Deaths 1886-1897

TABLE 1. *Continued*

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (n = 10) and the intervention group (n = 10). The control group received a standard diet (SD) and the intervention group received a low-carbohydrate diet (LCD). The subjects were followed up for 12 weeks. The primary outcome was the change in body weight (kg) and the secondary outcome was the change in blood glucose (mmol/L).
