There are grave reports coming to us concerning the probabilities of a yellow fever epidem ic along the Mississipi Valley this Summer. The outlook is bad in Memphis, and though it is claimed that the cases so far reported are easily a description. ported are sporadic, there is fear that the disease may become opidemic. Our quarantine regulations will be very strictly ex

rced. There has been considerable excitement over a peculiar af-fection which has assumed an epidemic ferm among the girls employed in Lorillard's tobacco employed in Lorillard's tobacco factory in Jersey City. There was a runor that the sickness originated from the germs of yel low fever with which tobacco from New Orleans was impreg-nated. Jersey City doctors, how yever, throw discredit upon the runor, and say that the sickness may have been rooduced by ice runor, and say that the sickness may have been produced by ice water, or by simply working in the tobacco, the poisonous fumes of which might produce the hysterical symptoms to which female humanity is prone. Speaking of the judges, law, courts, ect., reguinds me that, anumber of our judges are doing very little work, although they are drawing their pay with regularity that would be commendable, if services were redered for it.

A TALE OF TWO CITIES

Sixteen persons killed by heat
in one day in a city of but little
more than fifty thousand inhabitants implies a terribly oppressive temperature; and this experience of Uharfeston recalls
the much severer visitation that
afflicted St. Louis last year a
short time before the yellow for
eye epidemic declared itself. In
St. Louis on that occasion the
largest number of deaths was, we
believe, forty in one day; and is
the population of that city is
the population of Charleston, the
nourtainty reported from the lat
ter place is twice as great, proportionally, as that for the worst
of St. Louis load days last year,
in Charleston, on Saturday, the
temperature at 2 p. in. was 111
degrees, and in St. Louis, last
July, the highest point attained
yas 103 degrees. From the com
parison of the degree of ficat, as
well as the extent of mortality, it
