's exultant wing,
 Nor breathed a rose's fragrant sigh!
A weary land—alas! alas!
The shadows of the vultures pass—
 A spectral sign across your path;
The gaunt, gray wolf, with head askance
Throws back at you a scowling glance
 Of cringing hate and coward wrath.
And like a wraith accursed and banned
Fades out before your lifted hand;
A dim, sad land, forgot, forsworn
By all bright life that may not mourn—
Acrazed with glist'ning ghosts of seas
In broideries of flower and trees,
And rivers, blue and cool, that seem
To ripple as in fevered dream—
Only to taunt the thirst, and fly
From withered lips and lurid eye.

A hundred days, a hundred nights—
 The goal is farther than before,
And all the changing shades and lights
 Are wrought in fancy's woof no more.
The sun is weary overhead,
And pallid deserts round you spread
 A sorrowful eternity;
And if some grisly mountain here
Confront your march with forms of fear,
 You turn aside and pass them by.
And all are overworn—the flesh
Is now a frayed and faded mesh
 That will not mask the inward flame;
There is no longer any care
To round the speech, or speak men fair,
 Or any gentle sense of shame;
The hearts of all are shifted through—
 The grain drops through the windy husks
And false lights flick'ring round the true
 Are quenched at last in dews and dusk.
And some are silent, some are loud
And rage like beasts among the crowd,—
And some are mild, and some are sharp
In word and deed, and snarl and carp,
 And fret the camp with petty broils;
And some of temper, sweet and bland,
Do seem to bear a magic wand
 That wins the secret of their toils—
Rare souls that waste like sandal-wood
In many a fragrant deed and mood;
And some invoke the wrath of God,

Or feign to kiss the burning rod,—
And some, may be, with better prayers,
Stand up in all their griefs and cares
And clinch their teeth, and do and die
Without a whine, a curse or cry.
And so the dust and grit and stain
Of travel wears into the grain;
And so the hearts and souls of men
Were darkly tried and tested then
That, in the happy after years,
When rainbows gild remembered tears,
Should any friend inquire of you
If such or such an one you knew—
I hear the answer, terse and grim,
“Ah, yes; I crossed the plains with him!”

And, lo! a moaning phantom stands,
To greet you in the lonely lands,
 Among all lesser shadows, dight
With spoils of death; his meager hands
Salute you as you pass, and claim
 The sacrifice that feeds his flame.
The march has broken into flight,
And wreck and ruin strew the road
The flaming phantom has bestrode;
 The ox lies gasping in his yoke
 Beside the wagon that he drew—
 Where the forsaken campfires smoke
 To hopeless skies of tawny blue;
And here are straight, still mounds that mark
The flight of life's delusive spark—
The somber points of pause that lie
So thick in human destiny.
 And oh, so dark on this bleak page
 Of drifting sand and dreary sage!
 The sultry levels of the day,
 The night with weird enchantment fills,
 And frowning forests stretch away
 Along the slopes of shadow hills;
And in the solemn stillness breaks
 The wild-wolf music of the plain,
As if a deeper sorrow wakes
 The dreary dead in that refrain
 That swells and gathers like a wail
 Of woe from Pluto's ebon pale,
 And sinks in pulseless calm again.

A change at last!—an opal mist
 Along the faint horizon's rim
Is banked against the amethyst
 Of summer sky—so far, so dim,
You shade your eyes, and gaze and gaze,
 Until there wavers into sight
 A swinging, swaying strand of white,
 And then the sapphire walls and towns
 That breaks the light in quiv'ring showers

And float and fade in diamond haze;—
 It is the mountains!—grand and calm
 As God upon his awful throne;
 They build you strength and breathe you balm,
 For all their templed might of stone
 Is our eternal sculptured psalm!
 And now your western course is led
 Where grassy pampas spread and spread
 The pastures of the buffalo;
 And like the sudden lash of foam
 When tropic tempest smite the sea
 And masts are stript to ward the blow—
 A ragged whirl of dust described
 Upon the prairie's sloping side
 Portends a storm as swift and free,—
 And lo, the herds—they come! they come!
 A sweeping thunder cloud of life
 Loud as Niagara, and grand
 As they who rode with plume and brand
 On Waterloo's red slope of strife;
 Wild as the rush of tidal waves,
 That roar among the crags and caves,
 The trampling besom hurls along—
 A black and bounding, fiery mass
 That withers, as with flame, the grass—
 O! terrible—ten thousand strong!
 Meanwhile, the dusty teams are stopt,
 The wagon tongues are deftly dropt,
 And drivers by their oxen stand
 And soothe them with soft speech and hand.
 And yet, with horns tossed free, and eyes
 Ablaze with purple depths of ire,
 A thousand servile years expire
 And flashes of old nature rise,
 As if a sudden spirit woke
 That would not brook the chain and yoke,—
 And then, the stormy pageant past,
 They bow their callous necks at last,
 And with a heavy stride and slow,
 The dreams of liberty forego.

 Alas! it is a land of shades.
 And mystic visions, swift alarms;
 The fretted spirit flames and fades
 With clanging calls to prayers or arms.
 * * * The day is dying, and the sun
 Hangs like a jewel rich with fire
 In the deep west of your desire.
 And o'er the wide plateau is rolled
 A surge of crinkled sunset gold,
 Bordered with shadows gray and dun.
 A horseman with loose, waving hair,
 Black as the blackest of despair,
 Wheels into sight and gives you heed,
 And on its haunches reins his steed,
 All quivering like a river reed,

And sits him like a statue there,—
 Transfigured in the sunset sea—
 A bronze, bare sphynx of mystery!
 A moment thus, in wonder lost,
 His eagle plumes all backward tossed,
 Then wheels again, as swift as wind,
 The wild hair floating free behind.
 And sunset's crinkled surges pour
 Along an empty waste once more!
 But you, since that fantastic shade
 Across your desert path has played,
 Distrust the very ground you tread,
 And shiver with a nameless dread
 Till stars drop crimson, and the sky
 Is wan with heartless treachery.

* * * * *

For many days a form of white
 Has flashed and faded in your sight
 In fleeting glimpses, as of wings,
 Our God's bright palm in beckonings.
 It is a secret nursed of each—
 You dare not give the thought in speech,
 So wierdly solemn is the sign—
 As if, upon the western stairs,
 The angels of a thousand prayers
 Were come with sacred bread and wine.
 Again, the still, enchanted hour
 Of sunset burns in crimson flower,
 And purple-hearted shadows sleep
 Like clustered pansies, warm and deep,
 Eastward of wreathen crag and wall.
 The road that wound and wound all day
 In many a dark and devious way
 At last with one swift curve ascends.
 A rolling plain that breaks and bends
 Westward, till rosy curtains fall
 O'er mountains massed and magical.
 Resplendent as a pearly tent
 Upon the fir-fringed battlement—
 Serene in sunset gold and rose,
 A pyramid of splendor glows,
 So vast and calm and bright your dream
 Is dust and ashes in its gleam.
 A maiden speaks—"He led us far—
 It is the golden western star!"
 And then a youth—"Our goal is won—
 'Tis the pavilion of the sun."
 A gray sage, then, in undertone—
 "It must be Hood, so grand and lone—
 The shining citadel and throne
 Of Terminus, that Roman god
 Who marked the line that legions trod,
 And set the limits of the world
 Where Cæsar's battle flags were furled!
 Oh, for the days of dark-eyed prophetess
 Who sang in Syrian wilderness
 The gilded chariots' overthrow,

To lead us for the cymbaled song
 To him, the beautiful and strong,
 Who dashed the brimming cup of woe
 And was our cloud and flame so long!"

Forward! the crested mountains kneel
 To patient toils of fire and steel—
 A way is hewn and you emerge
 Upon the Cascades' battled verge;—
 And far beneath you and away
 To ocean's shining fringe of foam
 And summer vail of floating spray,
 Behold the land of your emprise,
 Serene as tender twilight skies
 When day is swooning into gloam!
 It is the morning twilight now
 That wraps the valley's misted brow;
 The bourgeoning and blooming dawn—
 The reveille of Oregon.

How brightly on your vision, first
 The pictured vales and woodlands burst,—
 The lakelets set like twinkling gems
 Along the prairies' pleated hems,—
 The silver crooks and rippled sweeps
 Of happy rivers here and there,
 And many a waterfall that leaps
 In rainbow garlands through the air,—
 The skirted maples and the groves
 Of oak the mild home-spirit loves—
 Enameled plains and crenelled hills
 And tangled skeins of brooks and rills,—
 Imperial forests of the fir,
 All redolent of musk and myrrh,
 That fling and furl their banners old,
 And still their gloomy secret hold
 As Time his cloudy censer fills.

* * * * *

Where the foothills are wedded to the meadow
 In the dimples that dally and pass
 And the oak swings an indolent shadow
 On the daisies that dial the grass.—
 In the crescents of rivers; in hollows
 Red-lipped in the strawberry time,
 And the slope where the forests half follows,
 A brooklet's melodious rhyme,—
 On the sun-rippled knolls, and the prairies,
 Beloved of the wandering kine—
 In the skirts of the woodland the fairies
 Embroidered with rose and with vine—
 There's a tent, and a smoke that is curling
 Above in the beautiful dome,
 Like a guardian spirit unfurling
 Soft wings o'er the temple of home.

And the ax of the woodman is ringing
 All day in sylvestrian halls,
 Where the chipmunk is playfully springing
 And the blue-jay discordantly calls ;
 And the red chips are fitfully flying
 On the asters that sprinkle the moss ;
 Where the beauty of summer is dying,
 And the sun lances glimmer across ;
 There's a bird that is spectrally knocking,
 On a pine that is withered and bare,
 For the fir-top is trembling and rocking,
 In the blue of the clear upper air—
 There's a crackling of fiber—the crashing
 Of a century crushed at a blow,
 And the fir-trees are wringing and lashing
 Their hands in a frenzy of woe !

A pheasant whirs up from the thicket
 In the hush that comes after the fall,
 And the squirrel retires to his wicket,
 And the bluebird renounces his call ;
 And the panther lies crouched by the boulder
 In the gloom of the canyon anear,
 And the brown bear looks over his shoulder,
 And the buck blows a signal of fear ;
 But there's never a pause in your duty,
 And the echoing ax is not still
 As you waste with the green temples of beauty
 For the puncheon and rafter and sill
 That are wrought in a cabin so lowly
 The trees will clasp hands over head,
 But the heart calls it home, and the holy
 Love-lights on its hearthstone are shed.

It is staunch and rough-hewn, and the ceiling
 Of the fragrant red cedar is made,
 With an edging of silver revealing
 A picture of sunlight and shade.
 And the Word has its place, not a trifle
 Obscured in a pageant of books,
 And above the broad mantle your rifle
 Is hung on accessible hooks.
 Oh, the freshness of hope and of fancy
 That illumines the home and the heart,
 With the grace of a bright necromancy
 That excels the adorning of art !
 And you rise and look forth and the glory
 Of Hood is before you again,
 And the sun weaves a gold-threaded story
 In the purple of mountain and glen.

* * * * *

Stand up, and look out from the mansion
 That adorns the old scene of the past
 On the fruitage of hope—the expansion
 Of the fruits of your vigils forecast !

While the shadows of Hood have been wheeling
 Away from the face of the sun,
What a glamour of change has been stealing
 On the fields that you painfully won !
Like the castles that fade at cock-crowing
 The enchantments arise and advance
Where the cities of commerce are glowing
 Like pearls in the braids of romance ;
For a state, in the shimmering armor
 Of the Pallas Athena has come,
And her ægis is fringen with the warmer
 Refulgence that circles our home.

As for you, you are gray, and the thunder
 Of the battle has smitten each brow
Where the freshness of youth was turned under
 By Time's immemorial plow ;
But the pictures of memory linger,
 Like the shadows that turn to the East,
And will point with a tremulous finger
 To the things that are perished and ceased ;
For the trail and the foot-log have vanished,
 The canoe is a song and a tale,
And flickering church spire has banished
 The uncanny red man from the vale ;
The cayuse is no longer in fashion—
 He is gone—with a flutter of heels,
And the old wars are dead, and their passions
 In the crystal of culture congeals ;
And the wavering flare of the pitch light
 That illumines your banquets no more,
Will return like a wandering witch-light
 And uncrimson the fancies of yore—
When you dance the "Old Arkansaw" gaily
 In brogans that had followed the bear,
And quaffed the delight of Castaly
 From the fiddle that wailed like despair ;
And so lightly you wrought with the hammer,
 And so truly with ax and with plow—
And you blazed your own trails through the grammar,
 As the record must fairly allow ;
But you builded a state in whose arches
 Shall be carven the deed and the name,
And posterity lengthens its marches
 In the golden starlight of your fame !

PILGRIMS OF THE PLAINS.

By JOAQUIN MILLER.

A tale half told and hardly understood ;
The talk of bearded men that chanced to meet,
That lean'd on long quaint rifles in the wood,
That look'd in fellow faces, spoke discreet
And low, as half in doubt and in defeat
Of hope ; a tale it was of lands of gold
That lay toward the sun. Wild wing'd and fleet
It spread among the the swift Missouri's bold
Unbridled men, and reach'd to where Ohio roll'd.

Then long chain'd lines of yoked and patient steers ;
Then long white trains that pointed to the west ;
Beyond the savage west ; the hopes and fears
Of blunt, untutor'd men, who hardly guess'd
Their course ; the brave and silent women, dress'd
In homely spun attire, the boys in bands,
The cheery babes that laughed at all and bless'd
The doubting hearts with laughing lifted hands—
What exodus for far untraversed lands !

The Plains ! The shouting drivers at the wheel ;
The crash of leather whips ; the crush and roll
Of wheels ; the groan of yokes and grinding steel
And iron chain, and lo ! at last the whole
Vast line, that reached as if to touch the goal,
Began to stretch and stream away and wind
Toward the west, as if with one control :
Then hope loom'd fair, and home lay far behind ;
Before, the boundless plain, and fiercest of their kind.

At first the way lay green and fresh as seas,
And far away as any reach of wave ;
The sunny streams went by in belt of trees ;
And here and there the tassell'd tawny brave
Swept by on horse, looked back, stretched forth and gave
A yell of hell, and then did wheel and rein
Awhile and point away, dark-brow'd and grave,
Into the far and dim and distant plain
With signs and prophecies, and then plunged on again.

Some hills at last began to lift and break ;
Some streams began to fail of wood and tide,
The somber plain began betime to take
A hue of weary brown, and wild and wide
It stretch'd its naked breast on every side.
A babe was heard at last to cry for bread
Amid the deserts ; cattle low'd and died,
And dying men went by with broken tread,
And left a long black serpent line of wreck and dead.

Strange hunger'd birds, black-wing'd and still as death,
And crown'd of red and hooked beaks, flew low
And close about till we could touch their breath—
Strange unnamed birds, that seem'd to come and go
In circles now, and now direct and slow,
Continual, yet never touch the earth;
Slim foxes shied and shuttled to and fro
At times across the dusty weary dearth
Of life, looked back, then sank like crickets in a hearth.

Then dust arose, a long dim line like smoke
From out of riven earth. The wheels went groaning by,
The thousand feet in harness, and in yoke,
They tore the ways of ashen alkali,
And desert winds blew sudden, swift, and dry.
The dust! it sat upon and fill'd the train.
It seem'd to fret and fill the very sky.
Lo! dust upon the beasts, the tent, the plain,
And dust, alas! on breasts that rose not up again.

They sat in desolation and in dust
By dried-up desert streams; the mother's hands
Hid all her bended face; the cattle thrust
Their tongues and faintly called across the lands.
The babes that knew not what the way through sands
Could mean, did ask if it would end today.
The panting wolves slid by, red-eyed, in bands
To pools beyond. The men look'd far away,
And silent deemed that all a boundless desert lay.

They rose by night, they struggl'd on and on
As thin and still as ghosts; then here and there
Beside the dusty way before the dawn,
Men silent laid them down in their despair,
And died. But woman! Woman, frail as fair!
May man have strength to give to you your due;
You falter'd not nor murmur'd anywhere,
You held your babes, held to your course, and you
Bore on through burning hell your double burdens through.

Men stood at last, the decimated few,
Above a land of running streams, and they?
They pushed aside the boughs, and peering through
Beheld afar the cool refreshing bay;
Then some did curse, and some bend hands to pray;
But some looked back upon the desert wide
And desolate with death, then all the day
They mourned. But one, with nothing left beside
His dog to love, crept down among the ferns and died.

PIONEERS OF THE PACIFIC.

BY JOAQUIN MILLER.

* * * * *

The wild man's yell, the groaning wheel,
The train moved like drifting barge ;
The dust rose up like a cloud,
Like smoke of distant battle loud ! Loud
The great whips rang like shot, and steel
Flashed back as in some battle charge.

They sought, yea, they did find their rest
Along that long and lonesome way,
Those brave men buffeting the West
With lifted faces. Full they were
Of great endeavor.

* * * * *

When

Adown the shining iron track
We sweep, and fields of corn flash back,
And herds of lowing steers move by,
I turn to other days, to men
Who made a pathway with their dust.

DOCUMENT.

The following is one of a set of documents giving contemporary evidence on a most important epoch of Oregon history. It was secured by Principal J. R. Wilson.

(From the New Orleans Picayune, November 21, 1843.)

PRAIRIE AND MOUNTAIN LIFE—THE OREGON EMIGRANTS.

During our detention among the upper settlements, before starting out, a constant source of interest to us was the gathering of people bound to Oregon. One Sunday morning, about the usual church hour in a larger place, five or six wagons passed through the town of Westport, and one old man with silver hair was with the party. Women and children were walking, fathers and brothers were driving loose cattle or managing the heavy teams, and keen-eyed youngsters, with their chins yet smooth and rifles on their shoulders, kept in advance of the wagons with long strides, looking as if they were already watching around the corners of the streets for game. There was one striking feature about the party which leads us to name it more particularly. Though traveling on the Sabbath and through the little town that was all quiet and resting from business in reverence of the day, there was that in the appearance of the people that banished at once even the remotest idea of profanation. They were all clean, and evidently appareled in their best Sunday gear. Their countenances were sedate, and the women wore that mild composure of visage—so pleasantly resigned, so eloquent of a calm spirit, so ready to kindle up into smiles—that is seen more often among churchgoers, perhaps, than in ball-room or boudoir. Some of the women carried books,

and the prettiest girl carried hers open before her as she stepped a little coquettishly through the dust of the road. Whether she was reading, or trying, or pretending to read, was hard to tell, but the action had a naive effect, and as she passed she was, no doubt, much astonished at a strange young gentleman who audibly addressed her with, "Nymph, in thy orisons, be all my sins remembered."

Many other small bodies of these adventurous travelers crossed our notice at Independence, Westport, and at encampments made in the vicinity of these and other towns, but in their largest force we saw them just after crossing the Kansas River about the first of June. The Oregonians were assembled here to the number of six or eight hundred, and when we passed their encampment they were engaged in the business of electing officers to regulate and conduct their proceedings. It was a curious and unaccountable spectacle to us as we approached. We saw a large body of men wheeling and marching about the prairie, describing evolutions neither recognizable as savage, civic or military. We soon knew they were not Indians, and were not long in setting them down for the emigrants, but what in the name of mystery they were about our best guessing could not reduce to anything in the shape of a mathematical probability.

On arriving among them, however, we found they were only going on with their elections in a manner perhaps old enough, but very new and quizzical to us. The candidates stood up in a row behind the constituents, and at a given signal they wheeled about and marched off, while the general mass broke after them "lick-a-ty-split", each man forming in behind his favorite so that every candidate flourished a sort of a tail of his own, and the man with the longest tail was elected! These proceedings were continued until a captain and a council

of ten were elected ; and, indeed, if the scene can be conceived, it must appear as a curious mingling of the whimsical with the wild. Here was a congregation of rough, bold, and adventurous men, gathered from distant and opposite points of the Union, just forming an acquaintance with each other, to last, in all probability, through good or ill fortune, through the rest of their days. Few of them expected, or thought, of ever returning to the states again. They had with them their wives and children, and aged, depending relatives. They were going with stout and determined hearts to traverse a wild and desolate region, and take possession of a far corner of their country destined to prove a new and strong arm of a mighty nation. These men were running about the prairie, in long strings ; the leaders,—in sport and for the purpose of puzzling the judges, doubling and winding in the drollest fashion ; so that, the all-important business of forming a government seemed very much like the merry schoolboy game of “snapping the whip.” It was really very funny to see the candidates for the solemn council of ten, run several hundred yards away, to show off the length of their tails, and then cut a half circle, so as to turn and admire their longitudinal popularity *in extenso* themselves. “Running for office” is certainly performed in more literal fashion on the prairie than we see the same sort of business performed in town. To change the order of a town election, though for once, it might prove an edifying exhibition to see a mayor and aldermen start from the town pump and run around the court house square, the voters falling in behind and the rival ticket running the other way, while a band in the middle might tune up for both parties, playing “O, What a Long Tail Our Cat’s Got ;” which we surmise some popular composer may have arranged for such an occasion.

After passing them here, we never saw the Oregonians again. They elected a young lawyer of some eminence as we were told, named Burnett, as their captain, and engaged an old mountaineer, known as Captain Gant, as their guide through the mountains to Fort Hall. Several enactments were made and agreed to, one of which was called up to be rescinded, and something of an excitement arose in regard to it. The law made was that no family should drive along more than three head of loose stock for each member composing it, and this bore hard on families that had brought with them cattle in large numbers. The dispute resulted in a split of the large body into two or three divisions; and so they moved on, making distinct encampments all the way. Captain Gant was to receive \$1.00 a head from the company, numbering about a thousand souls, for his services as guide. But a few more such expeditions following in the same trail will soon imprint such a highway through the wilderness to Oregon that emigrants may hereafter travel without such assistance.

We left them here about the last of May and encountered no sign of them again until returning in September, when we struck their trail on the Sweetwater, near the south pass of the mountains. They had followed in our own trail as far as this point and had here turned off, our course lying in another direction. From here, all the way to Fort Laramie, we found the now deeply worn road strewn with indications of their recent presence. Scaffolds for drying meat, broken utensils thrown away, chips showing where wagons had been repaired, and remnants of children's shoes, frocks, etc., met our notice at every deserted encampment.

But one death seemed to have occurred among them, and this was far out under the mountains. Here the loose riders of our moving camp gathered one morn-

ing to examine a rude pyramid of stones by the roadside. The stones had been planted firmly in the earth, and those on top were substantially placed, so that the wolves, whose marks were evident about the pile, had not been able to disinter the dead. On one stone, larger than the rest, and with a flat side, was rudely engraved :

J. HEMBREE.

And we place it here as perhaps the only memento those who knew him in the States may ever receive of him. How he died, we of course cannot surmise, but there he sleeps among the rocks of the West as soundly as if chiseled marble was built above his bones.

On returning to Rock Independence, a point about nine hundred miles from the settlements, we were astonished at finding that the Oregonians had reached and passed it only four days behind us. We had confidently supposed them four weeks in our rear, and their rapid progress augurs well for the success of their enterprise. On the rock we found printed :

“THE OREGON CO.
arrived
July 26, 1843.”

At Fort Laramie we were told that they were still well provisioned when passing there, and could even afford to trade away flour, coffee, etc., for necessaries of other kinds. But it was droll to hear how the Sioux stared at the great caravans. Some of them on seeing the great number of wagons, and particularly white women and children, for the first time, began to think of coming down here, having seen, as they supposed, “the whole white village” move up the mountains.
