The White

Sewing Machine

THE EARLIEST SELLING, THE BEST SATISFYING

Its introduction and World-renowned reputation was the death-blow to high-priced machines.

THERE ARE NO SECOND-HAND WHITE MACHINES IN THE MARKET.

This is a very important matter, and one which should be carefully considered. It is a well-known and undisputed fact that many of the so-called cheap machines which are offered for sale, are in reality nothing more than cheap toys, and are not worth the money paid for them. They are not only useless, but they are also dangerous, and may cause serious injury to the user. The White Sewing Machine, on the other hand, is a machine of the highest quality, and is well known throughout the world for its durability and its ability to sew all kinds of fabrics. It is a machine which will last for many years, and it is a machine which will give you the most satisfactory results. Therefore, if you are considering purchasing a sewing machine, you should purchase a White Sewing Machine. It is the only machine which is worth the money paid for it.

It is much larger than the family machines of the same size, and it is much more durable. It is also much more powerful, and it is much more reliable. It is a machine which will give you the most satisfactory results, and it is a machine which will last for many years. Therefore, if you are considering purchasing a sewing machine, you should purchase a White Sewing Machine. It is the only machine which is worth the money paid for it.

It is much more powerful, and it is much more reliable. It is a machine which will give you the most satisfactory results, and it is a machine which will last for many years. The Manorial Value of Salt.

Salt has been employed in Europe as manure from time immemorial, and is still used both there and in this country, not only to induce the growth of some marine plants, but to impart solidity to the grain and stiffen the stems of cereals cultivated on lands deficient in experience and soda. Its advantage to growing plants sustained by experience, is also to be inferred from a knowledge of its composition. In a pure state it consists of sixty parts of chlorine and forty of sodium in every one hundred parts. Sodium chemically combines with oxygen to form soda. Salt, therefore, must furnish two of the important constituents in the ash of every vegetable. Its great affinity for water has the effect, like that of gypsum, of attracting dew and other fluids to the growing crop, by which it is supplied

with a pure state of chlorine and forty of sodium in every one hundred parts. Sodium chemically combines with oxygen to form soda. Marietta, Ga., March 19, 1879.

man Carver all hollow. I'll tell you what I've seen Potter do. You know, may be, along here in the cherry season, Mrs. Potter would want some cherries to preserve; so Tom'd pick 'em off for her, and how do you think he'd store 'em?

"I don't know. How?"
"Why, he'd fill his gun with bird shot, and get a boy to drop a half bushel of cherries at one time from the roof of the house. As they came down he'd fire, and take the stone clean out of every cherry in the lot. It's a positive fact. He might occasionally miss one cherry, maybe, but not often. But he did bigger shooting than that when he wanted to."

"What did he do?"
"Why, Jim Miller—did you know him? No! Well, Tom made a bet once with Jim that he could shoot the buttons off of his own coat tail by aiming in the opposite direction, and Jim Miller took him up."

"Did he do it?"
"Do! He fixed himself in position, and aimed at a tree in front of him. The ball hit the tree, caromed, hit the corner of the house, caromed, struck a lamp-post, caromed, and flew behind Tom, and nipped the button off like a whistle. You bet he did it."

"That was fine shooting!"
"Yes, but I've seen Tom Potter beat it. I've seen him stand under a flock of wild pigeons, billions of them coming like the wind, and kill 'em so fast that the front of the flock never passed a given line, so that it looked like a brown and feathery Niagara. Tom did it by having twenty-three breach-loading rifles and a boy to load 'em. He always shot with that kind."

"You saw him do this sort of shooting?"

"Yes, sir; and better than that too. Why, I'll tell you what I've seen Tom Potter do. I saw him once set up an India rubber target at three hundred feet and hit the bull's eye twenty-seven times a minute with the same ball. He would hit the target, the ball would bounce back right into the rifle barrel just as Tom had clapped on a fresh charge of powder, and so he kept her going backward and forward until at last he happened to turn his gun and the bullet missed the muzzle of the barrel. It was the biggest thing I ever saw; the very biggest—except one."

"What was that?"
"Why one day I was out with him. When he was practicing, and it came to rain. Tom didn't want to get wet, and we had no umbrella, and what do you think he did?"

"What?"
"Now what do you think that man did to keep dry?"

"I can't imagine."
"Well, sir, he got me to load his weapons for him, and I pledge you my word, although it began to rain hard, he hit every drop that came down, so that the ground for about eight feet around us was dry as punk. It was beautiful, sir; beautiful!"
And then the company rose up slowly and passed out, one by one, each man eyeing Abner, and looking solemn as he went by; and when they had gone Abner looked queerly for a moment, and said to me:

"There's nothing I hate so much as a liar. Give them a drink of the friend of the solid truth and I'll tie to him—Max Adeler."

FOR SALE!

THE HOUSE and Lot in the City of Marietta, one block from the city square, owned and formerly occupied by F. W. E. Dunwoody.

FARM of 120 acres, miles from Marietta, Cobb County—has 80 acres of arable land—small house—will be divided.

FARM of 80 acres 1 1/2 miles from Marietta, Cobb County, with the W. & A. R.—will be divided into three small farms.

A FIRST CLASS Plantation of 200 acres, four miles from Marietta, in one of the best premises in Cobb county. There are on the premises about 100 acres of arable land, 70 acres of bottom land and a beautiful pond, with abundance of wood and water.

THE PLANTATION formerly known as the "Mule Property," containing 300 acres on Nickels Creek, about 1 1/2 miles from Concord Factory, was formerly used as a good water power. It contains about 100 acres of arable land and a tract of white oak timber.

ALSO PLANTATION of 100 acres, about 1 1/2 miles from Marietta, Cobb county—has 30 acres cleared—30 acres in good woodland. There are on the premises about 100 acres of arable land, abundance of good, free stone water. Terms easy.

A. Van Wyck,
At the Marietta Savings Bank.

He called the new sexton, who knew nothing of Mr. Johnson or his annual ten shillings. John told the man to have the tomb repaired, and engaged to pay all expenses. They entered into a little talk about the inmates of the surrounding graves. John found that he had more friends in the churchyard than in the village.

"Do you know what has become of James Woodman?" he inquired. "He lives just where he did, sir," answered the sexton.

"Impossible!" said John; "I have seen the house, and surely it has new inmates."

The sexton shook his head and laughed grimly.

"That's a new wife, sir," he said; "the first one, one of the daughters, sir, she died years ago."

There was a short silence.

"What has become of the elder children?" asked John.

"Well, sir, the youngest daughter died before her mother, and the boy ran away when his father married again; and Bella, the eldest, married a sailor and went abroad."

"Is Isabel, Mrs. Woodman, buried here?" asked John.

"Yes, sir. I'll show you where," and he hobbled over the mound, and then paused. John followed him.

"That's her grave, sir," he said. It was a long, grassy heap, matted with weeds. At the end stood a small wooden cross, already falling on one side, and a disconsolate shrub stretched across it and concealed the all the fading inscription, except one word:

"ISABEL."

John stood so long, gazing silently at the grave, that the old man went back to his digging. The next week John took up his abode in the village. He did not offer the sexton money to weed that grassy grave, but he went in the early morning and weeded it himself and set up the cross and planted some flowers beside it.

The only person he ever met in the churchyard was a quiet little woman, not much younger than himself. He found that she tended the Simpsons' grave, being too poor to pay the sexton. It was Cecily.

By and by these two got acquainted, and he found that she had never left the old village, but had kept a school there, maintaining both her parents for some years, until they died, and then tending their grave. She was all alone now, and very pleasant it was for her and John to talk over things, sitting in her little cottage, whether he often invited himself.

The great house of the village had stood empty for some years. John took it and beautified it and went to live in it. But he found life in a large house but a dreary thing for a man whose friends were mostly beneath the churchyard turf. Such guests as came only wearied him. His housekeepers cheated him; and so, perhaps, it hardly to be wondered at that one spring morning he went with Cecily to the old church, and when they went back to the big house she was his wife.

Cecily founded a school in the village, and it so happened that James Woodman's children were the first pupils. James Woodman himself is very poor, and his wife manages her household affairs no better than she manages her temper, and he is very glad to find work in John's garden.

Visitors to the pretty Kentish village may now see an elderly gentleman, tall and with slightly stooping shoulders, walking by the side of a lady with silver hair and bright gray eyes, who has always a cherry word for all his children, and who seems to be the object of their special admiration. And anybody can see that John Hurst and his wife are very happy.

TOM POTTER'S SHOOTING.

They had been talking about the remarkable performance of Dr. Carver the marksman who shoots with a rifle glass balls which are sent into the air as fast as a man can throw them. Presently, Abner Byng, who was sitting by, said:

"That's nothing."
"What is nothing?"
"Why, that shooting. Did you ever know Tom Potter?"

"No."
"Well, Potter was the best hand with a rifle I ever saw; beat that

John then remembered to inquire who that happy man was.

"James Woodman," she answered. "Do you remember him? We all went to school together."

John did remember, and also that young Woodman had been as civil to a certain little Cecily Simon as he himself had been to Isabel, but he only said that he remembered James Woodman quite well.

"Lorpoose, you are married?"

"No, I'm not," he answered, "but I'm thinking of it."

"Bitterly, thinking as he was of the fickle woman, and quite forgetting that, if he was unmarried, it was not his fault that he was so."

"You're not sad Isabel?"

"I'm much surprised."

"You have three children. Well, that's a good deal for a girl."

"In the election."

"Just eight years in the office of the wife."

It was fully ten years since John had prepared to be Bertha's bridegroom.

James Woodman came in and was duly introduced. He was a jolly countryman, with yellow hair and red cheeks that shook when he laughed, and he wore light country clothes and knee-breeches. John was very tall and very thin, and, being dressed all in black clothes and having a face as we said, like old parchment, and the remnant of a head of hair, the two men formed a great contrast as could well be imagined.

He stayed with them but a short while. Their easy, good-humored affection for each other was painful to him, and when he alluded to the letter he had missed Isabel could not think what he referred to until he explained. That completed his bitterness. He resolved to leave them whilst he could part in a friendly way, so they shook hands all round and he went away.

"What a grim old crow he looks!" remarked Isabel, as they watched his retreating figure up the lane.

John went to the churchyard, and found that some other grandson had put a stone at the head of his grandmother's grave. He offered to send the sexton some money every year to keep it neat, but the honest old man answered,

"Misther Johnson, him that paid for the stone, sir, gives me ten shillings a year to do it, and I couldn't in honor take no more."

So John gave the old man a present and walked off.

"I'm not wanted in Kent," he thought, "so I'll just go back to Jamaica."

He went back, and worked and prospered, and the remnant of his hair grew gray, and he found that he could see better with spectacles than without them. At last the doctors said that if he did not want to die within the year, he must leave his money-getting and go back to live among the green fields of Kent.

John sighed heavily, and obeyed. He made his final arrangements, and found himself to be even wealthier than he had thought. Then he leisurely travelled home to Kent. He did not, however, return to the native village, but settled in the county town. Nevertheless, he some times felt a strange longing to see once more the old church on the hill, where he had knelt in boyhood and the cool lanes where he and Isabel had wandered and played together, and one summer evening found him at the old place.

He wandered down the lane where he had discovered the Woodmans on his last visit. The house was sadly changed; no longer a honeycomb now, it was a solid mass of stone. He turned himself over the porch, and breathed its fragrance into the face of the old and dusty traveller, and in the little familiar plot of ground the flowers had run to seed or were choked by weeds. A woman came to the door, a woman of a honest, old-fashioned type, and he said to her—how different!—she screamed in a harsh voice to some children playing in the garden, and John turned sadly away.

The long shadows of the trees were falling across the churchyard, and he sped the time and entered. A man whom he knew was not digging a grave the old sexton was gone. The place was now crowded with graves, so that it was with some difficulty he found his grandmother's, the stone cracked and half hidden in nettles.

left a letter came for him, which he, not being there to receive it, tossed aside, and so it never reached him.

John became a great favorite with his new masters, so that one of them constantly invited him home. During these visits he frequently saw a very handsome young lady, his master's daughter. For a long while he did not think of her, but she was his master's daughter, and very beautiful.

After a while, and very much to his surprise, he found that she was his master's daughter, and very beautiful.
