1. The first part of the paper is devoted to the study of the properties of the function $f(x) = \sum_{n=0}^{\infty} \frac{x^n}{n!}$ for $x \in \mathbb{R}$. It is shown that this function is strictly increasing and concave down on the interval $(-\infty, \infty)$. The maximum value of the function is attained at $x = 0$ and is equal to 1. The minimum value of the function is attained at $x = -1$ and is equal to e^{-1} . The function is also shown to be symmetric about the line $x = 0$.
