Remarks. — Season no less hot for 10 years. Intermittent and remittent fever of a malignant grade then prevailed to a great extent along the river and lower creeks — It is worthy of remark that an epidemic of dysentery followed immediately after the principal dysentery. Our climate is remarkably healthy when compared with other regions of the South.

The water is found in perfect condition and in great abundance. There is much
more abundance in the beds and along the banks of many streams - Siskiwit, Ontonagon
and White Lake, Big Lake, Shishong, Saginaw, etc. The face of the country is
very

Remarks - moved back in heavy sand hills & bottom. The soil this day very
 productive compared with other soil of similar appearance. Much is
 found in abundance in some of the crevices. Iron ore is sufficiently abundant
 for the production of iron & castings to an almost indefinite amount. The
 country abounds in water power to an unlimited extent and offering every
 facility for all kinds of manufacturing.

Copy that the foregoing is a true and correct copy of the letter in the 14th volume of the
 County Register for 1880 the county of 1880 as per copy of the
 record book of the Register for the year of 1880.
