The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atom. It is shown that the structure of the atom is determined by the laws of quantum mechanics, which are based on the principle of the conservation of energy and the principle of the conservation of momentum. The structure of the atom is determined by the laws of quantum mechanics, which are based on the principle of the conservation of energy and the principle of the conservation of momentum.

1. The first part of the paper is devoted to a general discussion of the problem of the existence of solutions of the system of equations

(1) $\Delta u = f(x, y, z, u, v, w, \dots)$

in the domain

(2) $G = \{x, y, z, \dots\}$

where f is a continuous function of its arguments and satisfies certain conditions.

It is shown that if the function f satisfies the conditions

(3) $f(x, y, z, \dots) \rightarrow 0$ as $|x|, |y|, |z|, \dots \rightarrow \infty$

then the system of equations (1) has a solution in the domain (2).

The second part of the paper is devoted to a study of the properties of the solutions of the system of equations (1).

It is shown that if the function f satisfies the conditions

(4) $f(x, y, z, \dots) \rightarrow 0$ as $|x|, |y|, |z|, \dots \rightarrow \infty$

then the solutions of the system of equations (1) are bounded in the domain (2).

The third part of the paper is devoted to a study of the properties of the solutions of the system of equations (1).

It is shown that if the function f satisfies the conditions

(5) $f(x, y, z, \dots) \rightarrow 0$ as $|x|, |y|, |z|, \dots \rightarrow \infty$

then the solutions of the system of equations (1) are bounded in the domain (2).
