Remarks: In my district or county, the most prevailing disease is Intermitent fever, which doubtless is owing to malaria arising from the decay of vegetable matter as well as stagnant sinks of water which are to be found interspersed generally over the whole surface of the country. Occasionally we have fevers of a very malignant character. Particular

Remarks: Iron, but perhaps not in sufficient quantities to justify Manufactories for their. Our soils, especially upon the river, are of an alluvial character and very productive. Our uplands are of clay substratum and also productive & capable of being made very fertile. Our winters are long and severe & our springs
